The miscellaneous conversation is interrupted about six, when the French "bread merchant" is rung for to count the potatoes for dinner; as his Lordship imports those useful articles, with cabbages, peas, turnips, milk, and butter from Louth Hall. After delivering the necessary number of vegetables to the cook, who has finished the respective dinners of her democratic fellow-prisoners, the culinary process for his Lordship's table commences, and at seven the mutton chops appear ready for the company. Mutton chops are favourite food with his Lordship; they are so convenient that they may be increased in proportion to the appetite of the company; while one or two on the table, if there is any apparent necessity for an increase of the number, a servant is employed running to the market for each pound weight, until a signal is made that another purchase is unnecessary.

At eleven his Lordship goes to his bed, which forms part of the furniture of his dining-room, after regaling himself with a literary pennyworth of an evening paper. The two servants disperse for the night; one mounts to an upper cell, and the other retires to the hospitable guard bed of some neighbouring watch house.

IRISH BIBLIOGRAPHY.

The Use and Need of Its Study

BY E. R. M'C. DIX.

(Read originally before the National Literary Society in February, 1900.)

II.

The history of paper making in Ireland is another sub-class or department of bibliography that would be one of much interest, comprising also that of water-marks. A study of the various types used, a study of all the books, etc., printed in Irish, separating those in Roman from those in Gaelic characters, the printing and publication of music, (a) of engraving, of woodcutting, of private presses and their work, all these have their place in the important study of bibliography, and are each worthy of being very carefully studied and put on record. If it is impossible to find a sufficient number of persons interested to justify the publication of works, or even of a journal or paper on these subjects, at least an increased number of articles upon them in local magazines is to be desired, or an association specially devoted to the subject. There is, as I have thus indicated, still a very wide field for research, and I will now give you two or three examples of what I have found myself, though I am but an amateur in the subject and acquainted as yet with little more than the fringe of it.

(1) In the course of searches for early Dublin books made for me in England there was found a solitary copy of a weekly journal printed in this city in 1659, and several succeeding numbers of a like journal, published in the years 1662-3, that is, respectively, about 23 or 24 years earlier than it was generally supposed that anything like a regular newspaper was published here. I was permitted by the Royal Irish Academy to lay before them a short communication on this subject.

2. In a pamphlet in Marsh's Library, and also in the Royal Irish Academy, I came across a list of announcements in 1663 by a publisher named Samuel Dancer, of Dublin printed books, and a short article upon it appeared at the time in a local paper in a preliminary way. This is the earliest list of the kind, though a list of Usher's works appears in a list at the end of his life by Dr. Bernard, or Barnard, published here in 1656.

3. A similar bookseller's announcement, but of later date, also afforded the very interesting information that music was printed here in Dublin from copper plates about the year 1686, 30 or 40 years earlier than it was supposed at that time that any musical notes were first printed here.

4. As regards Humphrey Powell, the first printer in Dublin, on looking through the Acts of the Privy Council of England I found the interesting information that in 1550 Powell received £20 to assist him in setting up in Ireland. Here, then, are a few items of information, throwing light upon printing and printers, on record for centuries, but hitherto entirely unnoticed. If there were many students working in the field how much more could be done; how much new information might be gleaned.

In the edition of our municipal records so ably edited by the late Sir John T. Gilbert are to be found abundant information on various subjects connected with the trades, occupations, etc, of our city, through a period covering centuries. Here, too, are to be found items of information about our early printers, only waiting for students to assimilate and make them known, as can now be done. Most interesting information of this kind has lately been brought to light by Mr. Keatinge in a paper read before the R.S.A.I. upon the existing records of the Dublin Guild of St. Luke, to which printers belonged.

I have referred, so far, mainly to printed matter. As regards MSS., which is also a most important branch of Irish bibliography, I hesitate to speak, save to mention how much more attention by far has been given to our Gaelic MSS., and I need only refer, amongst many others, to such distinguished names as O'Curry, O'Donovan, Dr. Reeves, and Dr. Todd, in the past, besides the many learned writers and students still living, who have all studied, and are still ceaselessly studying, the sources from which our earlier history can be formed, but notwithstanding their invaluable and increasing labours, I doubt if any special list of all the Irish MSS. or MSS. relating to Ireland, even of those contained in our own country, has ever been published, and we further know that our MSS. are scattered all over the Continent, and are to be found in many a distant city. It is again and again asserted by competent authorities that our MSS. are to be found in large numbers, especially in the libraries of other countries. Information as to such MSS, and as to the various copies of some works in MSS. would be of material use. But the subject is receiving increased attention now, and so many are the writers to-day that this interest will probably be maintained and increased, and sufficient funds provided so that much greater acquaintance with our MSS. will become general and information be in the power of anyone to acquire. There is also, I think, work to be done about MSS. in English or Latin, as well as Gaelic. Those, too, must not be neglected.

Let me suggest another line in which our bibliography may be pursued, namely, the compiling of lists of works published at particular periods of our history, or in particular places, or by particular writers. For example, a list of all the publications that issued from the presses of the Catholic Confederation in the middle of the seventeenth century would be of great interest and use.

So also would be a list of all the works and editions of any Irish writer which have appeared down to the present day. May I put to you and the country at large a few pertinent questions on this point of my subject? Take Goldsmith, for instance. Who knows the total editions of his works printed in this country? Has he been appreciated by his fellow-countrymen, or has he not? How many editions of Moore, his poetical or his musical works, can we boast of? Of standard classics, what editions have been reproduced here? How many plays? What music? These are queries that ought to touch us and arouse our interest.

I might here suggest to anyone interested in Irish bibliography that he should not try to take it up too widely, but rather to devote his attention to one particular branch of this subject, and to follow it up fully and carefully, studying it thoroughly and systematically, and then giving, either by papers, articles, or communications to magazines or otherwise, the result of his labours from time to time.

One branch of the subject deserves special attention, namely—works written or published by natives of Ireland on the Continent, which they were unable to do here. Sir John T. Gilbert, in his communications to the Royal Irish Academy (already referred to), drew particular attention to this subject, and most deservedly so, for his special knowledge of it would have rendered him particularly suited for the task himself had his life been spared; and it is a matter of great regret that he did not live to place on permanent record the full result of his researches in this direction.

But our greatest want is, in fact, a purely literary journal devoted to the subject of Irish bibliography. Such a work ought to have the support of all booksellers, especially those engaged in the second-hand book trade throughout the country. It would be a means of much profit to them, as it would raise the value of Irish books greatly, while a more persistent study might reveal some now forgotten or unexpected literary treasures of our land, and draw forth knowledge now confined to solitary and isolated bibliophiles scattered through the country.

As libraries are beginning to multiply throughout the land, I would suggest that each library in any particular town or locality should make it a special study to acquire all books relating to that particular town or locality, so that the student of this country at a future day might know where to look for the books, etc., dealing with the place. For example, the Derry libraries should make it a special point to obtain all books dealing with Derry, and keep them together, or at least keep them well catalogued. Then would the student or writer know to what place or library to go for the information he required.

It is a matter of great regret that so many of our printed as well as MSS. books are carried off to other lands. Many have been carried off to America. Hundreds, I think, have been carried off there during the last 25 or 30 years. It is, therefore, very important that our libraries here should acquire all such volumes that are still to be had, for in the case of individuals, death often brings private libraries suddenly into the market, and the books gathered slowly during a long lifetime are irrecoverably scattered in a day in all directions. Another matter which would much help this study would be the publication of the catalogue of every public library of any importance. I would even go further and suggest that book lovers who have made a particular line or study of their own in the gathering of Irish books of any particular time or place, or of any particular kind, should, as might be done with small expense, publish in a separate form, or in magazines, short particulars of their most valuable books, giving any important particulars. Here, again, a bibliographical journal would be of immense service.

There are not many private libraries in this country, but still there are some. Two I might refer to in particular, namely, the Diocesan Libraries of Cashel and Derry. Small as most of these libraries are, but often they contain valuable books. In some cases their catalogues have been printed, but the multiplication of such catalogues is much to be desired, and as such catalogues are required more particularly of older books, there would be the less need for their being reprinted. At later dates new editions or supplements, giving all books subsequently acquired, could be printed from time to time. It is a pity that the catalogue of the Royal Irish Academy is not printed, nor that of the splendid and unique collection of the Halliday Pamphlets and Tracts.

Thus, in a crude and incomplete form, I have endeavoured to put before you this subject, in which I personally take a very great interest, and to the study of which I would fain draw many, as the more that are engaged in its study and research the more likely are beneficial results and further acquisition of knowledge to follow. It is a mistake to despise things

(a) Note—Mr. F. Kidson, of Leeds has published a valuable and interesting work on British and Irish music publishers, and here are gathered under Ireland the first list of the kind well deserving of attention. He received information from excellent local authorities, such as D J O'Donoghue, Dr Culwick etc, Mr W H Grattan Flood (of Enniscorthy) is also at work on a somewhat similar subject, I understand.

which are at our own door, and to think that what is distant alone is valuable. Future generations will not thank us for such neglect and indifference, for too often thus have MSS. and books been lost.

Let no one think the pursuit of any branch of our Bibliography too uninteresting or useless. It will be found, on the contrary, very fascinating and useful. If old china and glass, coins, and stamps have their numerous devotees, much more should books and all book matters. What keen pleasure and delight does the book collector enjoy in finding a rare volume or tract, or in becoming its owner, after much labour and perhaps difficulty.

Our antiquarian societies have after many years of unceasing toil to a large extent awakened the country generally to a sense of the value of its ancient monuments. The ruined church or castle, the cromlech, rath, or caher, seldom now fall victims to deliberate or wanton destruction. We have learned that all such remains of past centuries should rather be carefully preserved as national monuments.

For a like treatment would I plead on behalf of the books and MSS. of our country. They, too, are national monuments often, and should be preserved carefully in our public libraries, and not left as the playthings or hobbies of a few individuals. My paper has been rather an appeal than a record. I fear, therefore, I have overlooked the work of some labourers in this field.

I have not attempted to give details of any of our special Bibliographical treasures. I have only dealt in generals, not in particulars, to try and show the need and use of a separate study of Irish Bibliography, using the term in its widest sense. Compiling lists of books and so forth, or of editions, may seem, and perhaps is, a very dry and uninteresting task, as monotonous as index-making. Granted, but could we do without indexes? Certainly not. So we cannot do without Bibliography, which is the handmaid, or at least the serving wench, of History, Poetry, Art, and Drama.

(The End.)

BOOKS.—LET THERE BE LIGHT.

BY ANNE C. L. BOTTA.

Light to the darkened mind
Bear, like the sun, the world's wide circle round,
Bright messengers that speak without a sound;
Light on the spirit blind
Shall fall where'er ye pass; your living ray
Shall change the night of ages into day—
God speed you on your way.

In closet and in hall
Too long alone your message hath been spoken,
The spell of gold that bound ye there is broken;
Go forth and shine on all.
The world's inheritance, the legacy
Bequeathed by genius to the race are ye;
Be like the sunlight, free.

A mighty power ye yield;
Ye wake grim centuries from their deep repose,
And bid their hoarded treasuries unclose,
The spoils of time to yield..
Ye hold the gift of immortality;
Bard, sage, and seer, whose fame shall never die,
Live thro' your ministry.

Noiseless upon your path,
Freighted with lore, romance, and song, ye speed,
Moving the world, in custom and in creed,
Waking its love or wrath;
Tyrants that blanch not on the battle-plain,
Quail at your silent coming, and in vain
Would bind the riven chain.

Shrines that embalm great souls,
Where yet the illustrious dead high converse hold,
As gods spake through their oracles of old,
Upon your mystic scrolls,
There lives a spell to guide our destiny—
The fire by night, the pillared cloud by day,
Upon our upward way.

CHURCH PEWS AND OTHER ECCLESIASTICAL SEATS.

They decently in form pay Heav'n its due,
And make a civil visit to her pew,
Young.

Very little has been written concerning pews, most likely because it is not a very interesting subject, and any research in this branch is unrewarded. Except a trifling article in an encyclopaedia and a solitary little pamphlet on the subject there is nothing to amuse or instruct in the subject. In Bloxam's "Principles of Ecclesiastical Architecture" the subject is briefly treated upon, at the same time containing the minutest information on the subject, which it is hard to scrape together, even with the greatest industry and labour.

It is not at all hard to prove the antiquity of seats, and it is no use to prove, as is well known, that they were used in the most ancient times. The oldest that exist at the present day are the Druid's stone chairs, of which there is said to be an example at Killiney, but according to Mr. Wakeman, in his "Handbook of Irish Antiquities," it is an imposture. This stone is commonly called "the Druid's Judgment Seat," it is formed of granite, and Mr. Wakeman says that it must have been taken good care of, for it is quite evident to anyone who has examined these stones carefully that small wedges have been introduced at various times, and these stones are ancient and may probably have belonged to some ancient monument now no longer existing; one great evidence of its being a forgery is the position it occupies in being near the eastern side of the enclosure, while the back of the seat is turned towards the west, and towards the centre of the space anciently encompassed with the stone circle. The following are its measurements: breadth at base, 11 feet and a half; depth of the seat, 1 foot 9 inches; extreme height, 7 feet.

There were often extensive stone ornamented seats near the walls of large churches and cathedrals, of which there is a fine example of Lenham Church, Kent. This stone chair is situated in the south wall of the chancel, one of the arms is a little broken, also a little of the moulding on the top, otherwise it is in very good order and preservation. Another example that may be appropriately introduced here is at St. Canice's Cathedral, in Kilkenny. This seat is called St. Ciaran's stone chair, who appears to have been the patron saint of the diocese, and one of the first teachers of Christianity in Ireland. This stone seat is not near so ornamented as that we have mentioned before in the chancel of Lenham Church, Kent, for it is only a square block of stone, with two arms slightly ornamented.

The form that pews have now was not assumed till after the Reformation; prior to this there were stone seats along the wall for the congregation, which still remain in several churches and cathedrals. Very early specimens may be seen at Tincdon, Northamptonshire; Headington, Oxfordshire; Hasely, also in Oxfordshire; Elkstone, Gloucestershire; Cubberly, Gloucestershire; Steeple, Aston, etc., which show the chief varieties of ancient pews. As we have gone so far we will describe the style that may be observed in most of these examples which we have named. The seats are separated from each other by wainscotting about two feet and a half or three feet high, and enclosed at each end by highly ornamented panels, which were commonly higher than the wainscot. A very fine example is at Nettlecoombe, Somersetshire, where it is adorned with acorns and—

"Carved o'er in ancient Gothic wise."

In the "Glossary of Terms used in Grecian, Roman, Italian, and Gothic Architecture" there is a very useful article on pews, in which we find that "the partitions sometimes reach down to the floors, and sometimes only to a little below the seats; they were usually perfectly plain, but the wainscotting next the cross passage was generally ornamented with panellings, tracery, small buttresses, etc. Opposite to the seat in each division or pew, a board was frequently placed, considerably narrower, but in other respects exactly like the seat; sometimes it was placed at rather a higher level; this kind of pewing was arranged so as to leave a broad passage down the middle aisle, with cross passages as to the different doorways, etc.; it was a place fixed to oak plates or to a wooden floor.

It may be useful to know that in the standard works on ecclesiastical law the word pew is seldom found, as it is generally spoken of as a church seat. Sometimes an aisle or a few seats in it are the property of private persons, and are claimed by some as having been erected for their ancestor's use, and it is necessary to repair the aisle or pew, as it may be in that manner proved that it has been used in past times by the ancestors of the claimant, which right must also have existed immemorially. According to ancient ecclesiastical law there ought to be no money matters regarding pews—in other words, no purchase or renting. The ordinary have most authority about pews; they can appropriate the seats to whom they think proper; but, where a faculty exists, the ordinaries have no authority (Sir John Fuller v. Lane, 2 Add Ecclesiastical Repertory 425). We see that by the general law, and of common right, the pews in a parish church are the common property of all the parish; they are for the use in common of the parishioners, who are all entitled to be seated, orderly and conveniently, so as best to provide for the accommodation of all, and besides, we find that "the churchwardens,"* who are the officers of the ordinary, are to place their parishioners according to their rank and station; but they are subject to control if any complaint be made against them.

* "Penny Encyclopaedia."

In the very heart of France, extending over 111 miles between the Loire and the Yonne, one of the Seine's tributaries, is the picturesque Nivernais Canal. The summit level of the canal is to be found between the Baye and Port Brule, 28 miles as the bird flies, north of the junction of the Canal with the Loire. Such is the peculiar section of the canal, and so insufficient is the width of the towpath at its summit, that it has been impossible to utilise the ordinary tow horses, and it was therefore necessary to resort to towing by men. Since the canal at its summit lies partly in tunnel and partly in a deep cutting, it could not manifestly be readily widened. The plan was hence adopted of employing mechanically-driven barges. Mechanical haulage is accomplished by means of an immersed chain. The chain was laid last August, in which month the tow-boat was tested in actual service. The engine with which the boat is equipped is a four-cycle petroleum Foret motor of sufficient power to enable the boat to tow three barges over the 2½ miles of the summit level in one hour and four minutes. Every day the boat makes two journeys each way. For these four trips the consumption of fuel varies between 5 and 6 gallons, or about 10 pints per barge hauled. At the rate of 41 centimes per litre the cost of fuel per barge hauled over the 2½ miles is about 2 francs and 46 centimes. Empty boats are towed free of charge.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:
Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

CHAPTER X.—Continued.

These high demands of the Irish monarch being reported to the council, they, by the advice of Miles de Cogan, resolved upon a sudden sally, hoping for success from the unexpectedness of the attempt. Miles de Cogan, at his own request, commanded the van-guard, consisting of 200 chosen men; Reymond le Gross put himself at the head of the battle, consisting of 200 also; and the earl advanced in the rere with the like number. They directed their march to Finglas, where Roderick lay encamped, and made such an unexpected and vigorous onset, that all fled before them. They slew 1,500 of the enemy, and took many prisoners, with the loss of only one English footman (Regan). The king himself escaped with some difficulty; for at the time of the first onset he was in a bath (Giral. Cambr. lib. I. cap. 25), on account of some bodily indisposition. This overthrow so discouraged the rest of the Irish, who had beleaguered the city in divers parts, that they abandoned the siege, and the town was relieved in its greatest extremity. For in the enemy's camp were found great store of baggage (Regan), and such quantities of corn, meal and pork as were sufficient to victual the city for a year.

The siege of Dublin being thus raised, the earl found himself at liberty to march a part of his forces to the relief of Fitz-Stephen, who had been closely besieged in his castle of Carrig, near Wexford. But all correspondence having been cut off between him and his friends in Dublin, he had surrendered before their arrival.

From Waterford earl Strongbow sailed to England, to appease the king; and he offered him all the acquisitions he had made in Ireland, either by the sword or marriage. It was agreed (Giral. Cambr. lib. I. cap. 29) that the earl should recognise the king as sovereign lord, and should surrender to him the city of Dublin, with the adjacent cantreds, the maritime towns of Leinster, the city of Waterford, and all castles, and should acknowledge to hold the remainder of the king and his heirs.

In the meantime, Asculph Mac-Torcall took advantage of the earl's absence, and arrived in the harbour of Dublin with a fleet of 60 sail and 10,000 soldiers (Regan ib.), levied in the isle of Man, the Orcades, and Norway, full of hopes to recover Dublin, and his former greatness. He was attended in this expedition by John le Dene (called John Wood, i.e., John the Mad by Cambrensis (cap. 21), a man of great estimation for military prowess; and with him came a good body of Norwegians. No time was lost in landing their men; for they hoped to surprise the city and carry it by a sudden assault. But the governor, Miles de Cogan, was not wanting in his preparations for a vigorous defence.

Near Dublin lived an Irish petty prince, named Gillemoholmock (Regan) who was at peace and good neighbourhood with the English, and his hostages were at that time with Cogan. This petty king came to offer his service in defence of the city. But Cogan insisted that he should stand aloof, as a neuter, in some quarter where he might see the action, and if the enemy fled, that he should cut off their retreat to their shipping, and help the English to kill them; but if the English gave ground, that he should fall upon them, and put as many of them to the sword as he could to prevent their dying by the hands of their enemies. Upon the performance of these conditions, which Gillemoholmock swore to, Cogan promised him to deliver up his hostages.

John le Dene made a furious assault on the east gate, then called the gate of St. Mary les Dames, from a nunnery of that name in the neighbourhood of it; but he was repulsed by Miles de Cogan, and 500 of the Norwegians fell in the action, and great numbers of them were drowned. It is reported by Maurice Regan that John le Dene was a man of such great strength, that with one blow of an axe he cut the thigh of an horseman asunder, and the leg fell to the ground. During the action at the east gate, Richard de Cogan, by direction of his brother, sallied out of the south gate (then called pole-gate, at the end of St. Werburgh street) with a body of 300 horse, and taking a circuit round that part of the city, fell with such resolution on the enemy in flank, that they were thrown into confusion; which Miles de Cogan perceiving, he sallied out of the east gate with the greatest strength of the garrison both horse and foot, and obtained a complete victory. As soon as the Norwegians were broken, Gillemoholmock, not unmindful of his engegements, pursued the chase with great eagerness, and slew many before they could reach their fleet.

The Norwegians slain in this engagement were numbered at 2,000, and only nine or ten Englishmen were lost. John le Dene fell by the hands of Miles de Cogan, and Asculph was taken prisoner by his brother; but boasting what mighty matters he would do when he obtained his liberty, Miles de Cogan commanded him to be beheaded in sight of the fleet. Those who had escaped the sword of the English were intercepted by Gillemoholmock, before they could reach their ships, and obliged to fly dispersed into the country, where, being odious to the natives on account of their former cruelties, they were slain in great numbers; so that of this army 2,000 did not escape, and most of their ships, homeward bound, afterwards perished by tempest.

Thus ended the power of the Ostmen in Dublin, who never after made any effort to recover their former possessions. Many of them had before incorporated with the Irish; and now upon this great revolution such as as remained in the city or neighbourhood became quiet subjects to the English, and by degrees one people with them.

This storm was soon followed by another (Cambrensis). For in the beginning of the year 1172, Tiernan O'Roirk, king of Brefiny (called by Cambrensis king of Meath), taking advantage of Strongbow's absence in England, and judging that the several assaults before mentioned had much weakened the garrison of Dublin, mustered up a considerable army, and marched to besiege it. But Miles de Cogan broke all his measures by a successful sally, in which his whole army was routed, and his son and other chieftains slain.

While these things were doing, king Henry II. was preparing for a voyage into Ireland, where he arrived (Regan. Cambrensis) near Waterford with a fleet of 240 ships on the 18th of October, 1172, attended by Earl Richard Strongbow, William Fitz-Aldelm, Humphrey de Bohum, Hugh de Lacy, Robert Fitz-Bernard, and many other lords, earls and barons, besides 400 knights or men-at-arms, and 4,000 soldiers well appointed. The first action he did upon his landing was to receive the investiture of the city of Waterford, and the homage of Earl Strongbow for the kingdom of Leinster, the inheritance of which was granted to him, and he placed Robert Fitz-Bernard in the government of Waterford, where he made but a short stay, and from thence marched to Dublin, which Strongbow, according to covenant, delivered up to him, and the king committed the government thereof to Hugh de Lacy, who is called in records and history, sometimes bailiff, sometimes seneschal, and sometimes guardian or custos of Dublin.

From Dublin, the king without any delay marched into Munster, and in this journey received the submission and homage of a great many petty princes in the south, particularly of Dermod Mac-Carthy, king of Cork, Donald O'Brien, king of Limerick, Donald Mac-Gilla-Phadruick, king of Ossory, O'Phelan, prince of Desies, and many others; and at Lismore his majesty held a synod of the clergy, and gave directions for the building of a castle there, which done he returned to Dublin. According to Giraldus Cambrensis, the king made but one journey to Dublin, and that after the time he had received the submissions of the princes of Munster. But we choose to follow Maurice Regan, who was an eye-witness of the

transactions of those times: and indeed it is more probable that the king should be in haste to proceed to Dublin (not only a town of the greatest importance in all Ireland, but also the metropolis of Leinster) in order to obtain the possession of it from Earl Strongbow, of whose growing power he was exceeding jealous.

Upon the king's return to Dublin on the 11th of November, many petty princes made their submission (Cambrensis), and swore allegiance to him in person, as Gillemoholmock, O'Chadesie, O'Carroll, king of Uriel, O'Melaghlin, king of Meath, O'Roirk, king of Brefiny, with many others. But Roderick O'Connor, king of Connaught and monarch of all Ireland, came no nearer to Dublin than the river Shannon, and there Hugh de Lacy and William Fitz-Aldelm repaired to him by commission from king Henry, to whom he made his submission, became tributary, swore allegiance, and gave hostages for his fidelity. Thus all Ireland made a voluntary submission to the king of England, except the princes of Ulster, and they also virtually did so in the submission of the supreme monarch, Roderick.

At this time the king granted the laws of England to the people of Ireland, which were joyfully received by them all, and confirmed by the king, having first received their oaths for the observation of them (Matth. Paris, ad. an. 1172). He seems also now to have established the courts of justice, and officers for the administration of the laws in Ireland, and to have held a parliament at Dublin: and though all the statutes at that time enacted are lost, yet the footsteps of one of them remain still in the Rolls-office, and is recited in a statute made in a parliament held at Trim, anno 2d Richard III. (Rot. Parl. 2d Rich. III. cap. 8), where it is enacted, "that the statute of Henry Fitz-Empress (i.e., Henry II.) made for the election of a governor of Ireland, when it shall happen to be void of any lawful governor, be by the authority of this parliament, ratified and confirmed, and that Thomas Fitz-Gerald, chancellor of Ireland, Sir Roland Fitz-Eustace, treasurer of Ireland, Philip Bermingham, chief justice of the king's bench of Ireland, Thomas Plunket, chief justice of the common pleas of Ireland, Oliver Eustace, chief baron of the exchequer of Ireland, or his deputy for the time being,, Thomas Dowdall, clerk and keeper of the rolls and records of the chancery of Ireland, John Estrete, the king's serjeant at law of Ireland, and every of them severally be adjudged to hold their several offices for their lives: and that it be lawful for you or the majority of them, as well as for all others, who shall severally hold any of the said offices, by reason of the death of any officer of the said offices, by gift under the teste of Gerald earl of Kildare, in any manner as governor of this land, according to the tenor, usage and execution of the said statute of Henry Fitz-Empress, with the assent of the nobles of this land, as is specified in the same statute, upon every such avoidance to choose a noble lord to be governor, and have the government as justice of Ireland, according to the ancient usage, used and executed from that time, and that it shall be lawful for such governor so chosen to hold parliaments and great councils, and what they shall do therein shall be good and effectual in law, as if done by any other governor in times passed. Provided that such election be made by the lords spiritual and temporal and nobles of the land." From hence it is apparent that king Henry II. made laws and statutes for Ireland, and by pointing out this statute concerning government in particular (which the statute of Richard III. was then about confirming) it is no way improbable that there were other statutes then made by that monarch for Ireland, which had no relation to the election of a governor, though they are now lost. It is manifest also from this statute, that Henry II. did first institute courts of justice in Ireland, and made his officers thereof. For the words, "that they (i.e., the chancellor, treasurer, &c.) do with the assent of the nobles of Ireland, and according to the tenor, usage, and execution of the statutes of Henry Fitz-Empress, as is specified in the same statute, elect a governor, who was to have the government as justice of Ireland, according to ancient usage, used and executed from that time," i.e., from the enacting the statute of Henry Fitz-Empress; or else how could it be said in this recited statute of Richard III. that the election must be made according to the "tenor of the said statute, and as it is therein specified" And if the tenor and ancient usage and execution of that statute of Henry II. was, that these great officers, with the nobles should make an election, the consequence is undeniable, and at the time of making the statute of Henry II. there were such officers for Ireland as chancellor, treasurer, judges, &c., and who, without all peradventure, did administer the laws of England to the subjects of Ireland then lately received and established there: and with this agrees the preamble of another statute (32 Hen. VIII. cap. 2), which says, "That ever since the conquest of the realm of Ireland, it has been used therein, that upon every avoidance of a governor, the council should elect a justice, &c.," and of the council have these great officers before-mentioned always been. To which may be added a resolution of the two houses of parliament of Ireland on the 11th of May, 1641, namely, "That in the reign of king Henry II. the common law and lawful customs of England were received, planted, and established in this his majesty's kingdom of Ireland." But this subject is more fully handled in another place (Antiq. of Irel. cap. 13). We only mention thus much here to obviate the common opinion of the historians who ascribe to king John the introduction of the English laws into this kingdom.

The king kept his Christmas (Cambr. ib. cap. 33) at Dublin in as great state as the place would then allow; for there was no house there capable of receiving his retinue; and therefore he was under the necessity of hastily erecting near St. Andrew's church a long pavilion, like a cabin, composed of smooth wattles after the fashion of the country (Tyr. Hist. v. 2 p. 374), which being well furnished with plate, household stuff and good cheer, made a better appearance than ever had been before seen in Ireland. Many of the Irish princes flocked thither to pay their duty to the king, not without admiration and applause of his magnificence. The greatest part of his charge was expended in royal entertainments to captivate the Irish, and his time in the five months he stayed there in endeavours so to settle matters as wholly for the time to come to frustrate France of the usual aid afforded by the Irish, when attacked by the arms of England. He had experienced the benefit of the crown received without charge by private adventurers, and therefore resolved by like methods to make the part he had gained defray the expense of subduing the whole. To this end he distributed large scopes of land and huge territories to the grandees who attended him. To Earl Strongbow (which, indeed, was his right by inheritance from king Dermod), all Leinster, to hold by homage only, the city of Dublin, and the adjoining cantreds, with a few maritime towns and castles excepted. To Hugh de Lacy, the kingdom of Meath, to hold by 50 knights. To John de Courcey, all Ulster, if he could conquer it; and to Robert Fitz-Stephen and Miles de Cogan, the kingdom of Cork (which formerly comprehended Desmond); and to Philip de Braos, the kingdom of Limerick. But these two latter grants were made after the king's return to England.

While the king remained at Dublin, he received intelligence from England that his son, the young king Henry (whom he had caused to be crowned), had rebelled against him, and that Normandy was in danger of revolting, into which the Pope had sent two legates to make an inquisition into the murder of archbishop Becket. To these distresses were added a plague and scarcity in Ireland, all which laid him under the necessity of hastening his return, though much against his inclination. For he was at first determined to stay the summer following in Ireland, to fortify it with some strongholds and castles, and settle it in a state of security.

He, therefore (according to Cambrensis) (cap. 38), left Hugh de Lacy with 20 gentlemen at arms, and Robert Fitz-Stephen and Maurice Fitz-Gerald with 20 other gentlemen at arms, to be wardens and constables of Dublin. He likewise committed to Humphrey de Bohun, Robert Fitz-Bernard, and Hugh de Gundeville, the government of Waterford, with 20 gentlemen at arms for their assistants; and he appointed William Fitz-Aldelm, Philip of Hastings, and Philip de Braos, with 20 gentlemen at arms, to govern Wexford. Maurice Regan differs from this account in the distribution of these governments. For, omitting Wexford, he places Robert Fitz-Bernard alone in the government of Waterford, and Hugh de Lacy alone in that of Dublin; but then he adds that Robert Fitz-Stephen, Meiler

Fitz-Henry, and Milo Fitz-David, were in a fort restrained, and obliged to remain at Dublin with Lacy, whether as assistants in the government, or as counsellors, is not said. However that may be, the king raised these and several other grandees to high power, and gave to them large portions of land, and great jurisdictions and privileges, in order to establish a counterbalance to Earl Strongbow, inheritor of all the rest of Leinster, who made his residence at Kildare (Regan), of whose reputation and interest both with the English adventurers and his new Irish subjects his majesty was past measure jealous. He also granted the city of Dublin to be inhabited by a colony from the city of Bristol, as will be more fully set forth hereafter.

Having thus settled the kingdom in as much security as the shortness of time would permit, he marched from Dublin to Wexford, where he embarked on Easter Monday (Cambrensis), 1173, about sunrise, and arrived at portfinan in Wales, half a league from St. David's, about noone the same day, having no man of note in his company but Miles de Cogan, whom he carried with him out of Ireland (Regan), and from St. David's he hastened with all imaginable expedition into Normandy.

Thus was completed the reduction of Dublin.

(To be continued.)

THE NOISY DRUM.

The drum is one of the most ancient of musical instruments—if it can be called a musical instrument, which some people will deny. All savage nations use drums of some kind, and it used to be considered indispensable in war, the sound being inspiring to the combatants. When the British troops went to America to quell the rebellion of the Colonists they brought drums with them, which some local poet describes thus:—

"They have got little barrels,
The heads be kivered wi' leather;
They beats upon 'em wi' little clubs,
To call their folk together."

Since that time the English drum-beaters have attained such precision in their art that it is stated that if all the drummers in the British army were collected together they would go through with all the beats in use (there are fifteen principal ones) in perfect time.

The Laplanders venerate their sacred drums. These are hollowed from a piece of pine or birch trunk, and covered at one end. A portion of the wood on the under side is left for a handle.

The ancient Romans used hand drums in their religious dances, and more than a thousand years ago other nations used them to give signals in war.

In Asia immense kettle drums are carried across the backs of camels in the trains of all crowned heads. The drums are adorned with gorgeous trappings, and a seat is prepared for the player upon the camel's back.

The musicians of Hindoostan play very dexterously on a very small pair of kettle drums, which are fastened before them by lengths of cloth wound several times around the body. They are beaten with the fingers. Single drums, beaten with two sticks of hard wood, are sometimes used to frighten away tigers.

Drums are used in Hindoo religious processions. They are made of baked earth, are sometimes a yard long, and are twice as large at the centre as at either end. Kettle drums are thin copper basins or bowls, covered with parchment or calfskin, which is held in place by an iron hoop.

A DARING INVESTIGATION OF MONT PELEE.

Prof. Angelo Heilprin, President of the Philadelphia Geographical Society, who has made two ascents of Mont Pelee, has just made known the results of his investigations. Several important discoveries have been made which throw light on the nature of the eruption, and which expose many of the wild exaggerations that always follow a terrible catastrophe. The first ascent of the mountain was made on May 31, and the second on June 1. On the first expedition, when the edge of the old crater was reached, the party was overtaken by a terrific thunderstorm. Clouds of rain and steam from the volcano so completely enveloped them that they were able to see only a few feet. Further progress was impossible, for on account of the electrical disturbances their compass refused to work, varying as much as 20 degrees to the eastward. With great difficulty they groped their way down the steep ridge, slipping at every step, for the rain-soaked ashes afforded a precarious footing, and threatened to hurl them down the yawning gulfs at each side. The terrific detonations heard were supposed to be of volcanic and not electrical origin, for when the River Fallaise was reached it was found to be filled with steam and mud indicating a fresh volcanic disturbance. The party reached Acier, caked with mud and much disappointed. However, on the next morning Prof. Heilprin was ready for another encounter with Mont Pelee. We cannot but admire the bravery and devotion of this man, who, with his followers, twice climbed the angry volcano, and who once, by a sudden dash during a lift in the clouds of vapour, reached the very lip of the crater, from which point stones could be dropped into the white-hot mass, 200 feet below. Standing on the very brink of the crater, he was witness of a most awful yet fascinating scene. As was to be expected, the principal output of the crater was steam, and but for a favourable shift in the vapour clouds the party could not have made the valuable observations that they did. So far as known, steam is always found in volcanoes, and seems to be the main cause of the eruption. Scientists divide volcanoes into two classes—the quiet, characterised by a flow of lava, and the explosve, characterised by the blowing out of fragments. Prof. Heilprin states positively that no lava has flowed from the crater of Mont Pelee. One of the main characteristics of the explosive volcano is what is called the "cinder-cone." This is formed of material which is cast out and which drops back around the orifice from which it was thrown, forming a cone Prof. Heilprin, however, states that no such cone was found in this volcano. What was taken to be a cinder-cone proved to be but a pile of ejected rocks with no central vent. Of course, in the present condition of Mont Pelee it is impossible to state absolutely that there is no cinder-cone, for it was possible to see down only about 200 feet, and it is believed that the crater is much deeper than this. In shape the new crater appears like a great gash in the mountain running north and south, and expanding into a bowl. The fissure runs transversely to the old crater, and appears to have nearly rifted the mountain. In the first reports of the eruption statements were made that the mountain had been reduced to one-third its original height. This is now shown to be utterly untrue, for from a number of observations taken with an aneroid barometer it was found that the height of the mountain had remained unaltered, and that no important topographical changes had taken place. The exaggerated reports may have had their origin in the fact that a dense cloud of steam normally covers the top of the mountain, which might lead to the supposition that the mountain was much reduced in height. From the investigations made, Prof. Heilprin considers violent eruptions improbable. Mont Pelee has freed itself of interior pressure, and while small disturbances may continue to occur, they will probably decrease in frequency and power. However, no one can prophesy with certainty on subjects of this sort. Volcanic action is very little understood; new and unexpected phenomena are continually occurring. The explosion of flaming gases is unprecedented, so far as is known, and was probably the main cause of the terrible loss of life. The electrical phenomena were also new, though they probably did not play an important part in the destruction of the city. Specimens collected by Prof. Heilprin show that the lightning bolts were small and very intense, penetrating the walls of the houses. No other volcano was ever so rapid in action, and never before has such a loss of life resulted directly from a volcanic eruption.

THE TOAD.

ITS HISTORY AND TRADITIONS.

Shakespeare speaks of the toad as wearing a precious jewel in his head. In the days of the poet, indeed from the Fifteenth to the Eighteenth Century, the toad was something of a power in the world—a malevolent power. It was believed to secrete a most poisonous venom, which it spat impartially at man and beast. The cattle plague, which occasionally ravaged Great Britain, and many mysterious human deaths were generally understood to be the malignant work of these animals.

There was one antagonist, however, which was able to meet the toad on its own ground, and triumph in single combat. The spider of those days was quite equal to him in venomous qualities.

Toads eat spiders, and think nothing of it. They are gifted with a patent, reversible tongue, firmly fixed in front, and with the gummy end free and pointing down the throat. Sitting immovable with an inscrutable countenance, the flies, gnats, and mosquitos, which presume on this aparent indifference to all earthly appetites and venture too near, are lost; flap goes the tongue, the insect is gone, and the toad looks as solemn as before.

Mr. Charles Dudley Warner, in his "Summer in a Garden," pays a tribute to the toad, in the character of the gardener's friend. "In a melon patch," he says, "nothing so disgusts the beetles and bugs of all sorts, which delight to make that spot their summer resort, as the presence of a stout and agile toad." American toads, by the way, are of a different branch of the family from those of Great Britain—larger, not so dark in colour, and much more agile.

Toads are regarded as so valuable in England that they are imported into Great Britain from Austria. They are carefully packed in moss, in wooden boxes, and are sold to gardeners at the rate of £3 or £4 per hundred. But the fact remains that their ancient value and prestige have departed. In days of old fortune-tellers were helpless without them; witches' incantations were incomplete. The witches in Macbeth began their wonderful mixture in the bubbling cauldron with the—

"Toad, that under cold stone
Days and nights has thirty-one
Sweltered venom, sleeping, got."

They further augmented the charm with "toe of frog."

In the mediaeval "Physicke Bookes" toads and frogs furnish specifics for many and various ailments. "Take the right eye of a frogge: lap it in russet cloath and hang it about the necke, it will cure the right Eye if it be bleared, and if the left Eye be greved, do the like by the left Eye of the frogge."

A baked toad, in a bag of silk, worn about the nack, kept off the ague, and a toad, alive or dead, applied to the back of the neck, stopped bleeding at the nose. A dried and powdered toad swallowed in spoonfuls formed a love philter, irresistible to the most obdurate swain.

Alas! virtue has gone out of him. Toad powder would only make one ill now, and even that precious jewel in his head has been lost—no trace of it remains. A child of my acquaintance recently made a thorough scientific investigation of the subject, and reported as follows: "A toad's head is partly full of water and partly empty."

LITERARY NOTES.

Mr. Stopford Brooke, Mr. Edward Gosse, and Mr. William Canton have made their awards in the contest of Coronation odes which "Good Words" organised. 1,084 odes were submitted. The successful competitors were: First price of £50, Lauchlan MacLean Watt, minister, of Alloa, Scotland; second prize of £15, Rev. S. Cornish Watkins, Kingston, Herefordshire; third prize, divided, £5, to Lucy Eveline Smith, Springbank, Heriot Row, Dunedin, New Zealand, and £5 to F. H. Wood, M.A., Brabourne Cottage, Bromley Park, Kent.

✧ ✧ ✧

Although the late Lord Acton had been a peer for thirty-three years, I do not (writes an old Parliamentary hand) remember hearing him speak in the House of Lords. Indeed, he spent little time in that assembly, though he was respected and liked by both parties. The fact is that Lord Acton was too much of a student to be a very active politician, and it was only Mr. Gladstone's friendship for him that led to his being a Lord-in-Waiting from 1892 to 1895. Then he became Professor of Modern History at Cambridge, and in 1891 was appointed Romanes Lecturer at Oxford. Moreover, he was a Royal Commissioner on Historical Manuscripts and a trustee of the British Museum.

HENRY RIDER HAGGARD
(June 22, 1856).

"This is my birthday."—Shakespeare.

A goodly Rider, well adventuring.—Spenser.
Tale followed tale like a merry-go round
Whereof sport turned the handle.—Browning.

If . . . .
Storm and adventure, heat and cold,
If schooners, islands, and maroons
And Buccaneers and buried gold,
And all the romances, retold
Exactly in the ancient way
Can please, as me they pleased of old,
The wiser youngsters of to-day:
So be it, and fall on.—R. L. Stevenson.

A book for the winter evening schoolroom, when the tasks are over and the hour for bed draws near.—R. R. Stevenson.
—"From the "Daily Chronicle."

✧ ✧ ✧

We have received the first number of the "Times of Egypt," a paper printed in Arabic and English, and addressed "to those who, in this maelstrom of cosmopolitanism, are slowly crystallising into a nation." It would seem that a great national spirit is developing in Egypt. The leaders of the movement anticipate the time when the country shall be free from the tutelage of John Bull and "Abdul Moneim shall be hailed ruler of Africa to the Equator—the day when Egypt shall be able to say to the Powers of the earth. "Thus far and no farther!" And as for Arabi Pacha, "who dreamed of National Independence and left to England the nightmare of Anarchy . . fifty years hence his statue will rise higher than the Pyramid." From which it appears that in Egypt John Bull has a promising pupil.

✧ ✧ ✧

Two writers, little known and widely-different in style, passed away last week. In one boys and girls have lost a benefactor, for it is Dr. James Macaulay's chief title to fame that he was the founder of the "Boys' Own Paper" and the "Girl's Own Paper." So universally have these publications influenced the lives of the young that it is difficult to imagine what the juvenile world was like before these harbingers of wholesome juvenile literature were evolved. Mr. Samuel Butler, whose death also took place last week, was, like his great namesake, a satirist. Much water has passed beneath the bridges, and many books from the press, since "Erewhon" was published in 1872. In all that time, however, its keen irony and engaging fantasy have not been equalled, without it be by its sequel of last year, "Erewhon Revisited."

✧ ✧ ✧

The style of certain American reviewers is still amazingly enraptured. Thus we are told of a lady named Hallie Erminie Rives that her "previous stories of sizzling, seething, white-hot passion will not have prepared her readers for the new book, 'Hearts Courageous,' to which her name is appended." The heroine is "all raptures—all sapphire and rose gold," with a "face fragrant with a white fragrance," and so on. This lady's name is Anne Tillotson, and she is "the friend of Jefferson and Patrick Henry." We need hardly add that so much "white fragrance" could only be bestowed upon a masquerading Frenchman, and that he was really a Marquis.

✧ ✧ ✧

A correspondent of the "Academy" asks the iconoclastic question, "Did Campbell write 'The Exile of Erin'?" He points out that the poem is often printed with a note explaining that the "exile" was Anthony McCann (exiled for being implicated in the '98 rebellion) whom Campbell met at Hamburg in 1806. He then draws our attention to the opening lines:—

There came to the beach a poor exile of Erin,
The dew on his thin robe was heavy and chill;
For his country he sighed when at twilight repairing
To wander alone by the wind-beaten hill.
But the day-star attracted his eye's sad devotion.
For it rose o'er his own native isle of the ocean.

"I take it," says the correspondent, "from the context that the twilight is that of the morning. But at Hamburg the day-star does not rise over Ireland. It is not, however, to convict Campbell of an astronomical blunder that I trouble you—I once met with a statement that the authorship of the poem had been persistently claimed by an obscure Irish versifier. I regret that I cannot give the reference to that statement now—I dismissed it with contempt at the time—but as the above quotation points to America, where the morning star is seen to rise over Ireland, and which is the land where most Irish exiles are to be found, as the locale of the poem it seems possible (1) that the exile was not McCann, (2) that the poem may have been mistakenly ascribed to Campbell on the strength of his acquaintance with M'Cann." Perhaps a reader may have views on these points. Our own opinion is that the real inspiratioin of such a poem is seldom an exact event or rencontre, and that where the poet himself has left no definite statement investigation is of little profit.

✧ ✧ ✧

In his always interesting "Bystander" column in the "Graphic" Mr. J. Ashby-Sterry notes a point in that deterioration of manners of which we hear so much nowadays. When he was a boy the man who converted a gift into cash was regarded as a person who might be tempted to pocket your spoons. But all that is altered. "Otherwise how can you account for the frequency with which you see presentation volumes in the catalogues of second-hand booksellers? This, too, when the donors and donees are still living, and the latter, to all appearance, in flourishing circumstances. If the latter have no feeling on the matter you would think they might at least have the decency to remove the presentation inscription. But why should they? They are all aware that the aforesaid inscription adds to the value of the book, and to make an extra two or three shillings out of your friends when you can is quite in harmony with the manners of to-day. This kind of thing is, however, not entirely confined to books. You see most astonishing things in the same line with regard to presentation pictures and sketches at the various salerooms, and the more celebrated the artist is, the more determined his so-called friends seem to be to make money out of him. Fine-art dealers and second-hand booksellers could, I fancy, tell you some strange stories with regard to this matter, were they so minded."

✧ ✧ ✧

The "Microbe," which describes itself as a journalette, and hails from Laura street, New Brunswick, might be supposed to have died of its title. The editor, however, gives another explanation. After telling us that the publication of the "Microbe" is to be suspended for "a time," he says:—"Not that the promoters are difficient (sic.) in energy or enthusiasm, but that, in our limited circle, we find it impossible to get matter as good as we desire it to be." This hardly seems surprising, since the title page sets forth that "there is no danger of any contributor being paid." But the editor of the now moribund "Microbe" still has hope—"We will not be inactive in the interim, but shall use the time in canvassing for talent, for we are very far from despairing, and at any unexpected hour may again soar into being.' To make this possible, however, "we would want an advance list of at least 120 subs to make it feasible." This ambitious editor now proposes to "take a piece of chalk and scrawl upon the door of our busy sanctum Resurgam." He concludes, however, with this depressing parable:—

Somehow writing this announcement reminds us of a time when we buried a certain little guinea-pig, and again when we saw a little son of the household dog panting, with a white tongue, in the middle of a cruel road where carts go by.

But these did not arise again. Amen.

✧ ✧ ✧

Mr. Algernon Ashton, who has made himself a specialist in the troublesome art of looking after the tombs and local habitations of eminent men and women, calls attention in the "Pilot" to a trick which is being played on the sentimental traveller in search of historical associations. It will be remembered that Dryden's house in Gerrard street, Soho, was demolished in the middle of last year, amidst a chorus of regrets from those who are grieved

When even the shade
Of that which once was great is passed away.

The destruction was an act of Vandalism, for the house is said to have been a handsome and strongly built one, showing no signs of decay at all, and it might just as well have been used by many coming generations. However, it is no use shedding tears over buildings which have already gone to the limbo of the housebreaker. Mr. Aston's complaint relates to a different and more easily remedied matter. On the old house the Society of Arts—according to its useful custom—had affixed a tablet with the inscription—"John Dryden, poet, lived here." The builder who is responsible for the vanishing of Dryden's house evidently felt some small compunction, or perhaps a sense of economy told him that it was a pity to waste a good tablet. At any rate Mr. Ashton writes:—

A few days ago I happened to be passing down Gerrard street again, when to my utmost surprise and disgust, I noticed that on the site of Dryden's old dwelling-house not only was there erected a jerry-built monstrosity, but the same old memorial tablet affixed on to the brand-new wall! This is, unhappily, not the only instance of a house bearing a tablet stating that a certain great man lived here when he never did live there, as the fraudulent tablets to Hogarth in Leicester Square, to Turner in Queen Anne street, Marylebone, and to Byron in Holles street amply testify. It is an insane practice, and ought to be stopped forthwith, as it only tends to entirely mislead future generations, who will naturally believe these houses to be the actual historical ones.

It certainly seems as if there ought to be some modification in these useful tablets when they refer not to the actual house in which a famous man lived, but only to the site where it once stood—"poor, poor dumb mouths!"

SCIENTIFIC TOPICS.

The journey of a bottle from Central Illinois to the Pacific Ocean has just come to light through the receipt of a letter by Walter Roeder, of Bloomington, Ill., from Jesse Wilson, of Santa Monica, Cal., saying that he had found a bottle off the coast of California which contained a letter written by Roeder and asking the finder to inform him when and where it was found. The letter was written on January 27, 1900, and after being placed in the bottle the receptacle was cast into the water of the Mackinaw River, ten miles west of Bloomington. The bottle must have followed the river until the confluence with the Illinois was reached, and thence floated to the Mississippi and through the Gulf of Mexico to the Atlantic Ocean. The currents of the ocean are supposed to have carried the bottle around Cape Horn and thence up the Pacific coast. The journey exceeded 10,000 miles. The bottle and message betrayed little evidence of the long journey.

✧ ✧ ✧

A simple but effective device for preventing the freezing of gas pipes is described in the "Illustrirte Zeitung fur Blechindustrie," consisting merely in the insertion of a wider piece of pipe just where the conduit issues from the ground or wall. For a conduit of a diameter from ⅜ to ½ of an inch a length of from 20 centimetres to 30 centimetres of a pipe 1 inch in diameter suffices. The deposition of the water particles contained in the gas, which on leaving the works have a temperature of about 10 degs. C., naturally takes place just where the gas is subjected to the most abrupt change of temperature—ie., on its issue from the ground. If the external temperature is sufficiently low, the deposited water immediately congeals and clogs the circuit. As soon as the gas has acquired the temperature of the conduit the deposition of water and congealing cease, and this is said to be the case a short distance beyond the first cooling point. Therefore there should be no congealing beyond the inserted wider piece, and this piece is wide enough to accommodate a thick ice-crust and to still leave a free passage for the gas. As a matter of fact, the principle of this new method is already employed in street lamps, and with success.

✧ ✧ ✧

Professor Robert T. Hill, who is at the head of the expedition which was sent to Martinique by the United States National Geographical Society, succeeded in getting a near view of Mont Pelee just at the time when the last violent explosion occurred. He reached Morne Rouge, the summer resort of St. Pierre, where he obtained a series of valuable photographs. Professor Hill states that at seven o'clock on Monday evening he witnessed from a point near St. Pierre a frightful explosion of Mont Pelee, and was able to take note of the accompanying phenomena. He states that following the salvos of detonations from the mountain, gigantic mushroom-shaped columns of smoke and cinders ascended into the clear, scarlet sky, and then spread in a vast black sheet to the south and directly over his head. Through this sheet, which extended to a distance of ten miles from the crater, vivid and awful lightning-like bolts flashed with alarming frequency; they differed from lightning in that they were horizontal and not perpendicular. This Professor Hill considers to be indisputable evidence of the explosive oxidation of the gases after they left the crater—a most important observation and a phenomena which is entirely new in volcanic history and goes a long way to explain the awful character of the catastrophe.

✧ ✧ ✧

The landscape gardener of New York City, Mr. Samuel Parsons, has drawn a gloomy picture of the future of Central Park, New York's famous pleasure ground. According to Mr. Parsons, about two million dollars will be required to save the park from ruin. The magnificent elms which line the Mall are said to be slowly dying for lack of nutrition. The removal of dead leaves in the interest of cleanliness has done its share to expose to the parching rays of the sun a soil which is in itself not over-nutritious. Mr. Parsons naturally hesitates to demand two million dollars for the saving of the park. It is being seriously discussed whether it is not advisable to abandon the park altogether, and to seek another spot which might be converted into an open-air pleasure ground for the people. Property owners have for years complained that the peculiar situation of the park, splitting the city as it does in two long halves, necessitates detours and causes not a little inconvenience. That the park will sooner or later give place to the all-devouring business needs of the city is hardly to be questioned, lamentable though that fact may be. Mr. Parsons is against the selling of the park for building plots, because, in his opinion, it is the most beautifully laid out property of its kind.

✧ ✧ ✧

During the work of excavating for the foundations of the new building of the Opera Pia di San Paolo, the pawnbroking and loan establishment in the Via Monte di Pieta in Turin, a well-preserved bronze head of Emperor Tiberius of Roman days was discovered. It was found August 24, 1901. Although oxidised and covered with a faint green deposit, it shows manifest traces of gilding in the sockets of the eyes, in the ears, and in the hair. The metal of the head has a thickness of three millimetres. The head measures twenty-six centimetres from ear to ear, and twenty-nine from brow to chin. The features are excellently executed, and are of manly beauty, the nose slightly aquiline and the hair crisp and short. This valuable find lay at a depth of about six metres below the level of the street, in an ancient well which had to be removed to make way for the foundations. This, coupled with the fact that the head shows signs of breakage at the neck, led to the conclusion that it belonged to a complete statue and was stolen and thrown into the well. It is possible that the head belonged to an equestrian statue, since the foreleg of a horse and the right leg of the rider were found in 1559, when the Church of the Holy Martyrs was being built near this site. These two objects are now in the Museum of Antiquities in Turin.

✧ ✧ ✧

Of the two possible routes for the Isthmus Canal, Panama and Nicaragua, there can be no question (says the "Scientific American"), with the red ruin of Pelee before our eyes, that choice must be made of that route, which present physical conditions and local tradition and history prove to be the least threatened with volcanic convulsions. The situation at Panama may be summed up in the statement that the Isthmus has not been modified since ages before man appeared on the earth; that no trace of volcanic agency can be found there; and that there is within 180 miles of the canal no volcano even of the extinct variety. Nicaragua, on the other hand, has always been a centre of seismic disturbances; its route is lined with, or closely approximate to, volcanoes, some of which have shown evidence of tremendous latent energy. Only 64 years ago Cosquina, in the north-west of Nicaragua, belched forth for two whole days a mass of matter, that in every six minutes of the eruption, according to M. Buneau-Varilla, would have equalled the whole mass of material to be dug from the Nicaragua Canal. The roar was audible a thousand miles distant, and ashes fell 1,400 miles from the Isthmus. Seven years later what is known as "the great earthquake" completely destroyed the city of Rivas, which is only five miles from the Pacific terminus of the canal, and seriously damaged Greytown, the Atlantic terminus.

✧ ✧ ✧

It is well-known that high-voltage currents have been in use for years in the United States for long distance transmission of energy. Some of the plants, where the climate is very favourable, have adopted voltages up to 40,000 and even 50,000 volts. On the Continent, where water power in the immediate vicinity of industrial centres is becoming more and more scarce, long distance power transmission with high voltage is being frequently resorted to, as the following will show:—A 23-mile transmission at 20,000 volts has been constructed to supply Como with energy. In the vicinity of Zaragoza, in Spain, two plants, of 4,000 horse-power and 6,000 horse-power respectively, are being installed. The power obtained will be transmitted at 30,000 volts over distances of 28 and 50 miles. The Feurs and Morge installation, near Grenoble, in France, is a 7,000 horse-power plant, supplying current at 26,000 volts to a number of towns and villages, such as Voiron, Moirans, etc., the distance covered being 32 miles. This plant has been completed, and is now working. The Reznau plant near Waldshut provides 10,000 horse-power, and the current is sent over distances up to 37.5 miles at a voltage of 25,000. Lastly, an order has recently been placed for the machinery of a 13,000 horse-power plant to be erected on the Cellina River in Northern Italy, the energy being supplied, at a tension of 36,000 volts, to the towns of Venice, Udine, Pordenone, etc. Current in this installation is transmitted over distances up to 56 miles. In all the above plants the current is three-phase, and is generated at a comparatively low tension of a few thousand volts, and raised to the transmission voltage by means of stationary transformers.

✧ ✧ ✧

A bridge has recently been completed at Zanesville, Ohio, which is probably the only structure of a similar shape in the United States, if not in the world. It is popularly known as the "Y" bridge, from the fact that it consists of three arms, which join at the confluence of the Muskingum and Licking rivers. It takes the place of a wooden covered bridge of the same design which was torn down in 1901 because it had become so weakened as to be dangerous for traffic. The site of the former bridge was utilised, but larger piers were constructed of masonry. Upon those were placed timber centering to sustain the steel ribs which constitute the permanent framework. The ribs are groups of pairs of bars, fifteen to an arch. A concrete filling consisting of gravel, sand, and cement was placed upon the steel framework. Next to this was placed a layer of asphalt to prevent water from reaching the tops of the arches, and upon the asphalt was laid a mixture of gravel, sand, and cinders, topped with another layer of concrete six inches in thickness. The roadway of the bridge is paved with brick, and sustains the track for an electric railroad, the rails of which are bolted to steel channels embedded in the concrete. Conduits are also arranged under each sidewalk for electric and telephone wires as well as gas mains. The east arm of the bridge is the longest, consisting of three spans 122 feet in length. The west arm is composed of spans 120½ and 99 feet in length respectively, while the north arm is composed of three, each of which is 81 feet in length. The arch rings are elliptical, while the piers sustaining them are finished with half-round columns or buttresses intended to support poles for electric lamps. Only the exterior of the piers is composed of masonry, the space within being filled with concrete also.

GLIMPSES OF THE PAST.

From the Dublin Newspapers of 1793.

PROROGATION OF PARLIAMENT.

DUBLIN, MARCH 25, 1794.

This day his Excellency the Lord Lieutenant went in State to the House of Peers, and sent a message to the Commons, desiring their immediate attendance. Accordingly the House went up, when Mr. Speaker addressed his Excellency with the following speech, on presenting the bills of supply for the Royal Address:—

"The Commons attend your Excellency with the bills, wherein they have cheerfully and unanimously granted supplies to the full amount which his Majesty's Ministers have desired for the public service, and the effectual defence of this kingdom.

"Their amount is great: but engaged, as the empire is, in a contest wherein the avowed objects of the enemy are the annihilation of all established Government, the subversion of all religion, and the extirpation of every principle on which civil society is founded, they are sincerely happy that the resources of the kingdom enable them, without laying much additional burden of new taxes, substantially to shew the zeal and ardour with which they are determined to support his Majesty in the necessary prosecution of so unprovoked a war.

"Knowing, from experience, your Excellency's attachment to the welfare of Ireland, they are sensible of the satisfaction that your Excellency must feel in the ample power which these bills entrust, for immediately putting and maintaining this kingdom in such a state of effectual and secure defence, as must shew to the enemies of its happiness the fruitless and desperate folly of any attempt to invade its shores, or disturb its tranquility; and they rely, with the most implicit confidence, on your Excellency's wisdom and vigour, in pursuing every necessary measure for that defence."

After his Excellency had given the Royal Assent to twenty-six public bills, he was pleased to make the following speech:—

"My Lords and Gentlemen—

"The important objects which engaged your attention being concluded, I am enabled to relieve you from further attendance in Parliament.

"I have his Majesty's commands to express his most entire satisfaction in the zeal and unanimity which has governed your proceedings during the present session, and the cheerfulness with which you have provided for the extraordinary emergencies of the State. This conduct, so honourable to yourselves, must essentially tend to preserve the internal tranquility of your country, to maintain that free constitution under which you enjoy such inestimable blessings, and is highly beneficial to the general interests of the empire, and to the common cause of Europe.

"Gentlemen of the House of Commons—

"I am directed by his Majesty to return you his thanks for the very liberal supplies you have voted for the public service. You may rely on their faithful application to the purposes for which they were granted.

"My Lords and Gentlemen—

"His Majesty feels, with the most cordial pleasure, the loyalty of his people of Ireland, and the affectionate determination they have always shown to stand and fall with Great Britain. In the contest in which we are engaged by the unprovoked aggression of France, measures of the most vigorous nature continue to be requisite; and his Majesty will persevere in his exertions, in conjunction with his allies, against the common enemy. Under the Divine Providence, on the justice of his cause, on the disciplined valour of his fleets and armies, and the united efforts of all his subjects, his Majesty relies for a favourable issue to a war which, on the part of our enemies, is waged against the envied liberty of these kingdoms, and the established Government of every State in Europe.

"I applaud your wisdom in passing an Act for preserving the property within this kingdom, of persons resident in France, from becoming the plunder of those who have usurped the Government of that unhappy country. It is peculiarly our duty to support the security of private property, and to maintain the principles of justice, when doctrines have been advanced, and attempts endeavoured to be carried into execution, for the destruction of both.

"I am sorry to inform you, that in some parts of the county of Cork, the people, deluded by the artifices of wicked and designing men, have assembled in numerous bodies, and have compelled many to take unlawful oaths. The timely exertions of the magistrates, aided by the spirited conduct of his Majesty's regular and militia forces, have nearly suppressed those disturbances. No attention shall be wanting on my part to the protection of the peaceable and industrious, and to the punishment of offenders againstthe law; and especially of those who have instigated the ignorant to the commission of such dangerous crimes.

"The early conclusion of the session will enable you, in your respective counties, to enforce a due obedience to the laws, and to inculcate that spirit of loyalty to the King, and attachment to our happy constitution, which has so eminently distinguished your conduct.

"I am truly sensible of the repeated testimonies I have received of your confidence and support, for which I return you my most sincere thanks, and shall endeavour to ensure their continuance, by employing every power with which I am invested, for the maintenance of the public tranquillity, and the advantage of this kingdom; and by faithfully representing to his Majesty your unremitting attention to the welgare of Ireland, and your unanimous exertions for the general cause of the empire."

And then the Lord Chancellor declared, that it was his Excellency the Lord Lieutenant's pleasure, that this Parliament be prorogued to Tuesday, the 27th day of May next—and the Parliament was accordingly prorogued to that day.

WAR OFFICE, DUBLIN.

MARCH 25.

His Majesty has been pleased to make the following promotions in the army on this establishment, and the commissions are come over accordingly—viz:

HORSE.

8th Regiment of Dragoon Guards.

Captain James Hall, from the 9th Dragoons, to be major, vice Vandeleur, promoted in the 17th Dragoons.

9th Regiment.

Mr. James Kearney to be cornet, vice Armstrong, promoted.

14th Regiment.

Lieutenant the Honourable James Butler to be captain, vice Noble, promoted in the 38th Foot.

17th Regiment.

Major Thomas Pakenham Vandeleur, from the 8th Dragoons, to be lieutenant-colonel, vice Birch, resigned.

FOOT.

8th Regiment.

Ensign James Powell to be lieutenant, vice Bliss, resigned.

Mr. Joseph Day to be ensign.

12th Regiment.

Mr. Thomas Gray to be surgeon, vice M'Lamburgh, deceased.

22nd Regiment.

Mr. John Wetherelt to be ensign, vice Piers, promoted.

31st Regiment.

Rev. Wm. Clay to be chaplain, vice Wayet, resigned.

33rd Regiment.

Lieutenant Amos G. Norcott to be captain, vice Gore, promoted in lieutenant-colonel commandant Murray's regiment.

Ensign Peter Kington to be lieutenant.

Mr. John Young to be ensign, vice Eustace, promoted.

DUBLIN, MARCH 27.

Last Saturday sailed from the Cove of Cork, his Majesty's ships Swiftsure, Capt. Bayle; Beliqueux, Capt, Brien; the Alarm, Resource, Fly, and Scorpion frigates, 16 transports with troops, and 89 merchants' ships, under convoy for the West Indies.

Sunday his Majesty's ship St. Albans, Capt. Vashen, of 64 guns, and the Pearl, the Hon. Capt. De Courcey, arrived at Cork, with a number of merchantmen under convoy from England. The Pearl sailed soon after on a cruise.

Yesterday the high constable impressed a number of cars in the city for conveying the baggage of the 85th Regiment, now under marching orders.

So great was the alarm caused amongst the drivers, that all the coal cars drove o ffthe stands; and even those usually employed in carrying flour were afraid to appear.

Tuesday evening the Right Hon. Mr. Douglas, with his suite, sailed for Holyhead.

Yesterday morning the Hon. Baron Smith and Mr. Chatterton, Judges on the Leinster circuit, set off from town for Naas, where they opened their respective courts.

(To be continued.)

TO THE

"DUBLIN PENNY JOURNAL."

Post free to any part of Ireland, Great Britain, Australia, New Zealand, Canada, United States.

Twelve months, 6s 6d; six months, 3s 3d; Three months, 1s 8d.

Printed and published for the proprietors at 90 Middle Abbey Street, Dublin, by W. F. Dennehy, to whom all cheques and money orders should be made payable.

Dublin Penny Journal

A Magazine of Art, Archæology, Literature, and Science.

Vol. I., No. 15.] DUBLIN: SATURDAY, JULY 12, 1902. [Price One Penny.

HIGH STREET, KILKENNY,

AS IT WAS BEFORE 1770.

SHOWING THE ANCIENT MARKET CROSS NOW DEMOLISHED.

The above picture, made from an original drawing at the time, shows High-street, Kilkenny, about the year 1770. It is most interesting because it depicts the old houses of that date with the old solid-wheeled market cars, then and subsequently in use. Its chief feature, however, is that it shows standing in position the beautiful ancient market cross, which was barbarously removed in 1771, after it had stood for more than four centuries and a half. The date "MCCC" was inscribed on the fourth step. An engraving of the cross was given in the "Dublin Penny Journal" in 1832, but the structure does not look in it so imposing as in the engraving given above, the statues not being shown. It was, indeed, a pity that if it were found necessary to remove so venerable a monument, a site was not found upon which it might have been re-erected.

THE FENIAN TRADITIONS;

OR,

SLIABH-NA-M-BAN.

BY JOHN DUNNE.

III.

The sports of the Fenians, particularly the exercises of the chase, were calculated to create a good appetite, which was satisfied every evening with the choicest venison around the ꝼalaċa ꝼian, or cooking pits of the Fenians; and the gigantic Ossian, though well worn down with age in the days of St. Patrick, yet enjoyed his former keen appetite. The traditions relate that men, animals, plants, and fruit, were of far larger proportions in the days of the Fenian heroes, than those which met Ossian's eyes on his return from Tir-na-n-og; and whenever a huge skeleton of the Cervus Megaceros Hibernicus, or great Irish fossil deer, turns up in one of our bogs, it is triumphantly referred to by the peasantry as a proof of their favourite theory, that all animals have been gradually degenerating in size from the beginning of the world. The following proverbial saying is one in general use:—

"Ꝺaċ líne ṫiocꝼaꝺ aꝺ ꝺul a mine ꝼa mḃṙéaꝺ aiꝺe,
'S Ꝺaċ ꝼín a ṫiocꝼaꝺ aꝺ ꝺul a ḃṙiċe 'ꝼa n-ꝺéanuiꝺe,"

Smaller each succeeding race, and more to falsehood prone—
And wetter each season, while later its fruits are grown.

Under these circumstances, it is not to be wondered at that the meal of an ordinary man should appear as a trifling repast in the eyes of the Fenian hero, and thus St. Patrick's kitchen had been daily the scene of loud and angry quarrels between Ossian and the saint's housekeeper, who, like many of her class, was rather pert and conceited, besides being of a niggardly disposition, never dispensing with a laiṫeaṁlaċ (open, generous) hand, the alms for the beggar, or refreshments for the stranger, which had been entrusted to her in her master's absence. Her largest quantum for a ꝺóṫain ꝺuine, or person's allowance, was no more than a lunch to the touch of the blind bard, whose thumb would in a moment measure the solid contents of the barley-cake laid before him, and discern the smallest increase or diminution in its size. One day, in particular, the scolding housekeeper declared, that what she had given on that occasion ought to be more than sufficient even for his enormous appetite, and that she would not give one morsel in addition; but her words were drowned in the wrathful voice of the enraged Fenian, as he indignantly retorted, "Ir minic ꝺo ċonnaiṁcaṙ ꝺuilleóg ꝼeiṁeáin có mór leo' ḃaiṫnín eórna, a'ṙ ceaṫṙaṁa lonꝺuiḃ có mór leo' ċeaṫṙaṁa ċaoṙaċ, ir ċaoṙ ċaoṙċainn có mór leo' ioṙgán ime." (I often saw an ivy leaf as large as your barley-cake; and a quarter of a blackbird as large as your quarter of mutton; and a berry of the quickbeam, or mountain ash, as large as your nuisgaun of butter). Three words in reply from the housekeeper's virulent tongue were worse to Ossian's proud heart than as many arrows from the quiver, viz.—"Ꝺuṡ ṫú ṫ-éiṫeaċ" (you lie). The motion of his hand was instantly understood by his faithful guide, a shrewd lad, who placed behind him his old oak chair, and Ossian, shocked at this crowning insult, sank back into it without uttering a word. (b) The boy selected by St. Patrick to be the guide and attendant of the blind hero is, in the traditions of the people, often compared to the young Ꝿobán Saoṙ, or Goban the Builder, for his penetration and ready wit. He was devotedly attached to Ossian, and listened with ecstacy to the tales of Fenian prowess recounted by him.

Vain were the boy's urgent entreaties on this occasion that Ossian would eat; the old man's feelings were wounded, and his thoughts seemed to be absorbed in some stretch of recollection, or in the meditation of some project. After the lapse of many minutes, however, his cogitations were brought to an end, and he devoured the repast, with an appetite that seemed to have been whetted by a consciousness of success in some contemplated scheme. Henceforth he received his meals without a murmur, to the astonishment of the shrewish housekeeper. He, however, bore her affront in recollection, and had planned his revenge. (c) Ossian had a favourite bitch in young of the first litter; he told the boy to watch her closely, and the moment she should have pups, to acquaint him of it. Many days had not elapsed ere the boy had it in his power to communicate the intelligence of this event, whereupon Ossian told him to procure a horse's hide fresh from the knife—or a sheep's skin, as another version of the legend has it—to nail it up, with the fleshy side out, to a board on the wall, and then facing the puppies towards it, to throw them against the hide, one after another, and tell him of the result. This being done, after some minutes a hearty laugh from the boy attracted the attention of Ossian, who inquired the cause. "The puppies have all tumbled back down again on the ground," responded the boy, "except one, who sticks firmly to the hide, with his teeth and nails." "Well," replied his master, "rear that one and drown all the rest." The boy complied with some reluctance, but, after a day or two, the chosen puppy possessed his undivided care and attention. At the end of thirteen months, during which time it was kept closely confined in a dark room, the dog was hardy enough for field sports, but strict care was taken all the time that he should not taste blood of any kind nor see the daylight. Ossian seemed so well pleased with the animal that he called it Bran Og, or Young Bran, after Fionn's famous hound, Bran. One summer evening Ossian announced to his guide his intention of going a journey on the morrow. The boy was up at dawn, and soon had made the necessary preparations for the journey; they were presently on the road, the Rock of Cashel was soon left far behind, and ere Sol had attained his meridian height the ceaṙca ꝼṙaoiċ, or grouse hens, on Sliabh-na-m-ban were frightened from their heather nests by the dog which they had brought along with them to perform an important feat—that for which he had been so carefully reared and trained.

Arriving at the foot of the mountain, they turned eastward into the long winding valley of Gleann-a-smoil (pronounced Glanasmole), and having traversed it for some distance, Ossian asked his guide whether he saw anything remarkable. The boy replied that he only saw a huge tree bearing fruit, which, but for its enormous size, he would suppose to be a berry of the cṙann caoṙṫainn (the quickbeam, or mountain ash). "You are right in your supposition, nevertheless," said Ossian, "pluck one of those berries, and bring it safely away." Turning towards the rocky side of the glen, the boy's attention was attracted by the ivy growing on the cliff, the leaves of which were so extremely large, that their shadow overspread and darkened the valley. By the hero's directions, one of these immense leaves was also taken, and they then retraced their steps towards the mountain of Sliabh-na-m-ban, which they immediately proceeded to ascend. Having reached the summit of Suiḋhe Finn, they sat on the cromleac to refresh themselves after their toilsome journey. When they had fully recovered breath, Ossian arose, and told his young guide to exert his strength, and lift off the covering stone of the cromleach. The boy was astonished at the command, but having essayed the task, was soon convinced of its impracticability, and declared that anything less than the strength of a giant must fail to raise so ponderous a block of stone. Ossian, himself, stooping, placed his hands upon the fragment of rock, and lifting it with ease in his sinewy arms, exposed to view, in the cavity beneath, three of the instruments of war and the chase which had been used in the days of the Fenians—the ḃaṙṙa ḃuaḃail, or great sounding trumpet, the liaṫṙóiṫo ṙṁáiṙ, or brazen ball, used as a missile, and the lann leaṫaṙṫa líomṫa, or keen-edged polished sword—which, as his direction, were taken out. The handling of those loved weapons once again deeply affected the aged warrior, who exclaimed—Mo mile ꝼlán leiṙ an lá ionaṙ cuiṙeaṫ annṙo ṙiḃ (my thousand farewells to the day on which ye were put here). Turning to the boy he said, "A mic mo ċṙoiṫe ꝸlan iaṫ

(b) The strictest adherence to truth was one of the great qualities of the Fenians, and to this day a liar is held in the strongest contempt amongst the peasantry. In the "Poem of the Chase," Ossian is represented as being highly indignant with St. Patrick for implying that he might possibly be induced to colour his narrative with fiction. The hero had asked the saint whether he ever heard the particulars of this chase; St. Patrick replied, "I have not heard, son of the king, wise Ossian of the strong deeds; tell us, and utter no lie, what happened to Fionn the day of the chase?" Ossian's indignant reply was:—

We, the Fians, would tell no lie,
Falsehood's cup is sour;
Truth and strength e'er brought us safe,
In peril's darkest hour.

(c) The Iverk version of this tradition omits all mention of the stingy housekeeper, and makes the entire dispute take place between the saint himself and his Fenian guest. Ossian thus made his complaint:—

I am Ossian, only son of Fionn,
And I am under a yoke, drawing stones;
They say that I get food,
But, God knows, I do not, nor drink.

St. Patrick overhearing this observation made, asked the Fenian did he not get enough to eat in a quarter of beef, a roll of butter, and a griddle of bread, for his daily allowance. Ossian replied, that he often saw a quarter of a blackbird as large as the saint's quarter of beef, a berry of the mountain ash as large as his roll of butter, and an ivy leaf as large as his griddle of bread. St. Patrick became so enraged at hearing what he considered such a barefaced lie, that in his passion he cast into the fire all the poems and traditions which he had taken down at the Fenian bard's dictation, and all were consumed except a few which the servant contrived to snatch from the flames without being observed. Ossian then adopted the plan of convincing the saint of his truth-worthiness related above, except that, according to another version, the hill to which they went to slay the bird was Sliaḃ cuaċ (the cuckoo's mountain). When the great bird was slain and quartered, the enormous berry of the mountain ash was found in its stomach, and the ivy leaf was plucked from amongst those growing on a cromleac which was upon the hill where they had taken their stand, and the covering stone of which they removed to obtain the implements that they used on the occasion.

ro so maiṫ anoiṛ" (son of my heart, clean these well now). This being done he told the lad to blow the trumpet, and the blast having been sounded, he asked whether anything strange was to be seen. The boy answered in the negative. "Blow it again, as loud as you can," said Ossian. "I have now blown it to my utmost strength," replied his guide, "and yet I cannot see anything strange." Ossian took the trumpet himself, and placing it to his lips, the reverberations were heard from a thousand hills and vales all around: again he blew a blast still louder; and once more a third more loud and far-echoing still. The result was marked by the boy with amazement. He observed a dense cloud overspread the horizon, and immediately the sky was darkened by a flight of birds gathering towards the mountain from the east, and lighting down in the valley beneath it. They came in three separate flights, each increasing in the size of the birds which composed it as the blast of the trumpet grew louder, the third flight consisting of enormous birds of the blackest plumage. The boy having broken into an exclamation that the valley was filled with the largest and blackest birds that the world ever saw, Ossian told him to unslip Young Bran, and let him down amongst them. This was done. "Now look sharp, my son," he said, "a moment of peril approaches; life or death—not only to us, but to all the inhabitants of the earth beside—depends upon your aim and the strength of your arm. When the dog is returning from the encounter to which he now rushes, you must deprive him of life by hurling this brazen ball down his throat." The lad became alarmed at the manner of the old man, and tremblingly informed him that Young Bran was fiercely engaged with the birds in the valley, and slaughtering them in myriads. Having laid them all dead in every direction, the dog's fierce gaze encountered one huge blackbird, larger than all the rest, which had hitherto sat perched on a rock overhanging the valley, her shadow falling upon it like a cloud. The huge bird and the hound were soon engaged in a furious contest, and the boy having stated to Ossian what was now going forward, was informed that this bird was the object of their search. After a long and fearful battle, Young Bran slew the great bird, and drank its life-blood, but in its death struggle it infused a quantity of virus into the dog's mouth, from which the most venemous madness immediately ensued, and the ferocious animal rushed back towards its master. "O! Ossian," exclaimed the boy with dismay. "the dog is now running back towards us with fire in his eyes, his open mouth exposing the bloody fangs, as if he would devour us, and I am afraid." "Courage, courage, now is the critical moment," rejoined Ossian, "the dog has tasted blood for the first time; if you miss your aim, he'll destroy us, and thousands beside." The boy trembled, and in the hurried accents of terror said he was afraid to venture. "Coward," cried Ossian, with phrenzied emphasis, "direct my hand towards his mouth"—the boy did so fortunately, and Ossian directly hurled the ball of brass into the animal's gaping mouth, when he rolled down the declivity writhing and foaming, and was soon choked. Ossian and the boy now proceeded to the vale of slaughtered blackbirds, and after surveying them with wonder, the latter, as directed, took the largest, and with the ṫann ṫeaṁáiṫe ṫíoṁṫa cut off one of its quarters, after which both returned to Lashel, and Ossian triumphantly laying down the proofs of his veracity on the kitchen table, called for St. Patrick, and summoning into his presence the housekeeper, narrated the whole affair, and concluded with an emphasis—"Now have I told a lie?" Ossian was about to give the niggardly woman a palm-stroke across the ear (buille baire ar feaṁ na cluaire amaċ), but the saint interposed, and soothed the acerbity of the Fenian's temper by requiring the woman to beg his pardon, and by expressing his wonder at the adventures of the day, and his admiration of the rarities before him, which afforded such unequivocal evidence of the strictness of Ossian's veracity. By the saint's directions—so says the tradition—from that day forth Ossian was never stinted in his meals.

(To be Continued.)

PATRICK HEALY'S WISHES.

(Translated by John D'Alton, Esq.)

Oh! could I acquire my fullest desire,
To mould my own life, were it given;
I would be like the sage, who in happy old age,
Disowns every link—but with heaven.

An acre or two, as my wants would be few,
Could supply quite enough for my welfare;
In that scope I would deem my power supreme,
And acknowledge no king but—myself there.

The soil of this spot, the best to be got,
Should furnish me fruit—and a choice store;
Be sheltered and warm from rain and from storm,
And favoured with sunshine and moisture.

My home should abound, and my table be crowned
With comfort but not ostentation:
The music of mirth should hum round my hearth,
And books be my night's recreation;

Delightful retreat, in simplicity sweet!
A wood and a streamlet should bound it;
And the birds when I wake, from each bower and brake,
Should pour their wild melodies round it.

This streamlet 'midst flowers and murmuring bowers,
In the shade of rich fruits should meander;
While the brisk finny race, o'er its sun-shiny face,
Should leap—flit—and sportively wander.

These joys—yet once more might enliven my store,
Redouble each comfort and pleasure;
A wife, of such truth, such virtue and youth,
That her smiles would be more than a treasure.

Let nineteen, and no more, to my twenty-four,
Be the scale of her years to a letter;
Then a babe every Easter, I think won't molest her,
No—I warrant she'll like me the better.

—Hardiman's Minstrelsy.

IN PALESTINE.

There is very little disorder in Palestine, very little crime, and none of the vices known to civilised countries. No man ever gets drunk unless he is a Christian, for the Mohammedans abstain from wine and all other intoxicating liquors. They do not steal from each other, except cattle and goats, and that is a capital offence, punishable by death on sight. Ordinary stealing is practically unknown. There are no locks on the doors of any of the houses, and the curtains of the tents are always loose, for several reasons, the chief of which is that the people haven't anything worth stealing. They never have money, and carry on their backs everything of value. Millions of dollars' worth of merchandise is carried over this trail by camel caravans every year, yet nothing is ever lost. The same is true in South America, where the transportation is done by mules and llamas over the mountains. Cargoes of bullion are carried regularly every day, yet guards are unnecessary and burglar proof safes could not be used. The mule drivers are perfectly trustworthy, and occasionally when some foreign adventurer organises a raid, like one of the train robberies in the United States, they will die in defence of their cargoes.

OUR WEEKLY STORY

HOW THE COW WAS SOLD.

A segment of the rising sun was still behind the ridge when Thomas Polly, with a basket of crisp, frost-rimmed galax leaves, leaped along the trail that led down to her cabin home.

Her feet were not cold, for they were clad in warm, home-knit stockings, but she had gathered her leaves in snowy gullies, and in her eagerness to select the prettiest and longest-stemmed, she had thrown her mittens into her basket, which she now kept shifting from hand to hand, as she tried to warm the alternately unencumbered members by pressing them close under her arms.

The door of the home stood wide open, but a great fire blazed in the chimney-place, and at a rude, uncovered table her father and mother were eating their breakfast. She dropped the basket on the door-step and ran and spread her hands before the flame. But the sudden exposure to heat made them ache terribly, and covering her eyes with her arm, she uttered a queer, whining cry.

Instantly came the clatter of suddenly dropped knives and forks. Her father went to her, a man without comeliness of face or form, unshaven, unshorn, unwashed—if the testimony of a leathery skin be credited—but he lifted her tenderly to his knee, cuddled her head against his breast, and chafed her hands.

"'Twa'n't fitten for Thomas Polly to go up thar this mornin'," he said. "She's plum beat out with the cold."

"I 'lowed it wa'n't," droned his wife, holding a cup of coffee to the child's plaintive lips, "but she'd have took on powerful if I'd have hindered her."

The man renewed his petting, smoothing the little girl's hair, patting her cheek, and calling her "daddy's namesake," "mammy's namesake," "daddy's pretty gal," and every endearing name that he could remember or invent. At last Thomas Polly drew her limbered hands out of his clasp, experimented with them, opening and shutting them faster and faster, and finally holding one of them close before his eyes and dancing its fingers ecstatically.

Then she slipped from his knee, drew the chairs up to the table again, and the breakfast proceeded. It was the mountaineer's repast—bacon, corn-cake, coffee, and contentment.

All this time the child had not spoken a word. When her mother, pointing to the galax, said, "She's plumb bent on gettin' money enough to buy herself a new, red store frock," the daughter eagerly watched her lips, and then brought a little hoard of dimes and half-dimes and pennies, and in pantomime insisted that her father count them. This he did while she capered about him, whirling upon her toes, twinkling her fingers, and finally clasping her hands upon his knees and gazing rapturously up into his eyes.

For poor little Thomas Polly was deaf and dumb. She could have written what she had to say—for she had been a pupil at a deaf and dumb asylum, and she always kept a pad and pencil for that purpose—or she could have spelled it in the manual alphabet; but neither her father nor her mother could spell or read or write.

Bringing her basket inside, Thomas Polly dumped the leaves upon the floor, and began to bunch them. Twelve years of continual effort to make her sentiments intelligible, had dispossessed her of whatever dulness or unde-

monstrativeness she may have inherited from her parents; and she seemed a waif that had blundered into their home rather than their true and dear and only child.

She was a very talkative little girl, and would practise her dactylology upon anything, human, beast or inanimate, with which she came into contact; the fact that most of them were none the wiser for what she had to say never seemed to detract in the least from her joy in her accomplishment.

When the leaves were all bunched and arranged in the bow basket, and she had tucked among her wares her pad and pencil, and had set upright among them a little placard bearing the inscription, "A Knickle a Bunch," she stood off and addressed them very earnestly. Then she jumped into a chair and rearranged a row of corn-cob dolls that stood on the mantelpiece, enjoining them to good behaviour with the impassioned eloquence of five flying fingers. All this time her father had been warming her mittens, and he himself drew them on her hands, tucking the wrists well up under her sleeves.

Then, with her basket on her arm, she started off, but turned at the door with a laughing, flirting courtesy, an exaggeration of something she had learned at school, and an uplifted hand that spoke under difficulties. But out of what it said Thomas Polly got just as much pleasure, and her parents just as much information, as if it had not been muffled.

She had gone half a mile when she saw "Ol' Mis' Caney," their nearest neighbour, come out of her roasting-ear patch, leading her cow by a rope tied about the horns. In the field last summer's stalks were still standing, but they were bare; not a shuck was left to rustle in the breeze, nor a leaf, nor even the sheathing stub of a leaf.

The child hurried along, and plucked the woman by the border of her rusty cape. But the eyes that met hers were full of trouble.

Thomas Polly pulled off her mittens and interrogated eagerly the cow, the corn-stalks, and the woman. One could spell no better than another, but the woman was the most responsive. She improved the opportunity to unburden her mind to a human being sure to keep her secret if she talked to the ear instead of the eye.

"Thomas Polly," she began, "there ain't no more meal for her or me, ary one. I turned her loose in the patch, and she's done devoured every last shuck, an' now I'm 'bliged to sell her!"

Thomas Polly had stepped off ahead, and walking backwards like a little drum-major, was reading her interlocutor's lips. When Mrs. Caney saw this she set her mouth firmly, and pulled her sun-bonnet far forward. Then the discouraged little sympathiser dropped abreast of her, and she went on.

"She ain't in good order to sell, she ain't. But without she can eat she's 'bliged to get sparer an' sparer. An' I'm gettin' sparer an' sparer, too, Thomas Polly," she gesticulated excitedly, and again her small companion stepped ahead to watch her face. The old woman held together the ruffles of her sun-bonnet, leaving herself only a peep-hole, and earnestly proceeded:

"I ain't tellin' ary soul but you, Thomas Polly. I've got to starve or sell my cow, ary one! It's come to that, Thomas Polly! I've got to—starve—to—death!"

In her excitement she released the ruffles, and so far forgot herself as to turn towards the child, who eagerly watched her face.

"There's a right smart little bit o' Jersey in Muley. I raised her myself, and it grinds me powerful to part with her, but she's 'bliged to go—if I don't get more'n seven dollars for her —she's 'bliged to go. Seven dollars'll keep me right comfortable till spring comes, seven dollars will."

And so she went on, now holding her ruffles with her free hand, and now forgetting herself and gesticulating with it; and Thomas Polly, subdued in spirit, plodded on beside her.

Although it was ten by the court-house clock when they entered Asheville, and the streets were thawed into a paste of mud, the wind was still cold and raw.

They led the animal round to the sunny side of the market-house, tied her to a telegraph-pole, and awaited a customer. Mrs. Caney was shy of strangers, but in desperation she made up her mind to be "right spunky."

"She's for sale," she said to a man who was hurrying past.

Giving only a glance at her and her merchandise, he said, "The bone market ain't noways brisk this morning, ma'am."

She had not the least idea of his meaning, but she felt encouraged by the blandness of his tone.

Two men, evidently father and son, and as evidently strangers and seekers of the picturesque, stopped and quizzically regarded the trio. In appearance they were Westerners, hearty, stalwart, and enterprising, used to the best of everything, and plenty of it.

"She's good stock," said Mrs. Caney. "Sell her right cheap."

The son laid a hand upon the cow's shoulder, and said, suavely:

"She's a magnificent creature, but we're not in the button business, madam, otherwise we wouldn't let this opportunity slip!"

His feint of enthusiastic admiration so encouraged the old woman that she resolved to raise the price of the cow, but Thomas Polly was shrewder, and her eyes gathered a better understanding of the strangers' sentiments than had her companion's ears. They spoke for her, too; those big, brown, astonished eyes spoke a volume of pitiful reproach.

"My son," said the older man, facetiously, but touched withal, for in his heart there was a big place for little girls, "I'm afraid you've jeopardised our good reputation in this town."

"Yes, dad, but see me re-establish it!" and he shot away into a store.

When he returned, followed by a darky carrying a steaming mash for the cow, he found his father bending over the basket of galax.

"Why, Howard, this little creature's deaf and dumb!"

"That's so, dad? Her eyes can speak, though."

"By George, her fingers don't ask any odds of her eyes! They've been spelling away here like—like—only I'm too stupid to read them. Why," he patted her shoulder in the kindliest, heartiest fashion, "she's a whole spelling-bee all by herself! My boy," feeling in his pocket, and finding nothing but a roll of bills, "you led this dance, now you pay the piper."

He pinned a bunch of galax to his lapel, and Howard tossed a couple of quarters into the basket.

"Now let's part as friends, Little Spelling-Bee." She put one tiny hand into the big one, and spelled away ecstatically with the other.

The men went on their way, the old woman gave her attention to the cow, whose value had kept on increasing in her estimation, and Thomas Polly went upon the street to market her wares.

"A Knickle a Bunch." The placard caught the eye of a group of young girls, who gathered quizzingly about her. But the oratory of that voluble little hand soon moderated their glee, and coins and galax began to change hands rapidly.

Meanwhile a crowd gathered and comment flew:

"A gay little mountaineer!"

"Look at those eyes!"

"Hush; she's a mute!"

"Less reason for repressing one's sentiments, then; can't hurt her feelings."

Nevertheless, the hush became general, although the demand for galax increased. Abashed, Thomas Polly shrank into a doorway, although all the while attending so strictly to business that her little blue yarn cash-bag grew heavy. Soon, her basket empty, her fingers twinkled "Thank you!" and "Good-by!" to the dispersing crowd.

Then there stood alone on the sidewalk, like a dainty shell left by a receding wave, a two-year-old girl, a little daughter of luxury, clad in white, downy coat and white paraphernalia of feathers, laces and ribbons, the only colour about her being her tinted baby face, a vapour of flaxen hair, and two little red knees left bare by the dictates of a cruel fad of fashion. She was a little bunch of snowy fluff that made Thomas Polly think of the cold, cold snow in the ravines.

Bewildered, the baby turned slowly, scanned a narrow, nurseless horizon, and began to cry.

On the opposite side of the street the brisk Westerner halted.

"By George, Howard, there's my little Marjory!"

"And away off down the street there's her new nurse in pursuit of a son of Ham."

"Forgotten all about my baby!" He dodged a passer-by and made a plunge for the other side, but his son held him back.

"Go slow, dad. There's that little deaf-mute gone to the rescue; let's see what she'll do."

They crossed, but kept out of sight.

With her bright little face one glow of pity, Thomas Polly knelt beside the baby, comforting her with a succession of cooing vocal efforts, while she chafed the little bare knees as her father had chafed her own hands that morning.

Evidently the richness of the child's apparel did not appeal to Thomas Polly's uncultivated sensibilities; it was "only just white," and Polly had an eye for colour.

All she took cognizance of was those cold, bare knees, and she rubbed them until the wondering baby stopped crying; and then Thomas Polly spelled out to her a whole vocabulary of endearment, until the little one laughed aloud at the dancing fingers.

The foot of a careless passer coming into contact with the basket seemed to remind the little mute of her whereabouts, for she got up, and as promptly as if going through with a daily programme, gave her hand to the waif and led her down the street.

"Good gracious, Howard! I wonder if that pretty little thing is in the kidnapping business!" The father strode after them, but again the son restrained him:

"Wait a bit, dad!"

Thomas Polly stopped where a display of haberdashery ornamented a window, entered the store, cornered her change while she wrote "stockings" on her pad, and laid a hand upon the red knees to indicate the size she wanted.

A clerk led the way to the farther end of the store, and spread out an assortment of lisle hose. Disgusted, the small customer harangued her with impatient fingers; then, failing a response,

"Warmer," she wrote, in big, emphatic hand.

With a smile for two spectators behind a

show-case, the clerk brought down some dark merino stockings.

Thomas Polly handled them rapidly, selected a bright red pair, and held out a handful of small coins. Then she lifted the baby to a stool, and pulled off the kid boots and silk socks.

She warmed each little foot and leg into a glow before she covered it, and all the while the baby chatted gleefully and clapped her tiny mittened hands. The little dumb girl laughed silently, and smoothed and patted and spelled "Little white pigeon," "Pretty girl," and a dozen pet names she had studied from her father's lips.

She had replaced the shoes, and was fitting the stockings well up over the knees, when—

"There's dada!" cried the baby, and held out her hands to the big Westerner.

He stooped to take her, but she shrugged away, slapping her knees, laughing up into his face, and wriggling in bewitching baby ecstacy.

He took her into his arms and sat down upon a stool, Thomas Polly a wide-eyed statue before him. For a moment her hand forgot its cunning, and he took it silently.

In perplexity she gazed at him, for his warm clothes and his well-cushioned bones told her one story, and the tears in his eyes and the scanty clothing of his baby told her quite another.

She began to spell at him, but suddenly remembering the limitations of his education, she took up her pad and wrote:

"You must be powerful poor, and I am just as sorry for you as I can be."

He deciphered it, and meanwhile she opened her blue-yarn bag, took out her largest coin, and put it into his hand.

"No, no, Little Spelling-Bee"—he dropped it back into her bag and selected a cent—"but give me this to remember you by. Here, Howard, I've only one free hand; take this pad and make her understand."

Howard had noticed her trick of lip-reading.

"See here, little girl," he said, speaking slowly, and exaggerating the action of the vocal organs, "he's 'powerful poor,' he is—but I'm rich—I've got piles of money at home—when I get him there, I'll give him some—if he's good, I will. You keep your money—only let him have his penny to remember you by. And see here, little girl—I'll give you something to remember us by. What'll you have? A new hat" He laid his hand upon a case containing the milliner's gorgeous exhibit.

She looked bewildered, so he wrote:

"I'll make you a present of anything you want," and, taking her hand, he led her about the store.

"A new frock?" He pulled at some gay red plaid, but she shook her head.

"A blue one?" "New shoes?" "A muff?" She shook her head at every suggestion. 'Why, dad, she's fastidious!"

"Aha!" cried the father. "I have it! Howard, you're a regular chump not to have thought of a doll. Young woman, please pand down that big one with the curls. Can she shut her eyes upon occasion?"

He laid the doll in Thomas Polly's arms, nd she gazed at it and hugged it in a very cstacy of tenderness.

"I told you so, Howard. That suits to a ."

But when Howard took out his pocket-book he lifted the doll, and with eyes swimming rith wistfulness laid it on the counter; then, anting, clasped her empty hands.

"What? Not a doll? Here, then." He ut her pad into her hand.

"A cow," she wrote.

"Oh, a cow, is it? Well, then, young woman, show us the liveliest beeves you have; one of those things that go by clockwork, and can switch its tail and 'toss the dog that worried the cat,' and so forth."

But not one step towards the toy counter would Thomas Polly take. Instead, she took the father by the hand and pulled him towards the door.

"Come along, Howard. She's got some bright idea in that little noddle of hers, and I'll discover it—if it costs us our dinner, I will."

Across the street she led them, round a corner, and across a plaza to where Mrs. Caney still waited for a customer.

"This is the cow I want." Her pantomime went straight to their understanding.

"Oho! It's the genuine article you want? How much, madam?"

Encouraged by their reappearance, the old woman made a bold advance.

"Fifty dollars," she said, nervously pleating the hem of her apron.

"By George, Howard, bones come high in North Carolina! But stick to your bargain, my son. Keep your promises; that's the way I made my pile. I'll help you out."

He set Marjory on her feet to get at his pocket-book, and while Howard counted the money into the shrivelled hand he untied the rope and gave it to Thomas Polly.

"She's your, Little Spelling-Bee."

She wound the rope around her wrist, and spelled at him in rapture.

He laughed softly, sitting on his heels with his arms round Marjory.

"Pardon my interruption, Little Spelling-Bee." He silenced her by shutting her supple little hand entirely within his own. "You understand, madam, that the cow belongs to this little girl? Howard, can you make the significance of this transaction clear to both parties" and while the son was explaining to the woman, the father sat there holding Thomas Polly's hand.

He kissed it before he released it. "Now kiss my little girl," he said, softly, and Thomas Polly understood, and touched her lips to the roseleaf cheek.

Then the men went to their dinner. "Queer she chose a cow, wasn't it, Howard But I tell you, what she wanted was that doll. Her eyes were shining like stars, and the tears in 'em, too, when she laid it on the counter."

Mrs. Caney, Thomas Polly, and the cow took the up-hill, homeward road. Muley, her appetite assuaged, was more tractable than before, and never did two people accomplish more conversation in a given time than did our heroines, for they could both talk at once without interrupting each other.

"Shucks, Thomas Polly!" said Mrs. Caney. "You ain't needin' that cow no more'n she's needin' another tail, you ain't. Your daddy's got more cattle now than he has pasture. But I'm powerful proud of this money, Thomas Polly. I ain't seen or heerd tell of so much since I sold the farm—nigh on to forty year ago."

When they reached Mrs. Caney's home, Thomas Polly let down the bars and turned the cow into the yard. The action was in accordance with what she had been telling the old woman all along, but still her companion stood wide-eyed and wide-mouthed with amazement.

That was great fun for the child, who ran on a few paces, then turned and courtesied and flirted her linsey-woolsey skirt, while her fingers fairly shouted.

Not till she had disappeared with a final caper round a bend in the road did Mrs. Caney recover herself.

"You ain't the least mite of a tattle-tale, she said. "I certainly do like you for that, Thomas Polly. No one but just you and me's goin' to know that Muley ever made a trip to Asheville." She turned at the clatter of horse's hoofs.

The big Westerner rode up. With only a nod of recognition, he swung himself to the ground and examined the footprints there.

"Is this your home, madam?"

She told him "Ya-as."

"I've followed your trail. The cow went in here and the little feet have gone on alone." His tone was severely interrogatory.

Mrs. Caney explained, quaveringly.

With some lack of agility, for as usual he had only one free arm—the other hugged a parcel—he mounted and followed the "little feet."

Thomas Polly could not sleep for joy that night. She kept waking to spell out endearments to a big, golden-haired doll that lay upon her left arm, but the row of corn-cobbies on the mantelpiece never suspected that their noses were out of joint.

TWILIGHT.

BY MARY E. BLAKE.

Out of the pearly gates and golden portals of sunset,
Crushing the amber light in the shade of her night black tresses,
Weaving with subtle hands the mystical web of darkness,
Comes through the quiet air the shadowy form of Twilight.
Wondrously fair is she as the star that gleams on her bosom,
Holding the splendid robe that airily floats around her;
Wondrously fair is she, with eyes that are as pure as heaven—
Eyes from whose quiet light the blessing of peace ascending
Falls on the cares of the day, hushing them all to silence.

Out of the pearly gates she leads to their old-time places
Feet that are silent now—forms that have passed forever;
Gently she draws them near, wooes them to sit beside us,
Holding our hands once more, speaking from soul to spirit.
Back to the white-haired sire she brings the days of his childhood,
Laughter and noisy games, and visions of boyish faces—
Days when his heart was light, and all his hopes and his longings
Hung like pictures of gold on the beautiful walls of the future.
Back to the mother's ears it brings the prattle of children
(Grown to be women and men), clinging again around her,
Fastens the broken links she lost in the quiet churchyard,
And shows her the golden chain completed and clasped in heaven.

But to the young man's eyes it shows in the dawn of promise
The beautiful days to come, the battles that lie before him;
Flashes of love and fire, victories worth the winning,
Honour and wealth and fame, the strife and the crown of glory.
So does she weave her spells, till on her sombre garments
Crushed and hidden away lie all the roses of sunset,
And a quick arrow, shot from the silver quiver of moonbeams,
Drops through the dim gray trees to tell us the night approaches;
Then in her shadowy wings folding the gifts she brought us—
Dreams of the beautiful past, hopes of the beautiful future—
Like to dream herself departs the mystical Twilight.

OENACH CULI MNA NECHTAIN.

ITS HISTORY AND TRADITIONS. BY REV. J. F. LYNCH.

Mr. William M. Hennessy ("Introduction to Mesca Ulad," p. xi.) has the following note:—

Old Oenach-Clochair—"The old 'fair-green' of Clochar"—a place much celebrated in the old Irish legends, and reasonably supposed to be represented by the name of the Parish of Monasteranenagh (the "Monastery of the Aenach," or fair-green), near Croom. In the curious tract entitled, "Senchas na relec" (a) ("History of the Cemeteries"), in "Lebor na h-Uidhre," p. 51,b., the men of Munster are stated to have been anciently interred in Oenach-Culi and in Oenach-Colmain. The Oenach-Colmain here referred to must be different from a place of the same name in Leinster, alluded to in the "Annals of Ulster," under A.D., 826, and by the Four Masters, under A.D., 940. But if any credit may be given to a statement in "Agallamh na Seanorach" ("Book of Lismore," 206 a), Oenach-Culi was the old name of "Old Oenach-Clochair." In a curious poem in the "Book of Leinster" (p. 206, b), the course run by horses, at the games of Oenach-Clochair, in which Find mac Cumaill is said to have assisted, is described as from the Oenach (or fair-green), to the "Rock over Lough-gair."

It is now many years since my old friend, the late Rev. Dr. Olden, asked me, as I was living not for from Lough Gur, to take down from the people any old fragments of tales which they possessed, in order that some light might be cast on the history of Lough Gur, of which, he said, so little was known. I got a great many important items from the late Edward Fitzgerald and some other old men living in the Lough Gur locality; and recently, when the Ordnance Surveyors were at work at the lake, I undertook for the Ordnance Survey Department the collection of the local names, and the identification, where possible, of the stone monuments. In this work I received most valuable assistance from Mr. Owen Bresnan, who, living beside Lough Gur, knew all the intelligent old people, and the present map of Lough Gur, when compared with the previous one, will show that we have been able to do something for Lough Gair. But since the work of the Ordnance Survey has been completed, Mr. Bresnan has made some additional discoveries, guided by the extracts which I forwarded him from the old Irish documents, and the particulars which have now accumulated concerning Lough Gur would fill a volume of fair size.

Mr. Brash, in his work on the Ogham Inscriptions, supposes that Oenach-Culi, also named Oenach-Clochair, was somewhere in West Cork; and Mr. Hennessy, as may be seen by present quotations from "Mesca Ulad," supposes that Oenach-Culi, and the Oenach near Croom, were the same; but the "Agallamh na Seanorach," and the poem in the "Book of Leinster," to which Hennessy refers, shows that he is mistaken. O'Curry ("Lectures," p. 305), was of the same opinion as Hennessy, who probably was influenced by O'Curry's statement; for O'Curry, referring to the poem ascribed to Oisin, thus writes: "He (Oisin) then gives a vivid account of a visit which, in his more youthful days, he had made, along with his father, Finn, and a small band of the Fenian warriors, to the Court of Fiacha Muilleathan, King of Munster, at Badamar, near the present town of Cahir, in Tipperary, and of the races of Oenach-Clochair (now Manister, near Croom, in the county of Limerick), which the King had celebrated on the occasion of Finn's visit. The winning horse at the course was a black steed belonging to Dill, the son of Daohreca, who was the King's tutor. The King purchased the steed from his old tutor on the spot, and made a present of it to Finn." In the coming time a great deal will be heard of this black horse, for the dissection of the tales will be undertaken as the knowledge of the Irish language increases, and the very outcry now made in Ireland about the revival of the Irish language shows that the Gaedhil are conquering all along the line. Some time ago I sent a few scraps of old tales which I had taken down from some old people in the county of Limerick, to one of the ablest authorities on Egypt and Chaldea, and he was much interested in them, and was able to discuss them, which is more than can be said for certain scholars in Dublin, over all of whom he towers head and shoulders. These scholars in Dublin have turned their backs on those who have long been trying to arouse the Irish people to take an interest in the old things of their native land; but the Gaedhil, as I have said, are now conquering, and the Iberians still remain.

In "Trans. Os. Soc.," vol. v., p. 219, Connellan also refers to the old Irish poem ascribed to Oisin: "He (Oisin) then relates an anecdote about Finn, who went one time into Munster to attend the fair and races of Clogher, in the present county of Limerick, which was ordered by Fiachu Muilleathan, King of Munster. It happened that a black race-horse, which was the property of Dil, the Druid, and grandfather to the King, won all the races, after which the Druid bestowed it on the King, who immediately presented it to Finn, the son of Cumhall. Finn prized this steed very much, and afterwards won many races by him. At the termination of the races, Finn, Oisin, and Cailte made a tour of the kingdom of Kerry, which is fully described."

Mr. Bresnan has recently informed me that the old people of Lough Gur have preserved a tradition of these races, which were held at the west side of Knock Finnell—that is, hill of Finne, Finnine, Findine, or Fininne. The letter l in Finnel represents the n of the form Finnen, which occurs in State Paper, dated 1200 A.D. O'Curry ("Lectures," p. 490), refers to the well-known tendency of the people to modify topographical names which end in er, air, and inn, to ail, ill, and so on; as Loch Aininn, in Westmeath, to Loch Ennill, and Loch Uair, in same county, to Loch Uail, or "Owel." O'Curry ("Lectures," p. 585), mentions that one of the lost tales of Ireland was named Tochmarc Finnine, or "Courtship of Finnine"; but Finnine is a genitive form of Finne, just as Danainne is a variant genitive form of Danu, usually written Danann from genitive, and much in same way as we may explain Manannan as extension of Manu. These names are old, and have various forms, and the genitive case is often utilised as nominative, which was often forgotten by Irish writers, for the false nominative, being a real genitive, was often regarded as true nominative, and from it was formed another genitive—that is, we have a genitive of a genitive. Duach, used as a nominative of Dia, or Dai, is a genitive case, but from Duach, as nominative, is sometimes the genitive Duaich. Grammatical changes like this often disguise names, and it does not seem to have occurred to O'Curry that the names Finnine or Findine, and Finne or Finn, were identical. In his "Supplement to O'Reilly," p. 642, O'Donovan mentions Findine, but he fails to identify the hill. We have, however, been able to identify Domhnach mor Maighe Aine—that is, "the great Church of the plain of Ane," about two miles north of Knockaine (hill of Ane), and besides St. Patrick's Well; and the identification of the hill of Finnine with Knock Finnel, would alone follow from this without any other evidence. Finnel represents the old name, Finne or Finn, and the identification is certain. In "Silva Gadelica," p. 140, we read: "A black horse Dil mac da creaca had; in all sports that they set on foot at the rock which dominates Loch Gair (on the Hill of Doon, over Loch Gur), he clean swept off the three prizes of the meeting." Here Mr. O'Grady's note ("on the Hill of Doon, over Loch Gur"), is not correct, for the hill over Loch Gur is Knock Finnel, and Knockadoon, or "Hill of Deon," is a large island containing about sixty acres, formerly surrounded by Loch Gur, and on the highest hill of which was Dun Gair, one of the royal forts of Munster ("Book of Rights," p. 90), and it was from this fort, not a stone of which is now left, that the island was named Knockadoon, or "hill of the fort," first applied to the hill on which was fort, and then to entire island. In Agallamh na Seanorach ("Silva Gadelica," p. 118), we have names of various remarkable places, which lay beside the old road leading from Kildare to Ardpatrick; and after leaving Cullen (not far from Limerick Junction), the old road passed beside Leim in fheinneda, or "the champion's leap," and skirted the assembly place of Nechtan's wife, Cuil (Oenach Culi mna Nechtain), called also the heifer-carrying fair-green of old Clochar (Oenach Sen-Chochair). The way to Loch Gur was along Gleann na muice duibhe, and this road passes at Ludden hill, beside Leim Dhomhnaill, and so it is highly probable that Leim in fheinneda is the same as Leim Dhomhnaill, and that Domhnall is the champion from whom the cliff was named. In the State Paper, dated 1200, which gives over one hundred Irish local names of Lough Gur, Bruff, and Mainister districts, the name Clochar is mentioned as a place-name at Lough Gur, and this is the Old Clochar. The people have also preserved some traditions of Cuil, now called "the White Lady of the Lake," and Beantighe, or "Housekeeper."

Dr. Joyce ("Irish Names," vol. i., p. 205), says that Mainister-an-aenaigh (the monastery of the fair, near Croom), is called Aenach-beag by Four Masters—i.e., little fair, "probably to distinguish it from the great fair of Nenagh," or an aenach Teite (the fair of Teite). The greatest fair in Munster was held beside Lough Gur, and this was the Aenach mor, in contrast to which the fair held near Croom was the Aenach-beag. In "Book of Rights," p. 91, O'Donovan says: "Aenach Cairpre—i.e., the fair of the territory of Cairbre. This is the place now called Mainister an Aenaigh, Anglice, Manisteranenagh—i.e., the Monastery of the Fair, from a great monastery erected by the Ui Bhriain (O'Briens), a short time previous to the English invasion."

In the poem by Gilla-Coemain, given in "Todd Lecture Series," vol. iii., p. 175, we read:—

> Noi m-bliadna, riaglom reil bla,
> Lugdach Iarndond, mac Enna;
> Dorochair in ruri ran
> Ir Raith Chlochair la Sirlam.
>
> "Nine years let us arrange the manifest fame
> (Reigned) Lugdach Iarrdond, son of Enna:
> Fell the great king noble
> In the rath of Clochar by Sirlam."

The Rev. Dr. MacCarthy says in note "Rath of Clochar"—"Not identified"—(O'Donovan, "F. M.," p. 64): In the Royal Irish Academy copy of the "Ogygia," "Co. Tyrone" has been placed on the margin (p. 249). In "L. L" p. 20 a) the reading is Rath Clochrain. The site of Raith-Chlochair is in the townland of Grange, at west side of Lough Gur, and at west side of the road to Limerick, and a short distance north of the house of Mrs. Fitzgerald, widow of the late Edward

(a) The following are the names of the chief cemeteries of pagan Ireland, according to Senchas na relec:—Cruachu, Brugh na Boinne, Tailtinn, Luachair Ailbe, Oenach Ailbe, Oenach Culi mna Nechtain, Oenach Colmain, Temair Erann. The list is also given in O'Curry's "Manners and Customs." I think, but am not quite certain, that Oenach Colmain was near Galbally, where some very valuable archæological discoveries have been recently made by Mr. J. J. Mahony, Superintendent of Ordnance Surveyors.

Fitzgerald, who was the first to show me the site of the rath, which we could not identify for a long time as Raith-Chlochair. At p. 181, poem of Gilla Coemain, we read:—

Eocho, mac Ailella Find,
Romarb Argatmar imgrind
Ri Carmuin, Clare is Cliach,
In-Ane na n-armsciath.

"Eocho, son of Ailill the Fair
Slew him, Argatmar, the very valorous,
The King of Carmon, Clar, and Cliu,
In Ane of the armour shields."

This slaughter of Eocho is mentioned by Four Masters, by O'Flaherty in "Ogygia," and in "Annals of Clonmacnoise," as having taken place at the Oenuch, or Fair of Knockaine. The Rev. Dr. MacCarthy quotes from "L. L," p. 20:—Eocho, mac Aililla Find, frisin re sin arrigi h-Erenn, co toracht Argatmar dar muir agus co n-derna Sid ri Duach Ladrach, co torchair leo Eochu i n-oenuch Ane. "Eocho, son of Ailill the Fair, was during that space in kingship of Erin, until arrived Argatmar over sea, and made peace with Duach Ladrach, so that there fell by them Eochu in the Fair of Ane."

Mr. Bresnan has traced the old road from Lough Gur to Cnoc Aine and Sliabh Belgadain, near Kilmallock, and he has told me that the track of the road may be seen along the brow of Cnoc Aine. Sliabh Belgadain is also the old name of Benlevi, near Cong.

Sir William Wilde ("Lough Corrib," p. 215), says:—"The Belgae having refused to divide the country with the invaders, the Dananns proceeded westward, and occupied the great plain of Nemedh, or Magh-Ith, which stretches for about 12 miles from the hill of Knockma, in the county of Galway, through the fertile barony of Kilmaine, in Mayo, to Slieve Belgadain, now called Benlevi, a short distance from the village of Cong, in the barony of Ross, and county of Galway, and forms the eastern barrier to the western highlands."

Cnoc Aine was also called Sidh Eogabail (Silva Gadelica, Wars of G. G.), and Druim Collchoille, or "ridge of the hazel-wood." which was also the old name of the hill of Dublin, and the ford beside Cnoc Aine was named Ath Cliath, as was the ford of Dublin.

BIRDS ARE CARELESS BUILDERS.

Nearly all sea birds are far more careless in their nesting than their cousins who live inland. The ferns, the skua, the puffins, the black-throated diver and the guillemot really make no nests at all. The puffins, however, usually borrow a rabbit burrow, and are not particular whether its original owners have done with it or not. If they interfere, or even try to pass, a peck from the puffin's great parrot-shaped bill is enough to warn them against trying to experiment the second time. The auks are birds of the northern seas, and are perhaps the finest divers of all the feathered tribes. Their short wings look in fact far more like fins than wings, and, unlike gulls, the auks catch their prey beneath the water. The auk's selection of a spot to lay her eggs is very strange. She chooses a bare, broken ledge of hard rock, overhanging the waves. It looks as though it were a feat to balance eggs in such a place, and the marvel is that the first gale does not send them rolling over the crags. But an auk's eggs are so shaped as to prevent such a calamity; they are much larger at one end than at the other, and so instead of rolling straight ahead like a ball they turn around in a circle when started, and so keep their places upon the rocks.

The Pennslyvania Railroad has had a run made from Pittsburg to New York, 438 miles, without a stop. This is the longest run of a passenger train on record. In order to accomplish this feat it was necessary for the locomotive to carry an extra supply of coal, and this was done by enlarging the locomotive tender.

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

BALLYSHANNON.

BALLYSHANNON, a sea-port, market, and post-town (formerly a parliamentary borough), partly in the parish of Innismacsaint, but chiefly in that of Kilbarron, barony of Tyrhugh, county of Donegal, and province of Ulster, 35 miles (S.W.) from Lifford, and 102 miles (N.W.) from Dublin; containing 3,775 inhabitants, of which number, 1,390 are in the Purt. In remote ages this town was called "Athseanaigh," and the chieftains of Tyrconnell had a castle here, in which Hugh O'Donnell, prince of Tyrconnell, received his son, Hugh Roe, after his escape from the castle of Dublin, in 1592. In 1597 the neighbourhood was the scene of the most important military operations of that period. An English force, consisting of 22 regiments of infantry and 10 of cavalry, under the command of Sir Conyers Clifford, crossed the Erne by a ford, although vigorously opposed by O'Donnell's troops, and succeeded in establishing their headquarters at the monastery of Asharouagh. Here they received heavy ordnance from Galway by sea, and laid close siege to the castle of Ballyshannon, but met with an unexpectedly strong resistance, and many of their best officers and men were killed or wounded. After continuing the siege for five days, the English were compelled to make a precipitate retreat, closely pursued by O'Donnell and his allies, and being unable to cross the Erne at the ford by which they advanced, they tried another that was seldom attempted, where many were killed or drowned, and thus one of the first expeditions into this long independent territory terminated very disastrously. On the grant by Jas. I. of the earldom and territory of Tyrconnell to Rory O'Donnell, in 1603, he reserved the castle of Ballyshannon and 1,000 circumjacent acres. The castle was taken in 1652 by the Earl of Clanricarde.

This town is situated at the head of the harbour of the same name, at the mouth of the river Erne, which is here crossed by a bridge of fourteen arches, and divides the town into two parts; that on the south side, in the parish of Innismacsaint, being called the Purt of Ballyshannon. The town was incorporated by a charter of Jas. I., dated March 23rd, 1613; and the corporation was entitled "the Portreeve, Free Burgesses, and Commonalty of the Town of Ballyshannon." From the time of its incorporation till the Union, when it was disfranchised, it returned two members to the Irish parliament, and the £15,000 compensation was paid to the Earl of Belmore. A small portion of the ruins of the once celebrated castle of the O'Donnell's, Earls of Tyrconnell, is in the town; and near to it, on the road to Belleek, are a few vestiges of the ancient church of Smniver.

(To be continued.)

NOTES AND QUERIES.

A NOTE ON PAPER-MAKING IN IRELAND.

Referring to the query by "Lector" in your issue of the 28th ult., as to paper-making here in the 18th century, may I offer the following note as a partial reply, and hoping others may add to it:—

When paper was first made in Ireland, where, by whom, of what materials, and stamped by what water-mark, would make an interesting study or object of research. At present I doubt if any positive or extensive information is available on the subject. I was asked the question some two or three years ago, and had to confess my total ignorance, but the question has never been forgotten. Hence a few allusions to the fact of Irish paper-making in the 18th century have been since carefully noted by me, and may, by their publicity now and here, elicit more information.

In Marsh's Library I accidentally lit upon a broadside of the year 1733, at the foot of which appears in print the statement that the paper was Irish, "of Thomas Slator's making." No water-mark, however, can I trace on it. It is a single folio sheet. The printer was A. Rhames, of Dublin.

In the same year (1733) on the last page of a Play printed by S. Powell, in Dublin, is the statement that the paper on which the Play was printed was made in Ireland. I cannot, however, make out the water-mark.

In Lowndes' "Bibliographer's Manual" (under John Milton), will be found mention of an edition of his "Paradise Lost" printed in Dublin in 1748, on "Irish paper." This was Hawkey's edition.

On the title page of the edition of Biggs' "Military History of Europe," printed in Limerick in 1749 by Andrew Walsh, it is stated that the paper was made by Joseph Sexton. I cannot, however, make out the water-mark clearly.

If we open "Wilson's Dublin Directory" for the year 1768 (the first that gives a list of the Traders in Dublin), we will find the names and addresses of twelve paper-makers given in it, and amongst them two of the name of Thomas Slator, one in Cooke street, and the other in Engine lane. There must have been, therefore, a considerable business done here in the making of paper. Of course, paper was widely used for writing as well as for printing on.

E. R. McC. DIX.

In the diary of the Rev. G. Washington Phillips, written in 1817, is given an interesting description of a trip in the first American steamer, the Fulton:—"In the evening I proceded to the steamboat with the intention of taking a passage to New York. Seldom have I been more entertained than at the surprise and admiration expressed by the African servants we had brought over. They had heard of ships without sails, impelled by fire, but had always considered such reports as altogether fabulous. When, therefore, they beheld the steamboat, like a huge sea monster, floating on the surface of the water, advancing with inconceivable rapidity amid the foaming billows; heard the clatter of the water wheels, the hollow sound of the machinery working, and the sudden crash caused by the discharge of steam through the valves, they were completely aghast. Some persusion and encouragement were necessary to make them venture on board. The vessel, which was named the Fulton, was near 156 feet in length, with excellent accommodations of all sorts. At eight o'clock the following morning I found myself at New York, distant a hundred miles, without any of the fatigue, delay, or inconvenience of a land journey, or any of the uncertainty and risk of water carriage."

THE CROWNING OF AN IMPOSTOR.

AN EPISODE OF IRISH HISTORY.

By ELLA MacMAHON.

Since the Conquest there have been four pretenders to the throne of England. Of these, one actually succeeded in getting himself crowned.

On the 24th of May, 1487, a boy was solemnly crowned in the Cathedral of Christ Church, in the city of Dublin, as Edward the Sixth, King of England and France and Lord of Ireland. We know little of the life of this boy. History presents him to us as one Lambert Simnel, the pupil and protege of an English priest named Richard Simon, who put him forward as Edward Plantagenet, Earl of Warwick, born in 1475, sole surviving son of George, Duke of Clarence, and consequently last male heir of the House of York. From the Tudor historian, Polydore Veirgil, we learn all that we can ever really know of this child, and from Polydore Veirgil's account later writers have simply borrowed. Apart from Polydore Veirgil, the official documents of the period contain little mention of him. The Rolls of Parliament, 1487, merely declare him to be "oone Lambert Simnell, a child of ten yere, sonne to Thomas Simnell, late of Oxford, joynour," but his father has also been described as an organ-builder and a baker. There is no certainty as to which he was, nor can any subsequent members of the family, or even bearers of the name, be traced, with the single exception of Richard Symnell, whose name appears as a Canon of St. Osyth's, Essex, on its surrender in 1539. The popular tradition of the scullion is equally unsupported by proof; and history is really silent as to the child's ultimate fate. Neither do we know how he fell into Simon's hands in the first instance, nor how the daring project, so boldly put into execution, took shape in the priest's mind. But possibly ambition, which has been the mainspring of so many human inventions, may be held accountable for this also; and if Simon foresaw a crown for his pupil, his prevision included a mitre for himself. At all events, he determined to educate the boy at the University of Oxford for the part he was to play. Owing, however, to an unexpected opportunity for precipitating matters, he changed his plan of campaign, and withdrawing the boy from Oxford, boldly presented him to the leaders of the Yorkist party, and the members of the Royal House of York, as Clarence's son, escaped from the Tower, and the custody of Henry VII. The attempt succeeded, and foremost among his partisans, Simon could reckon the most important and powerful supporter among them all—viz., Margaret of York, Duchess of Burgundy, widow of Charles the Bold, and sister of Edward IV. This woman, then in the prime of life, rich, childless, ambitious, and popular, was the dea ex machina of every Yorkist conspiracy. Her Court was the refuge and the rendezvous of every Yorkist plotter, great and small, while her political influence, which was considerable, backed by her purse, which was no less substantial, was at the disposal of any and everyone who should seek to advance the cause she had at heart. Besides the Duchess of Burgundy, Simon had also succeeded in attaching to the boy-Pretender's side John de la Pole, Earl of Lincoln (who had himself been named as the successor to the throne by Richard III), and Lord Lovell, one of the richest peers in England, and the most ardent of Yorkists. There is ground for suspicion, too, that Elizabeth Woodville, Queen-dowager and widow of Edward IV., espoused the child's cause; though the fact of her own daughter, Elizabeth of York, being actually Queen of England by virtue of her marriage with Henry VII., would seem to dispose of any such supposition. But we must remember that, from first to last, Elizabeth Woodville showed himself an intriguante, and Henry probably had good reason for keeping her under strict surveillance. Whether Lincoln, Lovell, Margaret of Burgundy, and Elizabeth Woodville were really deceived as to the identity of the child who was thus presented to them, we shall never know; but it is, to say the least of it, unlikely. Yet it is not unlikely that each and everyone of them fancied that by permitting his impersonation of the real prince, and striking through him a fatal blow at Henry VII., they would pave the way for a Yorkist restoration. It is, indeed, highly probable that the child and Simon were merely taken up as tools to be cast aside when their use was no longer required.

Meantime a promising arena disclosed itself for the staging of the play. That arena was Ireland. To be accurate, it was such portion of Ireland as then formed the Anglo-Hibernian kingdom. Now, what was that kingdom in the days of the first Tudor King?

The lordship of Ireland assumed by Henry II., or, rather, conferred upon him by a Papal Bull, consisted simply of the territory known as the English Pale. In the fifteenth century, the Pale comprised, for the most part, merely some portion of the present counties of Dublin, Kildare, Meath, and Louth, or little more, in fact, than the strip of country for thirty miles inland, lying along the east coast from Dublin to Drogheda. Within this territory there had been set up a miniature kingdom closely copied from the English constitution, and ruled by a Viceroy, styled the Lord Lieutenant, who was either a prince of the blood, or an English nobleman closely connected with, or related, to the reigning English Sovereign. But the Viceroy, whose appearances were apt to be few and far between, had a working deputy on the spot, who, under the title of Lord Deputy, really administered the Anglo-Irish colony. The Lord Deputy was chosen from some influential Anglo-Irish family—that is to say, from those families which, originally Norman or Anglo-Saxon, had been planted in by the various English Kings on the lands of outlawed native chieftains. Now it happened, as it has happened over and over again in the history of Ireland, that ere long the Norman and the Saxon became to a ludicrous degree, "more Irish than the Irish themselves"; and so, even in the days of Henry VII., "Ireland" held herself represented, not by the aboriginal Celtic tribes that covered nine-tenths of the island outside the Pale, but by the handful of Anglo-Irish families within it. Foremost among the latter was the great Anglo-Irish family of Fitzgerald, a family that gave more Deputies to Anglo-Ireland than any other, and one which, during eight hundred years of illustrious existence, has not seldom seen its scions arrayed on the "popular" side. In 1487 the head of the house Gerald, Earl of Kildare, was Lord Deputy of Ireland, while his brother, Thomas Fitzgerald, of Laccagh, was Chancellor. Kildare was a strong Yorkist, and it does not seem to have been difficult to stir him to action. He, too, saw and conversed with the youthful pretender, and he, too, professed himself entirely satisfied. With Kildare went the rest of Anglo-Ireland en masse. Except the south-eastern town of Waterford, and the important Anglo-Irish family of the Butlers—between whom and the Fitzgeralds there raged for centuries a feud parallel to the hereditary enmity of the Montagues and the Capulets—the nobility, gentry, and smaller folk of Anglo-Ireland, including the citizens of Dublin, were to a man for the White Rose. Holding firmly, as they unquestionably did, that the legitimate heir to the throne was the Yorkist prince, it did not take much to persuade them that the little pretender, now put forward, was that prince. In Ireland sentiment goes a long way, and sentiment ever leans to the side of the dispossessed. The intimation that the rightful heir had escaped from the Tower, and was hastening to cast himself upon the support of his Anglo-Irish subjects, was just the kind of announcement best calculated to fire the feelings, and the imagination, and the curious picturesque appreciation of the chivalric ideal that distinguished this strange complex Ireland, then, as now. Moreover, the young prince was the son of Clarence, who had been born in Dublin, born, too, during the Viceroyalty of his father, Richard, Duke of York, a Viceroy deeply-beloved of Anglo-Ireland; and there were plenty of men still alive who, for his grandfather's sake, as well as for his own, would gladly hold out a helping hand to the little heir. As to Henry VII., Anglo-Ireland held his claim to the English throne untenable. The bar sinister, indeed, stretched too obtrusively across Henry Tudor's pedigree to please Irish sentiment, and "the Welsh man," as they called him, was looked upon as an audacious usurper.

Altogether circumstances in Ireland seemed eminently propitious, the moment singularly opportune. Accordingly on the 5th of May, in this same year, 1487, Simon and his protege landed at Dublin. The boy was taken to Dublin Castle, and lodged in the house where his reputed father had been born, in a manner befitting his princely pretensions. A strong body of foreign troops accompanied the royal entourage, sent thither by the Duchess of Burgundy, who had obtained their services from her brother-in-law, Maximilian, King of the Romans. The Dublin people, nothing loth, we are told, "lovingly entertained" the German soldiers, while "the counterfeit Prince met with all the countenance he could desire." Anglo-Ireland, in short, including the capital, which had the benefit of beholding him in propria persona, went fairly mad over the supposed kingly visitor. It was useless for Henry VII. to try a counter-demonstration, and parade a lad through the streets of London, declaring him to be the true Earl of Warwick. Anglo-Ireland retorted that the true prince was in the streets of Dublin, while Dublin's reply to the exhibition in London was the Coronation ceremony in her own Cathedral. Nineteen days after he set foot on Irish soil, the boy was brought in state to the Cathedral of the Holy Trinity, there to be anointed and crowned King.

With the scanty materials at our disposal, let us try to reconstruct that historic pageant. And first, as to the church which was chosen for this strange ceremonial. Albeit one of the

(Continued on page 234.)

BARRACK BRIDGE, DUBLIN, 1820.

FORMERLY KNOWN AS BLOODY BRIDGE, NOW VICTORIA BRIDGE.

FROM AN OLD STEEL ENGRAVING.

The above picture shows a very interesting portion of the Dublin quays as it was nearly a century ago. The nearer bridge was the predecessor of the structure now known as Victoria Bridge, and joined Barrack street on the north to Watling street on the south. Its history is given in the appended brief article from the Dublin Penny Journal of 27th June 1835:—

"Barrack Bridge (formerly Bloody Bridge) was originally built of wood in 1671, but afterwards constructed of stone. It consists of four plain semicircular arches. The erection, at the south end, of a grand gothic gateway leading to Kilmainham Hospital, and the scenery in the back ground, give to this bridge at present a very romantic appearance.

"The Queen's Bridge, seen beneath the other, consists of three arches of hewn stone, and though small, being but 140 feet in length, is neat and well-proportioned. It was erected in 1768. On the site of the present structure Arran Bridge formerly stood, which was built in 1683, and swept away by a flood in 1763.

"Relative to the original construction of the former bridge, we have been favoured by a correspondent with the following:

"'Passing over the bridge that leads from Watling street across the Liffey, I inquired its name, and found it was called Bloody Bridge, from a great battle that was fought there during the rebellion of 1641. I was told again, it derived its name from a number of apprentices who were hung on its battlements during "the affair of '98;" and some other causes are given for its sanguinary title. These contradictory reports induced me to consult history. Its origin is as follows:—A D. 1408, the Duke of Lancaster made extraordinary preparations for subduing the Irish of Leinster, who, under the command of King Art M'Murchad O'Cavanagh, were fearfully encroaching on the Pale. The consequence was, a most sanguinary conflict took place between the two armies at the western extremity of Dublin, where the Phœnix Park now stands. The English were defeated with dreadful slaughter, and hotly pursued to the gates of the city. Before they could enter the city, they had to cross the Liffey by a ford. Here the confusion became fearful—the Irish enemy were upon them, and before the half of the defeated army had crossed, the ford was completely choked up with the dead and dying, and the water continued red for three days, whence it got the name of Ath Cro, i.e., the Bloody Ford, which name was communicated to a bridge afterwards built over the ford. Whether the present bridge is the original one or not, I cannot say. The Duke of Lancaster, who commanded the English, was wounded near the walls of Dublin, and soon after breathed his last.'"

We may add that the Gothic gateway shown on right of picture was removed many years ago and re-erected at another entrance to the Royal Hospital (called above Kilmainham Hospital), and makes a conspicuous object on O'Connell road (Island-bridge). The shelving bank at right is now the jetty whence Messrs. Guinness and Co.'s fleet of steam lighters bear the products of their world-famous brewery for placing on board the large steamers at the North Wall.

THE CROWNING OF AN IMPOSTOR.

(Continued from page 232.)

smallest capital cities in Christendom, Dublin has been in possession of two Cathedrals for nearly a thousand years. The larger of the two, the Cathedral of St. Patrick, has, owing to the saintly fame of its founder, and later, in some degree to the lustre of Swift's genius, attained a wider celebrity than any other church in Ireland. Yet the sister church can, of the two, perhaps boast a larger number of historical associations of the first order, while it has been peculiarly connected with English rule in Ireland. Originally a Danish foundation, as its peculiar nomenclature attests:—"The Cathedral of the Holy Trinity, commonly called Christ Church—it was seized and burnt by Strongbow; then, rebuilt by him, was handed over to the Anglo-Hibernian Church in Ireland. When Lambert Simnel was crowned within its walls, it was, though small, yet as it now is, a singularly beautiful example of the Anglo-Norman ecclesiastical architecture of the 13th century. This beautiful church, with its monastery buildings attached, rose up in the midst of a city whose streets were few, indeed, in number, and little better than lanes and alleys, and whose houses were principally huts, built of clay and wattels. Situated within a stone's throw of Dublin Castle, then a strong fortress encompassed by a deep moat, both church and Castle stood at a considerable height above the river Liffey on its southern bank. Around these two buildings the ancient city clustered; and a very small city it was. For in those days St. Patrick's Cathedral, though now only a street or two away, was as yet "without the walls," while College Green was a village common. The proximity of Christ Church to the Castle was, no doubt, an element in its close connection with English rule. The burial place of the great warrior Earl, who laid the foundations of Anglo-Ireland, it was into this church that Henry II. came to receive in person the homage of those Irish chiefs who swore allegiance to the English King, and for centuries after that portentous moment in Ireland's history, the representatives of the English Sovereign and the chief officers of State took the oath of office within the walls.

Where, then, in Ireland could be found a more fitting temple in which to crown the heir of the House of York? Where a more hallowed setting for a sacred ceremonial? The 24th of May was the day appointed, and the 24th of May in that year was Whit-Sunday. We are not told if the sun shone on the head of the child who, for a few short days, was to bear the uneasy burden of an earthly crown. But may we not suppose that this Whit-Sunday in late May was as fair as that season generally is in the Isle of Saints, and that from a heaven of radiant blue, flecked perhaps with the white cloudlets seldom absent from an Irish sky, the warm sunshine glinted off the arms and accoutrements of the noblemen and knights, and streamed in slender arrow-like beams through the clerestory windows on the gorgeous vestments of the officiating ecclesiastics? We may have little doubt but that it was as brilliant a ceremonial as the fashion of the time and the somewhat limited resources at the disposal of the principal actors could devise; we can have no doubt whatever as to the importance of those actors. For this pseudo-prince, Edward VI., was not crowned by irresponsible hands. The Archbishop of Dublin, the Prior of the great religious house of Kilmainham, and the Bishop of Meath, who preached the sermon, and set forth in it the boy's titles, and solemnly defended the validity of his claim to the throne, were there to take their part in this unique coronation. There, too, were the officers of State, Kildare, Lord Deputy, the Chancellor, the Judges, the Privy Councillors, the heads of the Irish nobility, the chief citizens of the capital. With the exception of the Archbishop of Armagh, who was a Florentine, and the Bishop of Clogher, an Englishman newly imported, the clan of the Butlers and St. Laurence Lord Howth, the Anglo-Irish executive was absolutely unanimous.

The Coronation of the child was carried out with all due observance, and a pretty picture enough it must have made. For he was a beautiful child, even Henry's historians tell us, and bore himself as a very prince, indeed. "An honourable boy to boot, and one that did not shame his robes." There is no record of the order of service or what rubric was observed, but it is specifically stated that the "English use" was adhered to throughout. As Henry VII. had been crowned at Westminster some months before, it is fair to assume that the English use referred to was the ceremonial observed at his Coronation. In the official document called the "Little Device," the details of the Coronation of Henry VII. are given at great length. The list of the King's wardrobe for the occasion is a portentous one, and most minute directions follow regarding the clothing of the great officers of State and Court in attendance, the "Earl Marshall" in particular to be very "well apparelled." We do not know who were chosen to represent these ornamental and important functionaries at the ceremony in Dublin, but we may be sure that the Lord Deputy had little difficulty in finding eager candidates. As for the ecclesiastics, the "Little Device" gave them plenty to do. No doubt the Archbishop anointed the child as he was therein commanded, not only on the head, but on each breast, on each shoulder, on each elbow. And then, before the oath was administered, "the King was to lye grovelling before the High Aulter while the Archbishop sayeth upon him the 'Deus Humilium.'" And possibly they robed the child in the white dalmatic here ordered for the Sovereign, and in that priestly garment he sat in his chair before the high altar, or waited kneeling, while the crown was sprinkled with holy water before being set upon his head. They had taken a crown from the head of an image of the Virgin and Child, which adorned the high altar of St. Mary's Abbey, in Dublin, one of the most splendid Cistercian foundations in the kingdom, and with this silver Virgin's crown the Archbishop crowned the child. In form it was "a double-arched crown, such as appears on the coins of Henry VII., and on his only"; and after many vicissitudes, this crown was sold within living memory in the city of Dublin, and flung into the melting pot. Then, with the crown on his head, and the sword girt upon his loins, the "Little Device" declares that the ruby ring is to be put upon the King's finger, and all are then to hold up their hands in token of fidelity, to sustain, defend, and support the King!" We may be sure that at the Christ Church Coronation the hands went up, whether the ring in this case went on or not, and that the homage was enthusiastic. Certain it is that within the walls of Christ Church that day every man solemnly renounced his allegiance to Henry VII., and pledged himself to be the "true man" of Edward VI., King of England and France and Lord of Ireland; and, indeed, within a month that oath was bravely redeemed on the field of Stoke, and every chronicler of the time has borne witness to the "furious valour" of the mock-King's Anglo-Irish forces, and how then, as ever since, they fought to a finish, outnumbered, ill-armed, and ill-clothed as they were, against well-armed and well-clothed troops; how "though broken they disdained to fly," and every "leader perished on the field!"

But we are looking at the gay and not the grim side of Royal Coronations, and surely this was a pretty Coronation, this half-pathetic, half-humorous sham-ceremonial! With stern soldiers in mail, and grey-headed councillors, and grave ecclesiastics bending the knee and kissing the child's soft cheek! We may be sure that the cheers for Edward VI. within the Cathedral shook its grey walls, and were caught up by the populace without. No wonder that when the King was carried out into the open streets once more, borne high on the shoulders of the tallest man in the kingdom, so that all might see him, the Dublin populace should have shouted themselves almost into a frenzy over him. For the whole story, the attendant circumstances—above all, the extreme youth and beauty of the central figure in the pageant, combined to evoke a genius of occasion such as people in Ireland love. Here was a romance, a living romance, moving before their delighted eyes. The short distance between the Cathedral and the Castle was turned into a triumphal progress such, perhaps, as only the extraordinarily sensitised excitability of Ireland and Anglo-Ireland can achieve among the colder peoples of the North. We may be sure that Darcy of Platten, upon whose shoulder the "scenic princeling" was carried, was a proud man that day. And here again we see how completely Anglo-Ireland managed the affair, for Darcy of Platten was the representative of a notable family within the English Pale. D'Arcy or Darcy, of Anglo-Norman extraction, one of whose members, Sir John Darcy, had been Lord Deputy.

That was how England's Anglo-Irish subjects crowned a King for her. The triumphal progress ended at the Castle, where a great banquet was given—it has a modern sound all this to ears accustomed to Irish social affairs—and the newly-crowned King lived in the Castle of Dublin for four weeks. Kildare, who was Protector of the Kingdom and the child's guardian, did the thing thoroughly. In the name of Edward VI. he summoned the Irish Parliament, made enactments, and minted coin. None of these are extant; but "Poyning's Law," of 1494, repealed all the enactments of the pretender's government, and swept the laws of Lambert Simnel from the statute-book for ever.

Note.—Petrie casts some doubt upon the statement that the crown used was that which belonged to the image of the Virgin in St. Mary's Abbey.

Authorities: Cox's "Hibernia Anglicana," Leland's "Colectana," Gardiner's "Henry VII.," Busch's "England Under the Tudors," Ware's "Annals."

THE SEA.

BY FITZ JAMES O'BRIEN.

Ebb and flow! ebb and flow!
By basalt crags, by caverns low,
Through rifted rocks, o'er pebbly strand,
On windy beaches of naked strand!

To and fro! To and fro!
Chanting ever and chanting slow,
Thy harp is swept with liquid hands,
And thy voice is breathing of distant lands!

Sweet and low! Sweet and low!
Those golden echoes I surely know;
Thy lips are rich with the lazy south,
And the tuneful icebergs have touched thy mouth.

Come and go! Come and go!
The sun may shine and the winds may blow,
But thou wilt forever sing, O sea!
And I never, ah! never, shall sing like thee!

THE

ROUND TOWER OF KILBANNON.

BY RICHARD J. KELLY, B.L.,
Hon. Secretary of Galway Archæological and Historical Society.

The Round Tower of Kilbannon, some two miles from the historic town of Tuam, is one of the seventy-two of its kind yet remaining in Ireland, and is in size, structure, and situation one of the most interesting of that famous group. These curious works have been divided into four groups representing the different forms of architecture. The first style are of a rude sort, built of rough field stones untouched by hammer or chisel, not rounded, but fitted by their length to the curve of the wall, roughly coursed, wide jointed, with small stones fitted into the interstices. The mortar used was, of course, unsifted sand or gravel. The next class consists of stones roughly hammer-dressed, rounded to the curve of the wall, decidedly though somewhat irregularly coursed —often badly bonded together, and having mortar freely used. The third style has the stone laid on horizontal courses, well dressed and carefully worked to the round and batter, the whole cemented in strong plain mortar of lime and sand. The fourth class has strong rough, but excellent ashlar masonry rather open jointed, and, therefore, closely analagous to the English Norman masonry of the first half of the twelfth century, or in some instances finest possible examples of well-dressed ashlar sandstone in squared courses.

Kilbannon belongs to the second style, as does Meelick, Monsteraboice, and Cashel. Here the doorway which, as in all these towers, is placed some six feet from the ground, gives one the first idea of an arch, the curve being scooped out of three or four stones, the stones of the entrance being of the same material as the rest of the tower, but roughly worked to the round. The windows are of the same material as the rest of the building. About a fourth of the shaft and apex of the tower have disappeared, but in its present dimensions about some thirty feet high sufficiently remains to give one an idea of its ancient symmetry and beauty of design. It stands at the angle of what is now the present graveyard of Kilbannon, and was anciently the grounds of the Dominican Monastery which was erected there. A road separates the tower and graveyard from the Catholic Church—a neat building erected, as the inscription over its doorway tells us, by a former Parish Priest of Kinconly, with which Kilbannon has for centuries been incorporated—the Rev. Father Gibbons.

Kilbannon, as its name signifies, means the church of Benin or Benignus, who was one of our most famous saints. In the "Martyrology of Donegal," St. Benignus is thus referred to:—

"November 8th Benignus—i.e., Benen, son of Sescnen, disciple of St. Patrick and his successor—that is, primate of ard Macha. The Holy Benin, was benign, was devout." He died on the 9th of November, 468, and a short time before his death he resigned his primatial coadjutorship into the hands of St. Patrick, who was then living. As a boy he was present when St. Patrick preached, and became so attached to the apostle that nothing could separate them. He accompanied the Saint everywhere. His voice was sweet and pleasing, and he was remarkable for his knowledge of and proficiency in singing the psalms. Hence, as Dr. Healy says in his most interesting work, "Ireland's Ancient Schools and Scholars," he was psalmist to St. Patrick, and led the choir of priests and monks on all solemn occasions, and trained the "wild eyed Celtic youth to sing the praises of God like another Orpheus, softening them into Christian meekness by the charms of sweet melody—the melody of his voice, and the still sweeter melody of his gentle heart."

St. Benignus founded a famous school at Kilbannon, and his sister, Mathona, was one of the first nuns veiled in Erin, and settled down at Tawnagh, in the county of Sligo. Benignus preached the Gospel in Kerry, in Clare, and South Connaught. He blessed that province with a special blessing from Bundrowes, near Bundoran, to Limerick, and the natives paid to him and his successors a yearly tribute of milk and butter, calves and lambs, as well as the first fruits of their fields. Kilbannon was his principal church, and continued so for years. His most famous disciple was St. Jarlath, the founder of Tuam.

Curious their most famous foundations should be so situated close to each other. The schools of Kilbannon and Cloonfush, as it is now called, but Cluainfois, as it originally was known, are but a few miles apart, and from the classic retreat of the meadow can easily be seen the tower that stood beside the church of Benin.

Speaking of Kilbannon, that great antiquarian, John O'Donovan, says, in an unpublished manuscript:—

This well-known parish, situated near Tuam, and so familiar to our people, is so designated from the two Irish words, "Cill and Beanin," so called after St. Benin or Mionnan, the servant of St. Patrick, who was buried at the foot of the Reek, where his "leachta" is still visited by pious pilgrims. There is a holy well near the church of Kilbannon also called after the Saint, and, furthermore, near the old church building, which stands in the graveyard, is one of the ancient "cloghteaghs," called locally "cloghteagh cill meannan," or church towers, and said to have been built by or for St. Benin. The door of the tower is about fourteen feet from the ground, and the church beside it is of the Gothic style of architecture, and not many centuries old. Stations were up to O'Donovan's time (in 1838), when he wrote about it, and for some years subsequently, performed to the well of St. Benin on Donnach Chroin Duibh, or Garland Sunday. The Parish Priest of Kilbannon, in 1838, the Rev. Mr. Joyce, or, as O'Donovan calls him in his unpublished letters, "the present coarb of St. Benin," tried to stop these. "He," says the antiquarian, "is making every exertion to put a stop to these "toarasses," because he believed that the tower was a Pagan fire temple, that the well was of Druidical sanctity, and that St. Benin was obliged to transfer them to Christian purposes to please the superstitious natives, and I might easily argue with a cataract of the contrary as the present coarb of St. Benin." Thus is quaintly but expressively described by O'Donovan, the strong, obstinate views erroneously taken by the old Parish Priest, and the impossibility he felt of trying to convince him or of reasoning him out of his views to the contrary. It seems stupid of the clergyman, for in the minds and hearts of his parishioners the place was associated alone with the sainted memories of the Saint, and only the perverse ignorance of the pastor attempted to give a Pagan flavour and complexion to otherwise harmless and laudable pious practices. Whether through the exertion of the Rev. Mr. Joyce or not, the Stations have anyway died out, and become things of the past, as unfortunately have too many other good, pious practices and harmless customs.

KILCREEVANTY.

Near Kilbannon is the townland of Kilcreevanty, and situated in the same parish. Here stand the ruins of "the celebrated nunnery of Cill Craebhnata." Its exact location had not been known until 1838, when it was discovered by O'Donovan, who describes it as affording evidence of the extensiveness of the old buildings. The doorways and windows are destroyed, excepting one on the north transept, which is of round shape, and measures 8 feet 6 inches in height, and 4 feet 6 inches in breadth on the inside, but the outside portion has been demolished. From the observations made it would seem the nunnery was originally in the shape of the letter T, the nave and choir being 120 feet in length and 57 feet in breadth; the foundation can still be traced, but not much of the old structure is extant, as the east and west gables are gone, and only 72 feet of the south wall remains, some 20 feet in height. A shapeless hole now does service for the door, and another hole at the western extremity, under which is a large, well-cemented piece of the wall laid prostrate. The mortar used, as with all these old buildings, is of excellent material. Twenty-four feet of the northern wall are yet standing, and were 18 feet high. There were two chapels attached to this building, one at the south and the other at the north side of the choir—the first (21 feet in breadth) containing the windows already referred to, and the southern part level with the ground. By an inquisition taken on the 10th of April, in the 34th year of the reign of Henry VIII., we find that the Nunnery of Kilcreevanty contained a church and belfry, dormitory hall, three chambers, a kitchen, a garden and sundry closes. The Annals of Lough Key, as quoted by Archdall, tell us that this Nunnery, which was also called "of the chaste wood," was founded for Nuns of the Order of St. Benedict about the year 1200 by Charles, the Red-handed O'Connor. The Four Masters relate that Fynola, the daughter of Felim O'Connor, Abbess of "Cill Craobhnata," died in the year 1301. From Archdall we learn further that Dervail Ny Connor was the last Abbess of the Nunnery of Kilcreevanty.

On the top of the townland of Ballygaddy in this neighbourhood will be found a heap of stones called Leachta Phadrigg, or the monument of St. Patrick. O'Donovan is of opinion that from the name "Cill Croabh-nata-cellacroevatae," that there was a primitive little Irish church in that place, on the site of which the extensive establishment of "Cathael Crobhdhearg" was subsequently built in the thirteenth century.

The most learned and critical researches into the origin and purpose of these buildings establish the following conclusions: (I) That these towers were built after the Irish became acquainted with the use of cement and the hammer. (II) That the towers were built at or about the period of transition from the entablative style of the early Irish period to the round arched decorated Irish Romanesque style. (III) That the largest number of these towers were built before their transition had been established and while the Irish builders were feeling their way to the arch. (IV) That as this transition took place between the time of Cormac O'Killeen and Brian Borumna—that is, between 900 and 1000, the first groups of towers now standing belong to the first date.

Reference to the towers occurs in our histories very early. The Annals of Ulster in A.D. 448 speak of a terrible earthquake, and mentions that fifty-seven of the towers were then destroyed or injured by its ravages. The Annals of the Four Masters mention the existence, in the year 898, of the Turaghan-Angson, or fire-tower of the anchorite, at Inis Cailtre, in the Shannon; and the same authorities note the destruction, by lightning, in 995, of the hospital, cathedral, palace, and round tower of the town of Armagh. In the old annals also recur the names of such places as "Muighe Tuireth nabh Fomoroch," that is, the plain of the Fomorian tower; while in the West, still perpetuated, is Moytura—the plain of the tower; and Tor Inis—

the island of the tower. Etymologically considered, we can get but a very slight inkling at their origin. In some parts the towers are called "cileagh," which, as translated, means a fire-temple; yet I am sure an equally plausible explanation in another direction might be hazarded. Undoubtedly, structures very like the Irish round towers have been found in many parts of the East. Hanway, a famous traveller, mentions four, which he saw at Sari, round in form, built of the most durable material, about thirty feet in diameter, and running to a height of 130 feet, corresponding curiously with ours in these details.

Pennant, speaking of the Indian Polygars, says that they retain their old religion, and that their pagodas are "chiefly buildings of a cylindrical or round tower shape, and tops circle-pointed or truncated." Lord Valencia describes, in 1887, two round towers he saw at Bhangulpore, in India, and which, he says, "much resemble those buildings in Ireland. The door is elevated above the ground by some ten or twelve feet, they possess a stone roof, and four large openings at the summit." The Brahmins had their fire-temples, which they called "coil," from "chalana," to burn. These are generally the chief grounds of the theories of Pagan origin as far as I can gather.

It is also said that the towers were erected for and used as belfries in Christian times, and the theory rests on the fact of their always adjoining churches. Under the foundations of some towers, when excavated, have been found human remains, and I think it was at Kilnaclugh there was discovered, some years ago, a skeleton which, from its position and some pious ornaments found with it, might go to prove the theory of their being Christian burial places; but then if the tower had a basement story, as the Cork Tower had, it might be possible to inter the corpse from the inside, or, indeed, easy to bury one from the outside, deep down under the foundations, while, in any case, we know that either the appearance of the cross with the position of the corpse would of themselves conclusively establish a Christian origin for the burial.

Gerald Barry (Cambrensis), speak of the legend connected with Lough Neagh, where it is supposed the fisherman

> Sees the round towers of other days
> In the waves beneath him shining;

and he says that vast expanse of water was supposed to have been due to the overflow of an enchanted well, which submerged a large tract of country, "inhabited by a wicked race of men." This quaint old observer calls the buildings "ecclesiastical"; but his testimony, while going to prove their antiquity, may also be adduced as evidence that they were put to sacred use in his time. There they stand in all their simple grandeur, models of archaic architecture; monuments of constructive skill, in a country which can boast of a long, pure civilisation—a farther reaching record than any other in Europe.

About thirty million gallons of mixed paint were sold in the United States during 1901. The greater portion of this was not used in the large cities, but in the towns and villages, where structures are of wood. In no country is so much paint made as in the United States of America, and the bulk of that paint is composed of lead, zinc, and linseed oil, and only the darker shades are made of oxides of iron and other pigments. Many manufacturers use a small quantity of water in their mixtures, and when the quantity of water is not over 2 per cent., it cannot be regarded as an adulterant. The water used is usually slightly alkaline, and in the case of lime water it forms a calcium soap with linseed oil and thickens the paint, so that it never settles hard in the tin and is easily stirred.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

Chap. XI.

Fasti Dublinienses; or, a short chronicle of the remarkable actions done from time to time by the citizens of Dublin in defence of the state, intermixed with other accidents befalling the city, and the charters and grants made to it.

A.D. 1173. King Henry II. having received the submissions of the Irish, granted the city of Dublin to the people of Bristol to inhabit, as by the following charter:

"Henricus dei gratia, &c. Henry by the grace of God, king of England, lord of Ireland, duke of Normandy and Aquitain, and earl of Anjou, to the archbishops, bishops, abbots, earls, barons, justices, ministers, and sheriffs, and to all his faithful subjects, French English, and Irish, greeting. Know ye, that I have given, granted, and by my charter confirmed to my subjects of Bristol my city of Dublin to inhabit. Wherefore I will and firmly command that they do inhabit it, and hold it of me and of my heirs, well and in peace, freely and quietly, fully and amply, and honourably, with all the liberties and free customs, which the men of Bristol have at Bristol, and through my whole land. Witness William de Braosa, Reginald de Curtenay, Hugh de Gundeville, William Fitz-Aldelm, Reginald de Glanville, Hugh de Cressy, Reginald de Pavilly, at Dublin (See cap. I)."

A.D. 1175. Hervey of Mount-Maurice, being with earl Strongbow at Waterford, persuaded him to an expedition against the Irish in and about Cashell; and to strengthen themselves they sent orders to a body of the Ostmen citizens of Dublin, who had incorporated with the English, to march to their aid. But they were surprised by Donald, prince of Ossory (or of Limerick, as Cambrensis says), and defeated with the slaughter of four gentlemen at arms and 400 of the citizens, which elevated the Irish so much, that Roderick O'Connor, king of Connaught, passed the Shannon, and preyed the country even to the walls of Dublin

A.D. 1177. Earl Strongbow died in Dublin of a mortification in his foot, and was buried with great solemnity in Christ-church, in sight of the cross, where still remains a monument to his memory. The same year Vivian, the Pope's legate, held a synod in Dublin, and therein published king Henry's title to Ireland, and the Pope's ratification of it denouncing excommunication against all who should withdraw their allegiance from him. He also gave licence to the English to take provisions deposited in churches or monasteries upon paying the value thereof.

A.D. 1178. William Fitz-Aldelm, chief governor of Ireland, removed a relict called "Jesus's staff" from Armagh to Dublin, and deposited it in Christ-church there, which brought no small profit to the canons of that church.

A.D. 1185. Philip of Worcester, constable or chief governor of Ireland, in Lent this year marched a body of forces from Dublin to Armagh, which he rifled and plundered for six days togther, and then returned without loss to Dublin.

A.D. 1190. Great part of Dublin was consumed by an accidental fire.

A.D. 1195. The body of Hugh de Lacy (who had been murdered at Durrogh in 1186) was this year removed from among the Irish, and buried at Bectiff in the county of Meath, by Matthew, archbishop of Cashell, and John, archbishop of Dublin; but they deposited his head in the abbey of St. Thomas ,near Dublin.

A.D. 1204. Great numbers fell by the plague this year, in Dublin and the neighbouring parts.

A.D. 1205. Meyler Fitz-Henry, lord justice of Ireland, signified to king John that he had no secure place to deposit his treasure in, and that for that, as well as other necessary occasions, it would be requisite to erect a strong fortress at Dublin. In pursuance of which application, the king commanded him by writ to erect a castle in Dublin, in such place as he should think proper, in order to secure and defend the same, and to enclose it with strong walls; but first he commanded him to build a tower, unless a castle and palace might be more conveniently raised, for the building which work he assigned him 300 marks due to the king by Jeffrey Fitz-Robert. He also commanded him to oblige the citizens to fortify and strengthen the city, and granted them a fair to be held for eight days, to begin on the day of the invention of the holy cross, and that due proclamation be made thereof to invite merchants to resort thereto. This writ is the first notice we have of the original of the castle of Dublin; though it was not finished, nor perhaps begun, by this lord justice, the honour of that action being ascribed to Henry de Loundres, archbishop of Dublin, who was constituted lord justice in 1213.

A.D. 1210. King John, being this year in Ireland with a considerable army, set about the reformation of it with vigour; and for this end he anew divided such parts of it as were in his possession into counties, erected courts of judicature in Dublin, and appointed judges, circuits, and corporations as in England. He also caused an abstract of the English laws and customs to be drawn up in writing, and affixing his seal thereto, deposited them in his exchequer at Dublin. Upon his departure from Dublin, he left the government in the hands of John de Gray, bishop

of Norwich, who, by command of the king, caused pence and farthings to be coined of the same standard and fineness as those of England, which had an equal currency in both kingdoms. On this new coin was the king's head in a triangle, inscribed JOHANNES REX, and on the reverse a crescent and bright planet, with three lesser stars or starlings in the three points of another triangle, with the mint-master's name, ROBERD. ON. DIVE. for Divelin. i.e., Dublin, The triange on the Irish coins of this monarch, as well as those of his two next successors, have been supposed to represent a harp, the arms of Ireland, which was after more fully impressed on the coins of some of the succeeding kings. The ounce of silver at this time was divided into twenty sterling pence, and so it continued till the 9th of Edward III., at which time it was divided into twenty-six pence. This proportion remained till the 2nd of Henry VI., when it made thirty-two pence. The standard received another alteration an. 5th Edward IV. into forty pence to the ounce, and since has increased to sixty pence. But this by the way.

A.D. 1212. John Comyn, archbishop of Dublin, departed this life, and was buried in a marble tomb on the south side of the choir of Christ-church, which he had partly renewed and somewhat enlarged in 1190. He also built and endowed that spacious church, dedicated to St. Patrick, in the southern suburbs of the city, having demolished the old parish church that was there, and therein placed thirteen prebends, which number in after times increased to twenty-two. To him (a) Henry de Loundres succeeded. This Henry is the person supposed to have built the castle of Dublin, and was made lord justice of Ireland in 1213.

A.D. 1215. The King granted a licence to the citizens of Dublin to erect a bridge over the Liffey, where they pleased.

A.D. 1217. Kng Henry III. granted a fee-farm of the city of Dublin to the citizens at 200 marks rent. Henry de Loundres, archbishop of Dublin, held a synod of the clergy there, wherein he established many canons, profitable for the Irish church, which are extant in the ancient registry called Crede Mihi.

A.D. 1223. The power archbishop Loundres has as lord justice, and the Pope's legate, gave him the opportunity of encroaching on the rights of the crown and the liberties of the subject, by drawing temporal causes to the ecclesiastical courts, of which the citizens of Dublin complained to the king, who this year sent him an increpatory writ, prohibiting him from such practices for the future, with threats of severe treatment if he persisted. The king also sent him another writ about the same time, commanding him to redress a nuisance committed in the harbour of Dublin, according to the law of England.

A.D. 1224. The citizens of Dublin made a voluntary loan to king Henry III. of 366 marks (a sum considerable in those times), to forward an expedition against Hugh de Lacy (brother to Walter de Lacy), who thereby was so effectually pursued, that he was obliged to make his submission, and was pardoned; and the king reciting the service, repaid the same by privy-seal soon after. The same year the king granted to them 50 marks towards walling the city, to make up what was deficient in a grant made by him for the same purpose four years before of three pence for every sack of wool, six pence for every last of hides, and two pence out of every barrel of wine sold in the city.

A.D. 1228. About this time archbishop Loundres died, and was buried in Christ-church, over against Comyn, as is said, in a wooden tomb on the north side of the choir, and was succeeded by Luke Dean of St. Martin's, London.

A.D. 1251. King Henry III. caused a new coin to be stamped in Dublin, and called in the old. It bears the king's head with a triangle, or three-cornered harp, with this inscription, HENRICUS REX III., and on the reverse a cross, quartering a penny into four farthings, and the name of the mint-master and place of coinage. RICHARD ON DIVE. for Divelin. The cause of striking this coin was probably to answer the Pope's demands of Irish subsidies made for the holy land this year.

A.D. 1255. Luke, archbishop of Dublin, died, and was buried in the same tomb with archbishop Comyn in Christ-church, on the fabric whereof he was at some expense.

A.D. 1262. This year much contention arose between the prior and convent of Christ-church and the corporation of Dublin, about the tyth-fish of the river Liffey; but how the same was composed does not appear.

A.D. 1266. A great earthquake was felt in Ireland, which, being a thing very uncommon, struck more terror into the people than it did them mischief.

A.D. 1267. Great quarrels arose betwene Fulk de Saundford, archbishop of Dublin, and the mayor and citizens upon this occasion. The principal support of the churches of Dublin (as the archbishop alleged) consisted then of the offerings on Sundays and holy-days, at the benedictions of new-married people, and the purifications of child-bed women, which offerings people made in the churches, accompanied by a numerous train, who all made their oblations upon the occasion. The mayor and citizens endeavoured to correct the excesses to which this practice had grown; and for this purpose they this year issued a proclamation with a penalty annexed, "That citizens should not presume to make their offerings more than four times a year, and restrained the numbers attending new married people and child-bed women to two. They seized the wax candles carried in processions at funerals, which used to be given to the churches, and deposited them in their own halls, leaving only two to the church where the person was buried. They ordered that no prelate or ecclesiastical judge within the city should hold plea of usury, or of any crime or cause, except what were matrimonial or testamentary; and that they should have no cognizance of intestates goods, which they ordered to be paid into the exchequer; and further, that no citizen, even in causes ecclesiastical, should be obliged to appear in judgment out of the limits of the city." These encroachments on the ecclesiastical immunities were highly resented by the Archbishop. He often admonished the mayor and citizens to a forbearance, which having no effect, he by his ordinary authority promulged the sentence of excommunication against them, and put the city under an interdict, to strengthen which he had recourse to Cardinal Octobon, the Pope's legate then at London, who, on the 18th of February, sent a commission to the bishops of Lismore and Waterford, to denounce the mayor and citizens excommunicate by bell book and candle in all places within the city and province of Dublin. These disputes put the city into a great flame, and in summer, 1268, Sir Robert de Ufford, lord justice, and the privy council interposed in the quarrel, and a composition was made between the archbishop and the citizens in the mayoralty of Vincent Tabi, the terms of which, relating only to some of the particulars (the matters merely ecclesiastical being probably before given up), were these, viz., "If any citizen committed a publick sin, he should for the said offence commute for a sum of money. If he continued in his sin, and the same were enormous and public, and then, 'fustigetur,' &c., he should be cudgelled about the church. That for a third offence he should be publicly cudgelled before the processions made to Christ-church or St. Patrick's, and if after this penance he should persist in his sin that the official of the archbishop should give notice of it to the mayor and bailiffs, who should either turn him out of the city or cudgell him through it. It was further agreed, that a general inquisition should be made once a year through the city after all publick sins; but that no citizen should be drawn out of the jurisdiction of the city by any official of the archbishop, but should answer within the city before the ordinary jurisdiction." We thought this passage worth transcribing from the black-book of the archbishop of Dublin, and the crede mihe, to show the practises and penances of those early times, and how little remedy the citizens had by turning reformers.

(To be Continued.)

(a) His tenants nick-named him Scorch-bill or Scorche-villeyn upon the following occasion. He being peaceably installed in his bishoprick, summoned all his tenants and farmers at a certain day appointed to make their personal appearance before him, and to bring with them such evidence and writings as they enjoyed their holds by. the tenants at the day appointed appeared, showed their evidences to their landlord, mistrusting nothing; he had no sooner received them, but before their faces upon a sudden cast them all into fire, secretly made for that purpose; this fact amazed some that they became silent, moved others to rage, that they regarded neither place nor person, broke into irreverent speeches: "Thou an archbishop, nay, thou art a "Scorche-villeyn;" another drew his weapon and said, "As good for me to kill as be killed, for when my evidences are burned and my living taken away, I am killed." The bishop, seeing this tumult, and the imminent danger, went out at a back door: his chaplains, registers, and summoners were all beaten, and some of them left for dead. They threatened to fire the house over the bishop's head: some means was had to pacify them for the present, with promises that all hereafter should be to their own content: upon this they departed. See Camd. An of Ireland, 1212, black-book of the Archbishop of Dublin, fol. 437.

LITERARY NOTES.

A number of letters of Nathaniel Hawthorne, in addition to those of which mention has been made in certain American periodicals, have lately been discovered. They deal with the author of "The Scarlet Letter's" visit to this country, and gives his impressions of certain prominent personalities of his day.

✧ ✧ ✧

Mr. Charles Major's "Dorothy Vernon of Haddon Hall" is not alone. There now appears from the pen of another American writer a book entitled, "Mistress Dorothy of Haddon Hall, Being the True Love Story of Dorothy Vernon of Haddon Hall." Mr. Major's publishers are "busy getting out injunctions."

✧ ✧ ✧

Mr. Augustine Birrell, in his study of "William Hazlitt" in Messrs. Macmillan's series of "English Men of Letters," does not attempt to palliate the many things which made Hazlitt disagreeable and reprehensible: he is no eulogist of the "Liber Amoris"; but the story of Hazlitt's life is handled in such a way as to bring out to the full the quality of his talents and personal charm.

✧ ✧ ✧

Fully 100,000 people were present at the unveiling recently of the statue, in bronze and granite, executed by Guiseppe Moretti, the celebrated New York sculptor, to the memory of Stephen C. Foster, composer of the "Old Folks at Home," "My Old Kentucky Home," and a score of other melodies that have sung their way the world over into human hearts. The statue stands in Highland Park, Pittsburg, Pennsylvania. Foster was the child of Irish parents.

✧ ✧ ✧

Of the new volumes of Messrs. Macmillan and Co.'s series, "English Men of Letters," which are to be issued by next autumn, Mr. Frederic Harrison's is the only one about which readers may feel most curious. Between the critic of art who turned preacher of ethics—ethics in everything, from political economy to the making of a bone button—and the positivist who is above all things a moralist, there is much in common; though there is also much wherein they are as wide as the poles asunder. Sir A. Lyall's subject (Tennyson) has been done to death by scores of people. Mr. H. W. Paul's (Matthew Arnold) has not. Whether a poet or writer of prose, but, of course, especially as poet, Matthew Arnold is, and always will be, the companion of the few.

✧ ✧ ✧

M. Le Gallienne has been writing in the "New York Journal Supplement" on "What should an unread man read" Mr. Le Gallienne's suggestions are neither very new nor very interesting. He says, in effect, let the unread man go his own way, and if he does not care for Homer let him frankly say so. This is precisely what the "unread man" has been saying all along. Mr. Le Gallienne thinks that his conjectural man should form the reading habit by a course of novels, and that if he wants philosophy he should read it in a boiled-down form. Then Mr Le Gallienne proceeds to history, and gives it first place as an object of study. With that no one is likely to disagree, but that "the best historians are the vividest" is a statement which can hardly be allowed without some qualification. It would be truer to say that the vividest historians are best—for the unread man.

✧ ✧ ✧

As we have stated, the "Academy" remarks, the mystery of the authorship of "An Englishwoman's Love Letters" is to be exploded in the autumn by the author, who will publish another book with his signature. The gap thus to be formed in the mystery market will be filled, we understand, by the publication in volume form of the "Confessions of a Wife," now running in the "Century Magazine." Already the question of the authorship is attracting considerable attention. The book will be issued without revelation of the true name of the author, who even to the publishers remains as much of a mystery as ever. In the circumstances, the following order issued to the clerks of the Century Company is not without interest: "All packages whatsoever for 'Mary Adams' are to be addressed on the outside to her lawyer, and on the inner envelope to 'Mary Adams.'"

✧ ✧ ✧

The centenary of the birth of three Scottish men of letters, Robert Chambers, Thomas Aird, and Hugh Miller, occurs this year, and while preparations are being made, in the case of the two latter names, to celebrate the event, it is somewhat surprising that the anniversary of the birth of Robert Chambers is likely to pass unnoticed. Born at Peebles on July 10, 1802, Chambers deserves grateful remembrance as one of the early disseminators of pure and informing literature. With his brother, William, he was the founder of the now world-famous house of W. and R. Chambers. It is interesting to recall that his much-discussed work, "Vestiges of the Natural History of Creation," one of the earliest speculative expositions of the evolution theory, was issued anonymously sixty-two years ago, and not till forty years later was its real authorship, long surmised, established on the death of Alexander Ireland, of Manchester, who was Chambers' fried and confidant. It had previously been attributed to various other writers.

✧ ✧ ✧

An interesting chapter in the history of Colonial journalism is recalled by the death of Mr. W. H. Traill, news of which is brought by the last Australian mail. He was to all intents and purposes the man who made the "Sydney Bulletin," although not its actual founder. That peculiar paper was born in the "Express" office, a Sydney Catholic weekly journal established by the late Archbishop R. B. Vaughan, brother of the present Cardinal of Westminster. But it did not become generally known until Mr. Traill wrote in its columns a startling exposure of certain orgies prevalent in the Sydney of the seventies, know as "Down-the-Harbour Picnics." The Zolæsque realism of the article led to a run upon the paper, and also to the incarceration of its conductors for a considerable period, during which Mr. Traill acted as editor. He was subsequently elected member for South Sydney. Latterly he had been editor of the "Queenslander," the leading weekly of the tropical State, and it was in the Queensland metropolis, Brisbane ,he passed away at the age of fifty-eight. He was one of the principal contributors to the "Picturesque Atlas of Australasia."

✧ ✧ ✧

Mr. Andrew Lang writes the introduction to Hugo's "Notre Dame of Paris" in Mr. Heinemann's "Century of French Romance" series. His concluding paragraph is an interesting and compact piece of criticism:—"To the English reader the sources of Hugo's faults appear to be two: the love of the excessive, as if Martin had written romances in the manner of his pictures; and the entire lack of the humour which restrains exaggeration. It is much to be doubted whether cosmic strifes and emotions find their true vehicle in romances; whether novels with forces and principles of human nature for protagonists are entirely possible. These things are the themes of historical science, or of history as understood by Carlyle and Michelet. Prose fiction has its limits; but limit was unknown to Hugo. He piled Pelion on Ossa to scale heaven: in his lyric poetry he is a man; he is a Titan, we must end by saying, as we began, in his romances. The characters of his creation who live are his mothers and children, and, now and again, his lovers, and his minor characters. Monsters, even monsters of virtue, cannot become more real than, though they are quite as impressive as, Quasimodo and the pieuvre. The chiefs of creative fiction live in their children, the children of Shakespeare, Moliere, Fielding, Jane Austen. Hugo's life is as the life of wind and waves: like Euripides, he is 'the meteoric poet.'"

✧ ✧ ✧

The "Sphere" has hit upon the ingenious idea of giving a pictorial view of English Literature since the King entered upon his public career. Upon the page we see reproductions of the backs of the volumes themselves, which make a most suggestive display. Here are the titles of the books represented:—1862. "Unto this Last"; 1863. George Eliot's "Romola"; 1865. "Alice's Adventures in Wonderland"; 1866. Swinburne's "Poems and Ballads"; 1867. Bagehot's "English Constitution"; 1868. Browning's "Ring and Book"; 1869. Blackmore's "Lorna Doone; 1870. D. G. Rossetti's "Poetical Works"; 1871. "The Descent of Man"; 1872. "Under the Greenwood Tree"; 1873. Mill's "Autobiography"; 1874. Green's "Short History of the English People"; 1875. Meredith's "Beauchamp's Career"; 1876. Froude's "Cæsar"; 1877. Mallock's "New Republic"; 1879. Arnold's "Light of Asia"; 1880. "Endymion"; 1881. "Virginibus Puerisque"; 1882. "All Sorts and Conditions of Men"; 1883. "Treasure Island"; 1884. Tennyson's "Becket"; 1885. Pater's "Marius the Epicurean"; 1886. Stevenson's "Dr. Jekyll"; 1887. "Life and Letters of Charles Darwin"; 1888. Arnold's "Essays," second series; 1889. Bryce's "American Commonwealth."

✧ ✧ ✧

A striking instance of the difficulties which beset the path of the official biographer has just been given. It has long been whispered abroad that Lady Russell of Killowen was not altogether satisfied with the Life of the late Lord Chief Justice. But not till now have her views been given to the public. To the "Hackney Spectator" she sends the following letter:—

"I am not surprised that your reviewer finds it (the biography) 'incomplete, scrappy, and unsatisfactory.' It could hardly be otherwise, for it was written in a hurry, it was written to sell, and was rushed into print with unseemly haste, in order to catch the public in what was considered equally the right moment by the author and the publisher. This was done in spite of the most earnest entreaties and remonstrance on my part.

"These two gentlemen, both of whom pose as friends, knew very well the book needed revision. They were told that it was full of inaccuracies, that many points of interest in Lord Russell's life has been passed over altogether. They were bent, however, on making it a financial success, and nothing else seemed to them to matter. The memory of Lord Russell of Killowen was a secondary consideration, and the feelings of those who loved him counteed for nothing.

"Mr. O'Brien was not by any means the intimate friend that he would lead his readers to suppose. The man of whom he undertook to write he only knew in a very outside kind of way. He never was in our house, and he was entirely ignorant of a great deal about which he professes to know.

"The story to which your reviewer has referred, told about the fur coat, and considered good enough to be told twice, is a fair sample of the accuracy of the others which are so freely used as 'padding.' Lord Russell did 'frequently wear a fur-lined coat himself,' therefore it is clear it could not have been merely his objection to the coat in question which angered him, when he told the wearer to take it off. No doubt there was a more serious case for his displeasure, but this is the way in which history is written. The other stories are for the most part either silly nonsense or gross exaggerations, or are told in such an inaccurate manner as to be almost entirely untrue. They constitute a sort of 'playing to the gallery,' which, I suppose, it was thought would be popular. I very strongly feel that this is not the sort of book which might have been written as a record for posterity of my husband's life and career."

SCIENTIFIC TOPICS.

Oscar McClellan, a printer, inventor and bosom friend of Edgar Allan Poe, died at his home in Philadelphia, recently at the age of 82 years. He was an inventor of some note, and three times had placed himself in an independent position through his inventive genius. His last achievement in this line was an improvement on a machine for performing some of the operations of shoemaking, for which improvement he received 80,000 dollars in royalties.

✧ ✧ ✧

The captain of the steamship "Australia," which recently arrived at San Francisco from Tahiti, believes that he has rediscovered the outcroppings of an island very rich in phosphates. The existence of this island was reported by Dr. John de Graves, now of Honolulu, as far back as 1859, since which time it has been searched for by vessels of the Government and private persons. Stormy weather prevented the captain of the "Australia" from making as thorough an investigation as he desired. The United States Coast Survey vessel, "Albatross," has made several fruitless searches for this island. The captain of the "Australia" states that the approximate situation of the island is 18 deg. 56 min. north latitude, and 136 deg. 10 min. east longitude.

✧ ✧ ✧

Madison, Wis., is a university town, and like most university towns it has a campus upon which grow huge trees. In these trees squirrels have made their habitation, to the great delight of the students and townspeople. For a long time the telephone service of the town has been bad. No one knew why. Finally a curious official discovered that the squirrels had nibbled off the insulation of the telephone cables, cut into the wires, and wrought havoc in many other ways. Rather than exterminate the squirrels, the telephone company determined to keep the force of linemen busy repairing the ravages. But the squirrels have eaten away the insulator faster than the linemen could supply it. A crusade against the squirrels will probably be instituted, despite the protest of the university faculty.

✧ ✧ ✧

The first International Congress for Electricity in Medicine and Radiography, which was held in Paris, was a complete success. More than 150 scientists from all countries were assembled. At that time it was voted to hold an international congress at intervals of three years; but in order to avoid clashing with other conventions, it was resolved that the second congress should be held in 1902 at Berne. The congress will be opened September 1, 1902, at the Physiological Institute, Buehplatz, Berne, Switzerland. Papers will be read on the present state of electro-diagnosis, surgical electrolysis, radiography, and radioscopy of the internal organs, accidents caused by X-rays, and the danger of industrial electric currents. An international exhibition of all electrical instruments of physiological, electrotherapeutic, and radiographical interest will be held.

✧ ✧ ✧

At last one of the many quarrels between rival inventors of wireless telegraphic apparatus will soon be definitely settled. Siemens and Halske, the makers of Braun's apparatus, have taken the bull by the horns, and have begun a suit for infringement in Germany against the Allgemeine Elektrictaets Gesellschaft, who own the Slaby-Arco patents. It is rumoured that the Braun system, for which Siemens and Halske stand as sponsors, is nothing but a Germanised Marconi system, and will therefore fare rather badly in litigation. At all events it is certain that the German Government distinctly favours the Slaby-Arco system. The Marconi Company, whose stock organisation in America was recently announced, will probably soon have to test its rights in the United States Courts. But since the Marconi system has already passed through one patent suit unscathed, the chances are that it will come out of others with equal success in America.

✧ ✧ ✧

Sir William Arrol and Co, the famous bridge building firm of the Dalmarnock Iron Works, Glasgow, secured the contract for the construction of the huge railway viaduct to be erected over the river Barrow, in the face of strong American and European competition. The viaduct is to be 1,980 feet in length, consisting of thirteen fixed spans each of 140 feet, and two opening spans each of 80 feet, through which vessels will be able to pass at high tide. Owing to the peculiar nature of the soil of the bed of the river huge cast iron caissons will be sunk to a considerable depth—to 100 feet from the under side of the superstructure of the bridge to the bottom in some instances. The bridge is to be built of steel throughout. This company also recently secured the contract for the large bridge carrying the Caledonian Railway of Scotland across the Clyde from the central station at Glasgow.

✧ ✧ ✧

Volumes have been written about volcanoes and their causes, but in point of fact, very little is known about them beyond what we see. In the eighteenth century Humboldt tells us "225 volcanoes erupted," and this is known to be far below the actual number, and doubtless the "extinct" volcano is merely dormant. Etna, which towers 11,000 feet into the air and has a circumference of about 100 miles, has been active periodically for two thousands of years. For the past two thousand years it has had eruptions about four times a century, or every twenty-five years. Etna is a typical periodic volcano; while Stromboli is an example of continued mild eruptions. The photographs of the moon exhibit a remarkable state of ancient volcanic eruption, the face of the moon having the appearance of a pepper box, and doubtless from a great height the earth or certain sections would have a similar appearance, as volcanoes, ancient and modern, are more common than generally supposed. The Pacific Ocean, especially in the equatorial region, is dotted with them. The following groups are conspicuous volcanic centres: the Society group, Marquesas, Navigator, Feejees, Friendly Islands, New Hebrides and Ladrones. Many of these are active, as Tauna and Ambrym in the New Hebrides, Tafoa and Amargura in the Friendly Islands, Tinkora in the Santa Cruz Islands. Mona Loa, 13,760 feet high, is one of the splendid active volcanoes of the world, as well as Mt. Hualalai, 10,000 feet, while Mount Kea also, on the Hawaiian Islands, is now supposed to be extinct. At least ten of the islands, including Martinique, representing the West India group, are volcanic and bear volcanoes. In the Mediterranean country we have Vesuvius, the volcanoes of Sicily and others in Spain, France, Germany, etc., formerly more or less active. Near Greece there are five volcanic islands. Mt. Ararat, 16,950 feet, is an ancient volcano, and along the Red Sea are many volcanic cones. Passing on to Java we find fifty volcanoes, twenty-five of which are active, and the same is true more or less of Sumatra and Borneo. About the latter over one hundred make life strenuous among the small islands. Madagascar, Mauritius, the Isle of Bourbon, and Comoro Islands, all have volcanoes, and as we approach the South Pole the smoke of Erebus and Terror suggests volcanic activity. Africa is not particularly famous in this respect, but the Bight of Benin and the various islands are volcanic. St. Helena, the Canaries, the Cape Verde, Madeira, Iceland and the Azores are virtual volcanoes more or less ancient.

✧ ✧ ✧

In the Philippines there are fifteen or twenty volcanoes. Patagonia has its volcanoes; Chili can boast of thirty-two, Aconcagua being 23,000 feet in height, and there are a dozen in Peru and Bolivia. Quito is surrounded by nearly twenty volcanoes, none of which are under 12,000 feet, Cotopaxi (19,660 feet) being the centre of interest. Coming up the coast the volcano seeker will find nearly forty in Central America, and in Mexico a number, large and small. The volcanoes of America, or of the United States, are of especial interest and they are found in the Western country, as a rule west of the Rocky Mountains. One of the most beautiful of these is Mt. Shasta, 14,440 feet high, which rears its massive twin cones in Northern California. Mt. Helena in Oregon, 12,600 feet in height, is a majestic volcanic peak, and Mt. Hood, 11,225 feet, has a world-wide fame for its beauties, little thought being given to its activity in the early geological history of the continent. Other famous peaks are Mt. Jefferson, Mt. Adams, Mt. Rainier, Mt. Baker, and Mt. Lassen. In the Aleutian chain there are twenty-one islands with volcanoes. Kamtchatka has fifteen or twenty, the Kurile Islands thirteen, and the Japan group twenty-four. In a word, the world is fairly dotted with volcanoes more or less notable for their activity in ancient or modern times.

✧ ✧ ✧

The catastrophe of Mount Pelee calls to mind other famous eruptions. The extinct volcano of Maui, 10,217 feet high, not many centuries ago emitted a river of lava two miles wide. In 1779 Vesuvius tossed cinders 10,000 feet into the air. During the time of Christ Vesuvius was extinct; even its crater was covered with verdure and its slopes to the summit with vines and trees; then Pompeii was destroyed and one thousand years passed in silence until 1036, when an eruption occurred. In 1631 towns about the base were destroyed, and it is known that the outbreaks have increased in volume and violence in time; yet people still live on the slopes, inviting the fate which is almost certain to come in some later generation. In 1815 Tomboro on the island of Sumbawa erupted, causing a panic in the Japanese group. Herschel estimated that the ashes if collected would have made a solid mass three times the size of Mont Blanc. For days utter darkness hung over the island and explosions were heard in Ceylon, nearly one thousand miles distant. In 1783 Mount Reykjanes threw out a mass of lava equivalent to twenty-one cubic miles. Perhaps the most remarkable flow was that of Kilauea, which in 1840 ejected a river of lava forty miles long; if collected it was estimated that it would have covered a square mile eight hundred feet in depth. The roar of the volcano of Cosequina, Nicaragua, in 1835, was heard at Jamaica, eight hundred miles north-east. That of St. Vincent in 1812 was heard on the llanos of Carasas. The volcano of Souffriere at St. Vincent, now devastating the island, and supposed for years to be extinct, has many times wrecked portions of the island, the eruptions of 1718 and 1812 being particularly terrible. The latter has been remembered as "Black Sunday." The inhabitants of Barbadoes thought that the fleets of France and Germany were engaged, so loud was the continued roar, yet Barbadoes is eighty miles distant.

✧ ✧ ✧

Evidences of a buried village have recently been reported in Lassen County, California, in the line of what was known in 1848 as "Lassen's Cutoff." The discovery was made by a party of surveyors who camped one evening over the spot, and were led by certain indications to make a search for buried ruins. Digging down a short distance they were rewarded by finding numerous skeletons and a number of peculiarly shaped dishes, cooking utensils, weapons, etc. It is said an expedition will shortly set out to determine the nature and extent of the discoveries.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1793.)

APRIL 4.

This day the Andromache frigate, Capt. Jones, with the Sherness and City of Cork armed tenders, and a large fleet of merchantmen under their convoy, sailed out of the Bay for England.

Wednesday last the first division of the Antrim Militia, under the command of Lord O'Neil, marched from Carrickfergus on its route to Clonmel.

The Queen's County Militia are to be quartered in Derry.

GRAND BALLET.

ANTRIM HOUSE.

This day fortnight the Marchioness of Antrim gave a most superb route, ball, and supper, at her ladyship's house in Merrion square, to a most brilliant and extremely numerous assemblage of the first rank and fashion.

His Excellency the Lord Lieutenant and most of the nobility of the town were present.

The general Scots ballet, which has been of so much expectation in the circles of fashion, was on this occasion performed by the following ladies, with the universal and unbounded applause of the whole assembly:—

Countess of Antrim,
Lady Letitia Macdonald,
Lady Isabella Beresford,
Lady Anne Butler,
Lady Augusta Forbes,
Lady Theodosia Meade,
Both the Hon. Misses Gardiner,
Both the Misses Montgomery,
Lady Leitrim,
Both the Hon. Misses Clements,
Miss White,
Miss Latouche,
Miss Stewart, and
Miss Ponsonby.

The ladies who danced the ballet were in uniform dresses of white muslin, trimmed with blue ribbands; with sashes and petticoats trimmed with silver fringe; head dresses; white turbans, spangled with silver, and blue feathers.

The music, which was all in the Scots style, was compiled for the occasion. The ballet commenced with a Strathspey in slow time, and the figures of the dance varied with the tunes, which had a most admirable effect.

The ballet, on its commencement, excited so much admiration as to draw the whole company crowding to the ball-room, which scarcely left the charming performers room to move.

But by the polite and persuasive interference of the noble Marchioness, the room was tolerably well cleared, and the press of the company restrained by barriers of ribband, held by noblemen.

The curiosity of the company, however was afterwards gratified by the good-natured condescension of the charming dancers, who once more, in the course of the night, encored the whole of the performance of the ballet.

Dancing commenced at 11 o'clock, and at one the company were summoned to the supper-rooms, where elegance and plenty seemed to vie in the decoration of the festive board, while wit, beauty, and all the gaiety and splendour of fashion enlivened the enchanting scene.

Dancing was resumed after supper, and the company separated with reluctance at six o'clock in the morning.

This ballet, which has given the stamp of fashion to the nouvelle introduction of Scots Strathspeys, was got up under the direction of the celebrated Mrs. Parker, whose elegant taste and finished style of dancing, have justly attained so much eclat in the first circles in both kingdoms, and who has in reality proved an invaluable acquisition to this country in that elegant accomplishment.

WATERFORD, APRIL 8.

The second division of the Tyrone Militia marched into this city on Saturday; and the remainder of the regiment arrived yesterday.

The inhabitants of this city were in much consternation and alarm the whole of yesterday, in consequence of the appearance of riot and popular commotion.

On Saturday and Sunday a rumour prevailed, that a mob proposed to assemble, in order to prevent all outward-bound vessels, laden with grain, from prosecuting their voyages.

In consequence of a requisition from the civil magistrates to the commanding officer of the South Mayo Regiment of Militia, a strong detachment of that corps, and another of the Tyrone Regiment (which had only arrived in town the day before), were called out at twelve o'clock on Sunday evening, and lay on their arms the whole night.

The mob, however, did not show itself any way formidable, till eleven o'clock yesterday morning, when a considerable number boarded, in lighters and boats, three different vessels which had sailed, and were proceeding down the river, and stript two of them of their sails, which they carried off in triumph.

Thus far successful in their depredations, they next proceeded to the stores of Messrs. Cherry and Sykes, which they forced, and carried off, or wantonly destroyed, a considerable quantity of oatmeal, etc.

We are extremely sorry to have occasion to observe, that Mr. Sykes, in attempting to remonstrate with the infatuated people, against their violating his property, received several blows; one with a stone, in particular, has considerably contused his cheek.

No other damage, we understand, has resulted from this very dangerous commotion, which, it is hoped, is now altogether over; and a subscription will doubtless be immediately opened, and a liberal contribution made, to relieve the necessities of the indigent, and prevent them in future attempting to seek redress of alleged grievances by means so repugnant to the spirit of the law—so dangerous and unprofitable to themselves—so destructive of private property, and dreadful to the whole body of the citizens.

Our worthy Mayor, animated with a principle of humanity that does honour to his feelings as a man, while he showed himself extremely felicitous to protect persons and property, conducted himself with a degree of prudence and caution, that perhaps prevented more serious consequences.

9th.—A division consisting of 210 men of the 35th Foot, a new regiment raised in Buckinghamshire, by Colonel Nugent, marched into Kilkenny on Monday fortnight from Carlow; they were followed on Tuesday by another division of nearly the same number, and the remainder arrived here on Wednesday. The whole regiment is to be quartered there.

SLIGO, 15th APRIL.

On Friday last came on at our Assizes the trial of William Nicholson, Esq., for heading and abetting the insurgents in May last, and voluntarily taking unlawful oaths. The evidence produced against him was one Rusk, an approver, and who, in the course of his examination, was found to be a principal in the late disturbances in this county. This was corroborated by the evidence of a very respectable gentleman, who was in company with Mr. Nicholson on the day he was forced to join those deluded wretches. The jury, without quitting the box, gave their verdict—Not Guilty.

The Hon. Justice Boyd, who presided, then said, "Mr. Nicholson, you have been honourably acquitted, and the witness must be committed for perjury."

Saturday came on the trial of a number of those deluded wretches called defenders. The only person capitally convicted was one Kelly, who is to be executed at the fair-green, near this town, on Saturday, the 26th inst.

On Sunday morning their Lordships proceeded from hence for Carrick-on-Shannon.

MULLINGAR, APRIL 19.

On Wednesday last Connor and Walpole were executed at Kinnegad, pursuant to their sentence at last Assizes.

CURRAGH RACES, APRIL 21.

This day Mr. Dillon's Chanticleer, and Mr. Daly's Tickler, ran for the Gold Cup, and 200 guineas.—The former won with ease.

CORK ASSIZES.

The following persons were tried and found guilty:—

John Sack, for cow-stealing, and William Savage, for sheep-stealing: recommended as objects of mercy by the grand jury.

Tobias Crone, Cornelius Dyne, James M'Carthy, Cornelius Callaghan, and Daniel Coleman, for a riot and assault on Adam Newman, Esq., and the Rev. Richard Meade, magistrates, in the execution of their duty.

John Brian, for administering an unlawful oath.

Daniel Cockerane, for unlawfully assembling.

James Sullivan, for feloniously publishing a notice at Durmonway, for the assembling of the people at Ballybay Cross.

Timothy Hurley, for unlawfully assembling and uttering seditious expressions.

John Griffin, for felony in the house of Peter Sullivan.

LIMERICK, APRIL 21.

This morning, Thomas Cordon, John Cavanagh, and Edmond Connely, were escorted from our county gaol, by the Sheriff and a troop of the 14th Light Dragoons. The two former will be executed this day, one in Ballylander, the other at Ballinvreens Cross; and Connely to-morrow, at Hospital.

DROGHEDA ASSIZES.

Messrs. Horne, Cunningham, M'Cabe, and Hoare, were tried on an indictment for procuring the murder of Mr. Pentland, a revenue-officer, and acquitted.

BANKRUPTS—APRIL 1794.

John Frayne, of Skinner's-row, in the city of Dublin, woollen-draper, to surrender on the 21st and 23rd days of April inst., and 25th day of May next.

Arthur Warner, of Middleton, in the county of Cork, factor and dealer, to surrender on the 28th and 29th of April inst., and 24th of May next.

William Bate and John Bird, of the city of Dublin, jewellers and co-partners, to surrender on the 25th and 26th days of April inst., and 27th of May next.

Elizabeth Gibbons and Frances Graham, of the city of Dublin, merchants and co-partners, to surrender on the 10th and 12th days of May next, and on the 10th day of June following.

Henry Thwaites, of Lower Ormond quay, in the city of Dublin, grocer, to surrender on the 9th and 10th days of May next, and on the 10th day of June following.

(To be continued.)

THE RIVER SHANNON.

VIEW FROM THE TOWER OF LIMERICK CATHEDRAL,
(Taken About Fifty Years Ago).

(From a Pamphlet by C. W. Williams.)

The river Shannon, unequalled in the British empire, embraces 234 miles of continuous navigation; and from the circumstance of its running through the centre of the kingdom, may be compared, for the purposes of intercourse, to double that length of coast. The advantages of water conveyance are thus presented to an extent of country equal to the whole line of coast between Belfast and Cork; or to more than the entire eastern coast of England.

The great feature of this extraordinary river is its diversified character. For a distance of 60 miles from the sea to the city of Limerick, it presents a magnificent estuary and tide way, without bar or other impediment whatever, and with a flood equal to a height of twenty feet at the city quays. This part of the river possesses several deep bays or inlets, and receives the waters of several rivers, some of which enjoy the tide-way for a considerable distance up their channels.

The great estuary of the Fergus, extending 10 miles to the town of Clare, with the means of extension to Ennis, the capital of the county of Clare, here pushes the benefit of navigation into the centre of

a district unrivalled, perhaps, in Britain, for depth and fertility of soil.

Above Limerick to Killaloe the navigation is varied, being part still water and part river.

From Killaloe to the county of Clare, to its source in the county of Leitrim, the river assumes a great variety of character. In some places it stretches out into seas, or lakes, two of which, Lough Derg and Lough Rea, are above 20 British miles long each. In other parts the river assimilates itself more to that of the river navigations of England, with the combined advantages of sailing and tracking, as seen in the Thames, the Mersey, and the Severn; in other parts it forms a succession of small lakes; and, lastly, in many situations it approaches almost to still-water navigation. The falls and rapids, which on the whole river amount to an elevation of 146 feet 10 inches, are overcome by lateral canals and locks. Throughout its course, however, it possesses the rare quality of having a sufficient depth of water for all the purposes of internal intercourse.

The Shannon washes the shores of ten counties out of 32, viz., Leitrim, Roscommon, Longford, Westmeath, King's County, Galway, Tipperary, Clare, Limerick, and Kerry.

Taking, then, the double length of coast which the ten counties present to the navigation, at 500 miles, and which, considering the extent of the bays, inlets, and rivers, is under the fact, it leaves an average of 50 miles of coast to each county. This fact alone is sufficiently indicative of what may be done through the instrumentality of this one river.

IN AGES PAST.

On a Paper Knife of Irish Oak.

BY MARGARET F. SULLIVAN.

The fair young oak that gave thy blade
  To carver with a cunning hand,
Stood ages since within a glade
  Of that forever shadowed land
Where lies a slave did once command
The world of science, art, and craft:
The fair strong oak that made thy haft
  Leafed first in rapture near a strand
Where armoured Northmen once did wade
  From bristling galleys, fore and aft,
To meet oak spears with gleaming tips,
That drove them, reeling, to their ships,
  Like pallid fiends, with terror daft;
  Far, high above the silver sand,
Where spears and banners meet and mix,
They hear the chant of holy lips,
  They see a god-like figure stand,
  And hold against them, like a wand,
A simple oaken crucifix.

And deeper in the shadowed glade
  Where grew thy fair young parent tree;
Where spiced winds the cedars swayed,
The sun's last rays reluctant fade
On abbey tower overlaid
  With braided ivy, tress on tress:
  While sweetly from its dim recess
    Thro' cell and chapel floats a wave
Of undulating stringed chords:
    The abbess' voice, majestic, grave,
  Gliding thro' chancel, crypt, and nave,
Repeats in glorious Gaelic words
  A song of heavenly joy and hope,
That thrills the ancient gray grim dun,
    And rises o'er moated scarp,
  Whose warders' sightless eyelids ope,
When, with the setting of the sun,
    The abbess smites her oaken harp.

THE FENIAN TRADITIONS;

or,

SLIABH-NA-M-BAN.

BY JOHN DUNNE.

IV.

The foregoing legend represents Ossian as residing with St. Patrick at Cashel, and in confirmation of that circumstance, but that the matter would be irrelevant to the Sliabh-na-m-ban district, and would occupy too much space, I might here narrate two other curious legends, one having reference to Ossian's fight with an evil bull one night at Cashel, and the other, to a great day's thrashing performed by him at Clerihan, a place situate a short distance from "the Citie of the kings," the saint having being made a present of as much corn as one man would thrash in a day, the donor little calculating on the employment of a person of such prodigious strength as the Fenian hero. I may be permitted, however, to remark, that the very prevalent custom in this neighbourhood, and elsewhere too, for aught I know, of drowning the first litter of whelps in order to insure the destruction of the first one which has come into the world, is said to have been originated from the circumstances connected with Ossian's dog, Young Bran, and the first litter of puppies, as treated of in the tradition. It is thought that the bite of the first pup, when grown up, would be venemous to either man or beast—that the animal would be always ferocious, and would eventually run mad.

Another piece of folk-lore may be mentioned in connection with the mountain ash, for a berry of which tree we have seen that Ossian went to Gleann-a-smoil, a district which was long famous for that tree, known by the local peasantry as the crann caorthainn, which they pronounce crann cawrhinn. According to their traditions, this was a favourite tree with the ancient Druids, and with it are associated many popular superstitions. Withes were made of its branches on the May-eve, and tied around the cows' horns, and also temporary hoops of it put around the churns, on the same eve, as a preventive against the spells of witches, who are generally supposed to be very busily employed before sunrise on May morning, in taking away the summer produce of honest people's butter. This is alleged to have happened to a farmer near me, and still living, who, with his family, used to work at the churn-dash from morning till night, and from night till morning, but was obliged, notwithstanding, to give it up in despair; not a print of sweet butter could be had from May to All-hallow-eve, the fruit of all their labour during that period being only a churn full of froth and foam. But the next May-eve, the farmer, recollecting the old proverb—

"Ceanzail vo meadaṁ le zad maiṫ caoṁṫainn,
Ir ná léiz vo ċuid teine le duine ṫar ṫairseaċ—"

Bind round your churn with a good gad of mountain ash,
And let not your fire with a person across the threshold—

tied his maddher, (a) or churn, with a gad of the tree, and not only bound the churn, but every cow in the yard had her brows bedecked with a branch of the same, each having on it a good sprinkling of green leaves and red berries. The churn and cows' heads being thus secured, he himself watched the fire on the following morning, being concealed in a corner of the kitchen, where he lay not very long till an old crone entered for a spark. He sprang out from his hiding place and, handled a buailtean, or flail-stick, so threateningly, that she took to her heels, and he alleges that from henceforth his dairy was as well supplied as ever!

(a) Meadar, a churn. "The Irish meadar is square and hollowed with a chisel, the Scottish is round and hooped."—O'Reilly's Irish Dictionary. In my neighbourhood a churn is called zónecum; but I am informed the old Irish word maddher, is still used in the more southern counties, and even in parts of the county of Kilkenny.

However, to return to the Fenian traditions of Sliabh-na-m-ban. A notice of the legendary lore of the district would be far from complete, did it not contain more than a mere passing reference to the most famous of the Fenian deer-hunts—that of Gleann-a-smoil—though as it is contained amongst the written metrical romances of the country, being one of the dialogues of Ossian and St. Patrick, and has been more than once translated into English verse, it must be well known to most of the members of the Society; I shall, therefore, but briefly state its leading incidents. Ossian having been requested by St. Patrick to recount some of the adventures of the king of the Fenians, proceeds to state that early one foggy morning Fionn and a large number of his most distinguished followers went to hunt in Gleann-a-smoil. They soon roused a hornless hind peculiarly marked, as one side was jet black, whilst the other was as white as snow. Fionn slipped his dogs, Sgeolan and Bran, and twelve other hounds were also let loose upon her by his companions, and soon all were lost to sight, the Fenians pursuing all day till evening fell, without coming up with the chase. At length they found Bran lying in a state of exhaustion on the ground, and whilst lamenting the loss of the other dogs, a beautiful female appeared, and invited them to come and partake of refreshment at the palace of the Grecian Emperor's daughter, who, having arrived from Greece with a thousand ships, presented by her father, had been sojourning for three months in Erin, without Fionn's knowledge, at Oileán-na-hInnse (the Island of the Inch). The weary Fenians accepted the invitation, and having proceeded to the island, were entertained at a sumptuous repast; having despatched which, Fionn proposed to lie down to sleep; when immediately a singularly ugly woman, of gigantic proportions, and wearing a satin robe, of which one side was white and the other black, appeared before him, and stating herself to be the daughter of the Emperor of Greece, offered her hand to the hero in marriage. Fionn declined, and stated that she must be an enchantress, as he knew by her dress that she it was who, in the shape of a hornless hind, they had been all that day pursuing. He demanded what she had done with his gallant dogs. The "loathly ladie" replied that she had put the dogs to death, and would proceed to cut off all the Fenians' heads if their chief any longer refused to comply with her proposition. She then recited an incantation which had the effect of instantly depriving the Fenians of their strength, and in this state she ordered her numerous female attendants to bind them hand and foot, and then proceeded to cut off the heads of a hundred of

them, only leaving Fionn, Conan, Osgar, Diarmuid, and Ossian alive. Fionn was dismayed at the power of the enchantress, but pleaded that he could not possibly marry her, having already espoused the daughter of blind Goll, whose anger would be destructive to them all if a slight was put upon him by the repudiation of his child. Upon hearing this, the enchantress, leaving the Fenians bound at the island, proceeded with her train to attack Goll and his men, in order to teach them submission to her will. She encountered these champions and slew thousands of them, but engaging with Goll himself, they fought in single combat for three successive days. In the meantime, Diarmuid, by means of his famous "beauty spot,' 'contrived to insinuate himself into the affections of a lovely damsel of the enchantress' train, left at the island to guard the prisoners; and she, at his request, broke the spells and set the Fenians free. The first use which Conan made of his freedom was to cut off the head of the fair maiden who had released them, which so much incensed Diarmuid, that he would have slain him but for the interposition of Osgar, who reminded them that they had a common enemy to encounter in the enchantress. They then proceeded o where the battle was at its height between Goll and the Grecian princess, and Osgar, having relieved Goll, soon despatched his antagonist by thrusting his spear through her heart.

This tale, even setting aside the enchantments of the Grecian princess, will not bear criticism, as it would be quite impossible that the dramatis personæ could ever have been brought together—that is, if we are to place reliance on the other Fenian traditions which put Diarmuid to death before Oscar, the son of Ossian, could have been born, or that Fionn could have taken the daughter of Goll as his second wife. However, the poet's licence to arrange his romance according to his own fancy must not be too nicely questioned. Metrical translations of the poem which recounts the chase of Gleann-a-smoil, have been supplied by Miss Brooke and in the old Irish Penny Journal," but in these the names of the places which give locality to the story have been ommitted. I have given the foregoing outline of the tale from a very full and tolerably ancient copy of the original Irish poem in the possession of Mr. Pierce Hawe, of Coolhill, barony of Kells, and I find Ossian made to say, where the Fenians accept the invitation to the Island of Inch—"we followed her in haste to Oileán-na-hinse, till we reached Sliabh-na-mban." I note this circumstance, as with many persons the name of Gleann-a-smoil will not be considered sufficient to identify the exact locality of the chase in question.

The scenes of a great many of our Fenian tales may be ascertained by the Irish names of hills and other places which stand as imperishable landmarks to point them out. Different localities may often bear the same name, thereby tending to confuse the antiquarian investigator, but there is scarcely any valley respecting whose site there is such a diversity of opinion among our seanchaidhes as Gleann-a- smoil. In this portion of the South of Ireland the valley to which that name is declared to have anciently belonged, and by which it is still frequently designated amongst the Irish-speaking peasantry, is the glen, of considerable extent, commencing in Tipperary, under Sliabh-na-m-ban, running eastward at the foot of the Newtown hills, and thence taking a southerly direction along that portion of the county of Kilkenny modernly known as "the Slate Quarries," where it is washed by the river Lingawn, and extends to the vicinity of the river Suir, near Carrick. However, more southward still, the hononur of containing this famous valley is claimed for the county of Cork; whilst I find the title of the county of Dublin to its possession more generally admitted.

Dr. Petrie, in an article on the Old Bridge of Miltown, which he contributed to the thirty-sixth number of the old "Irish Penny Journal," designates the valley in which the river Dodder had its source, "Glan asmole, or the Valley of the Thrush," and remarks of it, that there are objects of great interest to the antiquary and naturalist to be seen there; amongst them "the three things for which, according to some of these old bardic poems, the glen was anciently remarkable, and which were peculiar to it: these were the large breed of thrushes from which the valley derived its name, the great size of the ivy leaves found on its rocks ,and the large berries of the rowan or mountain ash, which formerly adorned its sides." Reference is here evidently made to the Ossianic legend which I have already narrated, and it is attempted to substitute a thrush for our blackbird—an innovation which the Kilkenny and Tipperary seann-chaidhes would never be reconciled to or induced to tolerate; and I think they would be fully justified in this, for neither Gleann-a-smoil, which is the true name of the valley, nor Glanasmole, as Dr. Petrie writes it, could signify "the valley of the thrush." Smolach, a word of two syllables, is the Irish for "thrush;" it is the same both masculine and feminine; in the plural, is is smoil-cha, but in any cases, either singular or plural, it is not smoil. The latter word has its own peculiar meanings, none of which however, refer to a bird of any description, but, on the contrary, to inanimate things. A Kilkenny man will never consent to have smol taken to signify a thrush, till it can be shown that spar would stand for sparrow, or swal for swallow (b). In one respect the Dublin men have an apparent advantage over us of Kilkenny and Tipperary, for they have a seaboard within a few miles of their glen, and it may be fairly alleged against us, that there being no sea near Sliabh-na-m-ban, there could be no island, nor could the Grecian princess have there with her a thousand ships. This, however, is easily answered. As the lady dealt in enchantment, all these matters may be ascribed to the spells which she used; and many places are termed islands, in Ireland, which are situate on the banks of streams, though not surrounded with water. Upon making inquiry on the spot a short time since as to where the peasantry of the district considered the enchantress had raised her palace, a man named Kelly, residing at Rossenany, pointed to a place on the banks of the river Lingawn, which runs through the valley that is stated to have been the ancient Gleann-a-smoil. The present name of the place so pointed out is Oilean-insecioticnn, or, for shortness, Inse-coitionn. However, be this as it may, whether Kilkenny has a just claim to the valley of Gleann-a-smoil or not, that claim has been asserted from a very ancient period, as the old songs and proverbs of the district abundantly testify. The following is a well-known local proverb concerning the exclusive privileges conferred by nature on the valley, and the allusion to the river Lingawn which it contains shows the place to which it is referrable:—

Tá buaḋa ag Gleann-an-ṡmóil, nać bṫuil ag aon ġleann eile a néiṁinn ,i. ḟorġaḋ ó'n n-ġaoiṫ a n-ḋeaṙ, ó'n ngaoiṫ a ḋtuaiḋ, ó'n ngaoiṫ a n-iaṙ, agus ó'n ngaoiṫ a n-oiṙ. An ġṁaṫ maṫoin, an ġṁaṫ a meaḋon lae, agus taiṫneaṁ na gréine aṙ ḟeaḋ an tṙaṫnóna. An bṫeac 'ṙa bṫaḋán a gcoṁnaiġe ann ṙan loingeán agus an ḟiaḋ moṙḋa, go beóḋa, bioḋġáṁuil, aiṙ bṫuaćaiḃ glaṙa, cṙaoḃaća na haḃann.

Gleann-a-smoil hath privileges that no other valley in Erin has—shelter from the south wind, from the north wind, from the west wind, and from the east wind—from the sun in the morning, the sun at noon-day, and the mild refulgence of his rays during the evening; the trout and salmon always in the Lingawn, and the stately deer, all life and celerity, on its green arborous banks.

Again, one of the prophecies attributed to St. Columbkill ,in the mouth of almost every peasant in this district, and looked forward to as likely to be speedily fulfilled, clearly refers to this locality. Ireland is to be taken from British rule by a dreadful battle, in which a "six-fingered, red-haired man of Leinster" is to act a prominent part, the native Irish receiving aid from a foreign nation; the prophecy then goes on to say:—

"Beiḋ ṙġoḃaṙnaćc coille aiṙ ċnoc-na-caṙṙaiġe, noć ḋo beiḋ na áiṫ teaġmála aiġ ṙeaṁaiḃ ré ċonnṫae. Tuiṫṫiḋ buaćailiġe bṁeaġa Sleiḃ-Díle ag aṫ-a-ṙeaṙṙa. Beiḋ ḟiać ḋuḃ aiṙ Ḋṁuim-ṙean-bó, ag coṙġ a íoṫa a bṙuil ṁaonna, Léiṁṙġṁoṙṙaṙ Cill Chianniġ go talaṁ, ionṫoṙaiġ an coġa ṗa ḋeiṁeaḋ a gcionn Beaṙna na gaoiṫe, beiḋ campa aiġ aṫ-innṙe coiṫionn ag taoḃ na loináine, iṙ páil ḟuaṙ ḋ'ṙeaṙaiḃ ó'n tSiúiṙ go ḋi 'n tṙiaḃ."

There will be a wood on Cnock-na-carraige, and this will be the rendezvous of the men of six counties. The fine youths of Sliabh Dile (d) will fall at Ath-a-t-searra. (e)

(b) According to ancient Irish manuscripts consulted by Dr. O'Donovan, the scene of Fionn's hunt was in Cualann, which was a district comprising portions of the present counties of Wicklow and Dublin; but of course transcribers varied the names of the places mentioned in these poems to suit local feelings and prejudices. Dr. O'Donovan says: "According to the traditions in Meath and in the glens of the county of Dublin, where the people still speak Irish, Gleann-a-smoil means 'the valley of the thrush.' We of the south add another syllable to smol to express thrush (ṙmolać); but the Meath men will have their own form an ṙmoł, gen. an ṙmoíl) and interpretation to be correct; they insist that the Gleann-a-smoil of the Fenian story, is the place still so-called in the county of Dublin, and they hold us in great contempt for attempting to transfer this glen to the south." In the Dublin glen they point out a well called Tobar Oisin.

(c) I give this word "ṙġoḃaṙnać" as the local seannchaidhes pronounce it, but I do not find it in the Irish dictionaries. I am, however, of opinion that ṙġoḃaṙnać coille means brushwood, or the straggling remains of a felled wood.

(d) Sliabh Dile is the name locally applied to a considerable district bordering on Sliabh-na-mban. The name is found in ancient manuscripts, and, according to Dr. O'Donovan, there is every reason to suppose that it was originally applied to the mountain itself, before the latter received a new appellation from the "women of Feimheann." The Doctor remarks:—"You will find that ancient names are sometimes transferred, as well as forgotten. As, for example, Sliabh Cua, which was the name of a high mountain, is now transferred to the lands at the base, while the mountain itself goes by a different and wrong name, i.e., Knockmuldoon (Anglice, Muldowney's hill.").

(e) Ath-a-t-searra means "the ford of the filly." This place divides the counties of Tipperary and Kilkenny, a mile nearer to Callan than Garryricken gate. Tradition states that a wolf once came to this spot, and attempted to steal a young filly, whereupon the mare, which had fetters on her fore-feet, suddenly sprang up and brought the fetter directly on the wolf's neck, keeping the animal pressed down in that position, until it was either strangled or beaten to death by the farmers with pitchforks and billhooks. Perhaps this is the situation of the Gleann-searraigh, or glen of the foal, mentioned in a note, p. 14, of "Leaḃaṙ-na-gCeaṙt (the Book of Rights). One of the five prerogatives of the King of Leinster, was the deer of Gleann-searraigh, to be brought to his palace at Din-Riogh. Tradition states that this neighbourhood formerly abounded in red deer, and many skeletons of those animals are still found in the neighbouring bogs.

A raven perched on Drom-seann-bho (f) will slake her thirst in human blood. Kilkenny will be laid in ruins. The stream of battle in this quarter, will finally run in the direction of Windgap; there will be a camp at Ath-inse-coitionn, on the river Lingawn, and a cold pavement of [dead bodies of] men from the Suir to the mountain.

The "Ath-inse-coitionn" here referred to, is the same place as that which I have before alluded to, as pointed out to me for the island of Inch, in the poem of the chase.—Ath and oileann were, I am informed, indifferently applied formerly, but both are now generally omitted for the sake of conciseness, leaving the name as Inse-coitionn. That the prophecy which has been here quoted has been long current in this neighbourhood, (g) may be inferred from a stanza of an old Irish caoine, or dirge, handed down as having been chanted by a woman from the banks of the Lingawn, for some of her kindred or neighbours who fell in one of the skirmishes following the last civil war of Ireland. The following is the stanza in question:—

n mo ċpeaċ ḟaṽa! 'ṡ m'aṫuiṁṗe níṁneaċ—
"í h-é coṫaṁ Ċṗomuiṫ ıṗ ṽíċ Ɫıom.
ná coṫaṁ Rıġ Uılliam, ı n-aṁ ṁaṁḃaiṁ na milte
aċt a ṅṽoiṁṗeaṁ o'ḟuıl eıṁ Ċallainn ıṗ beaṁa-na-ġaoiṫe.
'ṡ nGleann-an-ṁóil, ṽo ċuiṁṗeaṁ cṁíċ aiṁ."

Ah! my long weary woe, from war and its train—
Yet it's not that of Cromwell, which gives me most pain;
Nor the war of King William, in which thousands were slain—
But oh! the red torrents that reeking will flow,
'Twixt Callan and Windgap, that fill me with woe!
Oh! Gleann-a-smoil, last stage of the scene,
No spring can restore, thy carpet of green!

I might quote many other local songs and proverbs which would bear on this subject, but I fear that I have already grown tedious, and shall, therefore, draw to a conclusion.

Sliabh-na-m-ban holds a prominent position in all the traditionary remains of the South of Ireland, whether recounted in poetry or prose, handed down orally or in manuscript. I have already mentioned that there are frequent references to it by name in the curious old poems known as the "Dialogues of Patrick and Ossian," but there is more frequent mention still amongst them of a Cnoc-ṗḃınaan-n, or "hill of the Fenians," which all our southern readers and speakers of the Irish language believe to mean Sliabh-na-m-ban. The names of several of the Fenian heroes are also found connected with differen places in this locality. Fionn himself has given title to the highest hill of the range, from him called Suidhe Finn (Fionn's seat), whilst the cromleac on its top is termed Bord-suidhe-Finn (the table of Fionn's resting-place). The eminence pointed out as the scene of the celebrated lady-race, which is of lesser altitude, is situate within the old barony of Compsey, now included within Slieveardagh. One of the valleys in the Sliabh-na-m-ban range is known as Ɠleann Ɠhoıll (the vale of Goll), blind Goll, Fionn's father-in-law, being traditionally said to have once, whilst engaged in the chase, leaped across it, from the eminence at one side, to that at the other; whilst in the same neighbourhood till lately was pointed out a small cromleac-shaped monument, the site of which still is called Ɫeaba Ḃṛıain (the bed or grave of Bran), from Fionn's favourite hound, said to have been interred there. (h) The account which the peasantry give of the destruction of this interesting monument is, that the stones were torn from their position and scattered about by a tithe-proctor and his bailiffs, in revenge for some resistance or affront offered to them by the neighbouring people. Of Diarmuid O'Duibhne, amongst other traditionary recollections of the district, is is affirmed, that once in hunting a deer through Compsey, he lost a white steed by its being precipitated into a pool near the bog of Poulacapple, which name is alleged to be derived from this particular incident, as it literally means horse-pool. Numerous skeletons of gigantic deer have been found in this bog, and whenever they turn up they are always confidently appealed to by the peasantry as conveying the most convincing proof of the truth of the legend which accounts for the name of the locality.

I ought not to omit mentioning also, before quitting the subject, that in a wild, ferny, and unfrequented spot among the Sliabh-na-m-ban hills, there is a rock called Carraiġ an tuṁa (the rock of the spinning-wheel), and the peasantry declare that on approaching near the place they often hear a humming noise, as if of a spinning-wheel, proceeding, they believe from a fairy chamber beneath the rock. Doubtless, this must be the abode of the mysterious females whose unwelcome visit to the house of Gortnapise forms one of the legends of the locality which I have related. (i)

(The End.)

(f) Drom-seann-bho, situate on the high road between Callan and Kilkenny. This means, "back of the old cow." I have often been told that a neighbouring nobleman (an Earl of Desart) blasted this rock, thereby reducing it to a level nearly with the road; and after the operation, he jokingly remarked to a seann chaidhe, who stood hard by, and whose favourite theme was prophecy—"Now can the raven drink of human blood from the top of Drom-seann-bho?" Whereupon the seannchaidhe at once replied—"Until now, my lord, I had thought it impossible; but no longer does the shadow of a doubt remain on my mind as regards the prophecy; your lordship has now made Drom-seann-bho low enough for the raven, whilst standing upon it, to dip his bill in human blood—all will come to pass in due time;" It is said to have been a detached fragment of rock about five feet in height, of a different kind of stone from that of the locality. It was very remarkable from having in the centre of its smooth face an indentation resembling the impression of a giant hand on the soft surface of stucco. It is traditionally said to have been cast by the hero Fionn, from the top of Sliabh-na-m-ban, and the indentation was looked upon as the impression made by his hand as he balanced it for the throw. As it lay by the road side it may have been considered an impediment to the traffic, or the object in removing it was, perhaps, to falsify the prophecy concerning which the peasantry were so credulous.

(g) It is a curious fact that the local seann-chaidhes throughout Ireland have all different versions of this prophecy, the names of places being changed in each to suit their own district.

(h) The Iverk peasantry have the following quatrain descriptive of the appearance of Bran:—

"Corr donn do bí ag Ḃṛan,
Dá ḟúıl ḋuḃ agus tárr ġeal;
Dá ċlúasaṛ ċoṁċra ḋeaṁġ,
Agus beal buıḋe."

Dark brown legs had Bran,
Two black eyes, and a white back;
Two red erect ears,
And a yelow muzzle.

This differs materially from the stanza given in the "Transactions of the Gaelic Society of Dublin," p. 215, describing the marks of Fionn Mac Cumhail's greyhound. It is as follows, but no authority is cited:—

"Corr buıḋe bí aıṁ Ḃṛan,
A dá ċaeḃ 'ṡa tárr ġeal;
Ḋṁuim ṡuaċnıḋe ór cenn ṡelġ,
Is dá ċluasaṛ ċoṁċra ċóṁ-ḋeaṁġ."

Yellow legs had Bran,
Both her sides black and her belly white;
A speckled back over her loins,
And two crimson ears, very red.

A place alleged to be the site of the grave of Bran is also pointed out by the Co. Dublin peasantry in the valley of the Dodder.

(i) Dr. O'Donovan conceives the version of the legend of the witches of Sliabh-na-m-ban, to be very much modernised; the spinning-wheel not being more than eight generations in use. A Kilkenny bard celebrates the superiority of the spinning-wheel over the distaff, in a poem beginning "Coiṁġeal ċas ní ṁıġṁıó ṡeaṛta ó ṫáinıġ a ḃṛaıṫıonn túṁ-ṫann" (the twirling distaff will spin no longer since the spinning-wheel has come into vogue). With regard to the same legend, it is further said by the peasantry, that a party who attempted to make their way to Tir-na-n-og through a cave in Sliabh-na-m-ban, were met by the witches, who cried out, "Roiṫean na ṗola agus cṁaċaṁ na ḃṗuṫoġ" (the riddle of blood, and the sieve of the puddings), whereat the adventurers, petrified with fear, instantly returned.

THE BANSHEE'S SUMMONS.

I am come, I am come from the land unknown,
For the earth I have quitted my airy throne,
I have left the heights of yon starry sphere,
To sing his dirge in a mortal's ear.
Ullilu, Ullilu! morn comes fast,
A soul will have sped ere the moonlight's past.

I am come, I am come, as I came before
To the sires of thy house in the days of yore;
Many a chieftain has heard my cry—
Many a dame of thy ancestry.
Ullilu, Ullilu! thou must go
To join them either in joy or woe.

Hast thou called up tears to the widow's eye?
Hast thou listen'd in vain to the orphan's cry?
Hast thou driven the hungry from thy door?
Or taken the roof from the starving poor?
Ullilu, Ullilu! take the cost!
Ye mourners weep, for a soul is lost!

Hast thou seen thy country sunk in woe,
And taken the side of the tyrant foe?
Or a traitorous part has thy bosom played,
Hast thou risen on the wreck of friends betrayed?
Ullilu, Ullilu! then weep on,
Ye mourners, weep, for a soul is gone!!

Or hast thou striven for the good of all
Did danger daunt not—nor death appal?
Didst thou urge thy way in virtue's path,
Fearing no vials of human wrath?
Ullilu, Ullilu! earth must wail,
But heaven's bright angels record the tale.

Tremble not, then, as thou hear'st my cry;
Why should a good man fear to die?
Mourners, let your mourning cease,
Such a death is the soul's release.
Away on the morn's first beam I soar,
A sleeper will waken on earth no more.

—Anonymous.

JAPANESE STREETS.

In Japan houses are not numbered according to their sequence, but according to the order of their erection. That is to say, No. 73 may adjoin No. 1, with No. 102 on the opposite side. No. 2 is probably a mile down the street. The city of Tokio is made up of 1,330 streets, in which are 318,320 houses. These houses are divided up into fifteen wards. If a street passes through more than one ward the houses are numbered according to the wards in which they are; that is, a street passing through six wards will possess six number ones. It would be like hunting for a needle in a haystack for a stranger to try to find a number in Tokio, but a jinriksha driver knows the position and number of almost every one of the houses in Tokio. He is able to do this by having made his business the one study of his life.

OUR WEEKLY STORY

TOO LATE.

BY ETHEL GODDARD.

AGATHA LAMBERT made a fair picture when one sweet spring morning she sat by the open lattice window of her bedroom, eagerly reading a letter which brought charming blushes and dimples into play upon the dainty little oval face, and caused the bright, blue eyes to sparkle with a happy light, and yet again to grow dim as if from some strong emotion. Agatha's blue eyes, black ringlets, soft, cherry lips, nay, even her white hand, had all been the subjects of toasts (and rumour said also of duels), for Agatha lived in the spacious gallant days of sixty years ago, when men had time for hearty courtesies, and when ladies were surrounded by a glamour, and crowned with a halo in the male imagination, which ensured them (or, at least, the beautiful ones), as happy times as gallantry and admiration could give them. Agatha was an Irish girl, too, and she had never found Erin's sons backward in the soft attentions which in those days made up the sum of a girl's joy. In her father's old grey country house, protected and indulged by her parents, admired, courted, and generally spoiled by the gay gentlemen for miles round, Agatha lived screened from all trouble until her nineteenth year; but then grief came to the light-hearted damsel, who had brought heart's sorrow to many, and her grief came so that at first it looked like joy. The letter which she read with the sunlight streaming in upon her on that bright spring morning, dealt with that trouble so as to make it still seem a joy.

"My sweetheart," it said, "the days since we last met seem years to me, the five miles which separate our homes are as continents since I may not go to you; your letters in our hollow tree are the one bright spot in a lonely life—lonely for want of you. I fear to say what is in my heart, Agatha, for you have been trained in all subjection to your good parents; but, sweetheart, this delay, with no prospect of a change in your father's sentiments towards me, is cruel to us both, and useless as well as cruel, for I think you will never marry anybody else to please him, and for me you are the one woman in the world. This is what I want to ask you, dearest, will you trust yourself with me,and come away with me to-morrow night? We can return to my old home when we are wed, and I think that then ,when all is concluded, your father will be appeased. If you love me as truly as you said in one last sweet stolen moment, trust me, come with me. To-morrow night at ten o'clock, beloved, I will be at your father's gate with a chaise and pair if you but say that it is to be so in your answer to this letter of mine. My darling, I think you will make me happy! This will be the last time, then, that we shall use the old hollow tree and the little silver box which has carried our words of love. When I take your next letter from its hiding place I will take the box, too, and keep it as an ever-dear memento of my wooing.—Your always devoted John O'Hagan."

Agatha smiled softly as she laid the letter down. "John, John," she whispered. Soon another letter lay upon the table in the midst of a feminine litter of needlework and dainty books.

"Dear," it said, "I will trust myself to you, though I transgress against those whom, next to you, I hold most dear on earth. At ten o'clock, then, I will meet you at the gate attended only by faithful Pat, the boy who has shared our secret all along. This is the last letter the hollow tree will hold for you.—From your, Agatha Lambert."

Carrying the small silver casket, Agatha walked stealthily down the stairs and out into the rose garden.

"Pat!" she called, "Pat!"

A shock of rough hair rose apparently from the ground, where Pat had been zealously weeding.

"Aye, Miss Agatha."

"Can you take this, Pat, and leave it in the hollow tree—it must go quickly, and I shall want you to-morrow night." Agatha advanced her lips near Pat's large ear, "I shall want you to-morrow night to come with me to the avenue gate to carry a small package, precisely at ten o'clock, mind, for Mr. O'Hagan, and I are going then; this is the end of our secret, Pat—at last."

"Miss Agatha, the masther!"

"No matter, Pat, you will help me, won't you, for it must be."

"Surely, Miss Agatha, surely I will help ye. an' now to take the last letter in the silver box."

At ten o'clock on the following night, Agatha and her henchman stood together at the avenue gate. The wind blew cold, dark clouds crossed the moon, an owl screeched dismally. Agatha shivered; she felt chill within as well as without, for no John, no chaise, no sign of comfort could be seen. All the night before Agatha had pictured John, tall, firmly knit, with his curling, fair hair and brave blue eyes, coming to meet her, waiting for her in his fever of impatience, and now—he was nowhere.

"Where can he be, Pat You put the box in the hollow tree, did you not There could be no mistake"

"No, Miss Agatha, there couldn't. Miss Agatha, will I bate him for you?"

Agatha turned towards the angry boy, smiling reproachfully.

"No, Pat, never touch him, never speak to him; what good could that do you, foolish boy?"

Pat shrugged his shoulders, and clenched the hands that itched to shower blows on Squire John O'Hagan. Agatha's point of view was not that of the faithful boy who longed to serve her.

That night Agatha Lambert cried and moaned herself to sleep; she felt keenly the agony of anger against a loved one.

Pat slept, too, having long staved off slumber by thoughts of fury against John O'Hagan, the handsome, beloved, and faithless gentleman.

Two days passed, and Agatha, in the tender fashion of her day, drooped and paled as she brooded on her disappointment and humiliation. Then she heard that John O'Hagan was bound for the war. The war, where he might be killed! What matter! he was to her as one dead. Yet to think of his fair hair clotted with blood, his noble frame riddled with bullets, his eyes contracted from pain!

Agatha's mind was a mass of contradictions in those days, her heart was cruelly torn about by conflicting love and anger.

"Miss Agatha, I hear tell he's goin' about laughin' extraordinary loud, and with a devil in his eyes." Honest Pat spoke, hoping for permission to chastise John O'Hagan according to his deserts.

But no, Agatha smiled gently again. "I do not understand him, Pat," she said, "but never speak to me of him any more."

She stood at her father's gate (pitifully imagining that he must think the ordinary business of life had brought her there), and she gazed her last at him as he rode away to sail for England on the morrow. Straight and bold he looked at her as he passed, with no trace of love or shame in his blue eyes. "Pat," she said bitterly, "why did you tell me when he would pass; why did I come to bear such a look from him. I think my heart is broken, Pat." Her eyes were dim as she gazed at the cloud of dust which hid John O'Hagan from her sight. Pat scowled fiercely.

"Never break yer heart for the like o' him, Miss Agatha. Look around ye an' take yer pick o' all the fine gentlemen; never think agen o' him, miss."

Agatha turned away.

"You have been a good' faithful boy, Pat,', she said.

"Faithful, miss! Ah, bad luck to the day I ever helped ye to be fooled by a blackguard like that."

. . . . . .

On a fresh autumn evening a group of men stood round a veteran tree. All was in train for the old giant's destruction, and its withered branches shivered in the air for the last time.

"'Tis time it went," said one of the group, "the crows stopped buildin' in it this three year."

"Aye," assented an old bent man, "it's an ould tree for sure; 'twas an ould tree when Miss Lambert an' I was young, an' that's not yesterday, an' ould, ould tree."

"Careful now, boys, careful," the steward who was overseeing the destruction of the old tree, called out, "and stand you clear, Pat, for you're none too active skippin' out o' the way since the rheumatics gripped ye."

"That I'm not," said Pat shortly, and across his heart flitted the thought of what he had been sixty years back.

Crash! The old tree fell at last. The people gathered round in wonder to gaze at the huge trunk of dead wood; there was a far-away look in old Pat's eyes as he stood among the young men, who could not guess at his thoughts.

"But look at here," a boy's voice rang out, "look at here"; he held out a small tarnished metal box; "'twas among the rotten wood there at the butt."

Old Pat made a quick step forward.

"Give it here," he said, imperatively, "give it here; 'tis Miss Lambert's; I know all about it."

The boy hesitated.

"Begor, then, maybe she'll give a reward.

"She will so, an' you'll get it, too, young chap, if you give that to me, an' let me take it."

Having gained his prize, old Pat set out to hobble over the field. "'Twas here," he muttered, when he came to the avenue gate; "'twas here we stud, an' the owls hoot-tootin', an' she shiverin', while he never kem. Vargin Mother, to think o' it havin' fell down, a bit o' the wood must have sloughed away, an' we took no notice. To think o' the fine young gentleman an' the sweet lady! An' all for a bit o' rotted wood. Tell Miss Lambert I'm wantin' to see her," he said peremptorily to the astonished servant, and soon he was shown into the large, gloomy library where Agatha Lambert sat reading by the fire. A stately old lady she was, her slim, straight figure instinct with dignity; her soft, white hair, and delicate, but worn and sad, old face, giving her the look of the dainty dames of long ago, who have been celebrated in miniatures which make us sigh for the days of such fairy-like beauty.

"Good evening, Pat," she said, "what can I do for you?"

Pat looked pityingly at the fragile old woman, cheated of her life's joy.

"'Tis this, Miss Agatha (he used the old name involuntarily), "'tis this"; he held the little box out upon his rough hand.

Agatha half rose from her chair.

"What is it, Pat? I do not understand."

"When we was cuttin' down the ould tree, Miss Agatha, a chap kem on this afther the tree fell. 'Twas in the rotten wood at the butt. Ye know it, Miss Agatha."

Agatha had it in her hands; she seemed to be caressing the tarnished thing. She looked piteously at the old man.

"It was a mistake, then; he was true."

"Aye, Miss Agatha, a true gentleman, an' his heart was broke when yours was."

"I doubted him; I've doubted him for sixty years." She seemed to be in a reverie.

Pat spoke again. "No blame to ye, miss, if ye did doubt him, how could ye tell?"

"Good night, Pat, good night; we've seen it through together. Good night."

"Miss, I promised the chap ye'd give him a reward. It's not that I want to trouble ye, but"——

"All right, Pat, all right; give him this sovereign. I would have given him a hundred had he found it sixty years ago. Good-bye, Pat."

"Not good-bye, miss; please God, we'll weather many a year yet."

"Good-bye, Pat."

The old man hobbled from the room, the old woman sank into her chair; to both the thoughts of youth's strength, of love, and youth's treasure, given too late, was very bitter; they had felt keenly the agony of living when all becomes weakness and weariness, as they stood looking at each other in the fitful light of the fire.

Left alone, Agatha shivered dismally; she lighted a candle on a small table by her side; then she sat apathetically, holding the little silver box, until suddenly tears filled her eyes, and fell in a soft believing gush, rousing her from the calmness of despair to a more active misery. "John," she groaned, "oh, John, and we might be together now." She opened the box; there lay the letter just as she had written it in the sunlight, just as John was to have read it. John, who had long ago closed his eyes on the battlefield, thinking hard things of Agatha in his heart. "Oh, John!" the hopeless whisper came again, "my love." Through scalding tears she gazed at the age-stained letter. The tears left her then, and a strong calm came. The hours went on; they seemed as minutes to Agatha, for in her sad heart she was planning out just how everything would have been but for this tragedy; then suddenly, but gently, she seemed to fall back in her chair and to sleep well, still clasping the silver box.

VOICES OF THE ICE.

The winter of the far North is not wholly silent, although so little life is manifest at that season. A paragraph from Captain Koldewey's account of his winter's stay on east coast of Greenland makes this fact very clear. All these movements of the ice—the gradual crowding and pressing, bending, and pushing, the breaking of the masses of snow lying at the "ice-foot"—do not go on noiselessly, but are generally accompanied by certain sounds which are called the "voices" of the ice. No we hear a low singing, splashing, or grumbling, alternating with various other noises, cracking and snapping; now it sounds irregularly from a great distance, like a confusion of human voices, the rushing din of a train or a sledging party; or you fancy you hear the steps and voices of all sorts of animals. There is a charm in listening to these sounds on a still night.

NOTES ON OLD DUBLIN.

By SEUMAS CORMAC.

I.

ST. MICHAN'S CHURCH.

In the old church of St. Michan we have one of the most interesting and ancient relics in the city of Dublin. It dates from a period immediately preceding the Anglo-Norman invasion. Towards the close of the 11th century the remnant of Danes who remained in Dublin after the Battle of Clontarf (1014) were settled in the district north of the river known as Ostmanstown (Now Oxmantown); and here a Bishop of Danish stock, one Micharus, built the first parish church north of the Liffey. He is mentioned as St. Michan, of Kill Michan, in Ath-Cliath, in the "Martyrology of Donegal." The church had a double dedication. Its south aisle was named after St. Sithe, virgin and martyr, who was of Osyth, near Colchester, and daughter of Redwald, King of East Anglia. This princess founded a church and nunnery at Osyth. These were plundered by the Danes, or Ostmen. They beheaded the foundress near an adjacent fountain, for which barbarity they endeavoured to make reparation by naming a portion of St. Michan's Church in her honour. St. Sithe was commemorated on the 13th of May. The church has been twice burned down since its dedication in 1095; but the tower is undoubtedly of great antiquity, and is probably a portion of the original building.

THE SUBURBS OF THE ANCIENT CITY.

"When Henry II. paid his famous visit to Dublin the Irish princes who thronged to Henry's Court encamped, after the Irish fashion, in huts of turf and branches, spreading themselves over the meadows and fields, and strand, which extended on every side of the Dublin of that day. I have mentioned that Dublin in 1172, and for hundreds of years after, was a very small place. Fields and gardens ran up to the Castle in Dame street, the last relic of which is the Viceroy's. Woods, intermingled with meadows, covered St. Stephen's Green, Ranelagh, and Cullinswood, the last name bearing witness to the ancient fact. The wild Celtic soldiery squatted down on every vacant spot, specially along the highlands of St. Stephen's Green, then called Colonia, or Cualan, where wood and water were abundant. The name Cualan is now represented by the Prebend of Cullen, in St. Patrick's Cathedral, always held by the Archbishop of Dublin, and still retained in Cullenswood avenue."—"Stokes's Ireland and the Anglo-Norman Church."

HOGGEN GREEN.

When Henry II. entered the little Danish city of Dublin there lay without its eastern walls a village caled "Hogges," a name, says Mr. Gilbert, apparently derived from the Teutonic word "Hoge," or "Hoga," used to designate small hills or sepulchral mounds, the existence of which in this locaity was evidenced by vestiges found here in Charles I.'s reign, and mentioned by Sir James Ware. The place is now known as College green. Here Dermod MacMurchard, King of Leinster, founded and endowed a convent for nuns of the rule of St. Augustine in the year 1146, and some twenty years afterwards the great priory of All Hallows. The former stood on a spot not far from the site of St. Andrew's Church, and the latter on the present site of Trinity College.

DUBLIN IN 1577.

Richard Stanihurst's description of Dublin in 1577 is reproduced as an appendix to Vol. II. of the "Calendar of Ancient Records of Dublin," published by the Corporation, and his opening paragraph has a reference to the Liffey, which reads oddly nowadays—"This citie (he says), as it is not in antiquitie inferior to anie citie in Ireland, so in pleasant situation, in gorgious buildings, in the multitude of people, in martiall chivalrie, in obedience and loialtie, in the abundance of wealth, in argenesse of hospitalite, in manners and civilitie is superior to all other cities and townes in that realme. And, therefore it is commonlie called the Irish or Young London. The seat of this citie is of all sides, comfortable and wholesome. If you would traverse hills, they are not far off. If champion ground, it lieth of all parts. If you be delited with fresh water, the famous river called the Liffie, named of Ptolome Lybnium, runneth fast by. If you will take the view of the sea, it is at hand. The onlie fault of the citie is, that it is lesse frequented of merchant estrangers bicause of the bare haven."

THE PRIORY OF ST. JOHN THE BAPTIST.

On the site of the present-day beautiful Church of St. Augustine and St. John, Thomas street, there stood in ancient times the Priory of St. John the Baptist, founded by Alured de Palmer in 1188. It was intended as an hospital for the sick, and was the first of the kind erected in Dublin. At one time the infirmary contained no less than 50 beds, and in 1361 it appears to have supported 115 sick poor. So great was its usefulness that Edward III. granted it deodando for twenty years, and in 1284 the Mayor and commonality of the city granted to its inmates one-sixteenth of the salmon caught in the Liffey. In connection with the Priory was a home for nuns, who wrought and embroidered the vestments for the friars of Thomas Court, or the Abbey of St. Thomas; for the Franciscans of Francis street, and the University of St. Patrick, the precursor of Trinity College. These ladies received as compensation for their labour one-tenth of the wool and flax they spun, when the work was done. The various religious Orders for which they wrought used to visit the House on St. John's Day, when they presented their offerings before the image of the saint, which stood in the great hall of the Priory. On this annual gala day a great bonfire was made in the street before the hospital, as were many others throughout the city. The Priors of St. John's were persons of much importance. One of them, Prior William, held the high office of Lord Chancellor of Ireland. The steeple of the old Priory was standing in 1728. It is described in Brooking's map of that date as "John's Castle," and was taken down early in the last century.

THE DUBLIN MOUNTAINS.

It is to be remembered that these Mountains of ours, though now for the most part bare enough, were once thickly clothed with forests, through which roamed herds of wild deer and other large game, and possibly the wolf, which was not exterminated in Ireland until the reign of Charles II. Professor Oldham, in his time, unearthed a quantity of bones and antlers of great deer which he discovered in the clay of Kilternan, near the Scalp. The woods gave shelter likewise to the wild mountain men, the O'Tooles and O'Byrnes, who levied blackmail on the simple citizens who ventured into their domain, and forced them back to "embay" themselves under the walls of Dublin Castle. These forests were from time immemorial the cause of bitter contention between the Crown and the Archbishops of Dublin, both parties laying claim to them. The dispute was finally settled by the axe, which levelled most of them with the ground. It is a pity these beautiful mountains are now so bare and unclothed with their natural foliage—a foliage which lends such glory to the Scotch and Swiss mountains, and "Heaven's reflex—Killarney." The ten-

dency to strip them continues, and within the past few years a picturesque wood on the side of Kilmashogue has disappeared. Traces of former woods may still be seen in many places. Barnacullia, on the eastern front of the Three Rock Mountain ("Barr na-coille," the top of the wood), still retains some of the old timber, and venerable hollies and other trees are to be seen in the grounds of St. Columba's College. The title of the Archbishop of Dublin's stall in St. Patrick's Cathedral is Cullen ("Cullion," holly or hollyland).

ANCIENT DUBLIN.

The earlier mention of Dublin is to be found in a tract in the "Book of Leinster," called the Talland Etar, or the Siege of Howth. It is there called Ath Cliath. Ptolemy, the geographer, in the beginning of the second century, mentions Dublin as Eblana Polis. It was most likely one of the Irish ports that Tacitus mentions in general terms as having been better known to commerce than those of Britain. Nearly contemporary with the Egyptian geographer were Eoghan Mor, King of Munster, and Con Ced Cathach, King of All Ireland. The earliest notice of Dublin under its present designation occurs in the year 291—"Annals of the Four Masters":—"The battle of Dubhlinn was fought by Fiacha Sraibhtine, King of Ireland, son of Cairbri Lifficar, son of Cormac Ulfada, against the Leinstermen. The inhabitants of Dublin and the surrounding territory at that time were called Dercemosaig; they were descended from Deremesaih, one of the sons of Caithair Mor, King of Ireland, 177." The descendants of the Dercmosach held Dublin until the Hy Donchada and the Danes ousted them (Journal R.A.S., vol. xiii., p. 305).

ORIGIN OF THE NAME.

Under the clan system the people of Ireland led mainly a pastoral life, in the interior of the island, and it is a remarkable fact that, although surrounded by the sea, the Irish were never great navigators. In the course of ages towns sprang up on portions of the coasts where the commodities of foreign countries, chiefly England, France, Spain, and Phoenicia, were bartered for the products of Ireland. Dublin became the most important of these towns, being the nearest seaport to Wales, and the most accessible to the fertile and populous districts of Leinster and Meath, where were situated such centres as Tara, the seat of the Monarchy; Naas, Diuree, Allen, Dunlavin, and Mastera, residences of the Leinster chieftains; Talten, where annual fairs and athletic sports were held; Swords, Kildare, and Glendalough, large ecclesiastical establishments. Among the Gaels, or native Irish, Dublin, from ancient times, was known as Baile-atha-cliath, "the town of the ford of hurdles." This name, according to old native story, originated the hurdles constructed of small twigs (Cliath) by the men of Leinster to convey the sheep of an avoricious bard, Athairne, across a ford at Dun Edar, a fortress of Howth. The part of the river near which the town arose was styled in Gaelic Dubh-linn, or "the dark pool," whence the name of Dublin.

THE LIFFEY.

The bards relate that the Liffey received its name from a beautiful maiden named Lifea, who, eloping with the cup-bearer of the monarch, was so delighted in passing through the country watered by the river that she requested to have it styled Magh Life, or the plain of Life; and, the legend adds, that the cup-bearer declined to minister wine to the men of Erin at Tara till they consented that the district should be called by his bride's name. The name is, however, more likely one of Danish origin, as we find the names Amlavius, Amliffe, Aulaffe, and Analaffe, frequently in Danish records of the city. In a charter of Prince John, dated 1192, the river is styled Auenelith, and in the Inspeximus of an Inquisition (recited in Lib. Nig. Archb., Dub.) made in 1394, when Richard II. visited Dublin, confirming former grants as to the boundaries of the city, we find them defined in part thus: Usque ad aquam de Amliffy, also in a grant from Charles II. to Boyle, first Earl of Cork, by which a portion of the land outside the east wall of the city was conveyed, the name occurs in part of the description thus: "An from the river Aneliffe on the north unto the walls of the said city," so that it appears the present name means simply the river of Aneliffe or Amlaffe.

CULLENSWOOD.

The district comprising a portion of Ranelagh and Rathmines, and, till quite recently, known as Cullenswood, was anciently called "Boscus de Colonia." On Easter Monday, in the year 1209, a number of the citizens, who were colonists from Bristol, assembled here for amusement, when they were set upon by the O'Tooles of Wicklow, who lay in ambush in the neighbouring woods, and issuing forth, slaughtered 500 of them. The city was soon after replenished by a new colony from Bristol, and it was their custom on each Easter Monday to march out to this place well armed, and with a black flag, to bid defiance to their enemies. This custom was continued for many years, and the day was called Black Monday. In 1316 the citizens had their revenge, for David O'Toole and his sept having laid in ambush here in order to accomplish a similar enterprise and slaughter of the citizens, they were prepared for him, and under the leadership of Sir William Comyn, drove the O'Tooles back with heavy loss into their fastnesses in Wicklow.

THE LONELY OAK.

By Fitz-James O'Brien.

Widely and high thy branches spread;
The winter of age is on thy head,
Thy sturdy comrades all have died,
For time hath swept them from thy side;
Yet, though howling storms have o'er thee broke,
Thou hast braved them all, old lonely oak!

The time has been, when young and fair,
Thy branches waved to the summer air,
And the red deer slept beneath thy shade,
And the birds in thy boughs sweet music made;
And the wind, through thy green leaves, softly spoke,
With a happy voice—Thou lonely oak!

Yes; thou hast seen, when our native land
Was fettered not by a stranger's hand—
When our youths were brave, and our chiefs were free,
And our maidens were bright as the sunlit sea;
When the gay bard, stretched by thy mossy side,
Chanted his tales of Erin's pride.

Dost thou not sigh for the wild bird's wing,
When by thee he cleaves in the budding spring?
Dost thou not sigh with him to stray
To some giant forest far away?
Here thou hast no companion near thee—
Not even one is left to cheer thee

Yet I would grieve to part with thee
Iwould miss thy form, old, friendly tree;
For on many a sultry summer's day,
In childhood's time, when faint with play,
I sought thy kindly sheltering shade,
And my weary form beneath thee laid!

And, in manhood's time, when I strove to store
My seeking mind with ancient lore,
Thy lone and silent foot I sought,
And turned my mind to a deeper thought;
While the light through thy thick leaves faintly broke,
And shone on my page, old kindly oak!

And when I have grown old, like thee,
And age has come on me silently,
Like a shadow upon the sea:
And when with a tottering foot I stand,
On the viewless bank of the unknown land,
I will wait for death's resistless stroke,
And sleep beneath thee, old lonely oak!

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland, 1837.)

BALLINAKILL.

BALLINAKILL, a market and post-town (formerly a parliamentary borough), in the parish of Dysartgallen, barony of Cullinagh, Queen's county, and province of Leinster, 10 miles (S.S.E.) from Maryborough, and 50 miles (S.W.) from Dublin; containing 1,927 inhabitants. This is a place of some antiquity, but was not made a market-town till the year 1606, when a grant of a market and fair was made to Sir T. Coatch, proprietor of the manor of Galline. In 1612 it was incorporated by James I., and was invested with considerable privileges, to foster the plantation made here by Sir T. Ridgway, Bart. The castle, of which there are still some remains, fell into the possession of the R. C. party during the insurrection of 1641, and when Cromwell's troops overran the island, being bravely defended by its garrison, it was cannonaded from the Warren-Hill adjoining Heywood demesne, by Gen. Fairfax, and the garrison was at length compelled to surrender. Under the charter of Jas. I., the corporation consisted of a sovereign, twelve burgesses, and an unlimited number of freemen, and returned two members to the Irish parliament until the Union.

NOTES AND QUERIES.

HISTORY OF CO. KILDARE.

Could any reader of the "Dublin Penny Journal" inform me is there a History of County Kildare? or are there any local histories of any places in Kildare with the authors names? I remember seeing in the discussion in "Freeman" of Best Hundred Irish Books in 1886,-that there was a History of County Kildare, but the author's name was not given, and also having seen in some catalogue one of Athy, Castledermott, and Rathangan; or is there any work of the general Bibliography of the 32 counties? I may mention, to save time, I have Dr Comerford's collections, but it chiefly treats of ecclesiastical matters. Now the work I want would be more a historical account of old castles and other fortresses, as Kildare lay on the edge of the Pale, as where I write there were six castles inside ten miles, of some of which not a stone remains.

—G.A.H.

M. de Blowitz also describes for his French readers the system by which the publishers of the "E. B.." guarded themselves against undue loss, caused by the non-payment of subscribers who had already received their thirty volumes. It seems that they took their chance of dishonesty in the cheaper bound volumes, but, when a subscriber asked for a thirty months' credit for the full morocco binding, they made inquiries, and if these were not satisfactory, returned the first guinea with regrets. Their temerity was justified, says M. de Blowitz, for on the 44,000 subscriptions they have lost only one per cent., that is to say, a sum of about £11,000 on sales to the value of £1,100,000.

THE ANCIENT IRISH CHIEFS.

By F. R. Montgomery Hitchcock, M.A., B.D.

The Irish Chief was a very important personage. It was true that he did not own the land, but he had certain rights which prescriptive use had made his inheritance. Of these one was the privilege of coshering on his people, who were bound to support him and his followers with a certain number of meals or for a specified number of days when on marauding or hunting expeditions. What had originally been wrested from the clansmen by force became in the course of time a gracious concession. For the common people were glad to welcome their chief under their roof no matter whether he would eat them out of house and home or not. They rejoiced to spend and be spent in such a cause. So much so that the saying "Devour me, but defend me" passed into a proverb.

This national custom was greatly opposed by the Government, which perceived to what excesses and unlawful relations it might lead, and what obstructions it might offer to the peaceful settlement of the country. Indeed, it often happened that an outlawed chief could not be found or hunted to earth so long as he had a single follower to give him the shelter of his cabin and the security of his hearth. Archbishop King speaks of the number of Irish gentlemen who, though dispossessed of their lands, hovered about their ancient inheritance, receiving board and lodging from their former tenants, or joined the bands of Tories who roamed over the country, striking a blow wherever they could against the new settlers. This custom of coshering on their dependants created a mutual understanding and good-will between the follower and his chief, and, while it helped the former to respect himself and to carry himself with deference, but without servility, to his betters, it often paved the way for a deeper union between the tribesman and his lord, who very often married a daughter of a clansman. Hence it was that when the English came to Ireland they were principally struck by the independent, though courteous, air of the tribesmen in the presence of their chiefs, at a time when the Englishmen of the same position in life were regarded by their masters as dogs and churls. But this difference of manner between the peasants of England and the peasants of Ireland in the olden days has an explanation which it is only fair to our English cousins to give. While the Irish Prince and his native followers—not speaking of the mercenaries—were of the same blood and race, the Saxon thane was completely different in nationality and religion from the poor Briton he had crushed by his cruelty and debased by his tyranny. Driven out of his country and forced to flee into the mountains of Wales, the Christian Briton determined that he would not spread the truths of his religion among his oppressors, for why should he lead the souls of those who had ruined him to salvation? So he reasoned. It was, therefore, left to the Irish to convert the Saxons to Christianity.

Another custom of the Irish which helped to consolidate the forces of the tribe was fosterage. The sons of the chief were settled among the families of the tribe, given out to be trained and fostered by them. Thus the young chief would grow up in the bosom of his people, who loved their foster children as dearly as they loved their own, and bequeathed to them a child's portion. For this privilege of wardship they were not paid in the case of the son of a chief, but they had to pay. Campion tells us that commonly 500 kine and better were given to win a nobleman's child to foster. In the records of the Earls of Kildare we read long lists of the gifts of the Irishry to foster with that family. We cannot estimate too highly the advantage of this custom to the tribe and the chief. The clansmen got to know and love him whom they had taught to be swift and fearless in the chase, and they followed him with confidence to battle, while the chief had formed many an attachment among the ranks of those whom he was called upon to lead and govern. Many and many a time did his foster-brethren form a bodyguard for their chief through which the enemy could not break through save over their dead bodies. Many and many a time did the chieftain's brand hew out a path of safety for a wounded foster-brother in the madness of the contest.

But it is not to be imagined that this custom of fosterage was confined to the sons of the chief. It was the general method of education and training for the young. Suppose we allow our imaginations to travel back to the sixth century and ask what system of discipline was then in vogue for the young. The reliable histories of the nation and books on its national life answers that there was, considering the times, a very elaborate and judicious method of education in use. The father and mother of the child would first settle in their minds what friend of theirs would take the best care of the boy and teach him all he required to know, and at the same time not allow him to forget his parents. Then one fine morning they, with some of their relations, would go to the house of this friend and solemnly make over the boy to his care, giving him all responsibility over the child and permission to deal with him as he thought fit. And then they would retire, leaving their son with his new guardian. On that day, or the following, the lad of tender years would be introduced to life and labour. In the company of his foster parent he would be brought to the fields and shown the ground which he would have to learn to till. The cattle which he would have to herd would be pointed out to the boy "all tears." Then he would see the wild colts he would have to break in; the kilns in which he would have to work, and the forests he would have to clear. The foster parent would then bring him back to the house and point out the domestic duties he would be required to perform, the wool he would learn to dress, and the weapons he would be taught to wield. And, as soon as would be convenient, the lad would be brought to the bard of the neighbourhood, who would be engaged to teach him the poetry, history, and music of his people. As the bard was a very important person, one who was associated by his office with the loftiest traditions and highest circles of the land, a brief digression on this subject will be permitted.

The bard was one of the privileged members of the community. His office was hereditary, and he had not merely to sing the history of his tribe and nation, but he had to teach it. In those early days, when writing was almost unknown or a difficult accomplishment, the memories of men retained the folk-lore of the land which the bards were the means of handing down from father to son. It was in this way that the great poems or collections of poems, which have been attributed to Homer, were preserved, As the Homeridae, or school of poets, collected and revised the stories of their race enshrined in matchless verse, so the bards of Erin passed along the line of generations the poetical traditions of their people.

The Irish were a musical race, and their national bards kept alive the ancient spirit of their forefathers by their stirring melodies of the great and glorious past, when the Scots went forth from the Northern shores to conquer Scotia and to stay the Roman advance beyond the Tweed, when the virtue and piety of the race were a sufficient pledge for the safety of woman and child, and when the harp never vibrated to any but strains of valorous deeds and suffering nobly borne. It was the invincible inspiration of these martial and manly airs the invaders sought, and vainly sought, to suppress by their edicts against the bards, who represented the spirit of the nation, as they gave utterance to its mighty strivings and emotions. The same cruel policy was carried out in Wales, and the voice of the national bard was choked lest it should continue to fire the spirit of the vanquished race. But the harp of Tara was still voiceful as of yore. The spell of silence had not yet fallen upon its tuneful strings, and Giraldus, the Welshman, who had often heard the slow and measured strains of the same instrument on the Cambrian hills around Brecknock, records his astonishment at the wondrous skill of the Irish harper, and the wild gaiety of his tunes. But the Irish bard was a warrior as well as a singer. He buckled on his shield and led the way to perish or conquer in the front of the battle, as Moore describes in his well-known lines:—

> The minstrel boy to the war is gone,
> In the ranks of death you'll find him,
> His father's sword he has girded on
> And his wild harp slung behind him.

Such was the man to whom the literary education of the lad was entrusted, and we may rest assured that it was in safe keeping. Judged by its tendency to produce the end required—namely, a fine-spirited and industrious, a useful and chivalrous man, the education of that day can compare not unfavourably with that of our National Board.

After some years the parents would return for their son, and if they found that the foster parent had faithfully fulfilled his duties, they gave him a handsome present according to their means, from three to sixteen cows. But if they did not consider, after examination, that his education had been sufficiently looked after, they brought him straight to the Brehon, the judge, who put the boy through his facings, and if he found that he had not been instructed properly, inflicted a fine upon the foster parent, which was immediately handed over by the Brehon to the lad, because on him the injury of want of learning had been inflicted. The sons of the wealthier classes were not taught manual labour, but riding, swimming, hunting, and chess playing, accomplishments which tended to make them sociable as well as dexterous, courteous as well as courageous. Their training in military exercises was somewhat elaborate, and they "were allowed a horse to ride in the time of races." But in later years they were instructed in Latin, Greek, and Celtic literature.

There was the very same arrangement for the girls as for the boys. They were handed over to foster-parents when very young, and left to the really tender mercies of the matron of the establishment, who looked after them and fitted them to fulfil their social functions and domestic duties with appropriate grace. And this she was capable of doing, as she was selected from among the members of the same social class to which the parents of the girl belonged, while the poorer maidens were taught to churn and knead—in fact, to be useful housekeepers; those belonging to a higher station in life were instructed in embroidery and the loom, and so were fitted to adorn the homes of the proud chieftains, in the management of which they had an equal voice. This method of education strikes us as being simple and effective. Children as a rule are more easily trained by kind strangers than by indulgent parents. And this tie between the children and their guardians became very strong, and so had a great influence in binding the members of the clan together by the very closest bonds of friendship.

BALLYSADARE ABBEY, CO. SLIGO.

AS IT WAS IN 1793.

HISTORY OF BALLYSADARE.

From the "Anthologia Hibernica" of March, 1794.

BALLYSADARE, formerly called Assadara, or Esdara, is situate on the river Unicon, in the barony of Tirerril, county of Sligo, and about four miles south of the town of that name. It was anciently a place of some note, when this wild and barren country was but thinly inhabited, and the towns were consequently but few. The badness of its harbour, however, and its contiguity to Sligo, prevented it from ever rising latterly to a place of much consequence. In the year 1179 it was burned by the men of Moylisha and Moyltenary; it also met with the same fate in the year 1188.

At present it is an inconsiderable village, but being on the great road from Dublin, it has the advantage of a good inn, which is the best house in it.

The abbey was erected about the year 645, for Canons Regular, by St. Fechin, who was also the founder of Fore-abbey, in the county of Westmeath, and of the monasteries of Bile, Drumrat, and Kilnemanagh, in the county of Sligo. It was endowed with a noble and beautiful estate called Tearman Fechin.

A.D. 1158. O'Duilman, who was dean of this abbey, died here He was a skilful antiquary, and a chieftain of the country.

In the year 1230 died Giolla Coindheadh O'Duilman, abbot of Assadra.

In 1444 the son of Melachlin Fitz-Cormac Mc. Donogho was abbot of this monastery, and accompanied William O'Etagan, bishop of Elphin, with many others of the clergy, from Connaught to Rome, where the most of them died, among whom were the bishop and abbot of Ballysadare.

1450 died the abbot Edmund.

Conat O'Shiagal, who was abbot in the year 1544, also a prior of Akerras, in the barony of Tyreragh, and chaplain to Magnus O'Donnell, was advanced to the bishoprick of Elphin, by Henry the 8th, on the 23rd of March, in the same year.

By an inquisition taken the 29th of Elizabeth the abbot was seized of a church, partly thatched, a dormitory, and the ruins of two other buildings, 3 cottages with their gardens; and a cemetery, in a state of ruin and of little value; 3 small quarters of land, with their tithes, &c., situate in the town lands of Assadara; 40 acres of arable and pasture, and 60 of stony mountain, value 20s.; the townland of Trinebally, value 6s. 8d.; the rectory and vicarage of the parish of Ballysadara, annual value besides the curate's stipend, 13s. 4d.; the vicarage of Enagh, in the barony of Tirerril; the vicarage of Drumrat, in the barony of Carran; the vicarage of Kilnegarvan, in Mc. Jordan's country: all which, besides the stipend of the curates, was of no value.

26th August, 30th Elizabeth, a lease of it was granted to Bryan Fitz-William for 21 years, at the annual rent of 53s. 4d.

The abbey is at present in the same situation as when it was seized by Elizabeth, excepting its being unroofed. The grounds around it are barren, hilly, and unpleasing. Its situation is much more elevated and bold than houses of this kind usually were, fitter, one would have imagined, for a castle intended for defence and warfare than a peaceful abbey built only for meditation and solitude. It takes its station only a few yards from the edge of a perpendicular rock of about 60 feet, that forms one of the sides of a deep basin, into which the Unicon precipitates itself over a ledge of rocks, perhaps one hundred feet broad; the fall is not more than twenty feet, and much broken by the different projecting fragments of rock that impede the water in its descent, dashes it into foam, and raises a prodigious spray to a great height above the surrounding banks.

From the abbey there is a very pleasant though not an extended view; on the east, about a quarter of a mile distant, is the village with the purple, craggy mountains that bound Lough Gill, thrown in perspective behind it; the river, falling over the

different ledges of rock that form its bed, makes an irregular succession of smaller waterfalls till it forms a grand one at the precipice below. On the other side it commands the mouth of the Unicon, with a view of the sea, out of which the mountain of Knockmaree seems to rise; near its summit is one of those remarkable heaps of stones, called Cairns, supposed by some to have been the places where, in times of inauguration, the chieftain elect stood to show himself with more advantage to the people, or to have been erected in memory of some solemn compact, or the spot on which it was ratified. Others, however, imagine these must have been for sepulchral monuments, raised over the places where their ancient chiefs were buried, and that the size of the cairns was usually in proportion to the celebrity or popularity of the deceased.

The views around the abbey would be much more picturesque were there a few trees to hide some of the barren, rocky knolls that hurt the eye; but the scantiness of the soil, which is scattered in patches among the rocks, will hardly permit some straggling shrubs to vegetate, which scarcely afforded nourishment for a few goats that I saw browzing about the abbey wall.

This sketch was taken the 1st May, 1797.

THE OLD MILL.

Don'ts you remember, Lily dear,
The mill by the old hill-side,
Where we used to go in the summer time
And watch the foamy tide;
And toss the leaves of the fragrant beach
On its breast so smooth and bright,
Where they floated away like emeralds,
In a flood of golden light?
Lily, dear!

And the miller, love, with his slouchy cap,
And eyes of mildest gray,
Plodding about his dusty work,
Singing the live-long day?
And the coat that hung on the rusty nail,
With many a motley patch,
And the rude old door, with its broken sill,
And the string, and the wooden latch?
Lily, dear!

And the water-wheel, with its giant arms,
Dashing the beaded spray,
And the weeds it pulled from the sand below,
And tossed in scorn away;
And the sleeper, Lily, with moss o'ergrown,
Like sentinels stood in pride,
Breasting the waves, where the chinks of time
Were made in the old mill's side.
Lily, dear!

Lily, the mill is torn away
And a factory, dark and high,
Looms like a tower, and puffs its smoke
Over the clear blue sky;
And the stream is turned away above,
And the bed of the river bare,
And the beech is withered, bough and trunk,
And stands like a spectre there—
Lily, dear.

And the miller, Lily, is dead and gone!
He sleeps in the vale below:
I saw his stone in the winter time
Under a drift of snow:
But now the willow is green again,
And the wind is soft and still:
I send you a sprig to remind you, love,
Of him and the dear old mill,
Lily, dear!

THE ANCIENT IRISH CHIEFS.

(Continued from page 248.)

It is interesting to note that the education question was always paramount in Irish circles. As early as 574 A.D. we find the King of Ireland presiding over a council of chiefs and noblemen which was convened to arrange a course of studies for the different schools, a primitive form, no doubt, of the present National Board, which has done so much good for the children of our country.

The Irish chief was not only an educated gentleman, at a time when the commonest Irishman, as Prendergast well said, had something in him of the gentleman—he was a hospitable and courteous host. He rejoiced in dispensing hospitality. To refuse it were in his eyes a breach of honour, to be punished in another. Kincora, the residence of Brian Boroihme, was proverbial for the lavish entertainment offered to the passing stranger. "Go over to the great feast in the dun," they would say to him who approached, "the head of the weir." A characteristically Irish record of the ceade mille failth there extended is preserved in the Munster welcome. "Were mine the boire of the Dane or the wine of Kincora, it would be poured out for you." Richard Stanihurst, in his account of his doings in Ireland, relates that he used to see the crowds assembled to hear the judgment of the Brehons delivered under some ancient tree or from some historic stone, and as they dispersed, they followed the chiefs who had invited them to supper, in long lines, down the hill and says that he was the proudest chieftain who brought home the greatest number of guests. This lavish hospitality has been carried down to our own day by the county families of Connaught, whose improvident generosity has in many cases brought their property into the Encumbered Estates Court. Indeed, it was the principal duty of the chief to keep up his position by doing the honours of the tribe. Debarred from every menial or plebeian office such as gardening or working in the fields, his life must have been a very monotonous one, when not engaged in fighting or plundering his neighbours, but for the social functions he had to perform, as the Brehons relieved him of the judgment of the people. Some of these were not unpleasant. In the Crith Gablach, Ancient Laws of Ireland, we read—"There are seven occupations in the 'Corus' law of a king, viz.—Sunday, for drinking ale, for he is not a lawful chief who does not distribute ale every Sunday; Monday for judgment, for the adjustment of the people; Tuesday, at chess; Wednesday, seeing greyhounds coursing; Thursday, at marriage duties; Friday, at horse racing; Saturday, at giving judgments."

We still find the Irish as keen as ever on the drinking and dispensing of ale and stronger stuff, which might be used with more moderation, and on the coursing of greyhounds, horse-racing, and litigation, but we regret to find the game of chess is not pursued with the same enthusiasm as of old, when it was considered part of a gentleman's education. It is not often found that Irishmen quarrel over a game of chess, except in local tournaments. But if it was a woman who fanned the flames of the terrible invasion that found its catastrophe on the level sands of Clontarf, the match was held to it by a game of chess. Maelmordha, King of Leinster, of Glen Inama fame, was bringing three masts of pine to Cenn Coradh, or Kincora, as tribute to Brian, but in the effort to get them over the hills Maelmordha's tunic burst. When he arrived at the head of the weir he gave it to his sister, who was Brian's wife at the time, but instead of mending it she threw it into the fire, saying that he ought to be ashamed of being a vassal of Brian. The chieftain was naturally roused by his sister's words, and as he stood next day in the famous dún at Kildalua, or Killaloe, he watched Murchadh, the man who had found him in a yew tree and dragged him a prisoner to his father Brian, playing a game of chess with his cousin Conaing. Interested in the contest, Maelmordha advised Conaing to make a move which checkmated his adversary, who turned savagely upon him saying, "It was thou gavest advice to the foreigners when they were defeated." "I will give them advice again," said the other, "and they shall not be defeated." "Have a yew tree ready," cried Murchadh, and Maelmordha fled never to return to Kincora (Wars of the Gaedhill and the Gaill).

It is time now to say a few words about the rights and status of the chief among his clansmen. First and foremost, he was in virtue of his office entitled to a portion of the tribe land and to the largest share in the plunder. Of course, the ruling family from which the chief was duly elected, although not necessarily the eldest son, would have acquired, in addition to its portion, large estates of the unoccupied land. For while the land, as a general principle, was common property, in reality the rights of pasturage possessed by the poorer people who could not afford to stock their fields and had to hire cattle from the wealthier classes, used to pass into the hands of the rich, "the flaith" class, when the borrowers could not pay. And in many cases when the debtor had received his honour price, which was equivalent to his legal value as a free man of the tribe, he became the vassal and often the retainer of his Chief. In this way the latter had become a wealthy potentate, being in a position to hire out more cattle, and to keep more servants and feini, or followers, than other members of his class.

The principal foundation of his power in the tribe he represented rather than ruled, for he could be deposed if he displeased the community lay in the possession of this land, upon which he had quartered his followers, who were most frequently fugitives from other tribes or foreigners who had no political status or voice in the Government. These men helped him to overawe the truculent members of his tribe and to force from them the necessary supplies. While in appearance the chief was a popular ruler, the representative of the will of his people, he became in process of time a petty tyrant from living in constant dread of assassination. A passage in Crith Gablach throws a light on the arrangement of his house, which was generally a strongly fortified but clumsy dwelling. We learn from it how true it was of the Irish Chief that

"Uneasy lies the head that wears a crown."

Around the king, on either hand, in front and behind, stood four guards, men without kith and kin, who owed their life and freedom to the chief, and whose fidelity was thought to be secured by some act of crowning mercy, and to be proof against treason. But the guards who had been saved from punishment, and who had not been taken in battle, lest "they might lay hands on the King or slay him out of devotion to their own tribe chief," were not completely trusted. They were watched by some prominent hostage whose property was a security for his good behaviour, while at the north-east of the room were posted the unredeemed hostages in chains—whose lives would be instantly taken if any treachery became apparent. On the right of the King sat his wife, his brehon, and his guests, and harpers, while on the other side stood his jugglers, flute-players, and horn-blowers. More guards are stationed at the door, and there is also the champion and a "man of deeds," armed to keep order, or, as it is written, "against the confusion of the ale-house." But, in spite of this protection, the chief was often assassinated even in his own hall by a rival, or a member of a hostile tribe.

The conclusion of our study of the life and manners of the Irish gentleman of byegone centuries must be after this sort, that, while we cannot but admire his many virtues and qualities of heart, head, and physique, we are thankful that our lot has been cast under a quieter and less warlike rule.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

CHAPTER XI.—Continued.

A.D. 1271. Fulk de Saundford, archbishop of Dublin, died, and was buried in St. Patrick's church, in St. Mary's chapel; and in the same monument his brother, John de Saundford, also archbishop of Dublin, who died in 1294, was deposited.

A.D. 1279. Stephen de Fulburn, bishop of Waterford, lord deputy, by the command of king Edward I. made an alteration in the coin. This monarch to his everlasting honour fixed a certain standard in England for money, both as to weight and fineness, according to which rule the mints in Ireland were regulated, as appears from the accounts of Donat and Andrew Sperdsholt, masters of the exchange in Dublin. The money at this time struck presented the king's face within a triangle, or three-cornered harp, in the same manner as those of the two former reigns, inscribed EDW. R. ANGL. DNS. HIB. on the reverse a cross, as in his father's, inscribed, CIVITAS DUBLINIE. In this king's reign there were four mints in Dublin, and a great deal of money coined there, so also at Waterford and Drogheda.

A.D. 1282. High street was burned.

A.D. 1285. On the 2nd of January the greatest part of the city of Dublin was burned down by an accidental fire, which did not spare the steeple, chapter-house, dormitory, and cloisters of Christ-church; but such was the devotion of the citizens, that they first set about a collection for the repair of the church before they thought of re-edifying their own houses.

A.D. 1289. The following grant was renewed to the citizens of Dublin, 18 Edw. I. The king to the bailiffs and honest men of Dublin, greeting. Since in aid of walling your town we lately by our letters patents granted that you should take some customs to a certain day, of every thing to be sold coming to that town; and our beloved and faithful subject Nicholas de Clerc, treasurer of Ireland, has certified us, that you at the command of the said Nicholas have employed great part of the money arising by those customs to the enclosing or repairing the exchequer at Dublin, therefore we continue the said tax for three years longer than our first grant, &c. (Atwood, p. 130).

A.D. 1300. Two species of base money called "pollards" and "crocards" were forbidden by proclamation. Hollingshed explains these coins to be a white money, artificially composed by a mixture of silver, copper, and sulphur, and that a penny of them were worth no more than a half sterling, i.e., a halfpenny. The "crocard" might have been perhaps of such a composition; but the "pollard" seems to have been a legal money clipped, and reduced by that means to less than the value. As a pollard-tree is a tree that has been often topped, and a pollard-stag is a stag that has cast his horns, in the same sense the pollard seems to be "pecunia detonsa." The proclamation for crying down this money is extant in the red-book of the exchequer in Dublin.

A.D. 1301. A great part of the city of Dublin, together with St. Werburgh's church, was accidentally burned down on St. Columb's-eve. The manner of building here then was of wattles and thatch, as is observed before; so that it will be no extraordinary thing to hear often of such accidents. At this time the common-pleas and the pleas of the crown were not held before judges appointed in the courts for that purpose, but before the chief governor of Ireland, and sometimes, when he was otherwise employed, by commissioners appointed by him.

A.D. 1304. A great part of the city of Dublin was again burned down on the 13th of June, and among other places Bridge-street, the quay, the church of the Dominicans, and one quarter of St. Mary's-abbey were consumed, in the latter of which, being at that time the repository of the records in chancery, many of them were destroyed. The same year the first stone of the new choir of the Dominicans was laid by Sir Eustace le Power on the festival of St. Agatha the virgin.

A.D. 1305. The mayor of Dublin having made some complaints to the Irish parliament against the treasurer and barons of the exchequer, the cause was this year transmitted to England to be heard, and the mayor was fined, and committed a prisoner to the tower of London, in regard he could not make out his accusation.

A.D. 1306. The lord chancellor, Thomas Cantock, was consecrated bishop of Emly in Christ-church, Dublin, and upon the occasion feasted the nobility and gentry, and afterwards the poor, with a magnificence unheard of in those times.

A.D. 1308. William Mc. Balthor, or Mc. Walter, a great robber and incendiary, was condemned by the lord justice Wogan in the king's courts, Dublin, and was drawn at a horse's tail to the gallows, and there executed. John Decer, mayor of Dublin, at his own charge made a marble cistern in the public street to receive water from the conduit in Dublin for the benefit of the inhabitants (such as was never before seen there). He also a little before built a bridge over the Liffey, near the priory of St. Wolstan, and a chapel dedicated to the B. V. Mary in the Franciscan monastery, wherein he was afterwards buried himself: he also erected another chapel to the B. V. Mary in St. John's hospital. His bounty to the Dominicans is also celebrated; for he erected a large and elegant stone pillar in their church, and presented to the friars a large stone altar with all the appurtenant ornaments, and entertained them at his own table every Friday out of charity. It is also recorded in the registry of the Dominicans of Dublin that this generous magistrate in a time of great scarcity raised a vast sum of money, and furnished out three ships to France, which returned in two months laden with corn, and that he bestowed one of the ships loading on the lord justice and militia, another on the Dominican and Augustin seminaries, and reserved a third for the exercise of his own hospitality and bounty. At the same time the prior of Christ- church, being destitute of corn, and having no money to buy it, sent to this worthy mayor a pledge of plate to the value of £40, but he returned the plate and sent the prior a present of twenty barrels of corn. These beneficent actions moved the Dominicans to insert the following prayer in their litany, viz.: "Orate pro salute majoris, ballivorum, et communitatis de omni civitate Dubliniensi, optimorum benefactorum huic ordini tuo, nunc et in hora mortis."

A.D. 1310. The bakers of Dublin were drawn on hurdles at horses' tails through the streets, as a punishment for using false weights and other evil practices. This happened in a year of great scarcity, when a cronoge of wheat sold for 20s. and upwards.

A.D. 1312. The septs of the O'Birnes and O'Tools invaded Tassagard and Rathcool, and were powerful enough to strike a terror into the citizens of Dublin, as well by their numbers as their policies, in laying ambushes up and down the woods of Glendolory on the south side of the city of Dublin. The citizens had not at this time power sufficient to suppress them, and the state were otherwise employed in opposing a riot raised by Robert de Verdon in that part of Urgile, called the county of Louth. But upon the submission of Verdon, the O'Birnes and O'Tools were quelled.

A.D. 1313. John Decer, at this time a private citizen, but formerly mayor of Dublin, built a bridge extending from the town of Ballyboght to the causeway of the mill-pool of Clontarf, which before was a very dangerous passage. But after great charges the bridge was carried away by an inundation.

A.D. 1315. Edward Bruce, brother to the king of Scotland, having this year landed 6,000 men at Carrickfergus, overran a good part of the north, and possessed himself of Green-Castle. But the citizens of Dublin sent out a strong party by sea, and soon recovered it for the king. They took therein the governor, Sir Robert de Coulragh, whom they brought with them to Dublin, and cast him in prison; where being stinted to a hard diet, he died for want. On account of these troubles raised by the Scots, the term was by special proclamation pursuant to the king's order adjourned from Hillary to the quindene of Easter.

A.D. 1316. David O'Tool, and four others of the same sept, laid an ambush of a considerable party in the wood of Cullen, near Dublin, in order to surprise the citizens unawares, as they had formerly done in the year 1209. But they had not forgot their losses upon that occasion, and therefore issued out prepared with their black standard before them, headed by Sir William Comyn, and had the execution on the O'Tools for six leagues, of whom they slew seventeen, and wounded many desperately. On the 15th of November this year happened so great a tempest that much mischief was done by it both by sea and land; it threw down many houses in Dublin, and demolished the steeple of Christ-church. The same year, information being given that Richard, earl of Ulster (surnamed Bourgh or de Burgo), was instrumental in bringing Bruce and his Scots into Ireland, Robert de Nottingham, then mayor of Dublin (he was seven times mayor of Dublin), and a strong band of the commons, marched to St. Mary's-abbey (where the earl lay in a state of quietness, notwithstanding Bruce was encamped at Castle-Knock), and arrested and imprisoned him in the castle of Dublin. He made resistance, and seven of his men were slain in the fray, and the abbey spoiled on suspicion that the monks favoured the enemy. The earl lay a considerable time in confinement; and though the lord justice and several of the king's council sent a mandate to the mayor to discharge him on bail, yet the mayor disobeyed the orders, and he was kept in close custody till Whitsuntide, 1317, when the lord justice repaired to Dublin, and assembled a parliament at Kilmainham, by which he was set at liberty, having first taken an oath on the sacrament that he would neither by himself, his friends, or followers offer any mischief to the citizens for his imprisonment. He also gave pledges for the performance of his oath, yet he was left at liberty to pursue any remedy by law. During the imprisonment of the earl of Ulster, Bruce marched to Dublin at the head of his army, and made a show as if he would besiege it. The citizens to prevent any danger from his approach, by common consent set fire to Thomas-street, the flames whereof unfortunately laid hold of St. John's church, without Newgate, and burned it down to the ground, together with Magdalen chapel and all the suburbs. St. Mary's-abbey was destroyed, and St. Patrick's church rifled by the enemy. The church of the Dominicans was also razed, and the stones of it employed in building and repairing the city walls, which were enlarged on the north part, and extended to the quays. For before this time the walls were carried by St. Owen's church near 400 feet from the river, and the Merchant's-quay was then reputed as part of the suburbs of the city. But in the time of this danger the citizens built a new wall along the river to the Old-bridge, and so to Newgate. The damages done to the Dominican abbey were afterwards repaired by the citizens, who nevertheless sued out the king's pardon to prevent any future reckonings (a); and the king afterwards, upon their petition, in consideration of their sufferings from the Scots at the time of this burning, remitted to them half their fee-farm rent, the whole amounting to 200 marks. Bruce, finding that the city was well fortified, and the inhabitants prepared for a vigorous defence, turned aside to Naas, and made no further attempts on Dublin.

A.D. 1320. An university was erected in St. Patrick's church, Dublin.

A.D. 1327. Adam Duffe O'Toole was convicted of blasphemy in Dublin, viz., for denying the incarnation of Christ, the Trinity in unity, for affirming that the Blessed Virgin was an harlot, that there was no resurrection, that the scriptures were a mere fable, and that the apostolic see was an imposture and usurpation, and the next year, pursuant to his sentence, was burned on Hoggin-green (now College-green), near Dublin.

A.D. 1328. The mayor of Dublin was by commission appointed one of the judges for the trial of Roger Outlaw, prior of Kilmainham, who was accused of heresy by the bishop of Ossory.

A.D. 1331. A great famine afflicted all Ireland in this and the foregoing year, and the city of Dublin suffered miserably. But the people in their distress met with an unexpected and providential relief. For about the 24th of June a prodigious number of large sea fish, called Turlehydes, were brought into the bay of Dublin, and cast on shore at the mouth of the river Dodder (b). They were from 30 to 40 feet long, and so bulky, that two tall men placed one on each side of the fish could not see one another. The lord justice, Sir Anthony Lucy, with his servants, and many of the citizens of Dublin, killed above 200 of them, and gave leave to the poor to carry them away at their pleasure.

A.D. 1332. Sir Anthony Lucy marched out of Dublin into the county of Wicklow, attended by a strong band of citizens, and took the castle of Arklow from the Irish, and repaired the same and left a good garrison in it. This year John Decer, a great benefactor to the city, died, and was buried in the Franciscan convent.

A.D. 1333. The scarcity that had affiicted Dublin and the whole kingdom for some years past, was this year relieved, and the harvest came in so early that wheat was sold in the markets of the city on the 29th of June at sixpence a bushel. A parliament was assembled this summer in a convent of the Carmelites in Dublin, during which, as they were going out of the court of the friars, one Murrough Mc. Nichol O'Tool was suddenly murdered in the crowd by some person unknown; upon which the nobility, upon a supposition of treason, were greatly terrified; but the murderer made his escape in the crowd undiscovered.

A.D. 1337. An odd accident happened, which, though of no consequence, affrighted the citizens. Seven partridges forsaking the fields, took their flight directly to Dublin, and flying swiftly over the market-place, settled on the top of an inn which belonged to the canons of Christ-church. The boys of the town found means to catch two of them, and killed a third, which inhospitable usage frightening the rest, they took a swift flight and escaped into the neighbouring fields.

A.D. 1338. So great a frost was this year from the 2nd of December to the 10th of February, that the river Liffey was frozen over so hard as to bear dancing, running, playing foot-ball, and making fires to broil herrings on. The depth of the snow that fell during this frost is almost incredible; yet it is agreed that such a season was never before known in Ireland; however, we do not find that it was followed by any scarcity.

A.D. 1342. It is reported that on the 11th of October this year, and the eleventh day of the moon, two moons were seen by many about Dublin, in the morning before daybreak. The one was bright, and, according to its natural course, in the west, the other in the east with very little light.

A.D. 1343. St. Thomas street was burned down by an accidental fire on the 13th of February.

(To be Continued.)

(a) See Prins Animad, p. 60. A writ that the citizens should not be molested for burning houses and seizing cattle on this occasion; and another for a pardon.

(b) This is now called Donebrook river, and falls into the Liffey at Ringsend.

BY A DAISY-BROWED STRAME.

BY HENRY M. FLETCHER.

Oh, she dwells by a daisy-browed strame,
In one of the purtiest valleys—
The girl I'm not goin' to name,
For she's none of your Jennys or Sallys.
So there shan't be a slur or a slight
On Derry's wee blossomin' daughter,
That's as pure in my heart, and as bright
As the sun on the breast of Foyle water.

Wee birds on the bushes all round,
So merrily whistlin' and singin';
Wee calves skippin' over the ground,
Where the shamrock and daisy are springin'—
Your time appears almost as fine
As your forbearers friskin' through Aiden;
But your pleasures are nothin' to mine,
By the side of my innocent maiden.

Her cheeks colours red and then white,
When up the green loanin' I'm comin',
For she drapped a wee saicret one night
By the star that shines first in the gloamin'.
Iver since it by night and by day,
I'm beside myself fairly with gladness!
And faith, I heerd somebody say,
That love's but a beautiful madness.

Not a blot on her brightness I see,
She's the goold of perfection all over;
But her faults would be beauties to me,
If a fault I had eyes to discover.
This evenin' down by the spring,
Where the moon at her shadow is gazin',
We'll meet when the bat's on the wing,
And the craiks clamour over the grazin'.

FRENCH CREAMERIES.

There are now more than 100 co-operative creameries in France in the province of Poiton and the departments of Deux-Seves, Vendee, Charente, and Lower Charente, with 50,000 persons owning 125,000 cows and producing annually about 17,000,000 pounds of butter. Most of these establishments are less than eight years old and they have organised in a strong association.

JOHN MEADE MAYOR OF CORK AND THE SEVENTEENTH EARL OF DESMOND.

In an article on the Secret History of James, the Seventeenth Earl of Desmond, by the late Mr Daniel M'Carthy, which appeared in the "Dublin Review" for February, 1862, occurs the curious letter (here modernised), that John Meade, Mayor of Cork, wrote to the Privy Council on the 14th January, 1600 (whose orignal is preserved among the State papers), on being charged with having slighted the Earl of Desmond on his recent arrival in the City of Cork.

"I received another letter from your Honour, directed to me and the Aldermen, which letter did contain that your Honour was informed that the young Earl of Desmond, who lately came hither, was, with his company, very badly entertained here, and not well accommodated with lodgings or other necessaries. The truth is, Right Honourable, that upon his repair hither, it did not appear unto me by sight of his patent, or in any other manner, what authority he received from Her Most Excellent Majesty (albeit, I hold the favours bestowed by her Majesty upon him a most rare precedent of Her Highness's wonted gracious clemency), and while he hath landed at Youghal, he did not repair to the Lord President, being then at Mallow, but came hither first, and therefore it may please your good Honour to be advertised that I did fear it might be offensive to entertain him or any other not put into authority by Her Majesty, with any public welcome at the gates of the city, or otherwise, which is only used to the Lord Deputy, Lord President, or such as are authorised by Her Highness. And if I had known it were Her Majesty's pleasure, my good will should never want to countenance any work or measure Her Highness would expect, were it signified unto me by line, letter, or otherwise from my Lord President, or any in authority. But, Right Honourable, although I hope well of the disposition of the young Earl, yet I did fear those of some of his ancestors who have challenged courtesies for duties, and so might entangle this Corporation with new Customs, which only depends of God and of Her Most Excellent Majesty, and of no other peer or person whatsover. Yet for private kindness there wanted none, for I assure your Good Honour that the young Earl's officers did send to speak one Mr Skeddy's house for some private affection betwixt them, whereby I expected the same should have been ready for his Lordship; and by means of certain provancy and for provision of the garrisons which was kept in said house, the same was not so soon ready as his Lordship came hither, whereupon I entertained him at my poor house, while his lodging were a making ready, and when he had remained an hour or two in my house, his officers would not accept of the former lodging, and thereupon I was fain to lodge him at one Philip Martell's house (being an Alderman of this city), being the usual lodging of the Earl of Ormond, and where Sir Warham St Leger, here lately in Commission, did lie, and the Lord Chief Justice of England, at his being here, and being of the principalest houses of the place; and notwithstanding that the self night of his Lordship's repair hither, there came also 400 of the Welsh soldiers, sent hither for supplies, with the lodging of which the officers were much troubled, yet all of his company which came to the Bailies of the city to demand lodging were harboured sufficiently, and lodged without making of any payment for the same, neither would any of them repair unto the usual inns, and if any were unlodged, it was for want of demanding the same of the officers appointed here for those causes And concerning his supper, the truth is, I expected his steward and others had provided for him the first night of his repair hither, and meant to have entertained him to dinner the next day; and that his Lordship came of himself with his train, who had the best of provision I could afford. And his Lordship, being at supper, complained of the want of horses, and he would not believe but that the city could afford sufficient horses for him and his troop, which I truly answered that all the horses of the town, except a few garrons for wood, were stolen away this last rebellion, and out of use; for that the citizens durst not travel abroad, and with it I gave him the best advice I could, to send to the lords and gentlemen adjoining for horses, and his Lordship called for pen and ink to write unto my Lord President; and I, thinking that he meant to write by way of complaint for not furnishing him with horses, prayed his Lordship, of God's will, to acquaint me with his meaning, and that I would endeavour to see him provided to my power; and he said his letters were for Her Majesty's service and required haste, whereupon I promptly despatched them away at midnight by a messenger of the city's, and collected the keys being divided among the Aldermen, by custom used here since King John's time, and I received next morning an answer, the contents of which I have diligently endeavoured to observe (at which conference Captain Price was not present), and that was all that passed between the Earl and me touching any letter, protesting before God that he never wrote letters to your Honour in my house, but we did pass the time in merriment, and in no such matters of weight, which were to be used with gravity and secrecy, only he wrote those few lines to the Lord President sitting at the table accompanied with me and divers others after supper. And I marvel greatly that of such small and public conference, these matters were informed against me, as rather because mere indiscretion and childishness in me if I were faulty, than any wit or sense beseems the place I now carry on my profession of lawyer, and, albeit, I cannot make ostentation of discretion or other sufficiency fit for the place I now bear, which was involuntarily cast upon me, being a burden of great care and charge. Yet there is no want of my love and zeal to serve Her Majesty, according my most bounden duty, and to extend my poor power to entertain such as were in Her Majesty's favour, whom God Almighty long may bless and prosper against all her enemies whatsover. And so not doubting but the Lord President hath and shall have occasion to make like report of my willingness in Her Majesty's service, as occasion shall be here ministered, I must humbly take leave.

From Cork, the 14th of January, 1600.

Your Hon. Lordship most humbly to command
John Meade, Mayor of Cork.

Apparently, in punishment of his failing to provide a supper for the Earl of Desmond, Mayor John Meade had two of the latter's sisters billeted on him for nine months, very much, seemingly, against his grain, as shown by the following letter which he wrote to Cecil, when they had only been two months located with him:—Right Honorable, I have thought fit to advertise your Honour that since the last of January I have been charged by direction of Lord President, with the Lady Jane, sister to the Earl Desmond, who, together with her sister, Ellen, and others of her retinue, have been harboured and dieted in my house. I have been a suitor to my Lord President to be eased of her whose Lordship doth answer me that he had written to the Lords, and expects their answers, and in the meantime must rest contented. I have no allowance for her and her dependants, with which I rest willingly contented if it be their Lordships' pleasure. I am a suitor to your Honour that it will please you to resolve upon some course for the said lady, etc.

March 23, 1600. J. MEADE.
S.N.

ROYAL

SOCIETY OF ANTIQUARIES OF IRELAND.

VISIT TO DERRY AND DISTRICT.

The Royal Society of Antiquaries of Ireland are to have a session in Derry next week. By permission of Sir F H Miller, Mayor, and the Corporation of Derry, the Guildhall has been placed at the disposal of the members for the opening of the proceedings.

The executive secretaries are the Rev Joseph M'Keefry, C C, M R I A, Waterside; Mr W J Browne, M A, M R I A, Templemore Park; and Mr S F Milligan.

Several papers will be submitted at the coming session. Among them the following may be mentioned:—"Ancient ecclesiastical bronze bells in Ulster," by Mr Seaton F Milligan; "On Broighter, Limavady, and on the Gold Ornaments found there in 1896," by Mr Robert Cochrane, F S A; Extracts from the Memorial Book of St Michan's Church, Dublin, May, 1725," by Mrs T Long; "Rosginal and the old Kingdom of Fanad," by Mr Robert Welch; "Notes on the History and Antiquities of Maghera, County Londonderry," by Mr S F Milligan, M R I A.

At the meeting in the Guildhall, the City Charters will be submitted for examination of the members by Sir Newman Chambers, as also the City Swords.

It is learned that the first excursion of the antiquaries will start from the Guildhall under the guidance of the Rev Joseph M'Keefry, the city secretary, for Clooney old Church, and after investigation there the party will drive to Enagh to see the remains of a Franciscan Monastery and Church.

Next the visitors will be shown Derry Cathedral, exterior and interior, also the tower and graveyard. After a walk round the city walls, the antiquaries will proceed to St Columb's College, there to see the museum and library. Subsequently the Long Tower Church and graveyard (the site of the Teampul Mor and Dubh Regles of Saint Columba), will be visited.

For later days a number of more extended excursions have been arranged. For instance, one entire day will be set apart for a visit to Inishowen and Lough Foyle. The party will start from Derry to Carndonagh to examine the ancient crosses there, and the ancient tombstones in the churchyard, while in the adjoining townland of Glack the ancient bell of St Buadon will be shown to the visitors by its hereditary custodian, Mr Charles Doherty. The ruined Church of Clonca and ancient crosses will also be examined.

The following day the famous Greenan of Ailech, O'Doherty's Castle at Buncrana, and the ruins of the Carmelite Abbey at Rathmullan will be inspected.

Another excursion day arranged is that to examine Dungiven Abbey and Banacher Church, likewise the ruins of Drumachose Church, the Leim-an-mhadaigh, or Dog's Leap, Limavady; O'Cahan's Castle and Rock, and finally the Mullagh, or Mound, at Roe Park (by kind permission of Mrs Ritter), where, according to O'Donovan, the convention of Drumcette was held. The field at Broighter, where the ancient gold ornaments (now a subject of litigation with the British Museum authorities) were discovered, will also probably be visited.

For Maghera district excursion another day has been set apart. On this occasion the Fort of Dunglady, three miles from Maghera, will be visited. The Cromlech of Tirnoney will next be viewed, and the Sweat-house, in the townland of Tyr-kane, after which the party will proceed to St Lowry's Church and grave.

After the Maghera district visit the summer meeting proceedings of the society will terminate.

A CURIOUS INDUSTRY.

A curious industry in China is the manufacture of mock money for offering to the dead. The pieces are only half the size of the real coins, but the dead are supposed not to know the difference. The dummy coins are made out of tin hammered to the thinness of paper, and stamped out to the size required.

LITERARY NOTES.

A Life of Mr. Herbert Spencer will be published in America this autumn. It is from the pen of Dr. Charles H. Rieber, of Stanford University, and will be called "Herbert Spencer, the Man, the Scientist, and the Philosopher."

✧ ✧ ✧

A well-written story of Irish Presbyterian life is "The Shadow of the Cross," by Robert Cromie (London: Ward, Lock, and Company). The people are very like those whom we know in the pages of Mr. Barrie, and yet unlike. The accent of these Donegal people, touching at a few points the soft brogue of the southern Irish, and at others the hardness of the Scottish dialect, is very well rendered by Mr. Cromie. The characters, too, are well drawn, and though the story has an unnecessarily gloomy finish, it is cleverly written.

✧ ✧ ✧

It is both interesting and instructive to notice how the popularity of Dickens shows not the slightest signs of decline. This fact is proved by the reports of our public librarians all over the country, who state almost unanimously that the demand for this novelist's books is not only steady, but continually increasing. It has recently been demonstrated in Bristol that Dickens is as popular as ever by the formation of a society, bearing the name of the Bristol and Clifton Dickens Society. This Society, although it has only been in existence a very short time, already boasts close upon 50 members. Mr. Norris Mathews, City Librarian of Bristol, is the president, and Mr. J. W. T. Ley, of 26 Hillgrove street, Stoke Croft, Bristol, is the hon. secretary. The Duke of Beaufort and the Right Hon. Lewis Fry are hon. members. The secretary has received letters wishing the movement success from Lord Rosebery, Sir Henry Irving, Sir Frank C. Burnand, Mr. H. F. Dickens, K. C., Mr. Frank T. Marzials, Mr. George Gissing, Mr. Percy Fitzgerald, Mr. John L. Toole, Mr. George Manville Fenn, and others. The objects of the Society are as follows:—

1. To form a bond of union among lovers of Dickens, of both sexes, and to encourage a more general study of his works.

2. To hold meetings of a literary and social character periodically.

3. To arrange from time to time excursions to places immortalised in the works of Charles Dickens.

✧ ✧ ✧

Though the world may not be aware that it has lost the true power of speech, Mr. W. B. Yeats is leading a little band of crusaders to restore it. In a lecture at Clifford's Inn Hall, on "Speaking to the Psaltery," Mr. Yeats pleaded the cause of rhythm and the value of sustained tones, and told little stories of the traditional singing of Irish peasants and of a friend of his own who always writes his poems to little tunes, which on being transferred to musical notation proved to be curiously Arabic in character. Speech as we know it appears to be in its dotage, and the glory of its manhood was the day when poets spoke their verses to regular musical tones, and Mr. Yeats would make us young again. "Since the Garden of Eden," he said, "the world has been labouring to bring forth the photographic camera, and now that the monstrous birth is accomplished, we may be left in peace to recover beautiful arts." Miss Florence Farr gave some illustrations after the lecture on a psaltery made by Mr. Arnold Dolmetsch, whose tentative English and sudden smiles gave a very engaging air to his little explanations. Shelley's "Skylark" had certainly a melodious sound, and "The Hymn of Pan" was done to what was described as "a lilt after the manner of the troubadours." But a perilous word suggests itself for some of the illustrations. In writing "sing-song" one prays that Mr. Yeats may never see it, for one of the uses of the psaltery is to give a proper deep-toned power to curses, cursing being, in the lecturer's opinion, a much-neglected form of speech, of which, again, the world may not be quite aware. But at least we saw a psaltery, a kind of flat, oblong harp, held along the arm. It is tuned to semitones, not because that is a sufficiently close interval for the sound of the human voice, but because in the West we have no such subtle scale as the Orientals have.

✧ ✧ ✧

Canada has done more than erect an arch in Whitehall in honour of the King. It has produced an Ode of considerable merit from the hand of Mr. Bliss Carman, who is head and shoulders above all other Canadian poets of to-day. Mr. Carman has produced twenty-eight stanzas, which are published as a one-page-one-stanza book by the Page Company, of Boston. Mr. Carman's verses have all the keen open-air ring of much of his best work:—

By prairie, swale, and barren, by jungle and lagoon,
Where endless palm-trees rustle and the creamy breakers croon.
By canyon, ford, and pass,
By desert and morass,
In snows like stinging lashes, on seas like burning glass,
By every land and water beneath the great lone moon

Our fathers died for England at the outposts of the world;
Our mothers toiled for England where the settler's smoke upcurled;
By packet, steam, and rail,
By portage, trek, and trail.
They bore a thing called honour in hearts that did not quail,
Till the great twelve winds of heaven saw their scarlet sign unfurled.

And here is the penultimate verse:—

O, Sir, no empty rumour comes up the earth to-day
From the kindred and the peoples and the tribes a world away;
And be equal as of old,
For they know the Law will hold
With conscience never questioned and justice never sold,
And beneath the form and letter the spirit will have play.

✧ ✧ ✧

On a recent date the first itinerary was held, Bath being the place selected. Mr. T. Sturge Cotterell, who is engaged in writing a book on Dickens's associations with Bath, took charge of the party, and he was assisted by several other Bath gentlemen. It was curious that on the very day of this visit, a Charles Pickwick should have been fined at the Bath Police-court for assault, and that a woman named Louisa Pickwick should have given evidence at an inquest, also on the same day. The party visited the Assembly Rooms, where Mr. Pickwick's unfortunate performances at whist with the Dowager Lady Snuphanuph, Mrs. Colonel Wugsby, and Miss Bolo, led to the last-named "going home in a flood of tears and a sedan chair." Then the Pump Room was visited, and the waters which Mr. Pickwick took so assiduously were tasted, and most of the visitors discovered the "very strong flavour of warm flat-irons." A place of special interest was No. 35 St. James's square, the birthplace of Little Nell. This was Landor's house, and Forster tells us that it was while on a visit to Landor here that Dickens first conceived the character of Little Nell. At the Saracen's Head, where Dickens once stayed, the party were shown the two-handled mug, the four-poster bedstead, and the chair which the master used. The Royal Crescent, where the Pickwickians and Mr. and Mrs. Dowler lodged, and where the famous sedan chair episode took place, was visited, as well as No. 12 Queen square, where Angelo Cyrus Bantam, Esquire,, M.C., lived, and where Sam Weller first made the acquaintance of Mr. John Smauker. The Beaufort Arms, where it is believed the memorable "swarry" took place, was also inspected, whilst the party had a look at Park street, which the Pickwickians unanimously concluded "was very much like the perpendicular streets a man sees in a dream, which he cannot get up for the life of him." Objects of interest were the screen which stood in the office of the old White Hart; the two lamps and the original sign of that hostlery; a house in which lived a man named Snodgrass, etc. The trip was a delightful one.

✧ ✧ ✧

The firm which has revived and supplemented the "Encyclopædia Britannica" has a genius for advertisement, and has rarely failed to utilise any references to their great enterprise by public men. We do not know, however, what they will make of the unexpected testimonial which they have received from a Parisian subscriber, whose case is described by M. de Blowitz in the "Matin." This subscriber, who disappeared after paying his first instalment and receiving his complete edition, and was eventually found in prison, begged the "Times" people not to take his encyclopædia away from him. "I am," he said, "a begging letter writer by profession, and at present, though I owe you £12. I only have £7 in the world. I'll give you six of them, and pay up the rest of the amount as quickly as I can. But I must keep the volumes, which are invaluable to me." He then went on to explain that, having written a letter in which he stated that he was a potter who had been chemically poisoned, and unfit to work, he used the encyclopædia for details of the pottery trade of which he himself was entirely ignorant. The one word kaolin, which he used in his letter, and his explanation of the use of the material, made everyone believe in the genuineness of his appeal (he said), and brought him in a perfect harvest of bank notes and postal orders. This ingenious gentleman (M. de Blowitz adds) has since paid up his full subscription, and is probably one of the subscribers to the supplement.

✧ ✧ ✧

M. Rostand has met the American attack on his originality in a very proper spirit. It will be remembered that he was recently convicted, in a Chicago court, of having plagiarised practically the whole of "Cyrano de Bergerac"—except the poetry, which was not claimed—from a gentleman of that city. He now writes to the "Temps" to make plenary confession, as follows:—

I ask but one thing, and that is that I may some day have a translation of the Chicago work in my hands. Meanwhile, I am ready to admit that I took Bergerac, his name, the Hotel de Bourgogne, Montfleury, the Ragueneau cook-shop, the precious soul Roxane kissing Cyrano's words on the lips of Christian, the cadets of Gascogne—in short, all our seventeenth century history, from Mr. Gross, of Chicago. And, to make an end, I confess that I stole 'Les Romanesques' from J. H. C. Smithson, of Jefferson City, Missouri; 'La Princesse Lointaine' from Mr. T. Giles Trumbull, of Columbus, Ohio; 'L'Aiglon' from Tom Sambro, minstrel, of Springfield, Illinois. The idea of 'La Samaritaine' was derived from an apocryphal Gospel by the Honourable and Reverend G. H. Augustus Wonnacott, of Hartford, Connecticut. I may add that at the present moment I am in negotiation with a Virginia planter for the purpose of a manuscript, and I have caused to be stolen from a Louisiana shipbroker a grand play on Joan of Arc, the maid of New Orleans.

This should be eminently satisfactory to the admirers of the American drama. Meanwhile the American correspondent of the "Daily News" reminds us that the Chicago case, burlesque, as it seems, was an extremely practical affair. Mr. Gross, and not M. Rostand, will in future receive royalties on all productions of "Cyrano de Bergerac" in the States. As a rule the author who alleges plagiarism against a rival is not so fortunate—especially if his own work was only printed "for private circulation." Chicago is really going ahead. We suppose the next discovery will be that Bacon, before he wrote Shakespeare, was really a Chicago man—at least, his name sounds like it.

SCIENTIFIC TOPICS.

The U.S. torpedo boat Wilkes completed her trial trip off Newport, R.I., on June 6, and over the measured mile course made a speed of over 26 knots.

✧ ✧ ✧

Professor Willis L. Moore, chief of the United States Weather Bureau, has invented a cooling machine which is intended to reduce the temperature of buildings in hot weather. The machine is said to have a capacity for cooling about 20,000 cubic feet of space during the hottest weather. The fact that foreign patents are still to be obtained renders it difficult to obtain full particulars of the invention.

✧ ✧ ✧

By the narrow margin of 0.02 of a knot the hourly speed record for the Atlantic Ocean, held by the Hamburg-American liner Deutschland, was broken by the Kronprinz Wilhelm. On this record-breaking trip the Kronprinz Wilhelm covered the distance of 3,095 miles from New York to Plymouth in 5 days 11 hours and 32 minutes, at an average hourly speed of 25.53 Knots. Her daily runs were 434, 550, 535, 534, 552, and 490 miles. This is the best eastward record for speed thus far made across the Atlantic.

✧ ✧ ✧

As the construction of the Nile reservoir at Assouan involves the unavoidable submersion of a portion of the temple of Philae, situated upon the island of Philae, the Egyptian Government has decided to take all possible steps to preserve a record of these monuments as they existed prior to the rise in the water levels, and also to lessen any danger which might arise from the annual inundation. The record of these historic monuments has been completed, and now to insure the stability of the structures the foundations of the temples are being underpinned. As the foundations of the temple of Isis were found to descend everywhere to the solid rock, it was decided to limit the operations to the consolidation of the other structures. It is expected that the work will be entirely completed in the course of a few weeks.

✧ ✧ ✧

During the course of some excavations on a mound in the neighbourhood of Greenwich Observatory, some Roman remains of great value and interest have been unearthed. About two feet below the surface the floor of a Roman room with a great portion of the tesselated pavement intact was revealed. Under careful treatment the beautiful work in cubes of red tile was disclosed, and the space has now been railed off, in order that the public may view the remains. A fine collection of coins of the period of Hadrian and Constantine was also discovered, together with several pieces of beautifully figured pottery and ornamental wall plaster. The coins were in a state of remarkable preservation, the figures and inscriptions being in some instances almost as clear and distinct as those at present in use. The discoveries are regarded as important, for the reason that they prove that the Roman road from London to Dover led through what is now Greenwich Park.

✧ ✧ ✧

It is probable that very few photographers are familiar with the name of Dr. Maddox, who died a few weeks ago in Southampton, at the age of 85. He was, however, regarded as the inventor of the gelatino-bromide process now so universally used. The process was improved after him by Kennett, Burgess, and Bennett. Dr. Maddox, prior to the seventies, was particularly interested in photo-micrography, and found the work of drawing the enlarged images so vexatious that he looked about to see what could be done in the line of photography. He learned the practice of the collodion wet-plate process, and worked with that for a while. But the small darkroom he used soon became so saturated with ether evaporating from the collodion that it seriously affected his head and health. He then determined to try and ascertain a substitute for the collodion, and made an emulsion of isinglass, gelatine, and other materials. His experiments resulted successfully, for in 1871 he prepared a gelatino-bromide of silver emulsion and coated it upon glass plates, exposed them in a camera, securing very good negatives. These original negatives were placed on exhibition at the Inventions Exhibition in London in 1885, and he was awarded a gold medal therefor.

✧ ✧ ✧

In 1889 he was awarded the Scott medal of the Franklin Institute at Philadelphia, and in 1901 he was awarded the Progress medal of the Royal Photographic Society of London, in each case in honour of his early work in the production of a practical gelatino-bromide process.

✧ ✧ ✧

In 1892 a special fund was raised for his benefit of about £400, through the efforts of Sir William Abney and others, "in recognition of his services to photography, and especially of his investigations in connection wth gelatine emulsion." Like a true amateur and investigator, he pursued his experiments for the pure love of them, without any desire of pecuniary reward or with a thought of keeping the process secret, and for this his memory will be held in high esteem by succeeding generations of photographers.

✧ ✧ ✧

According to Professor R. T. Hill, of the American National Geographical Society, the area within the zone of the catastrophe caused by Mount Pelee forms an elongated oval, covering eight miles of land, in which there are several well-marked zones; the first or centre zone, in which all animal and vegetable life is utterly destroyed; the second, in which a blistering flame killed animal life and burned the leaves on the trees, but did not entirely destroy the leaves themselves; and the third a zone of ashes which did slight damage to vegetation only. The northern portion of St. Pierre was in the first zone, and here all animal and vegetable life was instantly annihilated. The terrible explosion of gasses must have had tremendous force, for guns in a battery on a hill south of the city were dismounted and carried for yards. A new crater midway between the peak of Mont Pelee and the sea was the cause of the destruction of St. Pierre, and is still vomiting forth black mud, while sympathetic and synchronous eruptions are taking place in the old crater.

✧ ✧ ✧

Messrs. Lumiere and Perrigot have been studying the question of obtaining the maximum of sharpness in photographic images. When examined by the microscope, the optical image given by a good objective is found to be incomparably sharper than that of the negative which is obtained under the same conditions. In fact, the photographic plate registers an image which seems sufficiently sharp when viewed by the eye alone, but cannot support an enlargement by the microscope. In examining the causes of this lack of sharpness, the experimenters were led to find a method for obtaining negatives under the best conditions. One of the principal causes is the influence of grain in the sensitive film. It is well known that the bromide of silver in the emulsion is in the form of small grains whose dimension varies with the sensitiveness of the emulsion. They made a series of exposures, using plates which were prepared by a series of emulsions of very different sensitiveness from the extra-rapid, corresponding to the grains of silver bromide of the maximum dimensions, to the limit of slowness, which is found in the special emulsion used in the Lippmann process of colour photography, and in which no grains are visible under the microscope, even with the greatest magnifying power. They thus find that it is the granulation of the sensitive layer which is the main cause of the want of precision in the images; the particles of bromide diffuse the light which falls upon them, spreading out the image and diminishing its sharpness in greater proportion as the particles are larger.

✧ ✧ ✧

Another cause lies in the errors of focussing, even though these may be small. In an ordinary apparatus only an approximate focus is obtained. The use of a simple hand-glass to examine the image, the noncoincidence of the ground glass and the plate, also the want of flatness in the latter, are causes which influence the focus. The experimenters fix the limit of movement for obtaining a clear image, and find it to be 1-100th of an inch. The influence of chromatic aberration may be found in the case of inferior objectives which have not been sufficiently corrected, but for the best lenses this is practically nil. Another cause lies in the use of the diaphragm. While in astronomical work and for the opposite extreme, miscroscopical work, it is desired to increase the opening of the objective, in photography, on the contrary, it is generally admitted that greater precision is obtained by the use of the diaphragm. The experimenters show that this is not always the case. The diaphragm increases, in fact, the general sharpness of the images by correcting certain aberrations, and especially by increasing the depth of the focus, but if the central portion of the image is considered, and admitting that the objective is already sufficiently corrected for aberrations, it is found upon enlarging the image considerably that its precision is greater as the opening of the objective is larger. The experiments show, in general, that when it is desired to obtain an image of great precision, which may be considerably enlarged, it becomes necessary to use plates which have no appreciable grain, such as those of the Lippmann process, to use the best possible arrangement for obtaining the focus, also to be assured of the value of the objective, especially as to the corrections of aberrations, and when a chemical focus is found, to allow for this. If the aberrations are sufficiently corrected in the lens, the maximum opening should be used.

✧ ✧ ✧

Metal is about the last thing one would regard as a substitute for rubber, and particularly where great flexibility is a quality which was absolutely essential; but this has been done recently, and a hose has been manufactured out of a steel tape which has all the flexibility of a tube made of rubber, and also several advantages which the rubber does not possess, such as great durability in all classes of service and the power to resist the action of heat and corrosion as well as that of acids and other chemicals. It is therefore adapted to the conveying of steam, compressed air, water, oils, acids, alkalies, gases, benzine, naphtha and gasoline. No rubber whatever enters into the manufacture of this hose. It is constructed entirely of a metal tape which is rolled up in the form of a spiral, so that the edges overlap and fit into each other without in the least interfering with its flexibility. As the tape is rolled up it forms a groove for the reception of a packing which is completely inclosed in the metal as it rolls, where it remains fully protected from external or internal wear and tear. The packing causes the tubing to be perfectly tight, while the jointing induces a flexibility superior to that of a rubber hose of equal dimensions. As this house will not kink, crust, or blister, it can always be relied on to deliver its full capacity, which is greater than that of a rubber hose of the same dimensions. From the fact that the connections are all made on the outside, leaving the full internal diameter of the hose always available. The single hose is recommended for all ordinary purposes; but where it is designed to convey air or steam under pressure, a double hose is made which will, it is claimed, resist a pressure of three thousand pounds to the square inch. This is constructed by placing one metallic hose within another, the coils of each running in opposite directions. This combination enables it to withstand the hardest usage successfully.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1793.)

DUBLIN, APRIL 29.

Yesterday a clergyman, of the name of William Jackson, was committed to Newgate on a charge of sedition, under a warrant from the Lord Chief Justice of the King's Bench.

He was apprehended by Oliver Carleton, Esq, High Constable, and John Atkinson, Esq., Chief Constable of Police, who at the same time seized his writings, etc.

On Wednesday last the Rev. James Verschoyle, LLB., was, at a very full chapter, unanimously elected Dean of the Cathedral Church of St. Patrick, Dublin, on the resignation of the Rev. Robert Fowler, M.A., who is collated to the Archdeaconry of Dublin, by his Grace the Archbishop of Dublin.

May 1.—Monday last the Association for Promoting the Practice of Religion and Virtue held their annual examination of the candidates for premiums belonging to the several parochial schools of this city, at St. Werburgh's Church. The candidates were in number between seventy and eighty; the whole of the children present about five hundred; the psalms, as usual, accompanied by a full organ, had a most pleasing effect.

RIOT IN THE COUNTY OF CAVAN.

On Tuesday, the 12th of May, a most desperate affray happened at the fair of Kilnelack, near Cavan, the circumstances of which are thus stated in letters from that quarter:—

A number of persons, calling themselves defenders, having come to the fair, declared "they would destroy every Scotchman, or Presbyterian, they should find." They met a Mr. Biggers, who had upon all occasions been forward in suppressing such lawless depredators, and having cut and abused him in a shocking manner, some humane people got him from the crowd, and concealed him from their fury. Word was immediately sent to Ballyjamesduff and the neighbourhood, when a Mr. Blakely assembled about forty of his neighbours, Protestants and Dissenters, and proceeded on their way to Kilnaleck. They were met by the banditti within one mile of the town, who made a show of opposition. Mr. Blakely, acompanied by some others, went to them, and stated that they did not come with any hostile intent, but hearing of the treatment that Mr. Biggers had received, they were determined to bring him home, dead or alive; upon which one of the leaders of the party made a stroke of a sword at Mr. Blakeley's head, which he defended with a blunderbuss, and had one of his fingers struck off, whereupon the fellow was shot dead. The insurgents immediately called upon each other to surround Mr. B.'s party, which they attempted to do, but received so smart a reception, that after a short engagement they fled, leaving thirty-two of their companions dead on the spot.

But this defeat, far from reducing the Defenders to obedience, seems only to have inflamed their fury; for on the morning of Thursday, the 15th, several thousands of them assembled in the neighbourhood of Ballinaugh; the Protestant inhabitants of which place, about a dozen families, immediately fled for refuge towards Ballyjamesduff, leaving their houses and property to the Defenders, who instantly took possession of them, and pursued the fugitives. They had not advanced far before they heard that several detachments from the royal regiment of Dublin militia were marching against them; upon which they changed their route, and falling back upon the estate of the Bishop of Meath, plundered and destroyed the houses of his tenantry without distinction, burning whatever they could carry off, and in particular committing to the flames the poor people's leases by which they held their lands.

They now returned to Ballinaugh, posting strong parties, well armed, on the hills, to annoy any who might pursue them.

By this time the men of Ballyjamesduff, the fugitives from Ballinaugh, and the Bishop's tenants, being rallied by Mr. Henry Maxwell, of Crover, put themselves under his command, and marched towards Ballinaugh, notwithstanding an incessant fire from the parties on the hills. On his march, Mr. Maxwell was joined by another party of Protestants, under the command of Mr. Nixon; they arrived near Ballinaugh, and there demanded of the Defenders the surrender of their arms and ammunition (which they had in abundance), and that they should quietly disperse themselves: they were answered by a heavy fire. In vain those spirited gentlemen and their brave followers attempted repeatedly to make some impression on the multitude of Defenders that opposed them; they must have relinquished the combat, had not at the very moment that their ammunition was all spent, two parties of the royal regiment of Dublin militia appeared to support them: they were the grenadier and light infantry companies, commanded by Captain Medlicott, having with him Capt. O'Meara, Lieut. Thwaites, and Lieut. Richard Sankey. Their courage, steadiness, and excellent discipline, soon turned the scale of battle. The Defenders retired without much disorder, into the town of Ballinaugh, and from the houses kept up a continued fire upon the soldiers: with such a handful of troops there was but one way to dislodge the Defenders, and that way the magistrates directed to be taken—it was by burning the town to ashes; which was accomplished about two o'clock on Friday morning.

By this time a third party of the royal Dublin militia, under the command of Ensign Hudson, had arrived from Bailieborough, more than 20 miles; though they had exerted their utmost powers, they had not been able to participate in the honour of the engagement, but they had the good fortune to fall in with a party of the runaway Defenders, and, after a short conflict, took their leader and several others prisoners. On their leader they found some papers, containing the Defenders' oath, list of his associates, and other matters not unimportant.

Colonel Alexander also, with a fourth party of the royal Dublin militia, arrived at Ballinaugh just as the business was finished. He had received an express at Cavan, that the parties he had sent out were likely to be overpowered; upon which he collected every remaining man, and putting himself at their head, hasted to Captain Medlicott's support.

It would be vain for us to attempt extolling the courage and conduct of the officers and men concerned in this affair—the applause and gratitude of their country, and the exultation of their fellow-citizens of Dublin, form their best eulogium.

Great praise is due to Mr. Cole, who, throughout this difficult and dangerous day's business, gave the best advice, and set the most honourable example to those concerned in quelling the insurrection.

We must not omit a little anecdote, which proves that true courage and humanity are ever found together:—

After the Defenders were completely subdued at Ballinaugh, four of them crept out of one of the burning houses, throwing down their arms and crouching into a corner, begged for mercy; the enraged soldiers, smarting from their wounds, rushed upon them with the bayonet; Capt. Medlicott commanded them to desist, but without effect—"If," says he, "you will kill them, you must kill me too." He was too much the object of the soldiers' love and admiration to be longer disobeyed.

DEATHS.

In Cork, at an advanced age, Ignatius Trant, Esq., merchant. His probity and industry had for a number of years been so uniform, as to enable him to leave to his successors a handsome fortune, with a most respectable character; of him it may be truly said, that he possessed many friends, and never had an enemy.

At Ranelagh, Alexander English, Esq., formerly known by the apellation of Buck English, a gentleman whose vicissitudes of fortune have been extremely eccentric. He languished for many years previous to his death in extreme poverty, and died at the crisis of a law-suit terminating in his favour, by which an estate of near £2,000 per annum would have been restored to him.

In Dublin, Mrs. Trulock, wife of Alderman Trulock, gun-maker.

At Tralee Castle, Co. of Kerry, Sir Barry Denny, Bart., representative in Parliament for the said county. He was collaterally descended from the famous Sir Anthony Denny, one of King Henry the Eight's executors. His estate and title devolve to his eldest son, now Sir Barry Denny, who will shortly be created a Peer, by the style and title of Baron Dunmore.

In Duke street, on Friday, the 23rd inst., Sir William Mayne, Lord Baron Newhaven. His lordship was youngest son of the late William Mayne, of Powis Logie, in the county of Clackmannon, and shire of Perth, where that family has been settled since the middle of the 14th century, and are descended from the ancient house of Mayne, of Lockwood, as appears by the registry of the Lyon's Office. At the accession of his present Majesty he represented the borough of Carysfort in the Parliament of this kingdom; and ... the 22nd of April, 1763, was created a Baronet of Great Britain. In March, 1766 he was appointed a Privy Councillor in Ireland; and in the first octennial Parliament was again representative for Carysfort. On the 27th of October, 1794, he was returned representative for the city of Canterbury in the British Parliament, and afterwards represented the borough of Gatton, in Surrey. By Privy Seal at St. James's, the 18th of June, and by P tent the 26th of July, 1776, he was advanced to a Peerage, by the title of Baron Newhaven, of Carrickmayne, in the county of Dublin, and had his introduction in the House of Peers the 9th of October, 1781. His lordship married the 15th of July, 1758, Frances, daughter and co-heir to Joshua Viscount Allen, and by her had a son who died young. The title is extinct.

(To be continued.)

VOL. I., No. 17.] DUBLIN: SATURDAY, JULY 26, 1902. [PRICE ONE PENNY.

SHANE'S CASTLE.

FROM THE "DUBLIN PENNY JOURNAL," 1832.

Situated on the north-east shore of Lough Neagh, in the vicinity of the town of Antrim, are the magnificent ruins of Shane's Castle, the princely residence of Earl O'Neill, we believe the only remaining descendant of that noble and once powerful family (1). It was for centuries the residence of that noble house, but was burned to the ground by an accidental fire, in the year 1816. An extensive library and many valuable paintings were wholly consumed in this awful conflagration; the green-house, or grand conservatory of rare and foreign plants being the only thing that escaped. From the ruins which remain, it is evident that it was a fine, spacious building: the vaults, which are still entire, and extend to the very verge of the lake, merit the particular notice of the curious traveller, both from their spaciousness and rather extraordinary construction. Several turrets and towers are still standing, and from their tops a fine view of the interesting scenery, amid which the ruins lie, may be obtained. A number of cannon are still mounted on the fort, which is boldly situated. Some of the buildings which formed a part of the out-offices have been fitted up by the noble proprietor as a temporary residence. We have heard with pleasure that it is his Lordship's intention to erect a castle, if not on the ruins of the old one, on some spot in the immediate vicinity (2). The following lively representation of the feelings which this romantic scene is calculated to awaken is taken from a very interesting and able paper, read before the Natural History Society of Belfast, in 1824, by Robert Patterson, Esq.:—

"It fills one with melancholy ideas of departed grandeur—where the stately pile

has gradually crumbled beneath the touch of time—where the fox-glove, the moss, the lichen, the thistle, the long, luxuriant grass, and the ever-verdant ivy,

> Group their wild hulls with every stain
> The weather-beaten walls retain,

the moralist may find a pleasing object of contemplation—the painter a glowing subject for his pencil; but here where the ruin is not sufficiently old for this,—where time has not wrought the fall—where the white walls, stained occasionally by the dark smoke-wreaths, alone meet the eye—one cannot but deplore the untimely fall of the noble and venerable palace. Some slips of ivy have been planted about it, but, as yet, the cultivated spots around render only more striking the ruined mass in the centre."

It is rather extraordinary that at the moment the fire broke out, there was a very large party on a visit with the noble proprietor; but every exertion to extinguish the flames proved unavailing.

It may at present appear matter of surprise that such a battery of cannon as was erected here should be placed in a situation of the kind. The following interesting particulars relative to an engagement which took place on the lake, in the year 1642, will serve to show that in former times such a parade of strength was not a more ornamental appendage to the castle of a chieftain, but was actually necessary to the maintenance of his rights and privileges:

"A spirited and adventurous garrison of Irish troops occupied Charlemont. These men, not satisfied with carrying on a merely defensive war, built a little fleet of boats, with which they sailed down the Blackwater, into Lough Neagh, and plundered the adjacent country. Their predatory excursions were observed by Sir John Clotworthy's regiment, which had erected a fort at Toome. Immediately they built a boat of twenty tons burden, and furnished it with six brass guns. This was accompanied by seven smaller boats, and the whole flotilla was manned with three hundred men, under the command of Lieutenant-Colonel Connolly and Captain Longford. Thus prepared, these officers sailed over the lake, landed at the mouth of the Blackwater, raised and manned two small forts, and then returned. The Irish, however, contrived to pass the forts in dark nights, and plunder the country. Nay, they rapidly erected a fort at Clanbrassil, to protect their fleet in any sudden emergency. To counteract these measures, Connolly and Longford manned their little navy, and met the Irish flotilla near the shore of Clanbrassil. A naval battle ensued. The Irish were routed, driven on the shore, and there compelled to surrender. Sixty of them were slain, sixty more taken prisoners, and their fleet itself was captured and brought by the victors in triumph to Antrim. The family of O'Neill are of Gothic descent, having sprung from Belus, a Gothic king of the Orkneys. They came into Ireland in the latter part of the ninth century, and were then called Nial, O'Nial, or Hy Nial, which signifies a chief or prince. Having married into the family of some Irish prince, they soon became paramount chiefs of Ulster, and the most powerful opposers of the invaders of the country. In 1165 they defeated the Danes, and for several centuries they bravely opposed the ambitious encroachments of the English, with various success."

Not far from the castle, in a small burying-ground, is the cemetery or vault of a branch of the O'Neill family. On a stone in the gable end, the following inscription is rudely engraved:—

> This vault was
> built by Shane Mac
> Brien Mac Phelim Mac
> Shane Mac Brien Mac
> Phelim O'Neill, Esquire,
> in the year
> 1722, for a burial-place
> to himself and family
> of Clanboy.

There is no other monument of the family in the demesne. A neat village once stood close to this, called also Shane's Castle, or more anciently Edenduff Carrick. It was removed by the late and present lord, and the inhabitants accommodated with houses on other parts of the demesne; not a vestige of it now remains.

1. It should be understood that the writer meant in the male line.

2. This intention was subsequently carried into effect, and the building restored.

TO A CAPTIVE SEAGULL.

By F. J. O'Brien.

Bird of the wild far-sweeping wing
  Why art thou here?
Who chained thee thus, thou Ocean-King,
  To earth so dark and drear?
Thy home is where the free winds sing,
And the thunder tones of billows ring
  Through caverns rocked with fear!

Did not thy proud heart burst—
  Thou reckless rider of the stormy main—
When o'er thy unsullied plumage first
  Was flung man's chain?
Oh! thou whose infancy was nurs'd
  'Mid all the freedom of the skies,
How could thy spirit prize
    Life e'er again?

Tempests were at thy birth, and the white waves
  Sprang up rejoicing round thy rugged home;
And as a lullaby, from deep-mouthed caves,
  Wild ocean-songs would come.
  Bathed in the breakers' foam,
Rocked into slumber on the swelling sea,
Never was wild bird's infancy
More bright or free!

No more—sad prophecy!—ah! never more
  Will joys like these unbind thy frozen heart;
The unreposing ocean and dark shore,
The giant cliff, the cavern's hollow roar,
  Now of thy narrow life can form no part,
  All prisoned, pining, wretched as thou art!
    Existence is a waste, thy soul lies dead,
The snows upon thy wing have melted there—
    Droop'd is thy glorious head,
Stain'd is that bosom once so purely fair;
  Dimn'd is the broad bright eye
  That look'd but from the billow to the sky!

Better, far better had thy life-blood dyed
  The heaving sea;
Better thy last breath had been sighed
  Where all was free:
Better had heedless waves triumphantly
  Swept o'er thy pride,—
Than to a lone existence thus to cling,
And hear the wild winds mock at thy unlifted
    wing

EARTHQUAKE RECORDERS IN AMERICA.

In connection with the recent volcanic eruptions in the West Indies and the disastrous earthquake in Guatemala, it is interesting to know that several instruments for observing and recording earthquakes are in service in various parts of North America. One is located in Baltimore, one at Toronto, three at Bayonne, New Jersey, and one at Victoria, British Columbia. Although the seismograph at Baltimore has been in operation only since April, 1901, it has noted a number of disturbances of the earth, the last being that which so seriously effected Central America. The instrument is of the form designed by Professor John Milne, the noted geologist, and consists of a so-called horizontal pendulum; that is, a beam supported by a vertical column as a door is hung by its two hinges. The line between the two points of support of the beam is nearly, but not exactly, vertical; the more nearly vertical it is the more sensitive is the beam to slight tremors. A small tilting of the column at right angles to the beam will cause the latter to swing in that direction. The adjustment is usually made so that a tilting of the column of ½ sec. of arc (i.e., a movement of the top of the column, which is about one foot high, of 1-35,000th of an inch beyond the base) will cause the end of the beam to swing a distance of 1-25th inch. The beam is 37 inches long, and on its end is fastened a plate of thin brass in which is a narrow slit parallel to the length of the beam; this plate moves over a fixed brass plate with a similar slit, but at right angles to the former. A ray of light is reflected through the two slits, which simply serve to narrow it, and moves to and fro as the beam swings. The light falls on a strip of bromide paper which is steadily moved by clock work under the slits at the rate of 1-25th of an inch a minute. When the beam is at rest the movement of the paper causes the light to trace a straight line upon it, but when the beam swings back and forth the straight line is changed into a sinuous curve. The period of vibration of the beam is about fifteen seconds, during which time the paper has only moved about 1-100th of an inch, consequently the curved line is very much compressed, and its back and forth tracing on the paper appears like the widening and paling of an original straight line. The instrument is mounted on a solid brick pier, built about twenty-five years ago, and consequently rests upon a very solid foundation, as the pier stands on the clays and gravels of the Potomac Formation, which rest on chystalline rocks seventy or eighty feet below the surface. The beam points about S. 30 deg. W. This direction was chosen so that the beam might be parallel to the Appalachian mountain system and to the coast line, and thus be most sensitive to disturbances propagated at right angles to these continental features. It is in charge of Professor Harry Fielding Reid, of the faculty of the Johns Hopkins University, and by a strange coincidence made its first record on the same day it was completed and placed in operation. This was an earthquake which was very perceptibly felt upon the Pacific Coast as well as at various points on the Pacific Ocean, and the record of the instrument shows more or less movement of the earth for a period of nearly four hours. Reproductions of this disturbance upon the photographic paper correspond almost exactly to that noted when the disaster in Guatemala occurred, although the Central American fluctuations were somewhat more violent, as indicated by the wave lines indicating the vibration of the instrument. Although many trains pass through the Baltimore and Ohio Railroad tunnel within 150 feet of the instrument, the vibrations caused by the service are so rapid that the seismograph is not affected. Scientists who have confidence in the construction of the instrument believe that the eruptions at Martinique and St. Vincent have been confined to a small area, as the record at Baltimore has given no trace whatever of disturbance since these eruptions.

ORIGIN AND MEANINGS OF IRISH FAMILY NAMES.

By JOHN O'DONOVAN.

[The following papers were contributed by the celebrated Irish Antiquary and Scholar to the Irish Penny Journal," 1841.]

I.

It has for a long time appeared to me a desirable object, as regards the history of Ireland and the information of the Irish people, to communicate to the public a correct account of the origin and signification of the proper names, tribe names, and surnames of the people of Ireland; more especially as some of the popular writers of the last century have misled them generally into the most erroneous notions with regard to these classes of names. The errors of these writers have not only been adopted by the usually shallow compilers of county surveys, county histories, and other topographical works down to the present time, but also to some extent by writers of a higher order and greater learning and research, as Lanigan and Moore. Indeed, strange as the fact may seem, it is nevertheless unquestionable that there are very few in the country whose ideas upon this subject are consonant with the truth; and hence, upon most occasions on which an Irishman adopts an anglised form of his Christian name and surname, the effect of the alteration is such as completely to conceal, veil, and not unfrequently to misrepresent, their original orthography and meaning. On this account it becomes unavoidably necessary for me, before I enter upon the series of articles which I propose furnishing on this subject, to exhibit and expose the ignorance of those writers to whom I have alluded, and whose theories have produced so erroneous an impression upon the minds of the Irish people; and to this object I purpose to devote the present introductory paper.

The fallacies which I have to expose were unknown to the Irish people until towards the close of the last century, the writers of an earlier period having been too well informed to lead their readers into error. But their works being for the most part in a dead language, and very rarely to be met with, they ceased to have an influence on the public mind, and left the way open for a new race of writers, very ignorant of the ancient language and history of Ireland, to impose their crude theories upon the uninstructed reader. A society of rich persons, of whom General Vallancey, Mr. Beauford, (a) and Dr. Ledwich, were the most active, was formed for the purpose of giving to the public a series of essays on the antiquities, ancient literature, and topography of Ireland; and the result of their joint labours made its appearance in a work published periodically under the title of "Collectanea de Rebus Hibernicis," and since popularly called "Vallancey's Collectanea." These gentlemen, however, after a time found that their systems had nothing in common, each considering the other as insufficiently informed in the subject treated of, and, I think, with justice; for, as I trust I shall be able to show on a future occasion, all were alike ignorant of the matters they professed perfectly to understand. But though the labours of these gentlemen contributed generally to the propagation of erroneous theories on the subject, it was a work of Mr. Beauford's, published in No. 11 of the "Collectanea," which, treating more immediately of this subject, has had the greatest influence on the popular mind; an influence less owing to any celebrity attached to its own name than to that of Vallancey, whose sanction and approbation this work is generally supposed to have received. With this writer originated the novel theory that the names of tribes and families in Ireland, as usual among the Saxons and Normans, were derived from earlier appellations of the territories and localities which they occupied. To establish this hypothesis he adopts a process of etymological investigation unparalleled in the annals of antiquarian research. In the first place, he takes the liberty of dividing the words into as many parts as he thinks proper; secondly, he makes such changes in the vocables thus obtained as he finds convenient to his purpose; thirdly, he gives these words new meanings of his own; and, lastly, he places the tribes whose names he thus explains in localities which many of them never occupied.

As the errors of this writer, though so long before the public, have never been sufficiently exposed, I shall here undertake the task, by the exhibition of a few examples of his process of investigation, taken without selection, and given as a fair specimen of the whole. It will be necessary for me, however, in fairness, to quote in the first instance the author's own account of the theory, which he has put forward to account in this novel manner for the origin of the names of men and tribes in Ireland.

"On the increase of population and the introduction of agriculture, these wandering tribes were under the necessity of confining themselves to certain permanent districts; which districts were generally denominated either from their situation or quality of the soil, and from which also the inhabitants obtained their collective appellation; whence, in the most ancient Irish poems and histories, we frequently find 'clan' and 'slioght' added to the 'name of the country,' to signify the inhabitants; 'clan Cuilean, slioght Breoghain, and "slioght Gae,' wherefore 'the children and race of any division' were the invariable names by which the ancient Hibernian septs were distinguished from the remotest antiquity, and not, as frequently asserted, the children and descendants of their respective leaders."

Again, "The chiefs of every district were elected from the elder branch of the dynasts, and the kings of the principalities from the senior chief of the subordinate districts, who on their advancement to the dignity obtained the name of the district or clan over which they presided; it being an universal custom amongst all the Celtic tribes to dominate the noblesse, with their other appellations, from the place of their residence; a custom in some measure yet retained in the Highlands of Scotland. The variety of names used by the ancient Irish have occasioned great confusion in their history; for before the tenth century surnames were not hereditary, and prior to the establishment of the Christian religion in this country no person was distinguished by one permanent nomination. It is true, during their Pagan state, every child at its birth received a name generally from some imaginary divinity, 'under whose protection he was supposed to be; but this name' was seldom retained longer than the state of infancy, from which period it was generally changed for others arising from some perfection or imperfection of the body, the disposition and qualities of the mind, achievements in war or the chase, the place of birth, residence, etc., so that it frequently happened that the same person was distinguished by several appellations. Our ancient historians, not properly attending to this, have committed great errors in relating the transactions of early periods, by asserting the same action to be performed by several different people, which in reality was performed by one only, thereby throwing their history and antiquities into too distant a period. A similar error has also been committed by not considering the dignitary names of the chiefs, who on their election to the government constantly obtained the name appertaining to the clan over whom they presided, or rather that of the district. These dignitary names becoming in the tenth century hereditary and family distinctions, created new difficulties to genealogists of latter ages."—"Collectanea," vol. iii., p. 257.

Now, it will be very easy to prove that these assertions are wholly erroneous, and are merely conjectures, unsupported either by history or etymology. In the first place, the three instances above given to show that the words "clan" and "slioght" were prefixed to the names of territories among the Irish, instead of supporting the author's assumption, go to prove the very contrary, for in the first two instances the names adduced are not names of territories, but of men; and with regard to the third instance, there was no such name among the ancient Irish, and it is a pure fabrication of Beauford's own imagination! As for his assertion that in the time of Paganism every child at its birth received a name generally from some imaginary divinity, under whose protection he was supposed to be, it is another pure fabrication; there is no authority in any of our ancient documents that men were called after their Pagan deities, except in three instances, in the darkest period of Irish history; and even from these it does not appear that such names were given immediately after the birth of the individuals referred to, but they assumed them after having arrived at the age of maturity. These instances are to be met with in ancient Irish MSS. concerning the history of the Tuatha De Dananns, a colony said to have preceded the Scoti in Ireland, at a period now generally believed to be beyond the reach of authentic history; but granting what has been handed down to us concerning this colony is authentic, it does not follow from any thing stated that even among them every child at its birth received a name from a divinity under whose protection he was placed; for the sum of what has been handed down to us on this subject is, that on the arrival of the Scotic or Milesian colony in Ireland, the Tuatha De Dananns were governed by three kings, who were distinguished by surnames derived from the names of the gods whom they worshipped. Thus, one of those kings, whose real name was "Eochy," was, it is said, usually styled "Mac Greine," because he worshipped the sun; the second, whose proper name was "Eathur," was called "Mac Cuill," because he worshipped the hazel tree, for I suppose men generally lived on nuts in his time; and the third, whose proper name was "Teathur,"

(a) Let not the reader confound this Beauford with the author of the ecclesiastical map of Ireland, for the latter was Dr. Beaufort, and his works are distinguished for their accuracy.

was called "Mac Ceachta," i.e., son of the plough, for he worshipped that useful instrument as his god! We have no instance of men having been named after Pagan deities but these three, and I venture to say that they are not sufficient to establish Beauford's hypothesis. But a stronger argument than this can be urged against this theory—namely, that among all the Pagan names of men which have been preserved by our authentic annalists, not one appears to be called after a Pagan deity; and if it had been a general custom to call children after such deities, it might be expected that at least a few of them would have been transmitted. Since, then, they have not been transmitted, how, I would ask, did Mr. Beauford discover that such a custom had ever existed? It is true that after the establishment of Christianity in the fifth century, the descendants of the Pagan Irish who entered into holy orders, or into the monastic state, had their Pagan names sometimes changed, as we learn from the lives of the saints of the primitive Irish Church, but no documents now remain to prove, or even suggest, that such a change had been made previous to the introduction of Christianity. It is undeniable that cognomens, epithets, or sobriquets, were frequently added to the first name from some warlike exploit, or from some perfection or imperfection of body, colour of hair, or disposition of mind; but this continued to be the custom in Christian times, and still continues so; but no authority has been discovered even to suggest that any change of the original Pagan name had occurred previous to the introduction of Christianity; and we find that, even long after that period, many distinguished Irish Bishops, abbots, and other ecclesiastics, bore the names of their Pagan ancestors.

It is also a groundless assumption that the chief changed his name for that of the territory after his election to the government, or that the names of either the clan or district became surnames or family names in the tenth century. Can any one believe that Brian was the name of the territory of the O'Briens before the establishment of the name O'Brien. Was Donnell the name of the territory of the O'Donnells previous to the tenth century. Was Niall the name of the principality of the O'Neills

So much then for Mr. Beauford's general theory as put forward in the introduction to his work. I shall now proceed to show the equal fallacy of the etymological processes by which he attempts to sustain his theoretical assumptions in the work itself—namely, that the names of Irish tribes and families were derived from the situations and natural features of the territories they inhabited.

1. "Clann Cuilean, or the race of the children of the corner of the water; called also 'Hy na mor,' or the district of the sea; the chiefs of which were denominated 'Mac na mor aois,' the sons of the eldens of the sea, by contraction Macnamara," etc.

Now, what will be thought of this etymological induction, when it can be proved from history that "clann Cuileain" signifies the race of "Cullen?"

The "Cuilean" or Cullen, from whom this tribe took their name, is found in the pedigree of Mac Namara, within the authentic period of Irish history, for he flourished in the eighth century, a period to which our authentic annals reach with the perfect historical certainty. Let us then see how this meaning, "children of the corner of the water," is obtained from the compound "clann Cuileain." Apparently by a very simple process—thus: "clann" means descendants, "cuil" means "corner," and "ean" water; but regular as this process appears, it is nevertheless utterly fallacious, for the word "clann' means children or descendants relatively to an ancestor, not to a "locality"; and though the name "Cuilean" (now Anglicised Cullen or Collins) when cut in two, would apparently make the words "cuil" and "ean," still the word is not compounded of "cuil," a corner, and "ean," water, for the first syllable is short, and the last syllable is a diminutive termination of the same power with the Latin "ulus," as in the compounds "campulus, colliculus, catulus"; and the word "cuilean," whether taken as a common noun substantive or as a proper name, is synonymous with the Latin "catulus," or "Catullus."

The next assertion above made, that "clann Cuileain" was also called "Hy na mor," is untrue, for the name "Hy na mor" had never any existence except in Mr. Beauford's fancy; and even if it had, the meaning given for it would not be correct, for "hy" does not properly mean district, nor does "mor" mean sea. The assertion that the chiefs of "clann Cuileain" were called "Mac na mor aois," is also untrue, for the name was never so written by any one except Mr. Beauford. They were uniformly called "Mic Conmara," as being the descendants of "Cu-mara," who was chief of the "clann Cuileain" in the tenth century; and the name "Cumara," signifying "hero of the sea," was first given to a chief of this family, from his being an expert seaman, not from his dwelling on the sea, for the "clann Cuileain" or Mac Namaras were not located on the sea, or near the sea, but in an inland territory in the south-east of the county of Clare.

2. "Cineal Eoghean, or 'Cean all Eoghain,' from 'cean thuath oll Eogh-an,' pronounced Connal Owen, or the principal division of the northern county of the Oll or Bolgæ, an ancient district in the province of Ulster, comprehending originally the present counties of Tyrone, Armagh, Donegal, and part of the county of Derry, being the ancient divisions of Eirgal or Orgall," etc.

Here the name "Cineal Eoghain," i.e., race or progeny of "Eogham," which had been translated by all the early Irish writers, is made to signify the principal division of the northern county of the Oll or Bolgæ. Let us examine how this interpretation has been wrested from "Cineal Eoghain." In the first place, he spells the name incorrectly, though we cannot see that he gains any point by doing so; next he takes asunder what he conceives to be its component parts, first metamorphosing the word "Cineal," which is cognate with the Latin "genus" and the English "kind, kindred," into "Cean all," which he made to signify "principal division," and resolving "Eoghan," a man's name, into "Eogh-an," to make it signify I know not what; but as the four vocables thus obtained would not answer his purpose, he took the liberty of adding one more of his own coining, thus making five distinct words of the two original ones. But even allowing that these five vocables are legitimately obtained from the two original ones, I have still a further objection to them, for they do not grammatically coalesce, or bear the meaning he affixes to them, as there is no word among the five to express "principal division" or "county." And granting further that the five words thus formed could really bear the signification he gives them, it would not follow that the name "Cineal Eoghain" is so compounded, while in opposition to the testimony of all authentic history; and we have the testimony of all the authentic Irish annals, the lives of the Irish apostle, and of the most ancient genealogical books, to prove that the great northern race called "Cineal Eoghain," took that apellation from their great ancestor "Eoghan" (the son of Niall of the Nine Hostages), who was contemporary with St. Patrick, as did a neighbouring race that of "Cineal Conaill," from Eoghan's brother, Conall Gulban.

But the supporters of Mr. Beauford's system may say that although it may be true that the "Cineal Eoghain" took their appellation from their ancestor Eoghan, still that this Eoghan may have taken his name from the territory over which he ruled. I answer, that this does not bear even the semblance of probability, for we have the authority of Cormac's Glossary for asserting that the proper name "Eoghan" (still used as a man's name in every part of Ireland, and Anglicised Owen and Eugene), was understood by the ancient Irish literati to signify the "good offspring," or the "goodly born," and this looks much more probable than the signification which Mr. Beauford wrings from it, for the Irish had many other names similarly compounded, as "Finghin" (now Florence), thereby meaning the fair offspring; "Coemhghin" (now Kevin), the beautiful offspring, etc. Thus it appears that Beauford's derivation of the tribe name of "Cineal Eoghain" is a mere etymological phantasy, unsupported by history or etymology. I have also to mention that the extent he gives to the territory of this tribe is too great, for it never comprised the one-fourth part of the present county of Donegal, or any part of Armagh.

(To be Continued.)

GENIUS AND ITS ECCENTRICITIES.

The well-known eccentricity of many writers, composers, and artists has suggested to Dr. Regnault, of France, a very interesting article on the "Mania of Authors." By "mania" Dr. Regnault does not mean insanity, but an ungovernable desire to do certain foolish things when accomplishing their work as authors. He writes:—

"For strong men like Victor Hugo, Mistral, Ampere, Catulle Mendes, walking is often sufficient to stimulate the production of ideas, which they can jot on paper while passing near their desks. Weak men like Descartes and Leibnitz, on the contrary, can produce only when they lie down. Cujas wrote lying on his stomach; Rossini found inspiration only in his bed; so did Ambroise Thomas, but not so regularly.

"Chateaubriand, while dictating to his secretary, was in the habit of walking in his bare feet; Schiller and Gretry could not write unless their feet were on ice; Gluck had his piano brought into the sun in the open air; Bossuet covered his head with hot cloths. The shirt-frills and ruffles of Buffon have demonstrated to us long since how great is the influence of the costume upon the writer."

To emphasise his idea concerning this influence of costume, Dr. Regnault gives a list of persons addicted to eccentric dress who were well known for their literary achievements:—

"A monk's hood was necessary to Balzac. Theophile Gautier had to wear a red gown, and Milton a woollen cloak. Mendes only writes in his shirt sleeves; Victorien Sardou would not think of handling a pen if he had not previously put his black skull-cap on his head; without his scarlet vest, Francois Coppee could write nothing, not even the Pater."

There is also, according to the writer, a close relation between the senses of taste and smell, and the faculty of thought:—

"Lord Derby always filled his mouth with brandy-cherries; Fenimore Cooper used to chew gum-drops; Byron filled his pockets with truffles; Theophile Gautier burned incense; Pierre Loti gets 'intoxicated with perfumes.'"

Other varieties of mania are as follows:—Zola needs only light; he writes, even in daytime (in which case his blinds are closed) surrounded with numerous lighted candles. For Cimarosa, Verlaine and John Stuart Mill nothing but noise would do to stimulate their brains. Those who require absolute silence are, however, more numerous. Carolus Duran never begins to paint until he has played the violin; Morot plays the organ; Darwin always practised on his old fiddle before writing. Finally the author mentions a composer who can not arouse musical inspiration without walking in his bare feet on broken glass. He often fills his shoes with broken glass and then walks for hours until he is ready to write his compositions. "When they have come to that," gently comments Dr. Blanche, the insanity expert, "it is better not to disagree with them."

OUR WEEKLY STORY

WHAT I FOUND IN THE HOLD.

BY ALBERT W. TOLMAN.

About fifteen years ago I was deputy collector of customs in one of the shore districts of Maine. Four shipyards lay in my territory, and as acting surveyor I was obliged to measure any vessels that might be built there. This might seem to be a very brief and simple task; there is, however, a great deal of detail in the work, for Uncle Sam is extremely particular about the dimensions and tonnage of the vessels that fly his flag.

One of these shipyards was in the town adjoining that in which I lived, and at the end of a long point fully a mile from my house. In the month of September, six weeks after my appointment, it fell to me to measure a four-masted schooner, fast nearing completion in this yard.

I arrived in the town by stage at eight o'clock one cool evening, and spent the night at the single small hotel. The next morning I engaged the owner of a horse and waggon to take me down to the vessel, and hold one end of the measuring tape while I got the various dimensions.

It was a long day's work for two men. I returned to the hotel for dinner, and then rode down again with my assistant to finish the job. Our hardest and longest task was in the hold. This we were obliged to divide into sections, and each section had to be measured several times. We did not get through below until half an hour after the men working on the houses and rigging had "knocked off" for the night.

It would have taken, perhaps, an hour to finish, and I wanted to bring the matter to a close then and there. But my helper, whose zeal had evidently been flagging the latter part of the afternoon, absolutely refused to remain longer. There was to be a political rally in the town hall that evening, and he wanted to get through his work at home in time to attend it.

Had it not been growing dark so rapidly I would have waited and completed the work alone, but I saw that before the last measurements could be taken a lantern would be needed. So it seemed best to me to go back to the hotel for supper, and come down again later. I could not wait until the next morning, as I should then be obliged to take the early stage for home.

After supper I tried to engage a man or boy to go back with me to the vessel, but not one could I get; everybody was going to the rally. At last I borrowed a lantern of the landlord, and started off alone. He told me that the night watch-man at the yard was an old, half-crazy fisherman, and advised me to make myself known to him before going on board the schooner, as he always carried a double-barrelled shot gun when on guard.

My walk to the yard, although a lonely one, was not at all unpleasant. For the last half-mile the road wound through a heavy growth of maple and birch, but the full moon, which had just risen, gave me plenty of light. On reaching the schooner I looked about for the watchman, but he was nowhere in sight. Far out on the water a small boat was slowly moving in along the moon-path, and I judged that it probably contained the missing man. I did not wait for him, but set to work at once.

Soon all the measurements were taken except those of the after deck. Lighting my lantern carefully to avoid danger of fire, I went down into the lazaretto, and then into the cabin. A few minutes sufficed for these, and only the poop forward on the cabin was left.

As I came out of the after companionway and went forward over the house with my lantern, I heard a shout from the water, and saw the boat coming rapidly in only a few hundred feet away. I was so nearly through that I felt it better to finish first, and afterwards explain why I was there; so, without paying any attention to the man's angry hail, I dropped down through the hatch and began to use my tape.

The poop-deck, which I was now measuring, was a space about thirty feet wide, fourteen feet from bulkhead to cabin, and three feet ten inches high. The iron water-tanks were placed, one on each side of the cabin, cutting off all communication with the lazaretto. Hence the only exit was through the hatch. In the corner near by was a pile of chips and blocks, reaching almost to the deck-beams.

I was glad when the last measurement was taken, for the cramped space between decks made it necessary for me to move about bent almost double.

Kneeling in the corner farthest from the hatch, I recorded the figure in my note-book, slipped it into my pocket, took my lantern, and turned to make my way out.

Then, without the slightest warning, I got the fright of my life. Piercing the darkness like a knife-blade, making my hair bristle and raising the goose-flesh, came a long-drawn wailing "miau," and the flash of two yellow eyes from the chip-pile.

Forgetting how low the deck was, I leaped erect, struck my head against a beam, and, half-stunned, fell back on my lantern, smashing it to fragments and putting it out. For a moment I lay without the power of thought. Then I raised myself on my hands and knees, and looked in the direction of the chips. About twenty feet away four yellow eyes glared into mine!

Canada lynxes! I knew that one was occasionally shot in the woods of the county, but the hold of a vessel was the last place in which to look for animals. They had probably come out of the neighbouring forest the first of the evening, and wandered aboard in search of food.

What was I to do? My courage came back a little as I realised that, unless cornered, the beasts probably would not attack me. Still they were very unpleasant companions in such narrow quarters, and I did not care to approach the hatch while they were in their present position.

One of my hands touched an iron wedge. I raised this, balanced it for a moment, and launched it at the eyes. The pandemonium that followed nearly frightened me out of my wits. The place seemed alive with snarling, screeching, spitting devils. When matters calmed down a bit, the two pairs of yellow eyes glared steadily through the darkness between me and the hatch!

There the two lynxes crouched, side by side, with the breath hissing between their teeth.

The only weapon I had was a pocket-knife with a four inch blade. Although this would have been practically useless in a scrimmage, I opened it and held it in my hand, mechanically feeling the edge to comfort myself a little.

The two cats now began to promenade up and down, fifteen feet away, turning in their beat with the regularity of sentinels, and all the while keeping their eyes fastened on me. At the same time they miaued together; and the way they ran up and down the scale from low to high, and from high to low, would have been interesting under any other conditions. They varied from a thin, wailing soprano to a grum, angry bass, that sent my heart up into my throat more than once during the performance.

Then the promenade and music stopped, and they did a thing that made my scalp tingle and my teeth strike together in spite of myself. Each cat, first one and then the other, deliberately reared itself against an upright and sharpened its claws. I could hear the hard pine splinter under their muscular forearms. The animals did not lose sight of me during this process, for I could see the twin yellow eyes shining malignantly.

Suddenly the beasts became quiet. I heard footsteps on the gangplank, and then on the deck; it was the watchman. As soon as I heard him come up on the poop I shouted. The footsteps stopped near the hatch.

"Who are ye? What d'ye want here?" growled the old man, in a very threatening tone. I explained as well as I could. But he did not believe me.

"You're a thief!" he muttered. "You're tryin' to rob the vessel. But ye didn't reckon on old Sile. He got ye where the wool's short; ye's goin' to keep ye here till mornin', and then he'll hand ye over to the law, dead or alive. You stay down there. If you lift your head above the combin's I'll blow it off!"

I argued, coaxed, threatened, but it did no good. I enlarged upon the subject of the lynxes, but he only cackled querulously and disdainfully. He seated himself on a carpenter's chest beside the combings. The gun-butt rang on the deck, and I heard him cock both barrels.

Then he began to complain to himself about his rheumatism and the trouble I was making by keeping him on deck all night instead of in the comfortable cabin. But he showed no signs of weakening. I can recommend him for a faithful watchman.

But it was the lynxes themselves that finally solved my problem. During my colloquy with the old man they had been very silent and attentive. Probably they thought that we were both planning a scheme to attack them. They kept very close together, and I could tell by the position of their eyes that one was resting his head on the back of the other's neck, as he stared at me.

The moon was now well up in the eastern sky. As it rose over the end of the cabin it flung an oblong patch of light on the deck beneath the hatch. One of the cats slunk across the corner of this bright spot, and the watchman saw him also.

Then, on the edge of the patch of moonlight, I saw one of the lynxes crouching for a spring outside. His mate was close to him. The watchman must have looked down the hatchway just at that moment, for, as the animal sprang, one barrel of the gun roared. He missed and the charge buried itself in the deck. The second cat followed the first through the smoke, and the old fellow lost his head, and fired the other barrel.

Now was my chance, before he had time to reload. I ran stooping to the hatch, popped my head through, and made a grab with both hands for the combings to swing myself up. In my hurry my left hand missed its hold, and I fell back. This literally saved my neck.

Something sliced through the air and struck the combings; the watchman had thrown a broadax! Luckily for me it passed over my head; luckily also he lost his balance, and came tumbling headlong into the hatch.

Without waiting to see whether or not he had broken his neck, I swung myself up and dashed for the gangplank. I leaped the rail

without touching it, barely missing a fall of thirty feet, rushed down the plank to the ground, and made up through the yard for the road. A few hundred feet before me I saw the two lynxes scampering for the woods, evidently as badly frightened as I was, and as much relieved to get away from the vessel. On the edge of the clearing I looked back at the schooner, and caught a glimpse of a figure climbing slowly out of the hatch. So I knew that the watchman could not have been badly hurt.

I hurried through the woods back to the hotel, and gained my room without being seen, as the rally was not yet over. I was not sorry to escape notice, for the front of my coat and waistcoat was filled with broken glass where I had fallen on the lantern; my hands were cut and bleeding, and I had a big bump on the right temple, where my head had struck the deck-beam.

I made myself as presentable as I could, settled with the landlord for his lantern, and left town on the early stage the next morning. Afterwards I heard that the old watchman reported that he had driven off a thief with two bloodhounds, who was trying to rob the vessel.

A SEASIDE MUSING.

By R. K. P.

I would I were a Wave, and yet I know not why,
Save 'twere to dance, a wild and wayward thing;
Or calmly resting, woo the rosy evening sky;
Or wake the caves with a sweet murmuring.
I love the sigh the blue wave utters to the shore—
Its deep and mellow tone instructs my heart,
Seeming a whisper from the dead, who now no more,
Tell me I am of earth's great plan a part!
A Wave in life's vast sea: now flashing in the sun,
Now in the wide expanse of ocean lost;
Of countless myriads a single nameless one,
By Fate's capricious breath for ever tost.
And yet a simple Wave hath a high part ordain'd—
From earth to heaven its dewy drops exhale,
And when their aerial throne its wings have gain'd,
They ride in cooling showers before the gale.
And every tree and flower they kiss looks bright and green;
And living things drink of the crystal stream;
And that which to the exalted gate of heaven hath been,
Comes back again, upon the ocean's breast to gleam,
And riding there, it bears upon its swelling form,
The loves for which true hearts in silence beat—
For which fond eyes pierce outward through the murky storm,
And longing arms fondly stretch forth to greet,
And thus I muse, whene'er I gaze upon the sea,
Hoping my life as true unto its end may be.

THE LEGAL COIF.

Judicial wigs are not uniform. Some are all white, and in others the white is relieved by a circular recess constructed just over the organ of benevolence. This black patch is the coif, and it shows that the judge who wears it holds the degree of sergeant-at-law. Once it was a skull-cap worn by a knight upon a helmet. That was, however, many centuries ago. In modern times—a little before 1300 A.D.—renegade clergymen used to do barristers' work and take barristers' fees. A canon, it is true, forbade them to act as advocates in secular courts; but even then clergymen were contumacious. They pleaded for their clients in the teeth of canonical prohibition and they used the coif to hide the tonsure. One old annalist, writing about the year 1400, describes how a certain advocate, who was a serjeant, having been proved guilty of the grossest malversation, was sentenced to death. He pleaded his benefit of clergy, and, untying the threads of his coif, disclosed the tonsure. The plea, however, was no bar to the action of the executioner, and he was hurried off from the judgment seat to the gallows. For six centuries the serjeants remained in undisturbed possession of that little black patch. But legislation has latterly been very cruel to them. The Judicature Act has extinguished the order, and the forensic wigmaker has sold off all his coifs.

NOTES ON OLD DUBLIN.

By SEUMAS CORMAC.

II.

THE CITY CHARTERS AND INSIGNIA.

During the administration of Strongbow, in 1172, Henry II. granted to Dublin the first charter, with the same privileges that the city of Bristol then enjoyed. This charter is beautifully illuminated, and is one of the treasures still preserved in the City Hall. John, Lord of Ireland, son of Henry II., granted a second charter in 1192, and a third in 1207, after he ascended the English Throne. The Magna Charta was granted to Dublin and to Ireland generally by Henry III in 1216, and the following year fee-farm of the city was granted to the citizens, and the charter of King John was futrher confirmed in 1227. A charter was granted by Edward I. in 1287, and permission given in 1407 to the Mayor to have a gilt sword carried before him as before the Lord Mayor of London. A confirmation of the former charter was granted in 1607, and in 1660 King Charles II. presented to the Mayor a collar of S.S., who was also granted a foot company as an escort. In 1665 the Chief Magistrate of the city was honoured with the title of Lord Mayor, as in London, and £500 was granted in lieu of the foot company. Sir Daniel Bellingham was the first Lord Mayor. In 1687 James II. renewed the charter on a quo warranto. The collar of S.S. was lost or stolen during the revolution of 1688. The handsome collar at present worn by the Lord Mayor was presented by King William III. in 1697, and attached to it is a miniature of the King. The charters above-mentioned are in the custody of the Town Clerk, and are carefully preserved in the City Hall.

AN HISTORICAL DOOR.

Visitors to St. Patrick's will observe leaning against the left-hand wall of the nave a very plain old door, with a square hole cut through its centre. This door dates from the 15th century, and was the door of the ancient chapter room. In 1492 the Cathedral was the scene of a stormy conflict between the Earls of Kildare and Ormonde, representatives of the rival Houses of York and Lancaster, as well as of the noble families of Fitzgerald and Butler. They met at the church for the purpose of arranging their differences, but a quarrel ensued, and a body of the Geraldine archers rushed into the nave to kill Ormonde. He took refuge in the Chapter House, and the soldiers showered their arrows into the rood-loft and chancel, and wherever they thought they might hit an enemy. Ormonde thought he had been betrayed, "but Kildare, the Lord Deputie, followed him," says Stanihurst in his quaint style, "to the doore of the Chapiter House, and undertook on his honor that he should receive no villanie. Whereupon the recluse, craving his lordship's hand to assure him his lyfe, there was a clift in the Chapiter House doore pearsed at a trice to the end that both the Earls should shake hands and be reconciled."

THE STEIN (OR STAINE).

The flat land extending southwards from the strand of the Liffy to "the lands of the Rath," and eastward from near the city walls to the River Dodder, was for many centuries known as the Stein, or Staine. It derived its name from a pillor-stone erected by the Danes to mark one of their landing places, which stood near the site of the Crampton Memorial, at the head of Townsend street, for it is shown as between the College and "Lowzy-hill" (Lazer's) in the Down Survey Map of 1654. There were numerous tumuli on the district. Austin Cooper, F.S.A., in his MS. "Journal of Antiquarian Rambles," writes—"Stayon Stone, 28th March, 1811. I observed that all the houses on the south side of Townsend street, next to College street, as far as Carter's alley, are taken down for the purpose of running a new street (Great Buckingham (sic) in a direct line by St. Mark's Church, on to the draw-bridge at the docks. The old stone of the Stayne, as I have always supposed it, has also been removed"—(Journal R.S.A.I., pt. 2, vol. vi., fifth series). It would thus appear that the Staine was removed about the beginning of the last century. Before 1607 all that space north of Townsend street, now covered by quays and streets, was strand, on which the tides ebbed and flowed. The new street described by Cooper as great Buckingham is evidently intended for Great Brunswick street, formed in 1795.

CORPORATION RECORDS.

In the Muniment Room of the City Hall are several manuscripts of rare archaeological value. They have been described by the late Rev. W. G. Carroll, M.A., Rector of St. Bride's, and historian of the parish, as follows:—

"The White Book" (Liber Albus), 145 pp.—It is a very ancient record, and Mr. Gilbert has found its name on an endorsement on a grant as early as A.D. 1402, and in a "City Act" of sixty years later. The volume preserves some monuments of its own biography—e.g., that in 1563 it was in the custody of John Dyllon, Clerk of the Tholsal. It cites Edward, "Lord of Dublin," in the 44th year of his reign in England, and the 38th year of his reign in France. It exhibits the regulations concerning the dues that were to be paid by vessels traversing foreign seas, and arriving at "Howthe," "Baldovil" (Baldoyle), Malahide, "Portraven" (Portrane), "Rogerstown," "Rush," and Skerry." It gives the accounts of some of the city guilds in 1566. It relates a perambulation of the Franchise in Sir John Carroll's Mayoralty in 1603, when "300 horse and above, of the citizens of Dublin, took their way out at ye Dame's Gate, betwixte ye Dame's Mills and ye Citie Mills, and soe to ye river syde of Avon Liffey," etc. It recites an Order in Council, 1618, headed "Oliver St. John," and signed "William Usher, Clerk of the Council," concerning Lord Brabazon's contention about St. Thomas's Court; and it bears a memorandum, in 1626, touching the said Lord Brabazon's riot in the Coombe, when riding the Franchises in 1621. The latest memorandum, 1637, is desiring Richard Ryves, Recorder, to surrender the book itself to his successor, Barnewall. The book then disappeared for 142 years. It was sold by auction at a book sale in the city in 1829, to Sir William Beatham, Ulster King-at-Arms, for the sum of £64 1s, and he sold it to the Corporation (as the inside of its cover relates) for £150.

"The Chain Book" (Liber Niger) is a smaller volume. It commences, apparently, about the fourteenth century, and its entries are continued down to the beginning of the eighteenth. It is bound in oak boards, covered with black leather, hence one of its names. It is said that there are three perforations in its oak sides, through which passed the chains that secured it into the Guild Hall, and hence comes its other name, "The Chained Book." These perforations, however, are not now discernible. The volume contains, besides sundry of the laws and regulations of the city of Dublin, a beautifully printed and illuminated calendar for the year. The calendar is printed in fine Gothic, and the illuminated letters are in rich red and blue colours. Its entries are not consecutive, and several of them seem to have been inserted regardless of contemporiety, in the vacant spaces of pages of long earlier dates. Thus, for instance, fronting 1573, we are told how, in 1674, Sir John Tottie and Mr. Philip Croft were sworn Clerks of the Tholsel; in another early page, how the Franchises were

perambulated in 1710; and how in 1693 the freedom of the city was presented in a gold box to King William III.'s favourite, Lord Deputy Sidney. Several of the folios seem to have been misplaced in the binding, the latest in date coming first in the volume. The book contains many very interesting and important records, such as the "Consuetudines capiendae," or the "Custumme to beene take" at the different markets and "ffeires" of Dublin; and the several oaths to be taken by all the municipal officers, from the Mayor down to the Constable. Many of the pages are sadly defaced, apparently by the application of acids.

"The Recorder's Book" is quite inferior in age and value to the two foregoing. It was not commenced until 1667. It purports to be a transcript of city documents, but it has been found to be both imperfect and inaccurate. It is a large folio manuscript entitled "A Booke of the Enrollment of all the Charters and other Muniments and Records belonging to the Cittie of Dublin, made in the Tyme of Mark Quine, Esqre., Lord Mayor; Matthew French and Giles Mee, Sheriffs, Anno Domini 1667."

"The Charters" have in every point of view a value and an interest which can scarcely be overstated. There are in all 102 Royal Charters, dating from Henry II., A.D. 1171-2, down to King George II., in 1727. They contain among them the account of the origin and creation of the municipal and civic life of Dublin, together with the foundations of the liberties, privileges, and immunities of the city. Some are beautifully illuminated, and are embellished with portraits of the monarchs who presented them.

"The Assembly Rolls."—These valuable parchments commence in the year 1448, and are continued in the roll form to 1841, nearly four hundred years. Thence on to the present time the Corporation Minutes are entered in books.

THE LIBERTIES.

The Liberty of Thomas Court and Donore, generally called the Earl of Meath's Liberty, included the entire parish of St. Luke, and three-fourths of St. Catherine's. It was divided into four wards, viz.—Upper Coombe, Lower Coombe, Thomas Court, and Pimlico, including forty streets and lanes, thickly populated. The Court of this Manor was erected under charter of King John. The officers were a Seneschal, Registrar, and Marshal, all appointed by the Earl of Meath, to whose ancestor the ancient Monastery of Thomas Court, with "a carncate of land called Denower," was granted by Henry VIII. The Court House was in Great Thomas Court, and the Liberty Marshalsea in Marrowbone lane. The Seneschal's authority within the Liberty was nearly equal to that of the Lord Mayor within the city.

The Liberty and Manor of St. Sepulchre included the parish of St. Nicholas Without, and part of those of St. Peter and St. Kevin. This was one of the eight Manors in the counties of Dublin, Kildare, and Wicklow belonging to the Archbishop of Dublin, granted by Charters dating from the reign of King John. There was a common jail in this Liberty for all these, and their magistrates, called Portrieves, were appointed by the Seneschal of St. Sepulchre's. The Lord of the Manor held Courts Leet, Courts Baron, and a Court of Record, wherein pleas arising within the jurisdiction could be tried to any amount. He also, up to comparatively recent times, exercised a criminal jurisdiction, and had a gallows for the execution of criminals at Haroldscross. The authority of the Seneschal was similar to that of the Lord Mayor within the city, and no officer of the city or county was privileged to execute anything belonging to his office within its limits, unless in case of default of its own officers. The last Courthouse and Marshalsea stood near the site of the old city basin, near the Grand Canal. The Deans of St. Patrick's executed jurisdiction over a few streets in the vicinity of the Cathedral, and appointed a Seneschal and other officers. This was a "sanctuary" for debtors, who could not be arrested so long as they resided there.—[THE END.]

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

BALTIMORE.

BALTIMORE, a village and sea-port (formerly an incorporated and parliamentary borough), in the parish of Tullagh, Eastern Division of the barony of West Carbery, county of Cork, and province of Munster, 7 miles (S.W.) from Skibbereen; containing 459 inhabitants. This place is situated on a fine harbour to which it gives name in St. George's channel, and was anciently called "Dunashad." It is supposed to have been a sanctuary of the Druids and one of the principal seats of the idolatrous worship of Baal, whence its present name, "Beal-ti-mor," signifying in the Irish language, "The Great Habitation of Beal," is probably derived. In 1537, the men of Waterford, in revenge for an attack made by Fineen O'Driscoll and his son on some merchant vessels consigned to that port, fitted out three armed ships with 400 men on board, which arriving in the harbour anchored under the castle: the garrison fled on their approach, and this force, after having laid waste the adjacent island of Innisherkin, landed here and set fire to the castle and town of Baltimore. So great was the resort of foreign fishermen to this coast, that, in 1552, Edw. VI. was advised by his parliament to erect a fort on the harbour, and compel them to pay a tribute; but the proposal was not carried into effect. In 1602, Sir Fineen O'Driscoll surrendered the castle to the Spaniards, and supplies of artillery and ammunition were conveyed into it for its defence by the Spanish commander, Don Jean D'Aquila, on whose capitulation soon after at Kinsale, it was delivered up according to the terms of the treaty. The town was, in 1629, reduced to great distress by Sir Walter Coppinger, who claimed and took possession of the castle, with the manor and town of Baltimore, upon which last the English inhabitants had expended more than £2,000. Sir Walter was summoned before the Lords-Justices, but in the meantime sold the property to Mr. Becher, who dispossessed the English colonists, and they never afterwards recovered their property. About two years after, the Algerines made a descent upon this coast, attacked the castle, plundered the town, and carried away with them more than 200 prisoners to Algiers, most of whom were English settlers. After these two calamities the town never regained its former prosperity, and in a short time dwindled into an insignificant village; and in 1645 the castle, which was well fortified, and amply supplied with ordnance and ammunition, was taken by Captain Bennet and held for the parliament.

The inhabitants received a charter of incorporation from Jas. I. dated March 25th, 1613, by which the government was vested in a sovereign, twelve burgesses, and a commonalty: the sovereign was empowered to hold a court of record in personal actions not exceeding five marks, and the privilege of returning members to parliament was granted. In 1689, Jas. II. granted another charter, dated subsequently to the accession of Wm. III., which recites that the provost, free burgesses, and commonalty had enjoyed many privileges which had been seized into the King's hands by a judgment of the Exchequer. From the time of its first incorporation, the borough continued to return two members to the Irish parliament till the legislative union, when it was disfranchised, and the £15,000 awarded as compensation for the abolition of the franchise was paid to Sir John Evans Freke, Bart., who in 1807 succeeded to the title of Lord Carbery. The ruins of the castle, on the summit of a lofty rock over the pier, and commanding every part of the harbour, are extensive and beautifully picturesque.

(To be Continued.)

NOTES AND QUERIES.

THE NAME OF ATHLONE.

To the Editor "Dublin Penny Journal."

Sally Mills, Rathangan,
July 9th, 1902.

Dear Sir—I find in Bardan's Folk Lore of Westmeath, in the Legend of the Black Pig, the following extract, which means the Ford of Luan:

"Just as he (the Black Pig) entered the ford a Firbolg Chief named Luan, who held sway in that part of the country happened to be conversing with his druid on an eskar that jutted into the Shannon on the opposite side. He was the first to notice the Black Pig advancing through the turbid waters. He turned sharply to his druid and directing his attention to the strange object inquired what it was. One moment sufficed the clear-seeing druid to ascertain who it was, and the object of its visit. "It is one O Chief," he replied, "who, if he succeeds in reaching this grassy mound (whereon an herb grows that will render him stronger than all the giants in Erin) will, not only accomplish the destruction of the great Druidic order, and of the valiant chiefs whom they have served; but even the very elements of Nature will be subservent to his influence."

When the Druid pronounced these words the mighty Luan unslung his battle axe, and as the disguised Muchdu reached terra firma its sharp edge smote him on the one fatal spot between the ears (as he was invulnerable while in a pig's shape everywhere else) and he fell back stone dead.

Luan was so proud of his exploit that he built a bridge over the Shannon and had the effigy of the pig carved in stone.

It is thus described by Weld—"A small stone sculptured in relievo, appears inserted in the outer wall of one of the nulls on the bridge towards the Leinster side, representing a boar, to which a tradition is attached that it marks the place where a wild boar was killed after a long chase and a desperate conflict. This tablet was taken down when re-building Athlone Old Bridge and presented with other sculptured stones to the Royal Irish Academy, where, I suppose, they still lie. Most of the latter information I have obtained from Rev. J. Joly's 'Old Bridge of Athlone,' published by Herbert, Dublin, 1831, a copy of which is in my possession.

G.A.H.

One of the latest men of prominence to testify to the usefulness of the automobile to a business man in the time saved going to and from his business, is Mr. H. C. Frick, the well-known steel magnate of Pittsburg. Mr. Frick uses a powerful machine to cover the fourteen miles from his home to his office twice daily, and the time consumed in the journey is but twenty-one minutes. The millionaire is reported to have said the time saved him by the new means of locomotion amounts to at least half a million dollars yearly.

KNOCKAINE.

A ROYAL FORT OF MUNSTER.

ITS ASSOCIATIONS WITH THE OLD IRISH KINGS.

By J. F. LYNCH.

I send copy of a letter in which Mr. Owen Bresnan gives a very interesting description of Knockaine and identification of the Ruadh Suidhe of Lough Gur. This is the third stone chair (1) at Lough Gur which has been discovered by Mr. Bresnan. There are stone chairs in many islands of the Ægean Sea, and on the celebrated mountain of Ida, near the City of Troy, in Phrygia, there is a stone chair. Dillmann (Genesis, vol. I., p. 327) says:—"It is true that already Sargon ii., B.C. 722-705, conducted a victorious campaign as far as Melid and Chammanu in Cappadocia, but it is not proved that the country was so early named after the Gimirrai. It is rendered probable on many grounds that these Gimirrai who appear in the seventh century (B.C.) were just the Cimmerians who crossed the Bosphorus from Thrace into Asia Minor, and that the naming of Cappadocia as Gamir dates first from them. Moreover, according to the statements of the ancients, the Asiatic Thracians also, the Bithynians, Maryandynians, Paphlagonians, Phrygians, and younger (Phrygian) Armenians, were offshoots of the European Thracians and Trererians, who were themselves Cimmerians." It appears to me that we shall be able to connect the Cimmerians with the ancient inhabitants of Ireland, and as the Trojans or Phrygians were Cimmerians we may be able to sit upon our stone chairs beside our Iberian lake, and discourse without being in any danger of being sat upon.

Mr. Bresnan, in his letter, refers to the tale of the Gilla Decair. This tale is given in Silva Gadelica, and it is stated in the tale that the Gilla Decair was Abartach, son of Allchad, the Irish god of music, in disguise. In Silva Gadelica is also the tale of O'Donnell's Kern, which gives another presentation of the Gilla Decair. O'Donnell's Kern appears "at Knockany, twelve miles forth of Limerick City, where Shane Mac an iarla (x) is, in Desmond. . . . . Just at this very time it was that on the green in front of his dwelling and good town Shane Mac an iarla of Desmond held gathering and convention." In the tale of the Gilla Decair it is stated that when Finn sat on the seat-mound on the side of Knockaine, with certain of his warriors assembled round him, that Finn Bane, son of Baeiscne's grandson Bresal, watched and warded the hill. In several old Irish documents it is stated that Eochu, son of Ailill Find, King of Ireland, was slain on the fair-green of Knockaine, by Argatmar, who was aided by Lugaidh, son of Eochu Fiadmuine, and Duach Ladrach. The date given for this slaughter is 787 B.C.

Mr. Bresnan writes as follows:—

"After a good deal of local inquiry I succeeded in locating the Ruadh Suidhe, or "red seat" of Knockroe (Lough Gur). It is situated a couple of hundred yards N.E. of Knocksentry, on the shoulder of the hill, and about four yards north of the boundary fence which separates the Croker and de Salis estates. It is about forty feet high at the northern side, and only about four and a half feet at the south. Its sides, almost to the summit, are clothed with furze, and within a few feet of the top and at the western side is a peculiar little well, apparently carved out of the rock, which must be of great antiquity. The mouth of the well is small and circular, and in formation the well resembles a wren's nest. It contains several gallons of water, and in the driest seasons was never known to go entirely dry. Many in the locality call it 'The Fairy Well,' and others Tubber Cunneen, as there is a rabbit warren in the adjoining fence, and those timid little tenants of the lonely hillside seem to enjoy the luxury of fresh water at that curious well, as narrow little paths lead up to its very mouth, which some attribute to the fairy-dwellers of Cahircorney Stone-fort, locally called Elliot's Moat. There was a stone chair on the side of the mound within about three feet of the mouth of the well, but the greater portion of the seat was broken away by some mischievous person, who left it at the foot of the mound, probably through dread of the resentment of its fairy protectors.

I paid a visit to the historic hill of Knockaine a short time ago, and was fortunate in discovering the Leabadh an triuir ("Grave of the Three"), which was pointed out to me by Mr. Daniel Quinlan, and must be the grave of the three Eochaidhs, to whom you referred. Knockaine hill forms a beautiful crescent at its southern side. In the centre, and about half-way up the hill, is a remarkable well, called Tubber Caoch (2), probably so called because the water oozes almost imperceptibly from the cliff to an oblong stone basin underneath. About one hundred yards west of the well is Leabadh an triuir, which is a small stone circle without a cairn, which may have been taken away by fence-markers. The Leabadh is only a few yards south of the public pathway which leads from Cringer to the fair green. Below the Leabadh are traces of several monuments, square and circular, though not very distinct, but convenient to the residence of Mr. Daniel Quinlan is a very large stone circle in a fair state of preservation. This must be the spot where Fionn and his warriors were when Finn Bane saw the Gilla Deacair approaching the hill of Knockaine from the east.

On the south-western slope of the hill was the historic cave of Ane, which has entirely disappeared through the recklessness of local quarry men. Overhead the cave and on the western pinnacle of the hill is a large earthen rath, and north of the rath and on the side of the disused old road are still pointed out the pillars of the gateway which led to the old fair field of centuries ago. On the eastern pinnacle of the hill is a magnificent mound, composed of earth and stones, about ten times larger than the one at Ballynagallagh (4), and excavated into the centre at the northern side exactly like Dun Fhir Aen Cholga, as you have called it. It has no circumvallation, but one hundred yards north of it are the remains of another mound, surrounded by an earthen rampart, portion of which has been taken away.

The ancient village of Knockaine, now called "The Commons," is still a freehold, and stands on the south-eastern shoulder of the hill. The surviving cabins of this very ancient village are irregularly and rudely built on the sides of lanes and bohreens, and the village is indeed an interesting specimen of what an Irish village was many centuries ago. The cabins of the Common's village are all built a few yards apart from one another, exactly similar to the foundations we found at Caherguillamore.

Dr. O'Donovan (Supplement to O'Reilly) says that he stood on Cnoc Aine on the 5th August, 1840, and found the description of the view (3) from Knockaine, credited to "Cu Chulaind," to be remarkably correct. In the Book of Rights, p. 88, one of the Royal forts of Munster is named Ane, and in Silve Gadelica, p. 575, there is account of the seizure of Knockaine by Tuatha de Danann.

Eogabal and Uaindhe are stated to be sons of Usmech's lofty Donn, and Ane and Fer Fi are the daughter and son of Eogabal. Cacht is the wife of Uainidhe, Eter the wife of Fer Fi, while Ane lived in spinsterhood. The north side of Knockaine was occupied by Uainidhe, the south side by Fer Fi, the west side by Eogabal, and the east side by Ane. In the tale of "Battle of Magh Mucramha" Olioll, we are informed, became Olom, or "docked-of-an-ear," or Knockaine, having incurred the wrath of Ane, and Eogabal suffered severely from the spear cast by Ferches, Olioll's druid. The name Ferches appears to mean "man of the cast," and he dwelt, we are told, in the land called Marg in Leinster, and Marg was also a caster. In order to get at the root of these old Irish tales, we must compare tale with tale, and name with name, and stone with stone. Fer Fi is depicted as being the cause of the battle of Mucramha, and he is stated to have played on his timpan the three tunes named Goltraighe, or "wail-strain," Gentraighe, or "laugh-strain," and Suantraighe, or "sleep-strain." These three tunes represented the three seasons of the Celtic year, as stated by O'Curry (Manners and Customs). In the tale of Labraid and Moriath's harper, given by Dr. Whitley Stokes (Revue Celtique, vol. xx., p. 429), we read—"Or is it a harp without a glee ('tuning') of the three tunings which used to serve the harper Craiftine, to wit, sleep-strain and wail-strain, and laugh-strain, these three are their names. And this Craiftine himself was the harper that Moriath had, the daughter of Scoriath, King of the Fir Morca, who are in the South of Ireland, in Munster. And 'tis this Moriath that gave love in absence to Maen ('dumb'), who is now called Labraid Loingsech ('exile')."

In Tain Bo Fraich, quoted by O'Curry

(Continued on page 266.)

(1) There is a stone chair on Knockdere, about a mile south of Lough Gur, and a stone chair on a rock a little to the west of Knockfinnil. The name of this rock is not now known at Lough Gur, but we think that it is Carrigcrimear, given by Mr. Lenihan in an article on Lough Gur in "Tipperary Vindicator." The particulars given by Mr. Lenihan were chiefly supplied by John Fitzgerald. In the townland of Grange, or Nova Grangia, at west side of Lough Gur, there was also a stone chair, but not a trace of it is left.

(x) John, son of the Earl, is mentioned in Annals of Loch Ce, A.D. 1515—"The Castle of Ane was captured from John, son of the Earl of Desmond, by James, son of the Earl, and he then sits down before the Castle of Lough Gur (Caislean dubh or "Black Castle"), which was in great straits by him, until the Sil-Brian and the Sil-Cerbhaill and the Cenel-Aedha sent him away from it." Shane's wife was More, daughter of Murrough MacBrian Duff O'Brien.

(2) Dr. Joyce (the "Irish Names," vol. ii., p. 89) says:—"Sometimes these wells are called Toberkeagh, blind well (caech 'blind'); but this terms is often applied to a well which sometimes dries up, without any reference to eye cure; it is blind when there is no water in it. There is a place called Blindwell in the parish of Kilcoola in Galway, six miles north-west of Tuam."

(4) Baile na gCaillech means place of the nuns. Lewis (Knockaney) mentions that this Convent, Monaster-ni-Caillaigh Juxta Aney, was founded in 941. Mr. W. C. Borlase (Dolmens of Ireland) queries the explanation which I gave of Baile na gCaillech, but the site of the nunnery is in townland.

(3) "Say, my Master Loeg, knowest thou in what territory we are?" "I know not, indeed," said Loeg. "But I know," said Cu Chulaind: "this to the south is Cenn Abhrat of Sliabh-Cain. The Mountains of Eblin are these to the north-east. That bright linn which thou seest is the linn of Luimnech (Limerick). This is Druim-Collchailli in which we are, which is called Ane-Cliach, in the territory of the Deise-bec. Before us, to the south, is the host, in Olin-Mail-Mic-Ugaine, in the land of Cu Roi, son of Daire, son of Deadh" (Mesca Ulad, p. 17).

GALWAY CITY.

VIEW FROM THE BAY, TAKEN NEARLY HALF A CENTURY AGO.

Galway is situate on the west coast of Ireland, and on the north side of Galway Bay, one of the finest in Europe, at the mouth of the Corrib, issuing from Lough Corrib. The Bay is 18 miles broad at its seaward extremity, diminishing to about 8 miles inland, and being about 20 miles long East to West. It is protected from the swell of the Atlantic by the Arran Isles.

The trade and commerce at one time carried on between this place and Spain was of the most extensive character; hence it will at once be seen that the style of architecture used in the erection of the old houses in Galway is of the Spanish quadrangular fashion. Indeed, the old race seem to have intermarried extensively with their Spanish customers, as to this day the Spanish cast of countenance can be traced in the features of large numbers of the Galwagians.

The population of Galway was remarkable for great urbanity and elegance of manners, which the extensive commercial intercourse with the chivalric and polite traders of the Peninsula doubtless tended to promote. John Lynch, the bishop of Killala, in his Life of Kirwan, his predecessor, says that "the city of Galway was adorned with green marble walls, flanked by numerous towers, and that within the precincts of these walls were edifices of the same material; its noble squares and fair proportions, elegant and symmetrical, gladdened the vision, and that it appeared to him, as Jerusalem did to the prophet Jeremiah, 'a city of most perfect beauty.'"

In addition to its beauty, Galway has been equally famed for its piety. Rinuccini, the nuncio extraordinary from the Court of Rome, said it appeared to him to be nearest his ideal of a Christian church.

Hardiman, in his History of Galway, thus speaks of the piety and splendour of that city:

"Rome boasts seven hills, the Nile its seven fold stream;
Around the pole seven radiant planets gleam:
Galway, Conacian Rome, twice equals these,
She boasts twice seven illustrious families.
Twice seven high towers defend her lofty walls,
And polished marble decks her splendid halls;
Twice seven her massive gates o'er which arise,
Twice seven strong castles, towering to the skies.
Twice seven her bridges, through whose arches flow
The silver tides majestically slow.
Her ample church with twice seven altars flames—
An heavenly patron every altar claims;
While twice seven convents pious anthems raise.
Seven for each sex, to sound Jehovah's praise."

The accompanying picture was taken from the deck of the Indian Empire, one of that fleet of vessels created by James Orrell Lever, from the establishment of which such high hopes were once entertained that Galway was to become the chief port in the Three Kingdoms for communication with New York—hopes that were, alas! doomed to disappointment. Nor were these high hopes entertained in Ireland only. The expectations of the Irish in America may be gauged from the following extract from the "Irish Miscellany," Boston, Sept. 18, 1858, in which the arrival of the second vessel of the line is chronicled:—

The "Propeller," of the new Galway line, has just reached our shores. This vessel is the second thus far sent to us, and, as it is the first step that costs in such things, and as that step has been taken with as great a degree of success as the more thoughtful friends of the scheme were prepared to look for, we hope that Mr. Lever, who seems to be the backbone of the whole thing—that is, the lever that started the machine—may turn out to be the very man destined by Providence to carry it out to a thoroughly successful termination. That he may cause stock in Irish-American steamships to pay, and to pay well—that the new line may swell the purse, not of England only, but of Ireland, too—that if it do not directly help all Ireland, in a money point of view, it may turn out to be a permanent and safe investment for Galway. If she wake up, even at this eleventh hour, and insist upon having her fair share of the cost, the responsibility, the profits, and the glory of the new enterprise, she may become rich once more; and not only all Ireland, but England and America, will find that a new element has been added to the commercial world, which should make it more united, stronger, richer, and perhaps better than it was before. The man who may do all this will assuredly be the man for Galway. Perhaps he may be the man for whom Ireland has looked so long. Who knows? . . . . If this Galway line become a permanent Irish institution, the ambassadors of the commercial powers—the merchants—will bethink themselves of hastening to give Ireland "assurances of their most distinguished consideration." How long since Ireland heard that music, think you?

KNOCKAINE.

(Continued from page 254.)

(Manners and Customs), Goltraighe, Gentraighe, and Suantraighe are said to be the sons of Uaithne, the Dagda's harper, and born of Boand, which I take to be Bofhind, or "white cow," the form from which the name of the river Boyne, written Bouovinda by Ptolemy, is derived.

In the tale of Magh Tuireadh North, Lugh, King of the Tuatha De Danann, and the Dagda and Oghma, followed the Fomorians, because they had carried off Uaithne, the harper of the Dagda, and when they reached the banqueting house in which were Bres, son spell-bound, so that it would not answer found the harp hanging upon the wall, and this was the harp in which the music was spell-bound so that it would not answer when called forth until the Dagda evoked it, and the harp came forth from the wall and killed nine persons, and came to the Dagda, and he played the three feats which give distinction to a harper, namely, the Suantraighe, the Gentraighe, and the Goltraighe, and just as Fer Fi escaped from Olioll Olom, by playing the Suantraighe, when all fell asleep, so also did Lug, Dagda, and Oghma escape from the Fomorians (O'Curry's Manners and Customs).

I am unable to accept the explanation which Professor Rhys (Hibbert Lectures) has given of the name Oghma mentioned in this extract from O'Curry. Oghma is regarded as the inventor of Ogham by the Irish, just as the Greeks regarded Cadmus as the one who introduced letters into Greece. O'Donovan, "Irish Grammar," quotes from Book of Ballymote:—

"What is the place and time and person and cause of inventing the Ogum? Not difficult. The place of it, Hibernia Insula quam nos Scoti habitamus; in the time of Bres, son of Elatham, King of Ireland. Its inventor, Ogma, son of Elathan."

Eogabal of Knockaine appears to me to mean "Great Oc." For Corca Oice or "race of Oc" of Ui Chonail Ghabhra, now Conillo baronies, see O'Hanlon's "Lives of the Irish Saints," vol. iii., p. 340. Near Tara there was a place named from Oc, which became Ochain nemed from Oc, which became Ochain (O'Curry's Lectures, p. 488; Silva Gadelica, p. 407), and just as Oc became Oche, Ocha, Ochain, so also did it become Ochaim, of which Ogma, that is Ocma is genitive form utilised as nominative instead of Ocaim, just as Dagda was preferred to Dagaid.

So far as I am aware, only two Ogham inscribed stones have been found in the county of Limerick, one of these was found near Rathkeale, and the other was found at Knockfierna.

In State paper dated 1288 there is a valuable description of the extent of the Manor of Any, in which are given the names of the Anglo-Norman settlers, and the names of the lands held by them, and the services and payments rendered therefor. It is stated that the burgesses of Any hold four carucates in their burgages, and yearly render therefor £6 7s 3d., and do suit at their hundred. They also render at Michaelmas 6d for a ploughshare, 12 horseshoes or 9d; the same hold 20 acres beyond the water, and render therefor 12 hens or 12d; they also hold in their burgages 1 [illegible] of land and render therefor 10 hens or 10d.

In this paper Herbertstown district is named Cathyr Hussoc, and was held by Henry Fitz-John. Oweniston was held by John Fitz-Adam, who rendered therefor 15s a year and suit. Oweniston is translation of Baile Eogain, or place of Eoghan, and it is now named Kilballyowen, from an old church, the site of which was discovered by Mr. Bresnan. Nicholas de Pierpoint held two carucates in Loychgyr (Lough Gur), by the service of 16d with suit, and one carucate in Bolger (Knockbolg), rendering to the Bishop of Emly 5 marks a year without suit. The garden and curtilage of the burgesses of Any are yearly worth as well in herbage as in fruit two shillings, two warrens two shillings, a water mill with a fishery, 30s a year. They extend the water called Loychyir (Lough Gur) with a fishery at 2s., the perquisites at fairs at 10 marks, tolls of the vill at 2s. The pleas and perquisites of the hundred there are yearly worth 6s 8d; perquisites of court, 6s. 8d.

State Paper, A.D. 1253. The King wills and grants that the Manor of Any, Ireland, which is in the King's hand shall remain to the Crown, and that after the King's decease, Alienor, Queen Consort of England, if she survive the King, shall have it in dower with the other lands assigned to her in Ireland. A.D. 1254. Grant to Godfrey de Lezignan, the King's brother, of 500 librates in the weste lands of Ireland with the Manor of Anny, in Munster, which belonged to Geoffrey de Marisco, to hold of the King in fee by the service of the three Knights, A.D. 1254. Edward, the King's eldest son, to John FitzGeoffrey, the King's Justiciary, in Ireland, and Richard de la Rochelle, or their lieutenant, in that country. The King, shortly before he gave to Edward the land of Ireland, had granted to Godfrey de Lezignan 500 librates of land in that country, the manor of Any being comprised therein. . . . Godfrey, having subsequently learned that the Manor of Any was of the King's demesne, and had been assigned in dower to Edward's mother, the Queen, surrendered it into the King's hand.

A.D. 1278. Charter of the King. Notifying that Edmund de Bassingburne having surrendered into the King's hand to the use of Thomas de Clare the Manor of Any, in Ireland, the King gives the grants that manor in tail to the said Thomas, in exchange for the Manor of Bleburgh, whereof Thomas had, by his charter, enfeoffed Edmund to hold the said Manor of Any of the King, and to render therefor to the latter the due and customary services with reversion to the King, A.D. 1584. Sir H. Wallop writes to Burghley and prays for fee-farm of Anye and Lough Gierrye (L. Gur), A.D. 1585. Petition of Thomas Spring Gent, late lieut. to Captain Zouche, to the Privy Council. Sixteen years' service. His brother slain in her Majesty's quarrels. Prays for the reversion of the commandery of Anne, which he holds in right of his wife, relict of William Apley, or Apsley.

Whatever may be thought of the King of Munster, Olioll Olom, going to Knockaine to pasture his horses on the hill, we may be certain that Knockaine was held by the Kings of Munster from the most remote period, and whatever may be thought of Olioll Olom himself, we may be certain that there were Irish Kings at Knockaine long before the period assigned to Olioll Olom. The oldest and most important Iberian settlement in Ireland must have been beside Lough Gur and Knockaine, and here was one of the ancient capitals of Ireland, and consequently I have repeatedly referred to the fact that this ancient capital and the present capital of Ireland include hills of same name, and dedicated to the same deity, for Drom Collchoille of Dublin was dedicated to Ochainne, an extended form of Oc, and Drom Collchoille of Ara was dedicated to Eogabal, which I have taken to mean Great Oc, and we have been able to cast some light, by comparison of tales and names, upon the old Iberian settlement beside the Liffey, and this working by the comparative method will, it seems to me, be most fruitful in results. The comparison of the old things of Ireland with the old things of other lands must sooner or later be undertaken, but the mess that Vallancey made by the comparative method ought to serve as a warning to us that we ought to be extremely careful.

Mr. Bresnan in his letter refers to the foundations in Caherguillamore, and these are stated by the people to be the site of the "city." There is no reference to this "city" in any Irish document, and I have thought that the city might have been in nubibus before being located in the Caherguillamore Park; still, I may be mistaken, for there are numerous monuments in the vicinity of Lough Gur to which no reference is made in the Irish documents. Several old people have informed me that there was a city in Caherguillamore Park, and there certainly are in the Park traces of some large settlement, and the sites to which Mr. Bresnan refers tend to show that there is some foundation other than Tirna-n-Og for the city of Caherguillamore. A city such as that described by the people could not have been founded by the Irish, but I have proved that the Norse held Lough Gur, and a friend has tried to persuade me to believe that the Norse were the founders of the city. In the State Paper, dated 1200 A.D., the name Caherguillamore does not occur, but Caherguillamore is mentioned in one of Queen Elizabeth's State Papers. In Wars G.G., p. 103, we read:—"Then Donnabhan invited Aralt the son of Imar unto him, after his father had been killed, and the foreigners of Mumhain made him King. He (Brian) went afterwards on a foray into Ui Fidhgenti, and they took cattle innumerable, and they plundered Cathair Cuan, and they killed its people; and they killed Donnabhan, son of Cathal, the ripe culprit, the King of Ui Fidhgenti; and they killed Aralt, son of Imar, King of the Foreigners, and they made a prodigious slaughter of the foreigners, and they carried away with them cattle innumerable." Todd supposes that Cathair Cuan was one of the forts of Bruree, and John Collins thought that Cathair Cuan was at Croom. In the Book of Rights, p. 67, O'Donovan states that the Ui Fidhgenti possessed that portion of the County of Limerick lying to the west of the River Maigue, besides the barony of Coshma in the same county. It appears from Wars G. G., p. 67, that the Dal g Cais held Lough Gur previous to the occupation by the foreigners, and a little north of Cahirconlish Rectory there is a rock named from the Ui Foircheallaigh, a tribe of the Dal g Cais. In Wars G. G., p. 59, it is stated that Mahon and Brian carried off their people and all their chattels over the Shannon westwards, in other words, sooner than submit to the foreigners, the Dal g Cais retired from the fertile Limerick district to the forests and woods of the Clare district. In Wars G. G., p. 87, we read that the Ui Cairpre, or Ui Fidhgenti, were in occupation of the territory of the race of Cormac or Dal g Cais, so it appears that the Ui Fidhgenti crossed the Maigue, and seized the lands vacated by the Dal g Cais, last of the Maigue. The Ui Fidhgenti were in close alliance with the foreigners, and the wife of Cathal, King of the Ui Fidhgenti, and father of Donovan, was a Danish lady, and a daughter of Donovan was married to Ivar, King of the Danes of Waterford. It is possible then that Cathair Cuan, though in the territory of Ui Fidhgente, could be east of the River Maigue. In State Paper, dated 1200 A.D., mention is made of "Ceallconill with its appurtenance in length and breadth to Tulachbracci, Brug, Cathircuain, and Chilloconill aforesaid." Tulach-bracci is Tullybracky, close to Lough Gur, and Brug is Bruff, and Cathircuain is Cathair Cuan, and this must be the Cathair Cuan which was captured by Brian Boroimhe in the year 978. Perhaps Cathair Cuan is the city of Caherguillamore.

In the recent speed trials organised by the Automobile Club over a kilometer course at Gunton Park, the highest average speed for four runs was attained by a 50-horse power Napier carriage, which covered the distance at the rate of 44 miles per hour. A 24-horse power Mors car gave an average speed of 41 miles per hour. The road surface was heavy, and two runs were down hill and two up hill.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

CHAPTER IX.—Continued.

A.D. 1348. This year a great pestilence raged through the greatest part of the world, and among other places destroyed vast numbers in the city of Dublin. It was called from the greatness of it the first pestilence, as having spread more mortally than any other that had before happened, and in respect of others that happened a few years after. John Clyn, a Franciscan of Kilkenny, who lived at that time, gives a particular account of it in his annals, which therefore I choose to translate. "This year, and chiefly in the months of September and October, great numbers of bishops and prelates, ecclesiastical and religious, peers, and others, and in general people of both sexes flocked together by troops, in pilgrimage to the water of Tachmoling, insomuch that many thousands of souls might be seen there together for many days. Some came on the score of devotion, but the greatest part for fear of the pestilence which raged at that time with great violence. It first broke out near Dublin, at Howth and Dalky; it almost destroyed and laid waste the cities of Dublin and Drogheda; insomuch that in Dublin alone from the beginning of August to Christmas, 14,000 souls perished. This pestilence had its first beginning (as it is said) in the east, and passing through the Saracens and Infidels, slew 8,000 legions of them: it seized the city of Avignon, where the Roman court then was: the January before it came among us, where the churches and cemeteries were not sufficient to receive the dead; and the Pope ordered a new cemetery to be consecrated for depositing the bodies of those who died of the pestilence; insomuch, that from the month of May to the translation of St. Thomas, 50,000 bodies and upwards were buried in the same cemetery. This distemper prevailed in full force in Lent; for on the 6th day of March, eight Dominican friars died. Scarce a single person died in one house; but it commonly swept away husband, wife, children, and servants altogether." The author seems to have died of this plague, and to have had a foresight of his approaching fate. For he closes his annals in 1348 thus: "But I (says he), frier John Clyn, of the franciscan order of the convent of Kilkenny, have in this book written the memorable things happening in my time, of which I was either an eye-witness, or learned them from the relation of such as were worthy of credit, and that these notable actions might not perish by time, and vanish out of the memory of our successors, seeing the many evils that encompass us, and every symptom placed as it were under a malevolent influence, expecting death among the dead until it comes, such things as I have heard delivered with veracity, and have strictly examined, I have reduced into writing. And lest the writing should perish with the writer, and the work fail with the workman, I leave behind me parchment for continuing it, if any man should have the good fortune to survive this calamity, or any one of the race of Adam should escape this pestilence, to continue what I have begun."

A. D. 1350. The septs of the Harold's, the O'Birnes, and the Archbolds, in the presence of the lord justice, Sir Thomas Rooksby, elected for themselves separately chieftanes their several tribes, and submitted to the Government, swearing to continue faithful subjects; and their chieftanes engaged that if any of their clans or adherents should for the time to come commit any felony or robbery on the king's subjects, that they would upon notice bring such in to abide their trials, according to the course of law. This for a considerable time gave great quiet to the citizens of Dublin, who were often molested by these bordering enemies.

A.D. 1351. Kenelbreck Sherman, formerly mayor of Dublin, died on the 6th of March, and was buried under the belfry of the Dominicans, which he himself had built. He likewise glazed the great window at the upper end of the choir, roofed the church, and did many other pious works. His munificence at his death was approximated at 3,000 marks, besides what he had expended in his lifetime on charities.

A.D. 1359. 'Till this time there was only one judge to despatch the business of the court of king's-bench, namely, John Redeness, who was at this time called plainly only justice. But now, the business being found to be too much for one man, the king, upon the application of the subject, appointed William Petit a second justice, under the name of an associate to Redeness, and allotted him an annual fee of £40, and he had liberty to practise as a lawyer, notwithstanding his being appointed a judge.

A.D. 1361. Morris Doncrese, a citizen of Dublin, died on the 6th of January, perhaps of a pestilence that raged this year, and was buried in the church-yard of the Dominicans, having given £40 towards glazing the church of that convent, besides other benefactions. He had been twice sheriff of the city, but never mayor. This year the city had a great loss by the removal of the exchequer to Carlow; and the steeple of the Dominicans was thrown down by a tempest.

A.D. 1362. On the 6th of April St. Patrick's church, Dublin, was burned down by the negligence of John, the sexton. A few years after it was re-built, and the present steeple added to it by archbishop Minot.

A.D. 1370. The third pestilence raged, and destroyed many of the nobility, gentry, and citizens. This was reckoned more violent than either of the two former.

A.D. 1376. It was this year found by inquisition that the citizens of Dublin had exceeded their powers by holding pleas of trespass in the tenement of Clonliffe, being without the bounds of the city franchises, against the king's charter granted to the abbot and convent of St. Mary's, Dublin; and that Nicholas Serjant, mayor, and Roger Folliogh and Robert Piers, bailiffs of Dublin, usurped a prætorian jurisdiction without the city liberties, upon John Stoad at Ballybough in the tenement of Clonliffe.

A.D. 1383. A great pestilence, called the fourth pestilence, raged and destroyed abundance of people.

A.D. 1394. King Richard II. made his first voyage to Ireland, and landed at Waterford, about Michaelmas, with an army of 30,000 foot and 4,000 horse, and having received the submission of most of the Irish of Leinster, he marched to Dublin, where he continued till the beginning of summer. During this time he granted to the city of Dublin a penny to be received yearly out of every house to repair the bridge and streets. Probably this is the original of the "landgable-pence." He also confirmed by patent dated the 4th of June this year, all former grants made to the city. It is said also that he held a parliament this winter in Dublin, and redressed many grievances complained of. But it is more certain that on the the 25th of March he knighted four petty princes of Ireland, who in robes agreeable to their state, sat that day with the king at table; and having supplied the courts of justice with able lawyers, he returned to England.

A.D. 1399. The citizens of Dublin made an inroad into the O'Birne's country, cut off thirty-three of the Irish in battle, and took eighty prisoners. King Richard II. having on the 13th of May this year landed at Waterford, made his entry into Dublin on the 28th of June with a puissant army and a large train, and was nobly entertained by the mayor, and by many of the citizens. Notwithstanding the great resort to the city upon this occasion, yet the price of provisions did not much increase. He received here the news that Henry, Duke of Lancaster, had invaded England, upon which he hastened over, and was soon after deposed and murdered.

A.D. 1402. (a) John Drake, mayor of Dublin, with a strong body of citizens well armed, marched out of Dublin against the O'Birnes and other Irish rebels, of whom on the 11th of July they slew (as Campion says), near Bray, 4,000, but Henry of Marleburg reduces the number to 493, all being men of war, for the merit of which action the citizens elected Drake mayor for the succeeding year. The consequence of this success was the submission

(a) According to Ware's list of mayors, John Drake did not fill the office until 1403.

of Daniel O'Birne, for himself and his sept, and his voluntary surrender of the castle of Mackenigan to the king. The same day that this victory was obtained, the new church of the Dominicans in Dublin was consecrated by the archbishop of that city.

A.D. 1405. The citizens of Dublin fitted out a fleet of barks, and going on board in June, invaded Scotland at St. Ninian's, where they behaved themselves valiantly, and did much mischief. After this they sailed along the channel, and made a descent into Wales, and having ravaged the coasts, brought from thence the shrine of St. Cubie, which on their return was deposited in Christ-church among other relics there. Both these actions were in aid of king Henry IV., against whom the Scots marched an army into England, and the Welsh under the conduct of Owen Glendower, had rebelled.

A.D. 1406. The citizens of Dublin marched out their forces on Corpus Christi day, and being joined by a body of the country people in the neighbourhood of the town, they advanced against the Irish, whom they routed, slew many of them, took two standards, and as a token of their victory brought home the heads of those they had slain, and fixed them on the city gates.

A.D. 1407. In consequence of the several great services done to the crown of England at divers times by the citizens of Dublin, king Henry IV. on the 5th of March this year granted a licence that the mayor for the time being, and his successors for ever should bear before them a gilded sword, for the honour of the king and his heirs, and of his faithful subjects of the said city, in the same manner as the mayors of London had borne before them.

A.D. 1410. Thomas Butler, prior of Kilmainham, being then lord deputy to the duke of Lancaster, lord lieutenant, marched out of Dublin with 1,500 kerns into the country of the O'Birnes, and was strengthened by a band of citizens under the command of Robert Gallen, then mayor of Dublin. Upon their approach to the enemy, 800 of the kerns deserted to the Irish; so that if the powers of Dublin had not been at hand, it might have proved fatal to the lord deputy, who by that means made an orderly retreat, with the loss only of John Derpatrick.

A.D. 1419. The mayor of Dublin marched out with the lord lieutenant into the county of Wicklow, where they razed Castle-Keivin.

A.D. 1423. On the 28th of July a writ was sent to the mayor, bailiffs, and citizens of Dublin, to raise and march out all the sensible men of the city to resist O'Connor and O'Reily, who with their clans were committing great depredations on the king's subjects, and they (the mayor, &c.) were commanded to meet the archbishop of Dublin, lord justice, at Trim, on the Sunday following. The like writs were sent to the magistrates of Drogheda and other corporations.

On the 25th of October the same year, it was debated in council before Edward, bishop of Meath, lord deputy, that whereas Donald O'Neill Garrow and Mc. Mahon, gathering together a great multitude of Irish enemies and English rebels, had risen up in war, and burned, pillaged, and destroyed the land, and especially the county of Louth, and had slain Sir Thomas Stynt, the king's captain, and many others, and that upon this the said lord deputy and council had appointed the mayor, bailiffs, and commons of Dublin to march out with a great force into Louth, but that the rebels upon the hearing of their coming, had marched off, and the liege subjects of the said parts were relieved. And, as the charge of the citizens in the said expedition amounted to £19 7s. 4d., it was ordered that the said deputy should re-imburse them out of the income of the revenue.

A.D. 1424. On the 9th of June, upon the application of James Butler, earl of Ormond, then lord deputy, it was ordered in council that the mayor and citizens of Dublin should have in prest the sum of £40 to enable them to aid the lord deputy in an expedition against the Mc. Mahons, Magenis's, O'Donnells, and other Irish enemies then in rebellion.

A.D. 1426. It does not appear what services the mayor and citizens did in the two preceding expeditions; but whatever they were, the state took them into consideration, and besides the two sums before paid them, the king on the 6th of February this year granted to them £20 as a reward.

A.D. 1434. The annals of Mary's-abbey relate, that on the 4th of March this year, the mayor and citizens of Dublin humbled themselves and did penance by walking bare-footed through the streets, first to Christ-church, next to St. Patrick's, and at last to Mary's-abbey, humbly begging pardon for the offences they had committed, in the said churches. The crime alleged against them were for committing manslaughter in taking the earl of Ormond prisoner in an hostile manner, and for breaking open the doors of St. Mary's-abbey, dragging out the abbot, and carrying him forth like a corpse, some bearing him by the feet, and others by the arms and shoulders.

(To be Continued.)

An ingenious sparkling plug for motor cars, called the "Seer," has been devised, in which the usual porcelain core has been replaced by a glass thimble. The metal portion of the plug is of the standard pattern, and the glass can be adapted to existing plugs. As a means of viewing the spark while the plug is in place it has obvious advantages, for it is not always certain that a plug needs attention when one unscrews it to see. If the plug is so dirty that the spark cannot be seen through the glass, there is certainly occasion for cleaning, but the advantage of being able to view it from outside is emphasised by the fact that an external spark, when the plug is dislodged, does not occur under the same conditions as in actual use. The heat and the pressure are disturbing factors, and it is, therefore, a decided convenience to see that the plug is doing its work correctly. Tough glass, which is less fragile than porcelain, is used, and experiments have shown that the glass is less likely to get dirty than porcelain, probably owing to its higher degree of polish.

SALE OF MAGNIFICENT JEWELS.

£22,200 FOR A PEARL NECKLACE.

The sale at Christie's of a casket of magnificent jewels "collected during a long course of years by a deceased nobleman, acknowledged to have been one of the greatest connoisseurs of his day," is unique even in the surprising annals of the history of Christie's. In about an hour thirty-one lots were knocked down, the total result being no less than £89,526. The jewels were of regal magnificence, and the quality of the highest. Neither the name of the nobleman who formed the collection nor that of the present owner was made public, although both are perfectly well known. The more important lots included:—

A magnificent pearl necklace, composed of 47 slightly graduated round pearls, of large size and brilliant orient; gross weight, 1,090gns	£22,200
A rope composed of 222 finely graduated round pearls of the highest quality and orient, gross weight, 2,320gns.	16,700
A matchless pear-shaped pearl of rare size and the finest orient, mounted with diamond cap as a pendant, weight about 209gns. net	13,500
A beautiful pearl and brilliant tiara, of coronet form, composed of fifteen large graduated round pearl drops, suspended in brilliant wreaths, each surmounted by a fine pear-shaped pearl and a collet brilliant	10,300
A magnificent brilliant tiara, of classical design, composed of fourteen graduated open cones, each with a large brilliant of rare purity and blue colour	4,500
An emerald and brilliant cluster centre bracelet, with flexible brilliant band of graduated scroll design, a square emerald of fine colour and purity in the centre	2,900
A brilliant collet necklace composed of forty-three large graduated brilliants of the highest purity	2,500
A turquoise and brilliant tour de corsage, composed of a band of eleven oval graduated clusters, with pear-shaped drops	2,450

OSSIAN.

BY JAMES KEEGAN.

Ossian, son of the King, thy name to me
Comes like a burst of magic music, blown
By some stray wand'ring wind from o'er the sea,
That over perfumed woods and vales hath flown,
Gath'ring bright memories of those olden days
When higher rose than all the clash of war,
Or roar of winds and waters, thy proud lays;
Till, as we listen, all the direful jar
Of those wild times sinks hushed before thy strain,
That filled green Erin's land from main to sounding main.

O prince, and bard and knight of high emprise,
Thou wert a ray of glory through the gloom,
A golden morning star in thund'rous skies,
A strong enchanter at whose touch the tomb
Opes wide its gates and renders back its dead,
Whose deeds shall never die while song has power
To spread its halo round the hero's head
(Such is of song supreme the priceless dower);
Who dared and did for virtue, love, and fame,
In those heroic days when life was living flame.

O royal bard, whose deeds were as thy song,
A light sublime to guide the souls of men;
O stainless knight, whose war was waged on wrong,
On throned king and bandit in his den;
O sweet, strong voice! too oft a voice of dole,
No singer e'er had sorrow great as thine;
Ten thousand swords did pierce thy heart, thy soul
Was one dark sea of sadness, one deep mine
Of woe no tongue, or pen, or song could tell—
Wherefore thy strain endures—whence thou didst sing so well,

THE PACKING INDUSTRY OF CHICAGO.

The industry of killing and packing beef, pork, and mutton has reached such proportions at Chicago—the greatest centre of this industry in the world—that the most modern processes have been introduced for the purpose of economising both time and labour, as well as utilising all of the products of the carcase. The Union Stock Yards, where are located some of the largest packing plants, are the most extensive in the world, having accommodations for nearly 125,000 hogs, 20,000 cattle, and 15,000 sheep. Yearly 3,000,000 cattle and 5,000,000 hogs are slaughtered and converted into packing-house products in what is known as "Packing Town," which really forms a section of the yards. A further estimate of the extent of the industry can be gained when it is stated that the space devoted to pens alone comprises 20 acres, while the yards are traversed by 150 miles of railroad track and 20 miles of streets, and the troughs from which the live stock are fed and watered aggregate 75 miles in length. As far as possible, machinery has been employed, with the result that one of the large companies treats 7,000 hogs in a day, where by hand less than 10 per cent of this number can be disposed of. While the killing itself is still done by manual labour, the butcher has every appliance to further his work. The drove of hogs, for example, is passed from the yards into specially-shaped pens, thence forced, single file ,into a compartment where a large metal wheel revolves slowly, but continuously. An attendant seizes each of the animals by one of the hind feet and fastens it to the wheel by a short chain. As it is lifted into the air, the butcher with a thrust of the knife opens the throat; the work occupies but a second. The blood from the carcase flows into a trough, which passes it on to vats, where it is kept until utilised in the manufacture of fertiliser. The carcase revolves on the wheel until it reaches a point where it is automatically removed and fastened to a trolly system, which conveys it into the scraping room. Here it passes through a machine, provided with revolving blades, which removes most of the bristles, preserving them so that they can be later made into brushes. The carcase is then passed into a vat or tank of boiling water, which softens the balance of the bristles so that they can be easily removed by hand. From this apartment it is conveyed by machinery into the chill-room, where it remains for 24 hours before being cut into sections. The carcase, freed from blood and bristles, is now ready for the cleaver, who separates it into the hams and sides for bacon, and removes the fat, which is to be converted into lard and other products. The cutting is done so dexterously that a few minutes suffice for one man to separate the hog into the several portions. Then the hams and bacon are placed in reservoirs filled with a pickling composition, of which each company has its own formula. The other portions for provisions are placed in the salt-room, where they remain from forty to sixty days. The same length of time is required also for the hams and bacon. Following the pickling and salting processes comes the smoking, which is done in compartments where thousands of pieces can be cured at the same time. The lard is extracted, or tried, in immense kettles heated by steam, and while in the liquid state it is forced through pipes into the packing room, the pails and other receptacles being filled by merely opening valves connected with the pipes. It is then allowed to cool, and is ready for shipment. The pork sausage is also largely a machine product, the meat being chopped into fine particles by rapidly revolving blades, and then forced into skins made of the intestines of the hog, these intestinal skins being, of course first thoroughly cleaned by machinery. A part of this machinery which is operated by compressed air, will fill several feet of sausage skin in a few seconds. The links are made by merely tying the skin with strings in sections a few inches in length. Before it is sent to market, sausage is usually hung in the storehouse for a few days to "season."

Except for fastening the hog to the wheel, the killing process, the cutting into pieces, and fastening the packages, the animal passes through the packinghouse with scarcely a touch of the hand. Sheep are treated in a somewhat similar manner, except that the carcases are not made into so many products. When slaughtered they are slung from the floor by chains fastened to the hind feet. The throat is opened by the single thrust of the knife, and the body is conveyed mechanically into the chill room. It is usually kept in this department forty-eight hours, when the hide is removed, and it is cut into halves or quarters as desired. Formerly the skins were sold with the wool on, but the packers have invented a process by which the wool can be easily stripped from the hide. The wool is then cleaned thoroughly in hot water, dried, and packed in bales to be shipped direct to the cloth manufacturer, the hide being sold to the tanner. The mutton intended for shipment is usually placed in the refrigerating department, which may contain 10,000 pieces at one time. Here it can be kept for an indefinite period, as the air is maintained at an even temperature by a refrigeration system which extends to all portions of the department. When the time arrives for shipment, the refrigerator cars can be run into the refrigerator compartments and the meat transferred without exposing it to the warm air. In the modern method of killing cattle the stunning process is still retained. As the beeves are driven into the gangways in single file, men upon elevated platforms knock them senseless by a blow between the horns with a heavy hammer quite similar in shape to the implement used in spiking railroad ties. As the animal falls a door in the side of the gangway is opened, allowing the carcase to slide to the floor below, where it is slaughtered. Here the transferring machine is attached to the body, and as fast as an animal is killed it starts on its journey through the several departments. First comes the chill room, then the compartment where it is skinned. While one man is removing the hide, another cuts off the head and removes the tongue, and another the feet. Next it is halved or quartered in the cleaving room, and is cleaved ready for shipment to the centres of consumption, either in this country or abroad. The carcases are usually left in halves, being transferred to the cold storage department, where, like the sheep, they may be kept for an indefinite period.

The beef affords a much greater variety of products than either the sheep or the hog, although, as already stated, every portion of the animals is put to some use in the modern process. The fat, boiled in large kettles, is resolved into oleo and stearine, oleo, or oil of the beef, forming the basis of butterine and oleomargarine. This and stearine are utilised in some of the soaps which are now manufactured. The blood is converted into fertiliser, and also into buttons of a cheap grade, which are now manufactured in Packing Town, within a short distance of the slaughterhouses. The hoofs, of course, are converted into glue. In the fertiliser compound, practically all of the offal of the beef can now be utilised. Within three or four years the manufacture of soaps and liquid foods has been undertaken on a very large scale in connection with the Chicago packing industry. Scores of products which have beef for the basis are distilled, refined, and placed in bottles and jars in plants adjacent to the packing houses. The principal concerns of Chicago manufacture their own cans for liquid and solid products, and own the factories for making boxes and barrels, while one company operates a mill for making bagging for hams. As 100,000 packages may be filled in a week with liquid and solid food, the economy of this plan is apparent. Even in the preparing of what is known as canned corned beef the tins are filled with the cooked meat by machinery, the contents of each package being moulded so that they fit to a nicety. After filling and soldering, the package is placed in boiling water, then a hole is made in the top to allow the gas to escape, and it is resoldered, keeping the contents in good condition for a period of years in any climate.

The trolley system is being used not only in the abattoirs for transferring the carcases, but for the general transfer of packages and cars from one point to another. The electric motor hauls everything from a truck to a railroad car. The method used for transferring the carcasses usually consists of an overhead bar or rail, along which the trolley is moved, taking its current from wiring or a feed bar. To the trolley are attached short chains ending in hooks, so that the animals can be easily fastened to it. The "hog-killing wheel," as it is termed, also revolves by electric power.

MALACHY II AT CLONTARF.

(The Editor of the "Dublin Penny Journal.")

Sir.—In your issue of June 21st, "History of City of Dublin," it is painful to see the last Ard Righ shamefully maligned, even now at the opening of the twentieth century. One would expect that the researches and writings of O'Donovan, Moore, and Haverty, should have rendered such impossible, but here we have the story of the "Munster fabricators of history" again trotted out, i.e., that Malachy II drew off his force from Clontarf and "was only a spectator of the battle at a distance." The Southern chroniclers added that it was Malachy who informed the enemy of the departure of Donough O'Brien's detachment to ravage Leinster. Harris has it also, from his "unexceptionable vouchers," we may suppose, that Malachy was "for his indolence and inactivity obliged to abdicate in favour of Brian." To any one knowing the history preceding Clontarf, this is not only inconsistent but utterly absurd. Just fourteen years before Clontarf, Brian invaded the Royal Province with a force of Danish Calvary in his van, who were cut off to a man by Malachy in person, and the Southern troops then thought well of retreating. Brian had previously burned Dun Fna Sciath, Malachy's residence in Westmeath, whilst the monarch was absent in Connaught; but he, justly it would seem, on his return, carried fire and sword into the Dalcassian territory.

The truthful southerns also asserted that, at Clontarf, Malachy made overtures to O'Kelly, and the commanders of the Connaught forces to abandon Brian. Even were these statements true, Malachy could well be excused, when we consider his position, and the treatment he had received. There is, perhaps, in our island story, no braver, grander, or more unselfish character than Malachy II; and, as is usual in such cases, none more maligned. If the force of the Ard Righ remained inactive in the early part of the fray, which seems very doubtful, we have the authority of the "Four Masters" (their compilation is said to have largely been from Clonmacnoise annals, some of which were translated by Connell MacGeoghegan, of Westmeath, to whom one at least of the Masters paid a visit during the progress of their work), for quite a different story at its close. There is no use making quotations in proof. Readers interested had better see for themselves, and also Dr O'Donovan's remarks, and those of Haverty and Moore, on this subject.

It seems not a little strange to find upwards of 9,000 Leinster men fighting on the Danish side at Clontarf (the Clonmacnoise annals say that the O'Mores and O'Nolans were not amongst the force; the O'Connors Fahy were, it seems), whilst on Brian's side we find a force of Danes, Dano-Irish, we may conclude. This latter will seem less strange when we remember that Brian Boru's daughter was married to Sitric, Danish King of Dublin; and that Brian himself—he who had in the Book of Armagh signed himself "Imperatoris Scotorum"—was married (his second wife), to the mother of Sitric, widow of Amlaff.—Yours,

TOLKA.

["Tolka" should bear in mind that we are reproducing textually the History as written by Walter Harris; and that therefore the results of later investigations cannot be embodied in it.—Ed., D. P. J.]

LITERARY NOTES.

Mr. Andrew Melrose will shortly publish a new sixpenny illustrated weekly, entitled "Russia." This paper has been established for the purpose of opening and developing commercial relations between Russia and Great Britain. It will also seek by articles on Russian literature, drama, and the arts generally, to make the people of England better acquainted with the Russian people. The editor, Mr. Nicolas Notovitch, is of a journalistic stock, his brother being the founder and proprietor of the well-known Russian paper "Novosti" in St. Petersburg. The size and get-up of "Russia" will be uniform with the "Tatler."

✧ ✧ ✧

Mr. W. T. Stead, editor of the "Review of Reviews," publisher of "Books for the Bairns," and the centre of a hundred other literary activities, was born at Embleton, in Northumberland, on July 5th, 1849. He is the son of a Congregational minister and left school at Wakefield in his fourteenth year to enter a mercantile office as office boy. At the age of twenty-two he became editor of the "Northern Echo," a half-penny daily published at Darlington, and nine years later was discovered by Mr. John Morley, and made assistant editor of "The Pall Mall Gazette," to the editorship of which paper he went in 1883.

✧ ✧ ✧

In 1885 his publication of "The Maiden Tribute of Modern Babylon" won for him three months' imprisonment, and for us the Criminal Law Amendment Act of that year. Ireland was visited in 1886, and a "No Reduction, No Rent, a Plea for the Plan of Campaign" published. In 1888 he went to Russia, and published "Truth About Russia." In 1889 the Pope was interviewed on his attitude towards the new era, and the result published in 1890. That year saw his resignation of the editorship of "The Pall Mall Gazette" and the production of the "Review of Reviews." He published the first number of "Borderland," a magazine for spiritualists, in 1893, which ceased to appear in 1897. He has not since let a year go by without publishing something of sensational interest.

✧ ✧ ✧

A new edition of Poe is soon to appear under the editorship of Professor C. F. Richardson. The edition will be issued by Messrs G. P. Putnam's, Sons, the original publishers of Poe's "The Raven and Other Poems," in 1845; "Tales," in the same year, and 'Eureka," in 1848. Poe's writings will for the first time be arranged in chronological order, under the heads of Poems, Tales, Criticisms, and Miscellaneous. Although Poe has undoubtedly suffered by the unwise perpetuation of merely perfunctory and ephemeral writing, which it is now too late to exclude from his collected works, it has seemed proper to give in this edition all the poems of the 1827 volume—"The Journal of Julius Rodman," and some hitherto uncollected passages from the article on "The Rationale of Verse" as it originally appeared.

✧ ✧ ✧

Signs are not wanting that the American craze for historical novels is going the way of other crazes. The "New York Journal" cits the words of a prominent bookseller," who reports the demand of his patrons among the novel-reading public to be expressed in substance thus: "Give me an old-fashioned, simple love story. I am tired of the historical romance of European life, and American colonial and revolutionary times, and of the swashbuckling heroes." Another American paper recently published a symposium to which several publishers contributed their opinions on the trend of fiction, and some of the best known prophesied that the tale of American domestic life would supplant the historical novel in public favour. A glance at the announcement of forthcoming fiction seems to support their position. The American public has never wearied of the tales of New England life which have appeared periodically ever since American fiction began.

✧ ✧ ✧

The authorities of the Bodleian Library have begun to prepare photographs of many of their treasures for issue to libraries and private buyers. Special attention is drawn to the Palaeographical Collotypes, and it is hoped that these will be taken largely by other libraries, it being admitted that there is no chance of their being bought by the general public in numbers sufficient to cover the cost of a negative and even twenty copies. The following photographs of Shelley relics can now be obtained:—

1s 6d—Miniature of Shelley as a boy, from the copy by Reginald Easton.
1s 6d—Portrait of Shelley, reduced from a crayon drawing.
1s 6d—Mary Wollstonecraft Shelley, from a portrait by Reginald Easton.
1s—Shelley's Sophocles, which he had with him when drowned. (The edges are supposed to show the mark of his thumb, incrusted in brine).
1s—Shelley's watch and seals.
1s—The guitar given by Shelley to Mrs. Jane Williams.

✧ ✧ ✧

The humours of American publisher's advertisements have already been noticed in our columns. One firm prefaces a list of its books with the following:—

Perhaps you are going away soon. In that case you will want to take some reading with you.
Light reading, probably; the kind for a swaying hammock or a drifting boat.
Here are some suggestions that may help you.

But the show of disinterested and friendly advice is sacrificed at the end of the list:—

P.S.—These books are just as well worth reading if you're going to stay in town.

Another firm displays the following:—

"Their cause I plead—plead it in heart and mind,
A fellow feeling makes one wondrous kind."

When old David Garrick uttered these words he consciously or unconsciously struck the keynote of all human sympathy. And it is this sympathy that, in ——'s new novel, "——," touches a responsive chord in every heart—a fellow feeling induced by the memory of some inward battle fought and won—or lost. The enthusiastic reception accorded this book is reflected below:—

"A classic."—"Philadelphia Item."
"Exceptionally good."—"New York Tribune."
"This novel is quite the crown of the author's art."—"Glasgow Herald."

✧ ✧ ✧

Few adjectives are so abused in criticism as "great." Writers speak of a great book, a great author, forgetting that the word implies a scale of merit—implies it often to destroy it. Prof. William P. Trent, of Columbia University, has been endeavouring to make a scale which rash writers might keep in mind, and his remarks are not uninteresting. From this article in the "International Monthly" we construct the following table:—

Great writers—Homer, Sophocles, Virgil, Goethe, Dante, Shakespeare, Milton, Moliere, Cervantes, etc. To this class Prof. Trent is inclined to add Balzac and Hugo.

Writers of great power, but not universal in their genius—Pindar, Lucretius, Petrarch, Tasso, Ariosto, Montaigne, Chaucer, Spenser, Schiller, Heine, Babelais, Gibbon, etc.

Writers whom one cannot call supreme, although one would as little think of calling them minor—Catullus, Horace, Leopardi, Marlowe, Ben Johnson, Keats, Browning, Byron, Lamb, Dryden, Pope, Gray, Burns, Coleridge, Tennyson, Wordsworth, Shelley, Landor, Hawthorne, etc.

Prof. Trent adds that if his classification has been made on correct lines, it needs filling out, and requires many qualifications. "And we must always remember that any scheme of classification is bad if it tends to make our judgments hard and fast, if it induces us to think that we can stick a pin through a writer, and ticket him as an entomologist does an insect. But if we use such a scheme intelligently, it may prove useful, if only by stimulating us to candid objections, for candid objections imply honest thought, and honest thought on such a noble subject as literature can not but be beneficial."

✧ ✧ ✧

In an article on Bibliomania in the July "Cornhill" Mr. Andrew Lang gives the following advice on the subject of book-collecting in general:—"The lowly collector desires to acquire books of value. He has, I think, three courses open to him. First, he can collect what people do not desire to-day, but will desire to-morrow. . . . Let him 'get in on the ground floor.' Let him collect the juvenilia of Mr. Stephen Phillips—if there are any—or the manuscripts of novels which fail to-day, but will be esteemed by posterity. I can let him have one or two of my own, at a low figure, being anxious to realise. American collectors may apply. By such artful prescience of a future demand the humble collector may amass things that will not disappoint him at his sale. But it needs heaven-sent moments for this power of forecast. The second plan for the impoverished bibliophile is to make a collection valuable in the mass, though not very expensive in detail. This may be done by cleaving to a single subject. . . The third way is to consider how much you can afford to spend yearly on books—not modern things, but books—and then, avoiding waste on dubious trifles, to purchase only one really good thing every year or half-year, or as your finances may permit. This is the most satisfactory plan of all, and the last which I could practise."

✧ ✧ ✧

The little controversy which recently took place in the pages of the "Academy" between Mr. W. B. Yeats and Mr. Arthur Symons on the question of the delivery of verse in the singing voice has been made the subject of an able article in the New York "Nation." The writer supports Mr. Symons in his doubts concerning Mr. Yeats's advocacy of the psaltery:—

There was a time, probably, when all poetry was sung to tunes as simple as those which are still heard in "traditional Irish singing." In fact, the recitation of poetry without music presupposes almost as advanced a civilisation as does the reading of poetry. But it should be remembered that this is a very different matter from the reform proposed by Mr. Yeats. The ancients and the Irish peasantry had quite distinctly in mind either song or speech—never a third mode which lay between the two and was used for the rendering of poetry. If the traditional ballad tunes are of the simplest kind, it is not to favour a theory of Mr. Yeats's, but merely because the composers of these tunes knew no more elaborate music. It cannot be too strongly urged that the real successors of the singing poets are Schubert and Mozart and Wagner—the great song writers and opera composers. Whenever poetry needs the enhancement of music, the composers will claim it for their own. The example of Richard Strauss's elaborate recitative compositions will hardly encourage them to revive among us "the traditional Irish singing."

Like many other well-intentioned movements, this revival of "speaking to music" is merely an amusing bit of archaism, which cavalierly disregards the reasons for things as they are. When poetry filled a large social function, was recited before audiences, and was practically never read, it naturally required the aid of music. Now that poetry has become an individual enjoyment—a matter chiefly for the closet—it has largely dispensed with melody. Meanwhile long generations of refined social intercourse have probably greatly improved the speaking voice; and in our time, in the case of Booth at least, and in Bernhardt before her mannerisms overtook her, we have heard a declamation so varied, so subtle and harmonious, that beside it any form of intonation—any thing, in fact, but the most perfect melody—must have seemed crude and inartistic. We are no longer a singing people, and the fact is to be deplored; but our regeneration lies along the lines of perfected music and of intelligent declamation, not along those of an archaistic return to outworn musical modes. Cantilation, at least, will not win us back from prose to poetry.

SCIENTIFIC TOPICS.

The American Museum of Natural History recently acquired a group of five caribou, which hail from the Barren Islands of Alaska, and are of an entirely new species. These rare animals were brought home by the Andrew J. Stone expedition.

✧ ✧ ✧

Lord Kelvin is busily engaged in compiling the specifications of two new patents. The completion and patenting of these devices will bring the number of patents controlled by the Kelvin syndicate to forty-nine, a large number of which deal with appliances which are now regarded as indispensable to the equipment of ships in every country of the world. The success with which the veteran physicist has exploited the commercial side of his inventions is shown by the circumstance that upon the latest warship added to the Japanese navy there are no less than fourteen Kelvin appliances.

✧ ✧ ✧

Professor Charles Whitney Carmen, who has been connected with a number of educational institutions in the Western States of the Union, is the inventor of a new electrical apparatus for the projection of pictures impressed on an opaque substance, on to a screen to be viewed by a number of persons simultaneously. This dispenses with the necessity of the special preparation of the lantern slide, as pictures of all kinds, and objects themselves, coming within the required dimensions, can be placed in the machine and shown in enlarged form on the sheet. This machine was recently shown before the members of the Chicago Electrical Association for the first time, and its work was regarded as entirely satisfactory.

✧ ✧ ✧

Professor J. C. Bose read a paper at a meeting of the Linnean Society, on electric response in ordinary plants under mechanical stimulus, and performed a series of experiments showing electric response for certain portions of the plant organism, which proved that as regards fatigue, behaviour at high and low temperatures, the effects produced by poisons and anaesthetics, the responses are identical with those hitherto held to be characteristic of muscle and nerve and of the sensitive plants. He drew the final conclusion that the underlying phenomena of life are the same in both animals and plants, and that the electrical responses which he had demonstrated are but the common physiological expression of these.

✧ ✧ ✧

The numerous accidents to workmen in establishments where belts are used has recently brought about the stringent application of a French law, forbidding the removing or replacing of a strap by hand while the machinery is in motion. In order to obviate the waste of time consequent upon the stopping of the machinery, an association of French manufacturers has announced an open international competition for the best fixed belt mounter. The invention should be designed for simple and not for conical pulleys, and must comply with the following conditions—1, It must be simple, strong, and occupy little space, easy to fix and use; 2, not dangerous in working; 3, convenient for any speed, width, or position of belt; 4, able to throw the belt off or on; 5, sufficiently low in price to allow of its wide use. Competitors are invited to send a full description of their invention, accompanied, if possible, by a model, or at least by satisfactory illustrations, to the President de l'Association des Industries de France contre les Accidents du Travail, No. 3 rue Lutece, Paris, prior to October 1, 1902.

✧ ✧ ✧

Bologna has been having a sensation in the rumour that its great leaning tower, the pride of the city, is weakening, and may fall, says the "New York Tribune." This has caused so large an influx of visitors that it is said that the hotel keepers may not be wholly guiltless in regard to the rumour. The city has two of these square towers, the Asinelli, which is 315 feet high, and was erected in 1109, and its rival, the Garisenda, which was built one year later, and was originally much higher, and is rendered peculiar by its decided inclination to one side. It is now only 153 feet high, the width of one side is 23 feet, the walls at the base are 6 feet 6 inches thick, while higher up they are 4 feet 9 inches. Its origin is somewhat obscure, but it was certainly intended to outdo the Asinelli, and both were for retreat in troublous times. Some say the original intention was to make it lean, but others contend that either the ground has settled or there was a defect in the engineering. This unique relic was so little thought of by one of its late possessors that it was sold for 220 lire, something less than 44 dollars.

✧ ✧ ✧

When we consider the wonderful adaptation of means to an end, the prevision and the ingenious methods employed by many sorts of insects in carrying out the purposes and objects of their lives, we are indeed inclined to credit them with intelligence of a high order. It is only after we are forced to recognise the extreme limitations of this so-called intelligence, its inflexible nature, and its inability to adapt itself to other conditions than those under which it is habitually, or ordinarily exercised, that we recognise how much is wanting in the behaviour of insects to furnish conclusive evidence of their possession of any intellectual capacity whatever. Light, for example, attracts insects in general, as it does also plants, but it does not necessarily follow that vision, in the human sense of the word, belongs either to plants or to insects. The attraction of light governs the growth, the inclination of stems and the position of leaves; the plant reaches, so to express it, out toward the light with all the power it has—yet it does not see. The insect has eyes or organs of vision (quite different from ours), but all we absolutely know about insects is that they are influenced by light, and to aver, without more definite knowledge on the subject, that they do anything so highly physical as seeing (as human beings see) is not only unscientific, but not at all consistent with well ascertained facts. How unintelligent is the impulse the insect shares with the plant in seeking the light, is shown by the inane manner in which moths or beetles will flutter about a white ceiling, or plunge into a flame.

✧ ✧ ✧

Intelligence does, indeed, direct the actions of the bee in building her comb and filling it with honey, and the ant in her wonderful domestic economy; but it is an intelligence quite as much above the plane of consciousness of the bee and of the ant, as it is above that of the orchid, for instance, in the admirably ingenious manner in which the flower enlists the aid of the insect in conveying the pollen. Reflex actions of this kind mimic intelligence on the part of the actor, something perhaps as do the movements of the boat, said to have been invented by Tesla, which, worked by etheric waves, proceeds in any given direction, turns or dives beneath the surface of the water upon which it floats, not in obedience to any directing power on board, but at the will of a person operating a battery on the shore. The stimuli of whatever nature, light, heat, some form of electric action, magnetism, or even more subtle, occult forces which move insects, seem to have the unvarying and unthinking nature of those supplied to mere machinery: the result is much the same as in an automation, blind perseverance in a certain limited number of actions it is designed to prform.

✧ ✧ ✧

Take from the cell excavated by a digger wasp, the grasshopper she has placed there, and upon which she has laid her egg, and the wasp, after entering and exploring the cell, will, instead of restocking it and laying another egg, calmly close it up, just as she would have done had it not been robbed. Cut off the antennae by which the wasp (Sphex maxillosus) drags a cricket to her burrow, and Sphex, unable to get her accustomed grip, leaves her quarry, and goes off in search of crickets which have not lost their antennae. It does not occur to her that the creature has legs as well as antennae. The sand wasp (Bembex) can unerringly return to the entrance to her cell from the distance of a mile or more, over a featureless sandbank, and although her burrow is covered over with sand, and to human eyes entirely indistinguishable from the parts surrounding it, the wasp can alight upon the exact spot, scratch away the sand and enter the nest; but remove the surface, exposing the cell and the larvae, and Bembex is entirely at a loss, unable to recognise either her own nest or her own offspring. Nothing can more perfectly show how an interaction of forces, without a conscious, directing intelligence, can, in a certain particular way, achieve a marvellous result, while in every other it results in confusion and failure. The unusual happens, and an organism constituted as is the Bembex, is thrown out of gear, much as would be a machine in which a cog-wheel has failed to engage the answering cogs of another wheel.

✧ ✧ ✧

Many plants shift the position of their leaves as the direction of the light changes. This power is possessed to a considerable degree by some of our common house plants. If an oxalis shrub, for instance, is exposed for a time to the light in a window, and then turned half way round, an observer can by watching, see the leaves readjust themselves to their new position in relation to the light. Certain movements of plants seem to testify to the possession by the plants of something answering to the tactile sense in animals. A number of plants besides the common sensitive plant, exhibit apparent sensibility to external impressions and manifest also the power of transmitting the perception of these impressions from one part of the plant to another. In addition to this power, there are plants which possess a power of discrimination that certainly seems to have as just a claim to being called intelligent as are the actions of some insects.

✧ ✧ ✧

The Pittsburg, Fort Wayne, and Chicago Railroad crosses the Alleghany River at Pittsburg on a bridge of the old-style lattice-work construction. The company has decided to replace it with a structure of the "double-deck" pattern, which will be used for a railway and highway. It is to be erected on the original piers of masonry. To prevent interruption of train service, it was decided to construct wooden piers and move the present bridge upon these. Although the mass of metal weighed over 2,000 tons, the actual time of removal occupied less than half a day. The Pittsburg section had to be changed twenty-three feet, and the Alleghany section forty-eight feet. The bridge was moved in a manner somewhat similar to that used in moving a house, a system of rollers being used. There was a set of these rollers at each end and at each pier. Beneath the rollers were placed a number of pieces of rail, and between the bottom of the bridge and the rollers, rail was also used. Three hoisting engines and rope and pulley blocks pulled the bridge to its new position, and had not extraordinary precaution been used, it could have been moved in much less time. The bridge was moved about five feet at a time, and then given a thorough examination before being moved again. This operation was repeated until the bridge reached its new bed. Structural ironworkers to the number of 100, and 150 carpenters, were used on the work, and after the removal had been accomplished, about 125 men changed the network of the tracks and switches at each end of the bridge by shifting them with crowbars. This part of the work took more time than the moving of the bridge.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1793.)

DUBLIN, MAY 28, 1794.

Yesterday the case in which Michael Daly Esq., of Mount Pleasant, in the county of Galway, was plaintiff, and Arthur Henry Daly, Esq., his son, defendant, was decided in the Court of King's Bench in favour of the defendant, ofter a laborious hearing of twelve days.

On an information filed ex offiicio by his Majesty's Attorney-General, the proprietors of a Belfast newspaper, called the "Northern Star," were tried this day for publishing a seditious libel on the 15th of December, 1792. Wm. M'Cabe, Wm. Trennant, Wm. Magee, R. Caldwell, John Boyle, John Haslet, Sam. Nelson, Robert Sims, Wm. Sims, Gilbert Macleveene, and John Tisdall, having been proved to be sleeping proprietors, were acquitted; but John Rhabb, the printer and publisher, was found guilty. They were tried by a special jury of the county of Antrim.

Same day the Attorney-General filed an ex-officio information against Dr. Drennan.

30.—John M'Dermott was brought up to receive sentence. Messrs. Simon Butler, M'Nally, Geoghegan, M'Dermott, and Costello severally offered points in arrest of judgment, which were over-ruled by the Court. Sentence of death was then passed on the prisoner by Mr. Justice Boyd, and he was thereupon remanded to prison.

The Attorney-General applied to make a rule for an attachment absolute, against the printer of the "Morning Post," for having reflected on the trial of Rowan while pending before the Court. The rule was made absolute.

ELECTION OF RECORDER.

MAY 30.

This day a post-assembly was held at the Exhibition-house, William street, for the purpose of electing a Recorder of this city, in the room of Baron George, who had resigned on his promotion to the Exchequer Bench.

The first candidate sent down by the Board of Alderman, as a fit and proper person to fill the office of Recorder, for the approbation of the Common Council, was Mr. Ormsby, a young barrister of considerable ability. On the question being put, a ballot was demanded—

Black Beans	67
White	57

Mr. Day, the chairman of Kilmainham (who had never publicly declared his intention of becoming a candidate till the morning of election), was next sent down. Another ballot took place—

Black Beans	76
White	47

Mr. Whitestone was then put in nomination by the board. In counting the beans there appeared—

Black Beans	81
White	40

Mr. Worthington followed—

Black Beans	59
White	57

At length Mr. Walker was sent down, when the numbers were—

White Beans	63
Black	57

Whereupon Mr. Walker was declared duly elected.

It is but justice to mention that Mr. Walker is a gentleman who has never intermeddled in politics, and so far from connecting himself with parties, has always avoided them. He is without attachment either to opposition or to administration, and, of course, possesses that neutrality which should always be the principle, as it is always the possession, of a judge.

JUNE 5.

Yesterday, being the anniversary of the birth of his Most Gracious Majesty, was observed as a holiday in all the public offices, and a day of rejoicing among all the citizens.

The Royal flags were displayed, the great guns in the Park were fired, and the garrison was drawn out, and answered the rounds from the battery by as many vollies.

His Excellency the Lord Lieutenant held a Levee at the Castle, which commenced at three o'clock, when an ode was performed.

In the evening he gave a State dinner, at which were present the Lord Chancellor, the Lord Chief Justice of the Court of King's Bench, the Speaker of the House of Commons, the Commander-in-Chief., etc., etc. The Castle was most brilliantly illuminated.

The Duke of Leinster has accepted the command of the Kildare militia, which are to be embodied immediately.

A few days since twenty-seven defenders were apprehended in the county of Longford, eight of whom were admitted to bail, and nineteen remain in prison.

7.—This day the unfortunate M'Dermott was executed at the commons of Kilmainham, pursuant to his sentence, for a riot and burglary at Castle Tenison, in the county of Roscommon, in June, 1793.

Same day the new Recorder, Mr. Walker, presided, for the first time, at an adjournment of the Quarter Sessions, in the Tholsel Court.

One M'Dermott, a near relation to the above unhappy man, has been lately committed to prison, on a charge of being a leader of the defenders.

14.—Last night the guns at the Park were fired in consequence of Lord Howe's complete victory over the French fleet. The battery was answered by three feu-de-joyes from the regiments in garrison, which were drawn out on the quays, and the night was concluded by a general and most brilliant illumination.

A number of unthinking youths attacked the police watch-house in St. Andrew's street, with stones for more than half an hour, during which time the policemen who were in it fired upon them several shots, from of which a person, then passing, was wounded in the shoulder; the ball was shortly after extracted, and the young man is in a fair way of recovery. The arrival of one of the Sheriffs prevented further mischief, as the assailants immediately dispersed.

Wednesday last being election day for master and wardens of the Corporation of Taylors, Mr. Alexander Bell, of Mary's abbey, was chosen master, and Messrs. Sweeny and Hautenville wardens.

16.—The examination for the vacant Fellowship in Trinity College closed on Saturday last; and yesterday Mr. Usher was declared the successful candidate.

DUBLIN, JUNE 23.

ADDRESS TO THE KING.

At a general assembly of the Right Honourable the Lord Mayor, Sheriffs, Commons, and Citizens of the city of Dublin, held on the 23rd of June, 1794, it was unanimously resolved that the following address be presented:—

To the KING'S Most Excellent MAJESTY.

The humble Address of the Lord Mayor, Sheriffs, Commons, and Citizens of the city of Dublin, in Common Council assembled.

Most Gracious Sovereign—

Permit your most dutiful and loyal subjects, the Lord Mayor, Sheriffs, Commons, and Citizens of the city of Dublin, in common council assembled, to take part in the universal congratulations of your people upon the signal victory obtained on the 1st day of June instant, by your Majesty's fleet, under the command of Earl Howe.

The manifold advantages, too conspicuous to require illustration, and too important to be forgotten, so gloriously won by the unexampled bravery and alacrity of your Majesty's forces, in executing your wise counsels, demand the grateful acknowledgments of the whole kingdom, and particularly of this city, and have made it manifest through the different parts of the world, where your Majesty's arms have been resplendent, how dear your just and mild administration hath rendered you to a free and grateful people, whom, animated by a zeal for your service, no dangers can terrify, no difficulties dishearten.

And we doubt not, that under the protection of Divine Providence, the utmost efforts of an infatuated and desponding enemy, will be baffled and frustrated, by your Majesty's known wisdom and experience, through the abilities and activity of your Ministers, the courage and conduct of your commanders, and the intrepidity of your forces.

We cannot sufficiently express our most dutiful acknowledgments for your Majesty's peculiar favour towards us, in having, at a juncture just as the present, been pleased to be represented here by a Chief Governor, who, every way formed to engage our confidence, does, in the most ample means, possess it.

And we trust that, in a day of trial, we shall show ourselves steadfast in that loyalty, for which our city hath been distinguished, and be as ready to make proof of it, as we have been at all times to cherish it.

In testimony whereof, we have caused the common seal of the said city to be here affixed, the day and year first above written.

Which address having been transmitted to his Majesty by his Excellency the Lord Lieutenant, the following most gracious answer was returned:—

GEORGE R.

I have seen with satisfaction the assurances of loyalty and attachment contained in the dutiful and affectionate address of my faithful city of Dublin. Their cordial congratulations on the late glorious victory obtained by my fleet, under Earl Howe, and their zeal for the vigorous prosecution of the just and necessary war in which we are engaged, prove how sensible they are of the blessings derived under our excellent constitution, for the preservation of which we are now contending.

G. R.

MARRIAGES.

June, 1794.—At Athlone, Anthony Pine, late of the city of Cork, Esq., to Miss Mary SEproule, daughter of William S., of Athlone, Esq., both of the people called Quakers.

In London, the Hon. Mr. Steward, eldest son of Lord Londonderry, to Lady Amelia Hobart, youngest daughter to the Earl of Buckinghamshire.

At Whigsborough, King's County, Robert James Enraght, Esq., High Sheriff of said county, to Miss Drought, eldest daughter of John D., of said place, Esq.

(To be continued.)

NARROW WATER CASTLE

ON THE RIVER NEWRY.

Narrow Water Castle, the ruins of which s they stood fifty years ago are shown ı the above picture, and which stand ıuch the same to-day, is situate on the anks of the Narrow Water river, a mile nd a half north-west of Warrenpoint. he castle, which overhangs the river on point where the stream is contracted by projecting rock, is supposed to have been built in the fifteenth century by the Duke of Ormond. It consists principally of a square battlemented tower; and though converted to the inglorious uses of being successively a salt works and a dog-kennel, it forms a picturesque feature in the vale of the river, and commands a noble view of the gorgeous basin of Lough Carlingford, overhung by the mountains of Carlingford and Mourne. The Narrow Water river is about 5¼ miles in length, and consists of the lower portion of the Newry river, running from Newry to the head of Carlingford Lough at Warrenpoint, and dividing Down from Armagh and Louth. It is all tidal, comprises a considerable area of tideway, and connects the Newry Canal navigation with the Irish Sea.

ORIGIN AND MEANINGS OF IRISH FAMILY NAMES.

BY JOHN O'DONOVAN.

II.

In returning to the subject of the origin of Irish family names, I feel it necessary to adduce two or three additional instances of the erroneous statements put forward by Mr. Beauford, as they have had such an injurious influence with subsequent Irish writers on this subject:—

3. "Osragii, derived from Uys raigagh, or the kingdom between the waters, the present Ossory, called also Hy Paudruig, or the district of the country between the rivers, etc., the hereditary chiefs of which were denominated Giolla Paudruig, or the chief of the country between the rivers, called also Mac Giolla Padruic," etc.

This seems an exquisite specimen of etymological induction, and I have often heard it praised as beautiful and ingenious; but it happens that every assertion made in it is untrue! Osragii is not the Irish name of this territory, but the Latinized form of the name of the inhabitants. Again, Osragii is not compounded of Uys and raigagh; and even if it were, these two vocables are not Irish words, and could not mean what is above asserted, the kingdom between the waters. Again, Ossory was never called Hy Pau-druic, and even if it were, Hy Pau-druic would not mean "district of the country between the rivers." Next, the hereditary chiefs were not denominated Giolla Paudruic, but Mic Giolla Paudruic (a name afterwards anglicized Fitzpatrick), from an ancestor called Giolla Paudruic, who was chief of Ossory in the tenth century, and who is mentioned in all the authentic Irish annals as having been killed by Donovan, the son of Imar, king of the Danes of Waterford, in the year 975. Moreover, Giolla-Phadruic, the name of this chieftain, does not mean "chief of the country between the rivers," as Mr. Beauford would have us believe, but servant of Saint Patrick, which, as a man's name, became very common in Ireland shortly after the introduction of Christianity, for at this time the Irish were accustomed to give their children names not only after the Irish apostle, but also after other distinguished saints of the primitive Irish church; and the names of these saints were not at this period adopted as the names of the children, but the word Giolla, or Maol, servant, was generally prefixed to the names of the saints to form those of the children: thus, Giolla Padruic, the servant of Saint Patrick; Giolla Ciarain, the servant of St. Kieran; Giolla Caoimhghin, the servant of St. Kevin; Giolla Coluim, the servant of St. Columb, etc.

4. "Conmaicne Mara, or the chief tribe on the great sea, comprehending the western parts of the county of Galway on the sea coast; it was also called Conmaicne ira, or the chief tribe in the west, and Iar Connaught, that is, west Connaught; likewise Hy Iartagh, or the western country; the chiefs of which were denominated Hy Flaherty or O'Flaherty, that is, the chief of the nobles of the western country, and containing the present baronies of Morogh, Moycullen, and Ballinahinch."

This is also full of bold assertions, unsupported by history or etymology. Conmaicne does not mean the chief tribe, but the race of a chieftain called Conmac; Conmaicne mara, which is now anglicised Connamara, was never called Conmaicne ira, and Conmaicne mara and Iar Connaught are not now coextensive, nor were they considered to be so at any period of Irish history. Conmaicne mara was never called Hy Iartagh, and O'Flaherty was not the ancient chief of Conmaicne mara, for O'Flaherty was located in the plains of Moy Seola, lying eastwards of Lough Corrib, until he was driven across that lake into the wilds of Connamara by the De Burgos in the 13th century. Again, the surname O'Flaherty does not mean "the chief of the nobles of the western district," but is derived from Flaithbheartach, who was chief of Hy Briuin Seola, not of Conmaicne mara, in the tenth century; and this chief was not the first who received the name, for it was the name of hundreds of far more distinguished chieftains who flourished in other parts of Ireland many centuries before him, and O'Flaherty became the name of a far more powerful family located in the north of Ireland; which shows that the name has no reference to north or west, but must look for its origin to some other source. Now, to anyone acquainted with the manner in which compound words are formed in the Irish language, it will be obvious that the name Flaithbheartach is not derived from a locality or territory, but that it is formed from flaith, a chief, and beart, a deed or exploit, in the following manner: flaith, a lord or chief; flaithbheart, a lordly deed or exploit; and by adding the adjective and personal termination ach (which has nearly the same power with the Latin ax), we have flaithbheartach, meaning the lordly-deeded, or a man of lordly or chieftain-like exploits. According to the same mechanism, which is simple and regular, are formed several other compound words in this language, as oirbheart, a noble deed; oirbheartach, noble-deeded, etc.

Finally, Mr. Beauford is wrong in the extent which he gives to Conmaicne mara. He is wrong in giving Morogh as the name of a modern barony, for there is none such in existence; and we have the most indisputable evidence to prove that the territory of Conmaicne mara, now called Connamara, never since the dawn of authentic history comprised more than one barony. It is to be regretted that these etymological phantasies of Mr. Beauford about the country of O'Flaherty are received as true history by the O'Flahertys themselves, and repeated in modern topographical and literary productions of great merit.

I shall give one specimen more of this writer's erroneous mode of explaining topographical names, and I shall then have done with him.

5. "Cairbre Aobhdha, or the district on the water, from cairbre, a district, and aobhdha, waters; the present barony of Kenry, in the county of Limerick. This country was also denominated Hy dun na bhan, or the hilly district on the river: the ancient chiefs whereof were called Hy Dun Navan or O'Donovan, that is, the chiefs of the hilly country on the river."

Here every single assertion comprises a separate error. Cairbre does not mean a district, and aobhdha does not mean waters. This territory was not otherwise called Hy Dunnavan; and even if it were, that name would not mean "the hilly district on the river." Again, the territory of Cairbre Aobhdha is not the barony of Kenry, neither is it a hilly district, but one of the most level plains in all Ireland; and lastly, the name O'Donovan does not mean "chiefs of the hilly district on the river," for this family name was called after Donovan, the son of Cathal, chief of the Hy Figeinte, a people whose country extended from the river Shannon to the summit of Slieve Logher, in the county of Kerry, and from Bruree and the river Maigue westwards to the verge of the present county of Kerry. He flourished in the tenth century, and was killed by the famous Brian Boru in a pitched battle, fought in the year 977; and his name was derived, not from his "hilly country on the river" Maigue, as Mr. Beauford would have us believe (though it must be acknowledged that he resided at Bruree, which is a dun-abhann, or dun of the river), but from the colour of his hair: for the name is written by Mac Firbis and others Dondubhan, which signifies brown-haired chief.

I trust I have now clearly proved the fallacy of Mr. Beauford's mode of investigating the origin and meaning of the names of Irish families and territories. It is by processes similar to the five specimens above given that he has attempted to demonstrate his theory, that the names of Irish tribes and families were derived from the territories and localities in which they dwelt, a theory never heard of before his time; for up to the time of the writers of the "Collectanea de Rebus Hibernicis," all were agreed that the Irish tribes took their surnames from certain distinguished ancestors, while the Saxons and Anglo-Normans took theirs generally from their territories and places of residence. For further information on this subject I refer the reader to Verstegan's work, entitled "Restitution of Decayed Intelligence" and Camden's "Remains." The learned Roderic O'Flaherty, in his Ogygia Vindicated, p. 170, speaks on this subject in terms which Mr. Beauford could not have mistaken. "The custom of our ancestors was not to take names and creations from places and countries, as it was with other nations, but to give the name of the family to the seigniory by them occupied."

To prove that I am not alone in the estimate that I have thus formed of the speculations of Mr. Beauford, I shall here cite the opinions of a gentleman, the best acquainted of all modern writers with this subject, the venerable Charles O'Conor, of Belanagare, who in a letter to the Chevalier Thomas O'Gorman, dated May 31, 1783, speaking of two tracts which he had published, to refute some errors of Dr. Ledwich and Mr. Beauford says:—

"Both were drawn from me to refute very injurious as well as very false representations published in the 9th number of the same Collectanea by Mr. Ledwich, minister of Achaboe and Mr. Beauford, a schoolmaster in Athy. Little moved by anything I have written against these gentlemen, the latter published his Topography of Ireland in the 11th number, the most flagrant imposition that I believe ever appeared in our own or in any age. This impelled me to resume the subject of our antiquities, and add the topography of Ireland as divided into districts and tribes in the second century; a most curious record, preserved in the Lecan and Glendalough collections, as well as in your Book of Ballymote. I have shown that Beauford, a stranger to our old language, had but very slight material for our ancient topography, and distorted such as he had to a degree which has n

parallel, except perhaps in the dreams of a sick man in a phrensy." *

Again, the same gentleman, writing to his friend J. C. Walker on the same subject, expresses himself as follows:—

"Mr. Beauford has given me satisfaction in his tract on our ancient literature, published in the Collectanea, and yet, in his ancient topography of Ireland, a book as large as his own must be written to detect his mistakes."

It is quite obvious from the whole testimony of authentic Irish history that the names of tribes in Ireland were not derived from the territories and localities in which they dwelt, but from distinguished ancestors; for nine-tenths of the names of territories, and of the names of the tribes inhabiting them, are identical. The tribe names were formed from those of the progenitors, by prefixing the following words:—

1. Corc, Corca, race, progeny, as Corc-Modhruadh, now Corcomroe in Clare, Corca Duibhne, now Corcaguinny in Kerry.
2. Cineal, race, descendants; cineal Eoghain, the race of Eoghan; cineal Conaill, the race of Conall. This word is translated Genus throughout the Annals of Ulster.
3. Clann, children, descendants; as clann Colmain, the tribe name of a great branch of the southern Hy-Niall.
4. Dal, tribe, descendants, as Dal-Riada, Dal-Araidhe Dal-g-cais, Dal Mesincorb, etc. This word has been explained by the venerable Bede, and from him by Cormac Mac Cullenan, Archbishop of Cashel, as signifying part or portion in the Scottic language; but from the manner in which it is used in Irish genealogies, this would appear to be but a secondary and figurative meaning. O'Flaherty seems to doubt that this word could be properly translated part; but Charles O'Conor, who gave much consideration to the subject, writes in a note to Ogygia Vindicated, p. 175, "that dal properly signifies posterity, or descent by blood; but in an enlarged and figurative sense it signifies a district, that is, the division or part allotted to such posterity: that of this double sense we have numberless instances, and that in this second sense Bede's interpretation is doubtlessly admissible."
5. Muintir, family, people; as Muintir Murchadha, the tribe name which the O'Flahertys bore before the establishment of surnames.
6. Siol, seed, progeny; as Siol Aodha, seed of Hugh, the tribe name of a branch of the Mac Namaras in Thomond; Siol Maoluidhir, the progeny of Maeleer, a great tribe in Leinster, who gave name to the territory of Shelmalier, in the county of Wexford.
7. Tealach, family; as Telach Eathach, the family of Eochy, the tribe name of the Magaurans in Breffney.
8. Sliocht, posterity; as Sliocht Aodha Slaine, the progeny of King Hugh Slany in Meath.
9. Ua, grandson, descendant: nominative plural, ui; dative or ablative, uibh. This prefix in its upright uninflected form appears in the names of Irish tribes oftener than any of the other seven. Some ignorant Irish scribes have supposed that it signifies a region or country, and some of the modern transcribers of Keating's History of Ireland have taken the liberty to corrupt it to aoibh, a form not to be found in any ancient or correct MS. In support of the meaning above given may be adduced the high authority of Adamnan, abbot of Iona in the 7th century, who, in his life of his predecessor St. Columbkille, invariably renders ua, ui, uibh, nepos, nepotes, nepotibus, in conformity with his habitual substitution of Latin equivalents for Irish tribe names, as often as he found it practicable. Thus, in the 16th chapter of the second book, he renders Ua Briuin, nepos Briuni; in the 5th chapter of the third book he translates Ua Ainmirech, nepos Ainmirech; in the 17th chapter of the same book he translates Ua Liathain, nepos Liathain; in the 49th chapter of the first book he renders Ui Neill, nepotes Nelli, i.e., the race of Niall; and in the 22nd chapter of the same book he translates Ui Tuirtre, nepotes Tuitre.

We have also for the same interpretation the authority of the annalist Tigernach, who, in his Annals of Ireland at the year 714, translates Ui Eachach (now Iveagh, in the County Down), nepotes Eochaidh.

On this subject it may not be uninteresting to the reader to hear the opinion of the learned Roderic O'Flaherty. Treating of the Hy Cormaic, a tribe located near Lough Foyle, in the present county of Londonderry, he says—

"Hy or I (which calls for an explanation) is the plural number from Hua or O, a grandson, and is frequently prefixed to the names of progenitors of families, as well to particularise the families as the lands they possess, as Dal, Siol, Clann, Kinel, Mac, Muintir, Teallach, or any such name, pursuant to the adoptive power of custom."—Ogygia, Part III. chapter 76.

Besides the words above enumerated, after which the names of progenitors are placed, there are others to be met with after which the names of territories are placed, as Aes, people; Fir or Feara, men; Aicme, tribe; and Pobul, people; as Aes Greine, i.e., the people of Grian, a tribe located in the present county of Limerick; Aes tri Magh, the people of the three plains, in the same county; Feara Muighe Feine, the men of Moy Feine, now Fermoy, in the county of Cork; Fir Rois, the men of Ross, the name of a tribe in the present county of Monaghan; Feara Arda, i.e., the men of Ard, a tribe in the present county of Louth; Pobul Droma, in Tipperary.

Many other names were formed by a mode not unlike the Latin and Greek method, that is, by adding certain terminations to the name or cognomen of the ancestors of the tribes. These terminations are generally raighe, aighe, ne, and acht, as Caenraighe, Muscraighe, Dartraighe, Calraighe, Ciarraighe, Tradraighe, Greagraighe, Ernaidhe, Mairtine, Conmaicne, Olnegmacht, Connacht, Cianacht, Eoghanacht, etc., etc. This is the usual form of the tribe names among the descendants of the Belgic families enumerated in the Books of Lecan and Glendalough, as existing in Ireland in the first century, and it is not improbable that the tribe names given on Ptolemy's Map of Ireland are partly fanciful translations, and partly modifications of them.

It appears from the authentic Irish annals, and the whole tenor of Irish history, that the Irish people were distinguished by tribe names only up to the period of the monarch Brian Boru, who published an edict that the descendants of the heads of tribes and families then in power should take name from them, either from the fathers or grandfathers, and that these names should become hereditary and remain fixed for ever. To this period we must refer the origin of family names or surnames.

Previously to this reign the Irish people were divided into various great tribes commanded by powerful chieftains, usually called kings, and these great tribes were further subdivided into several minor ones, each commanded by a petty chieftain, but who was subject to the control of the Righ, or head of the great tribe. Thus, in Thomond the name of the great tribe was Dal Cais, from Cormac Cas, the progenitor of the regal family, and of all the sub-tribes into which this great race was divided. Immediately before the establishment of surnames, Brian Boru, whose descendants took the name of O'Brien, was the leader and supposed senior representative of this great race; but there were various other tribes under him, known by various appellations, as the Hy-Caisin, otherwise clann Cuileain, who, after the reign of Brian, took the name of Mac Namara; the Kinel-Fearmaic, who took the name of O'Dea; Muintir Iffernain, who took the name of O'Quin; the Kinel Donghaile, who took the name of O'Grady; the Sliocht Dunchuain, who took the name of O'Kennedy; the Hy-Ronghaile, who took the name of O'Shanaghan; the Hy-Kearney, who took the name of O'Ahern, etc.

The chiefs of these tribes had generally the names of their fathers postfixed to their own, and sometimes, but not often, those of their grandfathers; but previous to the reign of Brian in the tenth century, these appellations changed in every generation.

The next article shall treat of surnames.

* Original in possession of Messrs. Hodges and Smith, College Green, Dublin.

THE LAST LINES OF CHENIER.

(From the French.)

As the last beams of light, and the peace-wooing gales,
In summer's fair evenings a moment delay,
To struggle with night-shades e're darkness prevails,
At the foot of the scaffold my lyre I essay.

Perhaps the dread moment approaches me now,
While the finger of time round its circle has gone;
Perhaps sixty pulses its dial may show,
Then pause; oh, too, like it my course may be run!

Perhaps while these numbers still wait on my tongue,
The dark pall of death o'er the poet may hang;
The verse still unfinished remain, and the song
Unsung and unheard, as the poet that sang.

Alas e're the half of this line is complete,
I hear in the corridor, waiting without,
The dull measured tread of the murderous feet
Recruiting for death. 'Tis my name that they shout.

And the echoes repeating shall sing through the gloom,
A long-murmured requiem over my tomb.

To guard the interests of consumers, Massachusetts has for many years required that all meters through which gas is to be supplied to customers of public systems, be tested and sealed by the State Inspector of Gas before they are put into use. Moreover, any consumer of gas from the public supply may apply to the State Inspector to test the meter through which the gas passes. A meter is considered correct under the law if it registers within two per cent. of the actual number of cubic feet of gas passing through it. Meters are owned by the gas companies, and they are subject to fine if they supply any meter for the use of consumers that does not have the seal of the State Inspector. Meters are liable to get out of order, however, though once correct, and any company is at liberty to reinspect its meters as often as it thinks proper. If a meter tested by the State Inspector at the request of a consumer proves to be correct within two per cent., the cost of inspection, amounting to about one dollar, exclusive of transportation charges, is collected from the consumer. If the meter is not correct, the gas company owning it must pay all charges.

JOTTINGS OF OLD DUBLIN.

Extracted from the Diaries of the late Austin Cooper, Esq., F.S.A., of 4 Merrion square, Dublin, a learned Antiquary of the last century.

I.

12 May, 1782—

Walked to see the Volunteers manœuvre at Clondalkin.

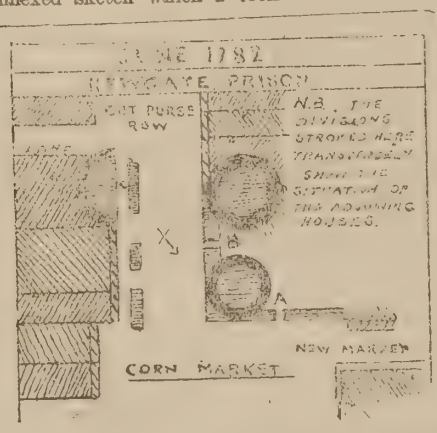
22 May, 1782—

Out looking at the Illuminations for Rodney's great victory over the French, etc.

3 June, 1782—

At the Review of the Volunteers.

18 June, 1782—



Saw Sir George Yonge, Lord Robert Spencer, our Vice-Treasurer, and General Burgoyne, Commander-inChief, sworn in.

8 August, 1782—

Passing under Newgate, I observed that they had just begun to pull it down. I paid it many visits since, which has enabled me to make the following observations:—

Mr. Harris's History tells us that it consisted of four towers, and upon being repaired at the time of the usurpation, the two towers next the city were thrown down.

In this particular I must differ, as by the annexed sketch which I took when it was

pulling down, it plainly appears; there was but one taken down, which was that at the E corner, and by making a regular front on that side, and carrying the wall in a direct line before the opposite tower, a small apartment was gained at A, which formerly was the guard-room, and the only entrance to the prison.

A few years ago the Governor's room was between the two towers at B.

About the year —— a footway was opened on the E side, and carried through the south tower at C, which caused the ground floor of it to be let for a shop (being on a line with the adjoining houses), as it was cut off from the other parts, but immediately over this shop the cell for condemned felons was kept.

I was much surprised to find that the walls of so old and durable a building, which undoubtedly would ever resist the efforts of time, were only four feet thick—a proof of its antiquity and good workmanship.

On the 16th October, 1780, they began to pull it down, but dropped it, and for some time after it was used as a prison for female nocturnal strollers, who were taken up by the Parish Associations, then newly formed. But as soon as they (like most things of the kind) had got a sufficiency of this work to allay their ardour, those harbingers of infamy were permitted to parade again.

7 October, 1782—

Passing through Thomas street I found they had, in the course of the former week, pulled down the range of old wooden houses at the corner of Moss lane, generally called the Pest Houses—there were five of them, and of but two storeys high. They have been in a very ruinous, tottering state for some time past, so much so that the Paving Committee last winter had them under their consideration, and at the same time a plan was in agitation for widening the street by not building on the site of them, but on the rear in a line with all the other houses.

This scheme was dropped owing to some differences between the owners of the ground (the City and Lord Carhampton), and they are now building on the old site.

Having had leisure to examine into the remaining wooden houses in the city, I made the following list:—

In Cornmarket	2
,, Back lane	1
,, Patrick street	1
,, Werburgh st. and Castle st.	2
,, Coal quay	1
,, Dame street (corner of Trinity street	1
,, Old Crane	1
,, Boot lane	1

9 September, 1782—

Passed the patent for Lord Shannon and Lord Charles Spencer, Vice-Treasurer.

9 December, 1782—

This day they began to pull down the old brick house in Dame street, opposite Eustace street. The front was most uncommonly ornamented with regular pilasters between the windows, from the capitals of which an arch was carried over each window, and in the void space formed by the turn of the arch, were oval stones, the only ones to be seen in the building.

Half the front was several feet further back than the line of the street, which made it appear as if it was a wing—if so, there must have been a similar one on the other side.

This house, I am informed, was built about 100 hundred years ago by the Eustaces as a city mansion, and the ground whereon Eustace street now stands was all laid out in gardens before this house, and from hence that street got its name.

It is likewise said to have been inhabited by the Kildare family, but at what time I cannot learn.

It is the first house taken down, in consequence of the late Act of Parliament, for widening Dame street.

4 November, 1782—

The anniversary of the birthday of our glorious deliverer, William the Third, the several corps of cavalry and infantry of the county and city of Dublin met at ten o'clock on Stephen's Green, where they paraded under the inspection of their revered General, the Right Hon. the Earl of Charlemont; and from thence they marched in grand divisions through York street, Aungier street, Bishop street, Kevin street, the Coombe, Meath street, Thomas street, Dirty lane, Queen's Bridge, Arran, Inn's, and Ormond Quays, Essex Bridge, Parliament street, and Dame street, to College Green, where they formed a square round the statue of King Wiliam, and fired three vollies, that would have been applauded by the hoary veteran, Frederick the Third of Prussia, though the greatest disciplinarian in the world; after which the different corps dined together, and spent the remainder of the day with that harmony and hilarity, which did honour to independent citizens and loyal subjects, to the most amiable and best of Princes.

The regulars likewise fired three excellent volleys in honour of the day.

On the pedestal of William the Third's statue appeared the following inscription:—

(On the west side was)

The Volunteers of Ireland by persevering, will

(On the south side)

Overthrow the Fencible scheme,

(On the east side)

Procure an unequivocal Bill of Rights; and

(On the north side)

Effectually establish the Freedom of their Country.

The following is an accurate account of the numbers of each corps, having reckoned them twice:—

Dublin Volunteers	190
Lawyers	50
Liberty Rangers	100
Donore	36
Dublin Independents	81
Attornies	53
Builders	57
Irish Brigade	143
Dublin County	137
Merchants	110
Goldsmiths	127
	1,084
Artillery	73
	1,157
Horse	114
Total	1,271

November, 1782—Phœnix Park—

I saw with Mr. Clements a plan of improvements proposed to be made in the Phœnix Park by James Donnell.

He therein proposes to plant it in many places, to remove some of the clumps of trees planted by Lord Chesterfield in order to abolish regularity; to drain in, make new roads, to build a masked bridge across the pond next Dublin Gate; to build a triangular tower or observatory, with round towers at each corner; but where this should be erected he does not mention.

This man lately lived with Lady Massareene at Leixlip as gardener, etc., but from his map, he must have some knowledge of surveying, as well as that of gardening and improvement.

He was last year employed by Mr. Eden, Secretary to Lord Carlisle, to drain the S side of the 15 acres, and level all the small ditches about it; also to make several additional plantations, as at the wall behind Chapelizod, the Ring, etc., etc.

(To be continued.)

According to the Railway and Locomotive Engineer, the first charter ever granted in America, or probably any other, for the building of a railroad, bears date 1819. The Pennsylvania Legislature granted the charter in question to Henry Drinker, for a railroad from Delaware Valley to the headwaters of the Lehigh River—practically the route now controlled by the D. L. and W. Railway from the Water Gap to Scranton. That was before the days of steam, and the "waggons" that were to be run on the road were simply horse vehicles. The old charter, and the rights it conveyed were purchased by the original Delaware and Lackawanna Company for 1,000 dollars.

The Louisiana Purchase Exposition authorities have offered a prize of two thousand dollars for the best design for an emblem. It may be either in relief or colour, but if colour is used symbolically, red, yellow, blue, and white should be selected, as these are the colours involved in the national flags of the countries in which ownership of this territory at various times has been invested. The design must be one which will be available for letterheads, medals, posters, or far any purpose in connection with the dignified exploitation of the Exposition.

THE YEAR OF ASHES.

A MEMORABLE 17th CENTURY VOLCANIC OUTBREAK.

WHAT HAPPENED IN THE AZORES.

A PARALLEL TO THE ST. PIERRE CATASTROPHE.

BY REV. W. R. HARRIS.

The Rev. W. R. Harris, a distinguished Canadian historian and profound scholar, wrote the following letter from the Azores, where he had been sojourning for health, a few months before the recent terrible volcanic outbreaks in the West Indies:—

Ponta Delgada, San Miguel, Azores.

Early one morning I left Ponta Delgada for the famous valley of La Furnas, thirty miles across the mountains. At about 2 p.m. we reached a part of the road where it descends abruptly, known as "Pedros do Gallego." Hundreds of feet below us lay the "Cintra Michaelense," the Arorean Vale of Tempe—the boast and pride of all the island—the valley of the Furnas.

Straight across on the opposite edge of the crater—for this beautiful depression, like Rome, lies in the very bosom of a once fierce volcano—we saw the rising stream of the ever-boiling geysers, whose sulphurous and noxious fumes kill all vegetation in their immediate vicinity. Here in 1630 occurred one of the most stupendous volcanic phenomena of modern times. The upheaval was preceded by submarine earthquakes when the sea swallowed islands and gave birth to others, some of which remain to this day. Mountains were hurled into valleys and valleys rose to mountains. An oceanic eruption broke over the waters and formed an island ten miles in circumference and 200 feet high, which, in one night, disappeared as mysteriously as it came. A thick mantle of ashes, pumice and lava from sub-aerial and submarine volcanoes covered the whole island of San Miguel. At Villa Francha, twelve miles from here, a high mountain was lifted from its foundations and falling on the town, buried the inhabitants, 5,000 in number. This was followed by a tidal wave that swallowed every living thing for miles around. When the sea receded, and the people of Ponta Delgada began excavations they came upon the skeleton of a mounted horseman, booted, spurred, and with lance poised, as he was rushing from the doomed city. Villa Francha rose again upon its ruins and to-day, except for its pumice, ashes and its menaceous trap around it, there is no trace of the awful visitation.

Furnas was the theatre and focus of igneous activity in the island. The day preceding the eruption was of exceptional calmness. The air was heavy and oppressive and a drowsy stillness brooded over the land. Pasturing cattle tried to hide, sheep bunched closer and the dog of the shepherd crouched at his master's feet and looked up inquiringly into his face. The silence continued to deepen, till a sense of loneliness entered into the habitations of man, followed by a melancholy and foreboding. No stars shone in the firmament that night, the moon shining blood red over the distant hills.

Suddenly at 2 a.m. the earth trembled and swayed like a ship in the billowy ocean, when with a roar, heard far out to sea, the crest of a mountain rose high in air and was hurled into a neighbouring lake, known to this day as Lagoa Suca (dry lake). And now above the loftiest peaks of the highest mountain was seen a huge column of fire and from the tomb of the volcanic monster came thick pillars of smoke and flame. Fearful detonations of escaping gas and bursting lava booms followed in rapid succession. Lurid flames and weird lights appeared in the heavens and a fierce heat scorched all vegetation for miles about. Rocks of blackest lava, many tons in weight, sailed high in air and, falling, broke into fragments a neighbouring village. The vomited ashes enveloped all things in murky darkness and covered the land with from six to seventeen inches of cinders and powdered pumice.

That memorable year is called to this day "Oauno dos Cinza"—the year of ashes. The darkness beyond the focus of disturbance, the rumbling of noises, like unto a thousand waggons on a rough road, the mysterious sounds below the earth's surface, the poisonous exhalations from decomposing sulphates, escaping carbonic acids and chlorides, alternating with blackest clouds of cinders, ashes and stones, portended the dissolution of the world, and the dawning of eternity. People died with fright, some were beside themselves with terror for a time, others lost their reason and ever after were raving maniacs or shrivelling idiots.

The flowing lava caught the fleeing cattle and sheep as they rushed down the sloping mountain, swept them into a grove of cypress trees and engulfed them for all time. Under twelve feet of aranaceous trap, powdered pumice stone and lava they lie buried, and no eye may look upon the ruins of the holocaust.

Ashes fell in Portugal, 800 miles away, while thick layers of cinders mixed with pumice floated 200 miles out to sea and forced inward bound ships to change their course. For three days and nights no sun, moon, or stars shone in the murky firmament, and the island was shrouded in a mantle of murky blackness. That Furnas was a very focus and theatre of igneous activity is manifest from the truncated cones of all sizes, with immense concarites, tell of the tyrant power which gave them birth.

Since this appalling catastrophe the lava furrows have been deepened by erosion, and are now stupendous ravines whose sides are robed with a marvellous growth of ferns and giant cryptomerla.

To-day the village of the Furnas is a dream of joy. A clean and pleasant village of 700 industrious people, surrounded by fig trees, orange groves, and fruitful vineyards, calm and peaceful as the sea when the storm has died away. All that remains to remind the present and future generations that this valley was once the stage of as grand and spectacular a vision as was ever given to man to look upon are the geysers and boiling wells which night and day throw up their columns of hot water, stream, and blue mud.

The government has built here a very fine bathing house. The mineral waters are piped to the bannaria, where the bather may select, on the advice of the doctor, a warm, thermal, or cold bath. The waters are officially classified as sulphurous, chalybeate, or carbonated, saline, acidulous, or carbonated.

THE SPINNER.

BY MARY AINGE DE VERE.

The spinner twisted her slender thread
As she sat and spun:
"The earth and the heavens are mine," she said,
"And the moon and sun;
Into my web the sunlight goes,
And the breath of May—
And the crimson life of a new-blown rose,
That was born to-day."

The spinner sang in that hush of noon,
And her song was low:—
"Oh morning, you pass away too soon,
You are swift to go;
My heart o'erflows like a brimming cup
With its hopes and fears.—
Love, come and drink its sweetness up
Ere it turn to tears!"

The spinner looked at the falling sun:
"Is it time to rest?
My hands are weary, my work is done,
I have wrought my best:—
I have spun and woven with patient eyes,
And with fingers fleet;
Lo! where the toil of a lifetime lies,
In a winding sheet!"

The Emperor William is doing his best to to promote the alcohol industry. He has induced the North-German Lloyd and Hamburg-American lines to adopt, experimentally, spirit motors on their small harbour craft. It is said that the Krupps are about to order an eight horse power spirit motor for their station at Meppen. The Alcohol Association will supply the spirit for these experiments gratis. What the outcome of these experiments will be is hard to say. That alcohol ought to prove an admirable fuel is evident enough from the recent trials made in Paris and Berlin, but up to the present time no satisfactory alcohol motor has been invented. There is here a chance for inventors.

OUR WEEKLY STORY

THE

HOME-COMING OF O'GRADY.

What poor O'Grady had not outgrown, he had outlived; what he had not outlived, he had outloved. He had outgrown his youthful Irish beauty and his desire to be a policeman; he had outlived his Aldermanic ambitions and his love of Irish whiskey (these last by painfully actual experiences). At last he had outloved—loved out—his boisterous wife and his dear city, "New Yorruk"; "my native Shtate," he was wont to say, "next afther Tipperary."

Once had laughed and lilted, whished and whistled, with the best of them; now he was strangely silent. To this rule of things outlived and outloved, there were two exceptions. He seemed likely not to outlive a racking cough, that had come down upon him with an oppression and a coldness like to the harbour mists; he had not outloved Molly, his only daughter, a red-cheeked, awkward girl in her early teens.

So it was without hope or desire that he took Molly and his cough out to the great West. Without regret he had taken his share of the long-hoarded silver. Without complaint he paid down the price of his physician's advice; perhaps he paid extra for the smooth-tongued eulogy upon the Hills to which he fled.

"There," it ran, "the air rises white and hot from the furnace of the Plains, and falls cold, rare, and keen in the mountain hollows." O'Grady devoutedly hoped that it would be "keen"—the city air cut like dull knives at every breath. So Tim O'Grady bid his wife and the boys a listless good-by and went away.

Through all the hurried stages of his journey, he did not wake from his apathy. He did not know what a ridiculously pathetic little figure he was in the hustling crowds, nor would he have cared had he known. His face was triangular, sharp, and stubbly bearded, below his long upper lip; his shoulders were bent and his eyes dull.

He let the Plains pulse and throb away from under him, giving no thought to their awful monotony. When Molly saw and exclaimed, and called to him to look, he glanced and smiled, but never past her face. In the waving, glimmering plain, blue mirage lakes spread out and were drawn in again. Here sod-shanties were circumstances, trees were events, windmill towns were epochs.

"See, Daddy," the girl would call, "it's a-comin'—now we're opposite—now we're more opposite—now it's gone." But Daddy did not seem to mind missing the wonderful sights.

Thus, they came to the mountain town, and to their place in it, one of the innumerable cheap boarding-houses. The situation was good—it could not be otherwise in a land where every house had its own hilltop; the house was indifferent, and it must be admitted that the landlady was bad, for she was grasping, hawk-nosed, and tyrannical.

But there was the beautiful out-of-doors to live in, and in that wide, new world there were a thousand sights and pleasures for the girl, one great pleasure for the man—that breathing was no more a pain. She took out her joy in laughter and incessant talk; he was still speechless. Molly in her cheap and oddly fashioned gowns was a quaint figure as she went in and out with the gay tourist crowds. She explored with whilom friends the narrow canyons and the steep red slopes. Daddy would hardly look up at the marvellous panorama from his seat on the porch.

Sometimes she dragged him to where, through interstices in the shifting hills, he could see the stolid, dun-coloured peak that overtopped them all. Now it was capped with roseate snow, now with angry, black puffs of cloud, and again it stood bare and sharp against the blue. For once man was more un-

changing than mountain. O'Grady was stolid, too, and his mood did not change; his clouds did not roll away.

Sometimes Molly coaxed him to the shops, but Mexican blankets nor arrows, nor prairie-dogs, nor uncut gems had power to charm; O'Grady was indifferent still. On Sunday afternoons the man and the girl went to the pavilion at one or another of the mineral springs. In the surging crowds there, strange things met; exuberant life and exultant death, luxury and joy, squalor and woe. Men dragged slowly there or rolled up in cushioned carriages for their last drink. Numbers made these doomed ones brave. Seeing that they were not alone they were no more afraid. They made appointments for "over there" as gayly as for a dinner, dance, or drive. Only O'Grady was sordid and unfeeling.

Molly, to rouse him, tried quarreling with the hard-mouthed landlady, whose tender mercies were cruel indeed. Daddy would not be angry. She wanted to move to the house of the dear French Madame, up the canyon, where lived one of her new friends, a prim little old maid. But Daddy did not care for friends. She tried being home-sick, wanted the mists and dull colours and noises of the city, wanted her mother and the boys. But Daddy had evidently forgotten that he had ever had a home.

So the flaming autumn and the crystal winter passed, with only a whirl now and then of dry snow or red sand to blur their brilliance. The spring came and the summer again, and yet O'Grady lingered, better, it seemed, but he said with gentle whimsicality he would be better still, "betther dead." Many died who held to life, desperately, lovingly. Many went back to their homes, impotent and unheeding, who had thought to go with bounding hearts and open arms. And O'Grady, who wished neither to go nor stay, stayed on.

At the end of the first week, in a homesick burst Molly had cried that a year would never go. But a week is the fourth of a month, and a month is the twelfth of a year, and by weeks and months the year went. At the year's end, now they were going home. He had yielded to the appeals of Molly, to the silent but forceful entreaty of his almost empty purse, and to the letters from his wife. O'Grady still wondered at himself when he put these letters by but partly read.

They were to go on the last excursion rates of the late summer. Molly's delight increased as the time drew near. Not even Mrs. Pinchem's tyrannies could quell her now. She loaded her trunk with specimens of everything —from mica-dust to blocks of gypsum that were almost boulders. She had yucca, cacti, and pine-cones, dried together in a prickly mass. She invaded the shops and bought Indian toys for brothers, till, remembering her own increased inches, she desisted, saying, "W'y, Pathrick an' Hinnery must be grown min, now."

She grew very daring at the end, and did not tell Mrs. Pinchem of their going, but ordered their trunks taken away early in the afternoon. Then she confided in her father her last great scheme; they must have a "burro picture." What tourist did not? He yielded, and they stopped for little Miss Prim on their way to one of the many stands. There the proprietor brought out the shaggy, lop-eared burros and perched each patron on a tiny beast. Then he set some huge straw hats jauntily on their heads and called the effect perfect. Miss Prim was frightened at her precarious position, her hands shook and her hat slipped crooked; "Misther" O'Grady was bent, and his eyes looked out tragic and terrible, but Molly was flushed and straight and happy. She knew someone at home who should have the picture and be glad.

If you have ever waited for a train a year, you know how Molly waited that night. Her intense eyes were fixed on the shining rails that ran toward home, and she had not a thought for the darkening hills behind. As for O'Grady, he looked neither forward nor backward.

There remained but a few moments of this happy tension. Then the man stepped up to O'Grady; he had a heavy hand and a harsh voice. O'Grady heard some cruel words: "Warrant—arrest—Mrs. Pinchem," and he suddenly understood it all. The merciless woman had followed them even to the end with her persecutions. He seemed to hear her sneering laugh behind him yet. He thought fast, and acted as actively as such a passive man could act. His last money had gone for his ticket; that would be worthless after to-night. He went with Molly to where the panting train stood, and pushed her up on to the steps. Then he kissed her, and told her not to cry, and then went away with the men.

O'Grady spent a bad night at the station; even he felt keenly its discomfort. The benches were hard and the room cold. He was more bent than ever in the morning, and his voice was weak and husky. The trial was mere form, after all, though terrifying to the timid man, who was now thoroughly awake to every sense and sensation. The woman accused him of theft and of unpaid bills, and of much indefinite fraud; but her blunders and her reputation were against her.

O'Grady had some papers and a slight acquaintance at the local bank, which served his purpose fully. So once again right came uppermost, and by noon he was a free man once more, and not only free, but changed. When the benevolent banker, knowing his story, advanced him his fare home, he took it gratefully, with something very like his old happiness in his eyes. He walked out of the court-room with his shoulders quite straight, and looked about him as one waking from a long dream.

As he walked on he chuckled aloud and talked garrulously to those that he met. He grew confidential with Yong Wa and Sam Fat, whom he had ignored heretofore. He told them that he was going home; over and over again, that he was going home. He patted indiscriminately the burros and the burro-boys, and told them that he was going home.

He remembered more vividly each minute the dear old city, the wharf, the mists, his own street, his own doorstep. He felt a tear on his cheek, and wondered why he wept when he was so happy.

He thought of his boys, and was proud; he thought of his wife, and was tender; he thought of the future, and was young, strong, and alive once more.

O'Grady decided to go to the Frenchwoman's up the canyon for his mid-day meal. He was a little shamefaced at appearing there again, but the good woman whispered the cause of it all about among the boarders, and they made him welcome.

In the afternoon he sat with the roomers in the bare storeroom that was their co-operative kitchen. It was raining torrents outside, and the mist-covered windows made the room gloomy indeed. In their desperation the shut-in people talked of anything, everything. They discussed mathematics with the children; O'Grady solemnly announced that the sum of happiness was home. They spent an hour in excited debate over "capitals and principal cities;" O'Grady declared that "New Yorruk" was the capital of the universe, and he did not see how his feeble jokes wore out by repetition. He grew very hilarious; a dozen times he would have sent to the candy stand across the way for "a treat all 'round," had he not remembered just in time his empty purse.

Night came on, and the rain ceased its roar; only heavy drops, now and then, fell through the mist. The lights glared out on the wide pools in the long, red street, and the wind shrieked down it, like spirits of the departed Utes. Madame and the others gathered in the door to bid O'Grady good-bye; they urged their good wishes and their umbrellas upon him, but the latter he steadily refused. How could a man be wet or cold with so high-beating a heart within him?

The bent figure, that had crept for months, skipped now like a boy from shelter to shelter. He hurried the trolley cars by which he made his last mile to the station. He found himself pushing on the seat in front of him to help along. He talked to himself, saying, "Musha —acree—sweet colleen," and other soft words that Irishmen use when they are mouthful and heartful of happiness.

He sat in the dim station, where the same—no, another—O'Grady had sat the night before. He was transfigured, for he had more of youth, more of yearning, more of desire, than little Molly had ever known. Five minutes more! Could he wait? Would that ecstatic five minutes ever end? Oh, wife; oh, babies; oh, home! How could he wait? He put his hand over his glowing face and laughed aloud.

"Santa Fe, going east, going east!" the harsh alarm rang out in the almost deserted station. O'Grady did not heed the call. Some loungers, who had watched the solitary man, went to him and shook him roughly; "Santa Fe, going east!" they said.

Their touch was tender before they released him—for O'Grady had not waited for the train. He was already so far on his way that disappointment could never reach him, that his hope could know no chill and his new-found joy no dying out.

And so the "Santa Fe fast mail, going east," failed to make connection with the swift, glad soul of Tim O'Grady, who went home.

FAIRY'S SONG.

(From the French of Victor Hugo.)

The fairy, lovely child, am I;
Around those distant shores I reign,
Where the bright sun, with deepening dye,
Sinks glorious down to the mighty main.
And mine is the homage of all the west—
And mine are the heavenly vapours, drest
In the golden tints of a summer's sky,
When I touch its clouds as I hover by.
And I am queen of the sleepy shades,
When reveries rise and the daylight fades;
And magic palaces, many a one,
I build in the clouds of the setting sun.

My light, transparent wing is blue,
And on my back, to the sylphid's gaze,
As I hover round, in the dazzling hue
Of two soft, tremulous silver rays.
And my hand shines clear of the tint of the rose,
And my breath is the odorous breeze that goes
At the vesper hour, thro' the meads along;
And my radiant hair flows fair and free,
And my musical mouth, unceasingly,
Is mingling its smiles with its sweetest song.

And I have grottoes of shining shells,
And beautiful tents of the boughs of trees;
And I stir the leaves, and I raise the swells
Of the gentle waves on the sparkling seas.
Then fly with me, and I'll show thee where
The rolling clouds in the fields of air
Depart on their far and fleecy wings,
And the gushing rivers have their springs,
And I'll teach thee, baby sprite, the words
Of the mystic language of the birds.

The word "Christian" is as much misapplied as any of the more limited religious terms over which we dispute; and the new governess who asked her little pupil for his Christian name could not imagine what he meant by replying that he had not got one. "Nonsense, dear!" she remonstrated; "everyone has a Christian name." "I haven't then," was the reply "'cos I'm a Jew." The laugh was on the other side, though, in the case of the little Jewish girl, who, having thoroughly enjoyed the turkey and plum-pudding in which so many Jewish families indulge on December 25, leaned back in her chair with a pitying sigh and remarked —"Poor Christians. No turkey; no plum-pudding; no Christmas—no nothink!"

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

BANNOW.

BANNOW, a parish, formerly a corporate town and parliamentary borough, in the barony of Bargy, county of Wexford, and province of Leinster, 1½ mile (N.E. by E.) from Fethard; containing 2,185 inhabitants. The parish is of a peninsular form, being bounded on the south-east by Ballyteigue bay, in St. George's Channel, and on the west by the bay or harbour of Bannow, which forms the estuary of the Scar river; and is situated near the new line of road along the east side of the mountain of Forth to Wexford. It formed part of the territory originally granted to Dermod Mac Murrough, last king of Leinster, to Hervey, who accompanied Robert Fitz-Stephen in his expedition, which landed at Bag-and-bun bay, within sight of this place. From the early period after the English settlement here was a town of some note, it being mentioned in the earliest charter of New Ross, by which, in the reign of Edw. I., Robert Bigod granted to the burgesses of that town "as extensive privileges as were enjoyed by the men of Bannow, Kilkenny, or any other town in Leinster." The old town has long since disappeared: part of its site is covered with sand drifted from the sea, in some places to the depth of many feet; and the inequalities of the surface immediately adjoining the churchyard are supposed by some to be occasioned by the ruins of the town lying at a considerable, from which circumstance it has obtained the appellation of the Irish Herculaneum. It does not appear that there is any charter of the borough on record; but there are extant numerous inquisitions, post mortem, of the reigns of Jas. I. and Chas. I., finding the seisin of certain parties in premises and rents in the town and burgage, which appear to have been held in burgage tenure, but they make no mention of a corporation. Notwithstanding the decay, if not the total annihilation of the town, it continued to send two representatives to the Irish parliament until the Union, when the £15,000 awarded in compensation for the abolition of the franchise was paid to Charles, Marquess of Ely, and Charles Tottenham, Esq., of Ballycurry, in the county of Wicklow. The names of St. Mary's, St. Tullock's, and St. Benedict's streets are retained in the quitrent books of the Crown, but their sites are merely conjectural. The only perceptible remains of antiquity are the ruins of its venerable church, situated within a walled enclosure at a short distance from the shore, and at an elevation of about 30 feet from the level of the sea: they are of considerable extent, and consist of the walls of the nave and chancel, surmounted by embattled parapets, and having two small chapels attached, the whole being unroofed; the east window of the chancel appears to have been in the decorated English style, and still retains some fragments of flowing tracery; the ancient font was removed some years since to the R.C. chapel at Danescastle, where it is preserved with great care. There are many ancient tombstones in the churchyard, one of which records the death of a person named French at the advanced age of 140.

Bannow bay produces an abundance of various kinds of fish. The harbour is navigable for vessels of 120 tons' burden: one side of the entrance to it is called the Isle of Bannow, it being connected with the mainland only by an isthmus of sand; from this there is a ferry to the barony of Shelburne, and between it and the little port of Fethard, or Feathard, is Bag-and-bun bay, where Robert Fitz-Stephen landed his troops for the conquest of Ireland.

NOTES AND QUERIES.

HISTORY OF COUNTY KILDARE.

In reply to G. A. H., I wish to say that there is no county history of Kildare, as far as I know, but the following may prove useful.—Journal of the Kildare Archæological Society.—"The early landholders in the County Kildare," by Canon Sherlock, and read before the above Society in 1900 or 1901—Hall's "Ireland" refers to the castles of Maynooth and Carbery at p. 276, vol. ii.—Harris's edition of Ware—History of the Wolstans in Irish Builder for 1899. I give the following additional authorities, as quoted by C. L. Adams, in the article, "The Castle of Leixlip," in "Weekly Irish Times," of 8th June, 1901. Leixlip Castle, by Lord Frederick Fitzgerald, in the Kildare Archæological Society's Journal: "The Town and Castle of Leixlip, by "P," in "Irish Penny Journal; Parliamentary Gazeteer; Book of Survey and Distributions; Calender of Patent Rolls, Ire.; Fiants of Elizabeth; Book of Inquisitions of Province of Leinster; M S Ordnance Survey of Ireland; A Book of Postings and Sale of the Forfeited and other Estates (Nat. Library); Proceedings of the Roy. Society of Antiquaries.

I may mention that I do not know of any Bibliography of the 32 counties, as inquired for by G A H, except the rough MS. one that I have compiled for my own use. It comprises about 600 items, taken entirely from book dealers' catalogues (English, Irish, and Scotch), and from references which I have chanced on in my reading (except "Dublin"), so that it may contain some works not in the National Library. As I know that many people interested in Irish topography, genealogy, and antiquities feel the want of such a list (compare how the counties of Scotland and England are supplied in this respect), perhaps the editor would print this very tentative collection, in want of a better—three counties each week, say? In any case, I should be very grateful for any items sent to me, to the address below, re the counties Mayo, Tyrone, Leitrim, Monaghan, King's County, Queen's County, Carlow, Fermanagh, Tipperary, or indeed any county.

T. P. STUART.

22 Garville avenue, Rathgar.

Dr. David T. Day, Chief of the Division of Mineral Resources of the U.S. Geological Survey returns from a trip to Porto Rico with accounts of the iron resources of the island. His superficial inspection rendered it difficult for him to ascertain how productive the ore beds might prove to be. But it seems certain that there is enough to warrant the growth of a fair-sized industry. Gold is not found in sufficient quantities to warrant a repetition of the Klondike excitement. At present about four hundred families are engaged in gold-mining. The product of their labour is carried to the stores, where it is weighed, and given in exchange for food, clothing, and cattle.

FAMOUS DUNCES.

One of the noblest utterances of the late William E. Gladstone is his observation that "in some sense and in some effectual degree there is in every man the material for good work; not only in those who are brilliant, not only in those who are quick, but in those who are stolid, and even in those who are dull." These are golden words that should be taken to heart by every young man who is despondent on account of his mediocre or mean ability. All experience shows that there is nothing in this fact which should dishearten any beginner in a calling. It is not brilliant ability, but resolution and persistence that as a rule win the prizes of life. It is proverbial that "slow but sure wins the race." A tortoise on the right road will beat a racehorse on the wrong road. Slowness is far less a foe to success than sloth. Quickness of parts often proves a disadvantage, since a boy who acquires knowledge quickly will often forget it as quickly, and again, because he sees no necessity for that strenuous application and dogged perseverance which a dull, slow youth is compelled to manifest and which are the surest means of success in every career.

It is a notorious fact that worldly success depends far less upon the general superiority of one's intellectual forces than on special adaptation to the work in hand. Moderate talent, steadily applied, will achieve more useful results and in the end win higher respect than ability of a high order whose temper is too fine for the drudgery and mechanical parts of a profession. The astonishing variety of talents which some men display is often acquired at the dear price of comparative feebleness in every part.

In reading biographies of eminent men one is surprised to learn what great things have been achieved by men who in youth were pronounced dunces. Histories of their careers are full of encouragement to timid, self-distrustful beginners in life. Among the illustrious dunces—dull and even stupid boys, but most successful men—were Justus von Liebeg, called "Booby Liebeg," by his schoolmates, who, when he replied to a question by his teacher, said that he intended to be a chemist, and provoked a burst of derision from the whole school, yet lived to become one of the greatest chemists of the nineteenth century; Tommaso Guidi, the great painter—the precursor of Raphael—whose works were studied by the latter and by Michael Angelo and Leonardo da Vinci, yet who was known as "Heavy Tom" when a boy; Thomas Chatterton, who was sent home from school as "a fool, of whom nothing can be made"; Isaac Barrow, a quick-tempered, pugnacious and idle boy at school, but in manhood a celebrated mathematician and preacher; Dean Swift, "plucked" at Dublin University; Richard B. B. Sheridan, the brilliant wit, playwriter, and orator, but an incorrigible dunce" at school; Thomas Chalmers, one of Great Britain's most noted pulpit orators; John Howard, the noted philanthropist, and even William Jones, who, besides writing various legal and other solid works, distinguished himself as a judge in India and at his death, at the early age of 48 years, had mastered 28 languages.

Not less illustrious than this roll of dunces were Robert Burns, a dull learner at school; Adam Clarke, "a grievous dunce," as his father said, in his boyhood; the "dull scholar," Napoleon; and Wellington, characterised by his mother as a dunce, who was only "food for powder"; "useless" Grant, as Ulysses was termed by his mother; and Robert Clive, "the heaven-born general," as Lord Chatham styled him, who, a dunce at school, was sent, to get rid of him, as a clerk to India, proud, poor, and irritable, but who entered the British army, rose to high command, and laid the foundations of that mighty Oriental empire which has been the source of such enormous wealth to Great Britain. Last, but not least—perhaps the most marvellous blockhead of all in the long roll—was Walter Scott, of whom his teacher, Professor Andrew Dalzell, said that "dunce he is and dunce he will remain," and who visiting the school when at the zenith of his fame, asked to see its dunce, and, when taken to him, gave him a half sovereign, saying, "There, take that for keeping my seat warm"

THE FAIR SEX OF ANCIENT ERIN.

By REV. F. R. MONTGOMERY HITCHCOCK, B.D.

It is our pleasing duty now to describe the fair ladies of Erin, whose bright eyes rained influence upon the social gatherings and brave deeds of the sterner sex. It were a stupid platitude to say that then, as ever, Ireland had much cause to be proud of her lovely representatives. Indeed it is a well-known fact that the English invaders would have never gained a footing in the land had they not been smitten by the dark eyes of Erin's daughters. If Greece took captive her fierce conqueror—the unflinching Roman, by the magic of her art and song, it is doubly true that captive Ireland subdued the hardy Normans and Flemings by the grace and charm of her freeborn damsels. For we here notice a difference in the manner in which the new-comers approached the Irish women from the customary arrogance of invaders. It was in honourable marriage they sought their brides, and it was only in honourable marriage that the Irish maids were given by their fathers and brothers to the so-called "Saxons," who lost both country and character through their relations with the Northmen from France. Strongbow was induced to invade Ireland by the promise of being married to the beautiful Eva, the famous Princess of Leinster. Richard de Burgho, the MacWilliam Eighter of Galway, was wedded to the attractive Nora, daughter of Murrough O'Madden, of Portumna, and the Geraldines of Kildare were intermarried with the ladies of the O'Connor sept. No wonder that the Irish were always proud of their women, whom they allowed to have an equal voice with themselves in the controlling of their households, and who, instead of being kept in seclusion, like their contemporaries the daughters of the English nobles, enjoyed a great amount of freedom and power. And, the consequence of this was, that the Irishman became gallant and courteous, from constant association with the ladies of the land.

At a time when women were sentenced to be publicly stripped and flogged by judges in England, an insult to an Irish woman, not to speak of such an indignity to her person, were mortal crimes. This fact has been immortalized in Moore's sweet song—"Rich and Rare Were the Gems She Wore."

A warrior queen has been no novelty in our land. Scota, Queen of the Firbolgs, like an ancient Joan of Arc or Boadicea, arose to rally her defeated clansmen against the advancing Celt. She led her people to battle, and terribly did she fight. Though she failed to stay the career of the Milesian host, she gave her name to the land, for our island was called Scotia long before it was known as Hibernia. In the eleventh century we resumed the name of Eire, which sometimes appears as Erin, and more generally as Ireland.

The celebrated palace of Emania, known to the Irish as Eamhian (Aven), and, by the addition of the Irish article "an," contracted to "n," converted into Navan, owed its foundation to a princess, Macha of the golden hair. The circumstances are given in the Book of Leinster. It appears that three kings agreed to reign in succession for a period of seven years. But after the death of the first, Aedhruadh, his daughter insisted to reign in his turn, but was opposed by the second king, Dihorba, whom she defeated in many battles, and, after this death, she married the sole survivor, Kimbay. There were still five of Dihorba's sons living, but captives. These Macha was advised to kill. "Not so" answered she of the golden locks, "because it would be the defilement of the righteousness of a sovereign in me; but they shall be condemned to slavery, and shall raise a rath around me, and it shall be the chief city of Ulster for ever." "And she marked for them the dun with her brooch of gold from her neck," and the place was called Eomuin, from eo (a brooch), and muin (the neck). This derivation may not be correct, but who can deny that it is ingenious? It was not an infrequent occurrence for two rival queens to lead their armies against each other. In Kilquane, portion of the Lambert estate near Craughwell, is found an ancient burial place, where is a stone which is supposed to be raised to the memory of Norah, queen of Connaught, who had been slain in battle with the queen of Munster.

As we skip the centuries we come to one whose name is a household word in Ireland. Who has not heard of and admired the romantic Grace O'Malley, Granuaile, the great queen of the West? The life and fortunes of "Grace of the heroes" have been described in verse by Dr. Panter, who has done ample justice to the fair virgin who dominated the land by force of character in his epic poem. She was, as he says, "notable for her powerful frame, her ardent love of rule, and for success in such naval and military exploits as the piratical and tribal wars in her neighbourhood afforded." It is said that the Galway chieftainess visited the Court of Elizabeth and interviewed her great rival in England. And the Irish Amazon was rebuked by "Gloriana's self." On the return voyage the Irish princess is wrecked, and her ship is cast upon Ben Edar's shore, attracting at once a host of wreckers, who were, however, dispersed by Grace's warlike arm. Then the hospitality of Howth Castle was sought by the shipwrecked mariners, but was flatly refused. Some days pass, and the sails of Grace's scattered fleet are seen above the horizon, and enter the haven. Then the fierce soldiers are landed, and proceed to revenge the insult to their queen. The youthful heir of St. Lawrence—who was found on the shore—is carried off by the enraged princess, and is only returned by Grace on the condition that the gates of the castle be opened at midday, and an extra plate be laid for any chance guest at the dinner hour.

Another century of storm and sunshine has passed over the grave of the heroic Grace, and Lady Offaly is besieged in her castle at Geashill by the insurgents of 1641. Henry Dempsey, her own kinsman, summoned her to surrender, but "with the rebels she could make no common cause, and with the defection of the Lords of the Pale she could have no sympathy." With smart repartee she defeated the arguments, and by vigorous measures the widow of sixty years foiled the enemy's attacks on her stronghold. The climax was reached when a piece of cannon which had been constructed with great labour by the besiegers burst in pieces, and, instead of demolishing the walls of the castle, scattered and dismayed their own troops. When her son was taken prisoner and a threat was sent to his mother that he would be instantly beheaded in front of the castle walls unless she surrendered, she promptly replied that she would have a notable prisoner of hers hurled from the ramparts if they dared touch a hair of her son's head. It is gratifying to learn that this brave lady was at last relieved by Philip Sidney from the distressful siege she had endured with heroic fortitude and strength of will. But it is not alone her high-spirited daughters who have shed lustre on Irish annals, for in her saintly women the land has been greatly blessed. Of these, St. Brigid of Kildare is perhaps the best known. She it was who became the foundress of the "Church of the Oaks," and the monastery where monks and nuns lived under the same roof. And so the Irish princess became a Christian saint. Another holy woman was St. Ite, the Brigid of Munster, whose name is suffered to survive in Killeady. The great work of the Christian Evangelists was thus ably seconded by their fair and noble sisters.

The Irish maidens of high degree were taught music, embroidery, and weaving, and their education received careful attention; but, above all things, they were trained up to be good mothers and devoted wives. On many an occasion a clan was saved and a chieftain reformed by the good offices of a woman. It was due to the piety of Lady Mary O'Connor, wife of Brian, who was involved in the rebellion of "Silken Thomas," that the last scion of the house of Kildare, the ancestor of the present Duke of Leinster, was brought up safely in the wilds of Offaley. As wife and mother, the Irish women would compare very favourably, then as now, with the women of any other country. Although it would seem that marriages might be dissolved by personal arrangement, the fact that there were no laws for divorce testifies to the comparatively high morality of the Irish wife. It is true that the Irish chieftain often formed attachments of a loose nature, but such were not countenanced by the law of the land. On two occasions a woman was the cause of foreign invasion of Ireland. Kormlada, once the mistress of Brian Boroihme, and the mother of Sigtrygg king of Dublin, was "so grim against King Brian after their parting that she would fain have him dead," and she gave Sigtrygg—who had married a daughter of Brian—no peace until he summoned his allies from Norway to help him to make war on Brian. But nothing could shake the loyalty of Brian's daughter to her father's cause. For it is recorded in the words of the Gaedhill with the Gaill that as King Sigtrygg watched the battle from his tower, he exclaimed, when he saw Brian's men yield before Sigurd's Orkney men: "Well do the foreigners reap the field. Many a sheaf they cast from them." But she replied: "The result will be seen at the end of the day." But when the shadows of evening were stretching over the sands of Clontarf the Danes began to retire to their ships, and Brian's daughter observed: "It seems to me that the foreigners have gained their patrimony." "What meanest thou, woman?" retorted the irate Dane. "Are they not rushing into the sea, which is their natural inheritance?" said she. "I wonder are they in heat, like cattle. If so, they tarry not to be milked," and the king smote her on the face.

A century rolls away, and Dermot MacMorrough, the truculent king of Leinster, steals the heart and person of Dervorgil, and arrays all Ireland and most of his own people, who had been estranged by his cruelty and licentiousness, against himself. In his desperation the wretched man went to the English Court and offered to hold his kingdom as the subject of the king of England if he would help him to recover his dominions. At the time the suppliant came to him Henry II. had his hands full of foreign affairs, but he gave Dermot a letter to bring round the country, and the letter succeeded in winning to his side some of the Norman barons who resided in Britain and in Wales and were out of favour at Court—a desperate and a fearless band.

The lady who had been the guilty cause of this war, after her husband and her lover

ANOTHER SIRR CARICATURE.

(From Watty Cox's "Irish Magazine and Asylum for Neglected Biography, 1811.)

We give this week another of the caricatures with which Watty Cox assailed his particular "bete noir," Major Sirr, to lampooning whom, in picture, prose, and verse a large portion of space in the "Irish Magazine" was devoted.

As a sample of the verse of which that functionary was the theme, we quote here "A Major's Epitaph" (in imitation of Burns), published in April, 1811:—

Is there some Major prone to blood,
A foe to hapless Erin's good,
But, when the adverse storm blows rude,
A cringing Cur,
O'er this spot pour the briny flood,
For here lies——.

Is there some jobbing Castle hack,
Than Belzebub, with soul so black,
Whose cursed footsteps, blood doth track,
Oh, look ye here,
Here rots the friend of yellow jack,
So shed a tear.

Is there some holy, swaddling chief,
Who lives, by selling oaths,—in brief,
Whose heart is steel'd 'gainst human grief,
Weep o'er the grave
Which doth contain a preaching thief—
A brother knave.

The reptile, who defiles this sod,
Nor e'er lov'd Man, nor e'er fear'd God,
No sacred Laws beneath him trod,
Like any hag,
Till Jove decreed his vengeful rod,
The "Irish Mag."

---

been reconciled by death, retired from the pleasures of the world to the seclusion of the abbey at Mellifont, where she spent the remainder of her days in penitence and prayer. At Cluan-mic-Nois (Clonmacnois) is an ancient building called the "Church of the Nuns." It is recorded that in 1167 "the Church of the Nuns" at Cluain-mic-noise was finished by Dearvorgail, daughter of O'Mclaghlin. "Such" remarks the historian Gerald of Wales "is the variable and fickle nature of women, by whom all the mischief in the world is caused, as may be seen in the ruin of Marcus Antonius (Mark Antony) and the destruction of Troy." For, "Like another Helen, she fired another Troy."

There seems to have been a remarkable princess in Offaly called Ettagh, who has bequeathed her name to that place and her head to Kinnity (Ettagh's head). She, no doubt, was conspicuous for something in her life. After her husband had been duly selected in a hurling match, or by some other method, the marriage of the Irish girl of humble station was celebrated with much festivity. The first of August was a favourite day for weddings in Meath. Then was held a great fair at Tellstown, between Navan and Kells, called Tailiten by its founder, Lewy of the long hand, one of the Tuatha De Danaan kings, after his foster-mother, Taillte. And there is the particular place, still called Laganeany, or the hollow of the fair, where the marriages were duly celebrated.

Dancing—which has ever been one of the favourite amusements of the people—was then the principal recreation for the young people of both sexes on all occasions of rejoicing. Under a bush or on a stone sat the musician, while around before him flitted the merry people, to the rhythmical measures of his inspiriting airs.

There is only space now to speak of one custom which distinguished the Irish mothers from those of other nations. They never bound their children in swaddling-clothes, but preferred, in this as in most things, to follow nature. Giraldus, the Welsh historian of Ireland, remarks that the Irish nurses never raised the baby's nose, pulled his face, or swathed his tiny limbs. And he declares that the result justified the wisdom of the Irish, for their sons and daughters grew up all the more tall and handsome because the unnatural custom of binding the babes in swaddling clothes was unknown in the land. This testimony of the Welshman of a thousand years ago to the fine physique and good appearance of the sons and daughters of Erin was confirmed in the writer's hearing by a German American who had travelled far and wide, and who declared that he had never laid his eyes on a finer body of men than the members of the Royal Irish, or on a more charming race of women than the Irish. Many natural causes have, no doubt, helped to bring about this good result, among them heredity, climate, the survival of the fittest, and the mixture of the best; but not the least is the principle referred to by Giraldus, and which rules the Irish woman's manners and regulates her dress and appearance, namely this —that "Nature unadorned is adorned the most."

IRELAND AND SCOTLAND.

THEIR HISTORICAL AND POLITICAL CONNECTION.

By THOMAS D'ARCY M'GEE.

[The following is portion of a lecture delivered in Montreal in 1858 by the brilliant poet and historian, Thomas DArcy M'Gee.]

Nowadays, if we speak of Scotsmen, we have no confusion of ideas as to the country of which he is a native; it was, however, very different formerly. A few centuries ago, whoever, in the universities or exchanges of Europe—at Oxford, or Paris, or Antwerp, or Venice, or Rome—mentioned a Scot, invariably added, as a distinction, "of Ireland" or "of Caledonia." It is not necessary to quote the long array of ancient authors who so speak of the people of both countries; but a very few—and those of most familiar note—may be mentioned. St. Prosper, of Aquitaine, a chronicler of the 5th century, speaks of Palladius preaching to the Scots of both countries; the venerable Bede, in the 8th century, speaks habitually of Hibernia as "the island of the Scots," and "the fatherland of the Scoti"; Eginhard, the secretary and biographer, the Bourrienne of Charlemagne, writing in the ninth century, denominates Ireland "Hibernia, Scotorum insula." These authorities, French and English, will suffice for the notoriety of the fact abroad—that Ireland was known abroad as Scotia, at least from the 5th to the 9th century. Of Irish authorities on this point, I shall cite none, and of modern Scots but one—the learned George Buchanan, the preceptor of James I. of England and Ireland, and VI. of Scotland. "All the inhabitants of Hibernia," says Buchanan, "were originally called Scoti, as Orosius points out; and our own annals tells us that there was more than one migration of the Scots from Hibernia into Albania." And every recent research has gone to confirm the fact that it was not till the 11th century that Eri ceased to be called Scotia, or that Alba came into exclusive possession of that name. Occasionally, in poetical and other compositions, the old title was applied to the mother country, as we still hear England called Albion, and as America is sometimes poetically spoken of as Columbia.

The word Scotia is itself the name of a woman; some Gaelic scholars derived it from Scytha, a Scythian woman; others from Scoth, a flower or blossom, a name like Rosa and Flora and Laura, naturally suggestive of female beauty. All agree that this generic title of our race is derived from some first mother of the tribe, some hero's helpmate, who braved with him the perils of migration and of war, whose dusky eastern brow shines for us out of the dim traditions, and th the foliage of deep-wooded Inisfail, "rich with barbaric pearl and gold." The profound reverence of the Celtic tribes for their women is attested by all the Roman writers. In Gaul they neither made peace nor war without consulting them, and in Britain the veterans of Caractacus did not refuse their homage to Boadicea. In this respect the Celts followed the example of Asia, rather than of Rome; they, too, had their Cleopatras, Berenices, and Zenobias, whom posterity might have equally admired had they been equally fortunate in their historians.

As the name Scotia is feminine, so that of Gael (Gaedhal) is masculine. His genealogy like that of the lady, is the subject of much debate among the antiquaries; but all are agreed that from this ancestor the language of the Scots takes its name. In this respect, that race differed in their first customs from the Saxons and other northern nations, who still speak of their language as mother-tongue, and their country as fatherland. Originally, these terms had an accurate sense; conquerors, intermarrying with the daughters of the vanquished, transmitted the land won by the sword to descendants nursed and bred in the speech of their mothers. With the Scotic family their speech is the speech of the father, their land bears the name of the mother of the race—a singular contrast, and full of matter for reflection.

Of some of the migrations of which Buchanan speaks, from Hibernia into Albania, we have no very precise records. No passages in human history have been less carefully kept than the records of emigration. The movements of rude masses of men, the first foundations of states and cities, are generally lost in obscurity, or misrepresented by patriotic ingenuity. The successive settlements of the Scots in Caledonia can be faintly traced from the middle of the third century till the beginning of the sixth. About the year 503, they had succeeded in establishing a principality among the cliffs and rocks of Argyle. The limits of their first territory cannot now be accurately traced; but it seems certain it spread north into Rosshire, and east into the present county of Perth. It was a land of stormy friths and fessured headlands, of deep defile, and snowy summits. "'Tis a far cry to Loughe Awe," is still a lowland proverb, and Lough Awe was in the heart of that old Scotic colony. By the middle of the 9th century (A.D. 843) Kenneth, the eleventh in descent from Fergus, the founder of the Argyle settlement, became King of all Caledonia, if we except the coast of Caithness occupied by Norwegians. His dynasty was extinguished in the male branch with Alexander III., in 1286; but through the Bruces and Stuarts, and from the latter to the present Sovereign of Great Britain, the collateral issue may be traced, devious and adulterated in its descent, but unbroken even till our own day.

In the extension of their political power, the Scots advanced by slow degrees southward. Kenneth removed "the seat of governments"—if I may use such an expression in this case—from Inverlochy to Abernethy; Malcolm Ceanmore, two centuries later, brought it still further southward to Dunfermline; in the reign of Alexander III., Edinburgh began to be looked upon as a permanent capital. The old coronation chair of the Argyle chiefs was in like manner transferred from Dunstaffnage to Scone (near Perth), and beneath it lay "the stone of destiny," on the preservation of which depended, according to Milesian belief, the continuance of the Scotic line. If we are to credit a recent learned writer—Dr. Petrie—this was but a suppositious stone, the original still remaining unnoticed and unknown on the grass-grown mound of Tara; while its high placed counterfeit is now exhibited to visitors in Edward the Confessor's Chapel, in Westminster Abbey. True or false, upon this corner-stone of Scottish loyalty the M'Alpin line, the Bruces and the Stuarts, were crowned, and the tradition that connects them with it connects them also with the paternal isle from which it was obtained, to add an additional solemnity to the coronation of their first Kings.

It is hardly necessary to observe here that the Argyle Scots were not, in those early ages, the only inhabitants of Caledonia. There were at least three other groups of men—the Picts of the German Ocean, and the Lothians, a German tribe; the Britons of Strathclyde, expelled by their Saxon conquerors, a Welsh tribe; and the Norwegians of Caithness, Sunderland, and the Orkneys. These three races taken together, no doubt, largely outnumnumbered,* even in the reign of Malcolm Ceanmore, the descendants of the Scoto-Irish. Yet the religion, the laws, and the nationality, and the sovereignty of Scotland, were all established by the children of the settlers of Argyle. They were the aggressive and prevailing race from the 6th to the 13th century, and if the Saxon element has been since steadily gaining in the lowlands and the cities—if the Anglo-Norman nobility, introduced by James I., have begun to outnumber the titled heads of great clans—still, in peace and in war, in action and in acquirement, the off spring of the Gael need not, even in the 19th century, veil their bonnets before any proud southerns plume. That they gave Scotland her style, her crown, her native kings, and the religion in which she worshipped for a thousand years, is proof enough that they were not inferior in energy or in civilisation to the men of Germany, of Briton, or of the North, with whom they were brought in contact in those ages, and over whom, peaceably or forcibly, they, in the lapse of time, extended their dominion.

What we have said of the Scots in Caledonia may also be said, with some difference, of their kindred in Ireland. They were not the sole, nor were they the earliest, inhabitants. The Belgæ were before them—were the people before the arrival of the Milesian settlers. Of those still earlier pioneers, the "Tautha de Danans," we can get no certain sight. They move about in the distance and the darkness, huge and uncertain figures, performing all sorts of wonderful things. Such men there were no doubt, with princes, warriors, a society, and a culture, above barbarism. But they, as well as the Belgæ, had to succumb to the conquering Gael, called by their best writers "Scoto-Milesians." One desperate revolt the vanquished made in the first Christian century, cutting off their oppressors by a well-planned conspiracy; but it was of no avail. After revolution had followed restoration, and Tuathal "the acceptable" returned from honourable duress in Agricola's tent, to re-establish the legitimate dynasty on the throne of Tara. From thenceforth till the Plantagenets came, the sceptre of Eri did not pass from the hands of the Scotic line. During all the long centuries, while the Argyle colony was growing into the Scottish monarchy, the parent island remained the populous home of the race, cherishing for their kinsmen in Alba an affection strengthened by all the ties of common creed, common speech, a common literature, a common ancestry.

The great unionist between the separate but kindred populations—the man who, in his own person, best presents the religious, the political, and the intellectual identity of the two nations—is St. Columbcille, the Apostle of the Picts, and the founder of Iona. He was not at the planting of the Argyle colony, nor is his name the first name invoked in the old Scottish liturgy. St. Kieran, the ruins of whose churches still, or lately did, exist in Campbelltown and other parts of Argyle, was the patron of the pioneers; but Columbcille was the finisher of the work. Born in the Province, from which most of the emigrants had gone out, nearly allied by blood to the house of Fergus, it is not wonderful that his natural affections should have suggested the missionary field. And nature had well fitted him to the great task of adding another realm to the empire of Christendom. His princely birth gave him power over his own proud kindred; his golden eloquence and glowing verse—the fragments of which still move and delight the Gaelic scholar—gave him fame and weight in the Christian schools which had suddenly sprung up in every glen and island. As prince, he stood on equal terms with princes; as poet, he was affiliated to that all-powerful Bardic order, before whose awful anger kings trembled and warriors succumbed in superstitious dread. A spotless soul, a disciplined body, an indomitable energy, an industry that never wearied, a courage that never blanched, a

sweetness and courtesy that won all hearts, a tenderness for others that contrasted wonderfully with his rigour towards himself, these were some of the qualities which adorned the character of this eminent missionary.

According to Bede, Columba arrived in Caledonia in the year 565. He was then in the prime of his life—his 44th year. Twelve companions, the apostolic number, accompanied him out of Ireland. For thirty-four years he was the legislator and captain of Christianity in those northern regions. The Kings of the Picts received baptism at his hands; the Kings of the Scottish colony, his kinsmen, received the crown from him on their accession. The islet of I., or Iona, ever afterwards so famous, was presented to him by one of these princes. Here he founded his parent-house, and from the Hebridean rock he shaped the destinies, spiritual and temporal, of many tribes and kingdoms

Formed by his teaching and example, there went out from Iona apostles to Ireland, to the Orkneys, to Northumbria, to Man, and to South Britain. A hundred monasteries in Ireland looked to that exiled saint as their patriarch. Twenty British or Scottish Bishops accompanied him from Iona to the assembly at Dromketh. His rule of life, adopted from the Far East, from the recluses of Thebaid and of Palestina, was sought for by chiefs, Bards, and converted Druids. Clients, seeking direction from his wisdom, or protection through his power, were constantly arriving and departing from his sacred isle. His days were given to labour, his nights to study and the transcribing of the Scriptures. Death found him at the ripe age of almost four score, "stylus" in hand, toiling cheerfully over vellum page. It was the last day of the week when the presentiment of his end came strongly upon him.

"This day," he said, to his disciple Diermitius, "is called for the day of rest, and such it will be for me, for it will finish my labours." Laying down the manuscript, he added, "Let Baithen finish the rest. Just after Alatius, on the Sunday morning, he peacefully passed away from the scene of his extraordinary labours.

Of his gentleness, as well as energy of character, tradition and his biographers have recorded many instances. Among them I may recall his habit of ascending an eminence every evening at sunset, to look over towards the coast of his native land. The spot is called by the islanders to this day, "the place of the back turned upon Ireland." The fishermen of the Hebrides long believed they could see their saint flitting over the scene after every fresh storm, counting the islands to see if any of them had foundered.

There is a beautiful legend of his finding a quail fluttering upon the strand with broken pinions, having been blown across from the Ulster shore by a western wind; of his nursing the bird until it had recovered, and then letting it loose, "that it might fly back again to its own country." Such are the relations which fond tradition, in no irreverent spirit, has carefully preserved of that great saint, and his must have been a loving and a lovely character of which such tender tales could be told, and such beautiful fiction could be universally believed.

As a statesman, he carried for our ancestors three great measures, of the last of which we are not, even at this moment, beyond the reach. He obtained the peaceful recognition by Ireland of the independence of her colony in Scotland, at the famous convention of Dromketh; he effected the reformation of the Bardic order, and he established the first western monastic institute. Of the two former, as political and social events of the first importance in Gaelic life, I shall speak a little more in detail.

The great convention of the Scotic race, and the last one in which the Argyle colony was represented in the mother country, was held at Dromketh, in the present county of Derry, in the year A.D. 590. Hugh, King of Ireland, presided, and there were present all the princes, chiefs, and prelates of both countries. The great questions to be settled were three: 1. The proposed suppression of the Bardic order, which, with their attendants, had reached the enormous number of 30,000 men, nearly one-third of the male adult population. 2. The taxation of the colonists in Argyle, by the mother country. 3. The case of the Prince of Ossory, then held close prisoner by the monarch. Aidan, Prince of Argyle, attended this convention, and thither, also, Columbcille came with a numerous train, set down in an ancient poem at 150, mainly ecclesiastics.

Of the incidents of the journey, we need not repeat the marvels that are told. He pleaded the cause of the Bard so effectually that the order was spared. The doctors, or master-singers among them, were prohibited from wandering from place to place; they were assigned residence with the chiefs and princes; their losel attendants were turned over to other pursuits, and thus a great danger was averted, and one of the most essential of the Scotic institutions being reformed and regulated, was preserved. Scotland and Ireland have good reason to be grateful to the founder of Iona, for the interposition which preserved to us the music, which became, in the lapse of ages, the inspiration of two modern Bards well worthy of their inheritance—Robert Burns and Thomas Moore.

The proposed taxation of Argyle by the mother country, Columbcille strenuously and successfully resisted. Up to this time the colonists had been bound only to furnish a contingent force, by land and sea, when the King of Ireland went to war, and to make an annual present called "chief-rent." If the noble King of Ardghal, enumerated in the "Lebhar n'g'ceart, as tributary to Tara, the Argyle Princes, he meant, they at the time of the compilation of that palimpsest, or of the more ancient one it follows, paid the stipend "out of Alba" of seven shields, seven steeds, seven bondswomen, seven bondsmen, and seven hounds all of the same breed. But the "chief-rent," or "eric for kindly blood," as it is variously phrased, did not suffice in the year 590 to satisfy King Hugh. The colony had grown great, and like some modern monarchs, he proposed to tax it for its success. Columbcille, though a native of Ireland, and a prince of its reigning house, was by choice a denizen of Caledonia, and he stood true to his colonial neighbours. The Irish king refused to continue the connection on the old conditions, and declared his intention to visit Alba himself; Columbcille, rising in the convention, declared the Albanians "forever free from the yoke," and this, adds Geoffrey Keating, "turned out to be the fact." From this statement we may conclude that Scotland never paid political tribute to Ireland; that their relation was rather that of allies than of sovereign and vassal; that it resembled more the homage Carthage paid to Tyre, and Syracuse to Corinth, than any modern form of colonial dependence; that a federal connection existed by which, in time of war, the Scots of Argyle, and those of Hibernia, were mutually bound to aid, assist, and defend each other.

This perpetual alliance, founded in the blood of both nations, sanctioned by their early saints, confirmed intermarriage, by a common language and literature, and by hostility to common enemies, the Saxons, Danes, and Normans, grew into a political bond of uncommon strength and power. Before I mention the most remarkable proofs of its continued efficiency for ten centuries, let me call your attention to the general fact, that Scotland and Ireland never had a national quarrel. There were Scottish exepditions against Man against the Orkneys; there were constant wars between Scotland and England; but Ireland never invaded Scotland, nor Scotland Ireland.

During the successive Danish invasion of both countries, we constantly find the two nations combatting side by side. These invasions were almost uninterrupted from the close of the 8th till the beginning of the 11th century. At first they may have been more predatory incursions under independent chiefs—these terrible Vikings, who issued with their long ships out of the Baltic, chanting battle songs to their God, and marked with the runes of death. One conspicuous fact will show how the Scots of both sides the Irish Sea assisted each other against them.

The most disastrous battle which the Danes ever fought in the West was unquestionably that of Clontarf, fought on Good Friday, 10[illegible]. Of the invaders, Bruder, the Danish leader, and Sitrick, Earl of the Orkneys, a deadly enemy of both Scotias, fell; of the Scots, Brian, King of Ireland, his son, grandson, and several of his nobles, and the Maormars (High-Stewards) of Man and Levin in Alba. In the chronicles of Denmark, Brian's battle is mentioned as the most memorable of its age. In Adelmais chronicle, and the chronicle of the Merianus; in the Scandinavian collections of Forfaeus and Johnstone, as well as in Gray's translation of "The Memory of Brian," is amply honoured. His own poet, McLeig, who survived him less than two years, in his pathetic address to Kinkora, the palace of Brian, asks where is "the faith-keeping prince of the Scots," who of old sat with the chiefs at the feast in thy halls, and drank the red wine. Where! oh, Kinkora."

It is remarkable that the year 1014 is given by all the Scotch writers as that in which the Danes finally abandoned their country also. So reasonable is it to conclude that, when the brave Maormars of Levin and Man fell at Clontarf, they were fighting the battle of Alba as well as of Erin.

In the Plantagenet invasions of Scotland they sometimes summoned the Irish chiefs to accompany them at the head of their clans; but I do not know an instance in which any Scoto-Milesian prince answered to the call. The Hiberno-Norman peers, the Butlers and De Burghs, whose kindred ties were with the invader, often obeyed his requisitions; but though before the campaign of Bannockburn every notable Irish chief was invited to join Edward II., we do not find one of them named as among either the prisoners or the slain. I know Sir Walter Scott has sung how—

> "Connoght poured from waste and wood
> Her hundred tribes, whose sceptre rude
> Dark Eth O'Connor sway'd."

But there is no mention of Scoto-Milesians on the English side in the battle; while there is the evidence both of "Blind Harry," and of Barbour, for reckoning Irish Scots among the adherents both of Wallace and Bruce. The second Henry's invasion of Ireland, in the 12th century, had given the two kingdoms a common enemy in the third. They had previously, in the Danish wars, assisted each other on both sides of the Irish sea. And now that the family of Bruce had enhanced the glory of Scottish name, it was to him the Irish looked as their natural alley, offering to his brother Edward their crown, on condition of his helping them to repeat on Irish ground the victory of Bannockburn.

The family of Bruce were bound by genealogical bonds, then kept bright and strong, to both the Scottish monarchies. The first Robert Bruce- Baliol's competitor—was grand nephew to William, King of Scotland. He stood, also, maternally in close relation to Dermid, King of Leinster, whose daughter Eva, the prize-bride of Strongbow, Earl of Pembroke, left a daughter, who by William, Earl of Mashal, left again four or five other daughters—co-heiresses, from whom the Bruces in Scotland, the Mortimers in England, and other noble families, were maternally derived. The second Robert Bruce, grandson of the first, was, in 1306, but 32 years of age when he stabbed his rival, the red Comyn, in the Dominican Church of Dumfries. He was one of several brothers of whom four are known to us by name: Edward, Thomas, Alexander, and Nigel. The commencement of his reign is known to have been disastrous, and it was not until the day of Bannockburn—eight years after his coronation, that he could be said to wear the crown with any degree of security. This justly celebrated event is the best known of his

life; but other passages which connect the name of Bruce, inseparably with the history of Ireland, are not less certain and authentic.

It will sound strange to some of this day, to hear that Edward Bruce, brother of Robert, reigned three whole years in Ireland, from May, 1316, to May, 1319, surrounded by a court and army, and in possession of a great part of the Kingdom. This possession he undoubtedly owed to the fame of his illustrious brother, who had passed the first winter of his reign a fugitive in the island of Rathlin, and who had returned to reclaim his crown, backed by Irish volunteers. An intimacy had then been established, which continued throughout life; for Robert Bruce was as remarkable for generosity in friendship as for his deadly hatred. Some of his Irish allies had shared the fate of their captain brothers, Thomas and Alexander, in 1307, and had died for the Scottish cause on the scaffold at Carlisle. Other Irishmen were in his army at Bannockburn, and the name of a very considerable territory. Kincardine O'Neil still attests his generosity to one of his Irish allies—'When intelligence arrived' (in Ireland) says Dr. Lingard, 'of the victory at Bannockburn, it was received with enthusiasm, and the conviction that the English were not invincible, awakened a hope that Ireland might recover her independence. Edward discovered that an active correspondence was carried on between the men of Ulster and the Court of Bruce. In the month of May, 1315,, Edward Bruce, with 6,000 men, landed at Carrickfergus, and was immediately joined by Donald O'Neil, Prince of Ulster, and other northern chiefs.* The following year, O'Neil formally resigned his claims to the sovereignty in his favour, and he was crowned at Dundalk, with all possible solemnity. Of his brief reign, I have not time to speak in detail; he was slain in battle, in his third year, in consequence of his own rash haste, or, as an old writer expresses it, 'his own wilfulness, that would not tarry for his full company, that were about at hand.'

At another point of great political interest, we find the traditions of ancient policy still influential at the Scottish Court. This was in 1541, when Henry VIII. of England, after many years of negotiation, at last obtained the crown and title of "King of Ireland," when the Irish arms were first quartered with the great seal of England, and the English heralds proclaimed the king's new title at Paul's Cross, London, and from Le Dame's gate in Dublin. In the "State papers of Henry VIII.," there are two volumes dedicated to his Irish policy, and two others to his Scottish intrigues and negotiations. We there find his agent at the Court of Scotland, informing him how in 1539, "eight Irish gentlemen" had arrived in Stirling, to offer their country's crown to James V.—the vanquished of Flodden Field, and the father of the ill-fated Queen Mary. Among the last to recognise the new title of Henry was the same king, who naturally did not wish to see the pretensions of his own house extinguished, though he was, at the moment, in no condition to maintain them by arms. But that which he desired did indeed come to pass, though not in any manner he could have foreseen; when on the death of Elizabeth, his grandson, James VI. of Scotland, attained the sovereignty of the three kingdoms, under the title of James I. Thus the crown of Ireland did in half a century pass from Henry's descendants to his own.

(In the subsequent passages of the lecture, Mr. McGee pointed out the Hiberno-Scottish alliance illustrated by the union of McDonald of Antrim with Montrose, of Colonel O'Kane with Dundee, and the fealty of Stapleton, O'Sullivan, and O'Neil to the unfortunate Charles Edward. But those are comparatively modern events, which any reader may master for himself.)

*Pinkerton surmises the original colony to have been 40 to 50,000 strong, but on what ground he does not state. I cannot forbear expressing some surprise at the importance attached to some of the dicta of this passionate and partial debater of historic doubts, rather than writers of history.

An Australian millionaire, named Darcy, is said to have obtained a concession to work the oil belt in south-west Persia. Surveying has begun for a pipe line, 360 miles long, from the Kerkah Valley to Mohammerah. The oil is believed to be purer than the Russian, and to be abundant.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

CHAPTER IX.—Continued.

A.D. 1447. Vast multitudes died in Dublin of a plague and famine this year, which afflicted all parts of the kingdom.

A.D. 1452. The river Liffey at Dublin was entirely dry for the space of two minutes.

A.D. 1459. A mint was opened in the castle of Dublin, where not only silver but brass money was coined.

A.D. 1461. A great tempest threw down the large east window of Christ-church, and the stones of it broke to pieces many chests and coffers in which the jewels, reliques, ornaments, and vestments of the altar, as also the deeds, writings, and muniments of the church were deposited, and the damages done upon this accident to the prior and convent were very great. Many foundation charters of the church were so lacerated and destroyed, that they were scarce left legible, or the impressions of the seals to be discerned, and particularly a foundation charter of Henry Fitz-Empress, which by no means could be read. The prior and convent, by the advice of lawyers, went to the barons of the exchequer, and moved them to enroll such of their deeds as could be distinctly read; which was done accordingly. The compilers of the black-book of Christ-church, Dublin (from whence this account is taken), adds a miracle upon this occasion. For they say that the chest in which the staff of Jesus and other relics lay, was entirely broken to pieces, and that the staff was found lying without the least damage on the top of the rubbish, but that the other relics were entirely buried under it.

A.D. 1462. A mint was established in Dublin for coining groats, two-pences, pence, half-pence, and farthings; and soon after it was ordered that English money should advance a fourth part in Ireland.

A.D. 1466. Another plague wasted Dublin, Meath, and the adjacent countries.

A.D. 1472. A fraternity of arms of St. George was established by act of parliament, to consist of thirteen of the most honourable and most faithfully disposed persons of the four counties of Kildare, Dublin, Meath, and Louth; and a poundage was laid on all merchandise imported or exported for their support. Among these, the mayor of Dublin for the time being was nominated to be one for the county of Dublin, together with the Lord Howth and Sir Robert Dowdall.

A.D. 1477. The plague again wasted Dublin this year.

A.D. 1480. The mayor and bailiffs of Dublin, with certain bands of the commons, went out a hosting into the O'Mores' country in company with the lord deputy.

A.D. 1484. The plague raged greatly this year in Dublin.

A.D. 1486. Lambert Simnel, an impostor, was crowned king in Christ-church, by the name of Edward VI.; the mayor and citizens, by the influence and example of Girald, Earl of Kildare, lord deputy, the lords of the council, and other men of great quality, assisting.

A.D. 1487. Jenico Marks, mayor of Dublin, and the citizens, made a submission and apology to the king for their misbehaviour in the affair of Lambert Simnel, in these words: "We were daunted to see not only your chief governor, whom your highness made ruler over us, to bend or bow to that idol, whom they made us obey; but also our father of Dublin, and most of the clergy of the nation, except the rev. father, his grace Octavian, archbishop of Armagh. We therefore humbly crave your highness's clemency towards your poor subjects of Dublin, the metropolis of your highness's realm of Ireland, which we hope your gracious highness will remit with some sparks of favour towards us. Your highness's loving and faithful subjects of Dublin, Jenico Marks, mayor of Dublin, John Serjant, John West, Thomas Mulighan, John Fian, aldermen of the same, &c." Several of the citizens at this time could not write, but put their marks to the letter.

A.D. 1488. Sir Richard Edgecombe being sent to Ireland to take the homage and oaths of the nobility, and to grant them the king's pardon, landed at Kinsale the 27th of June, and came to Dublin on the 5th of July, and on the 21st took the homage and oaths of fealty from the earl of Kildare, lord deputy, and the rest of the nobility, and on the 23rd from the mayor, bailiffs, and commonalty of the city, assembled at guild-hall, and delivered to them the king's letters of pardon. On the 27th he dined with the recorder, and on the 30th he embarked at Dalkey.

A.D. 1489. This year the first muskets or fire-arms that (perhaps) were ever seen in Ireland, were brought to Dublin from Germany, and six of them, as a great rarity, were presented to Gerald, earl of Kildare, then lord deputy, which he put into the hands of his guards, as they stood sentinels before his house in Thomas-court.

A.D. 1493. By means of a riot on Oxmantown-green, several eminent citizens were slain this year, and the mayor of Dublin, John Serjant, was committed to ward in the castle, and Richard Arland elected mayor till the Michaelmas following. The cause of his committal is not mentioned; but probably it was for abet-

ting, or not taking due care in quelling the riot, or perhaps for engaging himself in Perkin Warbeck's imposture.

A.D. 1496. Jenico Marks (who had been mayor of Dublin ten years before) was this year slain in Keysar's-lane, endeavouring to compose a riot of the citizens.

A.D. 1497. There was a great dearth this year through most of Ireland .but especially in Ulster. At and about Dublin it was not so great; for a peck of wheat, being almost four English bushels, sold for 10s., and malt for 8s.

A.D. 1504. Some of the degenerate English colonies, and particularly Ulick Burke, chieftane of Clanricard, commonly called Mc. William Burke, and Turlogh O'Brien, chieftane of Thomond, Melrony O'Carrol, and many other old Irish lords, finding the power of the earl of Kildare, then lord deputy, too great to be opposed separately, confederated together and drew into a body the greatest army that had been seen in Ireland since the first English invasion. To oppose this confederacy, the earl raised not only the whole power of the pale, but had the aid of several Irish lords, as O'Neal, O'Reily, O'Connor-Faly, and others; and John Blake, mayor of Dublin, and the two bailiffs, marched out to the earl's assistance with a gallant body of well-armed citizens. They fought the enemy on the 19th of August at Knocktuogh, or Knock-to, i.e., the hill of axes (so called from this battle), about five miles from Galway, not far from Aghrim, a place famous for a battle of much greater consequence in subsequent times. The event was doubtful for a long while; but at length victory declared for the earl. There fell over 4,000 of the enemy (the book of Howth says 9,000), and a great number were taken prisoners. The earl returned to Dublin with little loss. and distributed 120 hogsheads of wine among his army.

A.D. 1505. Thomas Newman, mayor of Dublin, Walter Pippard and Maurice Colton, bailiffs, marched out with the commons of the city in aid of the earl of Kildare, to Ballaghaspord, against O'Carroll, whom they harassed and destroyed, and then returned to Dublin.

A.D. 1506. The prior of Kilmainham attempted forcibly to take some loads of hay from the Dominicans of Dublin. But the mayor and commons assembling together in favour of the friars, rescued the hay and drove the prior into Kilmainham.

A.D. 1512. Hollingshed relates that this year there were great factions between Gerald, earl of Kildare, lord deputy, and James Butler, earl of Ormond, and that the latter marched to Dublin with a strong body of forces, under pretence of composing matters with Kildare, but in reality to lure him. They had a meeting in St. Patrick's-church, and the citizens guarded Kildare. But a quarrel happening between them and a part of Ormond's army, they discharged a volley of arrows at them, and, shooting at random, some of their arrows stuck in the images in the rood left. The matter being appeased, a complaint was after made to the Pope of this profanation, and a legate sent to make inquiry into it. The citizens were at length absolved; but a punishment laid on them, "that in detestation of the fact, and to keep up the memory of it for ever, the mayor of Dublin should walk bare-foot through the city in open procession before the sacrament on Corpus Christi day yearly," which was ever after duly accomplished, until the reformation put an end to such practices. Some ascribe this quarrel, not to the earl of Ormond, but to Sir James Ormond, who had been treasurer of Ireland.

A.D. 1513. The mayor of Dublin, with a well-armed company of citizens, attended the earl of Kildare this year in an expedition against O'Carroll. But the earl dying in the way, put an end to the design, and the citizens returned home.

A.D. 1516. The earl of Kildare (a), lord deputy, assisted by the citizens, invaded the O'Tools, and slew Shane O'Tool, their chieftane, and sent his head as a present to John Rochford, mayor of Dublin, by Robert Hoth, who received a crocard from the mayor for his trouble.

A.D. 1517. A band of light-armed citizens, under the command of Christopher Usher, mayor of Dublin, marched out against O'Tool; but returned home without their usual success, the enemy being much superior to them in number. However, their loss was little.

A.D. 1520. The Earl of Surrey having just entered on his government of Ireland, was alarmed on Whitsunday with the news that Con O'Neil had invaded Meath. Upon this report he sent immediate orders to the mayor, sheriffs, and citizens of Dublin to march out against O'Neil, and he himself followed with a good body of forces the day following. O'Neil was frightened with these preparations, and immediately retired, and soon after submitted.

A.D. 1521. The O'Mores of Leix confederating with the O'Connors, O'Carrols, and other Irish, invaded the borders of the Pale. To repel them, the Earl of Surrey, accompanied by Thomas Tue, mayor of Dublin, and a choice band of citizens, invaded Leix. In this expedition one Patrick Fitzsimons, a citizen, had the opportunity of signalising his valour. For the Irish divided their forces into several parties, and, having intelligence that the carriages and baggage of the army were slenderly guarded, they took the opportunity of attacking that quarter, and made such an impression that several of the lord lieutenant's soldiers fled, and laid the default on Fitzsimons, who, to justify himself, produced two heads of the enemy, which he had cut off in the action, and retorted the cowardice upon his accusers, and by that means obtained both reward and knighthood. The carriages being recovered, the army marched forward into the woods and fastnesses of Leix, where the lord lieutenant escaped an imminent danger. For a sturdy rebel shot at him, and struck the vizor off his helmet, without further damage. The fellow was seized and hewed to pieces, refusing to take quarter. The lord lieutenant having wasted Leix, and humbled O'More, immediately turned his arms into Offaly, nnd in a day or two took the strong monastery of (b) Monasterpheoris, and burned the county till the 23rd of July. O'Connor, hoping to preserve his country by making a diversion, marched into Meath, where he was pursued by the lord lieutenant, who obtained a victory almost without blows, and made great slaughter in the pursuit. Having finished this royal progress with advantage and honour, the citizens returned to Dublin with his lordship, loaded with spoils.

A.D. 1523. The Earl of Kildare obtained leave from the Earl of Ormond, who was then lord deputy, to invade the country of Leix; and marching out with John Fitzsimons, then mayor of Dublin, and a small body of citizens, he entered that territory and burned a few villages; but he was intercepted by a party who lay in ambush, lost many of his men, and with difficulty made his retreat.

A.D. 1524. Commissioners were sent over from England to compose the differences between the Earl of Ormond, lord lieutenant, and the Earl of Kildare, and to adjust other smaller matters. The mayor and citizens of Dublin complained to them of some injuries done the city by Sir Peter Talbot, as the taking of custom and breaking bulk at Malahide, contrary to the king's grants made to the city; and the commissioners ordered Sir Peter to pay a fine to the citizens in recompense of the wrong, and for the future never to intrude in like manner on the franchises of the city. A difference between the abbot of Thomas-court and the mayor of Dublin, concerning the toll-boul, was determined by the same commissioners.

A.D. 1525. A very hot summer this year ,and a wet autumn of the preceding one, produced a plague through the kingdom, which raged about Dublin with more violence than in other parts, and destroyed numbers of the inhabitants.

A.D. 1528. A pestilential sickness, called the "English sweat," which first appeared in Ireland in 1491, now again raged with great violence, and at Dublin swept away Archbishop Inge, lord chancellor, William Talbot, Richard Elyot, Richard Fitz-Williams, Walter Fian, and two canons Luett, with Stanihurst, and great numbers of other citizens.

(To be Continued.)

(a) Son to the former, who succeeded his father in the government.

(b) In the King's County founded by John de Bermingham, Earl of Louth, A.D., 1325, for conventional Franciscans.

A working model of a new type of steamship, the invention of Herr J. Brohan, an engineer of Hamburg, has been on view in the Hall of Civil Engineers, Rue Blanche Paris., The principal feature of this craft is that it is equipped with four propellors, one forward, another just before the rudder, and two at the stern. The vessel is flat-bottomed, but there is a short keel in the centre and two false keels forward, to keep the hull off the bottom in case of grounding, and between which the forward screw revolves. The inventor estimates that with a steamer 300 feet long, built according to his design, he could make the passage from Havre to New York in four days.

LITERARY NOTES.

Two new volumes are about to be added to Messrs. J. M. Dent's "Temple Primers." The first relates to "The Venetian Republic," written by Dr. Horatio Brown, and the second is by Dr. Otto Jiriczeh, who, in "Northern Hero Legends," gives a summary of the more important sagas underlying our older literature.

✧ ✧ ✧

The family of the late Marquis of Dufferin and Ava have requested Sir Alfred Lyall to write a biography of that great diplomatist, but the work may not be expected until the middle of next year, for the reason that Sir Alfred will not commence putting together his materials until late this autumn, when he resigns the seat he has occupied on the India Council since 1888.

✧ ✧ ✧

The difficulty of rhyming to "girl" is mainly due to the varieties of its pronounciation. It is never pronounced, as it is so often conventionally written, "gal"; but one often hears "gell" with a hard "g." Moreover, in Scotland, though it is as well not to mention the fact to a Scotchman, it consists of two syllables—"gurrel." The other day it was pointed out to a Scotsman that the name of his national poet was a dissyllable in Ayrshire. "Hoot awa'!" he said, or words to that effect, "Burruns two syllables! Absurrud!"

✧ ✧ ✧

Sir Alfred Lyall is well qualified for the task he has undertaken, for he was an intimate friend of Lord Dufferin, and both held appointments in India in the late eighties, the deceased being Governor-General, while the biographer was Lieutenant-Governor of the North-West Provinces. Nor must it be forgotten that Sir Alfred is the author of "British Dominion in India," and of an admirable life of Warren Hastings. An additional tie between the two men was that they were both educated at Eton.

✧ ✧ ✧

Probably the oldest dining club in the kingdom is that at Dulwich, whose toast, "The Hamlet of Dulwich and the Ladies thereof," has been honoured for a hundred and thirty years. Notwithstanding the gallantry of the club's sentiments, ladies have never been admitted to the dinners until this year, when an exception was made in honour of the Coronation. The Ship at Greenwich was the scene of the festivity; the menu was headed "Samedi Le 12th Julliet," a combination almost rivalling "the complicated horrors" of Pinkerton's "Americo-Parisienne" lecturer in Stevenson's "Wreckers."

✧ ✧ ✧

Talking of resignations, the "St. James's" tells a good story of Lord Rosebery. The speech of Lord Rosebery at Edinburgh, in which he resigned the leadership of the Liberal party, come in very slowly to the newspaper offices, and a weary sub-editor in the Midlands was moved to write, "Thank God!" on the last slip instead of the orthodox "Finis," which is the usual way of informing the compositor that the speech is ended. The compositor knows no more sacred thing under heaven than his rule to "follow copy," and the Midland paper wound up its report of Lord Rosebery's speech the next day by saying—"Lord Rosebery then left for the South. Thank God!"

✧ ✧ ✧

The lady students of the University of Melbourne have a "union" of their own, and they have been debating the proposition, "That the friendships of men are truer and more lasting than those of women." An eloquent daughter of one of the Professors championed the affirmative, and the logical daughter of a local Presbyterian divine no less ably upheld the negative. The latter proved the more convincing leader. Speaker after speaker rose to argue that man was incapable of self-sacrifice, and therefore of true friendship, merely utilising his so-called "friends" for the promotion of his own business interests or to banish the demon of boredom. One debater rejoiced that the practice of women kissing in public was fast dying out. Ultimately the proposition was rejected by an overwhelming majority.

✧ ✧ ✧

Lord Acton has arranged to publish with Messrs. Macmillan his father's lectures delivered as Regius Professor of Modern History at Cambridge. The late Lord Acton delivered two courses of lectures as Professor, one on "The French Revolution," and the other on "General Modern History." These lectures will be published in two volumes, together with a reprint of Lord Acton's inaugural lecture. It is hoped also later on to publish one or more volumes of essays. Lord Acton has entrusted the work of editing and seeing the lectures through the press to Mr. R. Vere Laurence, Fellow of Trinity College, Cambridge.

✧ ✧ ✧

The "Scottish tutor famous for his knowledge of Greek" under whose care the late Lord Acton was placed for a time when a young man, as related by Sir M. E. Grant Duff in his appreciation of his old friend in the "Spectator," was William Veitch, author of the well-known treatise on "Greek Verbs: Irregular and Defective," an enlarged and amended edition of which, on the recommendation of the late James Hannay, was published by the Clarendon Press in 1866. In one of their walks round Arthur's Seat in the early sixties Veitch, pointing to a solitary chateau at the west end of Duddingstone Loch, to the south-east of Edinburgh, said to Hannay, "I once taught Greek there to Sir John Acton. He was a fine, intelligent young man, and I could have made him a better scholar if I had had the 'grounding' of him, and if he had been longer in my hands. We read Plato, and J. G. Lockhart, who was on a visit at the house, used to take part in the reading, as he was much interested in my pupil. I was pleased to find how good a Greek scholar Lockhart proved himself to be."

✧ ✧ ✧

From the "Meditations of an Autograph Collector," a book enjoying considerable popularity in America, a reviewer quotes the following as a "delicious exposure of soul" from a present-day essayist:—

Dear Sir,—In reply to your questions—

1. My work being multiform and very pressing, I have no choice between the day and the night. I must use both—the physical clock-work seems to run down about 4 p.m.

2. I make no written skeleton or first draft—I round off my sentences in my head before committing them to paper.

3. I take no stimulants at work. I take wine twice a day, but after dinner I neither eat nor drink—I generally sleep soundly as soon as my head touches the pillow.

4. I can work anywhere if I am not disturbed. . . .

5. I cannot do literary or other brain work for more than three hours on a stretch.

6. I am utterly unable to write to order, that is to say on every occasion—I can generally write, but there are occasions when for weeks I am conscious of an invisible disinclination, and this I never force. . . .

7. In the above notes I have been speaking entirely of prose composition. Verse, of course, cannot be submitted to rule. My experience is that the habit of regular application is beneficial.

Yours faithfully,
EDMUND GOSSE.

✧ ✧ ✧

There is historical as well as political interest in the fact that next year will be the centenary of "Hansard," the authoritative though not official record of the proceedings of Parliament. The present editor, Mr. George Walpole, proposes to publish early next year a booklet dealing with the origin, the proprietors, and the not unchequered career of the work. That there is at least room for this sort of history is proved by the fact that different and contradictory accounts of the "Hansard" publication appear in the various encyclopaedias. Mr. Walpole will certainly have no lack of material for his book. By the close of this year "Hansard" will muster nearly 500 volumes. According to one depressing estimate, the mere text alone—the actual reports of speeches—contains three hundred and sixty million words. This is without reckoning some odd millions of words and figures represented by tables of contents, indices, and appendices. "Hansard" was first issued in 1803 by Cobbett, who lost money on the venture. The work derives its title from the name of Cobbett's first printer, Thomas Curzon Hansard. It remained the property of Cobbett until 1809, when the "Debates," with the unfinished "Parliamentary History," were taken over by the printer himself. It was a private undertaking until 1855, when the Treasury came to its aid.

✧ ✧ ✧

The "Cambridge Modern History," the great work projected by Lord Acton, will be completed on the lines laid down by him. Turning to an advance copy of this preface we find an interesting statement of the aim and scope of of this great work of scholarship. Its aim, we are told, is to record, in the way most useful to the greatest numbers of readers, the fulness of knowledge in the field of modern history which the nineteenth century has bequeathed to its successor. The idea of a universal modern history is not in itself new; it has already been successfully carried into execution both in France and Germany. But it is believed that the present work may, without presumption, aim higher than its predecessors, and may seek to be something more than a useful compilation or than a standard work of reference. This universal modern history proposes something distinct from the combined history of all countries—in other words, a narrative which is not a mere string of episodes, but displays a continuous development. It moves in a succession to which the nations are subsidiary. The following list indicates the topics of the twelve volumes:—Volume 1, The Renaissance; ditto 2, The Reformation; ditto 3, Wars of Religion; ditto 4, The Thirty Years' War; ditto 5, Bourbons and Stuarts; ditto 6, The Eighteenth Century; ditto. 7, The United States; ditto 8, The French Revolution; ditto 9, Napoleon; 10, Restoration and Reaction; 11, The Growth of Nationalities; 12, The Latest Age.

✧ ✧ ✧

Under the title of "The Service," Mr. Godspeed, the Boston publisher, has issued a hitherto unpublished essay by Thoreau. This essay, we are informed by the New York "Journal," was written about 1846 and sent to Margaret Fuller, then editor of "The Dial," who, after a second reading, rejected it. In refusing this essay Miss Fuller wrote Thoreau that the paper was rich in thought, but "The thoughts seem to me so out of their natural order that I cannot read it through without pain. I never once feel myself in a stream of thought, but seem to hear the grating of tools on the mosaic." The subject of "The Service" is human life. In it Thoreau dwells upon the qualifications of the good recruit, describing the brave man, the elder son of creation; and contrasting his qualifications and abilities with those of the cowardly man. He thinks there is no ill which may not be swept away like darkness by letting in a stronger light. Nature does not sympathise with our sorrows. The following extracts from the essay will interest:—"The brave man is the elder son of creation, who had stepped buoyantly into his inheritance, while the coward, who is the younger, waiteth patiently till he decease. He rides as wide of this earth's gravity as a star, and by yielding incessantly to all the impulses of the soul is constantly drawn upward and becomes a fixed star. His bravery deals not so much in resolute action as healthy and assured rest; its palmy state is a staying at home and compelling alliance in all directions. So stands his life to heaven, as some fair sunlit tree against the western horizon, and by sunrise is planted on some eastern hill to glisten in the first rays of the dawn."

SCIENTIFIC TOPICS.

Professor J. H. Sears, Curator of Mineralogy and Geology at the Peabody Academy of Science, in Salem, Mass., has unearthed in newly opened claybanks in Danvers fossils of the mollusk Portlandia lucina.

✧ ✧ ✧

Texas oil is to be used by the great Minneapolis flour mills instead of coal. From the experiments made it would seem that the use of oil is entirely practicable. A street railway company of Minneapolis and St. Paul is also conducting tests with Beaumont oil.

✧ ✧ ✧

A sample of snow gathered ten days after it had fallen in the outskirts of Manchester was analysed. After melting the snow a residue was obtained which was equivalent to over 10 pounds to the acre, and which consisted of 48.6 per cent. carbon, 8.9 per cent. grease, and 44.5 per cent. ash. Another sample, taken from the heart of the city, contained nearly three times this amount of residue, or in other words, about a ton of soot per square mile a day.

✧ ✧ ✧

The Andrew Carnegie gold medal for 1902, of the Iron and Steel Institute, has been awarded to Dr. J. A. Mathews, of New York, for research carried out by him as the holder of an Andrew Carnegie Research Scholarship during the past year. The medal has been designed by Mr. G. W. de Saulles, of the Royal Mint. Dr. Mathews previously received a Fellowship for the encouragement of scientific research from Columbia University, where he has been working under the guidance of Prof. H. M. Howe.

✧ ✧ ✧

A marine engineer of Rochester has patented a new system for steering twin-screw steamships. His device consists of a special trottle valve attached to each set of engines, the valves being connected by means of bell cranks and linkwork to a tiller. When the tiller is resting centrally an equal supply of steam enters each engine, but directy the tiller is deviated from its central position in either direction, the throttle vale fitted to one set of engines reduces the supply of steam, so that the propeller actuated by that particular engine revolves more slowly, the rotatory motion of the screw diminishing according to the degree to which the tiller is moved over.

✧ ✧ ✧

Mechanical stokers combined with special types of firebox have been found completely to solve the smoke problem for stationary plants. Some similar arrangement has long been needed for locomotives. What is wanted is a mechanical stoker, simple in construction and practical in operation, which can be applied to a locomotive without necessitating any great alterations. Such a stoker was invented a short time ago by a former engineer of the Chesapeake and Ohio Railway. In this appliance the coal is scattered in a thin layer over the fire, thereby avoiding the constant opening of the firebox, and the consequent admission of cold air. Not only is it claimed that fuel is saved, but that nine-tenths of the thick, black smoke usually produced by hand-firing with soft coal is done away with.

✧ ✧ ✧

The German Association of Alcohol Manufacturers and the Association of Agriculturists have jointly offered a prize of 30.000 marks (about £1,500) for the best method of drying potatoes for feed for cattle, etc. German agriculture has been increasing its potato crop very largely. The technical progress made in cultivating potatoes and the choice of certain kinds yielding a larger crop have made it apparent that Germany will continue to have a surplus of this vegetable. Already 40 per cent. of the total crop is used as fodder; but as potatoes deteriorate after six or seven months, they must be fed within that time. Transportation, also, is expensive, on account of the large percentage of water they contain. Three and one-half tons of fresh potatoes yield a ton of dried ones. It is predicted that a good method of drying potatoes will greatly benefit German agriculture, and it is intended to use the process on a large scale. Particulars for this prize contest can be had by applying to the "Institut fur Gahrungsgewerbe," Berlin, N. 65 Seestrasse.

The Telephone Exchange at Hamburg, one of the largest in Germany, is equipped with a horizontal switchboard, which is said to have many advantages over the ordinary upright type. The principal advantage claimed for it is an economy in the number of jacks required and the length of board, and consequently in the space occupied. As the sections are horizontal instead of vertical, operators can work from both sides of the board, and, theoretically at least, each section can carry twice the number of answering jacks that a vertical board can. It follows, therefore, that for a given number of lines a horizontal board is only half as long as a vertical board, although it must occupy more ground space breadthways. These horizontal boards are made by a German firm, who have supplied a large number for the Imperial German Telephone Department. It will be remembered that the Glasgow municipal board is of this horizontal type.

✧ ✧ ✧

The Russian Etat-Major is continuing its tests upon automobiles for army service. During the manoeuvres of the Russian army in 1901, a 6½ horse-power machine was used in the operations which took place in the neighbourhood of Siedlitz, in the Warsaw district. The ground was in very bad condition. According to the report which was made on this vehicle, it was only able to circulate over a single route. It was used for transmitting orders from the rear of the column to the advance-guard, or for the transport of the chief of the detachment in order to reconnoitre his own positions or those of the enemy. The average speed over the road was 12 or 16 miles an hour. During the ten days of the manoeuvres the automobile covered a total distance of 640 miles, running day and night. It had to stop for repairs 28 times. According to the report, the army will make a more extensive series of tests during the present year.

✧ ✧ ✧

A few years ago the Russian Prince Abemalak Lazareff, during his visit to the ruins of ancient Palmyra, discovered a large block of stone, about 12 feet long and 8 feet wide, containing a well-preserved bi-lingual inscription, i.e., Greek and Palmyrene, which is supposed to date from the third century of our era. The inscription is said to contain the tariffs of custom duties and taxes levied during that period, divided into three tables. Last year the authorities of the Imperial Russian Museum at St. Petersburg sent Professor Uspensky, of the Russian Archaeological Institute, who resides at Constantinople, to Palmyra, with other experts, to report on the inscription and to ascertain whether it was possible to cut it out from the huge block. The professor having reported on the feasibility of the undertaking, the Russian Government obtained the Sultan's sanction to remove it to Russia. Accordingly, an expedition was sent to the spot last summer, composed of workmen under the superintendence of a Russian consular official, and after cutting the block of stone into three parts, separated the inscription from each, and it is now on its way to the Russian capital. Palmyra, or Tadmor, as it is now called, is famous for the ruins of the Great Temple of the Sun. It was an important commercial place, being a depot for silk and other Asiatic and Indian products; and, on account of its copious spring, it must always have been a halting place for caravans passing through the Syrian Desert. It attained the height of its glory and prosperity in the third century, under Queen Zenobia, wife of the Emperor Odenathus.

✧ ✧ ✧

A road locomotive for military use is to be made the subject of a concourse organised for next year by the Minister of War and Minister of Agriculture of Germany. The tractor, which is to utilise alcohol, is to be constructed on the lines of the now existing steam tractors, and is designed for the transport of cannon or other military supplies. The conditions under which it has to operate are particularly hard, as will be seen from the following requirements. The tractor is to carry a load of 7½ tons on one axle and 5 on the other, and must be able to draw a gross weight of 15 tons up a 10 per cent. grade at the rate of 3 miles an hour. On a level it must make 5 miles an hour, and be able to cover 42 miles in a day's journey, carrying all the supplies necessary for the trip. The tractor must be able to mount alone a 20 per cent. grade, and be provided with a hoist by which it can drawn up the trailers after it; its own weight is to suffice for this operation without requiring an anchorage. The tractor must be able to run upon bushy or ploughed ground, snow, ice, etc., and sink in the ground no farther than will allow the mechanical parts to clear the soil. It must also cross streams having 16 inches depth. The motor is to use pure alcohol, but a small amount of gasoline is allowed for the starting. It must be adapted for other liquid combustible by a change in the carbureter. This competition is not international, as one of the stipulations is that the tractor must be of German make. It will be submitted to a three weeks' test under the direction of competent authorities. The tractor, besides, must fulfil in general all the requirements of military service. As will be remarked, the conditions are unusually difficult.

Salt mining constitutes one of the staple industries of Roumania. There are four mines in all. The most peculiar feature in connection with this industry is that the mineral is mined in three of the principal mines by convicts condemned to life and lengthy sentences of penal servitude. The reason for this is that crime in Roumania is practically unknown, and there is no death penalty. Under these circumstances the compulsory mining of the convicts is beneficial both to the Government and the labourers. In the case of the mine in which convict labour is not employed, the quarrying is performed by peasants, the work being assisted as far as possible by the most up-to-date mechanical time and labour-saving appliances for the employment of which skilled labour is essential. In all there are about one thousand convicts at work in the three mines. The labourers are not provided with any mechanical apparatus whatever, the whole of the work being performed by hand, each convict having to quarry a specific quantity of salt daily. The mines are controlled by a State official, whose position is similar to that of a governor of a prison. The mines are thoroughly well ventilated and illumined with electric light, so that the lot of the convicts is somewhat alleviated, though to those who are serving life sentences it represents a living grave. The mines are worked in galleries, and the pure white crystal presents a weird and peculiar aspect, especially in reflecting the fitful electric light. The main shaft terminates at the bottom in a huge apartment with a dome-shaped roof, and from which all the working galleries radiate. The mine contains a chapel and numerous other apartments, all cut out of the salt by the prisoners. The director keeps a record of the name of each convict who enters the mines, his conduct, and the efficiency and quantity of his work. Periodically the King of Roumania visits the mines and examines the official record, and in those instances where the results warrant such action, he extends a free pardon to the prisoner, or, at any rate, reduces the length of his sentence, so that good conduct and efficient work is an incentive to a royal pardon.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1793.)

June 24.—By a letter from Guadaloupe, we are informed that a most violent fever rages in that island, which has carried off, in the course of a few days, 150 privates and 22 British officers.

Various reports of country farmers who have been induced last spring to try the late discovery of planting potatoes by the shoots, concur in the most flattering accounts of their success.

June 26.—A misunderstanding of a very serious nature has subsisted for some days past among the privates of the 79th Regiment, owing to the intended embarkation of the regiment for Bristol. An idea is said to prevail with them that they are to go on some disagreeable service in the East Indies, unaccompanied by their Colonel (Cameron), to whom they express a warm attachment, and without they avow a determination not to embark for foreign service.

The favourite Adventurer, Barret, arrived in this harbour on Monday last from Yarmouth, laden with wheat.

Sunday last the Amphitrite, of Liverpool, Captain Hill, arrived in our bay from Newcastle on Delaware, with a cargo of wheat and flour. She had a remarkable quick passage, being but twenty days, from Cape Hatteras, which lies at the mouth of the Delaware, to the river Liffey.

JUNE 30.

REV. WILLIAM JACKSON,

Was yesterday brought up to the Court of King's Bench, in order for arraingment on the charge of high treason exhibited against him.

Being put to the bar, the indictment was read, and was of considerable length.

It charged to the following effect: That the prisoner, knowing of the war carried on against his Majesty and these realms, by the persons exercising the government of France, did, on the 3rd day of April last, land in this country, with a traitorous intent to make himself acquainted with the state and strength of this country, in order to communicate the same to the persons exercising the government of France, now carrying on war against his Majesty and these realms.

That he did afterwards, on the 21st of April, and at several times before and since, hold conference with several persons for the purpose of inducing them to conspire against his Majesty's government in this kingdom, and to send a messenger to France, for the purpose of treating with the persons exercising the government of that country, to invade this nation by an armed force.

That he did, on the 23rd of April, write certain letters addressed to a person named Stone, and another person named Benjamin Beresford, and put the same in his Majesty's post-office, in order to be conveyed to those persons beyond the seas; wherein he declared —that the Dissenters of this country were staunch Republicans to a man; that in no country was the spirit of aristocracy kept up with a more oppressive hand by the nobility, gentry, and clergy, from the highest to the lowest of them—nor was the people at large ever so much disposed to resist it as at that time; that the peasantry of the country were ripe for insurrection, and great numbers of them actually in arms, instancing the defenders; that there was scarcely any military force in the country to resist an invasion, except the newly-raised regiments of militia, who would never be brought to act against their countrymen; that if an army from France could effect a landing in this country, they would be immediately joined by the great majority of the people, to whom the connection between this country with Great Britain was become highly obnoxious; and directing those persons to communicate these particulars to the French government, in order to induce them to send an armed force to invade this country.

This was nearly, as we could collect, the purport of the indictment—the reading of which at length occupied above an hour and a half.

The prisoner pleaded, Not Guilty: Being asked was he now ready for his trial?

Mr. Curran, on behalf of the prisoner, stated, that from the shortness of the time since his client was made acquainted with the nature of the charges against him, by seeing the indictment, it had been impossible for him to be prepared with the necessary evidence for his defence; he trusted, therefore, that as it was a case wherein the life of his client was at stake, he would not be pressed to take his trial, when the want of evidence would expose him to fatality.

Lord Chief Justice observed that his object was to preserve the forms of the Court of King's Bench; the officers of the Crown who were to conduct this prosecution had certain privileges, of which they would not be deprived, and which it was at their own option to waive or not. Consistent with these considerations, his lordship should have no objection to grant the prisoner every reasonable indulgence.

The Attorney-General said, it was by no means his wish to press the prisoner to trial if he was not prepared; he should therefore consent to postpone the trial until the first sitting day of the next term, which will be on the 6th of November.

Lord Chief Justice then observed, it was his wish that the prisoner should see he was in a country where the laws were administered with temperance and humanity, and that whatever were the charges against him, no advantage whatever would be taken by his prosecutors, but every reasonable indulgence would be allowed him in preparing for his trial that the nature of his situation might admit.

The trial was therefore postponed till the day above mentioned, and the prisoner remanded to Newgate, whither he was carried in a coach, strongly guarded, and attended by the gaoler, and Mr. Shee, inspector of police.

Mr. Jackson was dressed in black, and appeared to be much weakened by illness, and much agitated. On entering the court he took his place in the dock, where, by order of the court, he was indulged with a chair.

His counsel were Mr. G. Ponsonby and Mr. Curran.—His agent, Mr. M'Keane.

The counsel for the Crown were the Attorney-General, Prime Serjeant, Solicitor-General. —Agent, the solicitor for the Crown.

The court was extremely crowded.

JULY 1.

The 79th regiment, commanded by Colonel Alan Cameron, embarked at Chichester quay, in the north, for Bristol, on Friday.

The Wilmington, bound from Belfast to Philadelphia, sailed from thence on Wednesday last with upwards of 200 passengers, and a valuable cargo of linen cloth.

The regiments embarked under Lord Moira are the 19th, 27th, 28th, 40th, 42nd, 54th, 57th, 87th and 89th.

The lords of the Admiralty have appointed a convoy to proceed from the Downs on the first of July, direct for Belfast.

The Bishop of Cork and Ross was consecrated in St. Anne's church on Sunday last, by his Grace the Archbishop of Dublin (in the absence of the Archbishop of Cashel) assisted by the Bishops of Ossory and Killala. The consecration sermon was preached by the Reverend William Stopford, rector of Donaghmore, in the diocese of Clogher.

JULY 5.

A general court-martial has been sitting since Tuesdy last at the Barracks, on Captain Browne, of the South Mayo Regiment of militia, on a charge of having absented himself from quarters without leave. The Earl of Westmeath presided, and several other officers of the militia were members. Joseph Atkinson, Esq., Judge Advocate.

This is the first general court-martial which has been assembled on the trial of any person belonging to the militia since the institution.

The court was dissolved yesterday, but the event of the trial is not as yet known.

WEDNESDAY, JULY 16.

Yesterday the general quarter-sessions of the peace for the county of the city of Dublin was opened at the Tholsel, before the Right Hon. William James, Lord Mayor, William Walker, Esq., Recorder, and the Aldermen Reid and Fleming, when the several presentments of the last sessions grand jury were laid before the court, and new grand and market juries sworn.

On the grand jury being sworn, the Recorder delivered a most excellent charge from the Bench, in which he pointed out, with great legal accuracy, the nature and extent of the powers with which, by the constitution and privileges of the city, the jurors were invested; as also the duties which by their oath they were bound to perform. He made several judicious observations on the most prevailing abuses which at present exist within the jurisdiction of the city, the removal of which by the grand jury would, he said, best tend to prevent the commission of crimes, and concluded with a panegyric on the established constitution of these realms, under which every class and description of subjects are maintained in the enjoyment of equal laws, equal liberty, and equal protection.

The following gentlemen were sworn on the grand jury:—John Norton, Esq. (foreman); William Stamer, George Perrin, Geoffry Foote, William Henry Archer, Thomas White, John Langston, John Oldham, Joseph Maddock, William Galway, John Campbell, Mark Bloxham, William Evans, William Keene, Daniel Finn, William Pell, William Castlehollister, Luke Franklin, William Beane, Pool Taylor, William Edmiston, George Payne, and Richard Wilson.

The court was adjourned until Saturday, the 2nd of August next.

LIMERICK, JUNE 23.

A riot happened here yesterday between the Waterford militia and the 85th regiment, which proceeded from a difference between Mr. Matthew and some of the officers of the 85th. Many on both sides, as well as of the mob (who joined the militia) were wounded, though none killed; but by the spirited exertions of the magistracy and the inhabitants, peace was at length restored, with much difficulty.

BELFAST, JUNE 26.

The discontent that prevailed with the soldiers of the 79th regiment was yesterday entirely done away with on the arrival of Colonel Cameron, to whom they seem much attached; in the evening, they marched down street in a body, with their colonel at their head, and every grievance seemed at an end.

MARRIAGES.

G. Fitzgerald, of Merrion square, Esq., to Miss Isabella Staples, daughter of Sir Robert Staples, Bart., and niece to Lord Viscount D'Vesci.

Thomas Peen Gaskell, of Shanagarry, in the county of Cork, Esq., to Miss Ward, daughter of the late Dowager Countess of Glandore, and sister of the Rev. Ag. Vesey Ward, F.T.C.D.

Alexander Marsden, Esq., of Baggot street, to Miss Cooper, daughter of John Cooper, of Cooper-hill, in the county of Meath, Esq.

Charles Montague Ormsby, Esq., member of Parliament for the Borough of Duleek, to Miss Kingsbury, daughter of Thomas Kingsbury, of Molesworth street, Esq.

BLACKROCK (CO. DUBLIN)

And Its Neighbourhood in 1744.

FROM AN ENGRAVING OF A DRAWING BY WILLIAM JONES.

KEY.

1. The Salt House. 2. The Black Rocks. 3. Bathing Places. 4. Houses of Entertainment. 5. Lime-Kiln. 6. Newtown-Castle-Byrne 7. Rocks in front of Dunleary. 8. "Dunleary rocks in the Sea." 9. Lord Allen's Park at Stillorgan. 10. Mount Mapas. 11. Mapas' Obelisk. 12. Sugar Loaf Mountain. 13. Bray Head. 14. Ships. 15. "The Three Sugar Loaves."

Mr. Elrington Ball, in his most interesting and valuable "History of the County Dublin" (Part I.—Alexander Thom & Co., Dublin) gives the following description of the chief places shown in the picture given above:—

In the latter part of the eighteenth century, the neighbourhood attained its zenith as a fashionable resort. Each summer the Irish Court migrated thither from Dublin Castle, and the Viceroy of the day took up his abode in the residence known as Blackrock House. This great mansion, with its noble sea front and suite of magnificent reception rooms, "with just agreement framed in every part," was erected by John Lees, then Secretary of the Irish Post Office, and afterwards created a baronet. His idea in building it was, possibly, a speculative one, and it proved a very remunerative investment. To its occupation in 1778 by some distinguished person, reference is doubtless made in an ironical announcement that "the poor of Blackrock were hopeful of obtaining garden produce at moderate terms on a great personage accepting a house near the town." At its landing-place, the Earl of Northington, on his arrival in June, 1783, as Lord Lieutenant, stepped ashore, and there he dined

before proceeding to Dublin. In its large rooms his successor, the Duke of Rutland, in July, 1785, received and entertained at breakfast an aeronaut, called Crosbie, who had made an ascent from the Duke of Leinster's lawn in Dublin the previous day, and had been rescued out at sea, where his balloon had descended. There Rutland's Secretary, Thomas Orde, afterwards Baron Bolton, in the spring of 1786, recruited his health, and there, in July, 1788, Lord Charles Fitz-Gerald, a most popular nobleman, met with a severe accident while landing from his barge. From there the Marquis of Buckingham made sea excursions to Dalkey Island and every part of the bay, and there stayed his successors, the Earls of Westmoreland and Camden; the famous Lord Castlereagh, attended by his secretaries, Cooke and Elliott; and the great Earl of Clare, Lord Chancellor of Ireland, for whose protection at the time of the Rebellion a detachment of the King's County Militia was stationed at Blackrock.

About the same time as Blackrock House, Maretimo, which also still adorns the neighbourhood, was built. It was erected by Sir Nicholas Lawless, Bart., M.P. for Lifford, who was afterwards created Baron Cloncurry, and has since remained in the possession of the successive holders of that title. Lawless was the leading merchant of his day, and attained to some distinction as a member of the House of Commons. In spite of an unattractive presence and faults of delivery, he was not unsuccessful as a speaker, and displayed in committee a knowledge of the principles of commerce and of political economy. His elevation to his baronetcy and peerage was due to unswerving support of the Government.

A diarist of the period gives an interesting account of an entertainment at Maretimo, at which he was present, in the first Lord Cloncurry's time. It lasted for the round of the clock, and truly was deserving of the name of a rout. It was summer, and tables were spread in large tents on the lawn, and in the open air. The company was great, and many who were unable to find room at the tables outside were reduced to dining in the house. The grounds of Blackrock House were thrown open, and after dinner the guests strolled about until dancing began, to the music of the band of the Kildare Militia. A year later a similar entertainment, only more splendid, was given by the Earl of Clonmell at Neptune. The diarist describes the numerous assemblage sitting down to luncheon, after which, the day being showery, the guests sought amusement in crowding the rooms and listening to dance music, to which their host's entreaties could not induce them to respond. At 5 o'clock the Lord Lieutenant joined the party, and dinner began. It could not be served in the open air, as had been intended, on account of the rain, and "the squeeze was immense." Some of the tables had to be laid in the bedrooms, and others in the hall. After dinner, which was most sumptuous, dancing began, and lasted till midnight.

Another resident at Newtown at the same time as the first Lord Cloncurry was Mr. Robert Jephson, a dramatist and poet of some note, and a member of the Irish Parliament. He had come to Ireland with Lord Halifax, on his appointment as Lord Lieutenant. It is said that Lord Halifax was requested by Garrick, with kindly intention, to take the play-going youth to Ireland or anywhere else out of his way, as he left him no peace behind the scenes. Prospect, now St. Joseph's College, was then a boarding school, where the sons of many of the nobility and gentry of Ireland were educated. It was first kept by the Rev. John Burrowes, and afterwards by the Rev. Charles Meares. Amongst Burrowes' pupils was the second Lord Cloncurry, who says that Burrowes had good qualities, but had mistaken his vocation.

A boarding-house, with a spacious ballroom, was erected at Seapoint by a Mr. William Jones towards the close of the eighteenth century. It stood near the edge of the sea, close to a well, known as Tobernea, and its site is now occupied by the terrace called by that name. During the summer, subscription dances were held in the ballroom, and our diarist, on going down in July, 1800, found a full room, a good set, and a tolerable supper, but execrable wine. At the time of his rebellion, some of Robert Emmet's friends were staying there, and Emmet is said to have been a visitor at the house. It was subsequently proposed to purchase the house as a recruiting depot for the army, but the negotiations fell through, and Beggars' Bush Barracks were built instead. The strand at Seapoint continued to be a favourite bathing-place, and while bathing there in September, 1797, two young women were carried out of their depth. One of them was drowned; the other was rescued, but on learning the fate of her companion, she became unconscious and, died in a few hours.

The neighbourhood of Seapoint was, in November, 1807, the scene of perhaps the greatest tragedy that ever took place in or near Dublin. On a dark winter's day, two vessels, "The Princess of Wales" and "The Rochdale," set sail from the mouth of the Liffey, laden with nearly 500 soldiers and officers belonging to various regiments. In the night a storm arose, and the next morning the two vessels were discovered complete wrecks on the rocks near Blackrock House. Every person on board had perished, with the exception of the captain and some of the crew of "The Princess of Wales," who had escaped in the only boat, leaving the passengers to their fate. The shore long presented a sight too horrible for description.

The principal residents during the first half of the last century were the second Lord Cloncurry and the Rev. Sir Harcourt Lees, Bart., men who, in their political opinions, exhibited the opposite extremes. The former, who resided constantly at Maretimo, was a man of the most liberal views, who had been suspected in early life of revolutionary sentiments. The latter, who dwelt in his father's home, the gates of which he had sheeted with iron, was a man of the strictest type of Conservatism, and has been described as "the renowned, the dreaded, and the dreadless Sir Harcourt."

EXPEDITION to the SAHARA.

Mr. Edward Dodson has succeeded in traversing the Hinterland of Tripoli, which has hitherto been forbidden country. His expedition was sent out by the Natural History Museum of Edinburgh. Although little enough was gathered that was of interest from the standpoint of the natural scientist, Mr. Dodson nevertheless succeeded in gaining valuable knowledge of this unknown land, and in mapping out parts that have been hitherto but ill-defined on our charts. The journey was accomplished not without hardship. Eight camels, three horses, and nine Arab servants entered the great desert eight days after leaving the city of Tripoli. Heat and blinding sandstorms, as well as a lack of water, were but a few of the troubles experienced. Water could be obtained only at intervals of from ten to twelve hours. Two weeks after leaving Tripoli the town of Sofejin was reached, about 120 miles to the south-east. A detour was made in order to reach an old Roman reservoir where it was expected that a supply of water might be found. Mr. Dodson found this reservoir a most wonderful piece of masonry. The cement had not been in the least impaired, and the reservoir was still perfectly water-tight. On the journey to the reservoir dried beds of torrential streams containing great beds of brilliantly-coloured flowers were discovered. An examination of these flowery patches showed that the plants were of the "everlasting flower" kind. They had been completely dried by the heat and drought. After their water bottles had been replenished from the old Roman reservoir, the men struck out for the Bonjem oasis, on the desert road to Sokna. Mr. Dodson had hoped to acquife fresh supplies of food at the oasis. He was disappointed. Those who lived in the oasis were almost starving, and were compelled to depend on snails and date-palm juice for their sustenance. The miserable huts built by modern Arabs stood out in strong contrast to the splendid buildings erected during the Roman occupation. Like the old reservoir, these Roman buildings were in an excellent state of preservation. One of them covered an area of 3,600 square yards, and had a gateway 12 feet thick. After four days' intense suffering, the party reached Sokna. For a day and a night they had travelled through an uninhabited desert without water. From Sokna the journey was continued to Murzuk, about 300 miles from the Sahara. On this part of the journey the Jibil Soda, or Black Mountains, were crossed, and the great petrified forest traversed. The Black Mountains were found to consist of large slabs of perfectly black stone. In traversing the petrified forest ten hours were consumed. The fallen trees varied in circumference from 2 inches to 7 feet. That the region was at one time submerged by the sea was proven by the finding of marine shells. Returning from Murzuk the expedition again passed through Sokna, and finally returned to the coast.

SIR A. CONAN DOYLE'S STORY.

Mr Rider Haggard occupied the chair at the dinner given by the Authors' Club recently to those of its members who have been the recipients of Coronation honours. These gentlemen were Sir Henry Bergne, K.C.M.G., Sir Gilbert Parker, M.P., and Sir A. Conan

The latter, in responding to the toast of his health, related the following story. Almost the first intimation, he said, he received that "this thing (his knighthood) had occurred" was in a bill from his gunsmith, which was addressed to Sir Sherlock Holmes. In reply to a letter a representative of the firm called upon him and said that he had made out the bill in that way. He thought he was right, as he had always been informed that when a gentleman received a title he changed his name, and he had seen it in a paper that the name chosen by Sir Arthur was Sir Sherlock Holmes.

He (the speaker) thought that the pamphlet which he had written on the war was the chief cause of the honour that had come to him.

IRISH TOPOGRAPHICAL POEMS AND BALLADS.

PART I.—COUNTY CORK.

(First Selection.)

"There is scarcely a city, town, village, seat, grove, river, lake, or glen in Ireland," wrote the pioneer of Irish folklorists, Crofton Croker, some sixty years ago, "the charms of which, or some fair damsel connected therewith, do not, as Pope says of the Groves of Eden:

"Live in description and look green in song,"

Of Irish topographical poems and ballads, Goldsmith's "Sweet Auburn," Prout's "Bells of Shandon," Callanan's "Gougane Barra," Davis's "Sack of Baltimore," D F MacCarthy's "Pillar Towers of Ireland," Gerald Griffin's "Adare," and Allingham's "Ballyshannon," are well known, doubtless, to most Irishmen of the present day; but there is a considerable number of poems of a smimilar character hidden away in old collections, and being gradually forgotten, some specimens of which are here reproduced not so much on account of their poetical merits as of their more or less historical character, their quaint or odd composition, or their abiding local interest. The compiler has prefixed to each poem a brief note giving particulars of the author's life, or information concerning the circumstances of its composition or publication, which he hopes will be found of interest and value.

DEAR MALLOW, ADIEU.

(Author Unknown.)

The following verses, entitled "The Farewell, a Pastoral Ballad in Imitation of Shenstone," appeared originally in the "Shamrock or Hibernian Cresses," (Dublin, 1772), a collection of poems, etc, by Samuel Whyte. Whyte was Moore, the national poet's, schoolmaster, whose memory he has embalmed in a sonnet. The subjoined lines were written evidently whilst Mallow was a fashionable inland watering place, i.e., about the middle of the eighteenth century, when two other poems on the Hot Wells of Mallow (Croker tells us), were published in the "Ulster Miscellany," for 1753.

Oh, Mallow! dear Mallow, adieu!
How oft have I walked by thy spring,
While the trees were yet dropping with dew,
Ere the lark his shrill matin did sing.
How oft at noon have I strayed,
By the streamlet that winds through the vale;
How oft at still eve, on thy mead,
The soft breeze I have joyed to inhale.

O'er thy green hills, high bosomed in wood,
O'er thy sweetly diversified ground,
How oft, as my walk I pursued,
Have I gazed in wild transport around!
Invoking the powers that preside
O'er the stream, o'er the grove, o'er the hill,
With their presence my fancy to guide,
With their fire my rapt bosom to fill.

On a rock hanging over the flood,
Through the wild glen meandering slow,
Half-frighted, how oft have I stood,
To pore on the mirror below.
To see in the heart of the wave
The glen and the rock and the sky,
How bright the reflection it gave,
How pleased, how delighted was I.

At the foot of an elm, or a lime
How oft have I stretched me along,
Enchanted with Collins's rhyme,
Or Akenside's rapture of song?
How oft, too, an accident led
Through the churchyard path's fear-stirring ground,
Busy fancy has called up the dead,
To glide in dread visions around.

These sweet walks, this soft quiet, and all
Those blameless, those rational joys
Must I quit for the buzz of the hall,
For dissonance, wrangling, and noise:
For the city's dull uniform scene,
Where jobbing, and party, and strife,
Dissipation and languor and pain
Fill up the whole circle of life.

. . . .

Yet oft shall fond memory anew
Present each loved scene to my eye,
And with painful enjoyment review
The delights that too hastily fly;
Through all the sweet landscape around
Not a stream, not a nook, not a tree,
Not a field flower, not a shrub shall be found
Unmarked or unhonoured by me.

And ye my companions so dear,
What words my deep anguish can tell,
Receive from a witness this tear,
How it pains me to bid you farewell.
Ye, too, for I read in your eyes,
The emotions that swell at your hearts,
Ye have not yet learned to disguise,
Ye are sorry to see me depart.

Sweet seat of contentment and ease,
Where Rest her still Sabbath may keep,
Where all may have just what they please,
Eat, drink, read, laugh, saunter, or sleep.
The next spring may new brighten thy scene,
And thy leaves and thy blossoms restore;
But bring the loved circle again,
Or the landscape will charm me no more.

Sweet commerce of unison minds,
A treasure how rarely possessed,
How seldom through life the heart finds
The joy that gives worth to the rest.
But, hark! 'tis the chaise at the door,
My mare is already in view!
Alas! I have time for no more,
Oh! Mallow, dear Mallow, adieu."

GLANDORE.

The following lines, written at Glandore, Co. Cork, in July, 1843, had for their author, the Rev Dr Murray, of Maynooth. Dr Murray, who was a Monaghan man, was a voluminous writer. The lines first appeared in his Irish Miscellany, of which he published four volumes, now become very scarce.

Though I have forsaken long
Fairy land of tuneful song,
Though my lips forget to tell
Thoughts they once could utter well,
How can I with my heart and tongue
See unloved, or love unsung,
Scenes like those that rise before
The enchanted eye in sweet Glandore.

Though a high and holy call
Claims my soul and senses all,
Saints might sing a type like this
Of their own bright Realms of bliss;
Man may tell in strains of love,
Of how fair the Heaven above,
When such beauty beameth o'er
The heaven below of sweet Glandore.

Cloudless sky and sparkling sea,
Cliff and shore and forest tree,
Glen and stream and mountain blue,
Burst at once upon the view;
The gay, the beautiful, the grand,
Blending over wave and land,
Till the eye can ask no more
Than it hath in sweet Glandore.

But the sunshine on the sea,
And the emerald of the lea,
And the ever-smiling skies,
Claim not heart, or soul, or eyes,
Like the grasp of friendship's hand,
Like the welcome warm and bland
As the sunlight gleaming o'er
The happy homes of sweet Glandore.

For the loveliest scenes that e'er
Smiled of heaven the image fair,
Like the beautiful in death,
Have not soul, nor voice, nor breath!
O, 'tis but the kindly heart
Can to them true life impart,
Tree or flower, and sea and shore
Thus live and breathe in sweet Glandore.

Time may chill and bow and bind
Glowing heart and chainless mind,
They droop—the flowers of fancy, youth,
Round the ripening fruits of truth;
Yet I feel while here I stray,
Dawn again youth's sunny day;
Fancy with her radiant store,
Comes again in sweet Glandore.

Lovely region of Glandore,
Friends beloved for evermore!
'Mid the tranquil bliss I feel
One sad thought begins to steal—
Soon must come the parting day,
And my steps no more will stray,
And my voice is heard no more
Among the scenes of sweet Glandore.

LOUGH HYNE.

Fitz James O'Brien, the reputed author of the following lines on Lough Hyne, one of the loveliest spots in the county Cork, not far from Baltimore, was a Limerick man, who, having run through a fortune, turned journalist, went to America, where he became connected with the Press, and finally joined the American army. He died in 1862 from the effects of a wound (O'Donoghue's Dictionary of Irish Poets). Fitz James O'Brien was author of a novel called "The Diamond Lens."

I know a lake where the wild waves break,
And softly fall on the silver sand,
And no steps intrude on that solitude,
And no voice save mine disturbs the strand.

And a mountain old, like a giant of old,
Turned to stone, by some magic spell,
Uprears in might his misty height,
And his craggy sides are wooded well.

In the midst doth smile a little isle,
And its verdure shares the emerald's green,
On its grassy side in ruined pride,
A castle of old is darkening seen.

On its lofty crest the wild crane's nest,
In its halls the sheep good shelter find;
And the ivy shades where a hundred blades
Were hung when the owners in sleep reclined.

That chieftain of old could he now behold
His lordling tower a shepherd's pen;
His corse long dead, from its narrow bed,
With sorrow and shame would rise again.

'Tis sweet to gaze when the sun's bright rays
Are cooling themselves in the trembling wave,
But 'tis sweeter far when the evening star
Shines like a tear at Friendship's grave.

There the hollow shells through their wreathed cells
Make music on the lonely shore,
And the summer breeze through the distant trees
Murmurs in fragrant breathings o'er.

And the seaweed shines like the hidden mines,
In the fairy cities beneath the sea,
And the wave-washed stones are bright as the thrones
Of the ancient kings of Araby.

If it were my lot in that fairy spot
To live for ever and dream 'twere mine,
Courts might woo, and kings pursue,
Ere I would leave thee, loved Lough Hyne."

SWEET CASTLE HYDE.

This curious specimen of rhyme, of a class formerly rather common throughout Ireland, was once very popular in the county Cork, where it formed a sort of rival to Millikin's Groves of Blarney. In Dr Kenealy's Poetical Works (London, 1879), appears a Greek version, written by him, of "Sweet Castle Hyde." The now all but forgotten Dr Kenealy was a Cork man, who became notorious for his defence of the Titchbourne Claimant.

As I roved out on a summer's morning,
Down by the banks of Blackwater side,
To view the groves and meadows charming,
And pleasant gardens of Castle Hyde.
It is there you will hear the thrushes warbling,
The dove and the partridge I now describe,
The lambkins sporting each night and morning,
All to adorn sweet Castle Hyde.

If noble princes from foreign places
Should chance to sail to this Irish shore,
It is in this valley they could be feasted,
As often heroes had done before.
The wholesome air of this habitation
Would recreate your heart with pride:
There is no valley throughout this nation
With beauty equal to Castle Hyde.

There is a church for service in this fine harbour,
Where nobles oft in their coaches ride,
To view the streams and pleasant gardens
That do adorn sweet Castle Hyde.
There is fine horses and stall-fed oxen,
And a den for foxes to play and hide,
Fine mares for breeding, and foreign sheep in,
And snowy fleeces in Castle Hyde.

The richest groves in this Irish nation,
In fine plantation you'll find them there,
The rose and tulip, and fine carnation,
All one with the lily fair.
The buck, the doe, the fin, the eagle,
Do skip and play by the river side;
The trout and salmon they play backgammon
In those clear streams of Castle Hyde.

I rode from Blarney to Ballykenealy,
To Thomastown and sweet Doneraile,
To sweet Kilshannig and gay Rathcormac,
Besides Killarney and Abbeyfaile,
The river Shannon and pleasant Boyne,
The flowing Barrow and rapid Bride,
But in all my ranging and serenading,
I saw no equal to Castle Hyde.

CASTLE O'KENEALY.

The following are the first five stanzas of "Castle O'Kenealy," written by the late Dr Kenealy, and published in Volume I of his "Poetical Works," London, 1875.

"Gray old Castle! throned above the river,
Ivy-mantled ruin, stark and lone,
From thy cells and cloisters murmur ever
The deep accents of the Past and Gone.
Beauteously and slow the shining wave
Glides beneath thy towers dusk with time,
Time, that crushed and brought thee to the grave,
Still hath clothed thee with a spell sublime,
Gleams of other days, bestow glory,
Knightly daring, forth heroic, glow
Through thy fallen arches, famed in story,
O'er thy once proud ramparts, now laid low.

In thy primeval youth thou wert a monarch,
Firmly seated on thine iron rock,
Still defying rebel, traitor, anarch,
Hurling down on them thine arrowy shock.
Armies marched to quell thee o'er the plain;
Horse and horseman's catapult and ram
Strove and raged against thee but in vain:
Never made thy haughty towers salaam;
Who that knew thee in thy puissant splendour,
Could forsee thy present drear decay?
Could forsee that thou wouldst thus surrender,
And from grandeur rot into decay?

Centuries have rolled since thou, all glorious
In the strength and pride of youth, didst rise
Bristling bravely, and with arm victorious,
Flaunting out thy banner to the skies.
The White Hart upon his scarlet field*
Fixed at gaze, and with night's royal mien.
Borne by kings on corselet, asque, and shield,
Still foe-facing wheresoever seen,
Now it waves not, beats the breeze no longer
Flagstaff, ensign bearer, all are past;
Time hath been thy foe, and proved the stronger;
Time hath felled thee, not the battle-blast.

Could I summon from their dark recesses,
Soldier, statesman, minstrel, priest, or sage,
Blooming virgin, with her flowerlike tresses,
Plumed knight, with arch and saucy page,
Could I call to life each gallant band,
Who within thy walls exulting dwelled;
Eye of fire, and brow of thought, and hand
Which the harp or falchion deftly held.
Stately were the visions that before me
From thy portals would descend in pride;
But the wish were vain, and never o'er me,
Shall they gleam whose bones thy vistas hide.

Blackened are thy dark and solemn pillars;
Lichen, ivy, weeds, thy robes are now;
O'er thy spacious courtyards pass the tillers
With the labouring horse and snouted plough.
Sad and soft the melancholy breeze
Breathes its dying dirge above the clay;
From yon aged chunk amid the trees
Pours the owl her unauspicious lay:
And upon the Sabbath, when the singing
Choirs awake the echoes o'er the green,
Seems the song as if some spirit wringing
O'er thee, with its sad funeral keene.

*The banner of the Clan Kencaly.

ORIGIN AND MEANINGS OF IRISH FAMILY NAMES.

By JOHN O'DONOVAN.

III.

SURNAMES AND FAMILY NAMES.

Dr. Keating and his contemporary Gratianus Lucius have asserted, on the authority of the ancient Irish MSS., that family names or surnames first became hereditary in Ireland in the reign of Brian Boru, in the beginning of the eleventh century. "He (King Brian) was the first who ordained that a certain surname should be imposed on every tribe, in order that it might be the more easily known from what stock each family was descended; for previous to his time surnames were unfixed, and were discoverable only by tracing a long line of ancestors." *

This assertion has been repeated by all the subsequent Irish writers, but none of them have attempted either to question or prove it. It seems, however, generally true, and also that in the formation of surnames at this period, the several families adopted the names of their fathers or grandfathers. It would appear, however, from some pedigrees of acknowledged authenticity, that in a few instances the surnames were assumed from remoter ancestors, as in the families of the O'Dowds and O'Kevans in Tireragh, in which the chiefs from whom the names were taken were cotemporary with St. Gerald of Mayo, who flourished in the seventh century, and in the family of O'Neill, who took their surname from Niall Glunduv, monarch of Ireland, who was killed by the Danes in the year 919. It is obvious also from the authentic Irish annals, that there are many Irish surnames now in use which were called after ancestors who flourished long subsequent to the reign of Brian. But it is a fact that the greater number of the more distinguished Irish family names were assumed from ancestors who were cotemporary with this monarch; and though we have as yet discovered no older authority than Dr. Keating for showing that surnames were first established in Ireland in his time, I am satisfied that authorities which would prove it, existed in the time of Keating, for that writer, though a very injudicious critic, was nevertheless a faithful compiler. Until, however, we discover a genuine copy of the edict published by the monarch Brian, commanding that the surnames to be borne should be taken from the chieftains who flourished in his own time—if such edict were ever promulgated—we must be content to relinquish the prospect of a final decision of this question. At the same time it must be conceded that the evidences furnished by the authentic annals and pedigrees in behalf of it are very strong, and may in themselves be regarded as almost sufficient to settle the question.

It appears, then from the most authentic annals and pedigrees, that the O'Briens of Thomond took their name from the monarch Brian Boru himself, who was killed in the battle of Clontarf in the year 1014, and that family names were formed either from the names of the chieftains who fought in that battle, or from those of their sons or fathers:—thus, the O'Mahonys of Desmond are named from Mahon, the son of Kian, King of Desmond, who fought in this battle; the O'Donohoes from Donogh, whose father O'Donnell was the second in command over the Eugenian forces in the same battle; the O'Donovans from Donovan, whose son Cathal commanded the Hy-Cairbre in the same battle; the O'Dugans of Fermoy from Dugan, whose son Gevenagh commanded the race of the Druid Mogh Roth in the same battle; the O'Faelans or Phelans of the Desies from Faolan, whose son Mothla commanded the Desii of Munster in the same memorable battle, as were the Mac Murroghs of Leinster from Murrogh, whose son Maelmordha, King of Leinster, assisted the Danes against the Irish monarch.

The Mac Carthys of Desmond are named from Carrthach (the son of Saerbhreathach), who is mentioned in the Irish annals as having fought the battle of Maelkenny, on the river Suir, in the year 1043; the O'Conors of Connaught from Conor or Concovar, who died in the year 971; the O'Melaghlins of Meath, the chiefs of the southern Hy-Niall race, from Maelseachlainn or Malachy II, monarch of Ireland, who died in the year 1022; the Magillapatricks or Fitzpatricks of Ossory from Gillapatricks, chief of Ossory, who was killed in the year 995, etc., etc.

From these and other evidences furnished by the Irish annals, it appears certain then that the most distinguished surnames in Ireland were taken from the names of progenitors who flourished in the tenth or beginning of the eleventh century. But there are instances to be met with of surnames which had been established in the tenth century having been changed to others which were called after progenitors who flourished at a later period, as O'Malroni of Moylurg, to Mac Dermot, and O'Laughlin, head of the northern Hy-Niall, to Mac Laughlin. There are also instances of minor branches of great families having changed the original prefix O to Mac and Mac O, or Mac I, when they had acquired new territories and become independent families, as O'Brien to Mac I-Brien, and Mac Brien in the instances of Mac I-Brien Arra, Mac Brien Coonagh, and Mac Brien Aharlagh, all off-shoots from the great family of Thomond; and O'Neill to Mac I-Neill Boy, in the instance of the branch of the great Tyrone family who settled in the fourteenth century eastward of the river Bann, in the counties of Down and Antrim.

This is all we know of the origin of Irish surnames. Sir James Ware agrees with Keating and Gratianus Lucius that surnames became hereditary in Ireland in the tenth or beginning of the eleventh century; and adds, that they became hereditary in England and France about the same period.

Irish family names or surnames then are formed from the genitive case of names of ancestors who flourished in the tenth century, and at later periods, by prefixing O, or Mac as O'Neill, Mac Carthy, etc. O literally signifies grandson, in which sense it is still spoken in the province of Ulster; and in a more enlarged sense any male descendant like the Latin nepos: and Mac literally signifies son, and in a more extended sense any male descendant. The former word is translated nepos by all the writers of Irish history in the Latin language, from Adamnan to D. O'Conor, and the latter, filius; from which it is clear that it is synonymous with th

*Translation from original Latin MS.

Welsh prefix Map (abbreviated to Ap), and with the Anglo-Norman Fitz, which Horne Tooke has proved to be a corruption of the Latin filius. Giraldus Cambrensis latinizes the name of the King of Leinster, Dermot Mac Murchadh, Dermitius Murchardides, from which it may be clearly perceived that he regarded the prefix Mac as equivalent to the Greek patronymic termination ides. The only difference therefore to be observed between O and Mac in surnames is, that the family who took the prefix of Mac called themselves after their father, and those who took the prefix O formed their surname from the name of their grandfather. Ni, meaning daughter, was always prefixed to names of women, as O and Mac meant male descendants; but this usage is now obsolete.

It is not perhaps an unlikely conjecture that at the period when surnames were first ordered to be made hereditary, some families went back several generations to select an illustrious ancestor on whom to build themselves a name. A most extraordinary instance of this mode of forming names occurred in our own time in Connaught, where John Mageoghegan, Esq., of Bunowen Castle, in the west of the county of Galway, applied to his Majesty King George IV. for licence to reject the name which his ancestors had borne for eight hundred years from their ancestor Eochagan, chief of Kinel Fiacha, in the now county of Westmeath, in the tenth century, and to take a new name from his more ancient and more illustrious ancestor Niall of the Nine Hostages, monarch of Ireland in the fourth century. His Majesty granted this licence, and the son of John Mageoghegan is now called John Augustus O'Neill, that is, John Augustus, descendant of Niall of the Nine Hostages. The other branches of the family of Mageoghegan, however, still retain the surname which was established in the reign of Brian Boru as the distinguishing appellative of the race of Fiacha, the son of Niall of the Nine Hostages, and the ancestor from whom the Mageoghegans had taken their tribe name.

From the similarity and almost complete identity of the meanings affixed to the words O and Mac in surnames, it might be expected that they should be popularly considered as conferring each the same respectability on the bearer; yet this is far from being the case, for it is popularly believed in every part of Ireland that the prefix O was a kind of title among the Irish, while Mac is a mark of no distinction whatever, and that any common Irishman may bear the prefix Mac, while he must have some claims to gentility of birth before he can presume to prefix O to his name. This is universally the feeling in the province of Connaught, where the gentry of Milesian descent are called O'Conor, O'Flaherty, O'Malley, etc; and the peasantry, their collateral relatives, Connor, Flaherty, Mailey. All this, however, is a popular error, for the prefix O is in no wise whatever more respectable than Mac, nor is either the one or the other an index to any respectability whatever, inasmuch as every single family of Firbolgic, Milesian, or Danish origin in Ireland is entitled to bear either O or Mac as the first part of their surname. It is popularly known that O'Neill was King of Ulster, and O'Conor King of Connaught, and hence it is assumed that the prefix O is a title of great distinction; but it is never taken into consideration that O'Hallion was the name of the Irish Geocach or beggar who murdered O'Mulloy of Feara-Keall in the year 1110, or that Mac Carthy was King of Desmond or Mac Murrough was King of Leinster! It is therefore a positive fact that the prefixes O and Mac are of equal import, both meaning male descendant, and that neither is an indication of any respectability whatever, except where the pedigree is proved and the history of the family known. To illustrate this by an example: The O prefixed to my own name is an index of my descent from Donovan, the son of Cathal, chief of the Hy-Figeinte, who was killed by Brian Boru in the year 977; but the Mac prefixed in the surname Mac Carthy is an indication of higher descent, namely, from Carrthach, the great-grandson of Callaghan Cashel, King of Munster, whose descendants held the highest rank in Desmond till the civil wars of 1641.

It would be now difficult to show how this popular error originated, as the meanings of the two prefixes O and Mac are so nearly alike. It may, however, have originated in a custom which prevailed among the ancient Irish, namely, that, for some reason which we cannot now discover, the O was never prefixed in any surname derived from art, trade, or science, O'Gowan only excepted, the prefix Mac having been always used in such instances, for we never met O'Saoir, O'Baird; and surnames thus formed, of course never ranked as high among the Irish as those which were formed from the names of chieftains.

It may be here also remarked, that the O was never prefixed to names beginning with the word Giolla. I see no reason for this either, but I am positive that it is a fact, for throughout the Annals of the Four Masters only one O'Giolla, namely, O'Giolla Phadruig, occurs, and that only in one instance, and I have no doubt that this is a mere error of transcription.

Another strange error prevails in the north of Ireland respecting O and Mac, viz.: that every man in the north of Ireland of which Mac forms the first part, is of Scotch origin, while those to which the O is prefixed are of Irish origin; for example, that O'Neill and O'Kane are of Irish origin, but Mac Loughlin and Mac Closkey of Scotch origin. But it happens in these instances that Mac-Loughlin is the senior branch of the family of O'Neill, and Mac Closkey a most distinguished offshoot from that of O'Kane. This error had its origin in the fact that the Scotch families very rarely prefixed the O (there being only three instances of their having used it at all on record), while the Irish used O tenfold more than the Mac. This appears from an index to the genealogical books of Lecan, and of Duald Mac Firbis, in the MS. library of the Royal Irish Academy, in which mention is made of only three Scotch surnames beginning with O, while there are upwards of two thousand distinct Irish surnames beginning with O, and only two hundred beginning with Mac.

Another strange error is popular among the Irish, and those not of the lowest class, namely, that only five Irish families are entitled to have the O prefixed; but what names these five are is by no means agreed upon, some asserting that they are O'Neill, O'Donnell, O'Conor, O'Brien, and O'Flaherty; others that they are O'Neill, O'Donnell, O'Kane, O'Dowd, and O'Kelly; a third party insisting that they are O'Brien, O'Sullivan, O'Connell, O'Mahony, and O'Driscoll; while others make up the list in quite a different manner from all these, and this according to the part of Ireland in which they are located; and each party is positive that no family but the five of their own list has any title to the O. None of them would acknowledge that even the O'Melaghlins, the heads of the southern Hy Niall race, have any claims to this prefix, nor other very distinguished families, who invariably bore it down to a comparatively late period. On the other hand, it is universally admitted that any Irish family from Mac Carthy and Mac Murrough, down to Mac Gucken and Mac Phaudeen, has full title to the prefix Mac; and for no other reason than because it is believed to have been a mark of no distinction whatever among the ancient Irish. This error originated in the fact that five families of Irish blood were excepted by the English laws from being held as mere Irishmen. But of this hereafter.

There is another error prevalent among the Irish gentry of Milesian blood in Ireland (which is the less to be excused, as they have ample opportunities of correcting it), namely, that the chief or head of the family only was entitled to have the O prefixed to his name. This is the grossest error of all, for there is not a single passage in the authentic annals or genealogical books which even suggests that such a custom ever existed amongst the ancient Irish chieftain families, for it is an indubitable fact that every member of the family had the O prefixed to his surname, as well as the chief himself. But a distinction was made between the chief and the members of his family, in the following manner:—In all official documents the chief used the surname only, as O'Neill, O'Donnell, etc. In conversation also the surname only was used, but the definite article was frequently prefixed, as the O'Neill, the O'Brien, etc., while in annals and other historical documents in which it was found necessary to distinguish a chief from his predecessors or successors, the chief of a family was designated by giving him the family name first, and the christian or baptism name after it in parenthesis. But the different members of the chief's family had their christian names always prefixed as at the present day.

I have thus dwelt upon the errors respecting surnames in Ireland, from an anxious wish that they should be removed, and I trust that it will be believed henceforward that the Mac in Irish surnames is fully as respectable as the O, and that, instead of five, there are at least two thousand Irish families who have full title to have the O prefixed to their surnames.

THE CITY INCORRUPTIBLE.

Hark! 'Tis the roar of labour,
A ceaseless, deafening sound,
Now from the trembling scaffolds,
Now from the yawning ground;
Not the red fires of Vulcan,
Nor Cyclops' pristine powers,
Could match their feats of magic
Who shape this world of ours!

With myriad panting engines,
With countless picks and drills,
They arch the threatening rivers,
They pierce the hostile hills;
In steam and smoke and lightning
Earth's captive forces play,
To weld with Titan torches
The city of to-day.

Still from their sunken footholds
Those cobweb buildings rise;
Whose panes ray back the morning,
Whose forehead touch the skies;
While many a crowded workshop,
And toiling mill and mine,
Yields up its costly treasures
To make them fair and fine.

Yet, void of civic honour,
Of justice, light and law,
What were the proudest structures
That e'er the round world saw?
Rome was a queenly empire,
But power and wealth and state
And fame and triumphs failed her,
With sons no longer great.

Firm stands the nation's bulwarks,
Her fortunes wax apace,
While Virtue guards here hearth-stones.
And Truth, her market-place;
Lo, theirs are streets and temples
That dwarf the courts of kings—
A free and glorious city
Of incorporeal things!

OUR WEEKLY STORY

THE OTHER SIDE.

(By K. F. PURDON.)

"Gettin' married," said the Honourable Reggie Langholme, with that air of unutterable wisdom that only youth and complete ignorance can impart, "gettin' married is like goin' at a big fence in a country you don't know. You keep askin' yourself what's at the other side."

As will be seen, even by so casual an acquaintance as the reader, the Hon. Reggie had "no use for" g's in his conversation. And people who knew him much better than the reader aforesaid is likely to do, said that he made very little more use of his gees in what he called the "huntin' field;" but that may have been jealousy, not of Reggie as a rider, but of the means to that end, which an inscrutable fate had placed at his disposal.

"A big jump that you don't know?" said his companion, on their way to a meet of foxhounds, Phil Offlahertie, and he spoke in a rather uninterested way, as if he was thinking of something else. But then he pulled himself together, and added: "Harden your heart and mutter your prayers, and go like—go for all you're worth, whatever meets you; that's what I think is the cheapest in the end, when you're riding to hounds. But of course I don't know how that would answer if you wanted to start in double harness!"

As he spoke, Phil was gazing abstractedly at the elegant Reggie, who was on a little in front, in faultless get-up—scarlet coat, silk hat, immaculate tops, and that air of important severity which is usually assumed therewith. Phil was gazing, lost in silent wonder "how the mischief a chap with such a horse under him could crane at his fences." The Hon. Reggie was credited with the habit inculcated by the old saw "Look before you leap." Caution is, no doubt, commendable; but this particular form of it is out of place after hounds, and is held in hearty scorn by your thoroughgoing fox-hunter. Phil was only a hard-riding young farmer, who declared he couldn't afford to hunt, except that it helped him to sell his horses, if he put manners on them by riding them to hounds himself. His present mount was a big, raking chestnut, evidently new to the work, for he had fretted himself into a lather already, and the covert was only just in sight. It stretched up the side of a grassy hill, almost covered in places by furze and bracken. The dogs were working busily through this home-grown jungle, their quivering tails just visible as they nosed their eager way about, called to order now and then by a sharp word from one of the whips, or the huntsman, who were posted at various coigns of vantage about the cover.

When they reached this centre of grave interest, "I'll get on top, where I belong," said Reggie, with a laugh, pointing with his hunting-crop to a group of riders on the crest of the hill, silhouetted against the sky, "you can see nothin' of what's goin' on as long as you keep potterin' about down here on the road!"

"I'd go, too, only I don't know how this brute of mine will behave among other horses" said Phil, "and I don't want to draw the master's tongue on me if I can help it. He'd turn the air blue with language if this fellow took to kicking among the dogs, and small blame to him either! And he's as uncertain in the temper—this colt I mean—as most chestnuts. Well, so long," as Reggie departed: "Stand still, you brute, till they find anyway! Ah!" with a sudden change of tone as his eye, following Reggie pacing up the hill, fell on a certain little figure he had been anxiously looking out for. So had Reggie, for that matter.

It was a figure not easily passed over, though it was only a girl of seventeen, and she was mounted on a pony as ugly as sin is said to be, though perhaps that is a point on which two opinions are admissible. The pony looked like going, and that is the main thing if you mean business at a meet. The girl was conspicuous among the half-dozen or so well-habited women who were out, by reason of her dress, a faded tweed skirt, evidently home-made, and a brilliant red coat a world too wide for her slender little person. She might be said to be conspicuously badly dressed, if you liked; but I don't know. A dress that makes a pretty girl conspicuous—that helps you to see so pleasant an object—can't be a bad dress. The red coat that was so remarkable was really good of its kind, only unfortunately, like its original owner, Eileen's aunt, a trifle out of date. She had had it to wear twenty years before, when it had been the fashion. She and it had hunted then many times, in company with a certain beautiful foreign Royalty. Then it (the coat) had descended to Eileen, when a sudden storm of misfortune had flung the girl into auntie's sole charge. Eileen heartily hated the red coat, but she had to wear it or stop at home. And she would not for the world wound auntie's feelings by seeming dissatisfied. Auntie, who was now watching her with that second-hand happiness that is so satisfying, from the rath that crowned the top of the hill. However, it wasn't so bad for Eileen. She couldn't help knowing that the colour became her "down to the ground." Very few pretty girls are so stupid as not to perceive these things—a providential circumstance that adds considerably to their happiness, and, therefore, to the happiness of the world—a commodity of which there will probably never be too much.

"Mornin', Miss M'Carthy," said the Hon. Reggie, saluting Eileen with some impressement; "glad to see you out. How's the pony. Pretty fit?" he added, with what Eileen fancied to be a touch of patronage.

"Quite well," she replied, somewhat curtly.

"I'll be glad to give you a lead," he went on, very kindly. He meant well, did Reggie.

"Oh, thanks very much" replied Eileen, with polite outer decorum, because auntie was listening now, and auntie belonged to an older school, which not only knew what was what, but acted on the knowledge. But Eileen added to herself: "Give me a lead, indeed! I like that cheek!" Eileen was a trifle slangy. "If you manage to be in the same field with myself and Leprechaun you'll be luckier than you deserve; that's all!"

Ungrateful—nay, stupid Eileen! Could you not guess even the drift of Reggie's reflections—that he was saying to himself: "If only that girl was decently turned out, in a properly-built habit, wouldn't she just make the other women sit up; that's all!"

But Eileen never even knew he was staring so hard at the big loose coil of black hair and thinking how well it contrasted with the milky-white throat, and trying to think of something to say that would make her look at him long enough to give him a chance of deciding whether her eyes were really blue or black. And Reggie kept wondering why on earth the said eyes should turn so often on the horsemen on the road below, and was that flourish of her whip a signal.

Suddenly there was a change in the music of the dogs; their short, sharp yelping swelled to a fuller tone. A shout was raised: "Gone away! Gone away!" and instantly, as if suddenly set free, everyone was on the alert, and eager to be in motion.

"There he is! There he is!" cried Eileen, as a long, tawny creature came gliding from the furze into view, and racing swiftly away. There was an agonized "Keep back, gentlemen, for the love of heaven, and let the dogs get to work!" from the master; there was the usual scrimmage to be off in the first flight, the usual feverish flurry among the people on wheels and on foot to rush to the next point of vantage—generally in the wrong direction, and then the gallant cavalcade had streamed off and disappeared, and

"Silence settled deep and still,
On the lone wood and mighty hill."

"This is something like going" thought Eileen, exulting in the consciousness of being well to the front. "I wonder where Phil is. Struggling with that mad brute of his, I suppose, and, very likely, losing the cream of the run. As for that tiresome Reggie Langholme—Hurrah! Lep! The fox is over the big double! Now you and I have our chance to show them a thing or two! Ugly he called you! Said you had a head like a portmanteau, did he? He won't be within shouts of us after this! Now, pony, steady, and you can manage your own way. Goodness knows you ought to know best. Creep up one side of the bank; worry through the bushes; that's it; and now for a drop into this big field the other side. Well done, old boy!"

Leprechaun was an animal of vast experience, and Eileen was wise enough to give him a good deal of his own way. As they were gathering themselves together after the jump, a voice from the field they had just left—Mr. Langholme's voice—called out: "What's at the other side?" and, moved by an irresistible spirit of mischief, "I am!" cried Eileen.

But her voice was drowned by a roar from Phil: "Why don't you go see?" as he came thundering up on the big chestnut. "Clear the way, will you. Do you want to sleep the night here; for I don't!" and over the two rushed in safety.

"Where were you till now?" asked Eileen, as they raced off together, the gallant little Leprechaun straining every nerve and muscle to keep abreast of the long-striding chestnut. And, from this question, and Eileen's contented look and tone, it might be inferred that she and Phil were on, at least, friendly terms. "I was holding in this brute" said Phil, "and watching a chance to cut out Reggie Langholme. Confound him! What business has an ass like that with such horses as he rides!"

"It's just pearls before swine," said Eileen, a hard saying to apply to the elegant Reggie. Then an ugly obstacle intervened, in the shape of a wide water-jump with a bad take-off, and, after that, more hard riding to the finish, where, to her inexpressible joy, Eileen obtained the brush.

As they were jogging quietly home, through the dusk of a January afternoon, "I cut Reggie out at the big double to-day" said Phil, and the remark, coming after some minutes of silence, was not at all what Eileen expected. Besides, Phil was not given to that musical exercise known as "blowing his own trumpet." There was something unusual in Phil's tone, too.

"Yes; he got badly left," said Eileen. "I wonder if he's there still."

But Phil treated this foolish surmise with the indifference it deserved.

"I want" he said slowly and persistently "I want to cut him out in more than that, and you know that very well, Eileen. Tell me you don't really care for him?"

"Care for him! Who? That ass!" cried Eileen. Of course she should have resented such a question; but you see she knew no bet

ter, and besides, it was Phil that asked it. "Why, surely you know Phil—"

Eileen, as may have been observed, was nothing if not frank. Still, even she stopped short here, and at a most interesting point. But Phil managed to glean all the answer he wanted to his many questions.

"We'll stable our horses together some day, and before long, Eileen, please God!" he said earnestly, as he helped her to dismount at her aunt's door. "And you can always have the pick of the bunch to ride, when we're married and have set up on the other side."

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

CASTLEMARTYR.

CASTLEMARTYR, a post-town (formerly a parliamentary borough), partly in the parishes of Itermorrough, Ballyoughtera, and Mogeely, barony of Imokilly, county of Cork, and province of Munster, 19 miles (E. by N.) from Cork, and 127 (S. W. by S.) from Dublin; containing 830 inhabitants. This place is situated on the road from Youghal to Midleton, and on the mail coach road from Dublin, by Waterford to Cork; it appears to risen into importance at a very early period. At the time of the English invasion, the castle, then called the castle of Imokilly, was resolutely defended by one of the Geraldines; but the English at length reduced it and kept in it a powerful garrison, till 1196, when Donald M'Carthy besieged and destroyed it by fire, burying the garrison in its ruins, and putting to death all who escaped from the flames. The castle was afterwards rebuilt and became a very important fortress, commanding the pass betwen Cork and Youghal, and was strongly fortified and garrisoned by the English. In 1575, this castle, then called the castle of Ballymartyr, was garrisoned by Fitzgerald, seneschal of Imokilly, but was attacked by the Lord-Deputy Sidney and his forces, aided by 2,000 of the citizens of Cork, who, after a protracted and vigorous defence, compelled the garrison to surrender, and Fitzgerald narrowly escaped by flight. In 1645 it was besieged by Lord Inchiquin, to whom it was given up on honourable terms; and during the whole period of the parliamentary war, the town was the scene of violence and depredation, and was frequently plundered and partially destroyed. In 1688 it was plundered by Lieut.-Gen. M'Carthy and the Irish forces, on the retreat from Cork; and in 1690, after the battle of the Boyne, and the surrender of Youghal, a detachment of 36 dragoons and 42 infantry of King William's forces charged a body of 300 Irish at this place; the cavalry pursued them to the castle, in which they took refuge, and being joined by the infantry, they compelled the fortress to surrender and the garrison to march out without either horses or arms; in this skirmish the Irish lost 60 men killed and 16 prisoners. In 1691, after the surrender of Limerick, the Irish under Gen. M'Carthy obtained possession of the town by stratagem, but were shortly after driven out by a party of the garrison from Youghal, since which time the castle has been in ruins.

The town consists of one wide street, at one end of which is the demesne of the Earl of Shannon, and at the other a bridge, beyond which a cross road leads on the right to the villages on the sea coast, and on the left to Imogeely, Fermoy, and Tallow. On the right side of this cross road, which is lined with fine ash trees, some neat houses have been recently built, forming a suburb to the town. The total number of houses is 129, most of which are large and well built, and the whole being whitewashed gives the town a very cheerful appearance. The approach from Midleton is by a magnificent avenue of lofty elms, one mile in length, and terminating at the eastern gate of Lord Shannon's demesne.

The inhabitants were incorporated by charter of Chas. II., dated July 28th, 1675, granted to Roger, Earl of Orrery, by which the castle and lands forming his estate were erected into a lordship, called the manor of Castlemartyr, with courts leet and baron, and a court of record with jurisdiction extending to £200, under a seneschal to be appointed by his lordship. The charter also granted that the castle, town, and lands of "Ballymartyr," part of the said manor, should be a free borough, under the designation of the "Borough and Town of Castlemartyr," and should extend into the county of Cork in every direction from the centre of the town, so as to comprise in the whole an area of 100 acres. The corporation was styled "The Portreeve, Bailiffs, and Burgesses," and consisted of a portreeve, two bailiffs, and twelve burgesses, who had power to admit freemen at their discretion, and to send two members to the Irish parliament; the former privilege was never exercised, nor have the limits of the borough been defined. The corporation continued to return two members to the Irish parliament till the Union, when the borough was disfranchised, and the £15,000 awarded as compensation was paid to Richard, Earl of Shannon.

Immediately adjoining the town is Castlemartyr, the seat of the Earl of Shannon, a spacious mansion erected by the Right Hon. Henry Boyle, Speaker of the Irish House of Commons. It is a substantial structure, consisting of a centre with a handsome portico and two extensive wings, and is situated in a demesne of 1,000 acres tastefully laid out in lawns and shrubberies, embellished with woods of stately growth, diversified with some beautiful sheets of water, and intersected with numerous walks and rides, commanding fine views of the richly varied and highly picturesque scenery with which the demesne abounds. Near the house is a large and beautiful lake, and there are two of smaller dimensions within the grounds; also two canals, over one of which is an elegant bridge. The shrubberies are exceedingly luxuriant, and the flower garden contains a great number of rare and hardy exotics, which, from the mildness of the climate, attain an extraordinary size. The ruins of the old castle of Imokilly, or Castlemartyr, the ancient seat of the Fitzgeralds, mantled with ivy to the very summit, and surrounded at the base with trees of stately growth, form a strikingly interesting feature in the landscape; and within the demesne are also the ruins of the ancient parish churches of Ballyoughtera and Cahirultan. The deer park is about two miles distant; it contains some of the finest timber in the country. The ruins of the ancient castle show it to have been a place of great strength, and from the variety of its architecture it appears to have been built at different times. Richard Alfred Milikin, a gentleman distinguished for his talents and benevolence, author of a poem called "The River Side," and other productions, including the well-known song of the "Groves of Blarney," was born here in 1767.

(To be Continued.)

THE BARDS OF OLD.

BY JAMES KEEGAN.

Those olden bards, those glorious bards, who sang
in the distant times—
They stir me like a trumpet blast—their wild
melodious rhymes:
In those old strains, o'er Erin's plains the Fenian
legions march,
And still their living deeds are blazed on song's
triumphal march.
I see the stern unconquered Fionn, that thunderbolt in fight,
Pursue from Tara's princely bowers young
Grainne's love-lit flight;
The milk-white stag on Lene's clear strand her
northward swift career;
Deep-mouthed Bran, the matchless hound, and
Osgar's magic spear;
The chase, the strife, the free, gay life—witch,
dragon, men, and beast;
The games they played, the works they made, the
rich and joyful feast:
That was the life—'twas life indeed; those were
the glorious times,
When men wrought deeds well worthy song, and
bards sang deathless rhymes.

Those olden bards, those glorious bards, who
reigned when earth was young—
When Love and Beauty fired their muse, how
sweet the songs they sung!
They're living still, shall live for aye, those queens
and ladies bright,
Who sat enthroned in the world of song, like stars
in summer's night.
There Niav, the maid of golden curls, still curbs
her snow-white steed—
She whose soft eyes and jewelled hand are warrior minstrels' meed;
O'er Muma's sea in twilight bower swan-bosomed
Cliona reigns,
And Deirdre's fate still wakes the tear in Uiad's
lonely plains;
To the moaning wind on Moyle's cold wave Lir's
daughters yet are wailing,
And still in the low moon's waning light the cygnets sad are sailing.
Sublime were the lays of the olden bards, and
sweet the songs they sung:
And though the world grows old and hoar, their
strains are ever young.

Those olden bards, those glorious bards, they sang
of land and sea,
The stars that roll through changeless paths, the
winds that rove so free;
A pæan of joy to Sol they poured, to Luna a gladsome hymn—
An ode to the light of day so bright, a rann to the
dark night dim.
They looked to the sky with raptured eye, they
dreamed of the restless main,
And evermore to the flowery earth they chanted
the mystic strain.
By the winding streams they loved to stray, or
far among forests green,
And oft at gloaming's tranquil hour in lonesome
raths were seen.
Their words were of hope to the sons of men, of
praise to God on high—
Their songs were of beauty that ne'er grows cold,
of virtue that ne'er shall die.
O honour those olden, glorious bards—honour their
deathless songs!—
But for them, mayhap, e'en hope had despaired in
the night of our darksome wrongs!

JOTTINGS OF OLD DUBLIN.

Extracted from the Diaries of the late Austin Cooper, Esq., F.S.A., of 4 Merrion square, Dublin, a learned Antiquary of the last century.

II.

1 April, 1795—

This morning I observed the workmen beginning to pull down the houses on the west side of Fleet alley, on Aston's quay, towards opening the avenue from Carlisle Bridge to College Green.

Mr. Gandon was often attacked in the public prints, and by private persons, about his great delay in building Carlisle Bridge, but he often told me, as well as the Commissioners of Wide Streets: "Let them look to opening their avenues, and not mind my work, for I will have it done long before any approach is made." In this he has been right, as the public can now verify.

2 November, 1784—

John Lees was the son of a boatman a Greenock.

He served his time as an attorney or solicitor, as they are there called—afterwards became clerk to Mr. Cathcart, in Guernsey, who was an army contractor.

Here Lord Townsend, then Colonel Townsend, first met with J. Lees, who, whenever an opportunity offered, took great pains to serve the Colonel, and attract his notice.

In this he was not disappointed. J. Lees some time after, married Miss Cathcart, the daughter of his employer, privately, and in consequence the father dismissed him.

How he disposed of himself afterwards I do not know, until Lord Townsend was coming to Ireland as Lord Lieutenant, at which time J. Lees went to him—told a sad tale of his poverty, etc., upon which Lord T. said: "Damn it, man, come over to Ireland and write Lady Townsend's cards."

From an inferior domestic in the Castle, he warmed himself into the good graces of his lord, that he acted as private secretary, or, I may say, absolute secretary—for he was so clever and ready in making up despatches, that my lord and he constantly made them up without the knowledge of the principal secretary.

This caused a jealousy in Sir G. Macartney, who held that office, and was the cause of his resigning.

On his departure, Mr. Waite, who succeeded, gave up entirely to Mr. Lees, and let him act in his usual confidential capacity.

When Lord Harcourt came over, he got into the same employment, but not so much as before—I mean with regard to the Chief Secretary.

Under this Government, J. Lees got the Secretaryship of the Post Office.

On Lord Buckinghamshire's arrival he lost all favour, so much so, that he has himself declared it was sacrilege to put his foot in the Castle Yard.

When Lord Carlisle came over he again got into favour, and got the place of Secretary at War, on Captain Hamilton's death—this he held until the Duke of Rutland came over, and then was dismissed, as well as his nephew, J. Averit, from the Post Office.

Soon after he went to England, and by the junction of North and Portland, settled all differences—got the Court employment, and on the establishment of the Irish Post Office, was re-instated in his old employment.

12 May, 1796—

This day I witnessed Sir John Parnell's will with Mr. Crofton. (a)

21 June, 1796—

This night some person got in at the stairs window—stole all my clothes, a few spoons—and got clear off.

(a) He was Irish Chancellor of the Exchequer.

8 November, 1784—

They began to pull down the inside of the old Church of St. Nicholas Without, part of St. Patrick's Cathedral.

It was in a very tottering and ruinous state, and to repair, or, rather, rebuild it (to follow the words of the grant), the Parliament last session gave them £500.

17 April, 1784—

The workmen began to pull down the houses in College Green, joining the House of Lords, in order to clear the ground for building the new intended front for that noble edifice.

9 March, 1796—

Being appointed as a general fast, I went to Christ Church with the State.

The Bishop of Cork, Dr. Stopford, preached the sermon, which was nothing very extraordinary either in composition or delivery.

23 July, 1803—

Several friends dined here, but all went away before supper, on account of the disturbances in the city.

24 July, 1803—

The whole city in arms; the same as during the last Rebellion.

26 July, 1803—

The city quite on the alert this evening, owing to a false alarm of the rebels approaching at Thomas street.

20 August, 1803—

Cornet Cole, of the 12th Dragoons, piked by the rebels in Thomas street.

27 August, 1803—

Sworn a Peace Officer this day as one of the Committee in the Section—Trinity College, 33.

1 September, 1803—

Edward Kearney hanged and quartered this day in Thomas street, for being in arms there on the night of 23rd July. He was tried yesterday.

2 September, 1803—

Thomas M. Roche hanged and quartered in Thomas street for same offence as Kearney.

3 September, 1803—

Owen Kirwan hanged and quartered in Thomas street for same offence as the former Rebellion.

5 September, 1803—

James Byrne hanged, etc., this day in Townsend street for rebellion.

20 September, 1803—

Robert Emmet hanged this day in Thomas street for high treason, after a trial of 13 hours.

3 October, 1803—

J. McIntosh hanged this day.

4 October, 1803—

Thos. Keenan hanged, etc., this day.

6 October—

D. L. Redmond hanged, etc., this day on the Coal quay.

8 October, 1803—

Sworn a second time a Peace Officer, or, rather, Conservator.

9 October, 1803—

Went at night on duty as Conservator for my first time.

19 October, 1803—

Went to Christ Church as one of the Conservators in procession from the Exchange.

4 November, 1803—

Went to Mr. Villiers' lodgings, in College Green, to see the Army and Yeomanry fire round King William.

17 December, 1803—

Lord Conyngham left town for his command at Cahir as Brigadier-General.

30 September, 1804—

In the course of my early ride this morning, I observed a Martello Tower building at the butt of the pier at Dunleary (the first I have seen); they were about to turn the arch of the first storey, but how much higher it is to be I could not learn.

A few days after, I observed another Tower building on the strand near the old brick fields below Sandymount, and just opposite the works at the Pigeon House; it is not yet quite clear of the foundation, and must be a very expensive piece of work, as the walls are 12 feet 6 inches thick, and for the want of a firm foundation, being nothing but sand, has been laid on very solid planks.

16 June, 1804—

This day the statue of St. Andrew, by Smith, in Portland stone, was erected at the front of St. Andrew's Church.

6 July, 1804—

Went to the play to see Kemble in "Richard the Third."

3 August, 1804—

Sir Henry Cavendish died this day, at 4 o'clock.

NAPOLEON AND THE SMUGGLER.

It is not, perhaps, generally known that a vessel was engaged to be built at Battersea, by the renowned Johnson the smuggler, for the purpose of liberating Buonaparte from the Island of St Helena. The vessel was about 90 feet long, and of the burden of 100 tons. It was built of half-inch plank; the grain of two of such planks was placed in a vertical, and the other two in a horizontal position. These planks were so well caulked and cemented together that the thickness of the sides did not exceed that of an ordinary washing tub. The masts were so contrived that they could be lowered to a level with the deck, and the whole vessel might be sunk in shoal water, with the crew on board, without danger. Ample means were provided for supplying the vessel with fresh air. The plan was, to sail up at night, within a short distance of St Helena, and sink the vessel until the next or some subsequent night, when the emperor would be enabled to make his escape to the beach, at which time the vessel was to be raised, Buonaparte to get on board, and sail away in the dark. It happened, however, that Buonaparte died before the vessel was quite finished; and it is a curious coincidence that she was to be coppered the very day the news of his death arrived. Johnson was to have received £40,000 as soon as the vessel had got into blue water, exclusive of the reward to be given in case the enterprise succeeded. This Johnson had previously offered his services to the Admiralty, and affirmed that he could blow up any ship without being hurt. Accordingly a trial was given him in the Thames, accompanied by a boatswain to one of his Majesty's ships, who had been married only a week before, in a boat of a similar construction to the one before described, to a barge moored in the middle of the stream. They sunk their boat, made fast their torpedo to the bottom of the barge, and lighted the match. Johnson then perceived that his vessel remained fast, having got (as the sailors express it) his cable athwart hawse of the barge. Upon which he pulled out his watch, and having looked at it attentively, told the boatswain that he had only two and a half minutes to live. Upon this the boatswain began to make grievous lamentations—"Oh, my poor, dear Nancy!" said the boatswain, "what will she say?" "Avast blubbering," said Johnson; "doff your jacket, and be ready to stuff it in the hawse-hole while I cut the cable." Upon saying this, Johnson seized an axe, and cut the cable. The boatswain stuffed his jacket into the hole, and they got out of the reach of the torpedo, which blew up the barge.

KILDARE.

North View of the Town in 1794.

(FROM THE "ANTHOLOGICA HIBERNICA.")

(From the "Anthologica Hibernica," April, 1794.)

KILDARE, or Chille-darruigh, which signifies the church or cell under the oak, is said to have been founded by St. Conlæth in the beginning of the 6th century. It seems to have been one of the primitive churches of Ireland, and what is termed a mother church, numbers of which were deemed, in subsequent periods, bishopricks, though few prior to the 10th century were other than convents of regular canons, who resided in or near their churches, with their families and pupils or disciples, where they instructed youth in the principles of learning and religion. Under this circumstance, Kildare was one of the ancient schools or academies of Ireland during the middle ages. Of the original church and city of Kildare, there are at present no remains, both the church and other buildings being frequently plundered and destroyed by the Danes. The round tower and cathedral, whose ruins still remain, owe their origin to periods much subsequent to the times we are now speaking of.

If we believe the legendary chronicle, St. Brigid, an illegitimate daughter of an Irish chieftain, was the original founder of the church and convent of Kildare, for regular canons of St. Augustin, about the year 484, and was succeeded by St. Naithfraich, her coachman. But such tales deserve little notice; the regular order of St. Augustin was not founded before 1139, by Pope Innocent II., nor was St. Brigid and her nuns known before the year 1360. This lady was not Irish, as the fable relates but of Nerica in Sweden; their rule was nearly the same as that of St. Augustin, and both nuns and monks resided in the same monastery; that is, in one part the women, and in the other the men, and both under the government of the abbess. and her suffragan the abbot. So that all early account of Brigidines in Ireland is unfounded.

The church, however, of Kildare, and its school, flourished for some years, which occasioned much comfort of students, but unfortunately about the year 770 the town and abbey were destroyed by fire.

It was, however, soon rebuilt, and nearly regained its pristine splendour, when, in 830, Ceallach Mc. Brann, an Irish chieftain of the eastern parts of the county of Kildare, plundered both the town and abbey, during which a number of the clergy were slain. About five years after, Farannan, abbot of Armagh, attended by a number of his clergy, visited this place, probably to to repair and re-establish the monastery, but was seized by Fethlemid, son of Crinthan, and carried into captivity; and in the year following, 836, the Danes burnt the town and monastery of Kildare, and are said to have carried away the shrine of St. Conlæth. In 843 the Danes made another attack on Kildare, and slew Cudinasgh, the prior, with several others. So attached were the clergy or monks to their ancient dwellings, that they constantly repaired them, and suffered the same depredations from these plunderers in 882, when Mc. Duff Davorean, with his family, and 280 of the clergy and students, were carried into captivity. In 887, 889, 895, and 920, the Danes also plundered this town. In 907, Cormac, the king and archbishop of Cashel, gave his horse, one ounce of gold, and an embroidered vestment to this abbey. But which, with other rich articles, were taken by the Danes of Dublin and Waterford, in 924, 926, and 927.

In 962 the town was almost entirely destroyed by the Danes, and the greater part of the inhabitants carried into captivity. Notwithstanding these frequent losses, the collegiate school of Kildare still continued, and professors constantly resided here. The number of people who frequented this seat of learning made it constantly an object to the Danish plunderers, for in 965 992, 998, and 1012 they plundered this town, and in the last mentioned year destroyed it by fire. And in 1016 the Danes of Dublin, under the command of Sitric Mc. Amhlaif, laid waste the town. The buildings which, after the frequent depredations, were rebuilt, consisted of wattled cottages, and were therefore easily destroyed either by premeditated or accidental fire. Whence in 1018 the whole town was, except one house, destroyed by lightning; it was

also destroyed by fire in 1038, 1040, and 1071; also in 1098 and 1099 suffered the same calamity. During these periods flourished the professors or teachers, Cosgrach, Diermit O'Lachan, Mc. Donngal, and several others.

In 1096 a council was held in Ireland by Moriertach O'Brien, amongst other subjects, to consider of the repair of churches, when it is probable the church of Kildare was erected of stone; at least, the round tower is of that age ,and also the tower and cathedral now in ruins do not seem much later. These were probably the only buildings at that time of lime and stone, as we find in 1143 and 1135 the town and all its edifices destroyed by fire.

In 1152, Finan Mc. Tiarcain O'Gorman was abbot of Kildare, and assisted at the synod of Kells, when the distribution of palls was made by Cardinal Paparo, and was the first abbot of Kildare who acknowledged the church of Rome, and consequently the first Roman bishop, or rather any bishop; for the heads of the Irish churches prior to this period, though commonly styled bishops, were rather abbots, governing a convent of their clergy, who resided in community with their families.

In 1220, Loundres, archbishop of Dublin, extinguished the perpetual fire which were kept here and in various parts of Ireland for superstitious purposes. That at Kildare was kept in a small cell or house near the church, 20 feet square, some ruins of which are still visible, and called the fire-house. This fire, by which divinations were performed, was kept by virgins, called in Irish "Breochuidh," "Breoghidh," or "Brighid," that is, fire-keepers, from whence originated the story of St. Brigid and her nuns. They were, indeed, a species of nuns, but not the Brigidines who followed the rule of St. Augustin, as before observed, though in subsequent ages confounded with them. It doth not appear that any convent of Brigidines were in Ireland, and but one in England.

The Irish "Breoghidh," or "inghean an Dagha," that is, daughters of fire, as they were frequently called, were often women of the first quality, daughters of chieftains. One of these, Dermod Mc. Murrogh, king of Leinster, in 1135, stole out of her cloister, and forced to marry one of his own people. During which act of violence, 170 of the inhabitants of the town and abbey were slain. This fire, probably derived from pagan superstition, was in a few years re-lighted, and continued to burn till the total suppression of monasteries.

Soon after the arrival of the English, the town and church came into their possession, and a castle was erected for the security thereof by the de Vescies, to whom the town and district were granted. In 1229, the cathedral, if not rebuilt, was repaired and beautified at great expense by the bishop, Ralph de Bristoll. In 1260, William de Vescy, then earl of Kildare, began a monastery for friars of the Franciscan order, on the south side of the town; but afterwards completed by Gerald Fitz-Maurice, lord Offaly, in 1271, the ruins of which are still visible, but in nothing remarkable. About the year 1291 John Fitz-Thomas, lord Offaly, having a quarrel with William de Vescy, earl of Kildare, and L. J. of Ireland, when de Vescy refusing to decide the contest by single combat, according to the custom of the times, the king granted the town and manor of Kildare, with most of his other property, to the said lord Offaly, who became the first earl of Kildare of the Geraldines in 1316.

In 1294, Calbhach O'Connor having taken arms against the English, took the castle of Kildare, and burnt the rolls and tallies belonging to the manor, and wasted the adjacent country; but was defeated in 1307 by lord Offaly, and obliged to return to his own district, Hy Faly, in the King's county. In 1309 a parliament was held in this town, but we have no account of the business transacted by it.

About the year 1486, bishop Lane founded a college in the county of Kildare, in which the dean and chapter might live in a collegiate manner, but of which there are now no remains.

Among the number of students who were in different periods educated by the monks of Kildare, several were of distinguished parts, in particular O'Buge, who flourished about the year 1320, called generally in the language of the times, the burning light, the mirror and ornament of his country; he was well skilled in divinity, philosophy, rhetoric, and the canon and civil law, and was buried in the Carmelite monastery founded by William de Vescy in 1290. Which monastery was situated within the then town, and confounded with the ancient convent of regular canons, of which there doth not appear to have been any particular building; the cathedral was their church, and the members dwelt round it, in separate houses, constituting the ancient city. The ruins of the Carmelite monastery, or White friars, are seen a little to the west of the present town, but of no great extent, and was granted at the dissolution to Anthony Deeringe, in 1585. During the wars in the reign of queen Elizabeth, this town suffered severely; bishop Daly was three times turned out of his house almost naked and plundered by the rebels; so that in 1600 all the houses were in ruins, and without a single inhabitant. This, with the almost total alienation of the church lands by the bishops, Craik and Pilsworth, from the year 1560 to 1604, prevented the town of Kildare from rising again to distinction. In 1643 a garrison was established in the castle by the earl of Castlehaven, which in some measure re-assembled the inhabitants, but the cathedral, which had gone much to decay in the time of Henry the 7th, and repaired by bishop Lane, was nearly destroyed in 1641, and the steeple beat down by cannon, in which ruinous state, with the greater part of the church, it still remains, and the monuments, mentioned by Harris, no more; part of one, indeed, lies in the churchyard, but broke. The choir is repaired, and the present parish church, but there are neither bishop, dean, or chapter resident, the bishoprick being held in commendam by the dean of Christchurch.

In 1647, colonel Jones took the town upon quarter, but it was soon after retaken by the Irish, who held it till the beginning of June, 1649, when it was repossessed by the lord lieutenant.

The present town, which seems to be situated somewhat eastward of the ancient, stands boldly on a rising ground, and consists of the church, part of the castle still inhabited, the county infirmary, a good building on the east end, the parish school adjoining the church, a Roman Catholic chapel, a market house, and about 180 houses, most of which, however, are wretched cabins. It has 4 annual fairs, obtained from its ancient barons and earls, held on 12th February, 26th April, 12th May, and 19th September. In the reign of James 1st, it was instituted a borough, governed by a soveregn, recorder, and two portreeves, and sends two members to parliament under the patronage of the duke of Leinster. Here are no manufactures, except a small one of felt hats, and the general scarcity of water must in a great measure prevent any being established. The races of the Curragh contributed some years since to the business and riches of the town, but at present it is not much frequented by them. Being situated on the road from Dublin to Limerick, it is a post town, and the mail coach passes through it to the last-mentioned city, which, with other travellers, for some years have been the principal trade of the place, and even this has been greatly diminished by completing of the grand canal to Monasterevan and Athy.

SHOOTING THE CLOUDS.

It does not look as if the conference of meteorological experts, which has been meeting at Graz to investigate the value of firing charges of gunpowder for the purpose of preventing hailstorms, is likely to have any practical issue. The Hyrian burgomaster who first conceived the idea of protecting his vines in this way claims to have thus spared himself large sums, but the data brought forward at the conference were not of a kind to bring general conviction among the delegates, though many incline strongly to the belief that much may be accomplished in this way. However, the experiments are to be continued on the lines adopted by Herr Stiger, the author of the system. Small mortars are employed for the purpose, funnels being fixed on the muzzles in such a way that on the charge being fired a column of air is projected to a great height. It is believed that the formation of hailstones can take place only when the air is perfectly still, and that it is prevented by the violent agitation thus set up. The charge recommended by the conference is half-a-pound of gunpowder, and it is thought that experiments should be made with a number of the special mortars, distributed over an area of not less than 7,500 acres.

THE MEMORY OF HAZLITT.

It is suggested that a tablet should be placed on the house in which Hazlitt died, No. 6 Frith street, Soho, now a French boarding-house. That might well be done, says the "Era." The fact that Charles Lamb was in the room when Hazlitt died lends an additional interest to the house. At Winterslow Hut, where he lived for so long, the essayist, it seems, is without honour. We learn that the Hut, which is really the Pheasant Inn, standing on the old coaching road across Salisbury Plain, is in a somewhat ruinous condition. Hazlitt's room, however, can be readily surmised. As late as 1895 the old signboard was in an out-house, and not a soul at Winterslow had heard of the man to whom the village owes its fame.

IRISH FAIRIES,

BY EDGAR L. WAKEMAN.

Though the ordinary superstitions of the Irish peasantry may occasionally possess a decidedly gruesome and grisly nature, that portion which pertains to the fairy mythology of Ireland is full of revelation of belief in the almost universally comforting and friendly agency of every form of fairy elf, gnome, or imp. They are, of course, possessed of supernatural powers, but no one ever heard of an Irish fairy or imp harming anybody of right motive and life. Indeed, however wide and deep may be one's study of or acquaintance with these intangible folk of Erinn, no instance can be found of printed record from among the countless tales of the peasantry regarding their well-established doings, which could bring discredit upon their conduct, or make of the entire "wee folk" race aught but a benignant allied force of other good influences and people. Tracing their exact origin is a very difficult matter. The word sidh or sith, pronounced and Anglicised into shees, was always applied to the oldest known Celtic writings to the residences, palaces, and haunts of these immortals of the remotest Gaedhelic or Erse mythology. In this mythology was found the "man of the Sidhs," or the "farshee," and also "the woman of the Sidhs," or the "banshee." In the Gaedhelic mythology, however, were two classes of these immortals. One of these consisted of imps or demons having the power of taking upon themselves the body of man or woman, at will, and by wooing human men and women, and particularly in holding out ravishing promises of immortality, thus leading them into fatal unions through which the souls of the mortals so deluded were endlessly banished from heaven. The second class were semi-immortals and magicians, wholly devoted to Druidism and the black art. These beings are the mystic folks who originally possessed Erinn, and who gradually emerge from the realm of phantoms and legends, giving place to the forms and activities of men, where the hand of history begins to draw aside the veil from the silences. By many researches into ancient Irish lore they are interchangeable with the mythical Tuatha-de-Dananns. Those who believe Ireland to have been peopled before the coming of the Milesian colony, regard the Tuatha de Dananns as the aboriginal race, and their gradual and mysterious fading out of existence is largely the groundwork of ancient and present Irish mythology. Those who hold to the belief that the Milesians were the first human occupants of Erinn are willing to regard the Tuatha de Dananns as those imaginable beings easily created in the fanciful thought of the incoming wanderers, who naturally enough could not comprehend, from their eastern origin and associations, any land unpeopled and unknown of men. Whether the mythical race had existece, or whether its people were creatures of the imagination only so soon as the records of the doings of men came to be kept in ancient Erinn there were already centuries behind in which people of some sort existed, whose wonderful skill in the erection of sepulchral mounds, and in the making of metal ornaments and slender and delicately-formed spear heads, was such as to compel on the part of a less skilful and more warlike people the gradual deification of this mysterious race, and their eventful identification with the local phantoms and gods of the earliest historically known people of Ireland. True it is that in the oldest Irish authorities the fairies are often called the Tuatha de Dananns, and the latter are in turn given the virtues and powers of immortals and fairies. Their final dispersion after the two disastrous battles of Tailteann and Druim Ligheim was fairy-like enough. They "held a meeting at Brugh, on the Boyne, under the presidency of Manannan, and by his advice they distributed and quartered themselves on the pleasant hills (sidhs) of Erinn." Hence an easy transformation to "men and women of the hills" can be traced. Many of these sídhs are known to-day from local tradition and nomenclature. The learned Joyce states that the names of no less than seventy Irish townlands contain shee and its modifications; while anyone who will tramp about Ireland for a little, or, for that matter, even glance over its map for half an hour, will find names of vales, streams, glens, mountains, and hills, in countless numbers, which, in their Celtic form, have from 1,000 to 2,000 years been known as this or that "of or from the fairies." Sheetrim (Sidh-dhruim) or "fairy-ridge," and the old name of the Rock of Cashel, and also of six townlands of county Armagh, Knocknasheega (Cnoc-na-sige), near Cappoquin, in county Waterford, is the "hill of the fairies." Cuilsheegary is the name of two townlands in county Sligo, and its Celtic meaning is "the fairies forest." Ballysakeery, in Mayo, means the "town of the fairy hills." The Sheehys, a townland in Tipperary, means "the fairy mountains." The Shee hills, in county Meath, are "the fairy hills." Cloonshee, in county Roscommon, is "a fairy meadow." Mullagshee, at Ballyshannon, Donegal, "the hill of the fairy palace." These illustrations could be multiplied indefinitely, and there will be found names whose original and only present meaning comprehend every imaginable form of "rath or fort of the fairies," "the mill of the fairies," "the place of the fairies' dance," "fairy spring," "the glen of the wee folk," "the burn where the fairies sing," "the fairies' pool," "the church of the fairy hill," "the fairies' blacksmith shop," "storehouse of the fairies," "peeble heap of the fairies," "the fairies' cavern," "the mines of the fairies," and I even found, up among the misty heights of the Twelve Pins of Bunnebeola in Connemara, a lovely basin-like hollow near the top of wild Bengower, which the peasants of 2,000 years have called by no other name than "the place where the fairies wed." In the gradual evolution of the fairies of Ireland, that portion of demonology providing malevolent magicians of an impish nature has been wholly extirpated. The "farshee," or "man of the hills," in ancient times was a very wicked fellow, indeed, up to all manner of wizard harm, and making no distinction whatever between good and bad people in his depredations. So, too, the "banshee," or "woman of the hills," or "woman of the fairy mansions," as she is more pleasantly known to-day, was looked upon in olden times as a most vindictive and hurtful female demon. The former has been replaced by a throng of pleasant-mannered imps, possessed of much humour, with an occasional turn for practical joking, while not one in a score could be hardly accused of downright meanness. The latter has also, while retaining her original personality to a degree, been what might be called the fairy mother of an endless brood of lightsome fairies, who under no circumstances annoy other humans than those of evil heart and sordid nature and who are full of rewards to the generous, the sacrificial, and the good. The banshee itself, as everybody knows, is that sad-voiced one which, in the nature of a guardian spirit, comes to certain Irish families of long, unbroken line and gives notice by pitiful lamentation, often accompanied by the wringing and clapping of hands, of approaching death. By those who believe in her in Ireland to-day she is sometimes regarded as a spirit from purgatorial realms, released from penance when this pathetic mission is accomplished; by some she is thought to be a direct envoy from the spirit world; but by all she is believed to be the temporary persecution of some deceased member of the family to which her grievous message is brought. She is never trifled with, startled or vexed; for if this should happen the banshee would never again honour the same family, at least for a generation of time, with its tenderly plaintive presence. All Irish fairies are capable of conferring sure benefits, and their powers for punishing evil is regarded as boundless. Consequently they are a folk commanding more than ordinary respect, and they are universally spoken of either in the tender and friendly manner of "our neighbours" or with that delicate deference easily recognisable in the appellation of "the good people." Ghosts, phantoms, and demons form a goodly part of the fairy phantasmagoria of Ireland. One of the most hideous of these, and yet a fellow of infinite drollery, is the dullaghan. He is generally found with his head under his arm, in his pocket, or where a number of them are together, flinging it merrily at some other dullaghan, or again engaged with it in games of football; and I fancy Washington Irving had got an inkling of dullaghans before he penned his inimitable tales of "Ichabod Crane" and "Rip Van Winkle." I found them curiously occupied in the South-West of Ireland. The Kerry fishermen claim that once each year, at a certain time of the tide, a ship manned with a nameless crew sails thrice around Valentia Island, in search of a former pirate captain, who lost his head and ship in that channel in an engagement with Queen Anne's forces. Ballindullaghan, in county Roscommon, was a noted haunt of these odd creatures, and was so named in their honour. Drumarraghi, in county Fermanagh, is "the place of the spectres," arraght being Irish for an apparition. Then there are shirtless goblins for Lough Gillaganleny, the name of several tiny lakes in Ireland, means nothing more nor less than "the lakes of the shirtless fellows." Tobertasha is a coffin-shaped well, near Kilnamona, in Clare; and the signification of its Celtic name, Tobar-a'-taise, is the "well of the ghost." Killeennagallive (Irish, Cillin-na-ndealbh) in Tipperary, is "the little church of the phantoms." Again there are fairies who do nothing but play at coman, or hurley, and the fairy fort of Lisfarbegnagonmaun, near Corofin, in Clare, is simply "the fort of the little hurlers." The dancing fairies give Lissarinka its name—the fort of the dancing. Certain old forts or raths in the South of Ireland called Lissakeole, means "the fort of fairy music." While Lisnafeedy, from fead, a whistle, is "the fort of the whistling fairies." The Pooka is a wonderful spirit of merriment and cunning. In fact, he is the Irish (puca) Puck. He whisks through countless legendary tales, a ripple of laughter and a gleam of light, and scores of places in Ireland whose names bear his own, or some of its many modifications, attest his universal popularity. But of all Irish fairies the most exasperatingly impish practical joker is the leprechaun. He has many names in Celtic, such as luprachaun(luricane, lurrigadane, cluricane, lupperdane, loughryman, and the correct designation from which all these corruptions have come, luchorpan, from lu "everything very small," and corpan, diminutive of corp, a body. Leprechaun is the name now universally bestowed in Ireland upon this merry little sprite. He is still more familiarly known among the peasantry as "the little imp in green." To a hair's breadth he is just twelve inches in height. He is dressed in a little green coat with long, dainty tails, a bright scarlet vest, the prettiest knee breeches of puce velvet you ever beheld, with green silk hose, and low pumps with buckles studded with either diamonds or sparkling drops of dew. There is a jaunty barrhad or cap on his head, with the daintiest of dudheens stuck under the band at one side, and a jewel of emeralds, in the form of a shamrock, at the other. A film of lace made from rarest cobweb is gathered at his throat, another foamy rift of the same rolls over the edges of his little vest, and he wears a wonderful fob of wrought and blazing gold. His eyes are no bigger than doll's beads, but they are the merriest eyes that ever glistened; his mouth

is very large from continual laughter and his paunch is something wonderful to behold, developed into outrageous proportion from the shaking of his sides from uncontrollable merriment, all the result of his "jokes, deceptions, and diversions" upon those who endeavour to use him for gain. Indeed the little fellow seems to embody the idea of an endless torment and scourge to those who permit themselves to become possessed of an unholy greed and avarice. Patient plodding, hard labour, and a cheery spirit under deprivation and suffering, are all worthy of the characteristics of the lowly of Ireland. These are surely more or less rewarded in various ways by the leprechaun; but woe to the sordid spirit who endeavours to amass riches through the agency of this "little imp in green." His is the power to give sudden and great wealth. He has mills and mines and store houses of treasure innumerable. He is to every Irish man, woman, and child as the end of the seductive rainbow and kettle of gold to our own childhood's fancy, with this important difference. The leprechaun is an entity, an actuality. No one dare deny his possession of all the treasures necessary to instantly lift one from poverty to power and riches. Thousands of aching Irish eyes have feasted upon his gorgeous person and tantalizing face. Besides, you have the evidence of scores of places in Ireland being named from his known haunts. Near the old city of Cong, in Mayo, there is the Mullenlupraghaun cave, or "the leprechaun's mill." Here in former times good people left their caskeens of corn at nightfall, and came the next morning to find them full of meal, ground by the obliging leprechauns during the night. Only the other day I ascended Knocknatooricaun, near Lismore Castle, in county Waterford. It is the "hill of the looricauns," or "leprechauns." Poulaluppercadaun is a "pool of the leprechauns,' which I looked into at the edge of the Killorglin bog. And then, have not I myself seen many a score of peasant folk, who have told me, as I sat on the "stranger's seat" by the hobs of their cabins, from Malin Head to Dingle Bay, of the times when their brother, or father, or mother, or grandfather, or grandmother, had not only seen the leprechaun with their own eyes, but had actually caught the little imp; and but for their great excitement at the critical moment, "sweet bad luck to them!" would have gained the great treasure? There is no doubt about this little imp in green. But the conditions of securing his treasure trove are such that he almost invariably succeeds in defeating your greed and making you the laughing stock of a whole county and half another, more power to him for his cunning. If you can catch him and hold him until he is compelled to yield, you will gain all. Or, if you once catch his eyes and never move your own, you will succeed. But he has a gently-swung back door out of every difficulty. Get both your hands about his big paunch and squeeze him until he is black in the face, and he will whimper "Faith, an' it's yours, if I can be after tastin' me own breath?" You loose your grip a little, and in a twinkling he has popped out of your hands, "an' is givin' yez the five fingers at his beautiful pug nose." Follow him over bog and mountain, through fen and glen, and corner him quite at the peak of cloud-capped Carrantuohill, the highest mountain in Ireland, and he is more than your match still. "Well, here we are thin'!" he will exclaim, in a tone of praise for your great pluck. "Where is that treasure?" you will sternly reply, never taking your eyes from his own. "There, behind yer fut, ye gossoon!" You are startled and suddenly look behind you. The spell is broken. Away speeds the leprechaun with a maddening laugh that crazes you into shying great boulders after him down the mountain side; and you return to your every-day labours shamed into contentment with patient effort and slower gains. And thus the little Irish imp in green ever reproves avarice and discontent into honest effort and lives.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

IX.—Continued.

A.D. 1530. Sir William Skeffington was appointed lord deputy, and having landed near Dublin in August this year, together with the bishop of Meath, and the earl of Kildare, lately released from the persecutions of Cardinal Wolsey, the mayor and citizens of Dublin met them in solemn procession on the green of St. Mary's abbey, and the recorder, Thomas Fitzsimons, congratulated the arrival of the lord deputy, and the earl (who was very dear to the citizens), in a pithy oration; to which the lord deputy made answer in these words: "Mr. Mayor, and Mr. Recorder, you have at length, this nobleman here present, for whom you sore longed whilst he was absent, and after many storms by him sustained, he hath now to the comfort of his friends, to the confusion of his foes, subdued violence with patience, injuries with sufferance, and malice with obedience; and such butchers as of hatred thirsted after his blood, are now taken for outcast mastives, littered in currish blood. How well the king hath been of his gracious inclination affected to the earl of Kildare (his back friend being by his just desert from his majesty weeded) the credit wherein this nobleman at this present abideth, manifestly declareth. Wherefore it resteth, that you thank God and the king for his safe arrival. As for his welcome, Mr. Recorder's courteous discourse, your great assemblies, your chearful countenances, your willing meetings, your solemn processions do so far shew it, as you minister me occasion on his lordship's behalf, rather to thank you for your courtesy, than to exhort you to any further ceremony."

Kildare was no sooner arrived than he determined to punish the O'Tools for spoiling his tenants while he was in England, and was assisted therein by two hundred archers drawn out of the city bands; but with what success is not related.

A.D. 1531. A great riot and uproar happened between the soldiers and city apprentices, occasioned by a drunken servant, who, pitching hay in High street, threw some of it on a soldier's bonnet. The soldier, resenting the usage, cast his dagger at the servant, which not taking place, stuck in a post behind him. The servant thrust the soldier through the shoulder with his pitch-fork, upon which he was joined by several of his companions, as the servant was by the apprentices, and the fray became general, many being wounded on both sides, though none slain. Thomas Barbie, who was then mayor, issued out of his house with the king's sword drawn, and with great difficulty at length appeased the riot, and the lord deputy having come up by that time as far as the pillory, the mayor presented the author of all the mischief to him, who, in regard no death ensued, pardoned him.

A.D. 1534. Thomas Fitz-Gerald, eldest son to the earl of Kildare, being left lord deputy in his father's absence, a rumour was spread abroad that his father was imprisoned and beheaded in London; upon which he surrendered the sword to the council, and flew out into open rebellion. The council sent secretly to the mayor and citizens to apprehend Fitz-Gerald and his accomplices. But either the favour of the citizens to that house, or the strength of the confederacy, or the weakness of the city, which was much dispeopled by a plague then reigning in town and country, prevented any attempt at that time; however, the citizens afterwards behaved themselves with zeal and resolution against him. Fingal was the granary which usually supplied the city with corn; but was now exposed to the depredations of the O'Tools, and other Irish of the mountains, assisted by John Burnell of Ballgriffin, a gentleman of a good estate in Fingal, who favoured the rebellion. The citizens having received advice that the O'Tools were busied in conducting a prey from Fingal to the mountains, sallied out to intercept them at Kilmainham-bridge. They met the enemy near the wood of Salacock; but being overpowered with numbers, they were routed, and four score of them slain.

This misfortune threw the city into a consternation, which Fitz-Gerald laying hold of, demanded liberty to march his army through it, and lay siege to the castle, promising that no citizen should be injured in his property by his soldiers. The citizens took time to advise on this matter before they gave their consent; and immediately despatched one of their aldermen, Francis Herbert, to the king to know his pleasure, who, for his discreet demeanour upon the occasion, received the honour of knighthood, and was made a member of the privy council. They also consulted the constable of the castle, who regarding the security of the city, gave his consent to the demand, provided he were sufficiently furnished with men and provisions to withstand a siege. The citizens sent by night into the castle a good store of provisions, and alderman John Fitzsimons, upon his own account, furnished the constable with 20 tun of wine, and 24 tun of beer, 2,000 dried ling, 16 hogsheads of powdered beef, 20 chambers for mines, and an iron chain for the drawbridge that he had procured to be forged in his own house, to avoid suspicion.

The castle being abundantly supplied, the citizens consented to Fitz-Gerald's demands, and he accordingly sent in 600 men

under the command of six captains, viz., Field, Teeling, Wafer, Broad, Rouks, and Purcell, who planted two or three pieces of artillery near Preston's inn, opposite to the castle gate, and intrenched their party with strong ramparts sufficient to defend them from the shot of the castle; and to frighten the constable from annoying them with his ordinance, they threatened to place the youth of the city on the tops of their trenches, as marks at which they would be loth to aim.

The citizens considered this behaviour as a perfidious breach of treaty, and Sir Francis Herbert, returning at this juncture with an encouraging message from the king to stand manfully on their defence, and promising them sudden aid, they ordered the gates to be shut, as well to prevent the arrival of further supplies to the besiegers as to secure the rebels then in the city: they let down their portcullis, placed flags of defiance on the walls, proclaimed an open breach of the truce, and set about apprehending the traitors within the walls.

The besiegers, having notice of these preparations, thought it full time to shift for themselves, and some had the good luck to escape by fording the river; but most of them were taken prisoners. Fitz-Gerald at this time was ravaging the county of Kilkenny; but having speedy notice of his ill-fortune in Dublin, he immediately marched thither, and summoned all the powers of the Pale to join him near the city. In his way he seized upon several children of the citizens, who were at school in the country to avoid the inconveniences of the plague; particularly he got into his hands three sons of Walter Fitzsimons, who was mayor of Dublin the foregoing year, and James Stanihurst, who was afterwards an eminent lawyer, recorder of Dublin, and speaker in several parliaments. By means of these and other young gentlemen of rank, whom he seized, he hoped to oblige the citizens to a composition, and accordingly despatched messengers unto them to expostulate the breach of league, and require that it might be renewed, or at least the prisoners enlarged. But receiving a flat denial, he attempted to distress the citizens by cutting off the pipes of the conduits, and diverting the springs and rivulets that supplied the town with fresh water; and shorty after laid a formal siege to the castle in Sheep-street. But he was soon driven from thence, partly by the ordnance from the castle, and partly by an artificial fire prepared by one White, which burned down the thatched houses, and took from him all advantages of shelter.

From thence he removed to Thomas-street, and attempted to enter the city by Newgate, having for that purpose demolished the partitions of the houses on both sides, and thereby made a covered gallery, by which both his horse and foot were defended from any gun-shot from the walls. He then set fire to New-street, and planted a piece of artillery against Newgate, which pierced the gate and killed an apprentice of alderman Stephens, who was endeavouring to get water at the high-pipe in the middle of Corn-market. The valour of Richard Stanton, gaoler of New-gate, was memorable upon this occasion. He was an excellent marksman, and did much mischief to the rebels, whenever they had occasion to appear from under shelter. He perceived one of the enemy levelling his piece at the loop-hole where he stood; but preventing his design, he shot him in the forehead, and had the hardiness in the midst of fire to issue out of the wicket, and strip him of his gun and clothes, which he brought safe into the garrison.

However, the boldness of this action not only displeased the citizens, but excited the rebels to revenge; and therefore they immediately brought fire and faggot to the gate in hopes to burn it, and procure an entrance that way. The townsmen wisely considered that if the gate was burned, the expectation of plunder would animate the rebels to fight with greater alacrity within than without the walls; and they were persuaded that many of Fitz-Gerald's army, being inhabitants of the Pale, and forced to the camp, were in their hearts loyal; of which the citizens were convinced, because most of the arrows shot over the wall were unheaded, and many of them conveyed letters giving an account of all their leader's stratagems. These considerations induced them to resolve upon a sally, and reporting from the walls that new succours were arrived from England, they rushed out through fire and flame. The vigour of the sally gave a reputation to what they had proclaimed, and the enemy, not thinking the citizens durst adventure so briskly, unless they were supported, immediately fled, leaving one hundred gallowglasses slain, and their falcon a prey to the defendants. Fitz-Gerald fled to the friary in Francis-street, where he lurked that night, and in the morning got to the remainder of his shattered army.

Cooled by this defeat, and standing in great need of artillery and ammunition, he desired to treat with the citizens on these articles: I. That his men who were in prison should be enlarged. II. That the city should pay him £1,000 in money and £500 in wares. III. That they should furnish him with ammunition and artillery. IV. That they should intercede with the king for the pardon of him and his followers.

The mayor and aldermen debated these articles, and by the recorder answered to the I. That they would enlarge the prisoners, if he would deliver their children. To the II. That his wars had so impoverished them, that they could spare neither money nor wares. To the III. That if he intended to submit, he had no need of ammunition or artillery; if he did not, that they would not furnish him with implements to punish themselves. That instead of artillery to withstand his prince, they expected he should have requested parchment to engross his pardon; which IV. They promised to interecede for with the king by word or letter. In the end he accepted these terms, and hostages for the performance being mutually delivered, he drew off from the siege.

The great services and sufferings of the citizens upon this occasion were afterwards gratefully remembered to them and rewarded by the king; who by letters patent dated the 4th of February, 1538, reciting "the siege, the famine, miseries,, wounds, and loss of blood suffered by the citizens," granted to them and their successors for ever the site, precincts, ambit, and all the estate lately belonging to the dissolved monastery of All-hallows, near Dublin, lying in the counties of Dublin, Meath, Louth, Kildare, Tipperary, Kilkenny, and elsewhere in Ireland, at the rent of £4 4s. $0\frac{3}{4}$d. in the name of the twentieth part of the annual value. And further, in consideration of the debility and ruinous condition of the great forts and towers of the city, and in order to repair, support, and fortify the walls, he confirmed to them and their successors a grant made to them for sixty years by King Richard III. in the second year of his reign, of a rent of £49 6s. 8d. issuing out of the fee farm of 200 marks payable by the city to the crown; and as a further token of his bounty and gratitude, the king by the same patent granted and released to the city for ever an annual rent of £20 out of the said fee farm, which he had before in the second year of his reign granted to them only for forty years. Sir William Skeffington, lord deputy, landed the 4th of October following, and brought with him his majesty's gracious letters to the city of Dublin. An earthquake this year was felt in Dublin.

(To be Continued.)

The reason for the abandonment of the Sandy Hook battery of pneumatic guns is not to be found in any structural defects, but simply in the improvement of modern ordnance. The pneumatic gun is the invention of Captain Zalinski, who devoted his entire energy to the invention of a gun which would surpass in destructiveness anything that had previously been devised. The range of the pneumatic gun is about two miles; the modern 12-inch and 8-inch army guns, on the other hand, have ranges that vary from 5 to 10 miles, and are, moreover, much cheaper. That, in a nutshell, is the reason for the change. The only advantage which the pneumatic gun now has over the powder gun is its ability to throw masses of nitroglycerine or high explosives of equal power and sensitiveness without danger. It may be safely said that powder guns have so far not proven successful throwers of aerial torpedoes. But their cheapness and general efficiency fully compensate for this defect.

Mrs. Mayne Reid, who was granted a £50 pension from the Civil List the other day, is often to be met in London, and is not by any means so old-looking as one would expect to find the widow of the popular romancist who died at Maida hill nineteen years ago. It was in 1853, on his return to London from the wars in Mexico, that Mayne Reid—then thirty-five—fell in love with the thirteen-year-old daughter of George Hyde, of Quorn House, Leicestershire, a lineal descendant of the first Earl of Clarendon. A couple of years later they were married, and on many occasions the roving Captain's "child wife" was taken for his daughter. It was when they lived in Woburn place that Mayne Reid brought in from the streets one night the wild outcast, "attired in a rough blanket, with his head passed through a hole in the middle," who afterwards became known to fame as "Cannibal Charlie." The Captain fed him up, and he afterwards wrote "Lost Lenore; or, The Adventures of a Rolling Stone," a three-volume romance that would have choked off De Rougemont in time—if he had ever come across it.

LITERARY NOTES.

The late Lord Acton published so little in his lifetime that the reader might fairly expect a considerable crop of posthumous work from his pen. It is in vain, probably, to hope that any manuscript of the long-desired "magnum opus" will be discovered amongst his papers. Extreme delicacy of literary conscience—which made him feel that nothing could be written well enough to be given to the world, the obstruction of the mind by vast masses of material, and perhaps the absence of "that eternal want of pence" which has been responsible for so many a great book, combined to restrain Lord Acton from "rushing into print."

✧ ✧ ✧

The charge against Dickens, that in drawing Harold Skimpole, in "Bleak House," he perpetrated a libellous caricature of his friend Leigh Hunt, has been repudiated by Mr. Swinburne in his recent criticism of the novelist. Mr. Swinburne maintains that Skimpole was so unlike Leigh Hunt that the charge was absurd; but he blames Dickens for not having taken this high line, and denied the similarity outright. "The Westminster Gazette" lately recalled Dickens's semi-apology for Skimpole, which was to the effect that he made Skimpole talk like Leigh Hunt, but that in all other respects the character was imaginary.

✧ ✧ ✧

Mr. Swinburne now writes to our contemporary the following letter:—

I wish I could think I had always been wrong in thinking or feeling that Dickens's rejoinder to the charge of libel on the character of Leigh Hunt was singularly incomplete, ineffective, and awkward. I am old enough to remember its appearance, and the fact that I never met anybody at the time who did not think it more and worse than inadequate as an apology. "God forgive him," by all means; but mere men, I fancy, will, as a rule, agree with me that the due reply should have been the shorter and more straightforward one, which would at once have indicated and established the outrageous absurdity of the libellous imputation.

✧ ✧ ✧

Three years ago an excellent copy of Sir Walter Scott's first romance, published at 31s. 6d. in 1814, realised £150. The other day a long series of Waverley Novels, in the first edition, original boards, uncut, came under the hammer in Wellington street, many of them from the collection of the late Dr. Joly, of Dublin. Unfortunately, the "Waverley," although complete, could not be described as desirable in so far as exterior is concerned; moreover, the three much-used volumes, $7\frac{3}{8}$ by $4\frac{1}{4}$in., lack the white paper backs. Despite these drawbacks, Messrs. Quaritch paid £162 for the novel—a record price which compares with £150 for the finer set in 1899. Even more remarkable, perhaps, was "Guy Mannering," in similar state, but with the labels. On the other hand, Vol. I. lacked the imprint. Messrs. Quaritch were again the buyers at £86, against £70 for the perfect Harris example, one leaf torn, last year. In all, £306 15s. 6d. was paid for 20 lots of Scott's works in first edition, all from the Joly library.

✧ ✧ ✧

Mr. Fergus Hume, author of "The Mystery of a Hansom Cab" and many other sensational stories, is the son of the late James Hume, of Dunedin, New Zealand. He was, however, born in London, on the 24th July, 1862. He was educated at Dunedin High School and at the University of Otago. He was then called to the Bar of New Zealand, and went to live in Melbourne until 1888. A year previously he had published his first and best-known book. It created here and in Australia an amount of interest that none of his succeeding books have quite achieved. "Madame Midas," "The Indian Bangle," and "The Crime of the Crystal" are some of Mr. Hume's other novels, and a year seldom passes without the addition of one to the list.

✧ ✧ ✧

On July 26, 1796, a quaint notice of the death of Robert Burns appeared in the "Edinburgh Advertiser." The subjoined extracts are not without interest just now: "The public, to whose amusement Robert Burns has so largely contributed, will learn with regret that his extraordinary endowments were accompanied with frailties which rendered them useless to himself and his family. . . . It is proposed to publish some time hence a posthumous volume of the poetical remains of Robert Burns, for the benefit of the author's family. . . . It is hoped that, in the meantime, none of his original productions will be communicated to the public through the channel of newspapers or magazines, so as to injure the sale of the intended publications."

✧ ✧ ✧

Mr. Barrett Browning has bought a new property in Italy. It lies near to Florence, the city of his birth. That event gets to be distant—it was fifty-three years ago. The young child was "so like Robert," but was "so fat and rosy and strong" that his mother said she was "sceptical' of his being her child. "I suppose he is, after all," she writes to her sister-in-law, Miss Browning, who is now the companion of her nephew on his new estate. Before he was six months old his mother was able to say of him: "He is afraid of nothing in the world, and was in fits of ecstacy at the tossing of the horse's head" when he rode on his nurse's knee for five or six miles to a villa in the mountains—screaming for joy. The child was father to the man so far as a love for horses is concerned; and, with his new "stake in the country," the son of two great English poets may be said to be almost a fixture in the country where he was born, and where both his father and his mother breathed out their last sigh.

✧ ✧ ✧

The most important of the celebrations at Dieppe in honour of the birth of Alexandre Dumas was a performance of "Antony" the five-act drama which was produced at the Theatre de la Porte St. Martin, on May 3, 1831. The representation attracted a crowded audience to the pretty little theatre opposite the Casino, and, thanks to the satisfactory embodiment of the principal characters, the interest of the spectators was maintained until the close of the lurid story. "Antony" has become a classic—in the sense that it is very seldom performed either in Paris or elsewhere. It is a powerful but unpleasant drama. M. Albert Lambert fils passionately represented the impulsive, love-sick Antony, and Madame Raphaele Sisos impersonated the unfortunate Adele, who is prevented from forgetting the past, much as she desires to do so. The prologue was effectively delivered by M. le Marchand, and at the termination of the play, an ode by M. Dorchain was recited in honour of the occasion by M. Lambert fils, the company meanwhile surrounding a bust of Dumas placed in the centre of the stage, and waving gilt palm leaves in front of the huge plaster cast.

In the fifteenth century, Venice, who has just lost her campanile, and must rely on world-wide subscription to rebuild it, was wealthy enough to spend much money merely on advertising her splendour. She paid to Jacopo Sannazaro what is regarded as the highest price on record for a short poem. The six lines for which Sannazaro received six thousand golden crowns were thus translated by John Evelyn, the author of "Sylva":

Neptune saw Venice on the Adria stand,
Firm as a rock, and all the sea command.
"Think'st thou, O Jove!" said he, "Rome's walls excel?
Or that proud cliff, whence False Tarpeia fell?
Grant Tyber best, view both; and thou will say,
That men did those, gods these foundations lay."

Howel, when he came to write on the "stupendous site and structure of London Bridge," opened thus, without acknowledgment to the £1,000-a-line poet:

When Neptune from his billows London spied.

It scarcely need be said that he did not repeat the financial success of Sannazaro.

✧ ✧ ✧

An Edinburgh correspondent of the "Academy" raises the following Scott mystery: Sir Walter Scott's first public avowal of the authorship of the "Waverley Novels" was made at a theatrical fund dinner in Edinburgh, 23rd February, 1827. He said that upwards of twenty persons had previously been in the secret of the "Great Unknown," and that they had kept their secret very well. In gossiping memoirs dealing with this period one finds shrewd enough guesses, indeed guesses that are true. But how can one account for the biographical preface to a dainty German edition of Scott's Works, published at Twickenham, by the brothers Schumann in 1819, which is signed J. M. P.? This writer, whoever he was, who prefaced Volume I., "The Lay of the Last Minstrel," is quite certain as to the authorship, for he says that Scott "enjoys at present the same high character as an historic novelist as that he has acquired as a poet. Since Fielding and Smollett, no one has succeeded so well in this branch of literature; the characters in "Waverley," "Rob Roy," "Guy Mannering," the "Antiquary," and "Tales of My Landlord" are masterpieces of descriptive life, and at a future period, when the historian may be at a loss to describe the state of politics, manners, and society that existed in the first half of last century, he will find in these productions resources to aid his researches, which he will seek in vain for in the works of writers who then lived. . . . . These works have appeared without his name to them." Who was this prophetical J. M. P. who was so sure of the authorship? Certainly no such distinct statement was made in print at this date in England. This little volume I. of a German edition of Scott's works is the property of Dr. Alexander Buchan, Secretary of the Scottish Meteorological Society, Edinburgh."

✧ ✧ ✧

On this information, says the "Academy," and the spur of the moment, we can suggest only two possible explanations. One is that the date 1819, derived we presume from the title-page alone, is a misprint for 1829. The other is that a Twickenham publisher, living comparatively remote from the literary arena, thought well to deliver as certainty what he had received only as rumour, that the dogmatic character of his statement was due to irresponsibility rather than knowledge. Our first suggestion is, of course, weakened by the fact that J. M. P. does not mention any Waverley novel published after the professed date of his edition, 1819. But this might be coincidence.

SCIENTIFIC TOPICS.

Lake Titicaca is the highest known sheet of water in the world, being 13,000 feet above sea level. This inland lake measures 120 miles in length, and varies from 25 to 40 miles in width. After enormous difficulties had been overcome, a steamer built by Messrs. Denny Brothers, of Dumbarton, was launched on the lake, and it now plies between Puno, in Peru, and Chiliaya, in Bolivia, on the opposite shore of the lake, about 100 miles away. These places are the termini respectively of Peruvian and Bolivian lines of railway.

✧ ✧ ✧

Recently a large wild goose was killed not far from Spokane City, Wash., which had evidently winged its way from the remote Eskimo lands. When the hunter picked up the bird he was surprised to observe a slender piece of ivory protruding from its breast just below one of its wings. With much difficulty he succeeded in pulling out the piece, for the flesh had grown tightly around it. It proved to be an arrowhead, about eight inches long, which had some queer carvings on the stem where it had been fastened to the shaft. The carvings were delicate, though quite distinct. On a careful inspection by some Klondyke miners the carvings were pronounced to be of Eskimo origin. No arrowpoint of that kind was ever known to have been used by the Indians of Washington or British Columbia. The head was of fine ivory, no doubt carved from a walrus tusk. Evidently the goose had been shot by an Eskimo hunter in the Arctic regions, the wound had healed, the flesh had grown around the weapon, and in its long flight the bird had no doubt broken off the arrowshaft.

✧ ✧ ✧

Many devices have been proposed to prolong the life of electric arc lamps. The most effective arrangement consists of a chamber or cylindrical body around the pencil ends, which prevents access of air and thus secures longer life. But the use of such a chamber is objectionable by reason of the fact that it decreases the light ignition While it raises the temperature of a luminous arc, no means are provided by which this increase of temperature is utilised. A German inventor believes that he has devised an improvement in such arc lamps by providing them with pencils containing an addition of metallic salts or substances having a higher temperature of combustion than the carbon itself. Such carbon pencils, it is claimed, will produce a highly luminous arc. The temperature of incandescence and the power of emission of light possessed by the metallic salts used will be intensified in proportion to the heat generated by the combustion of the carbon. With pure carbon pencils the reflectors are disadvantageous as regards the yield of light, by reason of the higher temperature for reduced luminosity of the arc. With the use of this especial carbon, it is claimed that the very cause of this disadvantage is utilised in realising a distinct improvement.

✧ ✧ ✧

In connection with the disastrous eruptions in the West Indies, it was hoped by the planters, as a partial recompense for the terrible destruction of their property, that the volcanic dust might contain soil-enriching phosphates. Tradition says that after the dust-shower which accompanied the eruption of 1812 the sugar cane flourished in the West Indies as never before. The remarkable crops harvested in the years immediately following 1812 were attributed to the presence of phosphate and potash salts in the dust. An analysis of the dust, however, reveals the fact that the soil of the Barbadoes will profit little by these most recent eruptions. In a hundred parts of the dust that fell on May 7, only 0.675 part of potash and 0.141 part of phosphoric anhydride were found. Other constituents of the dust (alumina, titanium oxide, iron oxide, lime, magnesia, soda, etc.) are already contained in abundance in West Indian soils. The planters have merely reason to congratulate themselves that the sand contains no injurious substances and that the texture of the soil may be somewhat improved by the incorporation of the dust with the surface layers. That the eruption of 1812 was less violent than that of 1902 is indicated by the fact that the dust of the former is composed of much finer particles than that of the latter. The dust of 1902 is almost entirely volcanic glass.

✧ ✧ ✧

One of the most powerful engines ever built for driving a dynamo has been completed by an engineering firm of Leeds, and is to be utilised in connection with the municipal electric lighting plant of that city. It is of the vertical double-acting triple-expansion type, and every part is inclosed. The three cylinders are at the top of the structure, and have respectively diameters of 23 inches (high pressure), 35 inches (intermediate), and 55 inches (low pressure). The length of the stroke is 30 inches, the shaft on which the cranks are set at 120 deg. is 12 inches in diameter, while the total height from bed-plate to top is 22 feet, and it is designed to make from 200 to 250 revolutions of the crankshaft per minute. Some fine castings have been employed in its construction, notably the bedplate, which measures 21 feet by 8 feet and weighs 16 tons. The casing is cast in two pieces, and weighs 22 tons, while the low-pressure cylinder weighs 9¼ tons. The total weight of the complete engine is 105 tons. The cylinders are fitted with slide valves, and are self-draining. The forced system of lubrication is employed. The oil is supplied to all the working parts by a pump without valves or packing, driven from the crankshaft, which discharges the oil at a pressure of 10 pounds to 25 pounds per square inch through specially designed oil channels. The oil that escapes from the bearings drains into the crankpit, and is used again. The engine is coupled direct to a dynamo with a normal output of 1,400 kilowatts, but capable of generating 1,540 kilowatts. The steam pressure of the engine is 200 pounds maximum per square inch, developing 2,500 indicated horsepower.

The Norwegian Government has voted a sum of £18,000 to provide a submarine boat for the Norwegian navy. Captain Geelmuyden, of the Norwegian navy, was commissioned to visit the United States to examine the various types of this class of craft, and has recommended the Holland submarine, the construction of which will be commenced immediately. The British Government has also notified the company controlling the Holland patents of its acceptance of this type of boat for the British navy, the experiments with the first of the vessels built by the Vickers-Maxim Company of Barrow, upon the Holland designs, having proved highly satisfactory.

✧ ✧ ✧

From the rate at which the timber of the United States is now being used, says the Railway Age, it is apparent that within a few years a question of some weight will be that of securing a suitable supply for those industries using this material in large quantities. Railroads will be affected because of the large demands made by them for timber for tie purposes. It is true that great tracts of timber yet remain, but these for the most part are located in such remote districts that the necessary freight charges practically prohibit their use. The most natural remedy to propose is that of so treating the tie as to lengthen its life. Various successful methods of treatment are now being used, but in practically all cases the tie with treatment is just about as expensive in the end as the untreated tie. Among the other speculations that have arisen since the discovery of oil in Texas is that of determining its preservative properties in the treatment of ties. To this end extensive experiments are now being made by the Atchison, Topeka, and Santa Fe. A tank has been built by that company at its creosoting plant at Summerville, Tex., where ties are being soaked with crude oil. These will be placed in the track together with others treated by various creosoting processes, and the comparative value of the treatments determined. Different localities have been chosen for the tests where the ties will be subjected to extreme conditions of weather and climate.

✧ ✧ ✧

Astronomers expect the appearance of two periodic comets during the present year. The first of these was discovered by Temple at Marseilles on the 27th of November, 1869, and returns every 5.5 years. Its period was only known, however, after the rediscovery of the comet on the 11th of August, 1880, by L. Swift, for in 1875 it was not favourably placed for observation, and the same on its return in 1886 and 1897. In 1891 it was but feeble, and was observed for the first time on its return by Barnard on the 27th of September, with the Lick telescope. It will be in a better position for observation in the first part of December next, when it is expected. The second of the periodic comets has an interesting history. It was discovered by Swift on the 20th of August, 1895, and calculation assigns it a period of about seven years. It is remarkable that this comet seems to be identical with the one discovered on the 14th of June, 1770, at Paris, by Messier, who was called the "ferret of comets," because he had observed a greater number than any astronomer of his time. Lexell had calculated its orbit, and supposed that as its period was 5.5 years, it would come back at the end of 1775; but he did not find it, in spite of all his searches. Schulhof is of the opinion that the comet is passing near the planet Jupiter, whose mass is considerable, has undergone great modifications in its movement, and that the comet described by Swift is the same as the so-called "lost comet" of Lexell. Its return is expected in November, when it will be near the sun and in a good position for observation.

✧ ✧ ✧

Mr. Asaph Hall, this year's President of the American Association for the Advancement of Science, was born in Goshen, Conn., on October 15, 1829, and received a common school education in his native town. For a time he worked on a farm, but when he was sixteen years old he took up carpentry, and followed that trade for many years. Meanwhile a thirst for knowledge that would not down came to him, and in his twenty-fifth year he began the study of geometry and algebra in the Norfolk Academy. Later he went to Wisconsin, and still later to Ohio, in both of which States he taught school, from the earnings of which he was able for a single term to study at the University of Michigan. In 1857 he entered the Observatory at Harvard as a student, but his abilities were so manifest that he was almost immediately assigned to the working staff with the rank of assistant, remaining in that capacity until August, 1862, when he was appointed an aid in the United States Naval Observatory in Washington. A year later he was made Professor of Mathematics in the United States Navy, and remained as such until 1891, when he was retired with the relative rank of captain. It is with the United States Naval Observatory that his name will be associated always for the brilliant discoveries that were made by him and which have gained for him such eminence among the astronomers of the world. In addition to the usual routine work required at the Naval Observatory, he was from time to time assigned to important astronomical expeditions. These have included the parties sent to observe the solar eclipse from Bering Sea, and from Sicily, Italy, in 1870. He had charge of the American party sent to Vladivostok, Siberia, to observe the transit of Venus in 1874, and was chief astronomer of the expedition stationed at San Antonio, Texas, at the later transit in 1882.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1793.)

MONDAY, AUGUST 4.

On Saturday last Frederick Fleming, late marshal and bailiff of the Liberty of St. Sepulchre, was exposed one hour in the pillory, pursuant to his sentence at the last Commission, for committing wilful and corrupt perjury, in an examination sworn before Mr. Alderman Fleming, against Patrick Griffin. He is to be pilloried once more for the same offence, and to be imprisoned six months.

On Friday night Inspector Shee proceeded to the county of Wicklow, and apprehended John Gravil and John Gavan, for robbing the Wicklow mail on Wednesday morning last, and on Saturday night lodged them in Newgate. The postboy fully identified them both as two of the party, and recognised Gavan as the person who cut the cord of the bag.

A few days ago a fine boy, eight years old, was drowned in an attempt to swim near the point of the North wall. He was picked up by a ship's boat, then sailing down the harbour, but every means to recover him proved ineffectual.

Parents are extremely remiss in suffering helpless children of that age to roam at large and venture into the river to swim, when so many dangers of drowning surround them, and when they are incapable of assisting themselves in the slightest accident that may endanger their lives.

Horse stealing promises to become prevalent in the environs of this city. Two or three horses have been carried off in the neighbourhood of Ranelagh, and attempts have been made upon others. In England persons put steel collars with their names upon them on their horses when in the fields, to secure them from being stolen, it being impregnable to a file, at least for some hours. A similar precaution here would certainly have as good an effect, and is not so dangerous a one as that now in use, of locking the four feet together with fetters.

LEIXLIP SPA.

A gentleman confined to his room undertook, on Sunday last, for his amusement, to make an estimate of the number of persons who on that day passed through Leixlip, on their way to the new spa; for which purpose he placed himself in his window at 6 o'clock in the morning, with pen, ink, and paper, and between that hour and five in the afternoon he reckoned,

55 coaches, 29 post-chaises, 25 noddies, 82 jaunting cars, 20 gigs, 6 open landaus, 221 common cars (with company), and 450 horsemen, which, at the lowest computation, must have carried upwards of 3,000 persons, to which, if 1,000 be added from the adjacent parts of the country, and at least double the number of pedestrians, we will find that upwards of 12,000 persons visited the well on that day, attracted by the wonderful account published of the cures effected by these famous waters.

SATURDAY, AUGUST 23.

As there has been something mysterious attendant on the circumstances of the inhuman murder of the Rev. Mr. Butler in the county of Meath—and as a knowledge of the chief agents concerned in that deed has been hitherto sought after without effect, we feel ourselves happy in laying before the public the following particulars, the authenticity of which may be depended upon.

REV. MR. BUTLER'S MURDER.

On Saturday last, at Trim, the execution of Thomas Shieran, who at the last assizes was convicted of a robbery in that neighbourhood, was attended by some of the most respectable magistrates and gentlemen in the vicinity. The culprit, a few moments before being launched into eternity, declared with all the contrite solemnity becoming a dying penitent, that he and three men of the name of Lawless, all of whom lived contiguous to the Bishop of Meath's demesne, had concerted and conspired the death of Mr. Butler—then they lay in wait for him some nights, previous to the fatal one, that one of the Lawlesses was the person who fired the shot which killed Mr. B.—and that no other person whatever was concerned in the plot.

On a former day he voluntarily came forward and made this discovery to one of the Bishop of Meath's servants—after which, he and the Lawlesses were lodged in the same prison, where it is feared an intercourse with some dark villain occasioned his afterwards denying his first attestation, and accusing men innocent of the fact; this of course invalidated his evidence against the Lawlesses, who were enlarged.

At present it may be thought needless to comment on the severity with which some innocent persons in that county were persecuted without any grounds except from the perjured attestation of the basest miscreant. But when we have seen with what rancorous avidity some men in that county thirsted for the blood of innocent individuals, we cannot with too pointed severity reprobate such proceedings.

Personal security is the most striking feature of the subject's liberty, without which the State and the community must ever be at war. Hence we cannot refrain from saying that the man, be he who he may, whether placed on one of the eminences of the State or elevated as a mitred dignitary of the church, should be considered as an enemy to mankind and to his country, who, to gratify a bigoted prejudice against any body of people, or to effect purposes selfish and disinterested, could drag from the bosom of their friends and society, men whose unblemished reputation and amiable qualifications endeared them to the circle in which they moved. But Providence watches over the just, and innocence seldom wants its protector, else Mr. Fay, Mr. Gibney, Mr. Byrne, and some others, might have been long since sacrificed to the heinous demon of malice and malevolence.

As a good deal has been lately mentioned of crimping and enlisting men, the Act of Parliament on the subject may set many right; from that it appears clearly, if any enlisted person change his mind before he is sworn, there is nothing more necessary than to pay twenty shillings and return the bounty money. The following is an extract of the Act alluded to:—"When any person is enlisted, he shall in four days, but not sooner than twenty-four hours, be carried before the next justice or magistrate of a town corporate (not being an officer of the army) and before him shall be at liberty to declare his dissent to such enlisting; and on such declaration, and returning the enlisting money, and paying 20s. for the charges expended on him, he shall be forthwith discharged."

Monday, a recruiting sergeant went into a publichouse in Thomas street, and enlisted a hulking recruit, apparently six feet high, who sat in the next seat to him.

The fellow declared himself ready to serve his Majesty—but insisted on not stirring from the spot until he got half the bounty of six guineas offered by the sergeant.

The money was given instantly, and the reckoning paid;—but what was the astonishment of the sergeant, on finding his recruit without feet, hobbling after him on a pair of wooden stumps.

The sergeant demanded, and insisted on having his money—the recruit as positively refused, alleging he was ready to be attested, and to do the best he could for the King's service.

Their high mightinesses the mob entered into the spirit of the trick, took the part of the cripple, and hooted the sergeant, so much out of patience, and into shame, that he was very glad to retreat without beat of drum, leaving his recruit to triumph in his disgrace.

The dreadful state of the new road leading from the first Park-gate to Island-bridge has long remained a most alarming and mischievous nuisance.

There is no sort of barrier between the carriages and passengers travelling that way, and the steep and dangerous precipice down to the level of the long meadows.

No less than three carriages have tumbled over it within the last fortnight, by which means several limbs were fractured, and several dangerous, if not mortal, contusions and dislocations received.

By one of these accidents, a Mrs. Noble, an elderly lady, had her horses killed, her own leg broke, and her shoulder dislocated.

By another, a young lady had her thigh broken and her arm desperately bruised.

And by a third, Mr. Wemys, an elderly gentleman had his arm broke, his ankle strained, and was otherwise severely wounded.

Four years has this road been under repair at the expense of the citizens of Dublin.

DEATHS.

Hon. Captain Howard, late of the 8th Regiment of Light Dragoons, of the wounds he received in the action before Menin, on the 18th of May. He was brother to Lord Viscount Wicklow.

At his Lordship's house in Stephen's Green, the Right Hon. John Lord Baron Kilmaine.

At her Ladyship's house in Piccadilly, London, the Right Hon. Lady Viscountess Mayo, of Castle-Bourk, county Mayo.

In the West Indies, Lieutenant Robert Tew, of the 49th Regiment of Foot, eldest son to the late Alderman John T., of the city of Dublin, a young gentleman who promised to be an honour to his family and country. At St. Domingo, in the late engagements there, he was particularly distinguished for the gallantry and spirit which marked his conduct; and, had not an untimely and early death terminated his military career, we need not doubt, but that additional laurels and increased fame would have accompanied his progress through life, when at an early age he gave promises so becoming the soldier and man.

At Ellore, in India Captain Thomas Higginbotham, of the company's service.

At Enniskillen, Mrs Hall, wife of Mr. James H., merchant.

At Limerick, by a fall from his horse, James Hassett, Esq., M.D.

At Barkapore, Bengal, Captain George Heard, in the honourable East India Company's service.

Died at Somerset street, London, the Right Hon. Viscountess Dillon, mother to Lord Viscount Dillon of this kingdom, and to Lady Jerningham.

At Mallow, Anthony Jephson, Esq., formerly member of Parliament for that borough, and brother of Anthony Jephson, Esq., the present member.

In the 48th year of his age, Sir Vesey Colclough, Bart., representative in four successive Parliaments for the county of Wexford, and for the Borough of Enniscorthy in the present one.

CARIGAHOOLEY CASTLE.

The Dwelling-Place of Grana Uile,

THE FAMOUS CONNAUGHT PRINCESS.

FROM THE ANTHOLOGIA HIBERNICA, 1793.

This castle stands at Carrick a Cwly, at the end of a nook, or inlet, in the bay of Newport, in the county of Mayo. The proper name is "Carrick a Uile," or the rock in the elbow, alluding to the impending mountain, or the strength of the castle, and the recess in which it is situated. The castle is a strong, square tower, of about 50 feet in height, divided into four stories. At the north and south angles are two small projecting turrets, and the roof was raised considerably above the parapet wall that surrounds it, as may be perceived by the gable ends, in one of which was a window. This served as a banqueting-room, as it has a chimney, the only remains of one to be seen. On the south-west angle is a low, round tower, which served for a guard room. This has two stones and loop-holes for the discharge of musketry.

In this castle lived Grace O'Maly, known among the Irish by the name of Grana Uile; she was daughter of Owen O'Maly, and widow of O'Flaherty, two Irish chiefs in those parts. After the death of the last, she married Sir Richard Bourke, styled Mac William Eighter, who died in 1585, after having by her three sons and one daughter. Lord deputy Sidney writ to the council in England, in 1576, that O'Maly was powerful in gallies and seamen. Grana, who was a high-spirited lady, became fond, at an early age, of the watery element, and accompanied her father and his sept in many naval expeditions. The coast was plundered of cattle and other property, and many people were murdered in these excursions. Grana was ever foremost in danger: courage and con-

duct secured her success, and the affrighted natives trembled at her name along the north-west shore of this isle. Her fame attracted many desperate and hardy mariners from distant parts. Her larger vessels were moored in Clare island, where she had a strong castle; and her smaller craft she kept at Carrick a Owly. A hole in the castle wall is now shown, through which a cable was run from a vessel, and fastened to her bed, that she might be the easier alarmed and prevent surprise.

Tradition says that her piracies became so notorious, and her power so dangerous, that she was proclaimed, and five hundred pounds offered as a reward for apprehending her. This she disregarded for some time; but the English power growing strong in Connaught, she resolved to make her peace with Queen Elizabeth, and went to her court. The queen, surrounded by her ladies, received her in great state. Grana was introduced in the dress of her country: a long mantle covered her head and body; her hair was gathered on her crown, and fastened with a bodkin; her breast was bare, and she had a yellow bodice and petticoat.

After having made her peace, she returned to Ireland, and landed in a little creek near Hoath. She walked up to the castle, and found the gates shut, for the family were at dinner. After some inquiries, she discovered that Lord Hoath had a child nursing not far off; it was a boy, and heir to the title: him she carried on board ship, and immediately set sail, and arrived safe at Carrick a Owly; nor did she return him until paid a large ransom, as a punishment for his inhospitality. For many years after, whenever the family of Hoath went to dinner, the gates and doors were thrown open.

WHERE PEOPLE GO ON STILTS.

Most expert of stilt walkers in the world are those to be found in La Teste, in France. The rural postmen of this region, the shepherds and farmers go about on tall stilts with perfect ease. The stilts worn by these people in their ordinary work frequently measure six feet or more in height. Years of constant practice has made everyone remarkably expert in managing these artificial legs, and such a thing as a fall is unknown. A person who can add six feet to the length of his legs naturally has a great advantage over those who must walk with limbs of ordinary length. The French farmers mounted in this way are almost a match in point of speed for a horse, and a shepherd can outrun a dog in rounding up his sheep. The stilt walkers can even run at surprising speed over very rough country or through underbrush several feet in height. A race was recently run near Bordeaux between three picked horses, three stilt walkers, and three pedestrians. Only one of the horses finished. It arrived first, but only twenty minutes ahead of the first stilt walker. The last of the stilt walkers completed the course twelve hours ahead of the first of the pedestrians. The stilts used by the French peasants are entirely different from those sometimes used by the children in the United States. The stilts which serve as toys in America, as a rule, reach up to the armpits, or at least to within reach of the hands. The French stilts do not reach even to the knee. The French stilts have, besides, a much broader rest for the foot. The Frenchman never touches the stilts with his hands. They are strapped rigidly to his foot and leg, thus leaving both hands free to carry his long staff or any other burden. All the stilt-walkers worthy of the name are able to mount their stilts without assistance. The children learn to walk on great stilts almost as soon as they can walk, and men over eighty years old still retain their curious artificial legs.

THE TRISTAN AND ESSYLLT LEGEND.

THE RED BOOK AND THE BOOK OF ANEIRIN.

The latest report of the Historical MSS. Commission deals with documents in the Welsh language in the libraries of Jesus College, Oxford, and of the town of Cardiff, as well as nearly the whole of the quondam Havod collection, and a few stray manuscripts at Llanwrin Rectory, Merthyr Tydvil and Aberdar. The collection at Jesus College is the result of gifts from some of its alumni, of whom the Rev. Thomas Wilkins of Llanblethian, in the county of Glamorgan, is the worthiest in this respect. According to the introduction to the report to him belongs the credit of having rescued from the vicissitudes of private libraries the Red Book of Hergest, the largest vellum manuscript and one of the best known in the Welsh language. This Red Book, though incomplete, forms in itself a fairly good mediaeval Welsh library, theology and the laws excluded, it may be said to contain a representative collection of the best literature current in Wales at the close of the fourteenth and the opening of the fifteenth centuries. And though work done for this Commission has made it clear that most of its prose contents are to be found in earlier documents, still, says Mr. J. G. Evans, if we exclude the Black Book of Carmarthen, the Book of Aneirin, and the Book of Taliessin, it remains practically our oldest and most reliable source for a very large part of the works of the poets of the twelfth, thirteenth, and fourteenth centuries. The purely historical value of these metrical productions is too readily overlooked. Indeed, it seems necessary to reiterate again and again, with emphasis the impossibility of writing the social history of the Welsh peoples without an attentive and exhaustive study of mead-song and elegy, the trumpet call to battle, and the pæn of victory and peace. When all that remains of the "poetry" produced in Wales between the rise and the fall of the monasteries has been properly edited, the historian will find a wealth of unsuspected material, often stamped with the hall-mark of the eye-witness and fresh as the morning dew.

The Welsh portion of the manuscripts brought together at Middle Hill by the late Sir Thomas Philips, Bart., was removed to Cardiff Free Library in the year 1896. In this collection the one manuscript of first rate importance is the Book of Aneirin, which was borrowed or pilfered from the collection at Hengwrit some time in the eighteenth century. The subject of this work is the battle of Cattraeth, which has been argued to have taken place at various dates ranging from 540 to 603. The present transcript of the poem belongs to the middle of the thirteenth century. Its language, however, retains ancient forms of words, which by comparison with the glosses carry us back to the ninth century. But whether the poem as a whole is a mediaeval version of a really old composition, or partly old, partly altered, and partly added to, is a subject too debatable and too full of pitfalls to be pursued here. All that can be said with safety is, that the composition is decidedly older than the MS., and that the meaning is often uncertain, not to say elusive. There are also at Cardiff autograph manuscripts by Ellis Griffith and William Llyn. In the former are certain particulars about the writer himself, which are matters of inference when the introduction to the Mostyn Hall MSS. was written; and in the latter the greater half the poet's own composition, a fact which should encourage some student to edit and publish the collected works of the author. The fifteenth century manuscript which gives the Estreats of parts of Denbighshire, should be examined, by students of economics; it also contains interesting miscellaneous memoranda.

Two other manuscripts at Cardiff give a portion of the Tristan and Essyllt story, which we have discovered nowhere in what must have been its original form. The plot simply survives with a few fragments of verse. Tristan carries Essyllt with him into the Kyldon wood, accompanied by her maid, Summerday Aspect, and a diminutive dwarf as page. The husband, Mark, complains to fall and others of his knights to help Mark. Whosoever sheds Tristan's blood is fated to die, and whosoever's blood he sheds likewise dies. This is the reason, doubtless, why the knights agree with unseemly unanimity to Mark's proposal to engage Tristan himself. Tristan "passes through three encounters unscathed," while Kai the Tall passes on eagerly to Summerday Aspect, the object of his devotion. Mark goes a second time to Arthur and laments that he can win neither blood nor money out of Tristan. Arthur advises Mark to send stringed musicians to soothe the spirit of Tristan "from a distance," and afterwards to send bards, who should approach him with his praise in their mouths. Tristan acts generously towards these, and engages in metrical converse with Gwalchmei, who succeeds as usual, with his golden tongue, where the joust has failed. He carries Tristan to Arthur, who salutes him in verse, even a second and a third time. At last Tristan speaks, offers to consider his ways, and to abide by the counsels of Arthur. When Mark is pacified, King Arthur addresses both husband and lover, but neither is willing to give up Essyllt. He therefore adjudges that she shall divide the year between them, staying with the one while the trees are in leaf, and with the other while the trees are bare. The husband, who is allowed to choose his half of the year, elects to have Essyllt in the winter, when the leaves are off the trees. Arthur announces his judgment and Mark's decision to Essyllt, who, after blessing the judge, bursts out singing:—

> There are three trees of constant hue,
> The ivy, the holly, and the yew,—
> That bear leaves summer and winter:
> Tristan! I am thine for ever.

HISTORIC MSS. IN THE PRESS.

Those who had an opportunity at the garden party on Saturday last of inspecting the many historic treasures contained in Hatfield House will be interested to learn that the ninth volume dealing with the manuscripts of the Marquess of Salisbury is now in the Press, and will shortly be issued by the Historical Manuscripts Commission, of which the ex-Premier is a member. Since 1883 no fewer than eight volumes descriptive of the famous manuscripts of the house of Cecil have been issued, one of which—the first published—was reprinted some years ago. There are also passing through the Press at the present time a volume relating to the Stuart manuscripts at Windsor Castle, belonging to the King, the second volumes of the manuscripts of the Duke of Buccleuch and of Sir George Wombwell, the Duke of Norfolk, and his brother, Lord Edmund Talbot, Lady Buxton, and others, and the first volume of the papers of the Marquess of Ormonde.

MADAME MELBA.

Madame Melba has fixed upon August 2 as the date of her departure from England for Australia. Great preparations are being made for her reception in Melbourne (from which city Miss Nellie Mitchell derived her professional name) after an absence of fifteen years. It was early in 1887 that this successful vocalist, then nearly twenty-one years of age, by the advice of musical friends, went to Paris to study under Madame Marchesi, through whose hands so many prime donne have passed, and a few months later she made her debut at the Theatre de la Monnaie, Brussels, in "Rigoletto." The following season she was engaged by Sir Augustus Harris at Covent Garden. Her progress in public favour was so rapid that soon afterwards, for the Grand Opera in Paris, she studied Ophelie under Ambroise Thomas and Juliette under Gounod. Madame Melba left Melbourne a pleasing ballad singer; she returns one of the four most famous light sopranos of the day.

IRISH TOPOGRAPHICAL POEMS AND BALLADS.

PART I.—COUNTY CORK.

(Second Selection).

IN PRAISE OF KINSALE.

This satirical song, Crofton Croker states, appeared originally as a broadside, published, it would seem, by Haly, Hanover street, Cork, of whom he bought a copy in 1831. Its title was "Paddy Farrell of Kinsale to his Friend at Mallow," and both it, and a reply to it, named "Answer of Thady Mullowney of Mallow to Paddy Farrell, Kinsale," were ascribed to Mr John Lanigan, a one time eminent Cork solicitor:—

As shepherds and ploughmen in verses so clever,
Have sung of their heath-covered mountain or vale;
Why not a poor fisherman try his endeavour
To sing of his own native town of Kinsale?

By folks esteemed learned, I'm reckoned amphibious,
Because half the time on the water I sail;
And each morning arise from the ocean with Phoebus,
When we both spread our rays on the strand of Kinsale.

To do the theme justice exceeds my poor powers,
Then expect but a round and unvarnished tale;
To hook, in the aid of poetical flowers,
Is not in my line, while I sing of Kinsale.

For bathers of all sorts, we've hot baths and cold ones,
And boxes for ladies their charms to conceal;
We've races and quadrilles for young and for old ones,
And billiards and cards at the Rooms in Kinsale.

We've a Royal Hotel fit for kings to repose in,
Built and furnished in style by a brewer of ale;
Where are soft armchairs after dinner to dose in,
While fanned by the zephyrs that breathe in Kinsale.

We've a choice set of books for the student who wise is,
The eel of true science to seize by the tail,
all seasons a skate you can have where no ice is,
Or a sinecure plaice you may get at Kinsale.

Would you seek for that solace of life, a true friend, sir,
In this mart of true friendship you never can fail;
Not a man but would travel e'en the World's End, sir,
To serve any friend that he has in Kinsale.

If your partial to perfumes, cross over to Scilly,
Where scents odoriferous float on the gale,
Where you've cold baths if warm, and warm ones if chilly,
And much higher fragrance than is in Kinsale.

Cold bathing, 'tis said, gives additional tention
To muscle, and renders the fibres more hale;
Would you weigh this opinion with rigid attention,
You'd not want for scales on the strand of Kinsale.

Then take my advice, if you've got gout, boil, or cholic,
Only try what our baths and pure air will avail;
Or if you're in health, just come here for a frolic,
And abundant amusement you'll find in Kinsale.

A part of Kinsale is still known as World's End, and another portion of it is called Scilly. The reply to the above, which is of a much coarser character is to be found in Crofton Croker's "Irish Popular Songs."

KILCOLMAN.

Lines written by J Bernard Trotter, after his visit to Kilcolman Castle in August, 1817, and published in his "Walks Through Ireland" (1819). Trotter, who was for a time secretary to Pitt's great rival, Fox, died at Cork on the 29th of September, 1818, in his 43rd year.

Here wander'd the poet, when morning's grey dawn
Stole o'er the dark masses of mountain around,
And the far-speeding hare scarce touch'd the moist lawn,
Aroused by the fresh breeze's short rustling sound.

He mused on the scene for philosophy made!
And pensively wander'd the wild fields alone,
Then striking his lyre in the leaf-covered shades,
Sung far from his country, in Erin unknown.

He sought not her love, nor that poesy traced,
Which, enchantingly rich as his own sweetest lays,
The warrior has raptured—the palace has graced,
And gained from a nation the garland of praise.

He saw but a desert, and heard not the song
The bard of the mountain just murmur'd above,
He trembled at Erin's wild, wandering throng,
And felt not the pleasures of neighbourly love.

The gold rays of morning in vain dressed the hill,
In vain flowed his Mulla—suspicion destroyed
The rural enjoyment, that trembled at ill,
And feared the fierce Hand that it sought to avoid.

For the bard had not taught his own heart to impart
The lesson of lovely compassion to all!
The poet assumed the hard warrior's part,
And smil'd at a generous, lost nation's fall!

Oh, had he but wept the kind drops had been
The balm that charm'd, as they saddened his soul;
With unchequered rapture had viewed the fair scene,
And heard still delighted his Mulla's soft roll!

DEAR CARRIGALINE.

By Michael Joseph Barry, B L, one time a '48 man, but subsequently a police magistrate. He was Editor of "Songs of Ireland," and author of "Waterloo," "The Kishogue Papers," and some other volumes of poetry.

Dear Carrigaline, with what rapture I've trod,
In bright days of childhood, thy emerald sod,
Or, wearied with play, have reposed in the shade,
Which the hawthorn and beech in thy dear waters made,
While joy on my soul seemed as calmly to shine,
As the sun on thy waters, loved Carrigaline.

And later in boyhood, when passion's young thrill,
Made thy soft look of loveliness lovelier still;
How oft by the margin of shady Coolmore,
I've whispered soft views of idolatry o'er,
While the hand of the lov'd one, clasped warmly in mine,
Made thy shores seem an Eden, dear Carrigaline.

Now years have passed over, our lov'd ones are lost,
And o'er life's calm waters the tempest hath crossed;
And I visit thy shores after dark days of ill,
And I find them all peaceful and beautiful still;
Ah! I would that life's wave could flow tranquil as thine,
When the storm has passed o'er it, loved Carrigaline!

But that wave looks dreariest after the storm,
When the wrecks of young hope, its dark bosom deform,
And the heart, like a lone barque, floats mournfully on,
While the comrades it sailed with are scattered and gone!
Yet even in my sorrow, 'tis sweet to recline
Once more on thy green sward, loved Carrigaline!

Still, calm be thy water and bright be thy shore,
And young hearts be blessed there as mine was of yore,
For surely if Nature has painted a scene,
Where the dream of existence may still be serene,
And joy in the soul may unfadingly shine,
That scene is thy margin, dear Carrigaline.

GLENFINISHK.

BY JOSEPH O'LEARY.

Genfinishk! Where thy waters mix with Araglen's wild tide,
'Tis sweet at hush of evening to wander by thy side;
'Tis sweet to hear the night winds sigh along Macrona's wood,
And mingle their wild music with the murmur of thy flood!

'Tis sweet, when in the deep blue vault the morn is shining bright,
To watch where thy clear waters are breaking into light;
To mark the starry sparks that o'er thy smoother surface gleam,
As if some fairy hand were flinging diamonds on thy stream.

Oh, if departed spirits e'er to this dark world return,
'Tis in some lonely, lovely spot like this they would sojourn,
Whatever their mystic rites may be, no human eye is here
Save mine to mark their mystery—no human voice is near!

At such an hour, in such a scene, I could forget my birth,
I could forget I e'er have been, or am, a thing of earth;
Shake off the fleshly bonds that hold my soul in thrall, and be
Even like themselves, a spirit, as boundless and as free!

Ye shadowy race, if we believe the tales of legends old,
Ye sometimes hold high converse with those of mortal mould;
Oh, come, whilst now my soul is free, and bear me in your train,
Ne'er to return to misery, and this dark world again!

CARRIGDHOUN.

(Or The Irish Maiden's Lament, by the late Denny Lane, of Cork, of which city Michael Joseph Barry and Joseph O'Leary were likewise natives.)

On Carrigdhoun the heath is brown,
The clouds are dark o'er Ardnalea;
And many a stream comes rushing down
To swell the silvery Ownabwee;
The morning blast is sweeping fast,
Thro' many a leafless tree,
And I'm alone, for he is gone,
My hawk has flown, ochone machree.

The heath was green on Carrigdhoun,
Bright shone the sun on Ardnalea;
The dark, green trees bent trembling down
To kiss the slumbering Ownabwee!
That happy day, 'twas but last May,
'Tis like a dream to me,
When Domnall swore, aye, o'er and o'er,
We'd part no more, oh stor machree.

Soft April showers and bright May flowers
Will bring the summer back again;
But will they bring me back the hours,
I spent with my brave Domnall then?
'Tis but a chance, for he's gone to France,
To wear the fleur de lis.
But I'll follow you, my Domnall Dhu, for
still I'm true to you, machree.

THE SILVERY LEE.

This anonymous effusion of a juvenile Cork poet, as Crofton Croker designates its writer, was copied by Croker from a broadside, printed at Cork in 1818.

Rivers are there great and small,
Romantic, too, the course of many,
With castled crag and foamy fall,
But never, never saw I any
Half so fair or dear to me,
As my own, the Silvery Lee.

Much I have heard about the Rhine,
With vineyards gay and castles stately;
But those who think I care for wine
Or lofty towers mistake me greatly;
A thousand times more dear to me
Is whiskey by the silvery Lee,

The Tagus and its golden sand,
The Tiber full of ancient glory,
The Danube though a river grand,
The Seine and Elbe renowned in story.
Can never be so dear to me
As the pure and silvery Lee.

'Tis not the voice that tongues the stream,
In winter hoarse, or springtime clearer,
That makes my own dear river seem
Above all other rivers dearer;
But 'tis her voice who whispers me,
"How lovely is the silvery Lee."

DUHALLOW.

This poem is said to be a translation from the Irish by J C Mangan, and was published in Hercules Ellis's Songs of Ireland, the original writer being now unknown. It seems too modern to be attributed to one of the many natives of the county Cork transplanted thence by Cromwell into Connaught, as an alternative to a still more objectionable region.

Far away from my friends
On the chill hills of Galway,
My heart droops and bends,
And my spirit pines alway—
'Tis not as when I roved
With the wild rakes of Mallow;
All here is unbeloved,
And I sigh for Duhallow.

My sweetheart is cold,
Or, in sooth, I'd have wept her,
Ah! that love should grow old,
And decline from his sceptre;
While the heart's feelings yet
Seem so tender and callow;
But I deeplier regret
My lost home in Duhallow.

My steed is no more,
And my hounds roam unyelling,
Grass waves at the door
Of my dark-windowed dwelling;
Through sunshine and storm,
Corrach's acres lie fallow;
Would Heaven I were warm
Once again in Duhallow.

In the blackness of night,
In the depth of disaster,
My heart were more light,
Could I call myself master
Of Corrach once more
Than if here I might wallow
In gold thick as gore,
Far away from Duhallow.

I lov'd Italy's show,
In the years of my greenness,
Till I saw the deep woe,
The debasement, the meanness,
That rot that bright land!
I have since grown less shallow,
And would now rather stand
In a bog in Duhallow.

This place I'm in here,
On the grey hills of Galway,
I like for its deer,
Well enough in a small way;
But the men are all short,
And the women are sallow,
Give McQuillan his quart
Of brown ale in Duhallow.

My sporting days o'er,
And my love days gone after,
Not earth could restore
Me my old life and laughter.
Burns now my breast's flame,
Like a dim wick of tallow;
Yet I like thee the same
As at twenty, Duhallow.

But my hopes, like my rhymes,
Are expelled and expended,
What's the use of old tunes,
When our time is now ended?
Drop the talk! Death will come.
For the debt that we all owe!
And the grave is a home
Quite as old as Duhallow!

End of Part 1.

ORIGIN AND MEANINGS
OF
IRISH FAMILY NAMES.

By JOHN O'DONOVAN.

IV.

EPITHETS, SOUBRIQUETS, &c.

Having in the last article spoken of the origin of surnames in Ireland, and of the popular errors now prevailing respecting them, I shall next proceed to notice certain epithets, sobriquets, etc., by which the Irish chieftains and others of inferior rank were distinguished.

Besides the surnames, or hereditary family names, which the Irish people assumed from their ancestors, it appears from the authentic annals that most, if not all, of their chieftains had attached to their Christian names, and sometimes to their surnames, certain cognomens by which they were distinguished from each other. These cognomens, or, as they may in many instances be called, sobriquets, were given them from some perfection or imperfection of the body, or some disposition or quality of the mind, from the place of birth, or the place of fosterage, and very frequently from the place of their deaths. Of the greater number of these cognomens, the pedigree of the regal family of O'Neill furnishes examples, as Niall Roe, i.e., Niall the Red, who flourished about the year 1225, so called from his having red hair; Hugh Toinleasc (a name which requires no explanation), who died in 1230; Niall More, i.e., Niall the Great, who died in 1397; Con Bacach, i.e., Con the Lame, who was created Earl of Tyrone in 1542. Among the same family we meet Henry Avrey, i.e., Henry the Contentious; Shane an Dimais, i.e., John the Proud. Of the cognomens derived from the places in which, and the families by whom they were fostered, the pedigree of the same family affords several instances, as Turlough Luineach, so called from his having been fostered by O'Luney, chief of Munterluney in Tyrone; Niall Conallach, so called from his having been fostered by O'Donnell, chief of Tirconnell; Shane Donellach, so called from his having been fostered by O'Donnelly (An Four Masters, 1531 and 1567); and Felim Dovlinach, so called from his foster-father O'Devlin, chief of Munter-Devlin, near Lough Neagh, in the present county of Londonderry. Various examples of cognomens given to chieftains from the place or territory in which they were fostered are to be met with in other families, as in that of O'Brien, Donogh Cairbreach, who was so called from his having been fostered by O'Donovan, chief of Carbery Aeva, the ancient name of the plains of the county of Limerick. In the regal family of Mac Murrough of Leinster, Donnell Cavanagh was so called from having been fostered by the Coarb of St. Cavan, at Kilcavan, near Gorey, in Hy-Dea, in the present county of Wexford. This cognomen of Donnell has been adopted for the last two centuries as a surname by his descendants, a thing very unusual among Irish families. In the family of Mac Donnell of Scotland, John Cahanach was so called from his having been fostered by O'Cahan or O'Kane, in the present county of Londonderry.

In the pedigrees of other families various instances are on record of cognomens having been applied by posterity to chieftains from the place of their deaths; in the family of O'Neill, for example, Brian Chatha an Duin, or "of the battle of Down," was so called by posterity from his having been killed in a battle fought at Downpatrick in the year 1260; in the family of O'Brien, Conor na Siudaine, from the wood of Siudain in Burren, in which he was killed in the year 1267; and in the family of Mac Carthy, the celebrated Finoen Reanna Roin, from his having been killed at the castle of Rinn Roin in the year 1261, after a brilliant career of victory over the English.

On this subject of cognomens and sobriquets among the Irish, Sir Henry Piers wrote as follows in the year 1682, in a description of the county of Westmeath, written in the form of a letter to Anthony Lord Bishop of Meath, and published in the first volume of Vallancey's Collectanea:—

"Every Irish surname or family name hath either O or Mac prefixed, concerning which I have found some make this observation, but I dare not undertake that it shall hold universally true, that such as have O prefixed were of old superior lords or princes, as O'Neal, O'Donnell, O'Melaghlin, etc., and such as have Mac were only great men, viz.: lords, thanes, as Mac Gennis, Mac Loghlin, Mac Doncho, etc. But however this observation [may] hold, it is certain they take much liberty, and seem to do it with delight, in giving nicknames; and if a man have any imperfection or evil habit, he shall be sure to hear of it in the nickname. Thus, if he be blind, lame, squint-eyed, grey-eyed, be a stammerer in speech, be left-handed, to be sure he shall have one of these added to his name: so also from his colour of hair, as black, red, yellow, brown, etc.; and from his age, as young, old; or from what he addicts himself to, or much delights in, as in draining, building, fencing, or the like; so that no man whatever can escape a nickname who lives among them, or converseth with them, and sometimes so libidinous are they in this kind of raillery, they will give nicknames "per antiphraism," or contrariety of speech. Thus a man of excellent parts, and beloved of all men, shall be called grana, that is, naughty, or fit to be complained of; if a man have a beautiful countenance or lovely eyes, they will call him Cueegh, that is, squint-eyed; if a great housekeeper, he shall be called Ackerisagh, that is, greedy." (Collectanea, vol. 1, p. 113).

In the fourteenth and fifteenth centuries, when the Irish families increased, and their territories were divided into two and three parts among rival chieftains of the same family, each of the chieftains adopted some addition to the family surname for the sake of distinction. Thus, among the O'Conors of Connaught we find O'Conor Don, i.e., O'Conor the brown-haired, and O'Conor Roe, or the red-haired. This distinction was first made in the year 1384, when Torlogh Don and Torlogh Roe, who had been for some time in emulation for the chieftainship of the territory of Shilmurry, agreed to have it divided equally between them; on which occasion the former was to be called O'Conor Don, and the latter O'Conor Roe. (See Memoirs of Life and Writings of Charles O'Conor). It is now supposed by many of the Irish that the epi-

that Don postfixed to the name of the chief of the O'Conors is a Spanish title! while those who are acquainted with the history of the name think that he should reject it as being a useless sobriquet, and more particularly now, as there is no O'Conor Roe from whom he needs to be distinguished. It is true that the O'Conor Don might now very lawfully be called the O'Conor, as there is no O'Conor Roe or O'Conor Sligo, at least none who take the name; but as he had borne it before O'Conor Roe disappeared, we would not advise it to be rejected for another generation, as we think that an O'Conor Roe will in the meantime make his appearance, for we are acquainted with an individual of that name who knows his pedigree well, but is not sufficiently wealthy to put himself forward as an Irish chieftain.

In the same province we find the Mac Dermots of Moylurg divided into three distinct families, the head of whom was, par excellence, styled the Mac Dermot, and the other two who were tributary to him called, the one MacDermot Roe, i.e., the Red, and the other Mac Dermot Gall, or the Anglicised. In Thomond we find the Mac Namaras split into two distinct families, distinguished by the names of Mac Namara Fin, i.e., the Fair, and Mac Namara Reagh, or the Swarthy. In Desmond the family of M'Carthy split into three powerful branches, known by the names of Mac Carthy More or the Great, Mac Carthy Reagh or the Swarthy, and Mac Carthy Muscryagh, i.e., of Muskerry. Beauford asserts with his usual confidence that Mac Carthy Reagh signifies Mac Carthy the King; but this is utterly fallacious, for the epithet, which is anglicised Reagh, is written riach and riabhach, in the original annals of Innisfallen and of the Four Masters, and translated fuscus by Philip O'Sullivan Beare (who knew the import of it far better than Beauford) in his History of the Irish Catholics published at Lisbon in 1621. The O'Sullivans split into the families of O'Sullivan More and O'Sullivan Beare; the O'Donovans into those of O'Donovan More, O'Donovan Locha Crot, and O'Hea O'Donovan; the O'Kennedys of Ormond into those of O'Kennedy Finn, O'Kennedy Roe, and O'Kennedy Don; the O'Farrels of Annally into those of O'Farrell Bane, i.e., the White, and O'Farrell Boy, or the Yellow, etc., etc.

The foregoing notices are sufficient to show the nature of the surnames in use among the ancient Scotic or Milesian Irish families. It will be now expected that I should say a few words on the effect which the Anglo-Norman invasion and the introduction of English laws, language, and names, have had in changing or modifying them, and on the other hand the influence which the Irish may have had in changing or modifying the English names.

After the murder, in 1333, of William de Burgo, third Earl of Ulster of that name, and the lessening of the English power which resulted from it, many, if not all, of the distinguished Anglo-Norman families located in Connaught and Munster became Hibernicised —Hibernis ipsis Hiberniores—spoke the Irish language, and assumed surnames in imitation of the Irish by prefixing Mac (but never O in any instance) to the Christian names of their ancestors. Thus the De Burgos in Connaught took the name of Mac William from their ancestor William de Burgo, and were divided into two great branches, called Mac William Oughter and Mac William Eighter, i.e., Mac William Upper and Mac William Lower, the former located in the county of Galway, and the latter in that of Mayo; and from these sprang many off-shoots who took their surnames from their respective ancestors, as the Mac Davids of Glinsk, the Mac Phillbins of Dun Mugdord in Mayo, the Mac Shoneens, now Jennings, and the Mac Gibbons, now Fitzgibbons. The Berminghams of Dunmore and Athenry in Connaught, and of Offaly in Leinster, took the name of Mac Feoiris, from Pierce, the son of Meyler Bermingham, who was one of the principal heads of that family in Ireland. The head of the Stauntons in Carra took the name of Mac Aveely. The chief of the Barretts of Tirawley took the name of Mac Wattin, and a minor branch of the same family, located in the territory of the Two Backs, lying between Lough Con and the River Moy, assumed that of Mac Andrew, while the Barretts of Munster took the now very plebeian name of Mac Phaudeen, from an ancestor called Paudeen, or little Patrick. The De Exeters of Gallen, in Connaught, assumed the surname of Mac Jordan from Jordan De Exeter, the founder of that family; and the Nangles of the same neighbourhood took that of Mac Costello. Of the Kildare and Desmond branches of the Fitzgeralds there were two Mac Thomases, one in Leinster, and the other in Desies, in the now county of Waterford, in Munster. A branch of the Butlers took the name of Mac Pierce, and the Poers, or Powers, that of Mac Shere. The Freynes of Ossory took the name of Mac Rinki, and the Barrys that of Mac Adam. In the present county of Kilkenny were located two families, originally of great distinction, who took the strange name of Gaul, which then signified Englishman, though at an earlier period it had been a term applied by the Irish to all foreigners; the one was Stapleton, who was located at Gaulstown, in the parish of Kilcolumb, barony of Ida, and county of Kilkenny; the other a branch of the Burkes, who obtained extensive estates in that part of Ireland, and dwelt at Gaulstown, in the barony of Igrine. The writer, who is the sixth in descent from the last head of this family, has many of his family deeds, in which he styles himself sometimes Galle and sometimes Galle alias Borke; on his tomb, however, in his family chapel at Gaulskill, he is called Walterus De Burgo without the addition of Galle, and is there said to be descended from the Red Earl of Ulster. His descendants now all retain the name of Gaul, as do those of his neighbour Stapleton. The Fitzsimons, in Westmeath, took the name of Mac Ruddery, and the Wesleys that of Mac Falrene, etc., etc.

(To be Continued.)

STORY OF A PONY.

This story of the devotion of a pony found a place in the "Spectator" recently.

Captain R. T. Barrett, of Thorneycroft's Mounted Infantry, who was killed in a fight in South Africa, was riding at the time a favourite pony.

"We brought Barrett back to our camp, and buried him on a little knoll just outside the camp, and put a rough cross up over the grave," wrote a brother officer to a member of the deceased officer's family. "Another of our officers took his pony."

"About a week or so ago he was out with a patrol near the place where the fight of September 20th took place; he got off his pony to look through his glasses, leaving the pony to stand, which all these well-broken coloured ponies will do.

"Suddenly the pony looked up, pricked up his ears, sniffed, and then started off, galloping straight for the little knoll where Barrett was buried, which could be seen four or five miles off; he jumped two wire fences in the way, and finally reached the knoll, where our chaps could see him quite plainly with their glasses, standing quite still beside the little cross over his old master's grave.

"The patrol had to push on fast in the opposite direction, and so the pony was never recovered."

OUR WEEKLY STORY

THE

INN OF THE THREE KINGS.

"Aye, my good landlord, I'll wager there's a goodly story in it. Let's have it. Out with the tale," came from the lips of the merry company seated within the Inn of the Three Kings.

"Right you are," returned the pot-bellied host. "It's taken three kings to make mine inn what it is, and thereby came its name. First, you'll recollect it was the King's Inn; then the Inn of the Two Kings; and now, my good sirs, its name need not be told you. And should a fourth time a royal head choose to warm my pillows, who knows that my sign might not read: The Inn of the Four Kings? Aye, but those were great days when I'd stand behind his royal highness with a soup tureen in my hands, and bow as courtly a bow as any dandy or favourite could possibly do."

"Well, well, my good landlord, let us have the story with another bit o' sack around."

"The sack will be forthcoming, the story I'm in doubts about, for there never was a knight of Arthur's court who told a bolder one. But, my fair sirs, is this not three tales, 'stead of one, for does not the sign read three kings? Well, might it not be that each royal head, gentlemen, is worth a story? And then, my honourable guests, there is in it all the story of how I was dubbed sir knight."

"Ho, ho, ho, fat, mutton-headed landlord Bowles dubbed a knight! Ha, ha, ha, he! Let us hear my lord Bowles, the innkeeper!"

"I'll have none of it, gentlemen. Ye are not worthy to hear the tale."

"We beg pardon, good host, and pray that you tell the story."

"Faith, merry gentlemen, here goes, but none must interrupt or doubt my tale. Mine inn was then all but newly built, and I had yet bethought me of a name to adorn yon sign. Perhaps it was because of this newness that the royal party choose to remain over night within these walls. It was hardly four o'clock of an autumn afternoon when a royal messenger rode up post-haste to my door and called out: 'Good landlord, pray prepare thine inn, for his majesty the king will rest therein this night.'

"And when the royal party drove up I found myself in my best bib and tucker bowing before the carriage. It was then that his highness was scarcely five years of age, and was always accompanied by his mother, the queen. The party, my fair sirs, was not large, and all went happily as a marriage bell.

"At midnight all the house was quiet and the last servant had gone to bed. I sat here by the back-logs smoking, and drinking a last mug o' ale. I was staring into the fire that scarcely burned brighter than this, thinking how as now the name of mine inn was made, and that I'd live the rest o' my days in mine ease. Then, all at once, I heard the stair-door open slowly and some one step on the floor and walk toward the mantel. The door was beside the great chimney, and I could not see who had entered, but before I had time to place my mug down and look around, I saw a mischievous child peering around the side of this chimney. Then it stepped forth, dressed only in a nightgown that reached down to the bare feet. Its hair hung in yellow curls to the shoulders, and the blue eyes were very wide open. Before I could say a word he—for it was a boy, though girlish in size—stepped to the hearth, raised his head scornfully, and said:

"'Knowest thou not that thou must stand in the presence of the king?'

"I arose, my merry friends, straightway,

but said: 'Your majesty, I'm afraid, should be in bed at this late hour. I know'——

"'Who art thou that shouldst say to the king that he should be a-bed' he interrupted.

"'I'll ring for my servant,' I said as I started for the cord, when I heard the small voice command, with a stamp of the tiny foot:

"'Stop! I command thee to be seated as thou wast.'

"Thinking of a time when I might lay in a donjon tower, did I refuse then, I dropped into my chair. Then the king walked up, and, leaning on my knee, looked into my face and said:

"'Please to tell me a tale, good landlord, and to take my on your knee.'

"Why, bless your souls, merry guests, I gathered the boy into my arms and hugged him until his majesty the king, mind you, commanded me to desist. Then I placed the bit of a boy on my knee and told him the best tales that old host Bowles had within his head. When I had fairly given out, the lad slipped down and said:

"'Now we'll have court. Place your great chair in yon corner for my throne.'

"I obeyed in silence, and his majesty walked slowly across the room and climbed upon his throne. And there, gentlemen, sat his majesty, the king of the greatest country in all Christendom, upon his mighty throne, and I alone beside him.

"'You have a sword,' he said.

"'Yes, sire,' I replied.

"'Bring it!'

"So, my friends, I took from the chimney yon weapon, that has remained there untouched since those days, and presented it to his majesty.

"'Kneel before me,' came the command.

"I dropped upon one knee and bowed my head. And as his highness struck me across the back with the broadside of the sword, he said:

"'Landlord, I dub thee sir knight!'

"When I arose he slipped down from the chair, gave me back the sword, and whispered:

"'I must be going, and don't you ever tell anybody.' Then the gown disappeared, the stair-door creaked again, and I was alone.

"Next morning when the carriage of his royal highness rolled away he waived his tiny hand in farewell, and I pointed to yon sign without, which you would have read: The Sign of the King's Inn."

"Aye, a merry tale and a likely one, too, mine host, and I'll venture there's not in this good company one who will not pay for a mug around to hear the tales to follow."

"Well, well, my good friends, so shall it be—so shall it be. And here's how my sign again changed its kingly appearance.

"The night was fairly cold without, and 'round my humble fire a goodly company lingered late. My glasses of sack found their way to portly stomachs, and merry songs made the rafters ring with good cheer. It was near half after the hour of ten when two strangers entered yonder door. They were muffled deeply in wraps and coats, and their appearance bespoke gentlemen. They asked for wine, and sat at yon corner table, withdrawing themselves as if they did not wish to be disturbed. And thus they sat talking and watching the merry crowd out here. All was going well, and I felt justly proud of the gold that was rattling in the pouch hung from my belt. Then one of the gentlemen ordered drinks, as they might choose, for all that sat in the company. Some would have wine, and others only sack or ale.

"Then it was that some one of the company proposed a toast to the fair stranger whose bounty they did drink. 'And,' said the stranger, bowing his thanks, 'never let one toast be drunk without another to his majesty the king.'

"'Aye,' shouted the company.

"'Never!' came from the lips of a drunken youth, 'and never will I drink to him who would toast his majesty, the queen'—intimating the power of his spouse over his royal highness.

"'Thou shalt rue those words, coward!' cried the other stranger, who had heretofore remained silent, and he sprang to his feet, drew his sword, and would have rushed on the youth had not the first speaker, in a tone scarcely audible to me, said:

"'Sire, it is unworthy of thy sword. Let me run the impudent brawler through for his words.'

"'Nay, my lord,' answered the first, turning slowly, 'he's only a lad after all; and did not all the others drink? The ratio is too great to kill a thoughtless boy drunk with wine.' Then to me: 'Prepare us our beds, mine host, and we will bide our rest.'

"So, my merry friends," continued the landlord, "I had my room here empty by midnight, and was myself dozing in night-shirt and cap in yon room, when I swear to you I heard the stair-door open stealthily as I had heard it only once before in my life. 'The villian may be stealing to the strangers' apartment,' was my first thought. So I stole from my bed and peeped through yon keyhole into this very room. And what did I see?

"There, right there, in the great chair that had remained yonder since his majesty the king had called it his throne years ago, sat one of the bearded strangers. He was in a long flowing night-shirt, gentlemen, that reached his ankles. It was very evident to me that he had walked in his sleep and was still in that condition, so I stepped forth, thinking to awaken him and send him to his bed. When I reached the fireplace he said, as if in a dream:

"'Have you a sword?'

"I replied by handing him the same one over yon mantel.

"'Kneel,' came the command.

"I dropped upon one knee and bowed my head.

"He struck me across the back with the broadside of the weapon and said: 'Landlord, I dub thee sir knight!'

"The sword fell from his hand and clanked upon the floor. He started and was wide awake. Then, hurriedly arising from the chair, he said:

"'For heaven's sake don't tell anybody!' and bounded up the stairs.

"The following day, gentlemen, when his majesty the king bade farewell he winked knowingly, and I replied by pointing at yonder sign, which read: The Inn of the Two Kings."

"Ho, ho, our good host, thou art twice a sir knight—once by a baby king, once by a sleeping one; thou wilt surely be knighted next by a crazy one."

"Nay, nay, friends, for thou shalt see, or at least hear, that he who next caused my sign to be changed was neither a simpering child, drivelling idiot, nor fiend incarnate. Aye, merry gentlemen, listen:

"It was a time of wars and conspiracies. Roving bands made the country desolate. The king's hand was against every man, every man's hand against his majesty. The king himself had left the palace—not from fear or by force, but rather because it was then policy that his royal presence be withdrawn from the traitorous company of his court. Where his majesty had chosen to go no one was aware save the queen, and she would have died ere she gave the news. At least it was known that he had a gallant company of strong and goodly knights within reach of his royal voice.

"One night near the 3rd of April, if I'm not wrong, mine inn here was filled with a company of roving gentlemen. Whether they might be of the royal party or rebels I could not tell, only that I felt that something might be wrong, as they numbered thirteen. Yet they drank much wine and more sack, and did pay for it in sound coin on which shone the face of his majesty, for neither rebel nor royalist could buy meat or drink save by the king's countenance.

"Well, methinks it was not more than nine o'clock when a muffled stranger swaggered in, his sword a-clanking, and took yonder very table. When I approached for his order, he said beneath his breath: 'Sir knight,' and then did order in a louder voice, calling me 'good landlord.' And thus I knew him to be his majesty the king, or at least some messenger whom he had instructed to address me in that manner.

"Once as I passed the men seated at the other table, one did call me, and giving me a slip of paper, bade me bear it to the stranger. I bore it with a mug of ale, and as I passed under the light I saw that the only words written thereon were: 'It is dangerous for his majesty to be here to-night.' The stranger read the paper, tore it to fragments, and drank his ale as unconcerned as if it had been a lighter with which to start his pipe. At the table, however, in the meantime, a villainous-looking gallant, with a leering face, had risen, and with drunken hiccoughs, held aloft a glass and said: ''Ere's success to the rebels an' d—d— death to the—the king!'

"Before the words were fairly out of his mouth a dozen men were on their feet; a dozen swords clanked from their scabbards; a dozen steel points were pressed around the traitor, each pointing towards his blackened heart; and a dozen voices cried together:

"'Swallow the words, coward, or thy heart shall be the scabbard of the goodliest steel that ever drew blood in his majesty's service.'

"But ere the villain's lips could frame reply the unknown cried: 'Stop!' and stood proudly with drawn sword.

"'And who art thou?' cried twelve manly voices, 'that thou shouldest dare to command when the name of his royal highness is being avenged by knightly swords?'

"'I, the king, command,' came the reply from the stranger, as he threw aside his cloak and disclosed his royal person. 'And you,' he continued, 'will bind the prisoner, hand and foot, that he may bear no news with his traitorous lips. Then, if ye would favour me, withdraw from me, that I may remain alone to rest and think.'

"In five minutes we were alone. But the royalists, my merry friends, had hardly gotten out of hearing distance when, through the very door from which they departed, entered another band of revellers. They took their seats amid much swearing and loud laughter, and thence ordered eight mugs o' ale. They sung songs that were merry and more that were unclean, then told tales of ribald women until one monster-like man arose with a toast:

"'Ere's to the king,' he said.

"'Aye, aye!' roared the company.

"'Soon may he die,' he continued.

"'Aye, right thou art,' yelled the followers.

"'And 'ere's to the queen!'

"'Aye, aye!' they shouted.

"'Stop!' roared the king as he sprang into the middle of the floor. 'Whatever thou hadst intended to say was a lie! All of ye are liars, and unfit to mention the queen's name!'

"Instantly every sword in the room was drawn, as also was the king's. And it was then that I sprang in between them and shouted: 'Fools, all of ye! Know ye not that it is the king himself upon whom ye draw. Sheathe your swords, cowards!'

"'So much the better,' they shouted, 'if

it is the king.'

"'Stand aside, landlord,' kindly said his majesty. 'Ye are gentlemen?' he cried, addressing the company.

"'Aye,' they replied.

"'Then I will fight ye here, one by one, on this floor, until all ye, or I, do perish. All I ask is that I may pick my man as I choose.'

"'It is fair,' said the leader.

"Then the king himself cleared the floor, and, pointing to the giant leader, said: 'Thou first.'

"Ah, my merry friends, well ye may sit here at your ease, but such fighting as I saw that night I may never hope to see again. Their swords clanked and rattled most ominously, and once did I think the king was gone, for the great leader did thrust him until his royal blood flowed upon this floor. But ere his sword was well withdrawn the giant rebel fell without a groan, for the king's steel turned within his throbbing heart.

"'Thou next,' shouted the king, pointing to the strongest of the remaining men; and thus I noted that, throughout, his majesty chose always the greatest first. And how he did fight! But, gentlemen, one man cannot hold out for ever, and when five men lay dead upon the floor, each with a heart pierced by the king's good sword, I noticed that his royal breath did come in gasps, and that his blood was mingling freely with that of the rebels as they flowed together on the floor.

"And then did come the time when the staggering king did point to the last man, a mere weakling in strength, whispering: 'Thou next!'

"Then his majesty made one terrific lunge at his adversary, and did thrust him through and through, so that the blade stuck some six inches without the rebel's back.

"I helped his majesty to a chair—yon throne in yonder corner. There he whispered:

"'Hast a sword'

"'Yes, sire,' I replied, handing him this weapon for the third time in his life.

"'Kneel,' he faltered.

"This I did, dropping upon one knee and bowing my head. He then let the sword drop across my back and whispered:

"'Noble landlord, I dub thee sir knight!'

"When I arose I rushed and lifted his fallen head, but his eyes gave back no response. His majesty, the king, had died of his wounds!

"Next day, my fair company, when they did remove his royal body, it did pass directly under yon sign, which read, as it does to-day: The Inn of the Three Kings."

MR. LABOUCHERE'S LITTLE JOKE.

In the course of the debate that arose over the attempt of Mr. Chamberlain to prove that his friend the Earl of Selborne was entitled to continue sitting for West Edinburgh after succeeding to the peerage, Mr. Labouchere amused the House with the observation that there were some "dormant monarchs" sitting on the Irish benches behind him. They are also, apparently, to be found in the Parliaments of Greater Britain. Last week's mail brought an account of a disorderly scene in the Legislative Assembly of New South Wales. One of the leading actors in it was the Hon. Daniel O'Connor, one of the members for Sydney. Replying to a ribald remark from a Labour member, M. O'Connor assumed his most dignified manner, and said: "Pardon me, sir, I am descended from a Royal line." In the general hilarity that ensued the Speaker succeeded in restoring law and order.

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

CAVAN.

CAVAN, an incorporated market and post-town (formerly a parliamentary borough) in the parish of Urney, barony of Upper Loughtee, county of Cavan (of which it is the chief town), and province of Ulster, 25½ miles (S.E. by S.) from Enniskillen, and 55 (N.W. by W.) from Dublin, containing 2,931 inhabitants. This town was, from a period of remote antiquity, the seat of the O'Reilly's, tanists of the district now forming the county to which it gives name, and who had a castle here, of which there are no other remains than some vaults and part of the foundation. A monastery for friars of the order of St. Dominick was founded here in 1300, and dedicated to the Blessed Virgin, by Giolla-Jisoa-Ruadh O'Reilly, dynast of Breffny; but about the year 1393, the monks were expelled by the same septs, and others of the Franciscan order substituted in their place. In 1468 the monastery, and Bally-Reilly, the castle above noticed, were burnt by the English under the Lord-Deputy Tiptoft, Earl of Worcester; but the former appears to have been restored previously to the year 1499, and to have been occupied by friars of the order of the Strict Observance. It was again reformed by John, son of Cahal O'Reilly, in 1502, and provincial chapters of the order were held in it in 1521, 1539, and 1556. Owen O'Nial, the celebrated general of the Irish army, who died by poison, as is supposed, at Cloughoughter, was buried in this abbey, in 1649. There are no remains of the establishment, which was commonly called Keadue; the tithes now belong to the Dean of Kilmore, and in his title are described as "the rectory of Keadue." In the early part of the reign of James I., the lord-deputy pitched his tent to the south of the town, which is described as being a very unimportant place, for the purpose of reducing this part of the country to the observance of English laws and customs. Under the partition of lands made pursuant to an inquisition as stated in the article on the county, ten poles were allotted to the town of Cavan, which the king proposed to incorporate; ten poles to the castle, and 14 to the maintenance of a free school to be erected in the town. In 1610 James I. granted the inhabitants a charter of incorporation, in the preamble of which it is stated that the town was the only place of trade in the county, and the only town where the justices could conveniently meet for their assize and gaol delivery, and that the inhabitants during the late insurrection had supplied the garrison and performed good and acceptable service to Queen Elizabeth, from time to time, according to their best abilities. The commissioners for the plantation of Ulster reserved and set out eight poles of land, adjoining the town, to be granted to the new corporation; and the charter constituted the town and all lands within the compass of one mile from the stone house or castle in which Walter Bradie then dwelt, with the exception of the castle of "the Cavan," or O'Reilly's castle, and the two poles of land called Rosgolyan, the Borough of Cavan. This place was the scene of some skirmishing in the time of Cromwell, and till very lately a house was standing in the principal street, in which he is said to have resided for several weeks. In 1690, some of the forces of James II., having assembled here for the purpose of attacking Belturbet, the Enniskilleners, under their victorious leader Wolsey, marched hither with a view to take them by surprise; but the Duke of Berwick having arrived with a considerable reinforcement, they had, with a force of only 1,000 men, to contend with 4,000 of the enemy. Wolsey, however, attacking them with spirit, the native forces of James fled at the first onset, when the Enniskilleners burst into the town and began to plunder it; those who fled to the fort now sallied out to renew the engagement. Wolsey, as the only means of recalling his men, set fire to the town, and having rallied his forces, completed the victory with great slaughter. Human bones have been found in great numbers on the side of the hill overhanging the town, where the battle took place.

The charter of Jas. I. conferred the privilege of returning two members to the Irish parliament, which was exercised till the period of the Union, when £15,000 awarded as compensation for the abolition of the franchise was paid in moities to Theophilus Clements and T. Nesbitt, Esqrs.

In Swellan lake, about a quarter of a mile from the town, have been found, at different times, some of the largest horns of the elk that have been discovered in Ireland. The celebrated Dr. Sheridan, the friend and correspondent of Dean Swift, was for many years master of the royal school of this place, and was frequently honoured with visits from the Dean; a bower in the garden, called Swift's bower, is still in existence.

(To be Continued.)

THE RAILWAYS OF FRANCE.

The Administration of Public Works in France has issued a report dealing with the history of French railways during the past 10 years. During the great drop in French trade from 1883 to 1894, the railways suffered severely, and large demands were made on the French Treasury to make good the interest guaranteed to the shareholders by the State. In 1889, 29,000,000 francs were required to make good this guarantee, but in 1892 the amount required was 60,000,000, and in 1894, 62,000,000 francs. The falling off in net receipts leading to this state of affairs caused the companies to cut down, so far as possible, the working expenses. In 1894 these amounted to 688,000,000 francs per year, but in 1896 they were but 686,000,000 francs, although the amount of traffic handled had considerably increased. Since then the exigencies of the growing traffic have rendered necessary considerable increases in the working expenses, but these have been only about one-fourth the increase in the receipts. It has, however, to be observed that during the period of rigid economy inaugurated in the early nineties, the expenditure on new plant and works was kept down as much as possible, so that the railways were not fully prepared to meet the boom of the closing years of the century, and much heavy work is now desirable. During the period from 1890 to 1894 the number of passengers per year averaged 288,000,000, while between 1895 and 1899 it was 375,000,000. Similarly the goods traffic over the lines in question averaged 962,000,000 tons per year for the period 1890-4, and 1,095,000,000 tons for the years 1895-9.

FORTS AND FAIRIES.

A COMPILATION.

BY E. J. RYAN.

PART I.—FORTS.

1.—MEANING OF TERMS.

Fort is a generic name indicating those ancient artificial works of earth or stone, erected throughout Ireland, but most of all in the South and West. It is an Anglo-Saxon term derived through the French from the Latin "fortis," strong.

The Celtic language supplies other words of allied meaning:—

Aileach(1), a circular stone fortress.

Brugh(2), a palace or distinguished residence, an earthen fort.

Bruighean, the diminutive of Brugh.

Caisiol(3), Cathair(4), a fortified rampart, usually of uncemented masses of stone, called also aileach.

Caislean(5), Clough(6), a stone castle, a stone.

Daingean, meaning as an adjective, strong, and as a noun, a stronghold or fort; a modern castle.

Dun(7), a fort, a fortified residence, the fortification being of earth or stone.

Grianan(8), generally the same kind of structure as brugh and cathair; a residence in a sunny spot; a sunny spot itself; a bower; a balcony; a royal palace.

Lathair, a site.

Lathrach, the site of some sort of dwelling.

Leara(9), a floor.

Lios(10), an earthen mound; a rampart surrounded by an earthen bank and a trench; a circular mound of earth thrown up as a shelter to a house.

Longphort, a fortress; an encampment; a camp; a garrison.

Mothar, the ruin of any building, its proper signification being a cluster of bushes or trees.

Palas(11), a royal seat; generally the same as brugh.

Rath(12), the same as lios; a circular intrenchment around a house.

Teamhair, mostly the same as grianan; a royal court; balcony; a hill commanding a wide view.

Telach, Tulach(13), a hill; a gentle eminence easy of access, of fair soil, and with a good view; a mound.

(1) Also, Ailech.

(2) Brugh, a fairy castle; also, bru.

(3) Also, caiseal, caishel, cashel, and chaiseal, a castle.

(4) Sometimes, caer, caher, cahir, car, a city.

(5) Caislean, old castle.

(6) Also, Clogh.

(7) Also, dune and doon.

(8) Also, grainin and granan, diminutive of grian, the sun.

(9) Half-rath; m'urlar (murlaur)my floor.

(10) Often contracted to lis; sometimes liss, genitive of loss.

(11) Or, pallis.

(12) Rath, pronounced rah. The word is of the same class as ar or ard (elevated), and by metathesis of the letters ra or rah or rat (t aspirated sounds like h alone), is formed ar in Armenia, which means a hilly country.

(13) Also, tullach.

Other terms referring to forts are Brinen, Cahircumdach, Crishioll, Shun, and Tor. The commonest terms are: Caisoil, Cathair, Dun, Lios, and Rath, but all the terms imply the idea of defence and protection.

At the time of the first Ordnance Survey of Ireland, begun in 1826, there were in Munster alone, about ten thousand forts, but some of them have since been removed.

2.—OBJECT AND DATE OF THE FORTS.

The object of the ancient forts was to serve as places for habitation, assembly, defence, and public worship, also as pens for cattle, and probably as receptacles for the dead—purposes served either separately or in combination.

The original forts were built mainly in Pagan times by colonists said to have come as invaders, directly or indirectly from the East: the Partholanians(14); the Nemedians(15); the Firbolgs, a small, dark-haired, long-headed race, devoted to tillage and pastoral pursuits; the scientific Tuatha De Danaans(16), large, light-haired, artists, builders, and handy men; and the Milesians—a military people, who, it is said, after wandering through Egypt and parts of Europe,

> Set sail in their good ships gallantly
> From the sunny land of Spain.

The Milesians were called also Phoenicians or Scythians from their settlement in Phoenicia; and the Scottish nation, as well as the Milesian nation, from Scuta, the word whence Scotti or Scoti as they were also called, and Scythae are derived, meaning restless wanderer (17).

These various groups of colonists succeeded a colonisation under the lady Ceasair(18), who came forty days before the Deluge, and their arrival is assigned to periods ranging after the Deluge from A.M. 2520, to A.M. 3500, or equivalently from 2680 B.C. to 1700 B.C., according to a calculation assigning the birth of our Lord to A.M. 5200(19).

Circular duns or raths, after the Pagan fashion, continued to be erected down to the twelfth or thirteenth century.

3.—ANCIENT SOCIAL CONDITIONS.

The people were of various classes, living under different social conditions, and in the system of those rude and primitive times there was involved the type not of a national army, but of the family. There were small independent societies, each repelling rather than attracting all similar societies, and there existed frequent quarrels instead of any extensive or combined method of general defence. As occasion arose each section of the community protected itself and its possessions against hostilities by building forts, which afforded also protection against the incursions of wild beasts.

Sedna Innaraighe(20), a Pagan Milesian king, who began his reign in A.M. 4721 (479 B.C.), was the first who established a regular standing army, and put in force a fixed system of military discipline, maintained for many centuries afterwards.

4.—FORMATION OF EARTHEN FORTS.

Forts are principally of earthwork, but where stone is abundant, or could be easily procured without quarrying, and the soil shallow, stone material has been employed. In some cases appearances seem to indicate that material for the earthen forts must have been brought from a distance; in others, there are signs that it was found at hand. Advantage seems to have sometimes been taken of the natural form of the ground.

In the South of Ireland earthen forts were generally built in the form of an irregular circle, appearing to have been laid out rather by the eye than by actual measurement. They vary as much as from 30 to 300 feet or more in diameter, and from a few perches to an acre or more in extent. In the Queen's County there is a rath only four yards in di mer(21).

(14) From Partholan, their leader. The name is found also as: Parolan, Parthalon, and Partholon, and his followers are called Partholonians.

(15) The Nemedians or Nemedhians were so called from their chief Nemedh or Nemid. They were succeeded by the Fomorians, or Formorians, of unknown origin, coming before the Firbolgs.

(16) This name is found in twenty different forms: Tuatha De Danaan; Tuatha de Danaan; Tuath de Danaan; Tuath-de-Danaan; Tuath da Tuath de Danaan; Tuath-de-Danaan; Tuath da Tuatha-de-Danan; Tuath-de-Danan Tuatha De Danan; Tuatha de Danann; Tuatha-De-Danann; Tuatha De Denan; Tuatha De Danann; Tuatha Dedannan; Tuatha De Denann; Tuatha De Denions; Tooaha De Danahn; Tuatha de Danannain; and—what may be a misprint—Tuatha De Danamus. The original meaning of tuath is tribe, people, or territory. The Tuatha De Danaans are supposed to be of the Teutonic race. Antiquarian research points to the early original inhabitants as being of Turanian origin, who gave way to parties of immigrant Celts from Western Europe, including the shores of Spain, in the population of which there was a considerable Phoenician element. The Tuatha De Danaans were famous for their breed of horses. The Druids were the learned men among the Tuatha De Danaans.

(17) Clan Milly is named from Millya or Milesius, King of Spain; also Miledh or Miletius.

(18) Also Casirh, Keasair, Cassir, h-Erui, or Berba, or Cesar, and lady Banbha, or Cesair (pronounced Kesar). She is said to be Pharoah's daughter. It is stated also that there were eleven main classes of colonists or invaders: The Partholanians; the Nemedians; the Formorians, supposed to be African pirates, these three having arrived from 1600 to 1500 B.C.; the Firbolgs or Belgians 1300 before the Christian era; the Tuatha De Danaans, 1200 B.C.; the Milesians or Gael, 100 B.C.; the Cruthneans or Picts, about 100 B.C., but they were prevented by the Milesians from remaining; the Danes and Norwegians, or Scandinavians, in the ninth and tenth centuries; the Anglo-Normans, in the twelfth century; and the Scots, chiefly Celts, from the tenth to the sixteenth century. Others again say that the Formorians, Nemodians, and other minor invaders came direct from Noah's ark; and the arrival of the Tuatha De Danaans is stated to be from one thousand to fourteen hundred and ninety-nine years before the birth of Christ.

> Here came the brown Phoenician,
> The man of trade and toil—
> Here came the proud Milesian,
> A hungering for spoil;
> And the Firbolg and the Cymry,
> And the hard enduring Dane,
> And the iron Lords of Normandy,
> With the Saxons in their train.

There is a false theory of a pre-Adamic creation, an inferior humanity gradually disappearing before the advance of the higher Adamic race. It is said that in Ireland the inferior primitive tribes became the bond slaves for the higher humanity—the Tuatha De Danaans and the Milesians. Scripture and the Church disprove the pre-Adamic theory. There are seven distinct nations in modern Ireland:—The descendants of the Anglo-Norman in the counties of the East and the Pale; the Scottish race in the North-east, in Antrim and Armagh; an English population in Derry since the early part of the seventeenth century; the descendants of Cromwell's soldiers in Cavan and Fermanagh; the accurate type of the Celtic population in Sligo and Mayo; the Spanish element in Galway; the Germans of the Palatinate in Central Ireland, extending over a large proportion of the Queen's and King's Counties, and some of the counties of Munster.

(19) Other dates calculated as the time of Our Lord's birth are: A.M. 5411 and 4004. We are told that Our Lord became man about four thousand years after the fall of our first parents—Julian Period, 4713.

(20) Innaraighe, the rewarder.

(21) Possibly mistaken for a haystand.

A POLITICAL CARICATURE.

DANIEL O'CONNELL AND RICHARD LALOR SHIEL.

A HOUSE OF COMMONS PICTURE BY ALFRED CROQUILL.

(From Fraser's Magazine, 1834).

Oval and also polygonal forts are sometimes found, and in central and southern parts of Munster rectilineal works of nearly the same superficial area as the others are distributed in belts over the most fertile parts of the country. The Rath Righ(22) upon the hill of Tara is of an oval form, and measures in length from north to south about 853 feet. Navan fort, two miles to the west of Armagh, covers eleven acres of land.

5.—CONSTRUCTION OF EARTHEN FORTS.

In the construction of an earthen fort a circular trench was dug, and a plot prepared within it. The interior space was usually ocupied by a set of chambers called "pol fa tolla"(23). Narow openings communicate between them. When the nature of the ground admits of it they are often excavated in the natural earth, and domed over without any artificial support. Others are lined with undressed and uncemented stones. The chambers vary in shape and size. In some cases they are galleries made of dry stone, the sides converging towards the top. The top is usually flagged over with large heavy slabs of stone, serving at the same time to prevent the sides from collapsing. At other times, though rarely, they are formed by upright jambs and lintels of unhewn stone. The average size is about 9 feet in length, by 3 to 4 in breadth and in height. Sometimes excavations of beehive appearance, called clocans(24), lined with uncemented stones, and connected by passages large enough to admit a man, are found. A chamber discovered near the Navan Fort is of an oval form, measuring in length 11 feet, in breadth 9 feet, and in height 6 feet, with a passage or gallery 15 feet in length, having a niche let into each side. Both chamber and gallery are lined with uncemented stones laid pretty regularly. The quadrangular form is very rare in clocans.

Some stones bearing Ogham(25) characters, the writing of the ancient Irish, have been found in forts. It is supposed that the Oghams are of older date than at least some of the forts, and that the stones were used for convenience of building the crypts, either at a considerable period after the time of their original purpose, or else employed by an intruding race having no regard for the memorials of their predecessors.

Over the crypts was raised the inner part of the fort. Very often the flat middle space is raised to a higher level than the surrounding surface, but in some cases the centre is lower than the surrounding verge.

In many forts no passage to the interior is visible, but in various parts of Ireland several of them are open, each having in the centre of the inner space a door or inlet like a small arch, most of them having also stone steps descending to the bottom. In some, the opening, instead of having been the original entrance, may have been caused by the falling in of the crypt. The main entrance is frequently in the trench of the fort, and is not unusually the smallest.

The chambers, which are more usual in the southern and western parts of Ireland, are supposed to have been stores or granaries, or places of security for valuables, or refuges, whither the young and the weak might resort in case of attack, and possibly prisons. But as the ventilation was deficient, they could hardly have been suitable for prolonged periods of existence. In some forts they may have been used for burial purposes.

The rectilineal forts are devoid of underground chambers.

6.—HOUSES.

On the summit of the interior plot, houses partly of the shape of a beehive, were erected. This was the general shape of buildings in ancient Ireland, and ceased only in the thirteenth or fourteenth century. The material was generally wood—planks or hurdles or wattles—sometimes wickerwork between

(22) Rath Righ, or Rath na Riogh, the king's rath. It was called also Cathair Crofinn.

(23) A hole of a house, or a hole under a mound or hill.

(24) Also clochann, clochan, and cloughawn, a stone cell. The word means also a row of stepping stones across a river. In Scotland a clachan is a hamlet or small village. Cleachaun, an Irish word, means a half-knocked ditch or bank.

(25) Also Ogham craove, ogam, ogum, and oghum. The ogham alphabet is called beth-luisnion (or, beth-luis-non), from the name of its two first letters, which signifies a birch tree, and luis, the mountain ash.

strong posts, the interstices being filled with sods or mud, and all plastered with tempered clay. The doorway was sometimes conical, but generally in the shape of a plane four-sided figure, called a trapezoid, narrowing towards the top(26). When there were windows, they were mere slits. The house was thatched on top with rushes, sedge, or straw. Stone, with or without mud, was sometimes used in the buildings on the forts, and in such cases the house was generally completed with one stone on top. In these primitive times the arch was not used, either because the principle was unknown, or because the lintel was found to be more ready and convenient for all purposes, and for the buildings then in use, equally solid(27). Planks and beams, and rough blocks of wood or stone, were most likely reserved for the residences of kings and chieftains, and the other materials employed for the dwellings of the lower orders. The houses were usually whitened or artistically coloured on the exterior, and those of important personages may have been more ornate than the other dwellings. The mound of the fort on which the local king fixed his residence was generally occupied by his dwelling, and the fort was called an riogh rath(28).

7.—CIRCUMVALLATIONS.

Concentric circumvallations, ramparts or breastworks, formed of earth, from 6 to 16 feet in thickness, were generally erected around the forts. The intervening trenches were in some cases 30 feet in width, and 12 in depth, and sometimes a trench surrounded the earthwork. Both circumvallations and trenches served for purposes of defence and security. The more important the fort the more circumvallations and trenches it had. The habitations of kings and chiefs and other important persons, and forts situated in places exposed to hostile incursions, had generally not less than three. Some circular forts consist of a single trench with a bank on each side—a method of intrenchment which appears ill adapted for a defending party. Very large circular forts have often two or three or more banks and trenches surrounding the interior space. When required for protection stockades were erected on top. Probably the ancient indigenous thorns that still decorate their slopes or summits, are the veritable descendants of quickset hedges that helped to form the breastworks or staked defences on their summits. In favourable circumstances water was conveyed into the trenches both for domestic uses and to strengthen the defences. Traces of the water courses are still discernible. The trenches may also have been roofed over if required.

The larger size forts afforded ample room for groups of dwellings, and accommodation for property. The extended works or intrenchments enclosed a space of ground within which stood other dwellings, forming, practically, intrenched villages. In some forts remains of hut circles are found, and traces of very large buildings are still discernible on the hill of Tara.

Entrance to the forts was provided through the circumvallations, there being in some instances more than one entrance even through the same bank.

It is said that between some of the forts there are secret passages and chambers. The underground hollow noise observable in some places may be due to such communications.

(To be Continued.)

(26) The sides of a geometrical trapezoid may slant unequally.

(27) In the wilds of Dartmoor and Exmoor, England, there are Druidical or Celtic bridges older than the Roman bridges in that country.

(28) The king's rath.

THE MORO MEN.

TRAITS OF THE ARAB ISLANDERS OF MINDANAO.

Who are the Moros? If you examine a large map of the Philippine archipelago you will notice in the south-western corner a group of small islands extending from Mindanao toward Borneo. These islands are the stepping-stones by which the ancestors of the present Moros entered the archipelago, somewhat before the ships of Magellan sighted the north-eastern coast of Mindanao. They established themselves throughout these islands and on the shore of Mindanao, the second largest island of the whole Philippine group, so firmly that for three full centuries they laid waste the coasts not only on the Philippines, but even of more distant islands.

The Moro, or Moor, as the Spanish call him, builds his village over the water of a small cove, protected on the water side by reefs and shallows, with which he only is familiar, and on the shore side by a fort or cotta. Their houses, raised on piles until they are just out of reach of the little waves that find their way past the surrounding reefs and smaller islands, shelter in each case an entire family—the lord of the manor, his wives, concubines and slaves, all jumbled together, so travellers tell us, in a direct and patriarchial manner. The slaves of the Moro women spin and weave, producing stuffs of cotton and abaca, which they colour with native dyes. The men slaves tend the horses, cattle, goats and poultry, which the Moros possess in great abundance, and work on the plantations of rice, maize, and coffee. But they also accompany their masters on raids, either against an obnoxious Mussulman neighbour or against the weaker, partly Christianised or wholly heathen tribes of Mindanao. Their boats are always tied near the entrance of their houses, separated from the shore by rude bridges of bamboo that can be raised at an instant's notice. But their boats no longer go on distant voyages, and the activity of these expirates par excellence of the Philippine archipelago is now confined to their own immediate neighbourhood. Malaria is a further protection to them, for they are liable to live where even native regiments from the other islands cannot withstand the fevers of the swamp and flooded lowlands.

Guarding each village on the shore side there is often a stronghold constructed of tree trunks, the space between them filled with tightly packed masses of rocks, stones, and earth; the walls sometimes consisting of a double stockade, twenty feet or more in thickness and from twenty to thirty feet in height. Brass and iron guns and "latankas," the long guns that you sometimes see in museums, which the Moros bore by hand, and often decorate right skilfully, constitute the armament, reinforced by the long spears and peculiarly shaped swords and knives that are the personal equipment of every adult tribesman; for the Moro, like the proverbial American cowboy, is always armed, and not at all slow about using his weapons.

Some Moros, however, are less visibly armed than others. In 1891 Professor Dean C. Worcester, visiting a village in which the inhabitants were supposed to be especially peaceable and entirely without arms, tried the experiment of offering to purchase weapons; and an amazing quantity of arms became immediately visible. These weapons are an interesting illustration of the tastes of the people, whose most artistic industry lies in their manufacture. There is the "barong," an implement for close combat, fashioned somewhat like a butcher's cleaver, thick at the back and almost as sharp as a razor at the edge; with it a skilful warrior prides himself on being able to halve an enemy. There is the straight "kris," narrow and double-edged, for ordinary cutting and thrusting; the serpent "kris," with a wavy blade that serves the same purpose in a much more murderous fashion; the "campilan," a straight, two-handed sword used only for cutting; the kris dagger, a smaller serpentine blade for thrusting at close quarters; and finally there is a special kind of knife for executioners. Ordinarily the Moro carries barong, kris, or campilan thrust into his sash. When he has added a shield of light wood and a keen, broad-headed lance he is really ready to meet any enemy. He is ready to meet him anywhere and under any conditions, for the personal courage of the Moro is not questioned.

The men are of about medium height, with excellent physical development, and in their veins, still, perhaps, a distinctive although distant touch of the Arab.

They are anything but unclad savages. Their garments, bright in colour and often embroidered or otherwise ornamented, embrace pantaloons—somewhat like modern knickerbockers—which are loose to the knee and then follow the leg closely; waistcoat, sash, jacket and turban. The rank of the man, and there are many degrees of rank in a system of government not unlike the feudal system of the Middle Ages, is indicated by the way he ties his turban.

When a Moro grows weary of his present existence he argues somewhat in this manner. For a fellow to kill himself is suicide; ergo, to be killed by somebody else is not suicide. Moreover, a good Mohammedan who dies killing Christians indefinitely improves his future lot in paradise. Therefore, he bathes in a scarlet spring, shaves his eyebrows, dresses in white and takes a solemn oath before the nearest priest or "pandita" to die killing Christians. He is now a "juramentados (sometimes several "juramentados" start out together), and he seeks the nearest town in order to find the necessary Christians. Reaching the town, he runs amuck. Nothing but death can stop him, and every living thing in his path he attempts to kill. His relations celebrate his death, and at twilight claim that they see his spirit, mounted on a white horse, as it rides by them on its way to future happiness.

NOTES AND QUERIES.

(To the Editor "Dublin Penny Journal.")

Dear Sir.—I take the liberty of trespassing on your space for the purpose of ascertaining from you, or from any of your readers, some information in reference to the obelisk in James's street, commonly called the Big Fountain, when it was built, and by whom, and for what object.

PATRICK HAYES.

(To the Editor "Dublin Penny Journal.")

London, W., August 2nd.

Sir.—In the last issue of your interesting paper, there appears an extract from an old journal mentioning the marriage of a daughter of John Cooper, of Cooper-hill, county Meath. I should be glad if any of your readers could inform me when, approximately, the Coopers first settled in Ireland; and also whether I am right in thinking that the Coopers in county Cork are a sub-division of the Killenure, county Tipperary, branch, the other two chief branches being those of county Sligo (Mark Ree), and county Limerick (Cooper-hill).

I believe some printed pedigrees exist regarding this family, but I do not know where I could obtain copies of same. Any information, either in detail, or general, on the points I have named would be most acceptable to me.—I am, etc,

ANGLO-IRISH.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

XI.—Continued.

A.D. 1535. George Brown, an Augustin friar, was consecrated archbishop of Dublin, and was the first of the clergy who embraced the Reformation in Ireland, having renounced the Papal supremacy, and acknowledged the same in the king, pursuant to an act of parliament passed the year following. He also removed all superstitious relics and images out of the two Cathedrals in Dublin, and other churches in his diocese, and in their room placed the creed, the Lord's prayer, and ten commandments in gilded frames.

A.D. 1539. O'Neill and most of the chieftains of Ulster conspired together and invaded the Pale, burning Navan, Atherdee, and all the country as they marched, as far as the hill of Tarah. The lord deputy Grey, assisted by the forces of the Pale, and the mayors and citizens of Dublin and Drogheda, advanced to repress their insolence. They marched all night till they came to Bellahoa, where they found the enemy encamped on the other side of the river, whom they attacked and defeated, notwithstanding the great disadvantages of ground, and recovered all the prey of the Pale. For their good services in this action, the lord deputy, among other men of rank, knighted James Fitzsimons, mayor of Dublin, and Michael Courcey, mayor of Drogheda, in the field.

A.D. 1540. This year were minted in the castle of Dublin, for Ireland, of silver and base allay, new testoons, two pences, and pence, which bore an arched crown over the arms of England and France quartered, and this inscription, HENRICUS VIII. D. G. AGL. The reverse, a crowned harp between the letters H. and R. both crowned, and this inscription, FRANCE. DOMINUS. HIBERNIE. And the exportation of this coin to England was prohibited by proclamation under the forfeiture of treble the value, and fine and imprisonment. The year following, the king, by act of parliament, altered his title of lord of Ireland into that of king of Ireland, which occasioned an alteration in the coin, though not in the baseness of the metal, the harp and arms as in the former, but the inscription thus: HENRIC. VIII. DI. GRACIA. ANGLIE. Reverse, FRANCE ET HIBERNIE. REX. Upon proclaiming Henry VIII. king of Ireland, all prisoners (except for treason, wilful murder, rape, or debt) were set at liberty.

A.D. 1541. The priory and convent of Christ-church, Dublin, were converted into a deanery and chapter, and Robert Castell, alias Painswich, from the last prior was made the first dean of it.

A.D. 1547. The Birnes and Tools, assisted by some outlaws of the Fitz-Geralds, taking advantage of the change of government, and the infancy of King Edward VI., made inroads into the neighbourhood of Dublin, and distressed the citizens. Sir Anthony St. Leger, lord deputy, marched out a body of the standing army against them, and was aided by a considerable party of the militia of the city: with these he attacked and routed the enemy at Three-Castles, slew their captain, and drove them into their fastnesses. In this action, sixteen of the Fitz-Geralds were taken prisoners, and all hanged and quartered in Dublin, except one, named Maurice, who was imprisoned in the castle till the government had time to consult what punishment should be inflicted on him. He was the same year put to death. Thus this confederacy was broken, which in the compass of a year had been guilty of innumerable murders.

A.D. 1548. This year the names of the bailiffs of the city of Dublin were changed into sheriffs by a new incorporation of King Edward VI., and John Ryan and Thomas Fining, who were the last bailiffs, were made the first sheriffs. A mint was likewise established in Dublin by express order from court; but it soon failed for want of bullion.

A.D. 1550. On Easter Sunday, the liturgy in the English tongue was first read in Christ-church, in pursuance of an order from the king for that purpose; and the year following was printed in Dublin by Humphrey Powell, who had a licence for so doing exclusive of all others, and it is probable this is the first book that ever was printed in Ireland.

A.D. 1551. The see of Armagh was deprived of the title of the "primacy of all Ireland," and the same was annexed to the see of Dublin, occasioned by the obstinacy of primate Dowdal in not submitting to the king's order about the liturgy, and the compliance of Archbishop Brown therewith.

A.D. 1552. There was a great scarcity this year, insomuch that the peck of wheat (a measure containing almost four English bushels) sold in Dublin for twenty-four shillings, and of malt for eighteen shillings; but the harvest following proved so plentiful that wheat fell to five shillings a peck, and malt to two shillings. The testoon or groat of mixed money was now by proclamation ordered to pass at two shillings. The mayor of Dublin marched out with a strong band of citizens against O'Reily, who began to be troublesome in Cavan, and was assisted herein by the forces of Drogheda. But the service being performed, the two magistrates of these places had a contest upon their return who should lead the van, which ended to the honour of the mayor of Dublin, who by order had his right confirmed of commanding the van going out, and the rere returning home.

A.D. 1553. The lords justices were attended by the militia of Dublin in an expedition to Dundalk against O'Neil, who on the 1st of October was attacked, and lost many of his men, himself and his wife with difficulty escaping. The Mass and other Papal superstitions were restored in Dublin by an order from queen Mary.

A.D. 1554. Many Protestants fled from England into Ireland, to avoid the persecutions began against their religion by queen Mary; and among others John Hervey, Abel Ellis, John Edmonds, and Henry Hough, all Cheshire men, transported their effects to Dublin and became citizens thereof, one Thomas Jones, a Welshman, and a Protestant priest, privately officiating amongst them.

A.D. 1555. Patrick Sarsfield, mayor, and the rest of the citizens and commons of Dublin, at their own charge, began to enclose the place that contains the head of water running to the city, with lime and stone.

A.D. 1556. In May the Cavenaghs got together a great body of Irish outlaws, and invaded and plundered the south parts of the county of Dublin. To put a stop to their progress, the citizens marched out, and hunted them so briskly that they slew great numbers, and forced 140 to take shelter in the castle of Powerscourt, which they pretended to defend. Sir George Stanley, knight marshal, besieged them on the 5th of May, but they held out obstinately, and the marshal sent to the lord deputy for two pieces of ordnance and more men. The mayor and citizens sent out a fresh supply of 80 men under the command of sheriff Bulkely, and good store of provisions. The rebels, hearing that the forces of the city were arrived, surrendered at mercy, and on the 14th were led to the castle of Dublin about eight at night, where the day following about sixty of them were hanged, and the day after fourteen more. The rest were pardoned.

John Chaloner, mayor of Dublin, this year imported from Spain in a ship of his own several pieces of ordnance, and 150 muskets, with which he armed the citizens for queen Mary's service, and he and the sheriffs and citizens offered their service to assist the lord lieutenant against all rebels, upon which many of them submitted. The lord lieutenant would have knighted the mayor, but he refused the honour.

A.D. 1557. The lord deputy on the 10th of August made an expedition into Ulster against James Mc. Connell, a Scot. For further aid, he (according to custom) took with him the mayor of Dublin, attended with a troop of horse and company of foot of the citizens, in number 220 men well armed, under the conduct of John Usher, captain, and Patrick Bulkley, petty captain, besides 80 archers armed with bows and arrows, who attended on John Dempsey, the sheriff. The Scots, affrighted with these preparations, declined coming to an engagement, and sheltered themselves in bogs and woods, so that little mischief was

done then, except the taking of a few preys. However, some of the principals of them submitted, and Daniel Mc. Connell and Richard Guillin received the honour of knighthood.

A.D. 1558. The lord deputy Sussex had the aid of a body of citizens in an expedition against the Scots in the island of Raghlin, lying a little off the coast of the county of Antrim. He set sail on the 13th of September from Dalky, and, preparing to land, one of his ships was cast away on the rocks of the island, and several of the citizens perished. Yet he landed, slew many of the Scots, took the island, and placed a colony and garrison in it. From thence he passed over to Cantire in Scotland, and into the islands of Arran and Comber, and spread desolation far and near. He intended to have visited the island of Ila, but was driven back by a tempest to Carrickfergus. He spent above nine weeks in this hazardous expedition, and returned safe to Dublin on the 18th of November.

A.D. 1559. The Mass was again put down in Dublin, by orders from queen Elizabeth, and the litany and other prayers were sung in English in Christ-church before the Earl of Sussex, lord lieutenant, who from thence invited the mayor and aldermen to dine with him at St. Sepulchre's. Orders were sent to Thomas Lockwood, dean of Christ-church, to remove all Popish relics and images from thence, and to paint and whiten it anew, putting sentences of Scripture on the walls, instead of pictures and other objects of idolatry; and this work was set about on the 25th of May this year. Large Bibles printed in the English language were placed in the middle of the choirs of St. Patrick's and Christ-church (a), which caused great resort to them on purpose to read them.

A.D. 1560. The queen caused the castle of Dublin to be repaired for her lieutenants or deputies to dwell in, at which time the castle clock and other public clocks were set up.

A.D. 1561. The Earl of Sussex, lord lieutenant, having taken the oath of office in Christ-church, Thomas Fitzsimons, then mayor of Dublin, invited the lord lieutenant and council to dinner, after which he entertained them with a play, in which the Nine Worthies, were acted; in the evening he gave them a sumptuous entertainment, after which the mayor and his brethren, with the city music, attended the lord lieutenant and Council to Thomascourt by torch light. Soon after, the lord lieutenant marched with an army of 500 men, with six weeks' provision, against Shane O'Neill, and the city of Dublin, to show their fidelity to her majesty, sent Sheriff Bedlow with 80 men, and provisions for six weeks, to attend the lord lieutenant. In August following, sheriff Gough was sent to aid the lord lieutenant with another party of 40 archers, and as many musketeers, together with twenty-one days' provision, all at the expense of the city. These preparations obliged Shane O'Neill to submit, without any great action on either side.

A.D. 1562. The roof and part of the body of Christ-church fell, by which the ancient monument of Strongbow was broke.

A.D. 1563. On the 1st of April the Earl of Sussex, lord lieutenant, advanced his standard against Shane O'Neill, who was then in rebellion, and Edward Baron, one of the sheriffs of the city of Dublin, attended his lordship in this expedition to Dundalk, at the head of 80 archers and gunners for twelve days, and on the 8th of May, Walter Clinton, colleague of Baron, came to the camp with 60 fresh men from the city, and continued there eight days, On the 1st of July, the same sheriff again marched out with 60 men, and continued six weeks with the lord lieutenant, who, during these expeditions, had the better of the enemy in several encounters, and returned to Drogheda, and from thence to Dublin with great booty. A proclamation was issued this year against the meetings of friars and priests in Dublin, and a tax was levied on the housekeepers for absenting themselves from church, and for this purpose a roll of their names were called over every Sunday by the church-wardens.

A.D. 1565. In June and July this year, Nicholas Fyan, mayor of Dublin, caused the Wood-quay walls and most of the merchants-quay to be repaired with lime and stone at the city charge. On the 1st of October, Nicholas Fitzsimons was sworn mayor before the lord justice in the great hall in Christ-church, and he immediately issued a proclamation that no woman or maid should within the precincts of his jurisdiction sell wine, ale or beer, but such as should keep a sign at their doors, under the penalty of 40s.

A.D. 1566. Shane O'Neill, having made his submission to the queen after the last chastisement given him by the Earl of Sussex, broke out again this year into rebellion, and invaded Fermanagh; expelled from thence Maguire, at that time a peaceable subject, burned the cathedral of Armagh, and at length laid siege to Dundalk. But the valour of the garrison preserved the place, until William Sarsfield, mayor of Dublin, marched out with a chosen body of citizens, and without any other assistance raised the siege, and delivered the Lady Sidney, who was then enclosed in it, for which service, as well as for an expedition he made this year against O'Reilly, upon his return to Dublin he was knighted by the lord lieutenant.

(To be Continued.)

(a) It is remarkable that the desire of reading the bible was so great, that John Dele, a bookseller, sold 7,000 in two years time, when they were first brought into Ireland in 1566. Ware's An. Eliz.

WONDERFUL LITTLE THINGS.

The seed of the globe turnip is about the twentieth part of an inch in diameter, and yet in the course of a few months this seed will be enlarged by the soil and the air into 27,000,000 times its original bulk, and this in addition to a bunch of leaves. It has been found by experiment that a turnip seed will, under fair conditions, increase its own weight fifteen times in a minute. Turnips growing in peat ground have been found to increase more than 15,000 times the weight of their seeds in a day.

MY ARGOSY.

BY JOHN BOYLE.

My thoughts are outward in their flight,
And restless as the foam
Through which a good ship holds to-night
Her westward pathway home;
I see her trail her sable crest,
And spread her wings of speed,
While every stanchion in her breast
Is trembling like a reed.
With gallant pride she flings aside
The waves in angry foare,
And night or day I watch her way,
And sing her welcome home.

Last eve I saw her outward bound,
Her canvas on the gale,
And watched her pennon wearing round
The headland of Kinsale.
I saw Slieve-Ronan sink behind,
The sun go down before,
And as a seabird on the wind
My heart put out from shore:
And through the night I hailed her flight,
Beneath the starlit dome,
And through the day I watched her way,
And sang her welcome home.

Betimes I see her gallant form
Careering up the waves,
Betimes adrift before the storm,
Toward ocean's yawning caves;
Again I see her quivering spars
Go reeling round the sky,
Then righting, greet the topmost stars,
And wave her pennon high.
Still through the night I hail her flight
Beneath the starlit dome,
And night or day I track her way,
And sing her welcome home.

What though she bears within her hold
To me no treasure-trove—
Kind Heaven ordained not links of gold
To bind or hallow love—
No gems of Orient mines or marts,
No laurel wreath of fame—
The earnest of two kindred hearts
Is all from her I claim.
For this to-night I hail her flight
Beneath the starlit dome,
And night and day for this I pray,
And weave a welcome home.

These are my treasure, these my prize;
A heart my lot to share;
A playful child with azure eyes,
And sunlight in her hair.
For these I pray the mighty Power
That ruleth land and sea,
However seas and skies may lower,
To speed my Argosie!
And guard her flight throughout the night,
Beneath the starry dome,
And be the stay by night and day
Of those I welcome home.

HOW INSECTS MAKE MUSIC.

The grasshopper has a wing that is very curious to look at. You have seen this little insect, I have no doubt. Its colour is light green, and just where the wing joins the body there is a thin but strong skin, which makes a sort of drumhead. It is the rubbing of these two ridges or drumheads together which makes the queer noise you have heard. There is no music in it certainly. The insects could keep quiet, if they wished; but they must enjoy making the noise. The grasshopper sometimes makes two rubs on its drumhead and sometimes three. The moment it is very dark they begin. Soon the whole company is at work. As they rest after each rubbing, it seems as if they answered one another. Did you know that bees hum from under their wings? It is not the stir of those beautiful light wings we hear. It is the air drawing in and out of the air-tubes in the bee's quick flight. The faster the bee flies the louder the humming is. Did you know that insects feel They have nerves all over them, through their wings and out to the end of every feeler.

GRAND REVIEW OF THE IRISH VOLUNTEERS IN THE PHŒNIX PARK,

ON 3RD. JUNE, 1782

(From a Dublin Newspaper dated 4th June, 1782.)

Yesterday morning, agreeable to the orders which had been given by General Earl Charlemont, at 8 o'clock the different corps of cavalry paraded in Dawson street, and those of artillery and infantry in Stephen's green, and from thence marched down Dawson and Grafton streets, through College Green and Dame street, over Essex bridge, and along the quays to the Phœnix Park, amidst the applause and admiration of thousands of delighted spectators, many of whom attended them to the field of glory.

The following corps of cavalry arrived in the Park before 11 o'clock:—County of Dublin Light Dragoons, Rathdown Light Dragoons, Rathdown Carabineers, Wicklow Foresters, Independent Wicklow Horse, Naas Rangers, Kilcullen Rangers, Clane Rangers, Arlington Legion, Union Light Dragoons of Dublin, Dunboyne Light Dragoons; Hibernian Light Dragoons; and the whole (except the last three corps, who did not go into the line), being drawn up in six squadrons of 100 men each.

About nine o'clock the discharge of nine cannon announced the General Earl Charlemont's approach, who was escorted to and from the field by the Dundalk Light Dragoons, attended by the Earl of Mornington, and Lord Delvin as aides-de-camps; the calvary then received and saluted the General at open order, marched by in corps, ranked off, and performed a variety of very elegant manœuvres, but mostly such as are usually practised by heavy horse; the three squadrons on the right then filed to the right, and the three on the left, to the left of the infantry, and took post in the line: the corps of Artillery were Earl of Aldborough's Legion, Captain Calbeck's Corps, Wicklow Forrester's Corps, and Liberty Corps; the Infantry were Mountmellick, Col. Lord Carlow; Maryborough, Col. Parnell; Aldborough Volunteers, Col. Saunders; Drogheda Independents, Col. Lyons; Dublin Volunteers, Col. the Duke of Leinster; Dunlavin, Col. Sir J. S. Tynte; Goldsmiths, Col Lord Charlemont and Lieut-Col. Henry Flood; Lawyers, Col. Pedder; Merchants, Col. Dick; Liberty, Col. Sir Ed. Newenham; Wicklow Forresters, Col. Hayes; Trim Corps, Capt. Finlay; Duleek Light Infantry, Capt. Trotter; Duleek Grenadiers, Capt. Sir James Somerville; Ratoath, Capt. Gorges; Slane, Capt. Forbes; Donore, Major Verschoïle; Upper Cross and South Coolock, Col. Talbot; North Coolock, Capt. Weeks; Skreen, Col. Dillon; Ralphsdale Grenadiers, Capt. Smyth; Finglas, Col. Segrave; Talbotstown Invincibles, Col. Westby; Naas, Capt. Hon. John Burke; Castletown Union, Col. Right Hon. Thomas Conoly; Manooth, Col. Kane; Independent Dublin Volunteers, Col. Grattan; Builders, Capt. Reid; Attornies, Col. King; Portarlington, Major Le Grand.

The whole being formed into six regiments of 500 men each, and the line compleated, formed with the Artillery and Calvary on the flanks, the review of Infantry commenced, the General pasing along the line in front, and was as usual attended by his aides-de-camps, together with the Earls of Clanwilliam, Aldborough, and 18 other other Peers, and most of the other persons of distinction and consequence in the kingdom; he then took post in front of the line, and the troops afterwards performed the several manœuvres contained in the plans prepared by Major Gudgeon, Exercising Officer, with the utmost dexterity and exactness, to the entire satisfaction of the General, and the nobility and gentry present.

Col. Grattan acted as Lieut-General of the whole line; Col. Lowther, as Major-General; Col. Hayes and Lord Carlow, as Brigadier-Generals; Sir Edward Newenham, Lyons, Tynte, Talbot, Pedder, and Saunders, commanded the different regiments; Major Gudgeon was Exercising Officer of Infantry, and Major Broom of Cavalry, and their respective plans of manœuvres has done them very great honour.

His Grace the Lord Lieutenant, and General Burgoyne, expresed the utmost astonishment and delight, and declared they never saw so fine a body of men, or a finer and more noble sight; and the reviewing General returned his particular thanks to every corps in the field.

SCIENTIFIC EDUCATION IN GERMANY.

It is the common belief that the commercial rise of Germany has been largely due to the results of the Franco-Prussian war, which put money into its coffers and stimulated the energies of the people. Doubtless (says the "Scientific American") much of Germany's phenomenal success of the last quarter of the past century was due to this event; but in order to gauge accurately the nation's capacities and aims, it is necessary to look farther back than 1870-71. It is, perhaps, unnecessary to say that the whole standard of education in Germany is higher than in either the United States or England, and technical education had its beginning in Germany long before the Franco-Prussian war. Sixty years ago, Liebig had fifty students working in his factory, and all of the German universities have had their own chemical laboratories since 1827. To-day there are in German factories 4,500 thoroughly trained chemists, besides more than 5,000 assistants, whose brains are constantly at work upon the problems of improving processes, and lessening the cost of production. The sugar industry illustrates the practical application which the Germans make of their educational system. In 1840 154.000 tons of beet root were crushed, from which 8.000 tons of raw sugar were produced, showing about 5½ per cent of raw sugar extracted from the root. Twenty years later 1,500.000 tons were treated, which produced 128,000 tons of sugar, or about 8 per cent. Last year about 12,000,000 tons were crushed, which produced 1,500,000 tons of raw sugar, raising the percentage to 13. This advance is due entirely to scientific treatment. The production of dry colours, chemicals and dyes in Germany shows a corresponding increase in product and in dividend-paying capacity. Comparing the statistics of the dyeing industry of the year 1874 with those of 1898, it is found that notwithstanding prices in 1898 were considerably lower than in 1874, the net income in 1874 was 24.000.000 marks (about 6,000,000 dollars), and in 1898 was 120,000,000 marks (about 30,000,000 dollars). The great increase of earning capacity is due largely to the constant labour of trained men, who by application of their technical knowledge have so cheapened productions that they have succeeded in getting this trade away from the English, who formerly controlled it. Another illustration is found in the manufacture of artificial indigo, a chemical process for making which was discovered in Germany about thirty-five years ago. It was started with less than forty workmen, all told. It now employs over six thousand men, and has a staff of one hundred and forty-six scientific chemists. By placing this substitute upon the market at a very low price the Germans have nearly ruined the natural indigo industry of India. The Germans have also discovered a method for obtaining ground slag from steel processes, which is used as a fertiliser; and England, although she produces as much steel as Germany, has become a good customer for this article. A century ago the English and French makers of scientific instruments were far in advance of the Germans. During the last twenty years all this has changed. The value of the exports from Germany of scientific instruments for the year 1898 was about 1,250.000 dollars—three times what it was in 1888—and the work gave employment to 14,000 people. The conclusions to be arrived at from the foregoing are not so much academic as economic and practical. In Germany a young man is called upon to decide early in his career whether he will take a classical or a scientific course. If he decides to take the latter he goes into the "Real Schule," or lower scientific school, to be elevated thence to the "Real Gymnasium," or scientific high school, and thence to the "Polytechnicum," or institute of technology, which is separate from the universities. In this course he learns no Greek and only a moderate amount of Latin; but he has the sciences, engineering, mathematics, modern languages, history, and a mixture of practical and theoretical training in various technical branches, with frequent excursions for the purpose of inspection of work in factories and public enterprises.. The faculties of these institutions keep in touch with the manufactories, and when capable young men graduate they easily find situations. This is also true of the technical high schools, of which there are twenty-four, which likewise have courses in engineering, architecture, drainage, irrigation, modelling, drawing, chemistry, modern languages history, etc. The Imperial Department of Commerce and Industries has been of great assistance to the German manufacturer. It has been an intermediary between the educational and practical work, guiding the one, sustaining the other, and furnishing information to the manufacturer, first in beginning his industry, later in expanding it, and finally in marketing his surplus.

GRASS HOUSES.

The finest house ever designed by a redskin is the grass house of the Wichitas, a tribe that at present live in southern Oklahoma. They are the only tribe that ever accomplished sucessfully the erection of a grass structure. Soon they are to abandon these huts and take up their humdrum reservation life in two-room frame shacks, which are being built for them by the United States Government. The grass house, it is claimed, is far

I have read statistics by various authors on from being healthful; but it is certainly comfortable. There are but about fifty old men of the tribe alive to-day who understand the art of building one of these houses so that it will stand. And these refuse to work, even for generous wages. The Government has offered these grass-house builders lucrative employment to construct some houses that may be preserved as models of an ancient art. But they refuse, and the grass huts that used to dot the prairies of the Wichita reservation are now being torn down. The Wichitas are determined that their huts shall not survive them.

Appearances are often deceiving. One can look upon a grass house and imagine it an easy thing to build. But not so. It is indeed most intricate. The grass is gathered early in the spring, when it is yet fresh. The sod cutting usually takes place immediately after a rain, the sod being removed to a thickness of about eight inches. Buffalo grass sod is the only kind that will answer the purpose of the builder. He commences to lay the foundation as does the stone-mason, digging away the earth to a depth of about one foot. The grass portion of the chunks of sod is laid to the outside, and the house is built to a height of twelve to fifteen feet, in the form of a pointed dome. There is no hole in the top for smoke to pass out, the latter being carried away through a pipe on the outside of the hut. The door is usually in the south, and there are no windows. Through each tuft of sod is run a willow reed string, and these strings are bound clear around the stucture. The grass remains green, and will grow if there is plenty of rain. It is not at all uncommon to see the sides of these grass houses turn green as spring approaches, just as do the pastures near them. The houses are very warm in winter and cool in summer. They never leak. Often the Indians have made barns of the same material.

LITERARY NOTES.

It is to be hoped, writes a literary critic, that in the other volumes of essays by Lord Acton, which are less definitely promised, a place will be found for that interesting parergon to which Sir Mountstuart Grant-Duff tells us that his latest days were devoted. This was a list of books which a young man should read in order to complete his education, after it was "finished" in the ordinary sense of the word. Lord Acton, alarmed perhaps by the memory of that dreadful bore, the "Hundred Best Books" controversy, into which his old friend Mr. Gladstone had vainly tried to drag him, limited his choice to ninety-eight works. They were chosen—as Lord Acton said in a fine and inspiring passage which Sir Mountstuart Grant-Duff rightly wished to see inscribed on his monument—

with a view to assisting an English youth whose education is finished, who knows common things, and is not training for a profession, to perfect his mind and open windows in every direction; to raise him to the level of his age, so that he may know the (twenty or thirty) forces that have made our world what it is and still reign over it; to guard him against surprises and against the constant source of errors within; to supply him both with the strongest stimulants and the surest guides; to give force and fullness and clearness and sincerity and independence and elevation and generosity and serenity to his mind, that he may know the method and law of the process by which error is conquered and truth is won, discerning knowledge from probability and prejudice from belief; that he may learn to master what he rejects as fully as what he adopts; that he may understand the origin, as well as the strength and vitality, of systems, and the better motive of men who are wrong; to steel him against the charm of literary beauty and talent, so that each book thoroughly taken in shall be the beginning of a new life, and shall make a new man of him.

One might be inclined to say of a young man so trained what the Sicilian gossip in Theocritus said of the famous singer: "The lucky woman to know all that!" But there can be no question that Lord Acton's list would be well worth having, and one hopes (with "The Spectator") that in due course it will be given to the reading world.

✧ ✧ ✧

A writer in "The Manchester Guardian" has raised an interesting question as to the rights of a public library over its own books. It will be remembered that the Northampton Free Library recently sold a number of books, once the property of that ill-fated minor poet, John Clare, which had been presented to the library by a municipal subscription at the time of his death. Some of these volumes, which included first editions of Keats, Lamb, and Tennyson, made valuable by the autographs of their authors, were lately discovered in a locked cupboard, where the illiterate or thrifty librarian, who received them thirty-six years ago, had carefully packed them away. The Northampton Library Committee decided that these books were too valuable to be retained as "curiosities," and disposed of them at a well-known auction room; one volume, the first edition of the "Essays of Elia," containing Lamb's autograph, brought no less than £88. The Library Committee proposes to spend the proceeds of the sale, amounting to several hundred pounds, in books for the reference library. The question now raised is whether it was justified in so doing, on ethical and literary, as well as on legal grounds. No one will doubt that the Committee acted with the best intentions, and it may reasonably be argued that the books in question, having been locked up in a cupboard ever since they came into the Free Library's keeping, will be no great loss to Northampton. But, to compare small things with great, we need only try to imagine what an uproar would be caused if Magdalen College proposed to sell the manuscript of Pepy's Diary in order to purchase works of reference, or the Rylands Library wished to "trade away" one of its Caxtons for the latest atlases and encyclopædias, to see that a point of wider interest than the literary taste of Northampton has been raised. As the writer already mentioned well puts it, "it is to be hoped that this strictly utilitarian policy will not be followed by other Free Library Committees, for it will at once arrest the flow of private generosity which brought these valuable books into the possession of ungrateful Northampton." There are higher considerations than even reference libraries, and it would be hard to say how many sets of Larousse and Stieler and the Encyclopædia Britannica would really counterbalance the distinction given to a provincial library by the possession of books which had once been in Lamb's hands and were dignified by his autograph.

✧ ✧ ✧

A correspondent of the "New York Nation" has written an instructive letter on the subject of an interesting Longfellow coincidence. He says: In the Table-Talk of America's best-beloved poet is printed the following sentence:—

"When we reflect that all the aspects of nature, all the emotions of the soul, and all the events of life, have been the subjects of poetry for hundreds and thousands of years, we can hardly wonder that there should be so many resemblances and coincidences of expression among poets, but rather that they are not more numerous and more striking."

These words of Longfellow were recalled to my mind recently, as I chanced upon two lines in an old English homily which form an almost exact parallel to a portion of the "Psalm of Life." The lines occur in the sermon "In Caput Jejunii" ("for Ash-Wednesday"), which stands twelfth in the series of Aelfric's "Lives of Saints," edited for the Early English Text Society by Rev. W. W. Skeat; they are numbered 26 and 27 (vol. i., p. 262), and run as follows:

"Forthan thu eart dust, and to duste gewendest.
Nis this na gesæd be manna sawlum."

A literal translation of these words into Modern English gives: "For that thou art dust and to dust turnest; this is not said of men's souls"; which inevitably suggests the familiar

"Dust thou art, to dust returnest,
Was not spoken of the soul."

✧ ✧ ✧

Continuing, he remarks that in this age, when the pursuit of literary sources has achieved the dignity of a science, I often wonder that the poets do not rise and beg to be slain outright with that good old bludgeon, the now-disused cry of "Plagiarism"—the first impulse is to say "Post hoc, ergo propter hoc"; but, remembering the dictum quoted at the head of this letter, it is much safer to say "coincidence." It is, in fact, almost demonstrable that the poet's lips had had no draught from the old monk's well. It is true that, in the spring of 1838, Longfellow was studying Anglo-Saxon literature, and that an essay from his pen upon that subject was written in April and published in the "North American Review" for July of that year; and that the "Psalm," which appeared in the "Knickerbocker Magazine" for October 1838, was written on the morning of July 26 of the same year. But this homily was at that time resting safe in the obscurity of the British Museum and of the libraries at Cambridge University; it was never printed until 1885; and we have not the least reason for thinking that Longfellow's somewhat superficial study of Old English ever led him to much browsing among Anglo-Saxon manuscripts.

✧ ✧ ✧

It may not be out of place, in closing, to recall the first draft of this stanza of the "Psalm," as given in the Rev. Samuel Longfellow's Life of his brother; from this it will be seen that it was only by a second impulse that the poet's words came into line with those of Aelfric:

"Life is glorious. Life is earnest,
Cannot pass in smoke away;
Dust alone to dust returneth,
But thy soul cannot decay."

✧ ✧ ✧

Mr. W. A. Sibbald has written to the "Spectator" to point out the inaccuracy of which Mr. Swinburne is guilty in his recent article in the "Quarterly" on Charles Dickens. Mr. Swinburne speaks of Matthew Arnold's "stolid scorn" for the writings of Charles Dickens. But as Mr. Sibbald points out—1, Arnold was a prominent figure at the farewell dinner given to Dickens by his admirers on the eve of his departure for America, November 2nd, 1867 (see "Arnold's Letters," Vol. I., p. 374); 2, in an essay on "The Incompatibles," written by Arnold about 1880, and reprinted in his "Irish Essays," there occurs the following reference to (pace Mr. Swinburne) Dickens's masterpiece—"Much as I have published, I do not think it has ever yet happened to me to comment in print upon any production of Charles Dickens. What a pleasure to have the opportunity of praising a work so sound, a work so rich in merit, as 'David Copperfield'! 'Man lese nicht die mistrebende, mitwirkende!' says Goethe. 'Do not read your fellow-strivers, your fellow-workers.' Of the contemporary rubbish which is shot so plentifully all around us we can, indeed, hardly read too little. But to contemporary work so good as 'David Copperfield' we are in danger of perhaps not paying respect enough, of reading it (for who could help reading it?) too hastily, and then putting it aside for something else and forgetting it. What treasures of gaiety, invention, life, are in that book! What alertness and resource! What a soul of good nature and kindness governing the whole!"

✧ ✧ ✧

Mr. Brandon Thomas "created" two of Mr. Barrie's best Scotch characters in "The Little Minister" at the Haymarket and "The Wedding Guest" at the Garrick. He is an officer in the Artists' Volunteer Corps; a very busy man; the writer, among other things, of some of the first and best coon songs; and the list of the parts he has played, with the names of the theatres and dates of productions carefully added, is one of the most interesting records of the work of a popular actor.

✧ ✧ ✧

A curious and interesting letter of Robert Burns came up for sale at Puttick and Simpson's the other day. It is addressed to Peter Miller, Esq., of Dalswinter, Dumfries, and is dated October 20, 1787. It covers two pages quarto. After complaining of having contracted a cold, and of the doctor refusing him permission to go out "on pain of death," he continues—"I want to be a small farmer, about a plough gang, in a pleasant country, under the auspices of a good landlord. I have no foolish notion of being a tenant on easier terms than another. To find a place where one can live at all is not easy. I only mean living soberly. The banks of Nith are as sweet, poetic ground as I ever saw." The letter, which is in a glass frame, sold for £40.

SCIENTIFIC TOPICS.

The French Naval Department has been carrying out a series of interesting experiments with balloons for detecting submarine boats, when submerged, the results of which proved that the course of a submarine craft can be easily followed from a balloon in the air. The "Gustave Zede" was used for these experiments. The boat was submerged to a depth of ten feet and more, but it was easily discovered by the aeronaut when the boat ran counter to the sun's rays, although the balloon remained at a height of 1,500 feet. An ingenious telephonic apparatus was connected from the submarine to the balloon, in order that the latter might signal when it had discovered the boat. The experiments further proved that the green colour at present employed in painting submarines is not an effective disguise, and that the ease with which submarines may be descried beneath the surface depends on their angle with regard to the sun.

✧✧✧

The Count de la Vaulx is making active preparations for another attempt to cross the Mediterranean by balloon, and the experiment will have a better chance of success, as it will be carried out early in the summer. Last year the trip was delayed until late in the autumn, and it was undoubtedly due to the bad weather that the aeronauts were unable to cross. The start is to be made from a different point on the coast this time, at Palavas-les-Flats, near Montpellier, and here a great balloon shed is being erected on the beach. The balloon, after the last trip, was sent to Paris to be reconstructed, and will be called "The Mediterranean No. 2." The balloon shed at Toulon offered a great resistance to the wind, and on one occasion was nearly carried off by a violent storm, although it was well braced by guy-ropes. The aeronauts will profit by this experience, and are building the shed in a tent-like form, which will offer less resistance. The balloon, which is now in construction, has a volume of 4,160 cubic yards, and the upper part has been made in conical form to shed the rain. M. Herve has availed himself of the data obtained on the last trip to make some improvements in his steering and floating devices, of which an account will be given later. The balloon is arranged so as to be either attached to the float upon the water or to take a free flight; for the latter case it is provided with an interior air-balloon gaging 1,300 cubic yards, which will be kept inflated by a ventilating fan. The former arrangement of water-ballast tanks will be used, and this time will be improved by adding a 12-horse power petrol motor, which operates a pump for automically filling the tanks by a pipe which runs down to the automatic device. It is probable also that the balloon will be made partially dirigible by using the motor to operate the propeller.

✧✧✧

Some interesting experiments and observations have been made by Signor Mosso, upon the subject of man's endurance in mountain climbing. Up to the present, the highest point to which a man has ever climbed is 23,393 feet—the summit of Aconcagua, the loftiest mountain of the main Cordillera range of the Andes. Signor Mosso asks will it ever be possible to reach 29,000 feet We live at the bottom of an ocean of air, and our bodies are specially adapted for life at low levels; consequently, when we are placed in unusual conditions, such as exist at great heights, we are affected in different ways. Respiration becomes difficult, the circulation of the blood is altered, the heart is fatigued, "mountain sickness" is experienced, followed by lassitude and exhaustion. The reason that so few men have attempted the ascent of th highest mountain peaks in the world is due to the general conviction that man cannot withstand the rarified air of these altitudes. From his own experiments and observations, however, Signor Mosso is convinced that man will be able slowly to accustom himself to the diminished barometric pressure of the Himalayas. To accomplish such a climb it will be necessary for the climber to acclimate himself during a slow rate of progress, in order to reach the top in conditions of health and strength. His victualling arrangements must be generous, but prudently made, more especially as the last stages would have to be performed very slowly. Mountain expeditions have hitherto adopted too rapid a rate of ascent. The nervous system consequently has not time to accustom itself to the action of the rarified air, nor the organisms to the cold, the fatigue of the ascent consumes the strength of the climber, and leaves him no time to regain it; whereas by slowly making the ascent the climber adapts himself to the fluctuating conditions as he rises higher and higher.

✧✧✧

The Pittsburg Reduction Company has purchased one hundred acres of land at Massena, New York, on which five large factories, covering at least fifteen acres, are to be erected, The company is to make aluminium principally, and will employ from five hundred and six hundred men constantly during the year. The cost of this plant will involve an expenditure of over one million dollars.

✧✧✧

A new method of making carbide and carbon and carbide filaments has been invented by an electrical engineer of London. The filament is soaked, previously to its being heated electrically, in a salt of the metal or metals of which the carbide is desired. If the salt in its decomposition by heat damages the filament it is reduced to oxide by means of ammonia. During carbonisation of the impregnated filaments, carbonaceous gas is passed through the crucible. The filament is first treated electrically in an atmosphere of the metal or metals, or of a salt of the metal or metals to be comprised in the carbide, this heating being carried to such an extreme as will form the carbide desired.

✧✧✧

C. B. Jacobs has described a new application of the electric furnace, which may prove to be of great practical importance, before the New York section of the Society of Chemical Industry. Barytes, the natural barium sulphate, is usually converted into other barium compounds by treating it with coal or coke in a reverberatory furnace and then working up the crude barium sulphide thus obtained; but it has been found that when barium sulphate and sulphide are heated together in suitable proportions, at the temperature of the electric furnace, the sulphur is completely elimnated as sulphur dioxide and barium oxide remains, the conversion being so complete that only 2 to 3 per cent. of barytes remains unacted upon, as against 25 to 45 per cent. by the older process. By lixiviating with water and crystallizing out, almost pure barium hydroxide is obtained, and from that compound all the barium salts are readily obtained. The electrical energy required for the process is got from the Niagara Falls, and the plant in use at the present time is turning out sixty tons of barium hydroxide per day. The compound is largely used in the tanning industry, the white pigment and dry colour trades, the purification of water for industrial purposes, and general manufacturing chemistry, the largest consumption being the beet-sugar industry, for the recovery of the sugar remaining uncrystallized in the molasses. Barium hydroxide is also an ideal substance for the softening of water for boiler purposes, and its general introduction in place of the methods at present in use is said to be only a question of price.

The New York Central and Hudson River Railway Company has awarded a contract for the equipment of its Putnam Division with the Hall system of automatic electro-gas block signals, which are to be operated on the normal danger plan. In this system the semaphore arms are held horizontally, to indicate to the engineer dangers ahead, or are drawn down by the pressure of carbonic acid gas in each signal post. The electrical equipment of the system consists in a valve which controls the flow of gas from the storage-tank to the cylinder. The valve is closed or opened by an electric current passing through the rails. The circuit is automatically completed by the train as it runs over the block ahead, and the approach of a train from behind.

✧ ✧ ✧

The steamship Nevadan, recently built at the yards of the New York Shipbuilding Company, of Camden, N.J., for the trans-Pacific trade, is the first vessel in the United States to be constructed to utilize oil as well as coal for fuel. After the decision to build the Nevadan the discovery of this fluid in large quantities in Texas decided the American-Hawaiian Steamship Company to provide equipment for urning oil if possible, and machinery was specially designed for this purpose. The plan of supplying oil to the furnaces is somewhat similar to that used on locomotives, the liquid being injected in the form of spray by utilizing steam jets. The tanks are located at a considerable distance from the engine-room, and will be connected with it by piping. The Nevadan is also provided with bunker room for carrying coal sufficient for the round trip between San Francisco and the Asiatic coast, if it is necessary to carry this tonnage. The steamship is one of the fleet which the New York Company has contracted to build for the American-Hawaiian Company for its service between San Francisco and the Hawaiian Islands. It is 371 feet in length, 46 feet beam, and 34 feet depth of hold, with a carrying capacity of about 5,000 tons cargo, in addition to accommodation for passengers. The hull is constructed of steel, and is separated into several water-tight compartments. The engines are calculated to develop a speed of at least 15 knots an hour, while the ship is equipped with a series of modern steam winches for transferring cargo.

✧ ✧ ✧

No more striking illustration of the rapid improvement in ordnance is to be found than the abandonment by the United States Government of the costly pneumatic gun plant at Sandy Hook. In 1893 a contract was let for four 15-inch and two 8-inch dynamite guns. At that time extravagant stories of the weapon's power were circulated rather widely by the daily press. It was popularly supposed that these guns with their ability of hurling large masses of dynamite great distances rendered New York practically an invulnerable city. But about a year ago the Board of Ordnance and Fortifications made an elaborate investigation of these pneumatic guns, and upon their recommendation, the Secretary of War has decided to abandon the entire plant. The original cost of the weapons and accessories is said to have been £200,000. They were sold for less than £4,000 at a private sale. Although the guns are no longer serviceable for the defence of New York harbour, they are not altogether worthless. It is said that the purchasers of the guns have sold one of them to the Turkish Government for more than the price paid for the whole plant.

✧ ✧ ✧

An inventor, who is evidently wearied of the many fruitless attempts to light a cigar in a windy street, has invented a combustible tip, which is intended to do away with the use of matches. The tip is composed of a mixture of ground glass, saltpeter, potassium chlorate and gum arabic. This mass is moulded into a cap on the end of a cigar, and a frictional igniter, such as that used on the tips of matches, is placed on the surface of the cap. When the igniter is scratched the cap burns freely and cannot be extinguished by an ordinary wind. The combustion fuses the ground glass and renders the cap incandescent. The fused glass forms an airproof cover on the end of the cigar and prevents any of the fumes from entering the tobacco, so that no unpleasant taste results.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1793.)

SEPTEMBER 2.

Very considerable orders for goods of Irish manufacture have been received from America. The Glasgow, that left the Custom-house for thence a few days ago, went heavily laden with merchandize of that kind, but was unable to take near the quantity of goods that there offered for the American market.

More woollen goods of Irish manufacture are preparing to be sent thither at present than ever was known before to have been shipped for that country from hence at one time.

SEPTEMBER 8th.

The old castle on the island of Lambay is at present converted into a temporary garrison, whither a number of recruits daily picked up in the city are conveyed, in order to put a stop to desertion. They are first conveyed in coaches to Rush, and from thence in boats to the island, where they remain in safety till they are collected in sufficient number to be sent to England, there to learn the military discipline.

A number of impressed seamen sailed from Cork on Tuesday last for England, on board of the Expedition tender.

Tuesday last the well-known cause of Redmond, Duffy, etc. came on to be heard in Kilkenny, before the Hon. Baron Smith. Three of the traversers were acquitted, and five found guilty.

BANTRY.

SEPTEMBER 16th.

"Arrived here the 13th, Captain William Hart, late commander of the ship Liberty, letter of marque, of and for Lancaster, of 16 guns and 16 men; sailed from St. Lucia on the 28th of July; on the 30th she joined the convoy, and on the 25th of August she lost sight of the convoy in a dreadful storm, in lat. 41, long 53.—that on the 4th of September, at 10 p.m., in lat. 50. 45, long 14, fell in with a French privateer of 16 six-pounders, and 100 men, which she engaged near an hour when the privateer sheered off.

Dreading she would renew the action next morning, he ordered the gunner to make up some cartridge, when unfortunately the ship blew up, with a terrible explosion, which killed the gunner, two boys, and a foreigner, and badly wounded the captain and two of the men—the nine men unhurt, providentially saved the yawl, and took the three wounded on board, where they remained nine hours, when the privateer took them up. The same day they met with the New York, bound to Liverpool, who humanely took the three wounded on board, one of whom died of his wounds. On the 12th instant he fell in with the Mizenhead, when they put the captain on board a fishing boat, who landed him in Bantry on the 13th instant, in a shocking manner, being dreadfully burnt."

DUBLIN, SEPTEMBER 29.

On Thursday morning the body of Mr. Coghlan, tanner, of Dolphin's Barn, who had been missing some days past, was found in the harbour of the Grand Canal, near James's street, standing in an upright position. The Coroner's inquest have brought in a verdict, wilful murder against persons unknown, and several people who had been with him the night on which he was first missed have been committed on suspicion of being accessory to his death.

OCTOBER 1.

Yesterday Alderman Richard Moncrieffe was sworn into the office of Lord Mayor of this city for the ensuing year, before his Excellency the Lord Lieutenant at the Castle, when the Hon. Mr. Baron George gave his Lordship a most instructive and learned charge, consonant to the duties of his important office.

After his lordship was invested with the insignia of his office, he proceeded with his usual attendants from the Castle to the Tholsel, when Richard Manders and Robert Powell, Esqrs., were sworn in High Sheriffs of this city for the ensuing year; and Mr. H. Green Manders was sworn into the office of Sub-Sheriff.

Yesterday evening his Excellency the Lord Lieutenant and several persons of distinction were entertained at dinner by the Right Hon. the Lord Mayor, at the Mayoralty House in Dawson street

The entertainment was remarkably elegant.

The retinues of our new city magistrates are very elegant The Lord Mayor's new coach is a beautiful piece of workmanship. The colour of the ground is a French white, upon which the heraldry is executed with a lightness that shows great taste.

Mr. Sheriff Manders's chariot is dark blue, and Mr. Sheriff Powell's pearl colour—both highly finished and neatly polished, and the heraldry executed in a light and masterly manner. The three carriages do credit to the manufacture of the country.

His lordship has chosen for his motto, "Sur Esperance." Mr. Sheriff Manders's motto is "Pro Omnibus Laus Deo," and the motto of Mr. Sheriff Powell is "Tutus Virtute."

The High Sheriffs have introduced an addition to the retinue of their officers, by halberdmen, two of which attended at the side of each of their carriages on Tuesday in the procession.

On Sunday evening detachments of the 17th Light Dragoons marched into Dublin Barracks from Sligo and Ballinrobe; they went on board the transports on Tuesday evening in the river, and will sail immediately for Bristol.

By letters from Cork we learn that such a promising harvest is not in the memory of man as that in the western parts of that county; and to add to the happiness of the poor immense quantities of all kinds of fish are taken in the bays of Dunmanus and Bantry. In the latter bay, a great haul of pilchards was lately made, which gives some hopes that this fish so long a stranger to the Irish coasts, is returned once more.

3rd—Tuesday and yesterday several combining journeymen shoe-makers were taken into custody and lodged in the New Prison for having tendered to their employers a new bill of rates to sign with a view of raising their wages by compulsion.

Yesterday at a full meeting of the Weavers' Corporation, the freedom of the Guild was voted to the late Lord Mayor (Alderman William James), to be accompanied with an address expressive of the high sense they entertain of his zeal and activity in discharge of that office.

There are at present twenty-eight working shoe-makers (arrested at different times within these few days) in Newgate, under charges of combination.

Extract of a Letter from Tralee, Sept. 24.

"On Friday last came on before Judge Downes and a very respectable jury the trial of John Day, charged with the murder of John Duane, when, after a minute investigation of facts, in which the attention of the Court was engaged from morning until night, it appeared that the prisoner had gone to the house of the deceased with a gun in his hand to demand a pane of glass, which he alleged was his property; and on a trivial contradiction relative to the mode of taking it out of the frame, presented the muzzle of the gun within arm's length of the deceased, and lodged the contents in his body. The only defence attempted to be set up in extenuation of this deed of horror, perpetrated in the noon-tide hour, and in the presence of many witnesses, was that Duane had seized the gun when presented at him and that it went off in the struggle The judge's charge to the jury was justice, truly tempered with mercy. They retired for about half an hour, and returned a verdict, guilty.

"The unfortunate culprit was executed pursuant to his sentence yesterday morning, and his body delivered to the hospital for dissection. He met his fate with fortitude and contrite resignation. By some accident he had some years ago lost a leg, and used a wooden substitute, which together with his cudgel he requested to have laid by him in his coffin.

"Yesterday John Herbert was tried for the murder of his wife, near Bedford, in this county. The jury about five o'clock returned a verdict, guilty. He is to be executed tomorrow."

On Friday night, the 19th ult., a servant maid, wife to one M'Carthy, was barbarously murdered in Kinsale by some person unknown. A hundred guineas, however, are offered by the Sovereign of Kinsale for the discovery and prosecution of the person or persons concerned in this horrid deed.

MONDAY, OCTOBER 6.

Last Saturday the long-expected answer to the address of the Corporation of Dublin to his Majesty offering to raise a regiment for his service was received by the Lord Mayor. This answer, we hear, in the most gracious terms accepts the offer, and pursuant to the desire expressed therein that the command should be given to one of the Royal Family, appoints his Royal Highness the Duke of York to be Colonel.

This day the Committee of the Common Council of this city will meet at the Exhibition house in William street for the purpose of carrying into effect the raising of the new Dublin regiment.

Monday, being election day of the Guild of Merchants, Jeremiah O'Olier, Esq., was elected senior, and Nathaniel Hone, Esq., junior master, for the year ensuing, without opposition. At the same time an election for wardens took place, and on casting up the ballots there appeared—

For Mr. Henry Clements	104
Mr. Samuel Tyndall,	79
Mr. James Evatt,	72

whereupon Messrs. Clements and Tyndall were declared duly elected.

Monday fe'nnight Peter Daly, Esq., was sworn Mayor of Galway; James O'Hara, Esq. Recorder; John Bradley and Robert Squibb Esqrs., Sheriffs; and Robert O'Hara, Esq. Town Clerk. Same time Edmond Fitzpatrick Esq., was sworn Deputy-Mayor for the ensuing year.

10.—On Wednesday fe'nnight John Herbert was executed at Gallows green, near Tralee pursuant to his sentence, for the murder of his wife on the 29th of August last, near Bedford, in the county of Kerry.

CARRICKFERGUS CASTLE.

THE FRENCH INVASION OF IRELAND IN 1760.

THE LANDING OF THUROT AT CARRICKFERGUS.

CONTEMPORARY ACCOUNT.

(From the "Collectanea Politica; or, The Political Transactions of Ireland (1760-1800). By William Wenman Seward, Esq. Dublin, 1801)."

At the termination of the last reign (George II.), the government of this kingdom was in the hands of the Duke of Bedford, who was appointed Lord Lieutenant of Ireland in October, 1759. Great Britain had been for some years engaged in a Continental war, in which she eventually proved successful, under the prudent administration of the celebrated Mr. Pitt (afterwards Lord Chatham)—a man whose virtue and abilities raised the British Empire to the zenith of its glory. The public mind, however, was about this time agitated, by the aprehension of a French invasion; and during the sessions of 1759 and 1760, measures were taken to put the kingdom in the best state of defence—to augment its military force—to repair the different barracks, forts, and garrisons—and likewise to support public credit, which had naturally been affected by the circumstances of the times.

On the 29th of Oct., 1759, the following message from the Lord Lieutenant was communicated to the House of Commons:

"Gentlemen,

"Mr. secretary Pitt having, by his majesty's express commands, acquainted me by his letter, which I received on Friday, the 19th instant, that it appears by repeated most authentic intelligences that France, far from desisting from the plan of

invasion, on account of the disaster happened to her Toulon squadron, is rather more and more confirmed therein, and even instigated by despair itself to attempt at all hazards the only resources she seems to think left her for breaking, by such a diversion given us at home, the measures of England abroad, in prosecution of a war which hitherto, by the blessing of God on his majesty's arms, opens in all parts of the world so unfavourable a prospect to the views of France; and Mr. secretary Pitt having added, on this subject, that there is a strong probability, in case of the body of the troops, consisting of 18,000 men, under the command of the Duc De' Aiguillon, assembled at Vannes, where more than sufficient transports for that number are actually prepared, and ready to receive them on board, should (as the season of the year is growing less favourable for cruising) be able to elude his majesty's squadrons, Ireland will not fail to be one of their objects."

Fortunately, this dreaded invasion did not take place: the people of Ireland, nevertheless, gave evident proofs of their loyalty and attachment to their sovereign on this occasion. One circumstance, however, created a temporary alarm: a small body of French troops (not exceeding 1,000) under the command of M. Thurot, landed at Kilroot, near Carrickfergus, on the 22nd Feb., 1760; they had not immediately any hostile intention, but were driven here, by severity of weather, in great distress and want of provisions. M. Thurot had left Dunkirk in the month of October preceding, with a squadron consisting of the Belleisle, 50 guns; Begon, 40; La Bland, 30; Terpischore, 20; and Amarand, 18. His seamen were few and very bad, his troops when at Dunkirk amounted only to about 1,500, and during his stay in Dunkirk-road they were so sickly that scarce a day passed but some were landed, and for want of hospitals were obliged to lie in the open Change of Dunkirk; they were consequently much reduced in number when he arrived in Ireland.

The kingdom was in general much alarmed at this event; some depredations were, as usual in such cases, committed by the enemy, against whom forces were immediately brought forward from different parts of the country. The following official letter received by the then Lord Lieutenant from Major-General Strode, who commanded at Belfast, dated 23 Feb., 1760, gives an authentic account of what occurred (a)

"Information of Ben. Hall, lieut. and adjutant to my regiment, who this moment arrived here, on his parade, from Carrickfergus, in order to get provisions for the officers and soldiers of my regiment there, says, that on the 21st inst. three ships appeared off the isle of Magee, standing in shore, for the bay of Carrickfergus; and at eleven o'clock came to an anchor, about two miles and a half to the N. E. part of the Castle, and within musket-shot of the shore at Kilroot-point. At this time the small number of troops belonging to the garrison, were at exercise, about half a mile on the road to Belfast; and at a quarter after eleven o'clock, the guard was turned out, made up, and marched off, to relieve that on the French prisoners in the castle: the rest of the men continued in the field of exercise, where an account was soon brought, that the three ships just come to anchor had taken and detained two fishing boats, and with them and several others were plying on and off between the shore and the ships: on which immediate orders were sent to the castle for both guards to continue under arms and double the sentinels on the French prisoners: and be particularly strict and watchful over them, 'till they could be satisfied whether they were friends or enemies; though at same time, a strong report prevailed with some, that it was an English frigate and two store ships: but to be convinced what they were, after the troops had assembled in the market-place, lieutenant Hall went off with a reconoitering party, and took post on a rising ground, where he could plainly perceive eight boats landing armed men; and that they drew in detachments, and took post on the dykes, hedges, and all the rising ground, from whence they could have the most extensive views; upon which he gave the necessary orders to his non-commission officers and men to have a watchful eye of their approaches, and to take particular that they did not get round them by going at the foot of the hill undiscovered: in order to prevent which, he posted them himself, and told them as soon as ever their advance guard came within shot to fire upon them, and continue so to do until they repulsed them; or, if necessary to retreat, he likewise pointed out to them, with orders to take every opportunity or advantage of the ground, in their retreat, to retard the enemy's approach: and to be sure to keep up a communication with the town as much as possible; and on this he immediately went to the town and acquainted lieut-col. Jennings, where he met him with the troops on the parade, who immediately ordered detachments to be made to defend the gates of the town, and all the avenues leading thereto; soon after which the reconoitering party retired, after having spent all their ammunition: during which time the lieut.-col. and chief magistrate of the town sent off the sheriff and Mr. Macklewain (who is captain of the militia of the corporation) with orders to take off the French prisoners of war, and convey them with all speed to Belfast, where they were to receive further orders from me. By this time the enemy were in full march for the town, which he computed to be near 1,000 men; and two or three straggling hussars, on horses they had picked up after landing, attempted to enter the gates, but on the first fire, retired, but were soon supported by parties of foot, who attacked both the north and scotch gates; as also the garden walls of lord Donegal; but were repulsed also, and kept back as long as the men had ammunition. On which col. Jennings ordered the whole to retire to the castle: which he had sufficient time to do, as now the enemy was a little checked from our fire: and would have been more so, if the men had ammunition. Before the gates of the castle were shut, they made their appearance in the market-place; and then it was in his opinion the destruction of the enemy would have commenced, had it not been for the still dreadful want of ammunition, notwithstanding the supply of powder they had received a few days before by my order, from Belfast, but were in want of ball, and even time, if they had that, to make them up: from which the enemy finding our fire so cool, attacked the gates sword in hand, which from the battering of the shot on both sides, the bolts were knocked back and the gates opened, and the enemy marched in: but lieut.-col. Jennings, lord Wallingford, captain Bland, lieut. Ellis, with some gentlemen, and about 50 men, repulsed the enemy and beat them back. Here it was he saw great resolution in a few Irish boys, who defended the gate after it was opened, with their bayonets; and those from the Half-moon, after their ammunition was gone, threw stones and sticks. Had this attack of the enemy been supported with any degree of courage, they must certainly have succeeded in it, but they retired back under cover, leaving the gates open, with our men in the front of it; which gave them a short time to consider what was best to be done: first, to see the men's ammunition, who if they had any, would have certainly sallied, and even without it, had not col. Jennings and all the officers thought the enterprise too hazardous. Then they considered if the gate could be defended: the breach in the castle wall could not, it being near 50 feet long; and having but a short time to deliberate, all agreed a parley should be beat, and lieut. Hall sent to know on what terms they might surrender, which was done accordingly, and on his going out, found the greatest part of the enemy under shelter of the old walls and houses before the castle gate; and after the usual ceremony, demanded of the commandant (the general being wounded) what terms would be given to the troops on their surrender; and at the same time sent the drum to call col. Jennings out of the castle, in order to treat with the French commandant on the articles of capitulation, which he says as well as he can remember were as follows, viz.:

"Col. Jennings demanded that the troops should march out with all the honours of war, and the officers to be on their parole in Ireland, and that an equal number of prisoners should be sent to France within one month, or as soon after as ships could be got ready for that purpose.—

Granted.

"That the castle of Carrickfergus should not be demolished, or any of the stores destroyed or taken out of it.—

Granted.

"That the town and county of Carrickfergus should not be plundered or burnt, on condition the mayor and corporation furnished the French troops with necessary provisions.—

Granted.

"This as well as he can remember, was

(a) The reader will observe, no alteration has been made in this letter from the language in the original.

he verbal articles agreed on, though on riting them the French commandant, fter consulting his principal officers, declared he could not by any means answer o his master the French king for granting o his Britannic majesty the stores in the astle, which he insisted upon: and col. ennings, to his great grief, had it not in is power to refuse, declaring solemnly, t the same time with a grave countenance, hat he would rather have been buried in he ruins. To which the French commandant replied that he could not insert t in the articles of capitulation, yet he ould give his word of honour, and did so, hat if there was nothing of great value in he castle belonging to the king, besides owder, he would not touch it (which there eally was not); but how far he will keep is promise is not yet known. Likewise he magistrates of Carrickfergus, not furnishing the French with necessary provisions, they plundered the town, declaring t was their own fault, as they were convinced that they had it in their power to upply them, as they had found enough in he town afterwards.

"Mr. Hall further informs me that he as discovered by some of the French, that here was a disagreement betwixt their eneral and capt. Thurot, the general being or the attack of Carrick, and Thurot for anding at the White-house and attacking Belfast. He likewise judges the frigates o be one of 40 guns, the other two about 20 ach. Lieut. Hall begs leave to present is duty to your grace, and hopes your race will excuse any inaccuracy that may e in his description, as he was no way rovided with any papers, and states but rom memory, having been often interrupted by numbers of gentlemen of the militia, who were crowding perpetually into the oom to receive orders.

I beg leave to subscribe myself,
my lord, &c.,
Belfast, 23 Feb., 1760. Wm. STRODE."

In about two days after these despatches were received, M. Thurot thought proper to draw off his troops; he left the kingdom, but being pursued and overtaken by some English vessels, an engagement took place, in which the unfortunate Thurot lost his life. Capt. Elliot, of the Æolus, in a letter to the Admiralty, stated this circumstance as follows:—

"On the 24th ist. I received information at Kinsale, from his grace the lord lieut. of Ireland, that there were three ships of the enemy's at Carrickfergus; the same evening I sailed with his majesty's ship under my command, together with the Pallas and Brilliant, in quest of them. I made the entrance of Carrickfergus on the evening of the 26th, but could not get in, the wind being contrary and very bad weather; on the 28th, at four in the morning, we got sight of them, and gave chace; about nine I got up along-side of their commodore (off the isle of Man), and in a few minutes after the action became general, and lasted about an hour and a half, when they all three struck their colours. They are the Marshal Belleisle of 44 guns 545 men, including troops, M. Thurot commander, who is killed; the la Bland of 32 guns and 400 men, commanded by capt. La Kayce; and the Terpischore 26 guns and 300 men, commanded by capt. Defraudais. I put into this road to repair the ships, who are all much disabled in their masts and rigging: the Marshal Belleisle in particular, who lost her bolt-sprit, mizen-mast, and main-yard in the action; and it was with great difficulty we prevented her sinking, &c. Inclosed is an account of the killed and wounded on board his majesty's ships, viz., Æolus, 4 killed, 15 wounded; Pallas, 1 killed, 5 wounded; Brilliant, 11 wounded. N.B. I find it impossible to ascertain the number of the enemy killed and wounded, but by the best accounts I can get, they amount to about 300."

JOHN ELLIOT.

Dated 29 Feb., 1760.
Ramsey bay.

In consequence of these events, it was resolved by the House of Commons, "that the thanks of that house should be given to lieut.-col. Jennings for his prudent and resolute conduct at Carrickfergus; and for the gallant stand he made there against a much superior force, by which he gained time for the militia to assemble, and preserved Belfast from being plundered.' It was also resolved "that the zeal, courage, and activity, exerted on the landing of the French in this kingdom, by the counties of Antrim, Armagh, and Down, and by the citizens of the City of Londonderry, were highly honourable and beneficial to themselves and their country." The inhabitants of Belfast presented Lieut.-Col. Higginson, of the 62nd Regiment of foot, with a large and elegant silver cup, having an inscription expressive of their gratitude for the exertion of his great military knowledge, vigilance, and activity, for the security of the town of Belfast, on the landing of the French troops at Carrickfergus. The like compliment was paid to Col. Jennings (a).

THE LATE MR. KEGAN PAUL.

Mr. Kegan Paul, whose fourth closes a long and bravely borne illness by death, remarks the "Daily Chronicle," had several periods imprinted even as is own surname: Public-school Pupil, Professor, Parson, Poet, Publisher, Papist, Patient. He was a little bit of a Pedant as well, perhaps. Also he was something of a Poet, though it was his skill as a publisher to lose Tennyson from his list of authors—a loss hardly compensated by the adhesion of Sir Lewis Morris. "I am glad that you do not find that commercial claims upon your time cripple you in this higher activity," wrote Mr. Gladstone to Mr. Paul on receipt of a copy of his translation of a novel of Huysmans'. It is now some years since Mr. Paul ceased his connection with the firm that continues his name; but during this time illness left him little time—and latterly none at all—for literary composition

(a) A list of militia that marched against the French, on this occasion:—Antrim, 100; Temple-patrick, 100; Randlestown, 120; Ballymena, 100; Boroughshane, 46; Church, 100; Killylea, 60; Cumber, 60; Purdestown, 100; Gravabbo, 70; Newton, 70; Loughgilly, 71, 50; Armagh, 40; Lurgan, 60; Glenarm, 1[illegible], Ballintre and Billisten, 100; Belfast, [illegible], Ballymoney, 70; Lisburn, 40; Argun, 100; Donaghadee, 71; Bangor, 60; Hollywood, 80; [illegible], 60; Market-hill, 6; Dromore, 40; Rich-hill light horse, 70; Lisburn, 40; Argun, 100; Donaghadee, 70; own expense.

THE SKULL.

(From the Russian of Prince E. Baratinsky.)

Sleeping brother, who hath sought thee,
And profan'd thy silent dust?
From the halls of death I brought thee,
Dark, thy skull, with age and rust!
One slight lock of hair was clinging
Round the emblem of decay—
Thoughts of sad reflection bringing,
Of a being pass'd away!

Comrades, young and happy hearted,
Gamboll'd round me near thy tomb;
Had thy voice, oh! long departed,
Spoken to them through the gloom—
Telling how stern Time was pressing
Youth, and hope, and joy beneath,
Thou hadst prov'd, perchance, a blessing,
Warning them to think of death.

Could the skull I now am holding,
Whisper secrets of the grave;
Fate mysterious, dark, unfolding,
Many a sinful heart to save:
On the brink we should, recoiling,
Place our trust in yonder skies;
And the tempter's meshes foiling,
Look to love that never dies!

But, I err—since Heav'n ordained thee
Thus, in silence, to repose;
Dews of mercy once sustained thee,
Ev'n to thine ev'ning's close!
Thus, while through life's road we wander,
Let us cheerful hail the light,
Nor ungrateful, ever ponder,
On the shadows and the night!

Onward—while the sun is dawning—
Onward—while the step is free—
Onward—while the summer morning
Wakes the soul to ecstacy!
Grateful for the glories round us,
Scatter'd plenteous on the way;
Thankful for the comforts found us,
And renew'd from day to day!

Then, without weak fears or trembling,
We can sleep, like thee, below,
Gentle, loyal, undissembling,
Such can never sink in woe!
Skull, may none again molest thee,
Sacred be thy haunt from strife!
In the gloomy charnel, rest thee,
While we taste the sweets of life!

SOME SUPERSTITIOUS BELIEFS.

No sailor of New England feels perfectly safe in going to sea unless he carries with him a bone taken from a living turtle, a pebble from a fish, hawk's nest, or a small bone from the head of a cod. If a Kentucky negro see a caterpillar, he goes home expecting to find the family in the grip of fever.

The native of Massachusetts believes that good luck is assured if he is the happy possessor of the left hind claw from a crow's foot or the claw of a crab. The German-Americans of Canada believe that the sight of a snake means death whether he bites or not; a white spider crawling towards one signifies that the family will number one less before sundown, and the howling of a dog or the neighing of a horse means that the cemetery lot will soon have another tenant.

In Asia Minor a meaning is ascribed to every sound heard in the animal or bird world. The crow's caw is a sign of ill luck. This unfortunate bird seems to bear the same sinister reputation in every country. An owl's hoot means good fortune to whoever hears it. Partridges are detested because one of these birds is said to have betrayed the prophet to his enemies. Its legs are red because they were dipped in the blood of Hassan.

In Poland the goat is a harbinger of good luck, while the wolf, crow, and pigeon bring evil events in their train. The skin of a cat is treasured and worn next the skin by consumptives in the belief that tuberculosis germs flee before the presence of the fur of a defunct tabby.

English yokels are especially superstitious. The belief is still current in rural England that the wearing of a toad's breastbone makes animals obedient to the wishes of the wearer. Travellers from this country have noticed the heart of an animal stuck full of pins ornamenting the walls of the British peasant. The intelligent cottager firmly believes that this talisman keeps the house free from the odious presence of witches.

The broomstick brigade is still feared in certain parts of Merrie England.

ORIGIN AND MEANINGS OF IRISH FAMILY NAMES.

By JOHN O'DONOVAN.

IV.

EPITHETS, SOBRIQUETS, &c.

[Continued.]

Edmund Spenser, secretary to the Lord Arthur Grey (deputy of Ireland under Queen Elizabeth in the year 1580), attempted to prove that many distinguished families then bearing Irish surnames, and accounted of Irish origin, were really English. This, however, is undoubtedly false, and is a mere invention of the creative fancy of that great poet and politician; but as it has been received as truth by Sir Charles Coote and other English writers, we shall show how Spenser deceived himself or was deceived on this point. He instances the following families: 1, The Mac Mahons of Oriel in Ulster, who, as he states on the authority of the report of some Irishmen, came first to Ireland with Robert de Vere, Earl of Oxford, under the name of Fitz-Ursula; 2, The Mac Mahons of the South; 3, The Mac Sweenys of Munster; 4, The Mac Sheehys of Munster; 5, The O'Brins or O'Byrnes of Leinster; 6, The O'Tooles of the same province; 7, The Cavanaghs; 8, The Mac Namaras of Thomond. But he gives no proof for his assertions but the report of some Irishmen, corroborated by etymological speculations of his own; and as the report of some unnamed persons can have no weight with us when in direct contradiction of the authentic annals of the country, I shall slightly glance at some of the most important of his etymological evidences, and then give my own proofs of the contrary. To prove that the Mac Mahons of Oriel are the Fitz-Ursulas, he says that Mahon signifies bear in Irish, and hence that Mac Mahon is a translation of Fitz-Ursula; but granting that Mahon does mean a bear, it does not follow that Mac Mahon is a translation of Fitz-Ursula. But we have stronger reasons to urge than to prove that this is a "non sequitur," for we have the testimony of the authentic pedigree of the Mac Mahons of Oriel, and of the annals of Ulster, that the Mac Mahons had been located in Oriel and had borne that name long before the English invasion. The Mac Mahons and Mac Donaghs of the south are a branch of the Dal-Cais, a great tribe located in Thomond, whose history is as certain from the ninth century as that of any people in Europe. The Mac Sweenys and Mac Sheehys of Munster are of Irish origin, but their ancestors removed to Scotland in the tenth century, or beginning of the eleventh, and some of their descendants returned to Ireland in the beginning of the fourteenth century, and were hereditary leaders of Gallowglasses to many Irish chieftains. To prove that the Byrnes, Tooles, and Cavanaghs are of British origin, he has recourse also to etymology, which is a great lever in the hand of a historical charlatan, and says, in the first place, that Brin in the Welsh language means woody, and that hence the O'Brins or O'Byrnes must be of Welsh origin. But, admitting that Brin does in the Welsh language mean woody, what has that to do with O'Brian, the original Irish name of O'Byrne, especially when it can be proved that that surname was called after Bran, king of Leinster, who was usually styled Bran Duv, i. e., the Black Raven, from the colour of his hair, and his thirst for prey. Secondly, to prove that O'Toole is a Welsh name, he says that tol means hilly in the Welsh language! and so does tol in Irish bear this meaning. But what, I would ask, has that to do with O'Tuathail, or descendants of Tuathal, the son of Ugaire, from whom this family have taken their surname? The name Tuathal, signifying the lordly, has no more to do with tol, a hill, than it has with the English word tool, to which it has been anglicised for the last two centuries. Thirdly, to prove that the name Cavanagh is of Welsh origin, he asserts that Kaevan in Welsh signifies strong in English. This may be true; but what has the signification of the Welsh word Kaevan to do with the name of the Mac Murroghs of Leinster, who assumed the cognomen of Cavanagh from Donnell Cavanagh, the son of Dermot Mac Murrogh, who had himself received this name from his having been fostered at Kilcavan, in the north-east of the present county of Wexford? "Spectatum admissi risum teneatis amici?"

These errors of Spenser have been already exposed by Dr. Jeffry Keating, a man of learning and undoubted honesty, but of great simplicity, which is characteristic of the age in which he lived; also by Gratianus Lucius, and by the learned Roderic O'Flaherty, who has devoted a chapter of his Ogygiâ to prove that Spenser, though a distinguished poet, can have no claim to credit as a historian. Spenser's purpose in fabricating this story about the Mac Mahons was to hold them up as objects of hatred to the Irish and English people, as being descended from the murderer of Thomas a Becket. He never succeeded, however, in convincing Ever Mac Cooley, or any other of the rebels of the Farney, that they were descended from the Beares of England! Spenser also asserts that it was said that most of the surnames ending in an, though then considered Irish, were in reality English, such as Hernan, Shinan, Mungan, etc. I do not, however, believe a word of this latter assertion of the great English poet, but conclude, with the simple and honest Keating, that, "as being a poet, he gave himself, as was usual with the profession, licence to revel in poetic fictions, which he dressed in flowery language to decoy his reader." For we know that there is not a single instance on record of any Anglo-Norman family having taken any Irish names except such as they formed from the names or titles of their own ancestors by prefixing Mac, which they considered equivalent to the Norman Fitz, as Mac Maurice, Mac Gibbon, Mac Gerald, Mac William, which are equivalent to Fitz-Maurice, Fitz-Gibbon, Fitz-Gerald, Fitz-William. In this manner, however, the great Anglo-Norman families of the south and west of Ireland, who were, after all, more French and Irish than they were English (their ancestors having dwelt scarcely a century in England), nearly all hibernicised their names. It seems rather curious that Spenser has not furnished any list of those Anglo-Norman families who really hibernicised their names, while he was so minute in naming those who were not English, but whom he wished to make appear as such, in order to be enabled to censure them the more harshly for their treasons and rebellions. He contents himself by stating that there were great English families in Ireland who, he regretted to say, had become Irish in name and feeling. The manner in which he states this fact is worthy of consideration, and I shall therefore insert his very words here as they appear in the Dublin edition:—"Other great houses there bee of the English in Ireland, which, through licentious conversing with the Irish, or marrying or fostering with them, or lacke of meet nurture [i. e., education or rearing], or such other unhappy occasions, have degendred from their auncient dignities, and are now growne 'as Irish as O'Hanlon's breech,' as the proverbe there is."

Sir Henry Piers, of Tristernagh, in the county of Westmeath, complains of the same custom among the families of English descent, in about a century after Spenser's period.

"In the next place, I rank the degeneracy of many English families as a great hindrance of the reducing this people to civility, occasioned not only by fostering, that is, having their children nursed and bred during their tender years by the Irish, but much more by marriages with them, by means whereof our English in too many great families became in a few generations one both in manners and interest with the Irish, insomuch as many of them have not doubted [i. e., hesitated] to assume even Irish names and appellations: instances whereof are but too many even to this day: thus a Bermingham is called by them Mac Yoris, Fitz-Simmons, Mac Kuddery [recte Mac-Ruddery], Wesley[i. e., Wellesley], Mac Falrene, etc., and from men thus metamorphosed what could be expected?"—Collectanea, vol. 1, p. 105.

On the other hand, the Irish families who lived within the English pale and in its vicinity gradually conformed to the English customs, and assumed English surnames; and their doing so was deemed to be of such political importance that it was thought worthy the consideration of Parliament; accordingly it was enacted by the statute of 5 Edward IV. (1465), that every Irishman dwelling within the English pale, then comprising the counties of Dublin, Meath, Louth, and Kildare, should take an English surname. This Act is so curious as illustrating the history of Irish family names, that it demands insertion in this place.

"An Act, that the Irishmen dwelling in the counties of Dublin, Myeth, Uriell, and Kildare, shall goe apparelled like English men, anw weare theire beards after the English manner, sweare allegiance, and take English surname."—Rot. Parl. ca. 16.

"At the request of the Commons it is ordeyned and established by authority of the said Parliament, that every Irishman that dwells betwixt or amongst Englishmen in the county of Dublin, Myeth, Uriell, and Kildare, shall goe like to one Englishman in apparell, and shaveing off his beard above the mouth, and shall be within one yeare sworne the liege man of the king in the hands of the lieutenant or deputy, or such as he will assigne to receive this oath for the multitude that is to be sworne, and shall take to him an English surname of one towne, as Sutton, Chester, Trym, Skryne, Corke, Kinsale; or colour, as white, blacke, browne; or arte or science, as smith or carpenter; or office, as cooke, butler; and that he and his issue shall use this name under payne of forfeyting of his goods yearely till the premises be done, to be levied two times by the yeare to the king's warres, according to the discretion of the lieutenant of the king or his deputy."—5 Edward IV., cap. 3.

"In obedience to this law," observes Harris, in his additions to Ware, the Shanachs took the name of Foxes, the Mac Gabhans of Smiths, Geals of Whites, the Branachs of Walshes, and many others; the said words

being only literal translations from the Irish into the English language." Harris, however, I may remark, is very much mistaken when he supposes that the Branachs ᴀᴛɴᴀʂ i. e. Britones) of the English pale in Ireland are an Irish family, or that any ancient Irish family had borne that name before the Anglo-Norman and Welsh families settled in Ireland towards the latter end of the twelfth century; and he is also wrong in assuming that the Irish word for Geal, white, was by itself ever used as the name of any family in Ireland. In the other two instances he is correct; for the head of the O'Caharnys of Teffia, who was usually styled the Shinnagh, translated his name into Fox, and the Mac-an-Gowans and O'Gowans translated their name into Smith.

The importance thus attached by this Act to the bearing of an English surname soon induced many of the less distinguished Irish families of the English pale and its vicinity to translate or disguise their Irish names, so as to make them appear English ones, as Mac Intire to Carpenter, Mac Spallane to Spenser, Mac Cogry to L'Estrange, etc.; but the more distinguished families of the pale and its vicinity, as Mac Murrogh, O'Brennan, O'Kayly, and others, retained with pride their original Irish names unaltered; for while they could look back with pride on a long line of ancestors, they could not bear the idea of being considered as the descendants of tradesmen and petty artizans, a feeling which prevails at the present day, and will prevail for ever; for though a man has himself sunk into poverty, he still feels a pride in believing that he is of respectable origin. It is certain, however, that the translation and assimilation of Irish surnames to English ones was carried to a great extent in the vicinity of Dublin and throughout Leinster; and hence it may at this day be safely concluded that many families bearing English surnames throughout the English pale are undoubtedly of Milesian or Danish origin.

It appears, however, that this statute had not the intended effect; for, about a century after its having passed, we find Spenser recommending a renewal of it, inasmuch as the Irish had then become as Irish as ever. His words on this point are highly interesting, as throwing great light on the history of Irish surnames towards the close of the sixteenth century, and we shall therefore lay them before the reader:—

"Moreover, for the better breaking of these heads and [of ?] septs which (I told you) was one of the greatest strengthes of the Irish, methinkes it should be very well to renewe that ould statute which was made in the reigne of Edward the Fourth in Ireland, by which it was commanded, that whereas all men used to be called by the name of their septs, according to the severall nations, and had no surnames at all, that from henceforth each one should take upon himself a severall surname, either of his trade and faculty, or of some quality of his body or minde, or of the place where he dwels, so as every one should be distinguished from the other, or from the most part, whereby they shall not only not depend upon the head of their sept, as now they do, but also in time learne quite to forget his [their] Irish nation. And herewithal would I also wish all the O's and the Mac's which the heads of septs have taken to their names, to be utterly forbidden and extinguished. For, that the same being an ordinance (as some say) first made by O'Brien for the strengthening of the Irish, the abrogating thereof will as much enfeeble them."

Towards the close of the next century we find Sir Henry Piers of Tristernagh, in his account of the county of Westmeath, rejoicing that the less distinguished Irish families were beginning to take English surnames:—

"These, I suppose, may be reckoned among the causes of the slow progress this nation hath made towards civility and accommodation to our English laws and customs; yet these notwithstanding, this people, especially in this and the adjoining counties, are in our days become more polite and civil [civilized] than in former ages, and some very forward to accommodate themselves to the English modes, particularly in their habit, language, and surnames, which by all manner of means they strive to make English or English like; this I speak of the inferior rank of them. Thus you have Mac Gowan surname himself Smith; Mac Killy, Cock; Mac Spallane, Spenser, Mac Kegry, L'Estrange, etc., herein making small amends for our degenerate English before spoken of."

But I have exceeded the space which the Journal allows for this article, and I must defer the remainder to a future number, promising the reader that I shall make every effort to bring the subject of Irish surnames to a conclusion in two additional articles.

THE POPPY.

Far out at sea, gleaming sheets of dazzling gold arrested the gaze of the early explorers of California. Blazing along the Pacific coast, embroidering the green foothills of the snow capped Sierra Madres, transforming acres and acres of treeless plains into royal cloth of gold, millions of flowers of silky texture and colour of gold fascinated the Spanish discoverers. An eminent botanist, Eachsholtz, at once classified the plant, and his followers conferred his name upon this, the only native American papaver.

Dream-like in beauty, fascinating from sheer loveliness, spreading its soft undulations over the land, the California poppy bloomed above the richest views and arteries of gold the world has ever known, all unsuspected. A Circe, with powers to please, dazzle and charm by its enchantments, while it allures, lulls and mystifies this flower of sleep seemed to draw by some occult process from the earth the elixir of gold, unfolding its blossoms of gold as beacons proclaiming: "We are blooming above rich mines of gold."

There is ever a mystery about the poppy. It is a weird flower. It is almost sentient, with a life unknown to human kind. "While glory guards with solemn tread, the bivouac of the dead," stealthily a sea of gore creeps over the old battle-fields. Blood red, the poppies in waves and billows hold high carnival above the soil that covered the slain. Lord Macaulay says of the battlefield Needwinden, could hardly help foncying that the soil, fertilised by 20,000 dead, broke forth into millions of blood-red poppies." The traveller from St Cloud to Tirlemont who saw that vast field of rich scarlet stretching from Landen to Neerwinden, could hardly nelp fafncying that the figurative description of the Hebrew prophet was literally accomplished, that "The earth was disclosing her blood and refusing to cover her slain." Bayard Taylor, in "The Lands of the Saracen," says he contemplated, with feelings he could not describe, "the old battlefields of Syria, densely covered with blood-red poppies, blooming in barbaric splendour, gloating on the gore of the soldiers slain." . . .

However interesting the poppy may be to men of science and to lovers of the beautiful, it is yet more so to the people of California. This beautiful, weird, gold-coloured flower of gossamer texture belongs to California alone. Nowhere else in the world has it ever made its habitat. There it is naturally so profuse that it is related as a fact that, coming on a turn full face upon a blooming field of yellow poppies, dazzling in the sunshine, horses have been put to flight, as from flames of fire.

OUR WEEKLY STORY

FOR CZAR AND RUSSIA.

It was the night of the state ball at the Winter Palace, and both within and without all was bustle and excitement. From the windows facing the Neva the light flashed far out over the river; and along the quay walls hundreds of the poorer classes were lined, patiently waiting to catch some glimpses of the equipages and uniforms, to them wonderfully fairy-like and altogether out of tune with their lives. It was a bitterly cold night. The sky, as it rarely is in the winter months at St. Petersburg, was intensely blue—so blue that the dull gray of the prison walls of Sts Peter and Paul's across the river, and the deep red of the palace itself, were plainly distinguishable in the starlight. Two feet of snow lay hard as a rock on side-walks and roadway, and the streets glittered as if diamond-strewn under the globes of electric light. In the courtyard of the palace four thoroughbred horses had dropped dead from exposure, and the poor moujiks in their sheepskins were sympathetically gossiping of this fact.

It was midnight. The Czar and Czarina had already arrived. The various grand dukes and grand duchesses rolling by in their sleighs or carriages had been recognised and saluted; but those outside waited patiently for anything that might turn up, quite content to freeze their bodies if so be it their eyes might catch a glimpse of the Czar and Czarina on their return to the Anitschkoff Palace on the Newsky.

Sentries walked ceaselessly round and about the Winter Palace, and at every entrance the dark-browed Tartar dovrnicks kept vigilant guard. Hundreds of cavalry and mounted police perambulated in and about the vast semi-circle as far as the Newsky.

One of the attaches of the English Embassy shivered slightly as he entered the throne room.

"I hate the Winter Palace," he said uneasily and under his breath to his close friend M. d'Ennery. "There is an air of death about it."

"I don't feel it," his companion said airily "At least I could risk it to be Czar. What luxury, what splendour, what power."

"Ah, yes. But somehow I can never forget the hundreds of workmen who lost their lives because of the Czar's criminal"——

"No—foolish," the French officer interposed hastily.

"Well, yes—foolish desire to have it finished in a year."

"Pauvres diables," Maurice d'Ennery said with a shrug of indifference; then he added, with his ever-ready optimism, "Better to die while they had work and their stomachs were full than wait till old age and poverty sent them to a pauper's grave."

"Still, the right of living should not be denied the poorest or most miserable of us. Life is very sweet and"——

"Pray don't mention it. You make me shudder with your lugubrious remarks."

"Ah, well, then—the other, we have very uncertain knowledge of it."

"Oh, mon Dieu! Of course, it is very uncertain—our knowledge—but let let us talk of something else."

The Honourable Ralph Alliston smiled, yet grew more depressed, for his family was gifted with Scotch second-sight. He understood that his companion, despite his light remark experienced something of his own feeling of depression and apprehension. "I wish the ball was over," he thought uneasily, "and we were all well away from here. One never knows in Russia."

Just then Prince Yasha Damiroff came up to him and said—

"I want you to meet me to-night, Mr. Alliston, at Cubat's Restaurant. It is midnight now—in about an hour's time. You will, I hope."

Prince Yasha's manner was more earnest than Alliston ever remembered it to have been, and he said hastily:

"But, Prince, in an hour—that will be an impossibility!"

"Oh, nothing is an impossibility!" Prince Yasha said impatiently. "Get away on a plea of illness. I want you to take charge of my friends, you know—the usual crowd, and room 15. I beg it as a favour.'

Alliston hesitated a moment, then he smiled good-naturedly and dubiously. "Well, yes. I suppose I must say yes."

The Prince gave him a glad smile, and, turning hastily, was gone.

Just then there was a little fuss outside the door. Several officials of the household entered and every one stood up. It was the signal that their Imperial Majesties were coming, and at once a mixed feeling of awe and delight, and in some instances of positive love, took possession of those present as the two stately personages—the one so tall, broad, and dignified, almost to sullenness; the other so petite and gracious—entered, bowing slightly to all.

The Empress Marie's dark eyes looked bigger and more ethereal than ever, and her resemblance to her sister, the then Princess of Wales, was striking.

The ball was to commence with the usual stately polonaise, the Czar with the Queen of Greece, the Czarina with the Crown Prince of Greece.

Meanwhile, at the east entrance to the palace—a small, insignificant doorway on the Dvortsovaya Naberejna—two Tartars were talking in excited and frightened tones in their own language, and one was weeping bitterly.

"Go to his Excellency at once," the elder one said authoritatively. "Warn him while there is yet time! Do you hear? You stupid, go!"

Five minutes later a Court servant said in the ear of Prince Felutine—"You are wanted, your Excellency, without. Please follow me."

Engaged as he was in conversation with a young and charming woman, the Prince was at first confused and startled, and also annoyed. He hesitated just a second, then, graciously excusing himself, followed the man, asking no questions.

The footman led the way to the apartments occupied by the Prince and his family on the floor above, and stopping in the coridor, he said, as they halted before Mitinka, the Tartar dvornik—

"This is the business, your Excellency." Then, saluting, he left Felutine and Mitinka together.

Mitinka hesitated, a look of fear on his face, till the footman had gone well out of earshot; then he whispered stolidly—

"Your Excellency, I have watched Prince Yasha, and he is even now in his room with others and various—instruments."

The Prince's ruddy face grew visibly paler; his lips twitched ominously.

"Ah, my friend, that is so, is it? I shall reward you. You are not afraid to come with me?"

"Your Excellency, I could not harm him—I could not see him harmed," the Tartar pleaded.

"I am his father, Mitinka. I want your assistance, that we may serve him—and do our duty to our Czar."

Mitinka bowed his head. "I hear, your Excellency. I obey!" he said humbly.

The servant who opened the door of the apartment to the Prince and the dvornick looked alarmed and almost gasped out astonishment, as with an authoritative "Come, Mitinka," uttered by the former, they passed into the Prince's private study.

"Now, Mitinka, explain quickly."

"Your Excellency, about a quarter of an hour ago Prince Yasha entered and with him were Spironoff and another whom I do not know. They were speaking in English, and they carried some parcels. They are there now with Prince Yasha in his own private study."

"And we are right over the ballroom," Prince Felutine said gaspingly, not to Mitinka, but to himself. He groaned involuntarily, then straightening himself, said calmly, if hastily, "Mitinka, lose not a moment! Get the Chief of Police here and two officers! Give Baron Henlikoff this card. Get out without a sound, and take this key."

The Prince opened the door of his study cautiously, looked out, saw no one, beckoned to Mitinka to hurry, and, the door shut on the dvornik, he walked towards the bathroom, which was in the direction of the servants' quarters. The porter who had opened the door for them, and whose cat-like ears had detected the slight footfall, came hurrying forward, but the Prince said quietly, "You are not needed, Piotr. I feel slightly indisposed. Tell some one to bring me a glass of seltzer in about fifteen minutes to my study," and as he finished the Prince opened the bathroom and shut the door with a bang behind him.

"Oh, God! my God!" he said to himself, with one hand over over his eyes as he sat down on the edge of the marble tub. Yasha, his beloved Yasha, whose youthful escapades had long silvered his hair, yet whom he loved better than all his other children. Misguided, handsome Yasha, whose youthful, soft-heartedness was as so much wax in the hands of the designing Nihilists. Where had he met these men? Where? When? How? His Yasha a traitor! The Prince rose in an agony. He clenched his hands, his face grew livid, and for a moment a sharp, agonising pain seemed to clutch his heart; he grew dizzy and almost fell to the tiled floor. But a few moments later the soldier in him and his loyalty asserted themselves. He thrust aside his own personal trouble, and, opening the door, walked back to his study. He waited there in agony. Now and again wafts of music came to him from the ballroom below. Otherwise things were deathly still but for the slow, laborious ticking of a bronze clock on a cabinet, and, in contrast, the agitated sharpness of the pendulum in the timepiece—a travelling affair on his own writing table.

At last there was a click of the lock, and the Prince was outside at once. The Chief of Police, Baron Henlikoff, entered noiselessly, saluting the Prince merely by an elevation of the eyebrows. Behind him followed two officers and Mitinka.

Just as they entered the study Piotr came with the seltzer and the Prince sternly bade him remain. Then as quickly as possible Prince Felutine explained the situation to the Chief of Police, doing so in English. "One favour, I beg of you," he concluded, "leave my misguided Yasha to me."

Baron Henlikoff hesitated a moment, then he said quietly:

"It is serious, Prince, and being lenient seems useless."

"You have a son, Baron, and this once, I beg you."

The Baron looked up into the Prince's troubled face, then said gravely, "Well, this once—the last time." Turning to Piotr, his whole face changing in expression, he said in Russian. "Come with us and knock at Prince Yasha's door, and tell him—tell him Mlle. Vera desires to speak with him."

Piotr was very white, and his small eyes seemed to grow smaller as he said sullenly—

"Do your own dirty work, Baron. As for me, I refuse! You hear—I refuse! Now," he added insolently, "torture me, send me to Siberia, to Schlusselburg, do with me as you will, but I refuse."

"Handcuff him," the Chief said laconically. Then turning to Mitinka, he gave him the same message as he had given to Piotr.

The Prince, who led the way, with the Chief, Mitinka, and the officers, went straight to Prince Yasha's door, and after knocking, Mitinka did as he was bidden. But there was no answer, and the keyhole was dark.

The Chief waited about twenty seconds, then he threw his own weight, as did also the officers with him, against the door and broke it. All four entered quickly, and Prince Felutine turned on the electric light.

"Gentlemen," Prince Yasha began indignantly; then he recognised the Chief of Police and his father, and knew the game was up. He said nothing more.

"Handcuff Spironoff and Dovidoff," the Chief of Police said to the officers, and before either could offer resistance or draw a revolver, the thing was done with Henlikoff's own assistance.

On the table the three were sitting before, there was an amazing number of wires, a large ominous object, several charts, maps, and steel instruments. There was a sinister smile on the faces of the two prisoners as the Chief of Police began to handle these wires carelessly, which turned to surprise as he began cutting here and there until the object in the centre was isolated completely. Then he sent Mitinka for Piotr and the other prisoners, and telephoned to the chemical department for experts.

Meanwhile Prince Felutine stood, one hand on Yasha's shoulder; the son sitting down, one hand supporting his head.

When the three prisoners with Mitinka and the officers had left, Baron Henlikoff said quietly—

"I am sorry, Prince, I cannot leave you alone. But I shall get out of earshot, and you must only try to forget my presence."

Prince Yasha raised his head.

"Why am I not arrested, father, as the others?"

"Because," almost roared the father, passionately, "you will swear to me on the soul of your dead mother to abjure this damnable treason! You will swear to serve your Czar!"

"Father, I will swear nothing. My oath is already given to God and Russia. You cannot take this thing out of my blood. It was in my uncle's heart and brains as it is in the hearts and brains of millions. I have failed. Let them punish me as they punish my comrades."

"You are defiant?"

"No. I regret nothing, except that you arrived just ten minutes too soon."

"Regicide! Parricide! You would have killed me!"

"I would free Russia," Yasha replied wearily, "and I have failed. Let me be, father. Save yourself pain and trouble. Disown me!"

He looked up into his parent's face with the bright boyish smile that Prince Felutine could never before resist.

"Yasha," he said sternly, "swear on your honour as a gentleman, or by God a bullet will end your life!"

Yasha started. "Ah!" he said indignantly, rising, but catching his father's glance he sat down.

"Yasha, as God is my judge, I mean what I say!" and the Prince held his revolver quite close to his son's head. "Swear to serve your Czar and country! You are my son—I command you! Swear, or die!"

Prince Felutine's voice was hoarse with indignation, passion, and excitement.

At the further end of the room Baron Henlikoff heard, and came forward hastily to avert violence he feared might prove fatal. But he was too late.

"Death to the Czar!" the young Prince began, his head thrown backward, his boyish features radiant.

Then there was a report, sudden and terrible, and a sickening crash.

"Oh, my God! the pity of it!" Baron Henlikoff gasped, a moment later clutching the maddened father's arm. But the other cried out in stentorian tones as he looked with dazed, despairing eyes on the floor where his son lay—

"For my Czar and Russia!"

The next morning Mr. Alliston, looking like one who had slept but little or not at all, was at the Winter Palace bright and early to see Prince Yasha. When the servant gravely informed him that the Prince was not at home, hadn't slept at home that night, the Hon. Ralph said excitedly—"Well, then, I must see Prince Felutine."

The footman went away with his card, but came later with all the obsequiousness of the Russian servant, to say that the Prince was very sorry, he felt far from well, and begged to be excused.

Mr. Alliston looked perturbed and dismayed at the answer. He walked about the antechamber, and when he saw that the footman was holding his fur coat ready to cloak him, he took out a card and scrawled this—"I want to see you particularly; something important about Yasha."

It seemed almost half an hour later—so long had they kept him—that Ralph Alliston was ushered into the dressing-room of the Prince, and he started back in dismay at the aged, haggard look in the face of the latter.

"Prince, I see you are ill, and I am sorry for the intrusion. But last night Yasha told me to look after a party for him at Cubat's. He never turned up, and this morning Mlle. Vera, you know la petite danseuse, received this by post."

The Prince's hand was shaking, he groaned as he listened; then he took the note slowly. It ran thus in French:—

"Ma pauvre petite Cheri—You know all by this. I had no heart to write you farewell, in fact, dared not; but you understand. I have made a will, and I hope that they will give you all that I mention in it. Adored one, adieu. Remember me a little now and then.

"YASHA."

The Prince read and re-read. He seemed to have forgotten Alliston's presence. Then he said slowly and in English:

"My dear sir, say nothing of this. Tell the girl all that my son promised will be hers. It is his last wish. He is dead."

"Good God!" Alliston cried, and he was about to ask how and where, but the Prince said, with visible suffering:

"Ask me nothing. I only beg your silence. I am the most miserable of fathers in Russia."

Alliston hardly knew how he got away. He was shocked and horrified But he kept faith with the Prince. A week later society was amazed to hear that Prince Felutine's eldest son, Yasha, had died of pneumonia, caught the night of the state ball. Weird and exaggerated tales floated through society as to the cause of his death, and there was also a vague whisper of the truth. But these rumours were all set at rest by the presence of the Czar himself at the burial, and the splendour of the soldier funeral given Prince Yasha was long the talk of the city.

As Alliston saw the last of his friend buried in the ground at the Alexander Newsky cemetery and listened to the mournful sobs of the bereaved father, an indomitable feeling of sorrow came on him.

Certain of nothing, he nevertheless felt that the curtain was lowered on another of those terrible dramas that visit Russian households from time to time, the truths of which are hidden and concealed so carefully for love of Czar and Russia.

SONNET.

(From the Spanish of Lupere d'Angensola. Died 1613.)

Take hence, oh! sleep, similitude of death,
The dreams deceitful that o'erwhelm my heart:
Let not, oh! cruel, ev'ry hope depart,
By crowning her I love with cypress wreath!

Steal o'er the despot on his purple throne;
Torment his slumbers if his eyes can close;
Or fright the miser with suspicious throes,
While, with his coffers, on his couch, alone!

Call forth the people to besiege his home,
And force the locks from off his iron gates;
Or, let the pilfering slave, who crouching waits
To seize the gold, with gleaming dagger come.

And let the man of pelf defend with arms
The wealth amass'd with toil and anxious care:
Striving for all his bosom holds most dear—
But spare my love, oh! sleep, these sad alarms!

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

CHARLEMONT, an incorporated market-town and district parish (formerly a parliamentary borough), in the barony and county of Armagh, and province of Ulster, 5 miles (N. by W.) from Armagh, and 68 miles (N. by W.) from Dublin; containing 3,642 inhabitants, of which number, 523 are in the town. This place derives its name from Charles, Lord Mountjoy, who, while Lord-Deputy of Ireland, in 1602, erected a castle here, and called it Charlemont, partly after his name, and partly after his title. It was built to prevent the incursions of the O'Nials into the English pale, and to guard the wooden bridge which then afforded the only passage over the Blackwater. In 1641 it was deemed a place of considerable importance, and was taken by stratagem by Sir Phelim O'Nial, on the 22nd of October. Lord Caulfield, a brave officer, grown old in the royal service, had been made governor, and lived with his Irish neighbours in unsuspecting confidence, when Sir Phelim invited himself to sup with his lordship, and he and his followers being received, on a prearranged signal seized the family, made the garrison prisoners, ransacked the castle, and afterwards killed Lord Caulfield in one of O'Nial's houses. The chieftain subsequently retiring before the English forces, made this castle his head-quarters for a short time. Owen O'Nial, expecting to be besieged here, strengthened the defences; and when the Scottish General Monroe attempted to surprise it, he was repulsed with loss, but the castle was at length captured by Sir Charles Coote. In 1665 it was sold to Chas. II. for £3,500, since which time it has been vested in the Crown. It was garrisoned by the Irish for James II., in 1690, under Sir Teague O'Regan, and invested by Duke Schomberg. Caillemote, a French officer, being posted on the Blackwater, and harrassing the garrison, after some time the governor was summoned to surrender. O'Regan, a courageous Irish officer, determined to hold out to the last extremity, but the distress of the garrison becoming intolerable, the governor proposed terms of capitulation on the 13th of May, and on the 14th the garrison marched out with the honours of war, to the number of 800 men. On taking possession of the castle, the duke found in it 17 pieces of cannon, one large mortar, 83 barrels of gunpowder, and various munitions of war.

The town is situated near the confluence of the rivers Blackwater and Callen, and on the road from Armagh to Dungannon and Coleraine. In 1883 it contained 111 houses, and is connected with the post-town of Moy by a recently erected stone bridge. Charlemont Castle is still a place of great strength, fortified with bastions, a dry ditch, and escarp and counterscarp; and there are two ravelins, one in front, the other in rere of the works, surrounded by a glacis which runs along the side of the Blackwater. It is the ordnance depot for the north of Ireland, and the head-quarters of the artillery for the district of Ulster. Formerly it had a military governor.

The borough, which comprises the townland of Charlemont containing above 200 acres, and the liberties, containing 20 acres, was incorporated by the charter of James I., dated April 29th, 1613. The corporation consists of a portreeve, 12 burgesses, and an unlimited number of freemen. The portreeve was to be elected annually, on St. John's day, by the portreeve and free burgesses, the latter of whom were to be elected for life out of the inhabitants; and the freemen were to consist of all the inhabitants, and as many other persons as the corporation might elect. The charter also conferred on the portreeve and free burgesses the right of returning two members to parliament, which was exercised until the Union, when Francis William, Earl of Charlemont, received £15,000, as patron of the borough, for the abolition of its franchise.

There are some remains of the fortifications at Legerhill, from which Duke Schomberg bombarded the town, and of a Danish rath. A curious gold ring, and a gold cross, studded with gems, and said to have belonged to Sir Teague O'Regan, have been discovered here; also, a few years since, a body almost in a complete state of preservation, with the clothes and spurs perfect. In the museum of Messrs. W. & J. Jackson, there is a rare collection of minerals, petrifactions, coins, and other relics found in and near the town. Charlemont gives the title of Earl to the family of Caulfield.

(To be Continued.)

WHAT IS "LLOYD'S"?

Primarily "Lloyd's" is a corporation employed in marine insurance and having a world-wide agency for the collection of marine intelligence. Incidentally other insurance is taken. "Lloyds" had its origin in the enterprise of Edward Lloyd, a London coffee house keeper, whose place, opened in 1688, became a resort for shipowners and ship captains. So much was learned of marine matters, and so general became the interest in this information, that in 1692 an office was opened in Lombard street, London, and shortly afterwards "Lloyd's News," a paper issued three times a week, and devoted to shipping news, made its appearance. Adverse criticism by the paper of the British Government, coupled with a demand for an apology for an item of news which appeared in the paper, decided Mr. Lloyd to discontinue the publication. The insurance feature of "Lloyds" originated from a method of mutually insuring or "underwriting" each others' shipping risks by the owners frequenting Lloyd's establishment. Their method of doing this was to subscribe or "underwrite" their names to a document which stated the amounts that each was willing to give in the event of disaster to the risk. The present system of "Lloyds" does not differ in any essential particular from the method employed at the beginning, but is much better organised and the business has been vastly increased in volume. Its radius of operation now practically covers the whole world.

FORTS AND FAIRIES.

A COMPILATION.

BY E. J. RYAN.

PART I.—FORTS.

8.—STONE FORTS.

Stone forts were often constructed where stone was abundant. In the building of stone forts clocans were erected usually in groups. Their internal diameter rarely exceeded 18 feet. The door seldom measures 4 feet in height. The buildings were generally closed in at a distance of from 12 to 16 feet from the floor, having no windows, and but rarely a chimney, though charcoal and stones marked by fire are found in them. To the west of Kerry, where the rocky nature of the ground precludes the possibility of burrowing, clocans and elongated huts or galleries, of exactly the same form and size, as the underground chambers, are built with stone upon the surface, and are often covered with turf. The clocans are very generally encompassed by a cashel or wall of very great strength, built of dry masonry, the stones being fitted with great exactness. The walls of the dun are about 15 or 16 feet in thickness, and from 18 to 20 feet in height. When the stones are very large this style of building is called Cyclopean or Pelasgic(29). In some of these buildings stairs are found on the inner side of the wall, leading to narrow platforms varying from 8 to 43 feet in length ,for the accommodation of the defenders. Others have chambers in their massive walls. The walls were pierced for one or two doorways formed of immense stones, and displaying the flat lintel and inclined sides. This kind of fort is called a caisiol, and also a cathair—a city or town, a fort denoting the residence of many persons, and sometimes a dun. The name of cathair was usually applied to circular fortifications of stone, built without cement, but some stone forts were polygonal.

It is supposed by some that the caisiol or the cathair is the workmanship of the Firbolgs, at least where they were longest as a distinct race. Others say that the cathair is the workmanship of the Tuatha De Danaans. Probably such material as was found most convenient and suitable was employed indifferently by all the builders. The construction of the Munster forts points to a very early period.

In the erection of forts there seems to have been no rigid adherence to any strictly uniform plan, but that each fort was built in a style suitable for its purpose. Some forts were approached by a winding plane, inclined where suitable, facilitating the entrance of friends, and exposing enemies to the concentrated attacks of the defenders. They are in general so situated that a correspondence by signal could be expeditiously circulated from one to another throughout the country; but it can hardly be said with accuracy that they are, as some assert, found in groups of three.

(29) Also, Cyclopic, after the manner of the Cyclops; and Pelasgian and Pelagian, belonging to the Pelasgi. The Pelasgi possessed fortified towns built in the style known to us as Cyclopean architecture. This is the name applied to walls of massive unhewn stones fitted together according to their natural faces without mortar, because in ancient Greece such walls were fabled to have been built by the Cyclops. The Cyclops were mythical Greek giants, with one eye in the centre of the forehead. They were supposed to be shepherds and also blacksmiths, their forge being under Mount Etna in Sicily. The Pelasgi were the earliest inhabitants of Greece. The hill-forts of Britain are specimens of the style.

9.—POSITION AND SPECIAL PURPOSE.

The position of the fort appears to have been influenced chiefly by the fertility of the soil, and by the water supply. They are usually located in the most fertile spots, and in close proximity to a good spring. Some are found in valleys. Others are on the shoulder rather than the summit of a hill, in order, likely, to afford a view into the glens for the inspection of flocks. Some of them from their commanding positions leave little doubt that their object was to be defensive works. They are sometimes placed in rocky situations, probably for better defence, but the rocky and unproductive country to the west of Cork and the south of Kerry is almost devoid of them. Others are situated in positions that could never have been occupied for defensive purposes, even in the most primitive state of warfare. These may have been for cattle or other property under the protection of a neighbouring fort; or special places of Pagan worship, or receptacles for the dead in Pagan times, or they may have been ordinary residences in times of peace. Sometimes the Pagan Irish buried their dead by raising a small rath around the place of burial, and then putting a lacht(30) over the place, as in modern times we see a flag covering a grave.

It is difficult without a close examination to decide now to what purpose any fort was devoted.

The rath was a simple wall or enclosure of raised earth enclosing an elevated mound of more or less extent ,in which the residence of the chief, and sometimes the dwellings of the principal men, stood. It was invariably of earth, chiefly on the plains, and sometimes consisted of two or three concentric walls or circumvallations.

The dun is said to be of the same form as the rath, but consisting of at least two concentric circular mounds or walls, with a deep trench full of water between them. These were often encircled by a third, or even by a greater number of walls at increasing distances. The dun is also called a hill fortress, and is said to have been generally of stone without cement, but occasionally of earth, and to have been more of a military than a domestic nature. Sometimes the dun was the residence of a king.

The lis was probably the same exactly as the rath, but partook of the nature of a fortification, more especially of earth. It is said by some that the lis was the residence of a prince, and that if it had a bank around it, enclosing a courtyard, is was called a rath. Others again say that the lis was a structure for habitation of more moderate pretensions than the rath, being perhaps the residence of a farmer and his family. It is asserted that the smaller forts were the residences of farmers.

The caisiol and the cathair were generally if not invariably built of stone. The circumvallation built of earth faced with stone was called a cathair, or more usually a caisiol. The caisoil was a stone rath or entrance within which stood the dwelling-house. The cathair was a stone dun with loftier and stronger walls, not necessarily surrounded by water.

The various words have a different meaning, but they are sometimes used indifferently or indiscriminately.

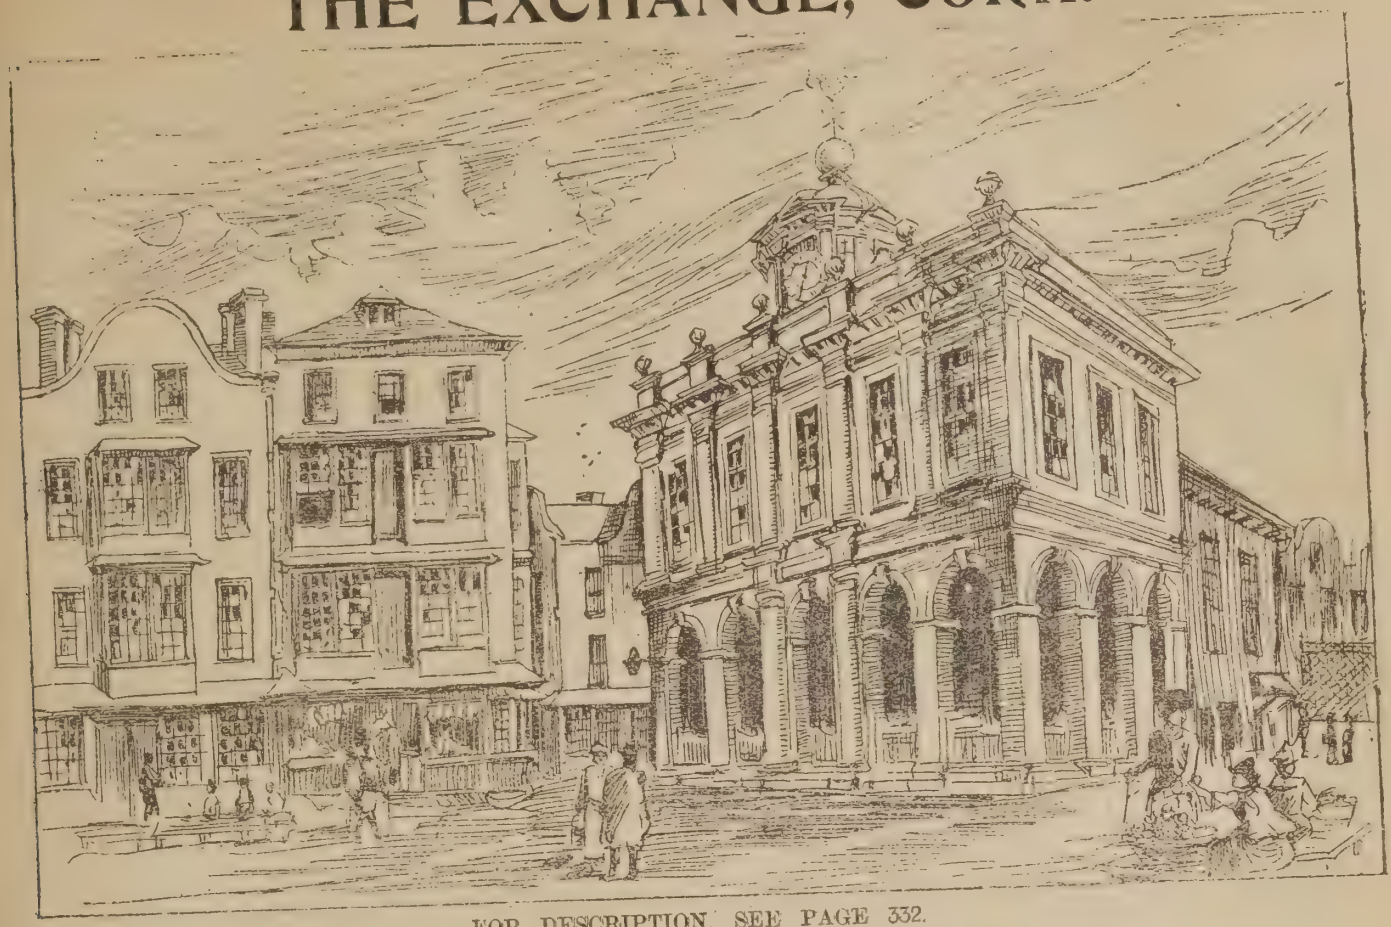
In the ordinary domestic forts resided single families, or chieftains and their clans; and in the more extensive forts, petty kings, chieftains, and their soldiers and retainers. The forts of most ancient date were the residences and palaces of kings long before the Christian era.

10.—FORTS AS BURIAL PLACES.

The absence of tumuli generally in Munster, though some are found there, leads to the supposition that forts must have been used for burial purposes. Cremation, for burials, may, at a very early period, have been usually practised, from the Celtic feeling of reverence for fire. It is probable that the bodies of men only were burned. An urn or fictile vessel was used to contain the ashes. Cremation, however, was not a universal practice in ancient Ireland, as many remains of skeletons have been found. The chiefs were often interred within the mounds of the forts, or beneath tumili or cromlechs in their interior. Monarchs were sometimes buried in the immediate vicinity or within the precincts of their dwellings. In some forts what are supposed to be burial chambers of considerable size exist, surmounted with large coverings of earth raised high over the surface of the fort itself, and occasionally, though rarely, skeletons have been discovered in the crypts. Eochaidh Aireamh, a Pagan Milesian king of Ireland, who began his reign in A.M. 5070 (130 B.C.), was so-called because he was the first to introduce the custom of burying the dead in graves dug in the earth, instead of covering them with cairns or heaps of stones. The tops of hills were in olden times favourite burying places. When buried without cremation, the body was placed towards any point of the horizon, although the east was preferred, either lying, sitting, or recumbent. Sometimes the bodies of kings and warrions were placed standing erect, fully accoutred and armed, and adorned with valuable ornaments of gold. The chief who had fallen in battle was often buried sword in hand, with his face and right arm turned against the territories of the enemy. King Loeghaire, who was a contemporary with St. Patrick, was interred in a standing position, with his weapons and war-dress upon him, in the external rampart of the rath which bears his name at Tara, with his face turned southwards towards his enemies, the Leinstermen.

(30) A large or remarkable monumental stone—a cairn stone.

11.—FORTS IN CATHOLIC TIMES.



In ancient times wood, which was then exceedingly plentiful in Ireland, was the material mainly used in architectural science. The use of stone and mortar was unknown before the introduction of the Catholic Faith. Even after the conversion of the country, when improved buildings were introduced, some of the inhabitants continued to live as in the earlier times. Several centuries afterwards Irish houses built of timber and wicker work were constructed with such skill as to excite the admiration of foreigners. In the sixteenth century there were natives who lived in forts during the winter, tilled a fertile piece of land in spring, and retired with their flocks and herds usually to the mountain districts in summer, living in huts or dairy habitations called booleys(31), and moving from place to place as found suitable. They lived on milk and white meats, curds, cheese, with meal, and probably calves' flesh, and in Autumn returned to secure their crops. Since then some of the forts may have been temporarily occupied for various purposes. In some instances they were renovated by additional works of lime and stone. People occasionally took advantage of the forts in the penal times for the safe celebration of Mass, and even monasteries or churches have been built on them, and some of them have been utilised as Christian burying places.

Dr. Petrie classes raths, when used in Christian times, under the denomination of cashels.

There were circumvallations also around ecclesiastical buildings, and, when of earth, they were called rath, or lis.

(31) Also boolies and boulies.

THE EXCHANGE, CORK.

FOR DESCRIPTION, SEE PAGE 332.

12.—ARTICLES FOUND IN FORTS.

Flint implements have been found in forts, but the Tuatha De Danaans were acquainted with the use of bronze, silver, gold, and enamel, when they first came to Ireland. Some Munster forts have been found to be associated with implements of iron. In some of them querns have frequently been found, showing that they must have been inhabited by an agricultural, granivorous people. The bones of the horse, the ox, and the pig or wild boar, and particularly those of goats and deer, and also ashes and fragments of burnt bones have been found in them.

13.—ERRONEOUS NOTIONS.

The forts of Ireland are called Danish forts, or raths. Ledwich says that all of them were built by the Danes.

Another account of the origin of the rath or mound is, that in the Danish wars, when the day of battle was over, when the Danes were conquered, and their bodies were strewn in thousands on the field, the Irish gathered them together, and made a big hole, into which they put them, and heaped them up into a great mound, covered them with earth, and dug scraws or sods and covered them.

There is also an idea that the forts were made by the fairies.

A popular notion exists that people were living under the forts in ancient times.

All these notions, however, are erroneous

Forts existed in Ireland before the Danes ever set foot on Irish soil. The word rath was in use in Ireland in the seventh century. The Danes, indeed, made plundering incursions into Ireland from the year 500 A.D., but it was mainly from 790 or 795, near the end of the eighth century, to their defeat at Clontarf in 1014, that their influence was greatest. Besides, they did not penetrate at all to many parts where numerous forts are found. Moreover, neither in Denmark itself, nor in any of the countries from which those collectively called Danes(32) came, are there any traces of similar works.

It seems, indeed, that the Danes built in the County Tipperary, and perhaps elsewhere, a great many extensive forts, possibly in imitation of those already existing, and not unlikely occupied, when suitable, the more ancient forts of the country.

The Irish also erected during the Danish period defensive works or fortresses, and mention is found made of Danish and Irish earthworks. Earthworks, too, resembling forts, or mistaken for them, may have been thrown up in more modern times. All these are different from the ancient Irish fort.

If the forts were formed in the Danish wars of heaps of slain covered over, they could not, on account of the natural decay of the bodies, retain their bulk to the present day. Besides, the stone forts would scarcely be erected or such a purpose, and the absence of any trace of sepulture in many of the forts shows that their origin was different. Furthermore, numerous though the battles undoubtedly were, the amount of slain would not be sufficient to form all the forts of Ireland. apart from the fact that no battles were fought in the vicinity of several of them. Possibly, however, the slain may, in some cases, have been formed into mounds that might easily have been mistaken for forts.

All these statements of Danish connection. and the similarity of the word Danaan. in any of its forms, and Dane, may explain the fallacy that all the forts are Danish. Some even say that the Tuatha De Danaans were Northmen or Danes.

But the original forts are the work of other people who occupied some of them at least, after their arrival in Ireland, as far back as 2680 years before the birth of Our Lord—4580 years to the end of the nineteenth century.

To the forts, as to the Round Towers, may be applied the poet's words slightly altered:

Around these forts have wandered the Briton and the Dane,
The captives of Armorica, the cavaliers of Spain,
Phoenician and Milesian, and the plundering Norman peers,
And the swordsmen of brave Brian, and the chiefs of later years.

The idea that the forts were made by the fairies is romantic rather than real.

The notion entertained by some persons that people were living under the forts may have arisen from the existence of the chambers.

14.—OTHER ANTIQUARIAN REMAINS.

Bodheen.—A bodheen was a large enclosure, surrounded by a strong fence or wall, and sometimes a place for defending a pass, or for cattle, and was often protected by towers. It is also a courtyard to a castle, and called a baion.

Boen.—A boen, a stone house, is said to be either of Pagan or Catholic origin. Some are supposed to have been used as a church, or as an anchoret's cell in the early ages of Catholicity in Ireland. The name bo (a cow), however, points to an earlier construction and use.

Cairn.—Cairns or carns, also called leacht, are rounded or conical heaps of small stones placed as sepulchral monuments covering dead bodies, or marking the site of some remark-

(32) More properly Ostmen or Eastmen. Norsemen or Northmen, including Scandinavians.

able event, or indicating boundaries, or erected as memorials. Reference is made in Genesis, xxxi, 46, to a similar heap. Many of the cairns are modern cenotaphs of an accidental or a violent death.

Castle.—The old castles whose ruins are found throughout Ireland were fortified dwellings, having, it is said, underground passages communicating with some of them. They were built by the Normans, the English, and the native Irish.

Cave.—The aboriginal inhabitants of Ireland were at first nomadic, and for a long time they were accustomed to live in woods and bogs, finding acommodation, sometimes, in caves and probably in tents. Many of the caves are formed artificially by stones regularly projecting over each other instead of arches, a fact which indicates that they must be of the remotest antiquity. Numerous inscriptions in characters that cannot at present be understood are found in them. In some caves there is a beehive-shaped chamber. The subterranean house or cave is rarely if ever unconnected with other similar structures, by passages lined and roofed in with stone. The subterrane is usually approached by a gallery of considerable length, wider at the bottom than the top. From the first chamber passages of a kind identical with that of the leading gallery, and varying in length from 6 or 8 to 20 feet, conduct to other circular or oval rooms. Chambers discovered unenclosed in plain fields may have become so from the obliteration in course of ages of their enclosures, or the enclosures may have been of timber which has long since perished.

A cave discovered near Mortlestown Churchyard, in the parish of Cahir, is probably an ancient habitation.

Cooking-places.—In some localities traces of the cooking-places of the ancient fenian hunters(33) are observable, and the stores which they heated for the purpose in pits, and the blackness of the earth around, remain to indicate the scene of the operations.

Cro(34).—The cro was a beehive-shaped hut, hovel, or pen—an uncemented stone structure, for a family or individuals. It was in general not more than 18 feet in length, 7 in breadth, and 8 in height. The door was narrow and low, seldom measuring 4 feet in height, and there were two small apertures for air, light, and smoke. Some of them, however, being more important, were much larger, and some large circular dome-roofed buildings were probably the dwellings of communities. The cro is rarely found where excavations could be practised. The cro and the clocan resemble the boen. At the present day there are inhabited beehive-shaped cabins at Keel, in the Island of Achill.

Cromleeh(35).—The cromlech is a rude oblong chamber composed of large slabs of unhewn and uncemented stone. The side slabs are placed on edge, and covered over with similar material, sometimes slanting. Some of these stones are of thirty tons weight. Cromlechs are at times found in series, or avenues, and are often enclosed by a circle of large undressed stones set on end. It is supposed that the Druids officiated in the practice of the Magian or Druid creed in this circle temple(36), and that the cromlech was the Druidical altar. More probably, however, the cromlechs were used for purposes of complete sepulture, as skeletons, and urns containing burnt bones have been found in them(37). Both cromlech and surrounding stones have in some cases been covered by a carn, whence it is probable that some distinguished personages have been interred beneath. The earth has been removed from some cromlechs by a process of denudation. They may possibly have served for a combination of both Pagan worship and as Pagan cemeteries. They are sometimes called, fallaciously, the beds of Diarmid and Graine, from the tradition of their flight and pursuit(38). They are also called, incorrectly, the beds or graves or monuments of the fenians. They are known, too, simply by the name of lacht(39), and often as labba, or other form of the Irish word for bed.

It seems not improbable that the cromlechs bore a resemblance to the altar mentioned in Exodus xx., 25, as being not built of hewn stone.

Dallan(40).—Dallans were standing pillar stones, in some places alone, in others there are circles of them enclosing a plain. They probably served as idol stones, or places for worship in the times of Paganism, as also for juridical assemblies in which the Brehons presided. Otherwise they may have formed part of the abattis of the strongholds of the Firbolgs, or megalithic monuments marking the graves of early Irish kings or queens, or Danaan heroes. Some of them, however, are found in connection with ancient Christian oratories, and marking Christian graves. Ogham characters are sometimes inscribed on them.

Danish Limekilns.—The Danes are said to have been acquainted with the fertilising quality of limestone, and in some places traces of Danish limekilns remain.

Danish Ridges.—Marks of ancient ridges and furrows, still visible in some fields, are attributed to the work of the Danes.

Faun(41).—A faun was a level green plot in front of the Irish residences, for games, exercises, and reception of visitors, but was sometimes not in connection with the habitations. It means a ring.

Giants' Graves.—Reputed graves of giants are found in various parts of Ireland. They are long mounds projecting over the surrounding surface of the ground.

Lake Dwellings.—The crannog(42), a wooden or ozier house, or, as the name implies, made of young trees, was a stockaded structure built in lakes and marshes. Crannog dwellings were in very general use even in the second half of the sixteenth century. Besides the crannogs, there were also stone dwellings in lakes—a position chosen for security. Communication was maintained by a boat or a path.

The cro, the subterrane, and the lake dwellings, are all probably older than the forts.

The people subsisted at first by hunting and fishing, and then as shepherds and agriculturists. To the shepherd state belong the numerous earthen forts.

Moats.—Moats are generally conical mounds usually of considerable height, and are called also tubids and tumili, and in England, barrows. Some consist of a large mass of earth; others, of an enormous cairn of small stones covered with a rich green sward. The ancient Irish moats are said to have been built by the Firbolgs as monuments of kings or heroes fallen in battle. Others again say that they are tombs of Tuatha De Danaan kings; or mounments of Scythian origin, raised over the remains of kings and princes of the Scythian race. It is also suggested that they are the burying places of Druids. In many cases they contain dome-shaped chambers or galleries called cists or cistvaens(43) formed of dry stones of enormous magnitude, the sides and roofs being composed of long flags without mortar or cement. In these receptacles were placed the bodies, or the urns containing their ashes. The earlier colonists in the country, the Firbolg and the Tuatha De Danaan tribes, were accustomed to build not only their fortresses and dome-roofed houses, but even their sepulchres, of stone without cement, in the Cyclopean or Pelasgic style. Moats are larger constructions than the ordinary cairns.

(To be Continued.)

(33) Called fene-men, the farmers; also finns, fionna, fionns, fenians, fianna, or fenni, old Irish champions or military heroes of Ireland. The Ard Righ lived at Tara, guarded by a band of warriors celebrated as the Feena Errin.

(34) Sometimes called clocan.

(35) The word is said to mean the stone of Crom, an altar for the worship of that false god. They are also called giants' graves or tombs, and in Irish, bothal, or house of God. It is difficult to imagine by what power such huge masses of stone were raised to a height, in some cases, of nearly four feet.

(35) The Celtic word means a circle, in reference to a primitive place of pagan worship. There were Druidesses also in Ireland, called Baudrai.

(37) In some urns food was found for the spirit of the deceased in accordance with the old pagan idea. In modern times some superstitious people leave aside food and clothing for their dead.

(38) There is a great diversity in the spelling of these names, as in the case of the Tuatha de Danaan. The first name is found as Dhiarmuda, Diaramuid, Diarmaid, Diarmid, Diarmod, Diarmud, Diarmuid, Diarmuidh, and Dearmuid. The second name is found as Ghrainne, Graine, Grainne, Grania, Grainnè, Gràinne, Grauna, Graunya, Graina Wael, Graine ni Mhaile, Graine-ni-Mhaile, Grainne Maoile, Grainne Maol, and Granuaile. The first name is rendered as Jeremiah, Darby, and Dermot, and the second as Grace, Joan, and Grace O'Malley. She was the daughter of King Cormac MacArt, and the wife of Finn MacCoole, spelled also Fiann M'Cumhaill, and in other forms.

(39) Lacht means also a heap of stones, as a cairn on the scene of a murder. Other forms of the word are: Cacht, a tomb; Cath, a large stone; a boundary stone.

(40) Or, dallaun or dolmen, or pillar stones and standing stones. When singly placed they are called maenhar and menhir, or tabe of stone, and when in rings, they are called stone circles, or pillar circles. They are similar to the harestones of Scotland, and the maen-gwyr of Wales. The Welsh circle of stones may have formed a bardic gorsedd. They are called megalithic as opposed to micholithic, small hewn stones. A pillar stone is called in Irish: legaun, or liagan, or liagane. The term dolmen is sometimes used as equivalent to cromlech.

(41) Or, faithche, or feathan.

(42) Also, crannoge,, and crannogue. Ancient log huts, dwellings of an early race, have been discovered in parts of Ireland. One in Co. Donegal was found 14 feet beneath the surface of a bog. It was 12 feet square, and 9 feet high, and consisted of a lower and an upper chamber.

(43) Also, kists and kistvaens.

IMPROVED FOG-SIGNALLING.

An interesting experiment in connection with submarine fog-signalling has been carried out at Egg Rock, Lynn, England. A bell was hung fifty feet below a buoy, moored in fifteen fathoms of water, and was struck by electricity from the Egg Rock lighthouse, where a power-house is established. By means of such submarine signalling it is stated that a person placing an ear against a rod held in contact with the hull of a vessel, is able to hear the bell from three to five miles away; in fact, it is believed that the ringing of the bell can be heard at a distance of ten or twelve miles.

Two centuries ago, a party of Spaniards were travelling in South America when one of them fell ill of a fever. For some time they carried him with them, but at last they were compelled to leave him behind. They laid him under a tree, with a supply of food, near a pool of water. It was a bitter experience for the sick man to be thus forsaken in his extreme need, and left to die alone. His thirst was intense, and, to add to his distress, the water was bitter and nauseous. But, strange to say, after drinking, he found his pains subsiding, his fever diminishing, and his strength returning. The tree under which he had been left to die was the chinchona; its leaves and pieces of its bark had fallen into the pool, making it, in fact, an infusion of quinine, which restored the fever-stricken traveller and led to the use of that wonderful meuicine.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

XI.—Continued.

A.D. 1568. Sir Henry Sidney returned lord deputy, and as he was a governor exceedingly beloved and honoured, so he was received by the city with more than ordinary solemnity. He landed at Carrickfergus, and as he made his journey to town, the sheriffs of the city, with a chosen band of citizens well appointed, marched five miles out of town to receive and escort him. The mayor and aldermen met him in state in the suburbs, and attended him to Christ-church, where he was sworn, and afterwards to the castle, where the mayor, according to the custom, delivered him the sword and mace, which he again returned.

This year great care was taken to prevent clandestine trade on the coasts near Dublin, and for that purpose sheriff Luttrell went by sea to Skerries, and seized a barque from Wexford retailing yarn and salt, and brought the vessel and master up to Dublin, who giving his promise that neither he nor his neighbours should for the future do the like on this coast, he was fined only a mark. The day following, the sheriff took with him the mayor of the bull-ring, and the trumpets and drums of the city, together with a chosen company of young citizens, and passed down to the new haven of Brymo, where he seized the Trinity of Milford retailing culm, the master of which took his oath to be in Dublin next day, and then a fine of 40s. was accepted from him; whereas both vessels were by law forfeited. This year a general hosting was proclaimed, and the mayor of Dublin was fined £100 Irish for disobeying the lord deputy's command, and committed to the castle of Dublin; but after two days imprisonment was enlarged.

A.D. 1571. This year Irish characters for printing were first brought into Ireland by Nicholas Walsh, chancellor of St. Patrick's, in Dublin.

A.D. 1573. The earl of Desmond was committed to the keeping of the mayor of Dublin, who told the government that the earl should be welcome to meat, drink, and lodging, but that he would take no charge of him; and the earl having licence from the government to walk abroad, he made his escape. Upon this he was proclaimed a traitor, and a large reward for him living or dead.

A.D. 1575. A great plague broke out in Dublin on the 7th of June, which continued till the 17th of October, by which (as it is said) 3,000 persons at least perished, and the city was so depopulated that grass grew in the streets, and at the doors of the churches, by reason of which Trinity term was not held in Dublin. Patrick Gough, who entered on the mayoralty at Michaelmas, and the two new sheriffs, Fagan and Barnewall, were sworn out of town at Glassnemenogue, and they kept their courts there till the 15th of October, when the sickness began to abate; and the lord deputy Sidney, who arrived at Skerries on the 12th of September, was sworn, and kept his court at Drogheda. The archbishop of Dublin ordered litanies and prayers to be said every Wednesday and Friday through the whole province, in order to avert this judgment.

A.D. 1578. On Sunday after St. George's day, James Bedlow, a citizen of Dublin, did penance, standing barefoot before the pulpit in Christ-church, and at the same time publicly confessed his faults, which were these: I. He denied the queen to be supreme head of the church. II. He alleged that one article of the ten commandments was false. And III. That the preachers, when they were out of their matter, and knew not what to say, fell to railing the Pope; all which particulars were confuted in a learned and eloquent sermon preached by Adam Loftus, archbishop of Dublin. This year the south wall of St. Nicholas's church was re-edified, as was the wall of the castle ditch, at the charges of the city. And Sir Henry Sidney erected Kilmainham-bridge. The mayor of Dublin did not go to Cullen's-wood on black Monday, according to custom, in regard the weather was so foul and rainy, that neither bow-men nor shot could go abroad; and the mayor of the bull-ring, who used to be elected in St. Andrew's church-yard, was now chosen in the Tholsel.

A.D. 1579. Sir William Drury, lord justice, ranged all the records in order in Birmingham-tower, and appointed a salary for a person to take care of them.

A.D. 1583. A controversy was determined by combat in the castle of Dublin, between two of the O'Connors, which we have inserted in Chapter II.

A.D. 1585. The citizens of Dublin, out of their fidelity and forwardness to supply the occasions of the crown, and in aid of Sir John Perrot, then lord deputy, bought munition to the value of £2,611. In consideration whereof the lords of the council of England wrote to Sir Henry Wallop, requiring him to allow the citizens a concordatum for the like sum.

A.D. 1588. Before Sir John Perrot delivered up the sword of government, he sent for the mayor and citizens of Dublin to the castle, and addressed them in these terms: "Mr. Mayor, I hope you and your brethren can testify that I have preserved the peace and quietness not only of this metropolis, but of the whole nation to the utmost of my endeavours, and as a memorial of the same I deliver this present to you." The present was a large silver cup, gilt, with a cover and spire over it, and on it this motto, 'In pace relinquo.' Upon his surrender of the sword, the mayor invited him to dinner, and a guard of young citizens with shot were appointed to wait on him till he arrived at his seat at Carew-castle in Pembrokeshire.

A.D. 1591. The mayor and citizens of Dublin having granted the site of the dissolved monastery of All-hallows, near the city, for erecting an university thereon, this year on the 13th of March the first stone thereof was laid by Thomas Smith, mayor, and dedicated to the holy and undivided Trinity, under the title of "Collegium Sanctæ et Individuæ Trinitatis ex fundatione Reginæ Elizabethæ"; and it was opened two years after.

A.D. 1596. A great quantity of gunpowder being landed at the Wood-quay to be conveyed to the castle of Dublin, by accident took fire, on the 11th of March, and did great damage to the city.

A.D. 1603, April 5. King James proclaimed in Dublin.

May 11. Charles lord Mountjoy made lord lieutenant.

June 1. Sir George Cary sworn lord deputy, who appointed the first sheriffs for the county of Tyrone.

A.D. 1604, Feb. 3. Sir George Chichester sworn lord deputy, and soon after establishes a circuit for judges of assize for Connaught and Munster.

This year the plague began in Dublin in October, and continued till the September following. It broke out again the next succeeding year, and continued that and the following.

A.D. 1605. The Jesuits and seminary priests busied themselves greatly in dissuading the people from resorting to divine service, according to the act of uniformity, and the king's proclamation thereon grounded. The lord deputy (Chichester) and council convened before them the aldermen and some of the principal citizens, and endeavoured by persuasions and lenity to draw them to their duty. They also exemplified under the great seal and published the statute of uniformity of the 2d of Eliz. in regard there was found to be some material difference between the original record and the printed copies, that none might pretend ignorance of the original record, and added thereto the king's injunction for the observance of the said statute. But these gentle methods failing to have any effect, sixteen of the most eminent of the city were convened into the court of castle chamber, of whom nine of the chief were censured, and six of the aldermen fined each £100, and the other three £50 a-piece, and they were all committed prisoners to the castle during the pleasure of the court; and it was ordered that none of the citizens should bear office till they conformed. Their fines were allotted to the repairs of such churches as had been damaged by the accidental blowing up of the gunpowder in 1596, to the relieving poor scholars in the college, and other charitable uses. This proceeding brought many to an outward conformity.

The customs of tanistry and gavelkind were this year abolished by judgment in the king's-bench.

A.D. 1606. Robert Lalor, vicar-general of Dublin, was indicted on the statute of 2 Eliz. cap 1. He submitted, and abjured, though he privately denied all again.

A.D. 1607. About this time a conspiracy was set on foot between the earls of Tyrone and Tirconnel, Maguire, O'Cahan, the lord Delvin, and almost all the heads of the Irish septs of Ulster, to surprise the castle of Dublin, cut off the lord deputy and council, dissolve the state, and set up a government of their own. A discovery of this conspiracy was made on the 19th of May this year by a Papist who was trusted and called into the consultation, but had too much virtue to go the lengths they required. He dropped a letter in the council-chamber directed to Sir William Usher, clerk of the council, which being taken up by one of the door-keepers, was immediately put into the hands of Sir Arthur Chichester, lord deputy, then sitting in council. The import of the letter was as follows: "That he was called into company by some Popish gentlemen, who, after administring an oath of secrecy, declared their purpose to murder or poison the deputy, to cut off Sir Oliver Lambert, to pick up one by one the rest of the officers of state, to oblige the small, dispersed garrisons by hunger to submit, or to penn them up as sheep to their shambles. That the castle of Dublin, being neither manned nor victualled, they held as their own; that the towns were for them, the country with them, the great ones abroad and in the north prepared to answer the first alarm; that the powerful men in the west are assured by their agents to be ready as soon as the state is in disorder. That the Catholic king has promised, and the Jesuits from the Pope warranted men and means to second the first stirs, and royally to protect all their actions. That as soon as the state is dissolved, and the king's sword in their hands, they will elect a governor, chancellor, and council, despatch letters to the king (James I.) trusting to his unwillingness to embark in such a war, and to his facility to pardon, would grant their own conditions of peace and government, with toleration of religion. That if the king listen not to their motions, then, that the many days spent in England in debates and preparations would give them time enough to breathe, fortify and furnish the maritime coasts, and at leisure call to their aid the Spanish forces from all parts." The writer of the letters declares, "That he interposed some doubts to them, which they readily answered, and he pretended to them to consent to further their projects, and that he took the method of this letter to give notice of their designs, though he refused to betray his friends; in the meantime that he would use his best endeavours to hinder any further practices." And he concludes, "That if they did not desist, though he reverenced the Mass and the Catholic religion equal to the devoutest of them, yet he would make the leaders of that dance know that he preferred his country's good before their busy and ambitious humours." Upon this discovery, the earls of Tyrone and Tirconnel, and the lord Maguire, fled beyond seas, and most of the other conspirators absconded and shifted for themselves as well as they could; yet some of them were taken and executed. This plot alarmed the kingdom greatly, and the more so as it followed thus close on the heels of the gunpowder treason in England.

A.D. 1608. Sir Arthur Chichester, lord deputy, joined to his forces a strong company of the citizens of Dublin, and another of the townsmen of Drogheda, and on the 5th of July began his march to suppress the rebellion of O'Dogherty. But that rebellion being quelled by marshal Wingfield, and the prime rebel slain the same day the deputy began his march, rendered the assistance of the citizens of no further use at that time. The charter of the city of Dublin, with an addition of further privileges, was renewed in the latter end of this year.

A.D. 1611, June 24. The lord Carew came over commissioner to inspect the affairs of Ireland.

A.D. 1613, May 18. A parliament called, which had not been for twenty-seven years before, when the Papists refuse to attend the house upon a difference between them and the Protestants in choice of a speaker.

Doctor Thomas Jones, chancellor, and Sir Richard Wingfield, marshal, were sworn lords justices.

A.D. 1614, Oct. 11. The parliament met again; the lord Kerry and lord Slane dispute precedency, which was adjudged to the former.

A convocation was this year held in Dublin, which established articles of religion.

A.D. 1615, Oct. The parliament was dissolved after several acts passed.

Doctor Thomas Jones, archbishop of Dublin, and Sir John Denham, lord chief justice of the king's-bench, were sworn lords justices.

A.D. 1616, Aug. 30. Sir Oliver St. John (afterwards Viscount Grandison) was sworn lord deputy.

A.D. 1617, Oct. 13. A proclamation issued for banishing the Popish clergy.

A.D. 1621. Sir Dudley Digges, Sir Thomas Carew, Sir Nathaniel Rich, Sir James Perrot, &c., came over commissioners to inquire into the state of the kingdom on some complaints of the Irish.

They allow (by the king's order) the new lord deputy Falkland all the profits abating only at the rate of £2,000 per ann. till he should come and receive the sword.

(To be Continued.)

A FAMOUS RELIC.

The carved wooden chimney-piece which was taken from the rooms in New Inn, Strand, which Sir Thomas More occupied before he removed to Lincoln's Inn, has just been sold in London. According to Sir George Bue, New Inn was originally a "guest inn," having for its sign a picture of Our Lady. In the reign of Edward IV. the inn was purchased by the then Chief Justice of the King's Bench for the accommodation of the students, who until that period had been lodged at St. George's Inn. Most of its buildings date back to the early part of the eighteenth century, and the garden, which was laid out about the same time, was described by a contemporary writer as being "very pleasant and airy."

THE EXCHANGE, CORK.

(For Picture see page 329).

(From "The Ancient and Present State of the County and City of Cork. By Charles Smith, M.D. Vol. I. Second Edition, with additions. Dublin: 1774).

The Exchange, which almost divides the main street of the city into two parts, N. and S., is an handsome regular structure of hewn stone. The front consists of five arches, with three others next the passage to the street. The middle arch, or principal entrance, is adorned with columns of the doric order, over which are fluted ones of the ionic order; between the front windows are pilasters of the same, with a handsome cornice and balustrade over these. On the top is an elegant cupola, covered with lead, a gilt ball, cross, and dragon. This building is in excellent proportion, and I may venture to pronounce it the neatest and most regular of the kind in Ireland.

On a table in gold letters, hanging up in this exchange, is this inscription:

'This building was erected by the public revenue of this city, and its foundation laid Anno MDCCVIII.

Joseph Franklin, Esq; Mayor.
Edward Hoar, Esq;
John Hawkins Esq; } Sheriffs.

Continued, Anno MDCCIX.

Rowland Delahoyde, Esq; Mayor.
William Lamb, Esq;
James Morison, Esq; } Sheriffs.

Finished, Anno MDCCX.

Noble Rogers, Esq; Mayor.
Richard Philips, Esq;
Samuel Wilson, Esq; } Sheriffs.

Alderman Daniel Crone,
Alderman James French,
Alderman William Goddard,
Alderman William Brown, } Directors.

THE FALSE MAID.

(From the Hungarian of Faluda.)

She is born of noble stem,
Fairer than the fairest gem
Which upon her robe doth shine,
Graceful, beautiful, divine.
What avails it all to me?
She is as false as false can be!

She has eyes like demsons black,
Shining like the comet's track;
Mouth of witchery—lightning glance—
Heaven is in her countenance.
What avails it all to me?
She is as false as false can be!

Neck of alabaster, lips
Crimson roses to eclipse,
Chin of marble's smoothest glow,
Shoulders piled of purest snow.
What avails it all to me?
She is as false as false can be!

Fair when distant, fair when near,
Fair her smile and fair her tear;
Fair when bending, fair erect—
Unadorn'd, or gem-bedeck'd.
What avails it all to me?
She is as false as false can be!

THE WORLD'S RICHEST GOLD MINE.

HOW AN IRISHMAN DISCOVERED IT.

The Right Rev. James Murray, Bishop of Northern Queensland, relates as follows the story of the discovery of the world's richest gold mine and the fate of its Irish finder:—

Australia possesses one of the wonders of the world in the marvellous Mount Morgan gold mine. No parallel to it has ever been discovered either in this or in any other country, for up to date it has produced no less a sum than £50,000,000 in gold, and is still producing, a record for a single mine which, I believe, is unequalled. When the final and total output of the Mount Morgan Mine is registered it will be likely to stand unexcelled for all time to come. The story of its discovery makes a strange and rare tale. A full generation ago an adventurous and hardy Irishman named Connor pushed his way across Queensland's coast range mountains, and after building a log cabin, started in to carve a farm for himself out of the surrounding wilderness. Years went by and the clearing of farmland grew. The centre of the homestead that Connor had located was ocupied by a conical shaped hill. This hill was covered with what miners technically call float. I do not know myself what it is exactly, but I believe its physical appearance resembles that of the clinkers found in furnaces. The hill itself, under certain conditions Connor noticed, frequently took on all the colours of Joseph's historical coat, but to his uninstructed mind this phenomenon meant nothing more than an agreeable physical addition to the view. So Connor led his peaceful, if hard, existence, and eked out a modest livelihood, and had no thought beyond his farm and its products. His wealth lay in a few corn patches and in sundry and divers cattle and sheep. One evening after sundown two Welsh prospectors named Morgan arrived at Connor's farm and sought shelter for the night. Connor gave them a share of his scanty fare and a shakedown on the veranda.

The following morning the Morgans were about to start on their way, when one of the brothers chanced on a piece of float which unmistakably betrayed the presence of gold. The Morgans thereupon questioned Connor closely about the country thereabouts, and finally asked him if he had ever noticed anything queer in the appearance of the earth. "Yes, I have," replied Connor. "Shure, it's mesilf that owns an entire hill that every now and again shows all the colours of the rainbow." He willingly showed the Morgans the mount, and gave them full permission to work as they would upon it. The Morgans were soon convinced that they had chanced on a great discovery, and at once made their way back to the coast with the float they had gathered from the hillside. The assay showed their surmise to be correct, for the float was rich in gold. Then they returned to the lonely ranch, and offered Connor £300 spot cash for his farm. Connor had had seven years of desolate life, and the sum mentioned to a man in his position represented a small fortune, so he eagerly closed with the offer. He did not dream when he packed up and started coastward with his precious £300 strapped carefuly round his waist, that he had parted with the richest treasure Dame Nature had deposited in the mountains of Australia or those of any other country. The rest of the story is simple. The Morgans managed to get together a sufficient sum to purchase a rude stamp mill, which it took them six months to transport and erect. Within thirty days from the time it started working it had paid for itself, and an order for improved machinery was on its way to the coast. That was twenty-five years ago. Since then £50,000,000 has been taken from that cone shaped hill, and it is yielding gold as plentifully to-day as ever. The cone is gone forever, though, and two years since, when I stood on the rim of a saucer-shaped excavation, and looked down at a busy shift of miners below, I was standing where the base of the cone had rested a quarter of a century before. The mountain was probably of volcanic origin, and the gold impregnated the soft rock which formed the centre of the cone. Mount Mogan is to-day a busy hive of industry—an industry which, by the way, has made the Morgan brothers take first rank among the world's richest men. To their great credit, be it known, that after their own success was assured, they sought out Connor, and so richly rewarded him for his kindly hospitality on the night preceding the great discovery of the Mount Morgan Mine, that he was made independent for his life.

GREAT LITTLE MEN.

One of the natural instincts of men is that curiosity which all feel regarding the personal appearance of those persons who have stood mentally high above their fellows. Whenever we read or hear of a great man, and especially when we are familiar with his history, we unconsciously from a picture of his looks and stature to which the contrast to the actual man is often very disappointing. Often we refuse to substitute the strange, unsatisfying reality for our own mind creation, especially if the great man is found to be a small one—the intellectual giant a physical dwarf. We are apt to overestimate the height and bulk of our heroes and endow them, if attractive, with supermuman beauty, or, if hateful, with ugly and repulsive looks. It was this feeling that made the people of Yarmouth, England, when Nelson, delicate in body and insignificant in appearance, was passing over the quay to take command of his first ship, exclaim: "Why make that little fellow a captain?"

During Napoleon's first campaign in Italy, in 1796, the Italians were greatly surprised at his personal appearance. His short stature, his pale face, the sickly thinness of his frail body, which seemed consumed by the fires of his genius, but was in reality made of muscles of steel, seized the imagination of the people by the contrast they presented to his dazzling feats of arms. It was a novel and startling experience to find that direct and penetrating glance, that abrupt, imperious gesture, laconic speech and peremptory and absolute tone—all which bespoke the man born to command—associated with such a dwarfish and attenuated frame.

Facts, however, show beyond a doubt that necessary connection between the size or shape of the body and the strength of the mind is purely imaginary, yet many persist in thinking differently.

Indeed, far the larger part of the men who have ruled the world, either intellectually or with the sword, have been men of small stature. Aristotle, the Greek philosopher, who for 2,000 years maintained despotic sway over the world of thought, was a slender man with spindle shanks, small eyes, and a shrill, stammering speech. In the great council of Nice, consisting of 2,000 delegates, the most potent spirit who, after long and fierce disputes, carried the council with him, was Athanasius, a man of very small stature—"a dwarf rather than a man," says Dean Stanley, "but of almost angelic beauty of face and expression." In his little body dwelt a mighty soul. Combining subtlety of thought and power of eloquence with resoluteness of will, intensity of conviction and intrepidity of spirit, he fought single-handed, and for half a century the great battle of orthodoxy, having "no friend but God and death," and to-day the creed of Athanasius is substantially the creed of Christendom.

Gregory the Seventh, the mightiest of the Roman Pontiffs, was a diminitive man, and so were Canute the Great and the great Conde. Voltaire, the "Devil's Messenger," the literary autocrat of the eighteenth century, and the most brilliant wit of the day, was one of the thinnest and most spectral of human beings. Two of the most potent spirits that directed the storm of the French Revolution, Robespierre and Marat, were far below the average stature. The former, an incarnation of will, who by the sheer force of his intellect swayed the multitude and the National Assembly at his pleasure, was but five feet two or three inches high, and the latter was less than five feet. Many of the most eminent Frenchmen of the nineteenth century—La Place, Poisson, Fourier, Thiers, Guizot—were small, spare, spiritualised beings who could distinctly feel their own ribs. Montaigne, the father of essayists; Doctor Watts, the hymnist; the sickly Scarron, who in reference to his ill-health and insignificant stature, called himself "an abridgement of human miseries"; Alexander Pope, who wore three pairs of stockings to plumb out his legs to a decent size; Campbell, the author of "Hohenlinden," "a pretty, little, delicate, lady-like, finical gentleman"; Thomas De Quincy, the "opium eater," were all dwarfish men.

Suwarrow, the greatest of Russian generals; Frederick the Great, David Garrick, the wonderful actor; and Alexander Hamilton, whom Tallyrand pronounced one of the three greatest men he had ever known, were slender and below the middle height. The brave General Marion "was in stature of the smallest size, thin as well as low," and Dr. Kane, who surpassed all his Arctic companions in braving torrid heat and polar cold, was but five feet six in height, and weighed at his best but 135 pounds.

FARMS IN THE DEEP SEA.

The sponge, like most other of Nature's gifts, is in danger of being effaced by reason of the ruthlessness of man. Growing upon the surfs of the ocean, largely off the Florida coast, they have been comparatively easy of access, and as there has always been a good market for them, the rocks have been stripped without regard to the needs of the future. Anticipating the extinguishment of this useful fungus, the Government has been making experiments to demonstrate the practicability of its artificial propagation, and ere long there will be a stock farm of sponges on the Florida coast, where a man can go and buy eggs or young sponges as he would buy hens' eggs or calves now.

Some time ago Dr. H. F. Moore began experiments at Sugar Loaf Key, about 25 miles east of Key West, and at several places in Biscayne Bay. Several thousand sponge cuttings were planted at these places under a variety of conditions. The chief problem confronting the experimenter in this field is to find some ready means of attaching the cuttings to a durable support, capable of resisting the action of salt water and the ravages of the tornado and animals having similar destructive habits, and which at the same time will not have an injurious effect upon the growing sponge. These cuttings live, and their cut surfaces heal without difficulty.

About six weeks after the plants were made they were examined, and under favourable conditions it was found that about 95 per cent. of the sheepswool cuttings were alive, healed and apparently healthy. In several cases where the plants were made in places exposed to very strong currents many of the pieces were torn loose from their supports, while others had been killed by the rough action of the currents.

The cuttings from yellow sponges suffered a much greater mortality than those made from the sheepswool sponge, but whether this be due to the more delicate nature of the animal or to the accidental conditions under which they were planted is not yet determined.

So far as has been discovered, the more valuable sheepswool spouge seems to possess greater hardiness than its congener.

LITERARY NOTES.

Mr. Andrew Carnegie is not the first millionaire to buy a historian's library en bloc. The seven thousand volumes of chronicles and travels from which Gibbons distilled the "Decline and Fall of the Roman Empire" were purchased by Beckford after the writer's death. "I bought it," said the author of "Vathek," in his lordly way, "to have something to read when I passed through Lausanne." There were few rarities in the collection, but most of the authors were in the best obtainable editions and, of course, in perfect condition; the fastidious Gibbon was incapable of behaving disrespectfully to a book. For six weeks Beckford revelled in his purchase; and he read himself nearly blind. He soon tired of his toy, however, as he tired of most things, and presented the whole collection to a German physician named Scholl. The recipient showed his appreciation of the treasure by promptly selling it at haphazard.

✧ ✧ ✧

The following birthday mottoes are suggested by a writer in the "Daily Chronicle" as appropriate for Frances Marion Crawford—

Novels which have so lately attracted the attention of a fair and gentle public.—Ruskin.

A tale of amusing fiction upon the romance of—Sir Walter Scott.

Spirited narrative with more than a touch of dialogue made eminently interesting.—George Eliot.

The rose of yesterday.—Omar Khayyam.

Said Francis.—Tennyson.

I do not claim that I can tell a story as it ought to be told. I can only claim to know how a story ought to be told.—Mark Twain.

The Path to Rome.—Hilaire Balloc.

✧✧✧

During the coming winter it is proposed to give performances, both in London and Oxford, of a Nativity Play, entitled "Bethlehem," written by Mr. Laurence Housman, with music by Mr. Joseph Moorat. The whole production will be designed and directed by Mr. Gordon Craig, who will have the co-operation of Mr. Martin Shaw as musical conductor. The first performance will take place in London on or about December 31, 1902, and representations at Oxford will be given about the same time. In neither case will the play be given in a theatre, and as it is necessary for the management to be free from any restrictions which the Censor of Plays might wish to impose, they have to rely entirely on subscribers to make the production in London possible. None but subscribers and their friends will be admitted to the performances.

✧✧✧

Apropos of American journalism it is a pleasure to record (the "Academy" remarks) the changes which have just been made in that excellent periodical, "Harper's Weekly." With the issue of this periodical for July 5, the size of the weekly has been reduced from folio to quarto size. It contains forty pages of reading matter and illustrations. From the cover the time-honoured insignia of the Harpers are missing. Instead there is a design based on the picture of the Goddess of Liberty, whose torch illuminates the names of the principal contributors and their topics—the opening chapters of Anthony Hope's new novel, "The Intrusion of Peggy"; "The Five Boons of Life," by Mark Twain; "The Fourth of July Boy," by W. D. Howells; and an anniversary poem, "Santiago," by Thomas A. Janvier. On the other side of the Goddess are the names of the contributors to the "Comment." This "Comment" is a curious feature which consists of several pages of paragraphs on all sorts of more or less timely topics, set forth without any particular typographic ostentation.

✧ ✧ ✧

Probably not a few of our readers (the "Academy" says) could write an interesting account of their feelings when they first walked round the British Museum Reading Room. And if they did so their impressions would doubtless read like those of a writer in the July "Atlantic Monthly" who whimsically argues that a great library should be enjoyed as a whole, without any petty personal quest. "I am as fond as the next man," he says, "of knowing what I am about, but when I find myself ushered into a great library I do not know what I am about any sooner than I can help. I shall know soon enough—God forgive me! When it is given to a man to stand in the Assembly Room of Nations, to feel the ages, all the ages, gathering round him, flowing past his life, to listen to the immortal stir of Thought, to the doings of The Dead, why should a man interrupt—interrupt a whole world—to know what he is about? I stand at the junction of all Time and Space. I am the three tenses. I read the newspapers of the universe. . . . . I can only speak for one, but I must say, for myself, that as compared with this feeling one has in the door, this feeling of standing over a library—mere reading in it, sitting down and letting one's self be tucked into a single book in it—is a humiliating experience." But the writer is correct when he says that the feeling wears off. Few of the frequenters of the Reading Room do not look as though they had recently fed on honeydew and drunk the milk of paradise.

✧ ✧ ✧

The following interesting Dickens relics were recently offered for sale by Messrs. Sotheby, Wilkinson and Hodge, at their rooms in Wellington street, Strand, when they realised the sum of £85 :—

1251. Dickens (Charles)—The mahogany office table, the office chair, the high back cane chair, and looking glass, in mahogany frame, which for many years were in daily use by Charles Dickens in his private office at 26 Wellington street, Strand, where he edited "All the Year Round."

These relics of the famous novelist were given by Charles Dickens' son to the housekeeper, Mrs. Hedderley, from whom they were bought by the late Henry Walker, and removed to the residence of his step-son, James Hooper, of Bromley, Kent,, who alone from that time has had the custody of them. Signed and witnessed attestation papers accompany them. It is now proposed to offer these relics for sale by private treaty, and those interested can inspect them at No. 9 Hanover Park, Peckham, S.E., together with the attestation papers.

✧ ✧ ✧

Now is the horticultural season at its height, and especially the season of carnations, picotees and pelargoniums. The literary tendencies of pelargonium-fanciers are certainly to be reckoned among the curiosities of the verbal craft. Among new varieties of this flower which figure in the enticing catalogues of nurserymen we have noticed the following; the technical descriptions are taken exactly from the florists' lists, and are doubtless more or less accurate—

Andrew Lang—Glowing scarlet; large white blotch on the two upper petals.

Hall Caine—Bright cherry-red; bloom of immense size.

Ian Maclaren—Warm salmon.

Rev. H. Brett—Fiery scarlet, with white eye.

Winston Churchill—A seedling from "Menelik," and for richness of colour, in this so-termed fancy class, is unsurpassed.

Mrs. Brown Potter—Another decided advance in the pink-coloured section.

✧ ✧ ✧

How many people know that Mr. Swinburne once turned novelist in a small way? We are reminded that he did by a writer in the "Daily Chronicle," who has rediscovered in the "Tatler" (the one which was born in 1877 and died in the following year) a story entitled "A Year's Letters." The pseudonym which Mr. Swinburne selected for this venture was "Mrs. Horace Manners," and the story, after a rather clumsily ironical prefatory epistle, glides into a quite real study of character. The style, too, is simple—at any rate for Mr. Swinburne—and it is to be hoped that some day the book may be re-issued with the author's name. It would be a pity if Mr. Swinburne's prose were deprived of this proof of its occasional limpidity and conciseness.

✧✧✧

Mr. Gelett Burgess has been interviewing a dime novelist, with interesting results in the American "Bookman." Mr. Eugene T. Sawyear, author of the "Nick Carter" series, is a very harmless person, whose greatest care is for his geraniums when he leaves the office of the San Jose newspaper, of which he is city editor. Mr. Sawyer talked much to the purpose. He has a record, not only for quantity, but for speed—

> "The fastest work I ever did," Mr. Sawyer said, "was once when I got an order by wire from Street and Smith, saying that one of their regular writers had failed them, and asking if I could send them a story of 60,000 words in four days. Of course I accepted. And, that, too, was in the days of longhand, before typewriters were common. As usual, I procrastinated, and two days had elapsed before I thought about the story. Then I locked myself into my room and began, writing in lead pencil, while my wife copied my work in ink. I didn't eat nor sleep, living on coffee alone, till the novel was completed, in about sixty hours. In order to have the manuscript reach the publishers in time, I had to have it in the post office at noon, and I caught that mail with something less than a minute to spare. When I saw 'Captain Crash' in print, it was just like reading a new book. I had forgotten absolutely about the plot and characters, having written almost automatically."

✧ ✧ ✧

Asked about his methods of work, Mr. Sawyer developed, in an amusing way, his theory of an opening. This he maintains should be at once striking and illuminative.

> The old method used to be something like this:
>
> "'Help! Help! Help!' These words rang out into the air on a cold November night, in a little town not twenty miles distant from New York. Some one was in dire need, but the whole country seemed utterly deserted."
>
> And then immediately there was a row of stars, after which the paragraph went on:
>
> "Twenty years ago, Ephraim Gobson was the most respected citizen in New Potsdam, and Huldah, his sunny-haired daughter, was called the prettiest girl in the village, etc., etc."
>
> But I fancy I revolutionised the opening of the dime novel. Writers for the magazines have learned how necessary it is to begin the plot with the first word, and do it perhaps more artistically, but it's the same principle. Here are some of my beginnings. For instance, in "Ramon Aranda, the Californian Detective," I start:
>
> "'We will have the money, or she shall die!'"
>
> Or, in another one I thought rather striking:
>
> "'Swear the defendant!'"
>
> And in "The Dead Man's Hand" the opening line was this:
>
> "'It is a case of mysterious disappearance, Mr. Carter!'
>
> Sometimes it is harder to get a good opener than a good title, though the title and the "cover situation" are what usually sell the book. That last quotation is from "The Dead Man's Hand; or, Nick Carter's Matchless Method." The main title was suggested to me by the publishers, who thought it would sell well, and from that phrase I built up the whole book.

In conclusion, Mr. Sawyer, who is under no delusion about the quality of his work, remarked—"It is not only the 'submerged tenth' who read cheap stories. I have been into book shops and seen bankers and capitalists gravely paying their nickels for the same tales their elevator boys read. I have known literary men to confess that they had read tales as bad as mine with interest and excitement. Such yarns are about as good a remedy for brain fag as you can find. They're easy, and require little effort of the mind. You can read "The Pirate of the Carribbees" when your nerves forbid ethical discussions."

SCIENTIFIC TOPICS.

The influence of mountains on the fall of hail has frequently been the subject of controversy, but up to the present time no certain conclusion appears to have been arrived at. The Italian Meteorological Office has recently published an interesting note upon the question by Prof. V. Monti. The positions chosen were, perhaps, the most suitable for the purpose of any among the Italian network of stations, viz., the Collegio Romano and Montecavo, an isolated station near Rome, situated at an altitude of about 1,000 meters; the complete observations at both stations, for the years 1880-87, are contained in the Annals of the Italian Meteorological Office. During this period, forty-one days of hail were recorded at Rome against eighty at Montecavo; the monthly values show two maxima, in April and October, and two minima, in July and December, as regards the excess of days of hail at the mountain station. A comparison of days of thunderstorms shows, on the other hand, that there were 76 such storms at Rome, against 29 at Montecavo. This seems to show the excess of hail at the mountain station is not attributable to a greater intensity of atmospheric electricity. The author gives a table showing that the monthly mean temperature at Rome is at times about 10 degrees higher than at Montecavo, and suggests that the fusion of hail traversing a warmer stratum of air may account for the smaller amount at Rome.

✧ ✧ ✧

Probably no greater feat is recorded in the annals of American railroading than the performance of the trains sent by the New York Central and Pennsylvania Railroads over the roads between New York and Chicago. At a speed which sometimes exceeded 80 miles an hour, and which averaged some 50 miles an hour including all stops, these trains, travelling east and west, covered the respective distances of 980 and 912 miles three minutes ahead of the schedule time of 20 hours. With these two remarkable records, American railroads hold the record for fast, long runs. On the Orleans and Midi Railroad, the Sud express travels 486 miles from Paris to Bayonne in 8 hours 59 minutes, averaging 54.13 miles an hour. That is probably the fastest train in the world for the distance. But the length of track is little more than half that traversed on the shortest route between New York and Chicago. Other famous European runs that deserve mention are those made in England by the East Coast express and the West Coast express. The former runs to Edinburgh and the latter to Glasgow from London. Both travel at an average speed of 50 miles an hour; but the distance covered is only about 400 miles. It is difficult to award the palm to either of these new American trains. The New York Central's express covered a longer distance at a higher average speed than the Pennsylvania train. On the other hand, the Pennsylvania train, although its route was shorter and its average speed not more than 45½ miles an hour, encountered heavy grades in crossing the Alleghany mountains. The officials of both roads claim that the journey from New York to Chicago could easily be covered in 18 hours.

✧ ✧ ✧

The enterprise of supreme importance in the transportation field, if not, indeed, in the entire range of activities on the island of Cuba, is found in the project being carried out by Sir William Van Horne, the builder of the Canadian Pacific Railroad, and the capitalists associated with him in the construction of a central line of railroad throughout the length of the island. This "backbone railway," as it has been aptly termed, and which will exert a more powerful influence for the general development of the island and all its resources than any other one undertaking, was an objective institution with foreign capitalists for half a century prior to the Spanish-American war; but all their schemes failed of consummation. The main line from Santa Clara to Santiago, to be completed shortly, is about 350 miles in length; but there will be feeders to the north and south coasts which will bring the aggregate length of the system to approximately 1,000 miles. The branches or feeders will reach such ports as Nipe, Baracoa, Gibara, and Manzanillo, connecting them with the interior, and affording an outlet to deep water shipping points for the plantations along the lines.

✧ ✧ ✧

The magnitude of the locomotive industry in the United States was emphasized in the festivities which attended the recent completion of their 20,000th locomotive by one of the American locomotive works, an event which occurred in the spring of the present year. The early founding of the Baldwin Locomotive Works, its rapid growth, the many standard types of locomotives which have been originated in the shops of the company, and the fact that its locomotives have been for years finding their way to the four corners of the earth render the works thoroughly representative of the locomotive industry in America. Mathias W. Baldwin, who founded the establishment, started in business as a jeweller in a small shop in Philadelphia in the year 1819. In 1830 the steam railroad was beginning to make its appearance and establishing itself in the States, and to gratify public interest the proprietor of a Philadelphia museum gave an order to Baldwin for the construction of a miniature locomotive for exhibition. In the spring of 1831 the work was completed, and the toy was set in motion on a circular railroad track at the museum. The success of the model brought an order to Baldwin for a locomotive from the Philadelphia, Germantown and Norristown Railroad Company. Guided by his experience with the little model, and by some memoranda which he had taken of a locomotive recently imported from England by the Camden and Amboy Railroad Company, Baldwin completed the curious and historical locomotive known as "Old Ironsides." The engine was tried November 23, 1832, and did duty on the Germantown road, and, later, on other roads for a period of over twenty years. The "Ironsides" was a four-wheeled engine, modelled after the English pattern of those days, and it weighed in running order something over five tons. The cylinders were placed beneath the smokebox and connected to a pair of cranks on the rear axle, which was placed in front of the firebox. The driving wheels were 54 inches in diameter, and the front wheels 45 inches in diameter. The cylinders were 9½ inches in diameter by 18 inches stroke, and they were carried beneath the smokebox, as is done to-day with modern inside-connected engines. The wheels had cast-iron hubs, wooden spokes and rims, and wrought-iron tyres. The frame was of wood. The boiler was 30 inches in diameter, and contained seventy-two copper flues 1½ inches in diameter. The valve motion was given by a single loose eccentric to each cylinder, and the engine was reversed by changing the position of the eccentric on the axle by a lever operated from the firebox. The contract price was 3,000 dollars.

✧ ✧ ✧

An interesting work of creating a waterfall for the purpose of supplying power is now being carried on at the headwaters of the Little Blackfoot River, about 30 miles west of Helena, Mont. Miles of flumes and ditches are being constructed by means of which a number of small streams are being brought together and carried five miles to the mouth of Hat Creek over a precipice of 500 feet. Here a power plant will be erected, and it is calculated that there will be 1,000 horse power available. The current generated will be transmitted a distance of ten miles to the Porphyry Dike Mines, at the summit of the main range of the Rocky Mountains, where there is one of the largest deposits of free-milling gold to be found in this country. The work is being done by a syndicate of St. Louis capitalists, and the active work has been in progress for two years and is now rapidly reaching a state of completion.

✧ ✧ ✧

Two intentors who live in Stirling, Scotland, have invented a lifeboat which is intended to become automatically inflated when it is immersed in water. A spring is employed which is kept in a state of tension or compression by means of a strip or roll of paper, the tensile strength of which, as long as it is dry, is sufficient to maintain the spring in a state of tension or compression, but which, when it becomes wet by immersion in water, immediately loses its strength or rigidity to such an extent that it is ruptured by the energy stored in the spring. Thus is the spring set free. The release of the spring causes the production of a volume of gas from materials sufficient in quantity to give the appliance any flotation power required. The materials in question are inclosed, together with the spring, in a perforated metal case, secured in the appliance in any desired manner, but so that water can have access to the controlling strip, as soon as the appliance is thrown overboard. Gas can be produced by the combustion of cordite or ballustite.

✧ ✧ ✧

A process has been discovered in France by which garbage is converted into briquettes, which consists in mincing the refuse from abattoirs, fish markets, etc., straw, paper, etc., and adding tar and naphthalene. The mass is then mixed in a kneading apparatus, dried, and pressed into briquettes. The briquettes have a slight odor of gas, burn brightly and engender heat slowly, it is claimed, and with a more highly perfected method of manufacture they will produce less ash, and the heat-producing qualities will be about the same as those of common coal. They will also possess the advantage of burning slowly and developing no smoke.

✧ ✧ ✧

A new process for the manufacture of artificial marble has been patented by S. Sborowitz, of Berlin. The new product is said to be particularly fine and very cheap. Asbestos, dyeing materials, shellac, and ashes are pounded into a stiff mass, and then subjected to high pressure. The resulting mass is surprisingly firm and tough, not brittle, is very easily worked by means of tools, can be given a fine polish, and cannot be distinguished on a mere ocular inspection from genuine marble. As it does not break easily, it can be used in the shape of very thin slabs of little weight, and will be very useful for the manufacture of washstands, wall coverings, etc. Owing to its being much cheaper and more durable in contact with water than any other kind of artificial marble, this new material, which can be pressed into moulds and given any shape desired, seems to have a promising future for the manufacture of a great variety of household goods, and also insulators for electro-technical purposes.

✧ ✧ ✧

I. G. Waterman, a millionaire resident of the Montecito Valley of California, has invented an electrical device for controlling the spigots of the bathroom by a touch button in the bedroom. By this means one can reach out from the bed and turn the water into the tub, and when the latter is filled the flow is automatically shut off. With an installation of this character in the house one is enabled to stay in bed until the bath is entirely ready, and then jump almost from under the covers into the water.

✧ ✧ ✧

In order to increase the illuminating power of an incandescent electric lamp, a California inventor forms the bulb with an interior tube open at one end. The tube and bulb are so connected that the vacuum is not destroyed, and that a brush can be exerted in the tube to apply silver to the walls in order to form a reflector. The filament is coiled around the tube, so that a maximum amount of light-producing surface is provided.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1793.)

OCTOBER 17.

At the Quarter Assembly held yesterday at the Exhibition room, William street, the conduct of the committee on the new regiment to be raised by the city was reprobated in the strongest manner, and the whole of their management set aside.

Another committee was appointed, and on the motion of Mr. Chambers it was agreed that the Lord Mayor do continue to refuse sealing the debentures voted for the regiment until the committee shall present a report, and the same be sanctioned by the approbation of the house, which was carried unanimously.

The thanks of the Assembly were next voted to Alderman William James, late Lord Mayor of this city, in a gold box, for his upright, active, and honourable discharge of the duties of his office. On a ballot which ensued upon this question there appeared for it 88, against it 2.

The sum of £1,000 for the extraordinary expenses of the Mayoralty and hospitalities of the Mansion House was also unanimously voted to Alderman James.

The thanks of the assembly were also voted to the late High Sheriffs, the same to be presented in silver boxes

Yesterday there was an uncommon great quantity of herrings selling about town; the fish were rather small, but exceedingly fresh. Such a supply as this, and wich has been frequent for this month past, should tend very much to lower the price of butchers' meat in the different markets of this city.

Between the hours of one and two o'clock on Monday morning last a gentleman was stopped in Kevin's street, near the Bishop's Palace, by three fellows, who robbed him of a guinea and a half and his hat.

OCTOBER 23.

The Parliament of this kingdom is further prorogued from the 2nd of October to the 25th of November next.

Yesterday evening his Excellency the Lord Lieutenant arrived in town from the Lord Chancellor's seat, Mountshannon.

The Dorset yacht arrived on Sunday from England at her berth near the Pidgeon house. The Right Hon. David Latouche and family came passengers in the yacht from England.

In the Dutchess of Rutland packet, which arrived on Sunday, there came passengers here the Earl of Mayo, Lord de Clifford, Mr. Wainright (an agent to the Earl of Fitzwilliam) and several other passengers.

OCTOBER 24.

Independent of the large export entries within these few days past of linens, diapers, sacking, ticken, and also large quantities of feathers, etc., for America, a very respectable house in the city has sent between six and seven thousand yards of woollen goods for New York. This last circumstance must afford the utmost pleasure to every well-wisher of the manufacturing and commercial interests of this country, as such exports may extend considerably our trade to the other side of the Atlantic, if a war with the American States should not unfortunately put a stop to it, an event we should indeed heartily deprecate.

OCTOBER 25.

On Friday night a servant in the employment of Lord Clonmel was robbed in Dominick street of his watch and a few shillings at the end of Stable lane. Application was immediately made at the watch house in Granby row for assistance. With much difficulty a few persons awere procured to pursue the marauders, but as it happened, too late to be useful.

We are concerned to be informed, by letters from the county of Kerry, that Sir Barry Denny has fallen in a duel with John Crosbie, Esq., having received the ball of his adversary's pistol in the forehead, which occasioned his death instantaneously. The dispute originated in some unfortunate misunderstanding connected with the election for the county, to represent which Mr. Crosbie was a candidate.

A fiddler of the name of Fitzpatrick fell into a ditch at Rockbrook, about two miles beyond Rathfarnham, early on Sunday night, and was smothered. He had been playing for the amusement of company during the most part of the day, in a publichouse in the neighbourhood, and appeared to be somewhat intoxicated in the evening. When discovered the dead body was brought on a car to some part of the vicinity of Dublin, where he had his place of abode.

Wednesday last near ninety thousand yards of linen cloth and eight thousand yards of woollen were entered outwards for New York.

OCTOBER 27.

On Saturday last, being the anniversary of his Majesty's accession to the throne, a Royal salute was fired on board the Ross revenue cruiser, commanded by Captain Harman, then lying at Poolbeg. The exactness of time between each gun, although the cruiser only mounts ten, was much admired by a number of spectators then upon the new south wall.

OCTOBER 28.

Last night Mr. Sheriff Manders and Powell went to a house in Bank lane, where a number of journeymen shoemakers had dined and were spending the evening, and there took four of them into custody, against whom charges of combination have been made, and lodged them in the New Prison.

The assizes of the city of Cork has proved a maiden one.

DUBLIN, NOVEMBER 1.

Thursday last, 3,000 yards of lace, and a quantity of muslins and silk stockings, were seized by Mr. Heron, coast officer.

Thursday, at the Commission, Mr. Whitestone moved the Court, in the case of the King at the prosecution of James Potts against Giffard, that the bill of indictment which had been found might be quashed on account of the informality of some words in it, and that a new bill of indictment might be sent up to the Grand Jury, which was ordered by the Court accordingly. The prosecution must consequently lie over to the next Commission.

The journeymen carpenters were acquitted of the combination and assault, but were found guilty of the riot, and sentenced to be imprisoned for six months, and to be bound to keep the peace for three years; themselves in a security of £100 each, and to find sureties for £50 each.

Yesterday thirty-five journeymen shoemakers were arraigned under 12 different indictments, founded on the 19th and 20th of the King, for unlawful combination, under pretence of regulating trade; of these, six only were tried, and of these three were found guilty—viz., James Bullen, Robert Adams, and James Fulham.

These were sentenced by the Court to a fine of £100 each, reducable, however, at the Court's direction, according to their demeanour before the next Commission.

Another respite for a fortnight, from this day, has been granted to the unfortunate Mr. O'Berne, now under sentence of death in the New Prison.

NOVEMBER 4.

This day being the anniversary of the birth of the late King William the Third, his Excellency the Lord Lieutenant went in State from the Castle through Dame street, College Green, Grafton street, and round St. Stephen's Green.

The army, upon the occasion, afterwards fired a feu de joie round the statue of the late King William in College Green.

His Excellency the Lord Lieutenant had a Levee this day at the Castle, previous to his going in State round St. Stephen's Green.

NOVEMBER 8.

Yesterday the Rev. William Jackson, charged on an indictment of high treason, with compassing and imagining the death of his Majesty, and also in adhering to his Majesty's enemies, appeared at the bar of the Court of King's Bench to stand his trial. There appeared as counsel for the prosecution, the Attorney-General, Solicitor-General, the Prime Sergeant, Mr. Franklin, and Mr. Ruxton; for the prisoner, Mr. Curran, who (with Mr. Ponsonby, absent) had been assigned by the Court, Messrs, M'Nally and Guinness attending as assisting counsel.

Mr. Curran moved that three affidavits, made by Mrs. Jackson, Mr. Keane, attorney to the prisoner, and by Mr. Jackson, should be read. Those affidavits stated the absence of material witnesses expected from London; that every possible exertion had been made to obtain their attendance; that money had been remitted to bring them over; that there had been no negligence on the part of the prisoner; and that he expected their attendance on a future day.

Mr. Attorney-General, admitting the materiality of the facts in the affidavits, said he had no objection to postponing the trial, and the Court accordingly postponed it until the 25th of January.

The motion being granted, Mr. Jackson was remanded to prison.

NOVEMBER 10.

Yesterday morning, Crosbie Morgell, Esq., representative in Parliament for the borough of Tralee, was discovered drowned near the first Wharf at the South Wall. Hat and umbrella were purposely placed together on the Wharf in such a manner as to preserve them from the incurrent tide. The body was entirely lifeless when brought ashore; of course, every attempt to revive it was in vain. He was father-in-law to the late Sir B. Denny, who lost his life a few days ago in a duel.

At the final close of the poll for a representative of the county Kerry,

CANDIDATES.

John Crosbie, Esq.,
Lieut-Col. Herbert,

John Crosbie, Esq., was declared duly elected.

CORK.

Mr. Raspe, the celebrated mineralogist, has been lately in that city, after having explored the mines in the vicinity of Killarney, and his researches have been crowned with the greatest success; amongst many others, he has discovered the richest cobalt mine in Europe, a ton of the ore of which is computed, at a moderate calculation, to be worth two hundred and fifty pounds sterling—and what renders this ore the more precious, is, that it is in great demand in China, where the India Company exports annually to the amount of £180,000 worth, which they principally draw from Saxony, at a very heavy expense.

A company consisting of very independent men, is already formed in Killarney to work this mine.

Mr. Raspe has also discovered, according to the same papers, a very rich mine of gold in the province of Munster, a specimen of which he laid before the Royal Irish Academy in May last.

DUBLIN, NOVEMBER 18.

Yesterday the trial of the proprietors of the "Northern Star," on the charge of publishing a seditious libel, came on at the King's Bench, when, after a hearing which lasted ten hours, they were acquitted.

The "Barrymore," Sullivan, from Cork to St. John's, was deserted at sea, the crew saved in the "Hawke."

The assize of the twelvepenny loaf this week is 7lb. 6oz. 2dr.—Wheat, £2 14s. 6., and Flour, £2 19s. per quarter.—Wheat-meal, 1s. 7d., and Oatmeal, 1s 11d. h. per stone.

(To be Continued.)

Vol. I., No. 22.] DUBLIN: SATURDAY, AUGUST 30, 1902. [Price One Penny.

HOLY CROSS ABBEY, SLIGO.

THE RUINS AS THEY STOOD THREE QUARTERS OF A CENTURY AGO.

The following is the description and history of Sligo Abbey given in Hall's "Ireland":—

Sligo Abbey has been long famous; and its ruins are classed among the most remarkable in Ireland. The abbey was founded in 1257, by Maurice Fitzgerald, Earl of Kildare and Lord Justice. In 1270, however, it was destroyed by fire, but was soon afterwards re-erected; again it underwent a similar fate in 1415; but during the following year a bull was issued, granting indulgences to all who contributed to its restoration; it was speedily re-built, and from this era we are to date the foundation of the present structure. The remains of this edifice attest its former splendour. "The steeple or dome is still entire, supported upon a carved arch or cupola, the inside of which is also carved; adjoining this are three sides of a square of beautifully-carved little arches, of about four feet in height, which seem to have been anciently separated from each other, and probably formed cells for confession and penance. Almost all the little pillars are differently ornamented, and one in particular is very like the rest, having a human head cut on the inside of the arch. There are several vaults throughout the ruins, containing the remains of skulls, bones, and coffins. The abbey and yard are still used as a burying place."

In the Ecclesiastical History of Ireland, by Rev. T. Walsh (New York, 1855), the following, which embraces some additional particulars, is given:—

Maurice Fitzgerald, who was Lord Justice of Ireland in the year 1229, and who

retained that office from 1232 to 1245, founded this noble monastery on the bank of the river Gitly and adjacent to the castle of Sligo, which Maurice erected A.D. 1245. The church was dedicated under the invocation of the Holy Cross, of which a commemoration was made daily in the divine office. It was supplied with friars of the order of St. Dominick.

O'Connor Sligo was a liberal benefactor to this monastery. So was Pierce O'Timony, whose statue was erected in the cloister.

A.D. 1360, Mac William Burke spoiled and burned the town.

A.D. 1414, the sacred edifice was destroyed by an accidental fire: at this time twenty friars were resident in the abbey.

Pope John XXIII. granted an indulgence to all who would contribute towards the expenses of refounding it.

A.D. 1416, the monastery was rebuilt by friar Bryan Mac Dermot Mac Donagh.

A.D. 1454, Bryan Mac Donagh, dynast of Tirerill, was interred here.

At the general suppression it was granted to Sir William Taaffe. It is at present in the possession of Lord Palmerston, who can be styled the "Cecil" of England in this enlightened century. The ruins of this spacious and beautiful monastery indicate its former magnificence. The northern and southern sides of the arcade, with the east one, still remain covered with an arched roof, which will soon yield to the wreck of time. The arches and pillars are of extraordinary workmanship, a few of which are adorned with sculpture. The east window is beautiful, and the high altar, which still remains, is decorated with relievo sculpture in the Gothic style. On the south side of the altar is a monument of O'Connor, with his own figure and that of his lady. Archdall observes that Cromwell has done some injury to this monastery, but that "merit" rather belongs to Ireton and Sir Charles Coote. . . . Cromwell was never in Connaught.

MY FRIENDS AND I.

BY ALFRED J. WATERHOUSE.

My little, low room is five flights high,
And some might think that its walls are bare;
But sweet communion my friends and I
Have often held in the silence there;
Noble, exalted, they come to me.
Fair as they were in the earth's first bloom,
Whispering hope for the time to be,
These are my friends in the little, low room.

Shakespeare of Stratford, Bacon, Carlyle;
Emerson dreaming his long, long dream,
Dickens, with sighs that are lost in a smile;
Milton—unblinded—the gods for his theme;
Goldsmith, weary no more, nor lone;
Chatterton, safe, though the storm rides high;
Byron unto his heritage grown—
Royal companionship here have I.

Homer, singing the song of strife;
Virgil, at rest by a sun-kissed shore;
Longfellow, chanting the Psalm of Life;
Poe, who will leave me—ah, never more!
Gentle Hawthorne, of Salem town—
These, the mighty, crowned the free,
One and all from the shelves look down,
Step to my side and talk to me.

Kings in your palaces, here is more—
Here, in faith, in a little, low room—
Than regal state and golden store,
The crowd's mad clamour, the cannon's boom.
Shades of the mighty come to me.
Sit and chat as the hours go by,
Prophesy things that the soul shall see—
And so we are happy, my friends and I.

FORTS AND FAIRIES.

A COMPILATION.

BY E. J. RYAN.

PART I.—Continued.

OTHER ANTIQUARIAN REMARKS.

There are many funeral urns in the National Museum, Dublin.

In the time of the fenian princes the dead were not burned but interred in the earth, the feet to the east, the head to the west, and the cairn raised over them. The mound was built large and high in proportion to the dignity of the dead and the respect entertained for them. Through this a passage with doors led to the place where the dead lay: a grave of one door for a man of science, and a grave of two doors for a woman. Mounds were erected also for foreigners of distinction, and enclosures were placed around those who died of the deadly plague. Even in comparatively modern times mounds have been raised over the bodies of Christians.

In "The Fate of King Dathi," whose real name was Feredach the Second, Thomas Davis, the author of the ballad, writes:—

Broad is his cairn's base—
Nigh the "King's burial-place,"
Last of the Pagan race,
Lieth King Dathi!

A poem by an unknown author, describing the burial of Godfrey O'Donnell, of Tyrconnell, slain in battle against the Normans, says:—

They dug him there a fitting grave upon that field of pride,
And a lofty cairn raised above, by fair Lough Swilly's side.

There were several royal burial places in Ireland in early Pagan times. The most extensive of the Irish cemeteries is the great necropolis which extends along the left or northern bank of the Boyne from Slane to Netterville. There was formerly a moat at Thurles town, and at present a moat stands at Knockgraffon, near Cahir; at Ardmayle, near Cashel; at Tullamaine, near Fethard; and at Donohill and Kilfeacle, near Tipperary, besides others in various parts of Ireland. Moats are suposed by some to be places where public assemblies were held.

Cairns, cromlechs, dallans, as well as moats or mounds, are said to have been placed in Pagan times over the graves of famous men, in many cases slain in battle.

The term tumulus may apply to a barrow, a cairn, or a moat, being an artificial hillock or mound raised over the dead, and the terms are sometimes interconvertible, but a barrow is always of earth.

Tumuli or mounds have been found in deep-draining a large field which had been laid down in grass for many years, and in appearance was almost level, and presented no indications of their presence.

Perhaps they are all older than even the old raths, caves, and engraved stones.

There is an opinion in favour of the stone forts beside Lough Gur in the Co. Limerick, being the Ivernis referred to by Ptolemy, the Egyptian geographer, who flourished early in the second century, and that these and the stone monuments were raised by the Iberians, a generic name for the Tuatha De Danaans. The Iberians were the neolithic inhabitants of Ireland; and the old stone monuments and tales of Ara Cliach must be credited to the Iberians, who are also called Mairtine. Ui Fidhgenti, who held the lands along the Maigue, were a different race from the men whom Ptolemy names Iverni(a).

(a) Ui Fidhgenti is found too as Ui Fidhgeinte and Hy Figiente.

Pictish Remains.—Picts, said to be so-called from painting their bodies, flourished in Ireland, at least about the year 320 A.C. Pictish houses and tumuli are found in the country.

Round Towers.—The Round Towers are supposed to have been built in Catholic times in imitation of reeds that grow at the edge of rivers and streams, and in marshy places. The reed is the emblem of St. John the Baptist, and its name corresponds to the Irish name for the Round Towers. There are signs in some of them of arrangements in the lower parts for Baptismal purposes. In accordance with these facts, they are inferred to have been mainly used in the administration of the solemn rite of Baptism at Easter and Pentecost, with all the ceremonies peculiar to the early Church. They are generally from 50 to 120 feet in height, and the higher parts may have been used for secondary purposes.

15.—ANCIENT DOMESTIC ACCOMMODATION.

The accommodation in the ancient dwellings was simple. Culinary operations were probably carried on in the open air. Internal fires were usually in the centre of the floor, and the smoke found an exit likely through a hole in the roof, but with the use of flues the fire was generally placed by the wall. The kitchen was sometimes built apart from the main dwelling. The furniture was simple, and the food and clothing plain. Hunting and fishing supplied some of the necessaries of life, and naturally tillage would be carried on as required in the vicinity of the forts. Artificial light was probably derived from the fire, or produced from wood, rushes, and grease. In modern times a wick and grease placed in a vessel were employed for lighting purposes, and called a sluth.

PART II.—FAIRIES.

1. BELIEF, TERMS AND MEANINGS.

There exists in Ireland a belief in a class of spirits called fairies. The belief is recorded in the oldest native writings as being long established, and it is very probable that it came in with the earliest colonies. A similar belief is very prevalent in many countries throughout the world, traces of it being found in Europe, Asia, Africa, and America.

The word fairy(44) is from the Celtic, fear, a man, and si, the supernatural or mysterious world or existence, a man of the other world, a spirit man. Another derivation means a fair or comely people; and the word fairy is said to mean enchantment, the work of the faye.

Various names are used to denote the fairies:—

Daine-sidhe, the people of the fairy mansions; a fairy man; gods of the earth; a phantasm; Duine matha, or good people; Faun; Feadh-Ree, a modification of Peri; The Gentry; Joeens, or Joees; Little men, Little people, as the fairies are generally represented as pigmies, and are said to be seen dancing like a number of children; Meisagh, a spirit; an apparition; fairy appearances; Michaeleens; Shivera, connected with fairies, fairy-like; and Sidheog, a little fairy, used also as a term of contempt.

The terms, Gentry, Joeens or Joees, and Michaeleens, seem to be local colloquial designations.

The Gaelic name, si(45), is not found out of

(44) An old form of spelling is faery, and fairie.

(45) Other spellings of names for the fairies are: Daune shi; Duine-sidhe; Daoine maithe; and Meisi, allied to Meisagh. Cognate social terms are: Daoine mora, great men; Duine mait, sir, good man; Duine moduil, sir; Duine uasal, a gentleman. The word si is found spelled also as: shee; shi; sidhe; sigh; sighe; siodha; sit, and sith.

Ireland, except in the Highlands of Scotland, and at La font de Scee, in Poitou, France.

2. THEORIES.

The fairies are said to be:—

Fallen angels, not bad enough to be lost, nor good enough to be saved—those angels who, without openly joining Satan in his rebellion in heaven, made no opposition.

Fallen spirits resembling in some way the fallen angels—a rare midway between the angel and man—once angels in heaven who were cast out as a punishment for their pride.

A class of beings in themselves half mortals, half spirits, who since their creation always were, and always will be, in their present state.

The gods of the earth, applied to the fallen angels and to the fairies.

The gods of Pagan Ireland.

Beings who lived on earth long ago, whose spirits are condemned to pass an indefinite time on earth before gaining heaven.

The great Pagan dead, who were not good enough for the heaven of the blessed nor bad enough for hell. Their heaven is in Ireland, where they enjoy an immortality of feasting and hunting. As described by Dante, they reposed in a seven-walled and seven-gated city in the under world.

The deified Tuatha De Danaans, who, when neglected, dwindled in popular imagination, and are said to live, endowed with immortality, as sprites and fairies with material bodily forms. The Tuatha De Danaans were so-called from their skill in necromancy, and we learn from history that they practised magic or the black art, and some of their sorcerers are said to have been so famous in the necromantic arts, that they were styled gods.

There is a theory that the fairies spoken of in the traditions of the Highlands of Scotland were identical with the historical Picts. This supposition is mainly based upon the traditional idea of the small stature of the Picts, and also upon the underground dwellings and artificial mounds which are still known in some districts there as "fairy halls," and in others as "Picts' houses."

The souls in Purgatory.

3. NATURE OF THE FAIRIES.

The immortal spirits of which we have knowledge are:

God Himself, the Great Spirit, Uncreated, Eternal.

The angels, faithful and fallen, those fallen being lost for ever.

The soul of man.

There is no evidence of a midway race, nor of any other class of spirits, and it is only unbaptised persons who die without actual sin that are not "good enough for heaven, nor bad enough for hell."

To nothing else does the Irish notion of fairies correspond except to the fallen angels of the air and the earth and sea. With these it corresponds so fully that when the exaggerations and fallacies with which popular error invests them are removed, there remains a substantial reason for believing that the fairies and this portion of the fallen angels are identical.

The nine choirs of angels in heaven contributed to the vast army of rebellion against God. The heaven of the angels' probation, however, was not the heaven where the blessed now see God intuitively—face to face, in the light of glory. Had they seen Him in this way, they could not but love Him. The common opinion is that an immense number fell—less, however, than the number of those who remained faithful, and are now confirmed in glory. St. John says in the Apocalypse that there was a great battle in heaven, Michael and his angels fought with the dragon, and the dragon fought and his angels . . and that great dragon . . that old serpent, who is called the devil and satan . . was cast unto the earth, and his angels were thrown down with him. The Apocalypse further states that his tail drew the third part of the stars of heaven, and cast them to the earth. Milton says that Satan

. . . . . in proud, rebellious arms
Drew after him the third part of Heaven's sons(46).

It is said that St. Michael remarked to God that heaven would be emptied, and requested Him to stop the expulsion, and that the request being granted, the expulsion ceased, as if anything defiled could be tolerated in heaven! The fairies are supposed to be more numerous than the human race.

When the bad angels were cast forth they entered at once into their eternal punishment(47). Several of them, by God's permission, go through the world, and roam through the air. According to St. Paul, numbers of these wicked perfidious spirits, whose chief he refers to as "the prince of the power of this air," surround us on all sides, and are dispersed in the immense space between the firmament and this globe(48). For the trial of the good and the just punishment of the wicked, these evil spirits, while carrying their torments about with them, shall not be shut up in the prison of hell until after the General Judgment. Rev. Alban Butler, the learned author of the well-known "Lives of the Saints," speaking in that work of the evil spirits, says that "while some were immediately confined to those dungeons, others are left more at large till the Day of Judgment; and in the meantime their torments seem less grievous"(49). These fiends are called the princes of the world; or the gods of the earth; the princes of the air, and of darkness. The devil is not the prince of heaven or of earth, but of the world—that is, of sinful men, or lovers of this world. According to the fire worship of the East, every celestial body had a spirit, the astral spirits being regarded in the Middle Ages as fallen angels, or souls of dead men, or fiery spirits. Paracelsus and others attributed to every human being an astral spirit, which lives on for a time after death.

The location of the fallen angels in the air, on the earth, in the sea, and in hell, is accounted for in some people's ideas by the notion that in the expulsion of the angels, St. Michael asked God to let them remain as they were, and that the request was granted, as some of them were in the air, some on the earth and in the sea, and others in hell(50).

People in speaking of the fairies, often observe great caution, and call them more frequently by the name of "the good people" than by any other appellation, as if they imagined them to be near. It seems, therefore, that people feel that these supposed spiritual beings may be aware of what is said about them, without themselves being perceptible to any human sense. This corresponds closely to the known fact of the aerial and terrestrial location of fallen angels.

These angels are called "the gods of the earth," an appellation altogether identical with a term applied to the fairies who are also called "the gods of the earth."

Another point indicating the identity of the fallen angels with the fairies is that the Irish word sluagh implies the idea of both fairies and fallen angels(51).

Dhaun airigh means fallen angels, and people of the air, and as the fairies are people of the air, the identity of both seems to be confirmed.

Fallen angels are in the air, the earth, the sea, and hell. Fairies are also supposed to be in the same locations, and the coincidence confirms their identity.

A popular idea regarding the fairies is that some of them are of a benevolent disposition towards mankind, whom they sometimes even assist, and are called "good people"(52), and that others of them act towards the race in a hostile and injurious manner, and are called "bad people"(53).

These ideas coincide with the fact of which we are assured that some of the fallen angels "are worse than others," and imply the identity of fairies and fallen angels to be the same.

A general idea among Irish people is that the fairies sometimes inflict injury on the body of man, and on his property. One physically injured is said to be struck, or, sometimes, to get a fairy blast.

It is recorded in the old chronicles that the shivera killed an Irish king.

Even animals are supposed to be sometimes used injuriously on earth by the fairies, and at times to be taken away altogether under the appearance of death, by them, occasionally as a substitute instead of a human being. Some flint spear and arrow heads found at forts are called elf stones, and are generally believed to have been discharged by fairies at cattle. Against the power of these ancient weapons charms are still used by the credulous.

Now, from various parts of the Scriptures, from the testimony of ecclesiastical writers, and from the practice of the Church, it is evident that the fallen angels can, by God's permission, act injuriously on the bodies and on the external goods of man.

In the Book of Job it is recorded that Satan, having gone round about the earth and walked through it, "went forth from the presence of the Lord, and struck Job with a very grievous ulcer from the sole of the foot even to the top of his head." The devils destroyed his cattle and servants by thunder and lightning, and caused the house to fall on his servants by a strong wind. It is also recorded in the Old Testament that evil spirits slew the seven first husbands of Sarah. In the New Testament, the possession taken of the swine by the devils in the presence of Our Lord Himself, and with His permission,

(46) It is said that Ariel was the last angel to leave heaven, after longing and lingering to remain.

(47) One section of the fallen angels is represented as being in hell, deploring the loss of heaven: and another as bent on the malicious temptation of man.

(48) Ithuriel is said to be the king of the powers of the air.

(49) Abaddon, called also Apollyon, almost a synonym for the chief of the fallen angels, is the angel of the bottomless pit.

(50) Some fell to earth, others were cast into the sea, while many were seized by other demons and carried down to hell, whence they issue as evil spirits.

(51) Sluag Shee, fairy army.

(52) "Good people" seems to be a propitiatory expression, like the Eumenides of the Greeks, a name given to the Furies, avenging goddesses, by way of euphemism or propitiation. The term implies "benevolent." In some places a distinction is made between the fairies and the good people, the good people being understood to be the souls in Purgatory. In Rob Roy, where reference is made to the fairies, "they ca' them," said Mr. Jarvie, in a whisper, "Daoine Schie," "whilk signifies, as I understand, men of peace, meaning thereby to make their good will." The Scots call them also fair folk, and good neighbours.

(53) The spirits of the air, earth, and sea are supposed to be mostly small, gentle, beautiful creatures: those of hell, malicious. Sometimes the fairies are called indiscriminately "the good people."

affords a marked case of injury done to irrational animals. It is recorded in St. Luke, xiii., 10-17, that Our Lord healed a woman whom Satan had bound eighteen years, besides numerous demoniacs cured by the Redeemer as mentioned by the Evangelists.

Rev. Alban Butler, referring to the Sacred Scriptures, states in his "Lives of the Saints," that the devils "have slain armies in one night, have often disturbed nature, and stirred up tempests which struck whole provinces with terror." He adds, that they "are sometimes permitted by God to exert their natural power and strength on natural agents by moving second causes, in producing distempers in human bodies, raising storms, and causing other physical evils in the world."

(To be Continued.)

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

CALLAN, an incorporated market and post-town (formerly a parliamentary borough), partly in the barony of Shillelogher, but chiefly in that of Kells, county of Kilkenny, and province of Leinster, 8 miles (S. by W.) from Kilkenny, and 65½ (S. W. by S.) from Dublin; containing 6,112 inhabitants. This is a place of considerable antiquity, and was the territory or ancient inheritance of the O'Glohernys and the O'Coillys or O'Callans: the Fforstalls or Forestalls, Butlers, and Comerfords had fortified castles here, the ruins of some of which yet exist. It was a walled town, as appears from divers grants of murage to the local authorities. In the year 1261 the native sept of M'Carty took up arms, and here attacked by surprise John Fitzgerald, whom they slew, together with his son Maurice and several knights and other gentlemen of that family; but from the dissensions which subsequently arose among the Irish themselves, the Fitzgeralds recovered their power and possessions here. The Earl of Desmond, in 1345, summoned a parliament to meet at his place, in opposition to that convened by the English deputy: but the vigorous measures enforced by the latter prevented its assembling. In 1405 a battle was fought near the town between James, Earl of Ormonde, lord-deputy, and the Irish under O'Carroll, aided by the sept of the Burkeens, of the county of Tipperary, in which O'Carroll was slain. James, Earl of Ormonde, founded here an Augustinian friary, the origin of which has by some writers been attributed to Hugh de Mapilton, Bishop of Ossory, about the year 1256: the founder died in 1487, and was interred in it: and at the dissolution it was granted, with its possessions, to Thomas, Earl of Ormonde. In the reign of Elizabeth, the celebrated James Fitz-Maurice of Desmond took this town: and in 1650 it fell into the hands of Cromwell, who, aided by Ireton, besieged it for a few days with great loss of life to the inhabitants.

Callan appears to be a corporation by prescription; and it is recorded that William Mareschal, or Marshall, granted a charter to it in 1217. A writ of the 4th. of Rich. II. (1380) recites that the towns of Callan and Kilkenny were part of the lordship of the Earl of Gloucester, and that all merchants and others within that lordship ought to be free of customs and murage, which immunities the sovereign and commonalties had enjoyed since the foundation of those towns; and commands that they should not be molested against the tenour of such liberties. Other grants were were made in the 19th of Rich. II., 4th of Hen. IV., 11th of Eliz., 7th of Chas. I., and 30th of Geo. III. The borough sent representatives to the Irish parliament of the 27th of Elizabeth, and thenceforth without intermission until the Union, when it was disfranchised, and the £15,000 awarded in compensation for the abolition of its electoral rights was paid to George, Lord Callan. The parish, which was very extensive, was formerly occupied by Canons Regular of the order of St. Augustine, under an abbot; the ante-chapel is in ruins, but displays two windows of beautiful design and in good preservation, and there are several tombstones of considerable antiquity, some of which are elaborately carved. Callan gives the title of Viscount in the peerage of Ireland to the family of Fielding, Earls of Denbigh, in right of their superior title of Earl of Desmond.

THROUGH BORROWED EYES.

BY ELAINE GOODALE.

I con it o'er and o'er again,
  Yet not to read the meaning clear:
Its music falls like summer rain,
  Low on the tired ear—
A music haply not its own,
  Nor wholly by another lent:
It comes as comes the tenderest tone
  Of stringed instrument.

He read it once, and by his side
  I dreamed the magic hours away:
Himself he never could divide
  From that he lived to say.
His voice a holier meaning brought;
  He breathed his soul in every line,
And with it—sweet precious thought!—
  And with it carried mine.

I listened deeper than I knew;
  I neither looked nor spoke nor stirred;
No words I felt—he broke them through:
  That voice alone I heard.
My spirit rose to passionate height,
  Or deep in calm immortal moved:
I drank a rare distilled delight—
  I hoped, I scorned, I loved!

He is not here, he will not come:
  No more I listen at his feet;
No more through him the words grow dumb;
  And leave the thought complete;
Yet still I turn the volume o'er,
  And dream above the printed page,
As one who reads forgotten lore
  Through lines grown dim with age.

The news of the disaster to Mr. Harry De Windt and his expedition, off the Siberian coast, has been received with sympathetic concern by his many friends in England. The whaler, William Bayliss, found Mr. De Windt in an uninhabited cave. He was in a sorry plight, and his provisions were almost exhausted. He and Mr. Harding had reached the coast only to find that the ice had broken up, and had drifted into the Strait, so that it was impossible to cross over on it. The whaler supplied the party with provisions.

OUR WEEKLY STORY

MARIE ANTOINETTE AND THE GIPSY FORTUNE-TELLER.

By JOHN J. FURREN.

It was the morning that Mary Antoinette was conveyed from The Tower to her new prison, the Conciergerie. At 3 a.m. she had been aroused and hurried off through the fog, rain, and darkness that hung over Paris. Arrived at her destination, six gendarmes led her through a dark corridor into a dark, dismal room on the ground floor, and, slamming the iron door, left her alone. In the light of a solitary candle that flickered on the table she saw an inscription besmeared with blood on the wall directly opposite the door—the letters L. E. R., written large and uneven. "Aurora the gypsy!" she exclaimed. "She is around again. She told me those letters contained my fortune. Well, whatever they mean, I am prepared for the worst. I have been trained in a good school," and, throwing herself on the cot, she buried herself in thought.

Mary Antoinette had seen that inscription—L. E. R.—before. Her earliest memories were grouped around those letters. When a young girl she had visited Seville, and while there had unconsciously won the heart of a certain Semprofie, the son of a gypsy chieftain and lover of a gypsy maiden.

Disguised as a peasant, she strolled one summer afternoon with some attendants to the banks of the Guadalquivir that she might seek relief from the solano, or warm south wind that had oppressed Seville all day. On the "wizard walk" her party met a band of gypsies. The gypsy leaders, thinking the strangers carried gold or other valuables, immediately plotted a robbery. Speaking in Rommany, the peculiar language of the gypsies, they gave directions to one particular youth of the band how to entice the strangers into a barranco, or ravine, some distance down the walk, where the scheme could be accomplished without fear of detection. The gypsies then hurried away to the appointed place to await the approach of the strangers. The youth whom they had left behind approached Marie Antoinette and asked if she would purchase a gypsy charm. This charm consisted of a magnet that had been ground to powder, saturated with white wine, and then dried in the sunlight amid the uninterrupted prayers of the whole gypsy band. Whatever Senorita partook of that powder, mixed with water that had just sprung from a mossy rock, would be endowed with an irresistible loveliness.

"Here is the powder, Senorita, and in a barranso a short distance down the walk there is a spring flowing out of a mossy rock."

Marie Antoinette purchased the charm and examined it with childlike curiosity. She then invited the gypsy to partake of some refreshments which her attendants had carried with them from the city. After she herself had served the refreshments to him she took her guitar and began to trifle with it shyly, striking an occasional minor chord as if by the merest accident. This elicited from the gypsy an invitation to sing. She accepted coyly and began with a war ballad like those which the muleteer hums to himself along the gnarled passes of the Sierra Morenas. Next she warbled a love ditty that the maidens were accustomed to dance to on the plazas of Seville; then she sighed a romancero like those with which the Spanish youth serenades his lady on a cool Spanish evening. Thus one song followed another until twilight came on—twilight, the hour in which love was first born.

"Ah, who can tell the heart-touching power
Of a lute and a sigh in that magical hour!"

While her attendants were making ready to return to the city Marie Antoinette said most

bashfully that she would sing for her guest a song that she herself had written, and which, she suggested, "might be suitable for a gypsy to sing to the first love of his heart." After a few bewitching introductory chords she thus proceeded:

O mia bonita reina Gitana,
My own black-eyed Gypsy of Gypsy Triana—
A dewdrop from heaven, one glad springtide day,
Kissed a young violet, happy and gay,
A violet that grew in the spring of the year
On the weird, wizard walk by the Guadalquivir.
The dewdrop loved the violet true,
The violet loved the drop of dew,
Happy pair, replete with mirth,
The pure, the simple, Heaven and Earth!

O mia bonita reina Gitana,
My own black-eyed Gypsy of Gypsy Triana—
The frolicsome wind in the next fatal hour
Parted the dewdrop and weeping young flower;
And the violet sighed till it wilted away
For the dewdrop that kissed it that springtide day,
For the violet loved the drop of dew,
The dewdrop loved the violet true—
Blighted love means buried mirth,
True love comes but once on earth!

It has been said that no one ever heard Marie Antoinette sing without loving her. As for the gypsy—well, he did not take the strangers to the barranco that afternoon, where his accomplices were waiting for them. On the contrary, he led them along a secret path until they were safe on the road to Seville. Then obtaining Marie Antoinette's name (who still concealed her nobility), and in return giving his own—"I am Simprofie, of Triana; I am known in the city as 'the barber of Seville'"—he went his way.

Two or three evenings after that a certain Gitana (gypsy maiden), who was known in Seville as "Aurora, the gypsy queen of Triana," returned to the gypsy camp quite peevish. She sought out Simprofie, and pouting like a child, she accused him of being influenced by a "payllo," as the gypsies call a person who is not of their race.

"I saw her to-night," she said, "on the alameda (avenue) at Seville, the same Senorita that you say escaped from you on the wizard walk. I told her buena ventura (fortune), and I know you did not try hard enough to bring her to the barranco where our people were waiting for her. If you are to be my rom (husband), as you promised, you must help me to ensnare her. Just see if she escapes from Aurora as she did from Simprofie. Why, I believe that I'll make a better queen for our people than you will a chieftain." And her black gypsy eyes danced with conceit.

From other members of the camp Simprofie slyly learned the details of the plot which Aurora proposed. Marie Antoinette had promised that next morning she would visit, in company with Gitana, the village of Santa Ponce. The innocent creature was to be enticed into a mountain cave near the rock of the serpents, where four or five hardy gypsies would be in waiting and prevent her from ever leaving alive.

When morning came Simprofie stealthily crossed the bridge of boats that connects Triana with Seville, and, half in a dream, strolled aimlessly along the road that leads to Santa Ponce, until he met a muleteer hauling provisions to the city. With threats and promises he induced the muleteer to hasten away to the rock of the serpents, where two roads intersect the road to Santa Ponce and to await there for the arrival of a party in which there would be Gitana and "a tall, slender young girl, with blue eyes, hair of a peculiar shade of blonde, and a complexion of immaculate white, save that her cheek is tinged with a pinkish hue, as if the twilight had kissed her, and in kissing her had fallen asleep."

"When you see this Senorita," he continued, "approach, and without allowing any one to hear you tell her that the barber of Seville sends her this note."

Saying this, he wrote with much difficulty on a slip of paper this incorrect German sentence:—

"Links entfliehe rasch" (escape quickly to the left).

"I suppose it is not good German," soliloquized Simprofie, after the muleteer had hurried away with the important paper, "but she told me she came from Vienna, and she can understand it. Then, should it fall into Aurora's hands, she cannot read it, and besides there is no name signed to it. As for the craven-hearted muleteer, I have him frightened into confidence."

Thus the young gypsy flattered himself that all was well.

Marie Antoinette, having listened on the previous evening to a number of stories depicting the treachery of the gypsies, decided not to go to Santa Ponce with Aurora. When the gypsy queen called she was told that Marie Antoinette's party had already started on the journey. Hurrying as quickly as possible to overtake the party, she was accosted at the rock of the serpents by the muleteer, who was awaiting patiently to deliver his note. He asked Aurora if she had passed a party in which "there was a Gitana like herself and a tall, slender Senorita with blue eyes," etc. Aurora, acting immediately on a suspicion, replied that the party had passed down the road, and that she was hastening to join them. The muleteer accompanied her down the road until he came to the mountain cave, where the sturdy gypsies were lurking. Here he was seized, and with the threat of losing his life was compelled to show the note, say from whom it came, and tell all he knew about it. the tumult that followed that night in a certain gypsy camp at Triana when it was announced that Simprofie, the coming chieftain, had proved treacherous to his people, can be imagined by those only who are familiar with the laws and customs by the gypsies. Shortly after that the Spanish youths, strolling by moonlight on the plazas and alamedas of Seville, frequently repeated these questions: "Where is the barber of Seville?" "Is he dead?" "Has he left the country?" But no one was found who could make a reply.

Marie Antoinette, after a short stay in Seville, returned to Vienna, wholly unconscious of Auroras plot to murder her and of Simprofie's unselfish love.

On August 19, 1785, the French Queen played leading role in a drama, "The Barber of Seville," which was produced in her private drawingroom at Trianon. The next afternoon while strolling in her garden a decrepit gypsy woman belonging to a band encamped near the forest of Fontainbleau approached and essayed to sell a gypsy charm. A long conversation about the gypsies followed, which was terminated when Marie Antoinette jestingly asked to have her fortune told. The old gypsy drew from her bundle a portrait which she looked at for a moment. Then scrutinising the Queen with that wild stare that characterises the gypsies in all countries, she held out a sealed envelope.

"This contains your fortune, Madame," she said, and her lip curled with a diabolical leer. "Open this to-morrow afternoon at 3 o'clock and read carefully. But if you open it before the appointed hour remember that the gypsy's curse will fall upon you."

And the old witch limped away.

When three o'clock arrived next afternoon the Queen tore open the envelope somwhat anxiously, and saw it contained a long letter, which was signed "Aurora, the gypsy Queen of Triana."

It was a strange letter. It told Marie Antoinette things that she had not known before. It recounted everything connected with her visit to Seville. It spoke of the muleteer at the rock of the serpents and of the note which Simprofie had sent. The concluding words ran like this:—

"I suppose you think I do not know everything, but I do. You loved the only man I ever loved. You dethroned me in his heart, and I will live to have revenge on you, as I had on him. I am not the old woman that I appear to you. I am still as fresh as I was the evening you met me in Seville. I promised to tell your fortune. Here it is. Read Simprofie's note—'Links entflieche rash.' Take the first letter of each word and you will have your fortune. I have written it with my blood." (And there were the letters L. E. R. red as scarlet.) "You will see these letters again, and when you do, remember

"AURORA, the Gipsy Queen of Triana."

It was only then that Marie Antoinette understood the whole case, and from that time she always feared to meet a gipsy.

Marie Antoinette spent her first night in the lonely prison cell at the Conciergerie thinking of that letter and of the events that clustered around it. Occasionally she would look at the bloody inscription on the wall which the gipsy said contained her fortune. Then her whole frame would involuntarily shudder, and closing her eyes, she would return again to the limbo of memory.

The trial and condemnation of the French Queen that followed her imprisonment in the Conciergerie history has related. The fatal day, October 16, 1793, came at last—the day of her execution.

That morning the gates of hell were thrown open, and the demons let loose upon the streets of Paris. They mingled unseen with the crowds on the Avenue des Champs-Elysees, the Rue de la Paix, the Rue Castiglione and the other thoroughfares of the city. About 10 o'clock Aurora the gipsy elbowed her way through the jammed mass of human beings on the Pont-Neuf, across to the Ile de la Cite, and stationed herself at one of the gates of the Conciergerie. Soon after a rickety cart with a plank for a seat and drawn by a bony white horse backed up to the prison gate. At precisely 11 o'clock the gate opened and the Queen appeared, dressed in a gown of white pique, around her neck a fichu of white muslin and her elbows tied back with a rope that was held by the executioner. With her head erect in that peculiar and charming position that had attracted the admiration of her court at Marly and Versailles, but with her eyes cast down—almost closed—she mounted the cart and seated herself on the plank, her back toward the horse. Immediately hoarse cries of "Vive la Republique!" were shouted, clenched fists were shaken, blood-stained handkerchiefs waved and hats thrown in the air.

Amid this tumult Aurora the gypsy mounted the cart and fastened to the side thereof a stick, at the end of which was some peculiar inscription written on a piece of pasteboard. This was placed in such a position that if the Queen looked up her eyes would immediately rest upon it.

Opposite the Jacobins the Queen did raise her eyes. She saw on an arcade the inscription, "Liberty, Equality, Reason." With a bewildered expression on her face she glanced around and noticed these words on all the banners that decked the route to the place of execution. She was about to lower her eyes when she saw the inscription attached to her own cart.

It was only a glance that she gave, but it was long enough to read and understand the following—

"Liberty, Equality, Reason."

"These have been the watchwords of the Revolution that leads you to the guillotine.

"Links Entflieche Rasch.

"L. E. R.

"You will see these letters again, and when you do remember Aurora, the gypsy queen of Triana."

At half-past 12 the Queen's head was severed from her body. When the mob had dispersed, satisfied with its bloody work, Aurora climbed upon the scaffold, held up for a moment the severed head of the dead Queen, still dripping blood, and muttered:—

"I have had my revenge."

. . . . . .

Two weeks after that day Padre Juan, a good monk of Seville, was summoned to the

deathbed of Isabel Pedrillo, the twelve-year-old daughter of the Spanish innkeeper.

"Oh, Padre," said the sick child as the monk was about to depart, "I dreamed a dream last night."

The silver-haired old man came back and simulated the deepest interest in what Isabel called her "beautiful nightmare."

"Yes, Padre," the child continued, "I thought my guardian angel carried me away up into the sky and made me sit down upon a cloud. Oh, Padre, it must have been heaven that I saw. I cannot describe it, but I wish I had never woke from that dream. My angel, seeing that I was lost in contemplation, told me to withdraw my eyes from all but one spot, where a tall, slender lady, with a peculiar shade of blonde hair, and oh, such white skin, stood upon a cloud. Beneath her feet was a wolf that was showing its teeth at her and growling savagely. Coiled around the wolf were the hissing serpents that were breathing flames of fire. Now and then the flames from the first serpent would shape themselves into the letter L, and the flames from the second serpent into the letter E, and those from the third serpent into the letter R. I was growing afraid that the wolf, with the three serpents coiled around it, would spring at the beautiful lady and devour her. My angel must have known this, for he told me to fear not, but to raise my eyes still higher. I did so, and I saw that near the beautiful lady were hosts of angels, above her head was a canopy that sparkled with diamonds, pearls, and rubies, and over all, in letters formed of twinkling stars—which as often as they twinkled changed into as many beautiful colours—were the words. "Lunam Expugnavit Regina,' and immediately under these the letters 'L. E. R.' What do they mean, Padre.? It is not Spanish, I know."

The monk repeated the words, and then gave the translation—

"The Queen has conquered the wolf."

THE COMMENCEMENT OF THE VOYAGE.

Sung over the cradle of a newly-born infant.

(From the French of Beranger.)

Behold, my friend, this barque of tiny mould,
But newly launched on life's uncertain sea.
A gentle passenger the skiff doth hold—
Ah! shall not we its crew and pilot be?
The waves to lift it from the strand prevail,
Which now it leaves for ever in its rear;
Let us, who see the little barque set sail,
With our gay songs its onward voyage cheer!

Already Destiny the canvas swells,
Already hope the silken cordage binds,
And, 'neath the glittering starlight, kindly tells
Of waves propitious, and of favouring winds.
Fly, hence, ye birds of dark presage, that wail;
A noble galley of the loves is here:
Let us, who see the little barque set sail,
With our gay songs its onward voyage cheer!

The masts are all with rosy wreaths arrayed
By sportive Cupid's light and nimble hands;
To the fair Graces offerings rich are made:
And steady Friendship at the rudder stands.
Nor, with red wine, will jovial Bacchus fail;
Nor Pleasure, once invoked, fail to appear—
Let us, who see the little barque set sail,
With our gay songs its onward voyage cheer!

One more, to hail our galley, comes in haste,
Misfortune, rescued now from want and woe,
She prays that every joy the babe may taste,
Which those who bind the wounded heart can know:
Sure that each fervent prayer that loads the gale,
The God who guards the sleeping babe shall hear—
Let us, who see the little barque set sail,
With our gay songs its onward voyage cheer!"

ORIGIN AND MEANINGS
OF
IRISH FAMILY NAMES.

By JOHN O'DONOVAN.

V.

According to Mabillon, hereditary surnames were first established in Italy in the tenth and eleventh centuries; but Muratori shows that this statement cannot be correct, as in the MSS. of the tenth century in the Ambrosian Library of Milan, no trace can be found of surnames. In the ninth and tenth centuries, to distinguish persons, their profession or country is added to the Christian names, as Johannes Scotus Erigena, Dungallus Scotus, Johannes Presbyter, Johannes Clericus; the dignity is also sometimes added, as Comes Marchio, without stating of what place. In the tenth century, "A, the son of B, the son of C," was another mode of designation. It is said that the Venetians in the beginning of the eleventh century adopted hereditary surnames, a custom which they borrowed from the Greeks, with whom they carried on a great trade. The Lombards adopted the same practice after the practice of the Venetians, and accordingly the great family of Monticuli took that name from their castle in Lombardy called Montecuculi, it being on the top of a hill. The great house of Colonna took its name from the town and castle of Columna about the year 1156; and about the same time the noble family of Ursini derived its name from an ancestor named Ursus, or Orso, on account of his ferocity. Other noble families adopted names from the nickname given to an ancestor, as the illustrious family of Malaspina (the bad thorn) of Pavia, and the family of Malatesta (the bad head). The family of Frangipani, so formidable to the Popes, took that name in the twelfth century. The Rangones of Rome took their name from an estate of theirs in Germany. The Viscontes of Milan were so called from their title of Viscount, which was borne by one of the family. These names appear for the first time in the latter end of the twelfth century. I consider it but proper to observe, that for this information on the subject of Italian surnames we are indebted to the antiquary whose name I have already mentioned, the accurate and laborious Muratori.

To resume the history of surnames in Ireland. We have seen in the last article that in the year 1682 the inferior classes in Ireland, especially in Westmeath and the adjoining counties, were very forward in accommodating themselves to the English usages, particularly in their surnames, "which by all manner of ways they strove to make English or English-like." This was more particularly the case after the defeat of the Irish at the Boyne and Aughrim, when the Irish chieftains were conquered, and the pride of the Irish people was humbled. At this period, the Irish people, finding that their ancient surnames sounded harshly in the ears of their conquerors and new English masters, found it convenient to reduce them as much as possible to the level of English pronunciation; and they accordingly rejected in almost every instance the O' and Mac, and made various other changes in their names, so as to give them an English appearance. Thus a gentleman of the O'Neills in Tyrone changed his old name of Felim O'Neill to Felix Neele, as we learn from an epigram written in Latin on the subject by a witty scholar of the name of Conway or Mac Conwy, whose Irish feeling had not been blunted by the misfortunes of the times. The following translation of this epigram is perhaps worth preserving:—

All things has Felix changed, he has changed his name;
Yea, in himself he is no more the same.
Scorning to spend his days where he was reared,
To drag out life among the vulgar herd,
Or trudge his way through bogs in bracks and brogues,
He changed his creed and joined the Saxon rogues
By whom his sires were robbed; he laid aside
The arms they bore for centuries with pride,
The Ship, the Salmon, and the famed Red Hand,
And blushed when called O'Neill in his own land!
Poor, paltry skulker from thy noble race,
Infelix Felix, weep for thy disgrace!

Many others even of the most distinguished family names were Anglicised in a similar manner, as O'Conor to Conors and Coniers, O'Brien to Brine, Mac Carthy to Carty, etc. The respectability of the O's and Macs, however, was kept up on the Continent by the warriors of the Irish Brigade, who preserved every mark that would prove them to be of Irish origin; the Irish having at this period become so illustrious for their military skill, valour, and politeness, that they were sought after by all the Powers on the Continent of Europe. Thus we find O'Donnell made Field Marshal, Chief General of Cavalry, Governor-General of Transylvania. The O'Flanigan of Tuaraah (John), in the county of Fermanagh, became Colonel in the imperial service; and his brother, James O'Flanigan, was Lieutenant-General of Dillon's regiment in France. O'Mahony became a Count and Lieutenant-General of his Majesty's Catholic forces, and his Ambassador Plenipotentiary at the Court of Vienna. Mac Gawley,, of the county of Cork, became Colonel of a regiment in Spain; O'Neny, of Tyrone, settled at Brussels, and became Count of the Roman Empire, Councillor of State to his Imperial Majesty, and Chief President of the Privy Council at Brussels. A branch of the family of O'Callaghan, who followed the fortunes of King James II., became Baron O'Callaghan, and Grand Veneur (chasseur) to his Serene Highness the Prince Margrave of Baden-Baden. The head of the O'Mullallys, or O'Lallys, of Tulach-na dala, two miles to the west of Tuam, in the county of Galway, settled in France, and became Count Lally-Tollendal and a General in the French service. O'Conor Roe became Governor of Civita Vecchia, a sea-port of great trust in the Pope's dominions, etc., etc.

The lustre derived from the renown of these warriors kept up the respectability of the O's and Macs on the Continent, and induced many of the Irish at home to resume these prefixes, especially the O'. Thus in our own time the name O'Conor Don was assumed by Owen O'Conor, Esq., of Belanagare, whose line was seven generations removed from the last ancestor who had borne the name; and the name of the O'Grady has also been assumed by Mr. O'Grady, of Kilballyowen, in our own time, though none of his ancestors had borne it since the removal of that family from Tomgraney, in the county of Clare. Myles John O'Reilly, late of the Heath House, Queen's County, was at one time disposed to style himself the O'Reilly, but I regret to say that

his circumstances prevented him. Daniel O'Connell, of Derrynane Abbey, prefixed the O', after it had been dropped for several generations; and I have heard it constantly asserted that he has no title to the O', because his father, who did not know his pedigree, never prefixed it; but such assertions have no weight with us, for we know that O'Connell's father never mentioned his own name in the original Irish without prefixing O', because it would be imperfect without it. And whether O'Connell can trace his pedigree with certainty up to Conall, chief of the tribe in the tenth century, we know not, but we know that he ought to be able to do so.

In like manner, Morgan William O'Donovan, of Mountpelier, near Cork, has not only reassumed the O', which his ancestors had rejected for eight generations, but also has styled himself the O'Donovan, chief of his name, being the next of kin to the last acknowledged head of that family, the late General Richard O'Donovan, of Bawnlahan, whose family became extinct in the year 1829. His example has been followed by Timothy O'Donovan, of O'Donovan's Cove, head of a respectable branch of the family. We like this Irish pride of ancestry, and we hope that it will become general before many years shall have passed.

There are other heads of families who retain their Irish names with pride, as Sir Lucius O'Brien, of Dromoland, in Clare; Mac Dermot Roe, of Alderford, in the county of Roscommon; Mac Dermot, of Coolavin, who is the lineal descendant of the chief of Moylurg, and whose pedigree is as well known as that of any royal family in Europe; O'Hara, of Leyny, in the county of Sligo; O'Dowda, of Bunyconnellan, near Ballina, in the county of Mayo; O'Loughlin, of Burren, in the north of the county of Clare; Mac Carthy, of Carrignaver, near Cork, who represents one of the noblest families in Ireland; Mac Gillicuddy of the Reeks, in the county of Kerry, a collateral branch of the same great family; O'Kelly, of Ticooly, in the county of Galway; O'Moore, of Clough Castle, in the King's County; More O'Ferrall, M.P.; O'Flahertie, of Lemonfield, in the same county; and John Augustus Mageoghegan O'Neill, of Bunowen Castle, in the west of Connemara, in the same county. We are not aware that any of the old families of Leinster have preserved their ancient names unadulterated. Of these, the Cavanaghs of Borris, in the county of Carlow, are the most distinguished; and we induce a hope that the rising generation will soon resume the name of Mac Murrogh Cavanagh, a name celebrated in Irish history for great virtues as well as great vices.

Among the less distinguished families, however, the translation and Anglicising of names have gone on to so great a degree as to leave no doubt that in the course of half a century it will be difficult, if not impossible, to distinguish many families of Irish name and origin from those of English name and origin, unless, indeed, inquirers shall be enabled to do so by the assistance of history and physiognomical characteristics. The principal cause of the change of these names was the difficulty which the magistrates and lawyers, who did not understand the Irish language, found in pronouncing them, and in consequence their constant habit of ridiculing them. This made the Irish feel ashamed of all such names as were difficult of pronunciation to English organs, and they were thus led to change them by degrees, either by translating them into what they conceived to be their meanings in English, by assimilating them to local English surnames of respectable families, or by paring them in such a manner as to make them easy of pronunciation to English organs.

The families among the lower ranks who have translated, Anglicised, or totally changed their ancient surnames, are very numerous, and are daily becoming more and more so. Besides the cause already mentioned, we can assign two reasons for this rage which prevails at present among the lower classes for the continued adoption of English surnames. First, the English language is becoming that universally spoken among these classes, and there are many Irish surnames which do not seem to sound euphoniously in that modern language; and, secondly, the names translated or totally changed are, with very few exceptions, of no celebrity in Irish history; and when they do not sound well in English, the bearers naturally wish to get rid of them, in order that they should not be considered of Atticotic or plebeian Irish origin. As this change is going on rapidly in every part of Ireland, I shall here, for the information, if not for the amusement, of the reader, give some accout of the Milesian or Scotic names that have thus become metamorphosed.

And first, of names that have been translated correctly or incorrectly. In the county of Sligo the ancient name of O'Mulcohy has been metamorphosed into Stone, from an idea that "clohy," the latter part of it, signifies a "stone," but it a mere guess translation; so that in this instance this people may be said to have taken a new name. In the county of Leitrim, the ancient and by no means obscure name of Mac Connava has been rendered Forde, from an erroneous notion that "ava," the latter part of it, is a corruption of "atha, of a ford." This is also an instance of false translation, for we know that Mac Connava, chief of Munter Kenny, in the county of Leitrim, took his name from his ancestor Cusnava, who flourished in the tenth century. In Thomond the ancient name of O'Knavin is now often Anglicised Bowen, because Knavin signifies a "small bone." This change was first made by a butcher in Dublin, who should perhaps be excused, as he conformed so well to the Act of 5 Edward IV. In Tirconnell the ancient name of O'Mulmoghery is now always rendered Early, because "moch-eirghe" signifies "early rising." This version, however, is excusable, though not altogether correct. In Thomond, O'Marcachain is translated Ryder by some, but Anglicised Markham by others; and in the same territory O'Lahiff is made Guthrie, which is altogether incorrect. In Tyrone the ancient name of Mac Rory is now invariably made Rogers, because Rogers is assumed to be the English Christian name corresponding to the Irish Ruaidhri or Rory. In Connemara, in the west of the county of Galway, the ancient name of Mac Conry it now always made King, because it is assumed that "ry," the last syllable of it, is from "righ," a king; but this is a gross error, for this family, who are of Dalcassian origin, took their surname from their ancestor Curoi, a name which forms Conroi in the genitive case, and has nothing to do with "righ," a king; and the Kings of Connemara would therefore do well to drop their false name, a name to which they have no right, and re-assume their proper ancient and excellent name of Mac Conry, through which alone their pedigree and their history can be traced.

These examples, selected out of a long list of Irish surnames, erroneously translated, are sufficient to show the false process by which the Irish are getting rid of their surnames. I shall next exhibit a few specimens of Irish surnames which have been assimilated to English or Scotch ones, from a fancied resemblance in the sounds of both.

In Ulster, Mac Mahon, the name of the celebrated chiefs of Oriel, a name which, as we have already seen, the poet Spenser attempted to prove to be an Irish form of Fitzursula. is now very frequently Anglicised Matthews; and Mac Cawell, the name of the ancient chiefs of Kinel Ferady, is Anglicised Camphill, Campbell, Howell, and even Caulfield. In Thomond, the name O'Hiomhair is Anglicised Howard among the peasantry, and Ivers among the gentry, which looks strange indeed! And in the same county, the ancient Irish name of O'Beirne is metamorphosed to Byron; while in the original locality of the name, in Tir-Briuin na Sinna, in the east of the county of Roscommon, it is Anglicised Bruin among the peasantry, but among the gentry, who know the historical respectability of the name, the original form O'Beirne is retained. In the province of Connaught we have met a family of the name of O'Heraghty, who Anglicised their old Scotic name to Harrington, an innovation which we consider almost unpardonable. In the city of Limerick, the illustrious name of O'Shaughnessy is metamorphosed to Sandys, by a family who know their pedigree well; for no other reason, perhaps, than to disguise the Irish origin of the family; but we are glad to find it retained by the Roman Catholic Dean of Ennis, and also by Mr. O'Shaughnessy of Galway, who, though now reduced to the capacity of a barber in the town of Galway, is the chief of his name, and now the senior representative of Guaire Aidhne, king of Connaught, who is celebrated in Irish history as the personification of hospitality. Strange turn of affairs! In the county of Londonderry, the celebrated old name O'Brollaghan is made to look English by being translated to Bradley, an English name of no lustre, at least in Ireland.. In the county of Fermanagh, the O'Creighans have changed their name to Creighton, for no other reason than because a Colonel Creighton lives in their vicinity; and in the county of Leitrim, O'Fergus, the descendant of the ancient Erenachs of Rossinver, has, we are sory to say, lately changed his name to Fergusen. Throughout the province of Ulster generally, very extraordinary changes have been made in the names of the aborigines; as, Mac Teige, to Montague; O'Mulligan, to Molyneaux; Mac-Gillycuskly, to Cosgrove; Mac Gillyglass, to Greene; O'Tuathalain to Toland and Thulis; O'Hay, to Hughes; O'Carellan, to Carleton, as, for instance, our own William Carleton, the depicter of the manners, customs, and superstitions of the Irish, who is of the old Milesian race of the O'Cairellans, the ancient chiefs of Clandermot, in the present county of Londonderry; O'Howen, to Owens; Mac Gillyfinen, to Leonard; Mac Shane, to Johnson, and even Johnston; O'Gneeve, to Agnew; O'Clery, to Clarke; Mac Lave, to Hande; Mac Guiggin, to Goodwin; O'Hir, to Hare; O'Luane, to Lamb; Mac Conin, to Canning; O Haughey, to Howe; O'Conwy, to Conway; O'Loingsy, to Lynch; Mac Namee, to Meath, etc., etc.

In Connaught, O'Greighan is changed to Graham; O'Cluman, to Coalman; O'Naghton, to Norton; Mac Rannel, to Reynolds; O'Heosa, to Hussey; Mac Firbis, to Forbes; O'Hargadon, to Hardiman (the learned author of the History of Galway, and compiler of the Irish Minstrelsy, is of this name, and not of English origin, as the present form of his name would seem to indicate); O'Mulfover, to Milford; O'Tiompain, to Tenpenny; O'Conagan, to Conyngham; O'Heyne, to Hindes and Hynes; O'Mulvihil, to Melville; O'Rourke, to Rooke; Mac Gillakilly, to Cox and Woods. In Munster, O'Sesnan is changed to Sexton; O'Shanahan, to Fox; O'Turran, to Tracy; O'Mulligan, to Baldwin; O'Hiskeen, to Hastings; O'Nia, to Neville (in every instance!); O'Corey, to Curry; O'Sheedy, to Silke; O'Mulfaver, to Palmer; O'Trehy, to Foote; O'Honeen, to Greene; O'Connaig, to Gunning; O'Murgaly, to Morley; O'Kinsellagh, to Kingsley and Tinsly; Mac Gillymire, to Mo-

man; O'Hehir, to Hare; O'Faelchon, to Wolfe; O'Barran, to Barrington; O'Keatey, to Keating; O'Connowe, to Conway; O'Credan, to Creed; O'Feehily, to Pickley; O'Ahern, to Heron, etc., etc.

Scores of similar instances might be given, but the number exhibited is sufficient to show the manner in which the Irish are assimilating their names with those of their conquerors.

(To be Continued.)

NOTES AND QUERIES.

THE COOPER FAMILY.

18 Russell avenue, Jones's road,
August 18th, 1902.

(To the Editor of the "Dublin Penny Journal.")

Sir—Your correspondent, "Anglo-Irish" asks for information about the settlement of the Cooper Family in Ireland, in your issue of 16th inst, I am in a position to inform "Anglo-Irish" that the Kilenure Coopers came to Ireland about 1740 with Henry Wayland, of Harrow, Middlesex, accompanied by some Bishops of the English Protestant Church. Austin Cooper was the last occupant of Kilenure Castle, county Tipperary; his son has been serving in the Boer war, and he is expected home soon to the home of his ancestors.—I am, sir, yours faithfully,

P. WAYLAND.

OVER THE WAY.

Across in that mansion yonder
Half hidden by curtains of lace,
I see through its polished windows,
A child's sweet little face,
His form is clad in a texture
Of soft and silken array,
For fortune has showered its favours
On my neighbour, over the way.

And here in my little cottage,
When my day's toil is done,
I sit with my little darling
And gaze on the setting sun,
My babe is dressed in cotton,
Its little feet are bare;
Yet its face is as sweet and handsome,
As my neighbour's boy, over there.

My home is small and lowly,
With its curtains of simple chintz,
My baby's wardrobe only
Some pretty coloured prints.
Her babe has many changes
Of raiment for every day,
And beautiful, costly garments
Clothe my neighbour's boy, over the way.

My neighbour's lofty mansion,
With its statues of marble and brass,
Its frescoed walls and ceilings
Are admired by all who pass.
And I, in my humble cottage,
Murmured and thought alway,
That heaven sent all its brightness
To the mansion, over the way.

Ask me; how we judge each other,
I thought her heartless and cold,
So proud of her wealth and splendour,
Of her satin's shimmering fold,
But I saw her to-day in the garden,
Guiding his steps to and fro,
Then I knew she was bearing the burden
Of a mother's bitter woe.

And now in my little cottage
Though I toil hard all the day,
I would not exchange with my neighbour
In the mansion over the way,
And though no diamonds adorn me,
To my fate I am resigned,
My babe's eyes catch the sunshine,
But my neighbour's boy—is blind.

Alas! how often we murmur,
And fill with regret the day,
Thinking others have all the sunshine
While our clouds are always gray,
We may not see their sorrow
Nor their trials, day by day,
Yet each heart bears some burden,
Like my neighbour, over the way.

IRISH BOOK-BINDING.

PRIMARY INTRODUCTION TO ITS STUDY.

BY E. R. M'C. DIX.

The subject of Irish bookbinding has been little, if at all, dealt with by any book-fancier, and certainly no book, or even separate pamphlet, has been published upon it; yet the subject is an interesting one, and worth pursuing. The searcher into it, however, must hunt almost alone, like one exploring a dense forest into whose depths no human foot has hitherto ventured.

Let us gather up such few elementary facts as lie on the outskirts or edge of the subject and then plunge boldly further into it. To help us to be systematic we will roughly classify our native book-binding into three divisions—"Early," that is, before 1700; "Later, or Middle," i.e., 18th century; and "Modern," from 1801 onwards. This is a mere arbitrary and temporary division till better knowledge suggests another.

Binding, of course, existed from a very early age. Manuscripts were bound centuries before printing was discovered; but printing developed the binder's toil, and gave him much more occupation and remuneration. It developed, too, the simpler and cheaper bindings much. For the present, however, we will take bookbinding as contemporaneous with printing here.

At present I fear that there is no trace or evidence of the style of the first bindings done in Dublin for locally printed or other books, that is, in the 16th century. The first printers may have done their own bindings, and if so it was probably in some very simple form. The very rare existing specimens, only seven in number, of Dublin or Waterford printing in the 16th century have been all, I think, rebound.

When we come to the 17th century we get a little more information. There is mentioned in the Calendar of State Papers (Ireland) one William Wight, a bookbinder, who was in 1607 paid by the State for work done for it by him.

In the National Library will be found a copy of the first Dublin edition of Spenser's "View of Ireland" (1633), bound, or stitched rather, in vellum or parchment—sheepskin doubtless. This method was then one commonly used in binding books, and I believe it to be the original form or cover of this edition, though there is only probability to support the conjecture. At all events, such was a common form of book cover at that period (1633), and even later; for I have got in similar binding Dr. Winter's "Sermons," printed at Dublin in 1656. Law Records and Statues were a class of books which were often well and strongly bound; and so there are frequently to be met with copies of such works as Bolton's "Justice of the Peace" and of "Acts of Parliament" well and strongly bound in whole calf. The binding, though very serviceable, is generally plain. Unfortunately, evidence is lacking as to the date and place of such binding, which may have been later, though possibly contemporary. Comparison with the English bindings of the period might help in arriving at a conclusion. The names of three bookbinders of this century are recorded, i.e., Samuel Adey, Nathaniel Gun, and William Norman. The last is styled "Bookbinder to his Grace the Duke of Ormonde." This latter, as he worked for one in so high a position and of such wealth, must necessarily have executed some good bindings, probably of a special character. Perhaps in Kilkenny Castle may still exist some specimens of Norman's handicraft. Later on in the 17th century Dublin-printed books of all sizes are often met with in plain whole calf without any tooling, save one or two plain lines ruled round the edge of the front and back cover, with occasionally a like line or lines (in blind tooling) across the cover, and about a fourth of the breadth of the cover from the left edge or back rather. This is an infallible and instant indication before ever the book be opened that the work was printed or published in the 17th century. This fact is so far interesting in its way; but the binding is certainly not. It is plain, even to ugliness. It is to be feared that in Dublin utility ruled absolutely to the total exclusion of any beauty or art in binding well on into the 18th century. We do, it is true, meet with early works well bound in good leather and tooled in gold, but these seem much later than the 17th century, or else are found to be English work. At best we can but play the agnostic and say we do not know, till light is shed on the darkness. In all this early period and till well on into the "later and middle" period the end papers in books are almost invariably of common white paper. The coloured end-papers that were made by each craftsman himself for his binding, we do not find until we reach the latter half of the 18th century.

Sometimes, indeed, the binder used old printed matter for end-papers, or between the millboard and the white end-papers. In this way some rare, though fragmentary, items of printing have been found when no other trace of them existed. Only lately, for instance, I had the good fortune of finding a folio sheet of a Dublin Almanac printed here in 1679. The same sheet was pasted to each cover inside, reaching in under the overlapping calf. The volume in which this discovery was made was a large folio printed in London in 1671. The fact of the two sheets of the old Dublin almanac being so used in its binding seems clearly evidence that the volume was bound in Dublin. Such sheets would hardly be found in a London printer's hands. Furthermore, this volume was bound for one of the Dukes of Leinster, and was among the handsome and valuable collection presented to the National Library by the late Duke about 1882. All the volumes in this gift bear the Leinster Arms, or crest, on the back. I have handled them nearly all, and found a general resemblance in the style of the bindings, though the date of the work is not indicated anywhere. The probabilities seem strongly in favour of these books having been bound in Dublin. They nearly all have gold tooling on the back.

The Folio in which the early Dublin Almanac was found was bound in brown calf. There was no gold tooling on the covers, only on the back. The blind tooling on the covers is in the form of a simple oblong, with an ornament at each of its four corners. This form of tooling was very common at the end of the 17th century and early part of the 18th century.

When better binding became more usual in the "later" or "middle" period, we find, as already noted, a little more blind tooling on the sides and gold tooling on the back of the book alone. I have got, however, several Dublin Almanacs ranging from 1711-1730 with some gold tooling on the sides. One is entirely covered with such tooling—not, indeed, of high-class work; rather the reverse—but, still, striking as a whole.

On the back of a play printed in Dublin in 1753 by Henry Saunders are advertised two

A SCENE IN WATERFORD FIFTY YEARS AGO.

Dejeuner in the Town Hall to the 89th Regiment,

PREVIOUS TO THEIR DEPARTURE FOR THE CRIMEA, 1854.

FOR DESCRIPTIVE MATTER, SEE PAGE 346.

works printed by him as bound in red leather and filleted with gold, for which a higher price is charged. Yet Saunders does not call himself a bookbinder, or indicate where this binding was done. He only states he printed and sold them. If, however, the binding was not done in Dublin or in Ireland we are forced to assume that after printing these works Saunders had to send the sheets over to England or elsewhere to be well bound, at a period when business communications were much fewer and more slowly carried out.

Thence down to 1785 no binder's name appears on any book, nor have I, so far, traced in the early Dublin Directories any of the bookbinding craft named. Better search, however, may do so. The earliest of these Directories that I have seen which gives a list of merchants and traders is that of 1768. It is probable that the printers and stationers were also bookbinders, as booksellers were generally also printers. There was a bookseller, however, named Wilkinson in "Winetavern street, the corner of Cook street," who had plays printed for him. He first appears in the Directory for 1773, but as a bookseller only. At that time few houses were known by numbers. Very soon after, however, in 1775, the numbers of the houses were given, and Thomas Wilkinson's was then 40 Wine tavern-street. I have a copy of a play called "The She-Gallant" printed for him. There is no date in it, unfortunately, and so it may have been printed any year between 1773 and 1787, in which latter year we find Thomas Wilkinson, Bookbinder, of 155, Francis-street, figuring in the Directory. Now, at the end of "The She Gallant" is an advertisement by Thos. Wilkinson, "Bookbinder and Bookseller in Winetavern street," announcing that "at said place all sorts of books are neatly bound, gilt or plain; old or new books bound or repaired," and "Books neatly and strongly bound at lowest prices." Here, then, is positive evidence of better-class binding being done in Dublin in the eighth or ninth decades of the 18th century. Prizes given by Trinity College, Dublin, were usually well bound, and in the latter part of the 18th century we find red and green moroccos made use of in the binding of these College prizes, and also for prayer-books and missals.

The earliest appearance in a volume of its binder's name that I have yet met with is that of "McKenzie" in a Trinity College prize, bound in green morocco and with gold tooling, chiefly on the back.

This binder's name is given as "McKenzie, of 63 Dame-street." He appears for the first time in the Dublin Directory of 1784, in which he is described as a bookseller. He carried on his trade here for many years. The work bound was a London edition of Milton's Works (1771). It was a T.C.D. prize, and had pasted inside the cover the usual Latin certificate. There were four volumes, but I possess only two of them. The gold tooling on the back is very close and abundant, though rather simple in character.

The end paper should next be noticed. Each binder, I am told, made his own end papers; and one can quickly recognise the same sort

of end paper in many volumes, suggesting thereby that they are all the work of the same binder. This is no far-fetched theory or imaginary idea. The end-papers in Scotch and English-bound volumes are totally different in colours and forms from those which I believe to be Dublin made. Even the Continental end-papers are different, yet nearer in resemblance to the Dublin ones, as if these latter had been designed from them. Prayer-books and missals of this time are often well and handsomely bound, no doubt as gifts. If we compare the end-papers of such well-bound copies of the Book of Common Prayer, all in the 18th century, printed by Grierson's successors, with those in similar bound Missals or Ritual Books, printed by Patrick Wogan in the last quarter of the 18th century, we find that the end-papers of each class of book differ—that is, "Grierson's" (so-called) differ from "Wogan's" always, but are identical in each item of Grierson's binding. So invariably is this the case that one can accurately tell from the end-papers alone before viewing the title-page whether the letterpress will be "Grierson's" or "Wogan's", provided that they have not merely bound an English book, as they sometimes did. The end-papers which I call "Grierson's" suggest that the colours were spread with a painter's comb or similar instrument. "Wogan's" seem to have had the colours dropped, or splashed, or shaken on the printing tray.

These end-papers are sometimes found in use as covers for pamphlets and also in books bound in half calf.

I am inclined to think that some Continental binders came over to Dublin in the latter part of the 18th century and worked here, introducing the elaborate gilt tooling and coloured end-papers then found, just as Italian artists came over and did such excellent fresco-work here at that period.

In this connection it seems worth pointing out that the end-papers in the bound volumes of the MS. Journals of the Irish House of Lords and Commons (preserved in the Public Record Office) are clearly of the two kinds above mentioned—that is, the earlier and plainer volumes have the "Grierson" end-paper, while the later and very ornate volumes have that of "Wogan." It would not be right to lay too much stress on this interesting fact, but to me it presents strong corroborative evidence that the unequalled binding of these magnificent volumes was really the handiwork of Dublin bookbinders. Every scrap of evidence towards this conclusion is to be welcomed. The cost of such binding must have been considerable, and what it amounted to might perhaps be traced in the journals themselves or the printed editions of them.

Again, a very close and careful study of the separate tooling and a comparison of identical impressions would be helpful.

The "modern" period of Irish book-binding I do not now propose to enter upon. In the early part of the 19th century book-binders often affixed a label to identify their work, or else occasionally impressed their names in blind sunk letters along the inner margin of the book cover. The pamphlets of the 18th century date were always, I might say, simply stitched with a coarse paper cover, usually of a dull blue or grey colour, and occasionally the cover was composed of stiff paper when the pamphlet was an important quarto.

The announcement is made that Mr. Swan Sonnenschein will issus at the beginning of next year the first volume of a dictionary of phrases. In two successive volumes he will deal with proverbs and the alluring, if dangerous, subject of literary parallels. The same publisher will issue in the autumn, in Sonnenschein's "Quotation Series," a work by Mr. E. Latham, dealing with historic sayings, dying speeches, etc., made familiar to us in literature.

A SCENE IN WATERFORD FIFTY YEARS AGO.

For Picture, see Page 345.

The picture given on page 345 is taken from the "Illustrated London News" of 9th December, 1854, and is reproduced because of the historic interest attaching to it in view of the alteration in social and political relations which have since taken place in Ireland. The picture in the "Illustrated London News" was accompanied by the following description of the proceedings depicted:—

The city of Waterford, on Wednesday, last week, presented the very interesting scene of the public farewell of this gallant regiment, now on their route to the Crimea. This demonstration of the sympathy of the citizens of Waterford, for those who are going to fight the battles of their country, was participated in by all classes and creeds. These gallant soldiers, headed by the Mayor, and the Protestant and Roman Catholic Bishops, filed into the Town Hall; and the cheer that greeted them evidenced how heartfelt was the joy in this union of two such dignitaries in honouring our brave defenders, and showing that the religious bodies, of which they are the head in this locality, were equally anxious to show their approval and sympathy with the war, and those who were staking life and fortune on its hazards.

In the Town Hall the Union Jack, the Tricolour, and the Crescent were blended over the Mayor's seat; and the fine apartment was decorated with other flags and evergreens. Soon after the arrival of the soldiers, the Mayor and High Sheriff, accompanied by the Bishop of Cashel and the Roman Catholic Bishop—who, we were informed, met this day for the first time—went down to the Hall to receive the guests; and a procession was formed, with the Mayor bearing his wand of office at its head; the officers and troops following amounted to about 250 men. On entering the large Assembly-room, they were received with hearty cheers. Lieut-Colonel Graham was prevented attending by illness, and his place was filled by Captain Hawley. The other officers present were:—Captains White, Thorp, and Atkinson; Lieutenants Haycock, Morris, and Holmes; Ensigns Robinson, Hall, Beech, Breaden, Lloyd, and Barstow.

The Mayor took the chair, supported on his right hand by the Bishop of Cashel, and on his left by the Right Rev. Dr. Foran, Roman Catholic Bishop. The soldiers having filed into the room during the most rapturous cheering, they were seated at the tables, with a civilian at the head of each to see their wants were supplied.

The Mayor addressed the company, stating: "That he felt much pleasure in the cordial reception given by the citizens to these brave soldiers, now about to go to defend their country from the enemy. All classes agree in doing honour to those departing to the seat of war. The English army had in various climes maintained its character for valour and intrepidity; it had shown those qualities in the Peninsula, on the Sutlej, as well as at Alma and Balaclava (great cheering). When Nelson lived he gave to British sailors the signal, "England expects every man to do his duty." Now, it can be said of the British army—not that England expects them to do their duty—but they have most nobly and gallantly done it (here all the soldiers rose and cheered at the top of their voices). Up to the present time the troops of England had maintained their fame and covered themselves with laurels—they had contended against unequal numbers—they had fought as brave men, and they had triumphed (great cheering). Soldiers and officers, you are going to join your comrades—you are going to unite with those who never turned their backs on their foes. You will emulate their ardour (immense and prolonged cheering). You will lead the van, and never pause until you send back the Russian eagles deprived of their claws and stripped of their feathers, to their homes in the north (great applause). Brave 89th, we have great pleasure in meeting you; we send you forth wishing you every success."

The Lord Bishop of Cashel then rose, and, after a long continuance of enthusiastic cheering, his Lordship said:—

"Officers, non-commissioned officers, and soldiers of the 89th.—I deem it right to explain the feelings with which the citizens of Waterford are actuated in asking you thus to meet them previous to your departure to the seat of war, to express their sympathy with those who are engaged in the arduous struggle that is going on in the East, and in which you are so soon to take a part. We, who tarry at home, have an interest, a vital interest, in the character, and conduct, and movements of the soldiers and sailors who are sent to foreign climes to fight for the welfare of their country. We pray that God's blessing may rest upon those who are engaged in this contest. 89th, you are going to take part in this war; we know your deeds in India and in Egypt; we feel that you will not allow British valour to be sullied (great cheering); we know that you will add glory to glory, and we hope you may be crowned with triumph (renewed cheering). But we, who stay at home, have asked you to meet us ere you leave, to say that we feel with you, we sympathise with you, we bear you on our hearts; I may say, for myself, that I never kneel before God to ask His blessing on myself that I do not put up prayers for the welfare of the army. I pray God that He will, through the effects of the army and navy, bring about peace, that the horrors of war may cease throughout the world (cheers). Every family in this country has a personal interest in this contest, as they have some near relative at the seat of war. Waterford has sent soldiers and officers to the field, and every family who has some relative or friend engaged in the war feels a personal interest in the success and welfare of our troops. I myself had one nephew dangerously wounded at the battle of Inkerman—that deadly but glorious fight—and who now lies in the hospital at Scutari. I have another nephew in the 89th, who will either meet you at Gibraltar, or precede you to the seat of war" (cheers). His Lordship concluded by proposing the "Health of the Queen," which was drunk most enthusiastically.

Lord Carew then rose, and briefly proposed "The Health of the Army and Navy"—air, "Rule Britannia."

General Roberts returned thanks for the Army, and Captain Anthony on behalf of the Navy.

The Right Rev. Dr. Foran then proposed "Success to the 89th Regiment and the Allied Army in the East" (great cheering). "As the paper was originally given to him, it was the '89th Regiment and the army in the East,' he had taken the liberty of changing it, as he thought the French were equally concerned. (At the mention of the French the whole assembly rose, and the most vociferous cheering

took place, in which the soldiers joined.) Both armies were fighting in the same cause; the two great Powers, England and France, were fighting to put down the Autocrat of Russia (great cheering). He hoped the brave 89th Regiment would fight the battles of their Queen and their country; he wished them every happiness, and proposed the toast"; which was drunk amidst great applause.

Captain Hawley returned thanks, the Colonel being laid on the bed of sickness:—

"Were I to say for my brother officers that they leave you with light hearts, I should be far from representing their true feelings, but both officers and men quit with strong ones; trusting they will prove worthy to fill the gaps which pestilence and the enemy have made in the ranks of that gallant band that left their homes in the spring—many now no more. If report speaks truly, we go to encounter a barbarous foe, but we hope that even in the heat and fury of the battle, we shall never tarnish the bright name of soldiers and Christians, by forgetting the humanity due to a fallen and disabled enemy. But that we shall do as we would be done by. (The soldiers rose at this sentiment and cheered most heartily.) This is the second time within a few days in which publicly has been expressed to us most kind and generous feelings by the inhabitants of Waterford and the neighbourhood. The recollection of your sympathy will, indeed, cheer us in the dreariness of our winter campaign and bivouac. May our future actions in some degree repay you. I beg to propose the 'Health of the Right Worshipful the Mayor and the citizens of Waterford.'"

The Mayor, in returning thanks, said he had been requested by his brother magistrates to thank the 89th Regiment for their orderly and peaceful conduct while in this city.

The soldiers were then ordered to retire, and they formed in the street, in front of the Town Hall, where they were saluted with cheers from the spectators which followed them as they marched to their barracks; and so closed the "Farewell to the 89th Regiment.

The gallant Regiment left Waterford on Friday, previous to which they were addressed by General Roberts. Captain Hawley replied. The whole Regiment then took off their shakos, and gave three loud and hearty cheers for the citizens of Waterford, which was as loudly responded to. The word was given—"Quick march!" Captain Hawley placing himself in front, the band struck up "British Grenadiers," and the fine fellows (250 strong) left the barracks with stout hearts and many blessings.

Four hundred and eighty-one miles in 460 minutes is the new record made on the Lake Shore and Michigan Southern by the 20th Century Limited Express. When 45 miles west of Buffalo the train was two hours and twenty-eight minutes late. The track was cleared, and orders given to make up as much of the lost time as possible. The 124 miles between Brockton and Cleveland were covered in 131 minutes. The distance from Cleveland to Toledo, 113 miles, was made in 103 minutes, the speed on this stretch at one time reaching 90 miles an hour. The train left Toledo one hour and forty minutes late, making up forty minutes on the run to Elkhart, a distance of 143 miles, arriving in Chicago 35 minutes late, making the run from Toledo to Chicago, 244 miles, in 228 minutes, including three stops—one at Elkhrat, where they changed engines; one at Englewood, and one at Thirty-first street, making an average speed from Toledo of over 64¼ miles per hour, including stops.

THE OLD STONE CHURCHES OF IRELAND.

BY RICHARD J. KELLY, B.L.

Not entering into the much-disputed and vexed question as to whether the men who cut the superb stone cross of Tuam out of the rough granite, who made the beautifully wrought cover of St. Patrick's bell, the rich jewelled cross of Cong, the frescoes at Cashel and Abbeyknockmoy, and designed the illuminated manuscripts which have since defied imitation could or could not build stone churches, and did not generally in those early times do so, I may say a few words about the variety of eccelsiastical structures then common in this district and owing their origin to these premediaeval times. These edifices were of several classes or orders of architecture, the Daimhliag, Duirtheach, Cloigteach, Erdamh, and Cashel. I shall refer here only to the two most prominent and popular styles. The Daimliag, or house of stone, was always built of that material, and hence the name came to signify a cathedral or abbey church. Its roof was cemented stone, though more frequently of wood, and covered with reeds, straw, and oak shingles. When we read, therefore, of these buildings being burned, such as those in Tuam were by the Conacions in 1177, the Dalcassians, and twice by the O'Connors, we may fairly infer that it was only the roof that was burned. They were, perhaps, often roofed with lead, as was the Cathedral of Armagh. The second order of church architecture was the Duirtheach, or house of oak, and then employed the name signified a smaller chapel or oratory than the cathedral, and was almost invariably constructed of oak. The word "daimliag" was generally applied to the cathedral, and oftentimes the terms tempul, eclais, regles, and baslic, adapted from the Latin, which latter terms came to be used indiscriminately, but never to a wooden church, which was called an oratorium. The extracts from the Four Masters relating to the destruction of churches are very instructive on this point, referring to the burinings of them as daimliags. Petrie, speaking of the characteristics of the old Irish stone churches, says:—"In their general form they preserve very nearly that of the Roman basilica, and they are even called by this name in the oldest writers, but they never present the couched, semicular abscess at the east end which is so usual a feature in the Roman churches, and the smaller churches are only simple oblong quadrangles. In addition to this quadrangle, the larger churches present a second oblong of smaller dimensions extending to the east, and constituting the chancel or sanctuary, in which the altar was placed, and which is connected with the nave by a triumphal arch of semicircular form. These churches have rarely more than a single entrance, which is placed at the centre of the west end, and they are very imperfectly lighted by small windows, which do not appear to have been ever glazed. The doorways seldom present any architectural decorations beyond a mere flat architrave or band, are more usually plain, and the windows still more rarely exhibit ornaments of any kind." This fairly describes the architecture as far as we can now decipher from the accounts of its size and style of the old St. Mary's Cathedral or daimhliag of Tuam. The annals of the Four Masters early refer to it, and from their varied references there can be little doubt that the church was of this order, and that Petrie's description may be taken as for all purposes accurately describing it. In the year 1177, according to these writers, we read:—"The Conacians burned Tuam and many other churches to prevent the English from fixing their quarters in them. They defeated the English and expelled them from the country." Two years after the same edifice met with a similar fate, for we read in the same veracious annals this account of its complete destruction:—"1179—Lothra, Ardfert, Cashel, Tuaim da ghulainn (Tuam), Dysart, Kelly or Kells, Kilmeadan (Kilmaine), and Balla, in the county of Mayo, were all destroyed by fire."

The Irish kings were liberal in their aid to the Church and generous givers of land for religious purposes. We find in 1176 Roderick O'Connor, king of Ireland, granted a "bally biatach to God and St. Berraidh for ever namely Tuaim Achaidh" (Four Masters.) The witnesses and trustees were native chieftains, among them being Cadhla O'Duffy, Archbishop of Tuam. This eminent prelate lived through this stormy period of invasion and its troubles and died in 1200. We have seen that the abbey of Abbeyknockmoy owed its foundation to a son of this same monarch and the passage in the annals referring to his life, labours, and gift will read well after our own description of the ruins of the building. The passage runs—"1224—An awful and strange shower fell in Connaught extending over Hymaine, Sodain, Hy Diarmada, and other parts, followed by terrible diseases and distempers among the cattle that grazed on the lands where this shower fell, and their milk produced in the persons who drank it extraordinary internal diseases. It was manifest that these were evil omens foreboding misfortunes to the people of Connaught, as they sustained irreparable loss and calamity in the same year by the death of Cathal Crovderary, the son of Torlogh More O'Connor and king of Connaught, the man who had during a long time destroyed more of the traitors and enemies of Ireland than any other had done, the chief supporter of the clergy and benefactor of the poor and indigent—a man in whom God had implanted more goodness and greater virtues than in any other of the Irish nobility in his time. From the period of his wife's death till his own he led a single and virtuous life. During his reign tithes were first lawfully collected in Ireland. This upright and noble prince, this warrior of pure piety and just judgments died on the 28th day of summer, on a Monday, in the habit of a grey friar in the monastery of Knockmoy, which he dedicated to God, and granted to the monks with its site and lands in which he was interred with due honours and solemnity. The place of Cathal Crovderag's birth was at the port of Lough Mask, and was nurtured and educated in Hy Diarmada with Tiege O'Conceanain."

"In the year 1225—the sons of Murtagh Muimnagh having proceeded as before stated to sue for protection from Hugh O'Connor, arrived on the following day at Killmeodhain (Kilmaine). At this place the three English armies formed a junction and the barony was nearly covered with their forces and those of the Irish. Hugh O'Flaherty, under the protection of the English nobles came before Hugh O'Connor, and entered into ties of peace and protection for his people and property on condition that he should expel the sons of Roderick from his territory. After this Hugh O'Connor and his English allies marched to Tuam, where he dismissed the English of Leinster and of Desmond."

This Crovderag made himself well known in Tuam, as the following extract will testify. Under year 1201 thus recounting the advent of a Cardinal here we read—

"1201—Iohannos de Monte Celion a Cardinal came to Ireland from Rome as the Pope's legate, and convened a great synod at Dublin, which was attended by the Bishops, the abbots and the clergy of the various orders, as also many of the nobility of Ireland. At this convention many regulations between clergy and laity were satisfactorily arranged. In a fortnight afterwards the Cardinal convened a Synod of the clergy and nobilityof Connaught at Tuam."

An interesting Scottish literary centenary was celebrated on the 22nd inst.—that of Hugh Miller, who was born in Cromarty on 12th October, 1802. Circumstances having decreed the due date inconvenient, the celebration was fixed for the 22nd inst., when Sir Archibald Geikie, LL.D., delivered an address on "Hugh Miller: his Work and Influence," in a hall of his native town.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

CHAPTER XI.—Continued.

A.D. 1622, May 4. The lord deputy removed (though soon after created Viscount Grandison), and Adam Loftus, Viscount Ely, lord chancellor, with Richard Wingfield, Viscount Powerscourt, sworn lords justices.

Sept 8. Lord Falkland comes over deputy and sworn.

A.D. 1622. Some of the Popish citizens of Dublin were censured in the star-chamber for refusing the oath of supremacy established 2 Eliz. ch. I., and bishop Ussher in a learned speech set forth the lawfulness of the oath.

A.D. 1623, Jan. 21. Issued a proclamation requiring the Popish clergy, regular and secular, to depart the kingdom in forty days, and forbidding all converse with them after that time.

A.D. 1626, May. The king orders the lord deputy to appoint a lord high steward, &c., for the trial of the lord Dunboyne by his peers, for killing a man in the county of Tipperary.

A.D. 1627, July 24. A second examinator was first added to the court of chancery.

A.D. 1629. The Papists erected an university in Dublin for the education of the youth of that religion, without any authority from the state, and in the face of the government.

Oct 26. Adam Loftus, Viscount Ely, lord chancellor, and Richard, Earl of Cork, lord high treasurer, were sworn lords justices and allowed each £100 per month.

A.D. 1630. A priest being seized in Dublin for transgressing the laws, was rescued by the people; and to humble the intolerance of the Papists, the lords justices, by directions from England, seized fifteen of their new-founded religious houses to the king's use.

A.D. 1632. A seminary or college being created in Back-lane, in opposition to the king's college, was shut up by the government, and disposed of to the University of Dublin, who placed therein a rector and scholars, and maintained a weekly lecture in it, which the lords justices often countenanced with their presence. But afterwards in the lord Strafford's government, it was restored and converted to a mass-house. A controversy arose this year between the city of Dublin and the merchant strangers, from whom the city demanded three pence per pound custom. But the matter was referred to the lord deputy Wentworth, who was then preparing to take on him the government of Ireland.

A.D. 1633, July 25. Thomas Viscount Wentworth was sworn lord deputy.

A.D. 1634, July 14. A parliament met at Dublin, which granted six subsidies in all £240,000, also a convocation of clergy; the king having before determined the precedency of the archbishop of Armagh to that of Dublin, a new book of canons was compiled.

A.D. 1636, July 3. The lord deputy going over into England, Adam Loftus Viscount Ely, and Sir Christopher Wandesford, master of the rolls, were sworn lords justices.

Nov. 23. John Atherton made bishop of Waterford and Lismore, whose ignominious end, by the common executioner, was about four years after near Stephen's-green.

A.D. 1639, Sept. Robert, Lord Dillon, of Kilkenny, West, and Sir Christopher Wandesford, left lords justices.

The Earl of Strafford returns lord lieutenant in March following.

A.D. 1640, April 3. Sir Christopher Wandesford left lord deputy.

A committee from the House of Commons goes over to England to impeach the earl of Strafford.

Dec. 3. The lord deputy dies suddenly.

Dec. 30. Robert, Lord Dillon and Sir William Parsons are sworn lords justices.

February following, the Lord Dillon removed, and Sir William Parsons and Sir John Borlace sworn lords justices.

The Irish parliament sends over two petitions (containing their grievances) to England, one to the king, the other to the parliament.

March 4. An impeachment from the Commons was brought to the House of Lords against Sir Richard Bolton, lord chancellor, John, lord bishop of Derry, &c., for introducing arbitrary government and giving unjust decrees, &c.

A.D. 1641, May 11. The parliament sits again.

August 7. The parliament is adjourned to the 9th of November.

October 23. The castle of Dublin was intended to be surprised and taken by the Lord Maguire, Mac-Mahon, Hugh Birne, Captain Brien O'Neill, and other conspirators, who had formed a rebellion through the kingdom. But the design was prevented by the discovery of Owen O-Conolly, and the vigilance of the lords justices; and several of the conspirators were apprehended, and some of them afterwards executed.

Oct. 24. The alarms and fears were so great in Dublin, that the castle drawbridge was once let down, and some of the state went to the platform of the castle to view the supposed Irish army, which was falsely said to be approaching.

Nov. 2. Sir Francis Willoughby was made commander of the castle, and Sir Charles Coote governor of the city. Application was made to the city of Dublin for money to answer this emergency; but so prevalent was the Popish faction in it at the time, that they could be persuaded to advance no more than £40 or £50, and that to be paid partly in cattle. Few of the Popish citizens administered the least relief to the poor stripped and despoiled English, who fled thither from the cruelties of the Papists in distant parts of the kingdom.

A thousand of the stripped English, who had fled to Dublin, were formed into a regiment, and put under the command of Sir Charles Coote, and two regiments more under the Lord Lambert and Colonel Crawford. The castle was victualled, and an old well in it cleared, the better to fit it for a siege. The council was removed out of the castle to Cork-house, and the rolls and records of several offices removed to the same place.

In December, Sir Simon Harcourt landed at Dublin with 1,200 foot, and soon after was made governor in the room of Sir Charles Coote, who was sent abroad upon other business; but Sir Simon was slain at the siege of Carrickmean in the county of Dublin early in the following year, and Sir Charles Coote was again made governor.

Part of the walls of the city fell down this year, and were left unrepaired by the citizens, under pretence of want of money, until the lords justices sent them £40 to advance that service.

Jan. 24. The lord lieutenant's regiment of foot, under Lieutenant-Colonel Monck, as also Sir Michael Earnly and Colonel Cromwell's regiment of foot, with other horse, landed at Dublin.

A.D. 1642. Sir Charles Coote was slain at Trim, and the Lord Lambert made governor of Dublin in his room on the 12th of May. The lords justices ordered the citizens of Dublin to bring in half their plate to be coined, to furnish the necessary exigencies of the army, promising that they should be satisfied out of the next supply; upon which proclamation £1,200 worth of plate was brought into the mint.

July 21. The Irish parliament sat.

Oct. 9. Mr. Robert Goodwin and Mr. Robert Reynolds arrive in Dublin, with money and orders to inquire into the state of the army and kingdom, from the parliament of England, who procured a subscription of most of the officers in the army to take debentures on the forfeited lands for part of their pay.

A.D. 1643. The mayor of Dublin was called before the lords justices and council to confer with them about raising £10,000, half in money and half in victuals, to enable the army to enter upon action, and prevent the ensuing cessation with the rebels; but such was the poverty of the place, that the matter was found not feasible, and the cessation followed.

July 2. Sir Robert Meredith, Sir William Parsons, Sir John Temple, and Sir Adam Loftus are committed by his majesty's orders to the castle, being averse from the cessation of arms with the Irish.

Jan. 21. James, Marquis of Ormond, is sworn lord lieutenant of Ireland.

A.D. 1644. An excise was laid by proclamation on all goods consumed in the city of Dublin, together with other taxes, and three pence an acre on all

lands inhabited within the English pale, to support the army, and answer other exigencies of the state.

In August this year the citizens of Dublin were numbered, and found to be of Protestants, 2,565 men nad 2,986 women; of Papists, 1,202 men and 1,406 women.

A.D. 1646. Peace was proclaimed in Dublin by the officers at arms in their formalities between the king and the Irish rebels; but the heralds sent to the other cities for the same purpose were opposed in some of them. The Pope's nuncio marched at the head of Owen Roe O'Neil's and General Preston's armies united, to besiege the Marquis of Ormond in Dublin, and intended to take it by a general assault at his first approach; but this design was frustrated for want of provisions, and no attempt was made.

Nov. 14. Commissioners arrive from the English parliament with 1,400 foot for the preservation of Dublin; but the lord lieutenant refuses to resign to them, so that they carried their supplies to Ulster.

February following, the Marquis of Ormond agrees to surrender Dublin and the government to the parliament commissioners.

March 17. The Irish parliament made an address of gratitude to the Marquis of Ormond.

A.D. 1647. On the 18th of June the Marquis of Ormond, compelled by extreme necessity, surrendered Dublin to the commissioners of parliament, rather than it should fall into the hands of the confederated Irish rebels; and he himself soon after left the kingdom. Colonel Michael Jones was made governor of Dublin, who gained a great victory this year at the battle of Dungan-hill, slaying 6,000 Irish, with the loss of only 20 men.

Nov. 24. Owen Roe burns the country about Dublin, so that 200 fires were seen from a steeple there.

A.D. 1648. The walls and fortifications of the city of Dublin were repaired and strengthened by Colonel Jones.

A.D. 1649. The Marquis of Ormond sat down before Dublin at Finglas on the 19th of June, and on the (a) 25th of July marched to Rathmines and closely besieged it. But on the 2nd of August Colonel Jones, governor of the town, raised the siege by an unexpected and successful sally, in which 4,000 men were killed and 2,517 taken prisoners; the artillery and baggage were lost, and the Marquis escaped with much difficulty.

On the 14th of August, Oliver Cromwell, lord lieutenant and commander in chief under the parliament, landed at Dublin with a supply of 9,000 foot and 4,000 horse, and had a good fleet to attend the service; and having settled the civil and military affairs at Dublin, on the 30th of that month he marched out with 10,000 men to besiege Drogheda. The government of the city was again committed to Sir Theophilus Jones, who on the 13th of March following was commanded on other service, and Colonel Hewson made governor.

(To be Continued.)

(a) On the same day Colonels Reynolds, Venables, and Hanks, landed with 600 horse and 1,500 foot, and other supplies for the city.

SHEAGHAN O'DUIBHIR AN GHLEANNA.

(O'DWYER OF THE GLEN.)

BY ALBERT BARRY, C. SS. R.

John O'Dwyer, commemorated in this celebrated song, was most probably brother of Colonel Edmund O'Dwyer, Commander of the Irish forces in Tipperary and Waterford, who for two years fought bravely but unsuccessfully against the armies of Cromwell. "The uniform tradition," writes Dr Joyce, "of the O'Dwyer country is that the glen from which John O'Dwyer derived the epithet of an ghleanna was the Glen of Aherlow. This glen is not in the barony of Kilnamanagh, but lies far away in the adjacent barony of Clanwilliam, and it is probable that John O'Dwyer's epithet was earned by some unrecorded deed of arms performed in the Glen." The O'Dwyer sept however had large possessions also in the barony of Clanwilliam.

This poem is composed not with quantities like Roman versification, nor with accents and jingling rhymes like English poetry, but its beautiful melody and harmonious music is produced by a fascinating mixture of alliteration and assonantal rhythm. "The Gaelic poetry of the last two centuries in Ireland and in the Highlands is probably the most sensuous attempt to convey music in words ever made by man," Douglas Hyde.

This song, which, with its beautiful music, was always a great favourite with the peasants of Munster, is a lament over the awful sufferings and destruction caused by the Cromwellian Conquest. Whoever reads this simple but graphic description of the woes of his native land without being moved in the innermost depths of his heart is wanting in the noble passion of love of country, and betrays a mean and ignoble nature.

The only merit which I claim for my translation into English of this ancient Irish melody is its perfect literalness. Dr Sigerson made a beautiful, but by no means literal or exact translation of it many years ago for Joyce's Irish music and songs.

SHEAGHAN O'DUIBHIR AN GHLEANNA.

At sunrise in the morning when the summer sun was bright,
The sound of wailing mingled with the music of the birds.
The badger, and the soaring lark, the plover, and the grouse,
Made answer to the fiery musket's loud resounding voice.
The fox stood on the rock; the horsemen filled the air with shouts,
A woman by the roadside sadly scanned her straying geese,
The sheltering wood is hacked and hewn: we'll fly beyond the wave;
And Sheaghan O'Duibhir an ghleanna, thou, alas, art dumb.

Oh, I am sad and lonely, for the forest trees are felled,
That warded off the northern wind; and death is in the air.
My lovely little hound is tightly bound without my leave,
Whose speed and joyous baying would give gladness to a child.
The flower of noble chieftains wander on the rugged peaks,
So bleak and bare, where naught but bracken will for ever grow.
And if the townsfolk for a while would give a little peace,
I'd go at once to Galway and forsake the barren hills.

The people of the "Glen of Streamlets" are without a Head:
And in the "street of goblets" neither healths or toasts are drunk.
Ah, most woeful is my lot, for there's no shelter now
From Chluan to the "Causeway of the Giants" in the North.
And hares are straying day and night along the forest side.
Hark to the hideous uproar which the foreign Saxons make.
Now striking, slaying, heaping up the bodies of the dead.
The thrush and blackbird on the bush have lost their sweetest note,
And war has driven priests and people to the mountain glens.
Ah woe is me each morning, that sinless I did not die,
Before I suffered scandal sore, anent my kith and kin.
The days were full and many, when the bright-hued apples grew,
The leaves came on the oak tree, and the dew upon the grass.
But now I'm thrusted from my home, all friendless and forlorn,
Stretched out beneath the bushes, wretched, sad, and weary,
Or lying hidden under rocks upon the mountain side:
And if the gentle townsmen will not give me peace and rest,
I'll flee my loved homestead, and leave this world for aye.

AMERICAN IRRIGATION BILL

To provide for the irrigation, under Government supervision, of the thousands of square miles of arid lands in the Western States and territories of the Union, a scheme has been embodied in a Bill which has recently been passed into law. The Irrigation Bill is based on the idea that the proceeds of sales of public lands shall be assigned from year to year to the building of irrigation works under contracts approved by the Secretary of the Interior, but only when there is sufficient money on hand to insure the completion of the work. According to Mr. Newlands, the Representative from Nevada, who has promoted the legislation on this subject, this Bill is very complete and comprehensive in its scope and automatic (so to speak) in its plan of action. It is estimated that during the next thirty years at least 150,000,000 dollars from the proceeds of the sale of lands will be available without further appropriations for public irrigation works. The Bill makes the present receipts from public lands, including those of the last fiscal year, stated to amount now to some 6,000,000 dollars, immediately available and the average annual sum of 3,000,000 dols. (likely to be constantly increased) can be used each year for a steady continuation and enlargement of any work for which contracts are made. The plan further provides against the acquirement of large tracts of land by individuals or companies by limiting the area to be owned by one person to 160 acres, subject to the provisions of the national homestead law, including its limitations, charges and conditions. At least half of the arid land so acquired must be improved by irrigation and the owner must reside on or near the land. After a plan of irrigation of a tract of land owned by several parties has been completed at government expense and the works are in order, the owners will be required to pay back to the government in not less than ten annual intstalments the estimated cost of the construction of the works, the money so paid to be returned to the general reclamation fund. Eight hours is fixed as a day's work, and Chinese labour is forbidden. The public arid and semiarid lands mentioned are in the Territories and States of Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington and Wyoming.

A USEFUL SOCIETY.

The Society for Encouraging National Industry in France has just awarded a prize of £80 for the invention of a cement to agglomerate diamond dust for mechanical purposes. Another prize of £120 has been given to the inventor of a steam superheater, believed to be much superior to anything at present on the market. A prize of £40 is now being offered for the practical utilisation of any bye-product used in chemical processes which is now wasted, and medals are offered for the publication of papers useful to chemical industry and metallurgy. Prizes are also offered for an apparatus suitable for domestic use, and capable of sterilising drink water, and for anything which shall free the vine from a certain parasite.

LITERARY NOTES.

It is a singular fact that no really great edition of Johnson's "Lives of the Poets" has yet been published in this country. The Bohn edition every student knows. It is good. But something more is needed. Dr. Birbeck Hill has for a long time been engaged upon a new edition, and we understand that he is now within sight of the end of his task, and that the work will be sent to press before the end of the year.

✧ ✧ ✧

Messrs. Blackwood will shortly publish the Earl of Ronaldshay's book, "Sport and Politics under an Eastern Sky." The first half of the book describes the author's adventures and experiences while hunting ibex, markhor, and other big game in the highlands of Kashmir. Especially interesting is the account of the author's perilous crossing of the Himalayas in the middle of winter. The second portion of the book describes the overland journey from Simla to London, via Quetta, Sistun, Meshed, and the Caspian. Lord Ronaldshay's work, which is profusely illustrated with photographs taken by himself, abounds in descriptions of scenery, men, and manners, and furnishes valuable information as to the relative positions of Britain and Russia in South Asia.

✧ ✧ ✧

Mr. Henry J. Roby, who was for some years M.P. for the Eccles Division of South-East Lancashire, attained his 72nd birthday on Monday last. Mr. Roby is a man of varied attainments, and, although a retired cotton manufacturer, has filled some important positions in the educational world. He was formerly under-master at Dulwich College,, then secretary to the Schools Inquiry and Endowed Schools Commission of 1865-72, and subsequently a Commissioner under the Endowed Schools Act. He was also Professor of Jurisprudence in University College, London, from 1865 to 1868. He has published works on College Reform, a Latin grammar, and other classical primers. He is Hon. LL.D. of Cambridge and Edinburgh. In Lancashire he is known as a good Radical, and has taken great interest in the promotion of technical education

✧ ✧ ✧

Portsmouth may not yet render to Dickens as much much public homage as some of the friends of Dickens demand of his birthplace. But a French seaport a few years ago set forth on a sign-board a delightful tribute to Dickens, albeit only a transitory one. This was when at Boulogne pedestrians on both the piers were warned of the danger of an "explosion de torpilles sur les debris du Dickens." A vessel called after the Dickens himself had, in fact, foundered on the bar, and the removal of the wreck necessitated the danger signal. "Les debris du Dickens!" They will suffice to build up as many lesser reputations as, say, the stones of the Coliseum reared palaces for the Rome of the early Renascence. But the dynamite among the debris is not always that of the torpedo; and really Mr. Murray should give unsuspecting readers more warning than that of a mere colourless advertisement of the literary explosion with which Mr. Swinburne deafens us in the pages of the current "Quarterly."

✧ ✧ ✧

All who are interested in the subject of Irish bibliography have good reason to feel grateful to Mr. E. R. M'C. Dix, whose researches have been fruitful in such valuable results. Part III. of Mr. Dix's "Books, Tracts, etc., Printed in Dublin in the 17th Century," has just been published, and a glance at its contents must convince the reader that it contains quite a mine of interesting and useful information, not hitherto available for easy reference. No student of Irish literature, history, and antiquities can possibly afford to do without this work, which is destined to become a standard one of its kind. Here the investigator is enabled without the least trouble to obtain such information regarding the authorship, date of publication, etc., of Dublin printed books, pamphlets, proclamations, broadsheets, etc., as will suffice for all ordinary purposes. The volume now before us deals with publications issued during the years 1651-1675, and its value is enhanced by some useful notes by Mr. C. W. Dugan, M.A., M.R.S.A.I. The Dublin publishers are Messrs O'Donoghue and Co., 31 South Anne street. The price of the book, which has been excellently printed by Messrs. Sealy, Bryers, and Walker, is only 2s 6d.

✧ ✧ ✧

The 12th inst. was the 128th anniversary of the birth of Robert Southey. The following birthday mottoes are given to the poet by the "Daily Chronicle":—

Robert S——, Esquire,
In the County of Gloucester.
—Shakespeare.

The degree of excellence which proclaims genius is different in different times and different places.
—Sir Joshua Reynolds.

Talent alone cannot make a writer.
—Emerson.

His virtues were domestic.—W. S. Landor.

Better thou wov'st thy woof of life, than thou didst weave thy woof of song.
—Francis Thompson.

Love is a celestial harmony
Of likely hearts composed of star's consent,
Which join together in sweet sympathy
To work each other's joy and true content.
—Spenser.

✧ ✧ ✧

Mr. J. C. Bose, a native Bengali, well known to or among scientific circles in England and abroad, is a man of science, of whom, if we are not mistaken, the reading world generally will some day hear a great deal. Mr. Bose is a Cambridge M.A. and a Doctor of Science of London University. He is Professor of Science in the Presidency College, Calcutta. He has for some time been conducting his physical researches in London. A fully illustrated volume by him is now in the press, and will be issued by Messrs. Longmans under the title of "Response in the Living and Non-Living." The book describes experimental investigations on animal, vegetable, and inorganic substances regarding their response to stimulus. Dr. Bose's researches show that the effects of fatigue, stimulants, depressants, and poisons are alike in the organic and inorganic, and that the response phenomena in the living have been foreshadowed in the non-living. The book is an amplification of papers read before the Royal Society, Royal Institution, Linnean Society, and the International Science Congress, Paris.

✧ ✧ ✧

The journalist in Italy (the "Academy" remarks) appears to be becoming a pet of the Legislature. The is before the Italian Parliament a Bill called the "Journalists' Contract Law," of wh ch the following are the salient points:—"The duration of a contract betwen a journalist and the proprietor of a paper cannot be less than two years for a chief editor and one year for an ordinary writer. A journalist taken on trial become a full-fledged journalist at the end of two months if not discharged. In case the paper is sold, if the owner changes his political opinions, or if there is a consolidation with another paper, the journalist is entitled to an indemnity should the change affect the stability of his position or force him to do some work not in accordance with his political opinions. This indemnity is equal to the amount of the salary he would receive at the end of his engagement. Any arrangement contrary to the Bill is void. In case of bankruptcy of the paper, the editors have a privileged lien on the furniture, the machinery, and the material. In the case of litigation between journalists and owners of publications, an arbitration tribunal will decide. This tribunal will be composed of two journalists and two owners, selected out of a list of three of each presented by the litigants. There will be no appeal from the decision. A fee of 4 per 1,000 of the amount involved will be paid to the treasury of the "Provident Association of Journalists."

✧ ✧ ✧

We have often pondered (says the "Academy") on the psychology of the composing room, but have never been able to understand the workings of a compositor's mind when he is confronted with difficult manuscript. That he deserves great sympathy in that situation we allow, but we are puzzled by his manner of meeting difficulties. A word is illegible; he cannot reproduce illegibility in type, as most of us reproduce on an envelope a badly written address. To set up gibberish is beneath him. What he actually does is to plunge at a real word, and it is in contemplating his selection of real words that psychology faints into the arms of mirth. The odd thing is that the wilder he becomes the less dangerous he is to the paper on which he is engaged in the event of his mistakes passing the printer's reader. It is the thinking compositor who is most to be dreaded, for he will select a word which makes good sense, while it entirely distorts or belies the author's meaning. Moreover, he will very probably select a word which no one but the author can correct. Last week, in our article entitled "Hookway's," the thinking compositor set up "Fitzgerald's 'Omar Khayyam' in severe bindings." Only the author was able to alter "severe" to "seven."

✧ ✧ ✧

To realise what the thinking compositor is capable of, one must intercept his work before it reaches the printer's reader, though the opportunities for study after that event are, as we know to our cost, by no means contemptible. From a list of "Errors on the Wing," supplied to us by a capable printer's reader, we take the following examples of the thinking compositor's handiwork:—

a steady (study of) temperament;
amazed (annoyed) nine reviewers out of ten;
the liability (liberality) of thought;
like Quixote, lifts a hand (tilts a lance);
they were all well drawn, especially the fitter and another (father and mother);
in a state of perplexed (perpetual) high spirits;
he was beginning to obscure (observe);
but the myster skated (stretched) out;
at whose wedding in Cumberland it is mutual (unusual) for the parents to be present;
for love of thee I ask alms (act thus);
the Moors believe in aliens (alms);
among the authors (Fathers) of the fourth century;
this is the whole story of Grim Mayes (Simon Magnus);
destroyed the altars in any striking moment (manner);
the final solution of the subject has been grand (good);
comes of fine German (yeoman) stock;
some rare (sane) a view;
enlargement (entanglement);
room for the last (at least twenty);
the invoices (ivories);
inveterate fidelity (frivolity);
the ship is to be contemplated (completed);
genial (cynical) old neighbours;
misleading articles (initials);
meeting (mutiny) of our Soudanese mercenaries;
preposterous remains (romances) of Madeleine;
sketching (selecting) photographs;
many of the poorer (fairer) half of the audience;
his own nervous face (force);
sunburny (umbery) gold;
antiseptic (antipoetic);
scientific (scriptural) sentiment;
puissant (pinioned);
upholds this idea (explodes the idea);
time of least assistance (line of least resistance).

This list could be extended indefinitely; it may serve, however, as an indication of the pitfalls which lie before printers' readers, sub-editors, and editors—pitfalls which result sometimes in unbecoming falls on which readers look with inhuman glee. That we could forgive; it is their postcards that hurt.

SCIENTIFIC TOPICS.

An effort is being made to secure the establishment of a United States Government biological station on the Great Lakes. The purpose of such a station is to investigate all the problems connected with the fisheries of these lakes throughout their whole extent, principally for the protection of the commercial fish.

✧ ✧ ✧

According to a report from Consul-General Bittinger at Montreal, a natural soap mine has been discovered in the foothills near Ashcroft, British Columbia. A company has been formed to work it, and already 275 tons have been taken out. The composition of the soap seems to be about one-fifth borax. It is said that there are 20,000 tons of the material in sight.

✧ ✧ ✧

Prof. Henry A. Ward has announced the discovery of a great meteorite in western Mexico. The stone weighs over 50 tons; it is 13 feet and 1 inch in length, and lay buried by the terrific force of its own momentum nearly 20 feet in the earth. Small portions of the meteorite were broken off; the remainder was left intact for the time being. The cost of transporting the stone to the seacoast, 71 miles away, would have been more than £10,000.

✧ ✧ ✧

The United States Geological Survey department has recently issued a number of topographical maps of interest. There are five sheets covering the State of Pennsylvania, which were made by the co-operation of the Geological Survey and the State authorities. Sheets have also been recently issued covering the States of New York, California, Utah and New Mexico. There has been a re-issue of the maps covering the State of New Jersey. These are available to persons interested from the department at a cost of five cents per sheet.

✧ ✧ ✧

A collection of butterflies, said to be the finest and largest in the world, has been recently acquired by the American Academy of Natural Sciences in New York. This collection was made by Dr. Herman Strecker of Reading, Pa., who died not long ago. It was purchased at a cost of £4,000, which was donated for the purpose by the Very Rev. Dean Hoffman, of New York. Dr. Strecker was a sculptor, and devoted himself to the collection and study of butterflies only as a recreation. There are several standard works on the subject compiled by Dr Strecker.

✧ ✧ ✧

The report of the scientific expedition to the Siamese-Malay State of Talor, which was subsidized by the British Government, has just been issued. The expedition is at present investigating the zoology of the caves in the limestone hills near Biserat. The caves are said to be numerous, and many of them extend for over a mile in length, and, in most cases, are very rich in fauna. It is anticipated that considerable light will be thrown on the history of cave-dwelling animals by these investigations. So far sufficient geographical data have been collected to permit the accurate mapping out of the highlands of the greater part of the north of the Malay Peninsula.

✧ ✧ ✧

Sucking fishes have the unenviable reputation of going through life as hangers-on to fishes of larger growth, notably sharks, swordfishes and bull-fishes. Like some human beings, they prefer to have their food found for them—too lazy to do their own skirmishing in the struggle for life; and to accomplish their end they attach themselves to the gill-covers or sides of larger fishes with their first dorsal fin (the fin on the back nearest the head). As they are excellent swimmers, there seems to be no good reason why they should become a burden to others, but it is well known that they travel with their unwilling hosts continuously in this manner, and the latter have often been found emaciated and thoroughly exhausted from the strain of pulling these uninvited guests around. From careful observation it appears that the object of the suckers beyond doubt is to share with their hosts the food which the latter find.

✧ ✧ ✧

The Remora was one of the first fishes observed by the discoverers of North America, and history tells us that the Indians used them as baits to catch other fish. Thus in Ogilby's "America" the following reference to them is found in speaking of the fishes observed about the West Indian islands:—"Columbus from hence (Cuba) proceeding on further westward discovered a fruitful coast, verging the mouth of a River, whose water runs Boyling into the Sea. Somewhat further he saw very strange Fishes, especially of the Guiacan, not unlike an Eel, but with an Extraordinary great Head, over which hangs a Skin like a Bag. This Fish is the Natives' Fisher; for, having a Line or handsom Cord fastened about him, so soon as a Turtel, or any other of his Prey, comes above Water, they give him Line; whereupon the Guiacan like an Arrow out of a Bowe, shoots toward the other Fish, and then gathering the Mouth of the Bag on his Head, like a Purse-net, holds them so fast, that he lets not loose till hal'd up out of the Water."

✧ ✧ ✧

The employment of the incandescent lamp for the display and illumination of shop windows containing dry goods is generally considered safe, but several experiments that have recently been carried out prove this contention to be a fallacy. A number of 16 candle-power incandescent lamps were enveloped in raw cotton, and at the end of a few minutes the material commenced to smoke. Directly a draught of air, such as is caused by the opening of a door, came into contact with the cotton, it burst into flames, and the bulb of the incandescent lamp immediately collapsed. Investigation as to the cause of this peculiarity showed that the thin glass shell of the bulb of the lamp softened under the influence of the heat gathered by the cotton from the incandescent filament, and when the draught of air came into contact with the lamp, the softened glass caved in under the air pressure, so that the filament fired the glowing material. In view of these interesting experiments, caution should be observed not to place cotton or similar fabrics too near an incandescent lamp, as is often done for decorative effect, otherwise great risk of a fire breaking out is incurred. The liability of combustion from ths cause is further accentuated where incandescent lamps covered with a coloured varnish are employed, as the varnish affords a stronger incentive to combustion.

✧ ✧ ✧

A method of replacing the ordinary anæsthetics used in dental surgery by the action of high-frequency currents has been brought out by Messrs. Regnier and Didsbury, of Paris. M. d'Arsonval has already shown that high-tension and high-frequency currents have a local anæsthetic effect, and the experimenters wished to see whether this could not be used to advantage for dental operations, and so do away with the inhalations of gas, which are not without danger to the patient. In the case of extraction they found it to work quite successfully. A d'Arsonval-Gaiffe apparatus was used, having a coil which gave a 1.2-inch spark, with a rotary interrupter and an oil condenser. The apparatus is connected to an Oudin resonator, one of whose terminals is joined by a flexible cord to an electrode fixed upon the jaw. The electrode is moulded in plastic material and covered inside by metallic powder and a layer of tinfoil. Under these conditions the current gave the patient no sensation other than a slight heating in the region covered by the electrodes. It was found that a tooth with one root was made completely insensible by the application of a current of 150 milliamperes for 3 to 5 minutes, while the larger teeth needed 200 to 250 milliamperes for 6 to 8 minutes. As to the use of the method for more prolonged operations, the experiments are not as yet conclusive, although they are favourable on the whole.

The late Mr. Cecil Rhodes repeatedly endeavoured to arrange for his railroad from the Cape to Cairo to pass through the more prosperous and promising Congo Free State, but he was unable to obtain the necessary concession, and therefore selected the alternative route through German East Africa. Now, however, the necessary concession has been granted by the Congo Free State for the construction of the railway, between the northern borders of Rhodesia, across Congo Free State territory, to Lake Kasali, on the navigable waters of the Lualaba, one of the head reaches of the Congo. It is provided by the contract that 40 per cent. of the plant of the railway shall be purchased in Great Britain. Negotiations are in progress with a well-known firm of contractors for despatching a railway survey party at an early date. The effect of this scheme will be to divert the route of the transcontinental railroad north of Zambesi, from which point, according to the present arrangement, it trends to the east toward Tanganyika and the great lakes. It will now be continued due north of Victoria Falls to the Congo border, whence for a distance of 350 miles it will continue due north through Kantanga to the most southerly navigable point on the Lualaba (Lake Kasali), whence there is navigable waterway to Stanleyville, on the Upper Congo. Thence a railway is projected to Mahagi, on Lake Albert, with further water communication on the Nile.

✧ ✧ ✧

A recent explosion with one of the fire engines of the London Fire Brigade burning liquid fuel has proved that it is far safer to use oil with a low than a high flash-point. With the engine upon which the accident occurred, oil with a flash-point of 105 degrees was being used. The tubes of the engine appeared to have clogged, owing to the tendency which the oil has to carbonize rapidly. The fireman noticed that the burner was not acting properly, and was in the act of shutting off the supply when the oil fired back with such force that his hair and clothing were singed and his face and arm scorched. As the result of his experiments, the commanding officer now recommends the use of an oil with a flash-point of 85 degrees, which is both considerably cheaper and safer than the higher flash-point oil. The experiments with liquid fuel for fire engines have not, however, resulted in such an economy as was anticipated; but the advantages of oil over coal in other directions are so numerous, both for stationary and marine engines, that the adaptation of all the engines for liquid fuel is to be carried out.

✧ ✧ ✧

Last year a mining expedition was organised by several English and German capitalists to explore the mineral districts of German East and British Africa, respectively, for the purpose of developing the rich mineral resources of these districts. For this object some extensive schemes, involving the expenditure of millions of dollars, are being prepared conjointly in London and Berlin. The main feature of the enterprise is the construction of several railroads throughout the various territories, to connect the Cape to Cairo Railway with the West Coast, and also in conjunction with the railways in existence in the already partially-developed portions of the country to cross the Continent, probably from Port Alexander on the west to Delagoa Bay on the east. Some of the most wealthy of British and German Colonial capitalists are financing the scheme, and in regard to that part of it which applies to German Damaraland, the German Government is interested, as concessionaries of the right conceded to an Anglo-German syndicate to search for and work the minerals of the district, including the copper mines of Otavi. Outside, however, of the district worked by the German South-West African Colonial Company, the period of this concession has expired, but the promoters have obtained a renewal of the right from the German Government.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1793.)

NOVEMBER 21.

In consequence of the heavy fall of rain, Patrick street and Patrick's Close, Bull alley, Bride's alley, etc., were yesterday totally inundated—the houses several feet under water; as also the lower Castle yard, Palace street, Crampton court, and that part of Dame street impassable for foot-passengers. Boats plied all yesterday in Patrick street, Castle yard, etc., etc.

Early on yesterday morning a vessel (the "Mercator") from Liverpool to Boston, was lost off Howth—the crew saved.

The remains of his late Grace the Lord Primate arrived on Monday last on board a British trader, and were conveyed to Henrietta street. They are to be removed for interment to the Cathedral of Armagh, which, during his Lordship's life, received so many marks of his attention and munificence, and which in death has the last bequest of giving sepulchre to his remains.

A horse, esteemed by his Grace, was landed from the same vessel. By his desire, this favourite animal is to be allowed to spend the remainder of his days in splendour and ease upon some of the estates which were purchased by his Lordship in this kingdom.

We hear from Waterford that a very atrocious murder was perpetrated a few days ago at Callan—the house of the deceased (a middle-aged woman) was broke into by four men; they did not show a disposition of plunder, but terrified the deceased so much, by breaking some delph ware, that she ran into the street, and was followed by those men, who killed her there with blows with a bludgeon, and wounds with a cane sword. The neighbours, hearing her cries, came running to the place, upon which the aggressors escaped.

A Coroner's inquest was held by Mr. Gore, of Kilkenny, and a most respectable jury, who found a verdict of wilful murder against two men of the town, who were immediately apprehended, and escorted to the gaol at Kilkenny, by a small party of the inhabitants.

DECEMBER 3.

By the late heavy gales of wind, no less than 44 vessels have been driven on shore on the northern and southern coasts of this kingdom, but we are happy to hear that very few lives have been lost.

Saturday night another violent storm arose here, which was attended at intervals with tremendous flashes of lightning. Several vessels were driven by the storm from their moorings in the harbour, and it is feared much mischief has been sustained by the shipping in various parts.

Another respite, for five weeks, has been granted to the unfortunate Mr. O'Bryne, now under sentence of death in the New Jail.

In consequence of the heavy rain on Friday night last, New street was flooded yesterday as high as Fumbally's lane, by which the inhabitants in that quarter received very considerable damage.

DUBLIN, DECEMBER 3

Three days ago a man of the name of Skarret, who was coachman to the Right Hon. William Burton Conyngham, was drowned by the flood on his way from Slane, near Finglas.

Accounts have been received by the last mails from England, of shipwreck, to a melancholy amount, not less than one hundred vessels within the last fifteen days. So disastrous a misfortune, superadded to the depredation of the enemy for some time past, is such a stroke as, in a like space of time, the trade of Britain never experienced.

Tuesday se'nnight a lighter going from Waterford, laden with coals, to Mrs. Phair's paper-mills, was sunk at the Long Reach by a heavy sea. When she went down, a boatman, who was asleep in the cuddy, unfortunately perished.

An adjournment of the Quarter Sessions was held at the Tholsel on Saturday last before William Walker, Esq., Recorder of this city, at which James Gallagher, for stealing clothes, the property of John Halligan; Daniel Reilly, George Corcoran, and Mary Murphy, for stealing stockings; and Bartholomew Dunne, for stealing a bridle, were convicted, and sentenced to be transported; after which the court adjourned to the 13th inst.

A large ship of war has been driven ashore on the Southern coast between Waterford and Wexford. She is supposed to belong to the French Republic, for when coasters had approached her she has taught them the necessity of keeping a civil distance by sending a thirty-two pound ball over their heads. An express was immediately forwarded to Cork with information of the circumstance, and it is concluded that before this some of the King's ships, on that station, have been able to give a better account of her.

On Sunday night last, at eleven o'clock, Mr. Dalton, of Fleet street, was stopped on the City quay, near Moss street, by a gang of armed ruffians, who robbed him of his watch and what money he had about him, and were proceeding to take the buckles from his shoes, and perhaps further strip him, but were prevented by the opening of a window in Mr. Dixon's house, which so disconcerted them that they fled precipitately. It is worthy of observation, that there was not a policeman from the Marine Hotel to the Guard House in Fleet street. After coming home he was alarmed in his bed by a vehement cry of police, murder, robbery, etc., immediately under his windows, and though this had taken place within a few yards of the Guard House in Fleet street, not a single policeman appeared. A considerable quantity of blood was found the next morning on the flags and steps of his halldoor, so that murder as well as robbery might have been committed with impunity.

The Muster-Master-Generals office, in the Lower Castle Yard, was feloniously entered on Monday night or Tuesday morning, by some person or persons unknown, and out of an iron chest contained therein, were taken, by means of skeleton keys, Debentures of different kinds, and Treasury bills, to the amount of £1,750, bank notes to the value of between £400 and £500, and above 40 guineas in cash.

Saturday night last, as a person named Robert Thompson was returning from the post at Waterford, with letters for the Marquis of Waterford, he was attacked by three men near the two-mile-stone, who, beside robbing him, abused him in so gross a manner, as to leave him without signs of life.

Saturday night, a gentleman passing through Meeting-house Yard, which leads to Usher's quay, was seized by three or four ruffians, who robbed him of his watch, money, and other articles; and after abusing him, made their escape.

The "Mercator," which was wrecked off the Light House recently, attracted a number of plundering adventurers, who surrounded the wreck in boats, and seized whatever they could lay their hands on. Sunday evening a scuffle ensued between a party of those marauders, when one of them gave the other a blow, which tumbled him into the sea, where he was drowned.

DECEMBER 9.

Kerry House, at Stephen's Green, which has been for so long a time at market, was yesterday disposed of for seven thousand pounds. Ten thousand pounds were offered and refused for it in the summer, 1792.

DECEMBER 17.

A gentleman returning home on Friday morning last, between the hours of twelve and one, was stopped by two robbers in Upper Dorset street, near Eccles street, but the neighbourhood being alarmed by his cry, they effected their escape, after taking from him a silver snuff box. A policeman absolutely refused to go any further than the extremity of Eccles street!

A few nights hence, a party of defenders attacked the house of a farmer near Lascartin, county Meath. They demanded arms, which being refused, they broke open the door with a sledge, on which the former fired at them, and wounded one of their leaders; this exasperated them so much that they stabbed him in several parts of his body, and left him for dead.

On Saturday came on before the Recorder, the trial of Theophilus Swift, Esq., and D. Swift, Esq., his son, for an assault on the Rev. Thomas Elrington, F.T.C.D. After an hearing of six hours, Mr. Theophilus Swift was found guilty. Mr. D. Swift pleaded guilty to the indictment, and was sentenced by the Court to a fine of £50 and to be imprisoned two months. Mr. T. Swift was sentenced to be confined one month, and to pay a fine of £50.

His Excellency the Lord Lieutenant has been pleased to sign a commission, appointing the Earl of Tyrone Lieutenant-Colonel commandant of the Waterford regiment of militia, in the room of the Marquis of Waterford, resigned. Commission dated 28th of November, 1794.

DECEMBER 18.

A poor man yesterday broke his leg in the lane leading from Fleet street to Carlisle bridge. He very philosophically thanked God he had one left to the good, to the inexpressible satisfaction of a Paving Commissioner who was present at the accident.

DECEMBER 19

On Friday evening, about 8 o'clock, the post-boy conveying the Dublin mail to Enniscorthy, was stopped within half a mile of the former place by a single footpad, who took the horse and mail, and rode off. The horse was found about an hour after stript of his saddle.

DECEMBER 20.

Last Wednesday night the house of Lady Barry, at Sandymount, near Ballsbridge, was broken into by a gang of miscreants, and robbed of valuable articles to a considerable amount. These savage ruffians, on entering into Lady Barry's chamber, fiered a pistol at her, which fortunately missed its aim, but strewed the room with the slugs with which it was loaded.

The following extraordinary circumstance happened last week: A merchant in Dublin sent 1,000 guineas to his friend in Waterford, above 700 of which worked out of the box between Dublin and Clonmel; as soon as the owner perceived the accident, he set off for Clonmel, and found them in the boot of the coach, where they had remained near 24 hours.

COMMISSION INTELLIGENCE.

DUBLIN, DECEMBER 20.

The Court sat at twelve o'clock.

William Widenham, who was found guilty at the last Commission, of forcibly and feloniously taking from the person of Mr. James Bardon Palmer, on the 19th of October last, one gilt metal watch, value £1 2s. 9d., one seal and chain, of the same value, and sentenced to be executed for the same, pleaded his Majesty's most gracious pardon, on condition of enlisting in his Majesty's land forces, and serving abroad.

Dublin Penny Journal

A Magazine of Art, Archæology, Literature, and Science

VOL. I., No. 23.] DUBLIN: SATURDAY, SEPTEMBER 6, 1902. [PRICE ONE PENNY.

ARMAGH.---1835.

VIEW OF COLLEGE STREET FROM THE ROAD LEADING TO THE OBSERVATORY.

The following description of Armagh City as it then was, and as shown in the above picture, is taken from that given in the "Dublin Penny Journal," January 17, 1835:--

The city of Armagh, which is situated in the province of Ulster, is not only the capital of the county of that name, but likewise the ecclesiastical metropolis of Ireland. It stands on the sloping sides of a gently ascending hill, and is generally esteemed to be the best built and finest inland town of which our island can boast. The streets are well laid out and regularly built, and the city is adorned with several public buildings, erected in a chaste and elegant style of architecture. It is surrounded on every side by a highly improved picturesque country.

The ancient cathedral which crowns the summit of Druimsailech-hill, is at once the most central point, and the most conspicuous object, in the city of Armagh. Towards this venerable church, some of the

streets seem to converge, like radii, to a common centre—others ascend, in more oblique directions, from the base of the hill, and are intersected by those of greater magnitude, which encircle the town. The citizens' houses are neatly built with calcareous stone, and generally slated. Numerous public edifices, erected with hewn limestone of a very vivid colour, and finished in a chaste style of architecture, unite beauty with utility, and give peculiar interest to the city. The sites of these edifices have been so judiciously selected, that the buildings are not concealed from view by contiguous dwelling-houses, nor degraded by the neighbourhood of any uncouth or despicable objects. They are each possessed of unity and elegance, and being distinctly visible, in various directions, are at once ornamental to the town itself and to the surrounding country.

Formerly the country abounded with lakes, marshes, and unreclaimed bogs. In the city of Armagh itself, there was, at the beginning of the eighteenth century, a small lake containing many eels. It was called Lake Lappan, and was situated behind the site of the old sessions-house, at the foot of Market-street. In the seventeenth century, deep woods and thickets, impervious to the sunbeams, prevented the free circulation of the air, and kept the surface of the earth in perpetual moisture. At present the ground is greatly denuded of trees, the bogs are drained, few swamps exist, and the atmosphere is pure and healthy.

The new sessions-house, a portion of the front of which is seen in our engraving, was erected in the year 1809, and is situated a little to the north-west of the public walks, now denominated "The Mall." Thus situated, it is seen to considerable advantage, and has a striking effect. It is built with hewn limestone, with a handsome portico in front.

ACROSS THE BAY.

BY WILLIAM CHANDLER BAGLEY.

Out through the gloom of the early night
I strain my eyes till I think I see
The flickering gleam of a distant light
Coming across the bay to me.

Another flickers and gleams afar,
And another yet, till they seem to make
A golden chain from the harbour's bar
To the long, grey beach where the billows break

The stars peep out in the eastern sky.
And the west is losing its tinge of red.
A purple flush is the last to die,
It fades away, and the day is dead.

But not the glories of nature's crown,
Nor the infinite beacons of space I see,
Only the lights of a distant town
Coming across the bay to me.

Coming across from the further shore,
Dancing and glinting from crest to crest,
Till they flash the blade of my lifter oar.
And fall, like a shower of gems, to rest.

And hope grows stronger each length I gain,
And my heart is light, as it needs must be,
When I think of the face that against the pane,
Watches across the bay for me.

ORIGIN AND MEANINGS OF IRISH FAMILY NAMES.

BY JOHN O'DONOVAN.

VI.

In my last article I gave examples of the process in the several provinces of Ireland among the people generally in changing their original names into names apparently English or Scottish; there are several others in Ireland among the genteeler classes who have changed their old Milesian names in such a manner as to give them a French or Spanish appearance; and the adopters of these names now wish to be deemed as of French or Spanish origin (anything but Irish)! These, it is true, are few in number, but some of them are respectable; and their effort at concealing their origin is not to be recommended. We shall, therefore, exhibit a few instances of this mode of rendering Irish names respectable-looking by giving them a foreign aspect, which the bearers cannot by any effort give their own faces. The most remarkable of these changes has been made by the family of O'Dorcy, in the west of the county of Galway, who have assumed not only the name of D'Arcy, but also the arms of the D'Arcy's of England. But it is well known that the D'Arcy's of Galway are all descended from James Reagh Darcy, of Galway, merchant, whose pedigree I know to be traced by Dual Mac Firbis, not to the D'Arcy's of Meath, who are of Anglo-Norman origin, but to the Milesian O'Dorcy's of West Connaught, who were the ancient chiefs of Partree, a well-known territory extending from the Lakes of Lough Mask and Lough Carra, westwards, in the direction of Croaghpatrick.

The next instance of this kind of change which I shall adduce, is found in the adjacent county of Mayo, where a gentleman of the ancient and celebrated family of O'Malley wishes all his friends to call him not O'Malley, for that is Irish, but De Maillet; but though his friends condescend sometimes to call him by this name, they can scarcely refrain from laughter while pronouncing it, for they know very well that he descends from Owen O'Malley, the father of the famous heroine Grania Wael, and chief of Umallia or the Owles, in the reign of Queen Elizabeth.

The third instance I have met with of this false Irish vanity is in the far-famed Thomond, where a gentleman of the O'Mulronies has followed the plebian corruption of that name, by which it is metamorphosed to Moroni, by which he affects to pass as not one of Irish but of Spanish descent; but he cannot prevent his neighbours from calling him O'Murruana when they speak the native tongue, for by a strange corruption in that part of Ireland, where the Irish language is in most other instances very correctly pronounced, when the prefix "mul" is followed by "r," the "l" is itself pronounced "r," as in the instance under consideration, and in O'Mulryan, a well-known name in Munster, where they now pronounce O'Murryan. Thus an accidental corruption in the pronunciation of a consonant is taken advantage of to metamorphose a famous old Irish name into a Spanish one. It is, indeed, most lamentable to see the native Irish think so little of their names and of their own natural country.

I have many other instances of this audacious kind of change of surnames at hand, but I refrain from enlarging on them, from the apprehension of exceeding my limits without being enabled to bring this subject to a close in the stipulated time. A few others, however, are necessary to be exhibited to public scorn. The next instance, then, which has come under my notice, is in the province of Connaught, where the family of O'Mulaville have all changed their name to Lavelle, and where those who know nothing of the history of that family are beginning to think that they are of French descent. But it is the constant tradition in the county of Mayo that they are of Danish origin, and that they have been located in Iarowle since the ninth century. Of this name was the late Editor of the "Freeman's Journal"; a man of great abilities and extensive learning, who, among other ancient languages, had acquired a profound knowledge of his own native dialect. This name is Scotticised Mac Paul in the province of Ulster.

Another name which some people are apt to take for a French or Anglo-Norman name, is Delany, as if it were De Lani; but the Irish origin of this family cannot be questioned, for the name is called O'Dulaine in the original language, and the family were originally located at the foot of Slieve Bloom, in Upper Ossory. Another instance is found in the change of O'Dowling to DuLaing, but this is seldom made, and never by any but people of no consequence.

Some individuals of the name of Magunshinan, or Magilsinan, upon leaving their original localities in Cavan and Meath, have assumed, some the name of Nugent, and others that of Gilson. Of this family was Charles Gilson, the founder and endower of the public school of Old Castle, a man of great benevolence, who found it convenient on his removal to London to shorten his name to Gilson.

Other individuals of Irish name and origin, upon settling in London and other parts of England, have changed their surnames altogether, as the ancestor of the present Baron of Lower Tabley, whose name was Sir Peter Byrne, but who was obliged to change his name to Leycester, to conform to the will of his maternal grandfather, who had bequeathed him large estates in England, on condition of his dropping his Irish name and adopting that of the testator. He is the most distinguished man of the O'Byrne race now living, and we regret that his Irish origin is entirely disguised in his present name of Warren. He descends from Daniel, the second son of Loughlin Duff, of Ballintlea, in the county of Wicklow, a chief of great distinction, and is related to the Byrnes of Fallybeg, near Stradbally, in the Queen's County, who descended from the first son of this Loughlin—a fact of which his lordship is altogether unacquainted; and the writer of these remarks has often regretted that his lordship has not been made acquainted with this fact, as it might be in his power to serve the sons of the late venerable Laurence Byrne, of Fallybeg.

Other changes have been made in Irish surnames by abbreviation; but though we regret this, we are not willing to condemn it altogether, especially when the changes are made for the purpose of rendering such names easy of pronunciation in the mouths of magistrates and lawyers, who could not, in many cases, bring their organs of speech to pronounce them

in their original form. Of these we could give a long list, but we shall content ourselves with a selection.

In the province of Connaught the name Mac Eochy has been shortened to M'Keogh, and latterly to Keogh; O'Mulconry to Conry and Conroy. In Ossory, Mac Gillapatrick has been manufactured into Fitzpatrick. In the county of Galway, and throughout the province of Connaught generally, Mac Gillakelly has been manufactured into Kilkelly; O'Mullally to Lally; Mac Gillakenny, to Kilkenny; Mac Gillamurry to Kilmurry; Mac Gilladuff to Kilduff; Mac Geraghty, to Geraghty and Gearty; Mac Phaudeen, to Patten; O'Houlahan, to Nolan. This last change is not to be excused, for it entirely disguises the origin of the family; and we would, therefore, recommend the Nolans of the county of Galway to reject their false name, and re-assume that of O'Houlahan. This family was removed from Munster into Connaught by Oliver Cromwell, under the name of O'Houlahan, and they have, therefore, no just right to assume the name of another Irish family to whom they bear no relationship whatever. The real Nolans of Ireland are of Leinster origin, and were the ancient chiefs of the barony of Forth, in the now county of Carlow, anciently called Foharta Fea, where they are still numerous; but the Connaught Nolans are not Nolans at all, but O'Houlahans, and are a family who bore the dignity of chieftains in ancient times, though it happens, that, not knowing their history, or taking a dislike to the sound of the name, they have, with questionable propriety, assumed the name of a Leinster family, which seems to sound somewhat better in modern ears. In the province of Ulster, the name Mac Gillaroe has been shortened to Gilroy and Kilroy; Mac Gillabride, to Mac Bride; Mac Gillacuskly, to Cuskly, and impertinently to Cosgrove and even Costello! Mac Gilla-Finnen, to Linden and Leonard; Mac-Gennis, to Ennis and Guinness; Mac Blosky, to Mac Closky. In Munster the noble name of Mac Carthy (or, as it is pronounced in the original Irish, Maw Caurha) has dwindled to Carthy (a vile change!); O'Mulryan, to O'Ryan and Ryan; Mac Gilla-Synan, to Shannon; Mac Gillaboy, to Mac Evoy, etc., etc. In Leinster, all the O's and Macs have been rejected; and though a few of them are to be met there now, in consequence of the influx of poor strangers of late into that province, it is certain that there is not a single instance in which the O' or Mac has been retained by any of the aboriginal inhabitants of that province—I mean the ancient Irish Leinster, not including Meath. The most distinguished of these was Mac Murrogh, but there is not a single individual of that name now living in Leinster; the descendants of Donnell Mac Murrogh Cavanagh, who, although illegitimate, became by far the most distinguished branch of that great family, having all changed their surnames to Cavanagh, and the other branches having, as the present writer has strong reasons to believe, changed it to Murphy. The writer has come to this latter conclusion from having ascertained that in the territory of the Murrows, in the county of Wexford, once the country of a great and powerful sept of the Mac Murroghs, the greatest number of the inhabitants, who are perhaps the finest race of men in Ireland, are now called Murphy. He has, therefore, come to the conclusion, and he hopes not too hastily, that the Murphys of this territory are all Mac Murroghs. At the same time, however, that the name generally Anglicised Murphy is not Mac Murrogh, but O'Murchoo, which was that of a branch or offshoot of the regal family of Leinster, who became chiefs of the country of Hy-Felimy, and whose chief seat was at Tullow, in the now county of Carlow. The writer is well aware that the Murphys of the county of Carlow and Kilkenny are of this latter family, but he cannot get rid of the conviction that the Murphys of the Murrowes, in the east of the county of Wexford, are Mac Murroghs. On the subject of the difference between these two families, we find the learned Roderic O'Flaherty thus criticising Peter Walsh towards the close of the seventeenth century:—

"An O' or a Mac is prefixed in Irish surnames to the proper names of some of their ancestors, intimating that they were the sons, grandsons, or posterity of the person whose name they adopted; but it was not proper to use one name promiscuously in the place of another, as he writes O'Murphy, King of Leinster, instead of Mac Murphy, or rather Mac Murchadh; but the family of O'Murchadha, which in English is Murphy, is very different from and inferior to this family."—Ogygia, Part III., cap. xxvii.

There are also some few instances to be met with, in which the O' has been changed to Mac, and vice versa, as in the remarkable instance of O' Melaghlin, chief of the Southern Hy-Niall race, to Mac Loughlin; also in those instances in which O'Duvyerma has been changed to Mac Dermot, O'Donoghy to Mac Donogh, O'Kravin to Mac Nevin, O'Heraghty to Mac Geraghty, and a few others.

These latter changes are not calculated to disguise the Irish origin of the families who have made them, but they are still to be regretted, as they tend to disguise the origin, race, and locality of the respective families, and we should, therefore, like to see the original names restored.

Similar changes have been made in the family names among the Welsh, as Ap-John into Jones, Ap-Richard into Prichard and Richards, Ap-Owen into Owens, Ap-Robert into Probert and Roberts, Ap- Gwillim into Williams, etc., etc.

Having thus treated of the alterations the Irish have made in their surnames, or family names, for the purpose of making them appear English, I shall next proceed to point out the changes which they have, likewise made in their Christian or baptism names, for the same purpose. Many of their original names they have altogther rejected, as not immediately reducible to any modern English forms; but others they have retained, though they have altered them in such a manner as to make them appear English. The writer could furnish from the authentic Irish annals and pedigrees a long list of proper names of men which were in use in the reign of Queen Elizabeth, and which have been for a long time laid aside; but the limits of this Journal would not afford room for such a list: he must, therefore, content himself by pointing out the original forms of such names as have been retained in an Anglicised shape. These changes in the Christian names have been made, not only by those families who have adopted English surnames, but also by those who have retained the Milesian O's and Macs; but these families have assumed that the English forms which they have given this class of names are perfectly correct. This was assumed to be true so early as the year 1689, in which we find Sir Richard Cox writing on the subject as follows:—

"The Christian names of the Irish are in England: Aodh—i.e., Hugh: Maoi[illegible]—i.e., Matthew; Teige—i.e., Timothy; Diarmaid—i.e., Jeremy; Cnogher—i.e., Cornelius: Cormac—i.e., Charles; Art—i.e., Arthur: Donal—i.e., Daniel; Goron—i.e., Jeofry; Magheesl—i.e., Moses.

Now, I absolutely deny that these names are identical, though I acknowledge that they are at present universally received and used such. In the first place, the name "Aodh," which has been metamorphosed to Hugh, is not synonymous with it, for the name Aodh signifies "fire," but "Hugh," which has been borrowed from the Saxon, signifies "high" or "lofty." Since, then, they bear not the same meaning, and are not made up of the same letters, in what, may it be asked, does their identity consist? It is quite obvious that they have nothing in common with each other. In the second place, Mahon, or, as Sir Richard Cox writes it, Mahoone is not Matthew; for if we believe Spenser and some other Irish glossographists, Mahon signies a "bear"; and if they be correct, it cannot be identical, synonymous, or cognate with the Scriptural name Matthew, which does not signify a "bear," but a "gift" or a "present." In the third instance, the Irish name Teige, which according to all the Irish glossaries signifies "a poet," is not synonymous with Timothy, which means "the God-fearing," and, therefore, is not identical or cognate with it; and I, therefore, doubt that the Irish people have any right to change Teige into Timothy. It was first Anglicised Thady, and the writer is acquainted with individuals who have rendered it Thaddhæus, Theophilus, and Theodosius.

In the fourth instance, Dermod, or, as Sir Richard Cox writes it, Dermond, is not identical with Jeremy, nor is it synonymous or even cognate with it. On this name, which was first very incorrectly Anglicised Darby, the learned Dr. O'Brien writes as follows:—

"'Diarmaid,' the proper name of several great princes of the old Irish. This name (which had its origin in Pagan times) is a compound of 'Dia,' god, and 'armaid,' the genitive plural of the Irish word 'arm,' Latin 'arma,' 'armorum,' so that 'Dia-armaid' literally signifies the same as 'Deus armorum,' the god of arms. Such is the exalted origin of this Irish name, which does not screen it from being at times a subject of ridicule to some of our pretty gentlemen of the modern English taste."

It must, however, in candour be acknowledged that this is not the meaning of the word Dermod, and that Dr. O'Brien invented this explanation to gain what he considered respectability for a name common in his own illustrious family, and which was considered vulgar by the fashionable people of the period at which he wrote. We have the authority of the Irish glossaries to show that "Diarmaid," which was adopted at a remote period of Irish history, as the proper name of a man, signifies a freeman; and though this meaning does not sound so lofty as the "Deus armorum" of Dr. O'Brien, still it is sufficiently respectable to show that Dermod is not a barbarous name, and that the Irish people need not be ashamed of it; but they will be ashamed of every Irish name in despite of all that can be said, as the writer has very strong grounds for asserting. The reason is obvious—because they have lost their nationality.

In the fifth instance, Concovar, or, as Sir Richard Cox writes it, Cnogher, is not identical, synonymous, or even cognate with Cornelius; for though it has been customary with some families to Latinize it to Cornelius, still we know from the radices of both names that they bear not the slightest analogy to each other, for the Irish name is compounded of "Conn," strength, and "Cobhair," aid, assistance; while the Latin Cornelius is differently compounded. It is, then, evident that there is no need for changing the Irish Concovar or Conor to Cornelius, except a fancied resemblance between the sounds of both; but this resemblance is very remote, indeed.

In the sixth instance, the name Cormac has nothing whatever to do with Charles (which means "noble-spirited), for it is explained by all the glossographers as signifying "Son of

the Chariot," and it is added, "that it was first given as a sobriquet, in the first century, to a Lagenian prince who happened to be born in a chariot while his mother was going on a journey, but that it afterwards became honourable as the name of many great personages in Ireland." After the accession of Charles the First however, to the throne, many Irish families of distinction changed Cormac to Charles, in order to add dignity to the name by making it the same with that of the sovereign—a practice which has been very generally followed ever since.

In the seventh instance, Sir Richard is probably correct. I do not deny that Art may be synonymous with Arthur; indeed, I am of opinion that they are both words of the same original family of language, for the Irish word "Art" signifies "noble," and if we can rely on the British etymologists, Arthur bears much of a similar meaning in the Gomraeg or Old British.

With respect to the eight instance given by Sir Richard Cox, I have no hesitation in asserting that the Irish proper name Domhnall, which was originally Anglicised Donnell and Donald, is not the same with the Scriptural name Daniel, which means "God is judge." I am at least certain that the ancient Irish glossographers never viewed it as such, for they always wrote it "Domhnall," and understood it to mean a great or proud chieftain. This explanation may, however, be possibly incorrect; but the "m" in the first syllable shows that the name is formed from a root very different from that from the Scriptural name Daniel is derived.

With respect to the names Goron (which is but a mistake for Searoon), Jeofry, and Magheesh, Moses, the two last instances furnished by Sir Richard Cox, they were never borne by the ancient Irish, but were borrowed from the Anglo-Normans, and, therefore, I have nothing to do with them in this place. What I have said is sufficient to show that the Christian names borne by the ancient Irish are not identical, synonymous, or even cognate with those substituted for them in the time of Sir Richard Cox.

(To be continued next week.)

A MUSICAL ALPHABET.

A for Andante, which means rather slow.
B is for Bar, we must count as we go.
C for Crescendo, get loud by degrees.
D for Da Capo, repeat if you please.
E, for fine Exercise, played day by day.
F stands for Forte, as loud as you may.
G for Gracioso, in soft singing style.
H for two Hands, which we use all the while.
I is the Instrument, skilfully made.
J for our Joy when we hear it well played.
K is for Keys, Black and white, as you know.
L is for Largo, most solemn and slow.
M for a Minim, just two in a bar.
N for the Notes; what a number there are!
O stands for Opera, a musical play!
P for the Pedal, use cautiously, pray!
Q stands for Quaver, in a bar there are eight.
R is a Rest, count one while you wait.
S is a Semibreve, let it count four.
T is a Trio, three voices, no more.
U Una Corda, or played all in one.
V for Vivance, a time full of fun.
W for Waber, whose music is fine.
X for Xcel, which just means to excel.
Y is a Youth who can play some nice things.
Z is a Zither, with many sweet strings.

Mr. J. St. John McCarthy has finished his history of "The Reign of Queen Anne," in two volumes, and has only to see the work through the press. Subsequently he proposes to bring his "History of Our Own Times" (completed in June, 1897) down to the death of Queen Victoria, so that his complete historical works, including those on the four Georges and William IV., will cover the record of England for the past two hundred years.

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

CASHEL.

CASHEL, a city (being the seat of an archbishoprick and diocese), borough, market, and post-town, in the barony of Middlethird, county of Tipperary, and province of Munster, 12 miles (N.N.W.) from Clonmel, and 75 (S.W.) from Dublin; containing, within the corporate lands, 12,582 inhabitants, of which number, 6,971 are in the city. This place was the residence of the kings of Munster; and a synod was held in it by St. Patrick, St. Ailbe, and St. Declan, in the reign of Ængus, who, after his conversion to the Christian faith by St. Patrick, is said to have founded a church here. It is uncertain at what period Cashel first became the head of a bishoprick; indeed, its early history is involved in much obscurity, and has been a fertile source of hypothetical inquiry. Some writers assert that Cormac Mac-Culinan, King and Bishop of Cashel, who was killed in his retreat from battle in 908, either founded or restored the Cathedral, by building on the rock of Cashel an edifice now called Cormac's chapel, one of the most interesting architectural remains in the kingdom; but its erection is, with greater probability, ascribed by others to Cormac MacCarthy, the pious King of Desmond. In 990 this place was fortified by Brian Boru, who rebuilt thirteen royal houses and palaces in Munster, one of which is still pointed out at the corner of Old Chapel-lane, in this town. Until the year 1101, the buildings on the rock of Cashel were merely such as composed the "Dun," or royal residence, or the "Carsoil," or habitation on the rock of the kings of Munster; the cathedral probably occupied some other site. In that year, according to the Annals of Innisfallen, Murtogh O'Brien convened a great Assembly of the clergy and people of Cashel, in which he assigned over to the bishops that hitherto "royal seat" of the kings of Munster, and dedicated it to God, St. Patrick, and St. Ailbe. The same annals record that, in 1127, Cormac Mac Carthy, king of Desmond, erected a church here (the chapel above noticed), called from him "Teampul Chormaic," which in 1134 was consecrated by the archbishops and bishops of Munster, in the presence of the nobility and clergy. A new church was built in 1169, on the site of the present cathedral, by Donald O'Brien, King of Limerick, who endowed it with lands, and converted the church founded by Cormac into a chapel or chapter-house on the south side of the choir of the new edifice.

Hen. II., on landing at Waterford in 1172, marched to Cashel, where he received the homage of the above-named Donald O'Brien; and in November of that year he summoned a general synod of the Irish clergy, which was also attended by those Irish lords who submitted to his sway, and at which Christian, Bishop of Lismore, the Pope's legate, presided. This assembly acknowledged the sovereignty of Henry; and of the ordinances enacted by it, one exempted the persons of the clergy from the jurisdiction of civil courts in criminal cases, and their lands from all secular taxes; and another enjoined a perfect conformity of the Church of Ireland with that of England. Henry, during his stay here, bestowed on the archbishop and chapter the city of Cashel, with a large tract of the adjoining country. After his departure, Richard Strongbow led an army to this place against the native princes of the west, and encamped here, awaiting the arrival of reinforcements from Dublin, which being defeated at Thurles, he was compelled to retreat precipitately to Waterford. In 1179 the town was burnt; after its restoration, Donat or Donchad O'Lonorgan, who succeeded to the see in 1216, erected it into a borough. Hen. III., in 1228, remitted to Archbishop Marian and his successors the new town of Cashel, to be held of him and his heirs in free, pure, and perpetual alms, discharged from all exactions and secular services. Sir David le Latimer, seneschal to Archbishop Marian, founded an hospital for sick and infirm poor, in honour of St. Nicholas, which was afterwards given to a society of Cistercians introduced by Archbishop David MacCarvill. In 1243 a Dominican friary was founded by Archbishop David Mac Kelly, which being destroyed by an accidental fire was rebuilt by Archbishop Cantwell, who was constituted both patron and founder by an instrument dated at Limerick about the year 1480; and in 1250 Archbishop Hacket founded the Franciscan friary. Hore Abbey, called also "St. Mary's Abbey of the Rock of Cashel," was originally founded for Benedictines; but Archbishop MacCarvill having dreamt that the monks had made an attempt to cut off his head, forcibly dispossessed them of their house and lands, and gave the whole of their possessions to a body of Cistercian monks, whom he brought from the Abbey of Mellifont, in the county of Louth.

In 1316, on Palm Sunday, Edward Bruce came hither with his army from Limerick, and proceeded to Nenagh; and in 1372 a parliament was held at this place. In 1495, during the baronial feuds, Gerald, Earl of Kildare, influenced by hostile feelings towards David Creaghe, then archbishop, set fire to the cathedral, and in the presence of the king subsequently defended this outrage, in answer to the accusations of his persecutors, on the ground that he would not have destroyed the building had he not thought that the archbishop was in it at the time. On the termination of the insurrection headed by the Earl of Tyrone, this place, with others, surrendered at discretion, in 1603, to the lord-deputy Mountjoy. Lord Inchiquin advanced against it from the siege of Cahir, in 1647; the inhabitants took refuge in their church on the rock, which was well fortified and garrisoned. Inchiquin proposed to leave them unmolested, on condition of their contributing £3,000 and a month's pay for his army: this offer being rejected, he took the place by storm, with great slaughter both of the soldiery and citizens, among whom 20 of the R. C. clergy were involved; and after having

secured the immense booty of which he obtained possession, dispersed his forces into garrison. In 1690 the adherents of King William who had been wounded in the attack on Limerick, were hospitably received by the inhabitants of Cashel, whose humane attention induced the king, on the bridge of golden, about four miles distant, to renew their charter by letter, which is still in the possession of the corporation.

The town is situated on the mail-coach road from Dublin to Cork, about two miles from the river Suir, in a fine open country. The town, as previously noticed, was erected into a borough, about 1216, by Archbishop Donat, who gave burgage tenements to the burgesses ,and is said to have also conferred on them the same privileges as were enjoyed by the burgesses of Bristol, reserving to the see a yearly rent of 12d. out of each burgage. Archbishop Marian, in 1230, granted the town to the provost and twelve burgesses, except only the shambles, then situated behind the present shambles, and the great bake-house in John-street, subsequently called Cunningham's Hall: he also granted them free pasture in all his lands (except meadows, corn, and manors), and empowered them to hold a hundred court and a court baron for hearing and determining pleas, reserving out of these grants only small chief-rents. Rich. II., in 1378, confirmed all the priviliges of the corporation; and other charters, chiefly confirmatory, were granted by Archbishop Roland in 1557, and by Queen Elizabeth in reward of their dutiful conduct, in 1584. Chas I., in 1637, granted a new charter, ordaining that the town or borough should be called the "City of Cashel;" and two years after, another which is now the governing charter. James II. seized the franchises into his own hands, pursuant to a decree of the exchequer, and subsequently granted a charter which is now considered void: their ancient rights and privileges were restored to the corporation by King William, as before stated. In the "New Rules" of 25th Chas. II., for regulating corporations in Ireland, it was ordained that the appointment of the mayor, recorder, and town- clerk should be subject to the approbation of the lord-lieutenant and privy council. The corporation, under the style of the "Mayor, Aldermen, Bailiffs, Citizens, and Commons of the City of Cashel," consists of a mayor, aldermen (limited by the charter to 17 in number), two bailiffs, and an unlimited number of commons, aided by a recorder, town-clerk, two serjeants-at-mace, a sword-bearer, and a crier; a treasurer is also appointed. The mayor is elected annually on June 29th, by the court of common hall, and is one of three persons nominated by the aldermen from among themselves, but the choice may be extended to the citizens and commons, at the discretion of the aldermen; he is sworn into office on Sept 29th, and, with the concurrence of three aldermen, has power to appoint a deputy during illness or absence. The aldermen, on vacancies occurring, are chosen from among the freemen by the remaining aldermen, and hold office for life. The recorder, according to practice, is elected by the mayor and aldermen, but the charter gives the power to the entire body; he holds his office during good behaviour, and may appoint a deputy. The bailiffs, by the charter, are eligible from among the citizens, one by the mayor and aldermen and one by the corporation at large; according to practice, they are elected annually on June 29th in the common hall from among the freemen, on the recommendation of the aldermen. The town-clerk is elected annually with the mayor and bailiffs; the sword-bearer is eligible by the whole body, and holds his office during good behaviour; and the serjeant-at-mace and the crier are appointed by the mayor. The freedom is obtained only by gift of the mayor and aldermen, who are the ruling body of the corporation, and have the entire management of its affairs. The city returned two members to the Irish parliament until the Union, since which it has sent one to the Imperial parliament. The right of election was vested solely in the corporation, but by the act of the 2nd of Wm. IV., cap. 88, has been extended to the £10 householders of an enlarged district, comprising an area of 3,974 acres, which has been constituted the new electoral borough.

The rock of Cashel is an extraordinary mass rising on every side with a precipitous and rugged elevation, and consisting of concentric strata of limestone; the remains of the ancient structures by which it is crowned have an imposing and highly romantic appearance. Among these, "Cormac's Chapel," standing in a line parallel with the south side of the choir of the cathedral, is one of the best-preserved buildings of that age in the kingdom; the walls and roof are of stone, the latter finely groined. The entrance doorway is a Norman arch richly moulded and ornamented with zig-zag and head-work; above it is a device in bas relief of a centaur shooting at an animal with a bow and arrow; the groining of the roof springs from low pillars with capitals variously ornamented. At the eastern end is a large recess, separated from the western part by a circular arch highly enriched and ornamented with grotesque heads of men and animals: within this recess is another of smaller dimensions, probably intended for the altar. The walls of each portion of the building are relieved with blank arches, and the pilasters from which they spring have been richly ornamented with various devices. A window has been recently opened by the Rev. Archdeacon Cotton, which has rendered visible some very ancient painting in fresco in the recesses of the walls; fourteen stone figures, representing the twelve Apostles and others, have also been discovered. The exterior walls of the chapel are, on the south side, ornamented with blank arches supported by pillars with grotesque heads; and attached to the building is a square tower, strengthened with bands of masonry and similarly ornamented. The "ancient cathedral," now in ruins, was a spacious cruciform structure, with a central tower supported on pointed arches, and generally in the early English style of architecture; it is in several parts embattled, and with other features of a military character presents a venerable and singularly picturesque appearance. But it is more striking as a grand and well-broken mass, than remarkable either for the elegance or richness of its details. The only monument worthy of notice is that of Archbishop Magrath, who is represented in a recumbent posture; it bears the date 1621, and was erected by himself about one year before his death. On the south side of the cathedral is the vicars' hall; and at the eastern angle of the north transept is an ancient round tower, in a very perfect state of preservation, its stone roof being still entire; the several stages were lighted by windows, of which the ledges are still remaining; the original doorway has been walled up, and another opened leading into the cathedral. The Dominican friary, situated in Moor-lane, was, after its dissolution, granted in perpetuity by Henry VIII. to Walter Fleming, "in capite," at the annual rent of 2s. 6d.: this was one of the noblest buildings of the order in Ireland, and considerable remains of its spacious cruciform church may yet be seen between the rock and the main-street. At a short distance from the town are the remains of Hore Abbey. At the back of Friar-street formerly were the remains of the Franciscan monastery, the site of which is partly occupied by the R. C. chapel; after its dissolution it was granted, in the 31st of Hen. VIII., to Edmund Butler, Archbishop of Cashel, to be held by him "in capite" at the annual rent of 2s. 10d. On the ascent to the cathedral is a stone, on which, according to tradition, the Kings of Munster were annually inaugurated. This place gives the titles of Viscount and Earl to the family of Moore, Earls of Mountcashel.

(To be Continued.)

HOPE.

(From the German of Francis de Gaudy.)

Like the dew upon the flow'r,
Is hope within the breast;
And with sanctifying pow'r,
It softens us to rest!
In the struggle of stern life,
Through the world's tempestuous strife,
'Tis the heaven op'ning o'er us—
And bright and true before us
Shines the star that loves us best!

As the plant upon the mountain,
That to the bare rock clings;
As a sunbeam through the fountain,
A glorious halo flings;
So is hope, whate'er our nature,
Changeful heart, or rugged feature,
Smiling through our tears of sorrow,
Rainbow of a sunnier morrow,
'Tis a gem 'neath limpid springs!

Weak and feeble, doubting ever,
Trembling, boasting, mortal heart!
Hope forsakes thee, wholly, never—
Though all else around depart!
Like the spider, daily weaving
Webs that fate may be deceiving,
Made, to be as soon destroyed,
Hopes may vanish ere enjoy'd,
But sweet bliss they can impart!

The first volume of "The Cambridge Modern History," planned by the late Lord Acton, is due on November 1, and at least one volume of Lord Acton's Cambridge lectures will be published by Messrs. Macmillan during the autumn.

OUR WEEKLY STORY

LAVENDER GINGHAM.

BY ELIZABETH M'CRACKEN.

Jeannette was in a hurry, but she lingered at the gingham counter. She ignored the probability that she would be half an hour late for luncheon, to which her Aunt Maria, who could not tolerate tardiness, was invited. She even forgot that she had meant not to be late, so absorbed was she in a quaint little country girl and a quaint old man, presumably her grandfather, who stood also at the gingham counter, earnestly and carefully selecting two dresses for the little girl.

Jeannette could not help hearing their discussion as to the prettiest colours and patterns. In fact, she lingered because she did hear, and because she was very much concerned lest the little girl should choose an alluring lavender and white check, which both she and her grandfather evidently regarded with deep admiration. Jeannette was sure that the lavender would fade.

Jeannette had, almost to a fault, a keen personal interest in the smallest detail of the welfare of other persons. Her Aunt Maria described it as "a fondness for putting her fingers into other people's pies." Her brother Fred said as graphically that Jeannette liked to "put in her oar"; and even her loyal and cherished mother said that her daughter had a delightful and sweet, if sometimes just a little over zealous, habit of offering advice.

Certain it is that Jeannette stopped strange children on the street and advised them to button their jackets, lest they take cold, or pointed out the superiority of peppermint drops over chocolate creams. And she gave her little sister Elsie so much advice as to the spending of her weekly allowance that the poor child usually ended by not spending it at all. As Jeannette said, this really was good for Elsie—it taught her at one and the same time economy and the value of knowing her own mind. Jeannette knew her own mind so well that she never listened to those hints of her family about pies and oars, although she did listen to, and sometimes remembered, her mother's occasional warning.

She remembered it now, but she was none the less agitated. The little girl and the old man were fingering the lavender gingham. Jeannette was more and more certain that it would fade.

"That lilac piece is really pretty, Sereny," said the old man, approvingly.

"Yes, grandpa," said the small girl, "it is, and I love that colour; it's just like violets."

"It will fade," said Jeannette to herself. "I know it will fade!"

"That pink and white stripe's real pretty, too, deary," said the old man. "Seein' as you're going to have two, why don't you get that for one? Your ma used to wear them pink and white stripes when she was your age."

"Did she really?" said the little girl. "Then I will: it is real pretty. I'll take five yards of this pink and white stripe," she said, primly, turning to the clerk, "and I think I'll take some of this lavender and white check, too; wouldn't you, grandpa?"

"I think I would, deary," said the old man; "it's real pretty."

This was too much for Jeannette. She touched the little girl lightly on the shoulder. "I think that lavender will fade," she said in a low tone.

The little girl looked up in surprise. She stared at Jeannette for a moment; then she said, gravely, "Do you think it will?"

The selection of the two new dresses was a serious and weighty matter to her. That a charming girl should see this did not seem at all remarkable to the little girl, or, apparently, to her grandfather.

"Do you think it will, miss?" the old man said, anxiously, to Jeannette.

"Yes," said Jeannette, "I am almost certain it will. Lavender is my favourite colour, and every summer I have a lavender gingham shirt-waist, and every summer it fades the first time it is washed."

"How dreadful!" said the little girl, in sympathetic tones. "I've always wanted a lavender dress, and I've never had one," she added, wistfully. "Does it always fade?"

"Well, I don't suppose it always does," said Jeannette, "but all the lavender gingham shirt-waists I've had did. Why don't you get blue That won't fade. My little sister always had blue and pink, too. My mother says there's nothing nicer for a little girl," she continued, comfortingly.

The little girl's face brightened, and the old man regained his cheerfulness. "Just hear that, Sereny! Now I remember your ma used to wear blue at your age; and grandma, she'll like it, deary."

"Grandma said I could get what I liked," Serena explained to Jeannette. "Grandma says I'm big enough now to choose my own dresses," she proudly added.

Jeannette smiled. "Well, then, you surely don't want to choose anything that will fade."

"Oh, no!" said Serena, decidedly. "I guess I'll get some blue," she said to the clerk.

"We have a blue with a pattern just like that lavender," he said, kindly.

"Have you?" exclaimed Serena and her grandfather in one delighted breath.

The clerk produced it, and it was regarded with approval and even enthusiasm. The clerk measured off five yards, and gave the two parcels to Serena. The grandfather paid the little bill, and they turned away, after thanking Jeannette for her kindness.

"Don't mention it," said Jeannette. "I just told you because I knew you would be sorry if you did get it and it faded."

"I would have been," said the little girl, earnestly, "and the blue is almost just as pretty."

Jeannette smiled at them, as she hurried home to luncheon—for which she was so late that the family and her Aunt Maria were just leaving the dining-room.

"My dear," whispered the mother, reproachfully, "you might have been in time—especially when you knew Aunt Maria was going to be here! Aunt Maria thinks, anyway— –"

"That you haven't brought me up properly?" said Jeannette, kissing her mother on the dimple in her cheek.

Her mother laughed, but she said, reproachfully, "You might have come before we were quite finished."

"I know it," agreed Jeannette. "I know it. I meant to, but something so out of the ordinary happened that I really couldn't help being late."

"Then I will forgive you," said her mother, "but you must be particularly nice to Aunt Maria to make up for it."

Jeannette succeeded so well that her Aunt Maria decided that she was, after all, not so improperly brought up as she had feared. Fortunately she did not stay very long, or Jeannette might have spoiled this good impression by relating her newest adventure. The door had hardly closed upon her aunt when she rushed to her mother and told her about Serena and her grandfather, and the lavender gingham.

"Why," exclaimed her mother, as Jeannette paused, "I was at that very same counter this morning, and, my dear, I bought some lavender and white checked gingham for you for a shirt-waist! I don't think what I have will fade."

"Where is it?" gasped Jeannette.

Her mother brought it, and they opened it. It was the identical gingham that little Serena and her grandfather had so reluctantly left unbought!

They laughed until the rest of the family hurried to the spot in alarmed surprise, to demand an explanation. The more they explained, the more they laughed.

"Anyway," said Jeannette, at last, "I still think it will fade. I hope it will!"

"Jeannette!" they all remonstrated; but Jeannette insisted. "Imagine how I shall feel if it shouldn't—but it will!"

She could hardly wait to make it into a shirt-waist; and when it came home from the laundry the first time, the family seized the box containing it, and almost tore it to pieces in their eagerness to see the contents. It had not faded!

Jeannette played golf in it; she wore it at the seashore; it did not fade. She wore it the entire spring, and everyone said: "How fortunate you are with that waist! It hasn't faded a bit!"

It had not; it would not! To Jeannette's eyes it became more and more lavender. Her remorse was so keen that when, one day, Elsie asked what she should buy with twenty-five cents that Fred had given her for "caddying" all the afternoon, she said: "My dear child, don't ask me! I give no more advice!"

"My dear," her mother said, "you are not to blame. You meant kindly, and it might have been expected to fade. Anyone would have hesitated, and especially before getting it for a child. The blue was far better, and lavender is so uncertain."

"It certainly is," said Jeannette. "But that little girl wanted it so! I have no way of finding out where she lives. They were just in for the day from the country. She never will know—and she might just as well have had it!"

Jeannette actually went to the gingham counter not a few times that summer, vaguely hoping to find Serena and her grandfather. She looked at all the little girls and all the old men she saw on the street. She wore the lavender shirt-waist whenever she could wear it, hoping that it would suddenly fade.

"I really think it would, if I should ever see Serena when I had it on," she said, pensively. "It couldn't have the audacity not to."

She did not see Serena; but one day, when she happened to be wearing the lavender gingham, and to be riding in an open car, she saw Serena's grandfather! There was no mistaking the old man. She precipitately left the car at the next stop, went quickly down the street, and touched the old man's arm.

"Do you remember me?" Jeannette asked, breathlessly.

The old man gazed at her blankly for an instant; then he smiled. "Well, well. who'd ha' thought it?" he said, in pleased recognition. "If you ain't the one that helped Sereny buy her dresses, and kept her from getting that lilac that would ha' faded!"

"But it didn't!" said poor Jeannette. "It didn't fade!"

Then she told the old man the whole amusing story, and even called upon him to witness the flaunting colour in her shirt-waist. He chuckled and laughed, and said, "Who'd ha' thought it!" at least six times; and laughed again, and looked at Jeannette's waist.

"Sereny liked them dresses she got," he said, "but she always sort of hankered for that lilac gingham."

"She must have it!" said Jeannette, with decision. Do let me get it for her! It will be such a comfort to me!"

The old man did see how much it really would comfort her. He went with her to the gingham counter; and with the aid of Jeannette's shirt-waist, they actually matched the lavender and white check, and Jeannette bought five yards of it, and sent it with her love to Serena. Then she hurried home to tell the family.

In a few days she had a sweet little letter from Serena. "It's just like a story!" wrote Serena joyfully in her postscript.

"With a moral," added Aunt Maria." Which is—keep your fingers out of other people's pies."

"Oh, no!" said Jeannette's mother. "The

moral is, if you must put your fingers in at all, put them in as far as they will go."

"Well, anyway," said little Elsie, "you and Serena have both got something lovely to tell and think about whenever you wear the lavender gingham—"

"Which won't fade!" Jeannette added.

HARMOSAN.

(From the German of Platen.)

The throne of the Sassanides was shatter'd on the ground,
The Moslem hand thy hoard of wealth, O Ctesiphon, had found,
When Omar to the Oxus came, through many a bloody day,
And Jesdegerd, the Persian king, among the corpses lay.

And as the Arabian caliph to count the spoil began,
Before him came a satrap, bound—his name was Harmosan:
The last was he to quit the field, where many fell in vain,
Or yield his sword; but now his hands were fastened with a chain.

Then Omar darkly frowned on him, and thus the victor said:—
"Know you how crimson is the hand that faithful blood hath shed!"
"My doom awaits your pleasure now—the power is on your side—
A victor's word is always right!"—so Harmosan replied.

"I have but one request to make, whatever fate be mine—
For these three days I have not drunk—bring me a cup of wine!"
Then Omar nodded, and his slaves brought presently the cup,
But, fearing fraud, suspiciously the captive held it up.

"Why drink you not? the Mussulman would ne'er deceive a guest:
You shall not die till you have drunk that wine—'tis of the best."
The Persian seized the cup at once, and cast a smile around,
Then dash'd the goblet down—the wine ran streaming o'er the ground.

As Omar's chieftains saw the trick, they drew with savage frown,
Out from their sheaths the scimitars to cut the Persian down;
But Omar cried—"So let him live! Faithful, put up the sword!
If aught on earth is holy still, it is a hero's word!"

THE LEAD PENCIL INDUSTRY.

Concord, Mass., is the home of the American lead pencil, according to a recent census bulletin. The first one was made there in 1812. The war with Great Britain, and the consequent interruption of imports, did much to stimulate the inventive genius of the American colonists and to give a start to infant industries. The lead pencil was one of the incidents. The scarcity of pencils, and their consequent high price, inspired a cabinet-maker named William Monroe to try his hand at making them. His cabinet business was very dull, also, in consequence of the war. So he procured a few lumps of black lead and pulverised it in a spoon and encased it neatly in wood. The pencil was not very good, and he went back to his trade. But, as he did not like to be beaten, he experimented every day for a few hours in an effort to reach more satisfactory results. After four months he got a better mixture of lead, and on July 2nd, 1812, he went to Boston with thirty pencils. They found a ready market, and his purchaser urged him to make more, and agreed to take all he made at a certain price. So he worked for eighteen months making pencils. Then his graphite gave out, and he could not get any more. At the close of the war he resumed business, doing his mixing himsel in a little room in his own house, to preserve the secret of his trade. In ten years he had acquired considerable skill, and supplied much of the home demand. There are now five pencil factories in the United States.

CELT AND MARTU.

By J. F. LYNCH.

Professor Sayce ("The Early History of the Hebrews," pp. 42-3), says: "When the Babylonians first became acquainted with Western Asia in the fifth or fourth milennium before the Christian era, the inhabitants of Syria were mainly of the Amorite race. Syria, accordingly, and more especially that part of it which is known to us as Palestine, was called in the old agglutinative language of Chaldœa "the land of Martu or 'the Amorite,'" a word which has survived in the Book of Genesis under the form of Moreh. When the older language of Chaldœa made way for Semitic Babylonian, Martu became Amurru, and Hadad, the supreme Baal or sun-god of Canaan, became known as Amurru, "the Amorite." By the Egyptians the Amorites were termed Amur; and, as has been already stated, the Egyptian artists have shown us that they were a fair-skinned people, with blue eyes and reddish hair; and that they were also tall and handsome, and wore short and pointed beards. In fact, they resembled in features the Libyans of Northern Africa, whose modern descendants—the Kabyles of Algeria—offer such a striking likeness to the golden-haired Kelt. The Amorite type may still be seen in its purity among the Arabs of the El-Arish desert, who inhabit the district between the frontiers of Palestine and Egypt; many of the latter, as we see them to-day, might well have sat for the portraits of the Amorites depicted on the walls of the old Egyptian temples and tombs. It would seem that the Amorite race, fair and tall and energetic, once extended along the northern coast of Africa into Asia itself, where they occupied the larger part of Southern Syria. There they have left behind them cromlechs (stone circles) and dolmens, which remind us of those of our islands. Indeed, if the Amorite were the eastern branch of the Libyan race, it is probable that he could claim kindred with the so-called red Celt of Britain. The physiological characteristics of the Libyan and fair-haired Kelt are similar; and many anthropologists assume the existence of a Libyo-Keltic or "Eurafrican" family, which has spread northward through Spain and the western side of France into the British Isles. We owe the term "Eurafrican" to Dr. Brinton (see his "Races and peoples, 1890," Lecture iv). For the relationship of the Libyan and the Kelt, see my address to the Anthropological Section of the British Association, 1887.

I have also been informed by Colonel Conder, who has made a special study of the language of the Berbers or Libyans, that it is closely connected with the language of the ancient Egyptians, and Fr. Muller and Maspero long ago recognised the relationship between the Libyan and Semitic languages. The rude stone monuments which Professor Sayce credits to the fair-haired race were, it appears to me, erected by an older race, the short, dark-haired, and long-headed race. It is possible and highly probable that the fair-haired race erected stone circles and dolmens, but the earlier rude stone monuments of Syria, Arabia, Libya, France, and the British Isles must be credited to the dark-haired race. In Ireland there were three races in the pre-historic period; two of these races were Celts, and the third and oldest race were Iberians, who, it seems to me, must be equated with the Cynetes or Cynesians, stated by Herodotus (ii., 33; iv., 49) to be the farthest people of Europe towards the west. These Iberians must, I think, have been of non-Aryan origin. In a stone circle on Knockadoon, in the year 1869, were found a skull and bones of this old race by Professor Harkness, and his description of these I take from an old Cork newspaper, which gives the address on Lough Gur delivered by Professor Harkness before the Cork Cuvierian and Archæological Society, April, 1869.

"On the eastern side of Lough Gur is a hill called Knockadoon, on which there are also stone and earth circles. These, as compared with those at Grange, are small in size, and have only a slight elevation. In one of these Mr. Day, F.S.A., Mr. John Fitzgerald, and myself, discovered, at the distance of half a yard from the surface, human remains. In one case these consisted of some of the bones, together with the skull of a young person from six to eight years of age. The skull was of a very curious type, consisting of a broad head with a very low upright forehead, and a very flattened crown. The upper jaw was very oblique, and the lower jaw had the molar angle much more obtuse than appertains usually to individuals of the age indicated by the skull. In another cist where human remains were found, these were enclosed in a stone cist little more than four feet long, the sides being composed of upright flagstones, and a flag of the same nature forming the cover of the cist, but not completely. These bones were found lying so as to indicate that the body had been nearly placed in a north and south direction. Judging from the character of the skull, this seems to have appertained to a race approximately most nearly to the modern Finns or Lapps."

This skull is now in the Museum of Queen's College, Cork, where it was placed by Professor Harkness. I was informed by Edward Fitzgerald, brother of John Fitzgerald, that the skull was found in the middle circle of the three stone circles on Knockadoon. This circle is, I think, due south of the eastern pinnacle of Knockfinnel, and in the circle, and south-east from the centre of the circle is a small pillar stone. The Buachaill Breige of Ludden hill stands in a stone circle, and is south-east from the centre. A short distance to the west of this circle is a stone circle, but without an enclosed pillar stone, and a little to the north, and close to the shore of the lake, is a flagstone named from King Rudhraighe, and some distance south of the flagstone is the Suidheachan of the Beantighe.

THE CORK FORESTS OF SPAIN.

The cork forests of Spain cover an area of 620,000 square miles, producing the finest cork in the world. These forests exist in groups and cover wide belts of territory, those in the region of Catalonia and part of Barcelona being considered the first in importance. Although the Cork forests of Estremadura and Andalusia yield cork of a much quicker growth and possessing some excellent qualities, its consistency is less rigid, and on this account it does not enjoy the high reputation which the cork of Catalonia does. In Spain and Portugal, where the cork tree, or Quercus suber, is indigenous, it attains a height varying from 35 to 60 feet and the trunk to a diameter of 30 to 36 inches. This species of the evergreen oak is often heavily caparisoned with wide-spreading branches clothed with ovate oblong evergreen leaves, downy underneath, and the leaves slightly serrated. Annually, between April and May, it produces a flower of yellowish colour, succeeded by acorns. Over 30,000 square miles in Portugal are devoted to the cultivation of cork trees, though the tree actually abounds in every part of the country. The methods in vogue in barking and harvesting the cork in Spain and Portugal are virtually the same. The barking operation is effected when the tree has acquired sufficient strength to withstand the rough handling it receives during the operation which takes place when it has attained the fiftieth year of its growth. After the first stripping the tree is left in the juvenescent state to regenerate, subsequent strippings being effected at intervals of not less than three years, and under this process the tree will continue to thrive and bear for upwards of 150 years.

FORTS AND FAIRIES.

A COMPILATION.

BY E. J. RYAN.

PART II.—Continued.

4. MYTHS, SUPPOSITIONS, AND CONJECTURES.

A phenomenon called a sheegeebha, or fairy wind or blast, is a whirlwind, or sudden rush of wind, which in a general calm on a fine day in summer blows with considerable force, disarranges moveable objects in its track, and, raising up a cloud of dust, suddenly disperses. The occurrence is supposed to be caused by fairies hurling on the place, or passing through the air. People dislike to be enveloped in such a wind, as it is looked on as very dangerous. It is related that some persons who were so situated were found, when the phenomenon had passed, to have been blackened on the body and injured in health. It is said that the beings present in a sheegeeba can be discovered by the human eye looking through a film of spittle formed in a loop made of a straw, but that such temerity results in the loss of sight to the eye.

A person sleeping in the open air is considered liable to be "struck," but by making a cross of blades of grass, or any convenient material, and lying over it, safety is said to be ensured. It is said that bones and grass have been removed from sores on persons' limbs, as the result of fairy malignity. People do not like to pick or lance a sore or make it bleed for fear of the fairies making it worse.

It is thought that some of the fallen angels, only for expecting salvation at the last day, would do immense harm in the world. They did not lose their natural power, and would, unless restrained by God, do incalculable mischief to man. But there seems to be no doubt that God sometimes even commissions the evil spirits to execute His just judgments against sinful men. All temporal harm, however, is not the work of fallen angels, for even good angels raise storms and inflict injury, as agents of God.

A person who lives to an uncommonly old age, or lingers very long with any strange disease, is often believed to be a fairy replaced for the real person gone to the good people.

It was the general idea that a new-born child, before Baptism, or even the mother herself, might be carried away, and some other bulk left instead. A fairy child left in place of a human infant taken away is called a changeling.

There is an impression that the fairies occasionally take away a human being altogether under the appearance of death, leaving one of their own order instead, or without any such expedient. To one of these supposed cases reference is made by the poet:—

> A mother came when stars were paling,
> Wailing round a lonely spring;
> Thus she cried, while tears were falling,
> Calling on the fairy king:
> "Why with spells my child caressing,
> Courting him with fairy joy;
> Why destroy a mother's blessing,
> Wherefore steal my baby boy?"

In the poem of "The Fairy Thorn," the author, alluding to the four maidens, of whom Anna Grace was one, says that in the dreamy evening, under a power of faint enchantment,

> They hear the silky footsteps of the silent fairy crowd,
> Like a river in the air, gliding round,
> And that the terror of the other three is wild,
> For they feel fair Anna Grace drawn silently away;
> By whom, they dare not look to see!

It is thought that a person taken away by the fairies sometimes confers benefits on others, and that occasionally such a one finds opportunity of making known how a release from them may be effected(56). People say that substitutes left for persons taken away may be got rid of by putting them on the fire, or by throwing them out with a shovel.

There is an awful belief that every seven years the fairies are obliged to deliver up a victim to the evil one, and to save their own people they try to abduct some beautiful young mortal girl for the purpose. Children, too, are said to be carried off for the sacrifice.

The sign of the cross is made on the mouth on yawning to prevent the fairies from entering.

When a person's hair is cut, people prefer to have it burned rather than thrown out, lest the fairies should obtain influence over the owner by its means.

People think that the milk of a newly-calved cow is at times required by the fairies, but by making use of some of it immediately it is preserved. Often on such occasions people make pious use of holy water and a blessed candle.

When domestic animals, especially horses or cows, shake or stretch themselves, people sometimes spit slightly at them and say "God bless them," to save them from fairy influence.

Any article falling or disappearing, and not easily found, is said to be required by the fairies.

People say that the fairies do no harm unless offended in some way, and that they cannot do harm without having a human being with them. They like generosity in their regard by not gathering or not using food or drink to the last atom, and care for their supposed requirements. They desire the hearth to be free for them at a reasonable hour, and to have clean water in the house. It is related that people staying late at the kitchen fire at night have been told by voices of invisible beings to leave the fireplace and go to bed. Some people have a dislike to throw out at night water in which feet have been washed, or any soiled water, for fear of offending the fairies. When leaving feet-water inside, a little fire is put into it to nullify possible fairy interference.

The fairies dislike whistling at night in order not to be disturbed in their music, but singing at night is said to be good.

It is supposed that the fairies are male and female, and possess qualities which are applicable to human beings alone. Their object in abducting a human female is sometimes to procure a wife for the fairy king. Children of such a union are supposed to be of a strange mystic nature, generally famous in music and song. Young human mothers are thought to be specially desirable to the fairy people for nursing purposes.

Mention is made of the fairy food and drink: they live on the nectar in the flower-cups, and they are said to delight in good wines of human make. The Scots have a saying that when sun shines through falling rain, it is a sign that the fairies are baking.

The fairies are supposed to dress in green, with red jackets, and round red caps bound on the head with a green fillet, symbolic, perhaps, of the alleged hope, the punishment, and the lost glory of the fallen angels.

They are said to make horses out of bits of straw, on which they ride. The cave fairies, it is thought, can assume many forms, but the human qualities attributed to fairies generally arose probably from the idea of their human origin. Religion is foreign to them, but in regard to sex, Milton says that

> Spirits, when they please,
> Can either sex assume, or both; . .

and

> in what shape they chose,
> . . . . . .
> Can execute their airy purposes,
> And works of love or enmity fulfil.

The term "Michaeleens" applied to the fairies, signifies little Michaels, and may have reference to the humiliation of the expulsion of the fallen angels by St. Michael, the Archangel.

The idea of the diminutive stature of the fairies may have reference to the fall of the angels, or to the fact that spirits have no dimensions. It may refer also to the dwindled estimate of the Tuatha De Danaans, or to the traditional small stature of the Picts, both sometimes considered as fairies. They are not, however, invariably represented as of diminutive size.

5. LOCATION OF FAIRIES IN FORTS.

There is a traditional feeling—pretty extensive in Ireland—that the forts are inhabited by fairies(57). There is, moreover, sufficient reason for believing that on account of Pagan practices in ancient Ireland, fallen angels had, as fairies, a special location in old forts, and that, even after the abolition of Paganism, those spirits continued to hover about them.

At the coming of St. Patrick some traces remained of an ancient idol-worship, probably dating from the time of the Tuatha De Danaans, more than two thousand years before. Druidism prevailed even in the time of the Tuatha De Danaans, and continued long after the coming of St. Patrick. We are told that the most sacred rites of the Druids were performed in the depths of oak forests or of caves, and that the Tuatha De Danaans were devoted to the phallic worship.

Besides idols there were worshipped natural objects and topical spirits. The sun and the moon were worshipped in Pagan Ireland. Fairies were worshipped as local deities by the ancient Irish. Even the Tuatha De Danaans, considered in after ages as fairies, were likewise worshipped as gods. The heroes of one cycle of colonisation seem to have become the gods of a succeeding cycle. It was on hills that the worship of the sun was celebrated by the Irish of an early age.

The ancient Irish divided the year into summer and winter—Samrath, beginning with May; and Gheimrath, also called Sam-fuim, or summer end, beginning with November.

There were four great festivals: the 2nd February, devoted to Saturnalia, and observed even in Christian times until the ninth century, when it was abolished by the Pope, on account of the excesses into which it had degenerated; May eve and May day, called La-Beltaine, the day of the Baal fires, because the fires of Baal, the sun-god, were lit by the Druids, the festival being sacred to the sun; Midsummer, for in ancient times the sacred fire was lighted on midsummer eve; La-Samnah, November eve, sacred to the moon; it was called the Samhain, being the feast of the moon, and was considered also the day of the dead and demons. La Beltine is explained also as the day of the ring, that is, the year. Ireland's three high gatherings were: the congregation of Uisnech, at Beltane (May day), the convention of Taillte, at

(56) One plan is said to be that, when the fairies are approaching, if you cast the dust that is under your feet against them, they are obliged to release any human being with them.

(57) When the race of chieftains died out, it is said, the sidhe crowded into the forts.

FLYING FROM FAMINE.

IRISH EMIGRANTS ON BOARD SHIP IN 1850.

The above engraving, showing the scene between decks on an emigrant ship is copied from the "Illustrated London News" of July 6th, 1850.

Lammas (first of August), and the feast of Tara, at Samhain.

The two most important festivals were La-Beltaine, and La-Samnah. The first of November was dedicated to the spirit that presides over fruit and seeds, and was called also, La-mas-abhal, the day of the apple fruit. May eve was the most memorable(58).

Now, the Psalmist says that all the gods of the Gentiles are devils, for the devils dwelt in the statues of the gods, and all the creatures and idols which the heathens worshipped, were only the visible instruments which Satan made use of to deceive them, and he considered the worship which was given to these idols as given to himself. St. Paul says that "the things which the heathens sacrifice, they sacrifice to devils and not to God." This expression is in agreement with Deuteronomy, which, referring to the chosen people of God, says that "they sacrificed to devils and not to God: to gods whom they knew not."

St. Cyprian, Martyr, Archbishop of Carthage, for the greater part of his life a Pagan, proves that the heathens often worshipped the devils themselves. The prince of devils was called Beelzebub, from a famous idol of the Accaronites.

St. Gregory Thaumaturgus very often cast out devils from the statues of the idols.

In ancient annals it is recorded that when St. Patrick was destroying "Crom Cruach(59) and his sub-gods twelve," at Magh Slecht(60), or the plain of adoration, in the present county of Cavan, all the people saw the demon, which St. Patrick sent to hell.

The instinct of natural religion and of worshipping some object is so universal throughout the human family that it may reasonably be assumed that the Pagans inhabiting the forts did not neglect to practice superstitious rites there. This is strengthened by the fact that forts are considered to have served as places of public worship. We learn that the Tuatha De Danans practised magic or the black art, that is, performed wonders—not real miracles—by the agency of the devil(61).

Like the incorrectly supposed case of the round towers, the poet's words, slightly altered, may in reality be applied to the forts:

"How many different rites have these ancient landmarks known!"

This state of matters would be most agreeable to the wicked spirits, as it would be the most effectual means of putting human souls in their power. "It is to be remarked,"

(58) The Phoenician name of Baal, Baol, Beal, or Bel, was applied to the sun also called grian, in reference to the worship of the fire god by the heathen Irish. The words in reference to the festivals are variously spelled: Baal-Tinne, Lá Baal Tinne, Beltaine, Bel-taine, Belltaine, La Beltaine; La Samnah, La-Samnah, Lá Samnah, Saman, and Samhain. The moon festival is succeeded by the Catholic All Hallow Eve. The month of May is Bealtaine. November was also sacred to the sun, on account, perhaps, of its declination into winter. "Snap-apple" sports on November eve may be a relic or substitute of the old idea. There is a tradition that St. Patrick transferred the fires to St. John's Eve, 23rd June, to give them a Christian significance. These are now called bonfires. They are sometimes lit on 28th June, the Eve of Saints Peter and Paul, as well as on the eve of "good St. John." Even in modern times, May eve and May day were notable for the practice of pishogues, or the transference of another's property by unlawful means.

(59) There were two Croms: Crom-dubh, the black Crom, or the black idol; and Crom-cruach, the red or bloody Crom. Crom-cruadh means also the great worm, the serpent idol,—a relic of an Eastern rite. The Sunday next following, 4th August, is called at Croagh Patrick, Crom Dubh Sunday, in memory of the overthrow of the old Pagan deity or idol, the demon-god Crom. Downugh Cromdu means the fair or pattern of Cromdu, but he was probably Criomthaun, the second Christian king of Cashel, Co. Tipperary, where the fairs were held on 26th March, and 7th August.

(60) Also, Moy Slaught.

61) The Druids are said to have had supernatural power over the forces of nature, and by their incantations could produce natural phenomena—drought, storms, mists, fire, and even showers of blood, but they were not the priests of any god. It is also stated that the Fianna had no gods.

says Rutter in his "Life of Christ," "that the city of Gadara was yet [at the time of the possession of the swine] immersed in idolatry, as appears from Josephus, and, therefore, the odour of its sacrifices offered to devils could not fail of being highly grateful to them. Moreover, it is the greatest pleasure of these wicked spirits to continue here among mankind in order to tempt them to sin, and thus involve them in their own miserable damnation." The same would apply equally to Pagan Ireland, and especially to the scenes of its superstitious Pagan practices.

Facts of which we are aware strengthen the idea of the local habitation of evil spirits, some in places congenial to their malevolence.

We are told that besides the spirits of the air, "others again are located in various parts of the earth." It is recorded that some evil spirits were confined in deserts, and that the deserts of Egypt were infested by such beings. The Thebaid in Upper Egypt was noted for such occurrences. It is mentioned in the Book of Tobias that "the angel Raphael took the devil [Asmodeus], and bound him in the deserts of Upper Egypt," that is, took away from his power of hurting, both the taking and the binding being spiritual.

The devil, Legion, besought Our Lord, "that He would not drive him away out of the country" of the Gerasens, nor send him into the abyss.

"The city of Neocaesarea," says Butler in the "Lives of the Saints," "was . . . so miserably addicted to superstition and idolatry, that it seemed to be a place where Satan had fixed his seat." In a heathen temple there the devils declared to the idolatrous priests that they could stay there no longer, being forced away by St. Gregory Thaumaturgus, who had taken refuge in the temple on the proceeding day from violent rain.

Martin Luther—the precision of whose statements affords in these matters a test of their reliability—says:—"There are places which the devils bodily inhabit. Prussia has many of those devils. Not far from Lucerne, in Switzerland, and on the summit of a high mountain, there is a pool called Pilate's Pond, where the devil resides in a terrible manner(62). In my own country there is a pond similarly placed. If you throw a stone into it there is a terrible storm, and the whole country around trembles. It is the prison of many devils." Besides,

There are more things in Heaven and earth, . .
Than are dreamt of in our philosophy.

The idea that the forts were built by the fairies may have arisen from the supposed human origin of the fairies, or from their supposed habitation of them.

6. OTHER SUPPOSED LOCATIONS.

Fairies are supposed to live also in certain subterraneous habitations or palaces in the interior of pleasant green hills, and were hence called Aes-sidhe, or Duine-sidhe, people of the sidhe or fairy hills or mansions. The meaning of the word sidhe, siodha, includes the habitations supposed to belong to these beings, in the hollows of the hills and mountains(63). Sometimes the hills themselves are called by the Irish, sidhe or siodha. The Siodh-Dune, or the Mount of Peace, is also a favourite resort of the fairies. It is an ancient place where the Druids in the old times used to retire to pray.

The Tuatha De Danaans were also called Shiveras(64), and the remnant of them who, it is believed by many people, took refuge in caves, are called cave fairies. They were supposed to dwell likewise on the green hills and in the silver lakes. In these places, it is said, they still exist, practise magic, and by their enchantments are safe from death until the judgment day. Each fairy hill is supposed to have its tutelary deity. Fairies are besides supposed to live under great rocks or sepulchral cairns. Solitary whitethorns and sometimes trees are also considered to be the resort of fairies. Fairy rings, or specially green circles in fields, are thought to be the fairy dancing places. The ideas of such topical residence or association may have arisen from the human origin ascribed to the fairies, or from the chambers known to have been constructed, or from the ancient habitations. The fairy castles or mansions, although generally built in ancient forts or raths, are moveable at pleasure. Their ideal country is the Tir-na-noge(64a), the land of perpetual youth, where they live a life of joy and beauty, never knowing disease or death till the judgment day. In their mansions and grounds the fairies, it is assumed, have great splendour, luxury, and amusement. The shifra, as the fairy palace in the heart of the hills is called, has its walls built of crystal, gold, and silver, with the pavement of gold; and the banquet hall is lit by the glitter of diamonds that stud the rocks. The entrance is concealed, but may be discovered by walking nine times around a fairy rath at the full moon.

All their surroundings as well as themselves are usually invisible to human eyes(65). It is said, however, that occasionally human beings have obtained glimpses of both, and obtained knowledge from the fairies. Those human beings who have, as it is thought, been taken away by the fairies, partake of their luxury, and sumptuous food and drink. Some persons are supposed to be "going with the fairies," that is, associating with them for part of the time, and for the remainder living the ordinary mundane existence. These, too it appears, enjoy a view of the fairy splendour. Sometimes the fairy spell is upon them, and the young men who have once heard the fairy harp become possessed of the spirit of music(66). Even doctors and midwives are sometimes, it is said, summoned for temporary professional visits to the fairy people. To partake of the food or drink or money offered by the fairies puts one, according to a popular idea, in their power. But gifts asked and received from them usually turn, it seems, to some useless trifle, sometimes grass or leaves or dust, surely Dead Sea fruit when clutched.

The notions of splendour supposed to be enjoyed by the fairies may have reference to the glory of heaven, lost by the fallen angels.

Although they have been given youth, beauty, joy, and the power over music, and all the mysteries of nature, they are often sad, for they remember they were once angels in heaven, and

now the thought
Both of lost happiness and lasting pain
Torments them.

They meet every seven years at the Siodh-Dune to perform the act of lamentation for having been cast out of heaven.

A mournful envy of humanity on account of its prescribed destiny further darkens their existence, and notwithstanding their seeming but unreal grandeur and pleasures,

One minute of Heaven is worth them all.

The fairies are supposed to change quarters on November eve, and people sometimes imagine that their passage through the air can be heard. It is supposed to be a night on which aerial sprites are peculiarly active.

On May eve the fairies wander abroad. If a young man listens to the sweet song of a siren at this season he is in danger of being allured into fairyland.

Whitsuntide is considered to be an unlucky season on account of fairy influence at that time.

(To be Continued.)

(62) Neither history nor tradition is unanimous regarding the fate of Pilate, the Roman governor or procurator of Judea, Samaria, and Idumæa, from 26 to 36 A.D. One account of the procurator is that when at the Crucifixion darkness covered the face of the earth, the Emperor Tiberius at Capri becoming alarmed, made inquiry, and hearing of the tragedy of Calvary, ordered the execution of Pilate. He, pleading ignorance, prayed to Our Lord, and a voice from heaven responding, gave him an assurance similar to that given to the thief on the cross, Pilate's wife dying at the same time with joy on account of the blessed manifestation. Another account is that Pilate perished miserably by his own act. Eusebius says he committed suicide in exile in Vienne, in Gaul. An ancient legend states that his body caused the greatest commotion when thrown into the Tiber, and the same result arising elsewhere, it was finally sunk in a deep and lonely pool on Mount Pilatus, overlooking Lake Lucerne, and the pool is darkly associated with his fate.

(63) A fairy mansion is sometimes called sia-brog.

(64) Or, sifra.

(64a) Tir-na-n-oge was the Elysium of the Pagan Irish.

(65) Places supposed to be frequented by the fairies are called gentle, as are likewise several herbs which are said to be under their influence.

(66) This was the case with Carolan, who acquired his skill by sleeping on a rath at night, when the fairy music came to him in his dreams, and on awaking he played the airs from memory,

Surpassing mortal sound.

One by putting his ear close to the ground at night can hear the sweet fairy music rising up from under the earth.

THE COLOUR OF WATER.

It has been shown that the colour of surface water depends both on the character of the neighbouring vegetation and on the time that the water remains in contact with it. Water near steep rocks, where there are few trees, will generally be below twenty units in colour; steep wooded or cultivated slopes give twenty to fifty units; similar, but gentler slopes, from five to 100, and swampy areas, 100 to 500, or even higher. Coloured water is gradually bleached by sunlight, the action taking place chiefly within one foot of the surface. The study of colour in water is of commercial importance, because most people object to drinking brownish water. Hence, in a town water supply the colour must either be removed or its formation must be prevented. The latter is often the most economical thing to do, and it may be accomplished by intercepting the water from the uplands and leading it into the streams without letting it pass through the swamps. Filtering through sand will not remove the colour from water, and even clay will take it out but partially. Generally, the water must be altered, chemically, as by mixture with sulphate of aluminum, which coagulates the colouring matter. The colour may also be removed by oxidation, as with permanganate of potash, or by ozone; but this method is not much in use at present. The question is largely one of aesthetics, as natural colouring matter in water is rarely harmful.

Mr. Elkin Matthews is to publish an interesting "find," which consists of a diary kept by Edward Williams, the friend of Shelley, who was drowned with him. Any new and intimate light upon Shelley, such as this diary is likely to supply, cannot fail to be of extreme interest. Dr. Garnett is to write an introduction to the volume.

SOME IRISH MUSICIANS OF THE EIGHTEENTH CENTURY.

STORY OF DOCTOR COGAN.

(By "W.," in "Irish Penny Journal," 1841.)

In this grave cigar-smoking age of ours, in which Irishmen exhibit so little of the love of fun and merriment—the drolleries and escapades which distinguished them in preceding ages—it is a pleasant thing to us septagenarians to look back occasionally to our youthful days, and call up from the storehouse of our memories the merry men whom and whose merry freaks we were either familiar with, or at least had heard of or seen. One of these choice spirits is just now present with us in our mind's eye, and we are certain that we have only to mention his name, to bring him equally before a great number of our Dublin readers. We mean the late musical doctor, John Cogan. There now, Dublin readers, some thousands of you at least have the man before you, though many of you are, unfortunately, too young to have heard his exquisitely and delicate hands on the piano, extemporising with matchless felicity upon "Garryowen" or some other melody of old Ireland; or participated in his playful and always inoffensive merriment and good humour. Even the youngest of you, however, must surely remember the little man—little, indeed, in size, but every inch of him a gentleman, who but a few years since might be occasionally seen taking an airing, when the sun shone on him, in Sackville street, sometimes leaning on his servant's arm, and at others driven in his pony-phaeton, which his prudence in youth had enabled him to secure for his days of feebleness and old age. That pleasant intellectual countenance, bright and playful as his own music even to the last, has disappeared from amongst us; but the memory of such a man should not be allowed to die, and we will, therefore, while in the vein, devote a column of our Journal to a sketch of one of the many incidents remembered of his long life, as illustrative in some degree not only of his character, but also of that of society in Dublin during the last century.

From what we have already stated, it will have appeared that Doctor Cogan was not only great as a musical performer, but also as a performer of innocent waggery. It would, indeed, have been difficult to determine in which performance he excelled, or whether he most loved his music or his joke. He was not only a good theorist, but loved a bit of harmony intensely, and a laughing chorus was his prime delight. These he would often accompany or direct as occasion required, to heighten the pleasure of a musical treat, when he rarely neglected a happy opportunity of introducing some vivace movement of his own composing, provided he could previously prepare a score of good fellows capable of performing effectively the several parts assigned them in it, which among his apt compeers was rarely a difficult task. A lover of good cheer and hospitality, which he both gave as well as partook of with a true Irish spirit, it was a settled point with the Doctor that brother professors should at all times live in harmony with each other, and receive brotherly encouragement; nor were such feelings of an exclusively national character, but extended equally to foreigners coming to Ireland, who, if at all known to fame, were sure of receiving a friendly and cead mile failte reception at his hands. If, it is true, he could on such occasions indulge in a little innocent joke by playing off a specimen of Irish counterpoint at the expense of such visitors, it was so much the more agreeable to him, as in the following instance of the concerted movement which he got up to do honour to the celebrated violinist, Pinto, who visited our city about sixty years since. But before we detail the circumstances attendant on this reception, it is necessary that we should tell our worthy readers something of the person who was selected by the Doctor to play a leading part—the principal fiddle—on the occasion; and the more particularly as the name is unknown to the great majority of the present generation, and almost forgotten by the few who may still survive him.

The person we allude to was Robert Meekins, or, as he was familiarly called, "Bob," a violinist of great tavern-playing notoriety in his day. Like his brother professors, the harpers of the last century, of whom Mr. Bunting has given us such characteristic anecdotes. Bob was a thoroughly Irish musician in every sense of the word; and though, as we believe, he had never travelled out of Dublin, his native city, few were found to equal him on his instrument either in tone, execution, or expression of feeling. From the earliest period of his musical studies, however, he had indulged in a wild and extemporaneous mode of practice, which proved most injurious to his professional career in after life, and, unfortunately for him, being an inveterate hater of dry study, Bob more frequently wetted his whistle than he rosined his bow. Under the influence of such bad practice, he became at last incurably vicious, and rarely kept within reasonable bounds, either in the way of drinking or fiddle-playing. Indeed, whatever command poor Bob retained over his instrument, he had none over himself. Leader after leader sought to curb him in his wild extravagance of style, in the vain hope of diverting his great natural musical powers into legitimate courses: but Bob would never be led, and as to driving him, that was found to be equally impracticable. He would go his own way and no other. He would read concerted music, not as it was intended, but as he thought it should be. His passion for obligatoes was unconquerable, and he rarely arrived at an ad libitum that he did not avail himself of it with a vengeance; and thus, while his brother musicians were attending to the pauses, perfectly content with the single note before them, an impromptu cadence would be heard meandering through a chord, telling of Bob's wanderings, and he the while so absorbed as to be equally heedless of the elbow-punchings of his neighbours, the authority of his leader, or the intentions of the composer. No composer, indeed, came up to his fancy—entirely; something was always wanting, and his fingers were ever upon the alert to supply that something which was not set down for him: and should a remonstrance come from the leader, it but too frequently produced a presto movement on the part of Bob, leaving a vacancy in the orchestra to be filled up as it might, at the shortest possible notice. Vain of his powers, and scorning restraint, his kicks against orchestral rule became beyond all bearing, and so he was himself at last kicked out from all decent musical society. Thus finding himself alone, he naturally turned solo player, and became one of the lions of Dublin, drawing nightly crowds to the taverns he frequented, where he could indulge his love for flights of fancy to his heart's content. But, unfortunately for him, in this new sphere he was enabled by the liberal contributions of his admirers to indulge also without restraint that more fatal passion for drink which had proved his bane through life, leading him step by step, as usual with reckless characters, to an untimely and degraded grave. It is generally believed that poor Bob Meekins died from the effects of intemperance in some wretched doorway in an alley of our city.

Such, then, was the person selected by Doctor Cogan to perform a principal part in the little musical drama which he had prepared for the reception of the great foreign violinist of the day, and the place chosen for its performance was the once celebrated hotel or tavern called the Pigeon-house, which at that period was the common resort for the meetings or departures of friends to or from England by the Holyhead packets. Thither accordingly the Doctor and his musical companions repaired, to await the expected arrival of the Signor, and ordered dinner with the determination that he should be their guest. It is not necessary to dilate upon the reception given to the brother professor, or to particularise all the good things that were said, sung, and eaten upon the occasion. It is sufficient to say that every thing passed off in true Hibernian style, to the astonishment as well as gratification of Pinto, who was delighted to find himself surrounded by so many new and warm-hearted friends, each keeping up the tide of merriment by a rapid circulation of the bottle amid the joyous flow of song, jest, and laugh. But where was Bob all this time? He was placed in an adjoining passage awaiting a silent signal, and being primed for action, was impatient for the moment of attack upon the excitable nerves of the delighted Italian. This signal was at length given, and so effectually arranged were the parts given to each of the Doctor's apt pupils, that as the soul-thrilling tones of Bob's violin vibrated through the room, it seemed to produce no other effect upon their ears than a sotto voce expression of displeasure, or forzando of horror. All this seemed quite spontaneous, and was at the same time so judiciously managed as to allow the instrument to predominate over the voices, and thus enable the practised ear of Pinto to discover in the invisible minstrel a master spirit— nor did the well-timed crescendo of "Turn the scraping villain out," "Curse the noisy blackguard," etc., etc., arrive at its climax, until Bob's varied and expressive execution had fairly bewildered the poor Signor with amazement. To him, indeed, the scene was one as unusual as it was unexpected; and when silence was somewhat restored, he eagerly asked in his broken English whence the tones had come; and truly ludicrous were the varied expressions of the Italian's intellectual countenance on being assured by the Doctor and his assistants that the performer who had so enraptured him was a rascally itinerant fiddler, who gained a precarious livelihood by scraping at taverns. The effect may easily be imagined. The Signor insisted upon seeing him; and when Bob's whiskey face and tattered habiliments became visible, Pinto sat fixed in mute bewilderment, conjuring up in his excited imagination the apparition of a Meekins at the corner of every street; and the success of the Doctor's joke was complete, when the poor Italian, with a forlorn and chopfallen visage, was heard to mutter, "Lit-el fid-el— lit-el fid-el—you call—if dis lit-el fidel, me go back, me no use!"

A simultaneous burst of laughter was the response to these hurried and broken accents of surprise and chagrin. But enough was effected, and in quick compassion for poor Pinto's feelings, he was at once made to understand the whole contrivance, on which he laughed as loudly as any of the merry Irish group around him. The scene of joyousness was kept up to an early hour, during which Mr Meekins occasionally revelled in the music of his own dear land, to the increased delight not only of the Signor, but of all present on the occasion.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

CHAPTER XI.—Continued.

A.D. 1650. This summer the plague (which began the year before) raged most violently in Dublin.

In December this year the Marquis of Ormond went to France, leaving the Marquis of Clanrickard lord deputy.

A.D. 1651, July 12. The last battle fought in this war was at Knocknaclashy, where the Irish were utterly overthrown by the parliament forces.

Nov. 26. Ireton died at Limerick, and Lieutenant-General Ludlow was made commander in chief of the army by the commissioners at Dublin.

A.D. 1652. A high court of justice was erected in Dublin by the commissioners of the parliament, for the trials of such as were accused of the barbarous murders committed by the Papists in the rebellion, in which Sir Phelim O'Neil and others were condemned and executed. Courts for the same purposes were erected in other parts of the kingdom.

A.D. 1653, Sept. 26. It was declared that there was an end of the rebellion

A.D. 1654. Fleetwood is made lord deputy.

A.D. 1655. Henry Cromwell is made commander in chief, but in the civil government others were joined in commission with him.

A.D. 1658, Sept. 3. Oliver Cromwell dies; upon his death, the new protector, Richard, made his brother, Henry Cromwell, lord lieutenant of Ireland.

A.D. 1659, May 7. After Richard's resignaion, the parliament sent over Jones, Tomlinson, Corbet, and Berry to govern Ireland.

A party of general officers inclined to the restoration of the king, in January this year surprised the castle of Dublin and the commissioners of government, which done, they declared for a free parliament, and upon the petition of the mayor and aldermen of Dublin, summoned a convention.

A.D. 1660. They accept his majesty's declaration from Breda, and concur to his restoration

Sir Hardress Waller seized the castle for the parliament, but was obliged to surrender it after a siege of five days.

The restoration accomplished.

King Charles II. complimented the city of Dublin with a collar of S. S., and bestowed a foot company to Robert Dee, the then mayor. The same year, Doctor Michael Boyle and eleven new bishops were consecrated all together in St. Patrick's-church.

A.D. 1661. A parliament was summoned, Sir Audley Mervin speaker, which gave the Duke of Ormond £30,000. He was appointed lord lieutenant, and sworn the year following.

A.D. 1663. Alexander Jephson, Mr. Blood, Colonel Abbot, Major Warren, and several other discontented adventurers and soldiers formed a plot to surprise the castle of Dublin; but the Duke of Ormond, then lord lieutenant, received notice of their design from the earl of Orrery and Sir Theophilus Jones, to the latter of whom Jephson had discovered it on the 19th of May at Lucan, endeavouring to persuade him to join in the design; and the discovery prevented any attempt; four persons were executed for it.

A.D. 1665. The chief magistrate of Dublin was honoured with the title of lord mayor, Sir Daniel Bellingham being the first that bore that character, and the king granted to the city £500 per annum for ever, to support that dignity.

A.D. 1666, June 11. The Popish clergy met in a national synod at Dublin.

Sept. 27. Edmond Reiley, titular archbishop of Armagh, is sent prisoner to England.

The second court of claims sat at Dublin disposing of lands by lot to the officers of forty-nine.

Oct. The lord lieutenant and council consider about sending 105,000 bullocks for the relief of London, lately burnt.

A.D. 1667. The king, being alarmed with reports of a French invasion, the militia of the city of Dublin, and of all other parts of the kingdom, were raised, arrayed and armed, and those of Leinster rendezvouzed on the Curragh of Kildare, while those of Dublin did the same within the city.

A.D. 1668. The spire of St. Audoen's steeple was blown down by a storm, and broke the roof of the church.

A.D. 1669, Sept. 18. John, Lord Roberts, Baron of Truro, landed at Howth, was met at Young's-castle by the lord mayor, recorder, aldermen and commons. After Mr. Recorder had congratulated his safe arrival, presented to him the sword, cap of maintenance, mace, keys of the city gates, &c., but his lordship refused to receive the same till he was sworn lord lieutenant of Ireland, which was done the same day.

A.D. 1670, March. A great storm happening at new moon, with great winds and rain, the wind at S.E., the water overflowed the bank at Ringsend, Lazer's-hill, and over Mr. Hawkin's new wall up to the college, and flowed very high into the city, which overthrew some houses and laid many cellars and warehouses under water.

April. John, Lord Berkeley, Baron of Stratton, lord lieutenant of Ireland, landed at Ringsend and was sworn the same day.

This spring, the lime-trees were planted on each side the walks round St. Stephen's green, the walks gravelled, and the green levelled and trenches made to carry the water away, which much annoyed the green.

This year there was a long wall of stone built at the south side of St. James's-gate to convey the water to the new cistern, and new leaden pipes were laid through the city, much larger than the former, for conveyance of the water, which was all done at the city charge.

The foundation of St. Andrew's-church was laid, and the church built at the charges of the parishioners and by bountiful contributions of many well disposed persons.

June 10. John, Lord Berkeley, lord lieutenant, mustered the whole army of horse and foot of Ireland on the Curragh of Kildare, and in the meantime committed the safe keeping of his majesty's castle and city of Dublin to the lord mayor and city militia (a).

Sept 3. This year at the charges of the commissioners of the customs, an exchange place was made in the garden of Cork-house, very convenient with buildings erected on pillars to walk under in foul weather, where merchants and others met every day at the ringing of the bell to treat of their business.

This year the spire of St. Audoen's-church was rebuilt, and all the church new roofed, at the charge of the parishioners and other well-minded persons, but the new spire is neither so high or stately as the old, which was blown down by an outrageous storm about two years before.

Eight new bells were put up in St. Patrick's-steeple, six in Christ-church (at present there are eight), and five in St. Katherine's-church.

The hospital for decayed citizens children, commonly called the Blue-coat hospital [of which more hereafter] was erected this year in the city of Dublin. The same year the Wooden-bridge over the

(a) The lord lieutenant's warrant to the lord mayor:—"After our hearty commendations to your lordsh'p, wee, having appointed a redezvouz of the army at the Curragh of Kildare on the twentieth day of the next month, to which place the guards of horse and foote now in this cittie are to attende. And wee haveing great confidence of the good affection of your lordship and this cittie in generall to his majesty's service, have resolved to comitt not onely the guard of the cittie but of this castle also, dureing our absence, to you and the militia forces under your command, of which we pray and require you to take notice, and cause the several officers of the traine bands to putt themselves and the men they command in readines to take up them the guard of the place, when we shall draw out his majesty's forces now here, wherein wee desire your care, and that due watch and competent guards be kept for the safety of this castle and cittie, and for your furtherance therein wee have appointed major John Griffin to attend you from time to time and receive and give out your orders. And soe wee bid you heartily farewell from his majesty's castle of Dublin, the 20th of June, 1670. Your lordship's very loveing friend,

"JO. BERKLEY."

To our trusty and well beloved the lord mayor of the cittie of Dublin.

ELLIS LEIGHTON.

Liffey, commonly called Bloody-bridge, was built.

A.D. 1671. The apprentices of Dublin assembled themselves riotously together with an intention to break down the Wooden-bridge, twenty of whom were seized and committed to the castle; but afterwards as a guard of soldiers were carrying them to Bridewell, they were rescued, and four of them killed in the fray, from which accident it took the name of Bloody-bridge.

May 20. About two of the clock in the morning a fire happened in the store-house, commonly called the parliament-house, in the castle, and burnt the house, with muskets, pikes, match, and armour therein to the value of some thousands of pounds, but by God's providence the powder was before removed to Cromlin.

Dec. 26. Being St. Stephen's-day, at a stage play at the great theatre in Smock-alley, the upper gallery fell down (being burthened by the multitude of people therein) into the pit, by which three persons were killed and many wounded; the play then acting was "Bartholomew Fair."

A.D. 1672, Sept. 24. Arthur, Earl of Essex, lord lieutenant, and the council made rules and orders for the better regulating the corporation of the city of Dublin, and electing of magistrates and officers in it, pursuant to a clause in the act of explanation of the act of settlement. By these orders, commonly called the "new rules," the constitution of the city received some alterations. For I., upon the election of a lord mayor, sheriffs, recorder, or town clerk of Dublin, the approbation of the chief governor or governors of the kingdom and the privy council was made necessary, which before was not required; and if the person elected and presented be not approved, that then they shall go to a new election, and present again, and so toties quoties until an approbation be had. II. That the election of a lord mayor, sheriffs, and treasurer of the city (which formerly was in the representatives of the people at large) was now vested in the lord mayor and aldermen, eight of whom were to be present at the election. III. The treasurer, sheriffs, and other receivers of the city revenues were yearly to account before auditors of the city, or a quorum of them, for such purpose assigned, which account was to be taken within six months after the expiration of their respective offices; and they were to pay over such monies as they received to the treasurer for the time being, under pain of disfranchisement by the lord mayor and aldermen, or usual quorum of them, and, in case of neglect, by the chief governor or governors and privy council. IV. The oaths of supremacy and allegiance, together with that called the "little oath," were appointed to be taken by all persons elected lord mayor, sheriffs, treasurer, aldermen, town-clerk, or the common-council, or master of wardens of any of the corporations or guilds, under pain of incapacity to hold such places; and upon refusal to take such oaths, the election to be void; yet a dispensation reserved in the chief governor or governors. V. Whereas the common-council of the city did consist of a lord mayor and twenty-four aldermen, who usually sat together in one room by themselves, and of sheriffs-peers not exceeding forty-eight persons, and of ninety-six others elected out of the guilds or corporations of the city, who usually sat together in one room by themselves, and were usually called the commons of the city, among whom the sheriffs for the time being presided: by these new rules it was ordered that the common-council of the city should consist of the lord mayor and twenty-four aldermen, who, or any eight or more of them, with the lord mayor, should continue to sit apart by themselves, and also of the sheriffs, who are to preside among the rest of the common-council, and of the sheriffs-peers, not exceeding forty-eight in number, and of ninety-six other persons to be chosen out of the guilds or corporations which said ninety-six were to continue only common-council men for three years. And further, that such guilds should some time in November at the end of every three years elect double the number usually chosen out of such guilds, and by the master and wardens present their names to the lord mayor in such month, who in the presence of one of the sheriffs and eight of the aldermen, should before the 24th December following elect out of them the number usually serving in the common-council for each such guild, which persons shall be of the common-council three years, and upon death or removal the guild to present two others, one of whom to be chosen; the persons so elected, with the sheriffs-peers, so as there be forty or more present, shall sit and vote and act in the general quarter and other assemblies of the commons. Upon neglect or refusal of the guilds within said times to elect, or the master or wardens to return, or the refusal of the persons elected to serve, then the election out of such guilds is to devolve on the lord mayor and aldermen, or usual quorum; and no others to be of the commons, besides the sheriffs, who are still to preside among the commons, and the said sheriffs-peers and ninety-six persons. Any pretending to be of the the commons, before such election, to be disfranchised by the lord mayor and aldermen, or the usual quorum of them. Yet this rule does not debar the lord mayor, aldermen, and common-council of their former power of changing the numbers of their common-council, and of distributing the same among other corporations, so as the whole number exceed not ninety-six, and they be presented and elected as aforesaid. VI. All strangers, foreigners, and aliens, as well others as Protestants, being merchants, traders, artizans, artificers, seamen, or otherwise skilled or exercised in any mystery, craft, or trade, or in the working or making any manufacture, or in the art of navigation, shall be admitted freemen of the city, or of any guild or fraternity of the same, upon payment or tender of 20s. to the lord mayor and common-council, and, if they desire it, of any guild, during their residence in this kingdom, and shall be denizens, they taking the oath of allegiance, and other oaths taken by freemen, and paying like charges as other freemen, upon pain of disfranchisement of the lord mayor, &c., for refusal, and rendering them incapable (without the government's licence) of being freemen or members again: and such stranger on tender of 20s. and taking the oath of allegiance before a justice of the peace of the county of Dublin, shall be a freeman, and free of any guild by taking the freeman's oath before such justice, and paying such charges as aforesaid. The hinderers or interrupters of such strangers in their business to be disfranchised.

(To be Continued.)

IRISH NEWS IN 1837.

(From "Tate's Magazine" of that Year.)

The National Association have unanimously passed a resolution against Lord Lyndhurst, which must render it difficult for him ever to hold office as a Minister. It was moved by Mr. Boyce, a Protestant gentleman of large fortune in Wexford, and seconded by Mr. O'Connell:—"That it having been ascertained that Lord Baron Lyndhurst has asserted in his place, as a member of Parliament, that the great overwhelming majority of the Irish people are aliens in blood, aliens in language, and aliens in religion from the British people, we deem it a sacred duty, solemnly, and in the face of the entire British nation, to proclaim our deep conviction that the said Lord Lyndhurst is an enemy to the Irish people, at the same time to the peace of Ireland, to the stability to the connection between those countries, to the liberty of the people, and the safety of the throne."

Another victim has been sacrificed to the Moloch of tythes. Patrick Dwyer, who was imprisoned for tythes due to the Rev. Mr. Coore, a clergyman of Kildare, lately died in jail. An immense funeral procession attended his corpse from Dublin to Kildare. Dwyer has left a wife and family, for whom we hope the establishment will provide.

The proceedings of the Irish Court of Exchequer, in issuing writs of rebellion for the recovery of tythes, has been established to be erroneous, the defenders not having received the various notices previous to the issuing of the writ they were by law and immemorial practice entitled. The consequences of this blunder to the clergymen on whose behalf the writs were issued, will be most serious. Several hundreds of these writs have been issued, lives have been sacrificed in executing them, sales have taken place, and numerous persons have been imprisoned in virtue of them. All the persons aggrieved have, of course, good actions for damages against the plaintiffs.

Several attempts have been made to effect tythe sales; but in not a single case has any article been sold. During the last eighteen months upwards of 20,000 persons have been prosecuted for non-payment of tythes.

The run on the Irish banks has stopped. A letter from Mr. O'Connell, as governor of the National Bank, had a considerable effect in producing this result. The run appears to have originated with the Tories for a political purpose.

The O'Connell subscription raised in Great Britain to assist in defraying the expenses incurred by the Dublin Election petition, has been closed, and the net account remitted to Mr. O'Connell is £8,419 15s. 9d. The justice rent amounted to from £300 or £400 a week. The Tory tactics of defeating their antagonists, by involving them in expense, are not, therefore, likely to be attended with success.

The Dublin election cost the Carlton Irish purse £46,000, the greater proportion of which was expended in bribery.

LITERARY NOTES.

The life of the late Lord Dufferin is to be written by Sir Alfred Lyall, who will make a complete study of the papers and correspondence at Clandeboye.

✧ ✧ ✧

It was stated in the "Academy" of April 26 that a reproduction of the cottage at Alloway in which the Scottish national poet was born was to be a feature of the St. Louis World's Exposition. It has just been decided by the Burns' Cottage Association of America that a replica of the "Auld clay biggin'" will require the aid of a statelier monument of Scottish history properly to equip the Scottish corner of the World's Fair at St. Louis. The needed addition is to be a replica of Stirling Castle.

✧ ✧ ✧

A book called "The Comic Side of School Life," made up of the blunders of boy and girl pupils, has been sufficiently successful to induce the publishers, Messrs. Jarrold and Sons, to make a venture with a book on the odd feats which foreigners execute in their speaking English. "Plain English" is the title of this book of foreigners' English. Its examples are drawn from all parts of Europe. The compiler quotes some amusing mistakes made by foreigners in drawing up English advertisements.

✧ ✧ ✧

The "Westminster" has been fortunate beyond its deserts in getting up a correspondence on the legitimacy of saying "different than." This is the sort of controversy which really should be settled not by the pen of the ready writer, but by determination and a pickaxe. "Different to" is a colloquialism, which excites purists to natural frenzy, and many who are not purists, but like the pose, to an apoplectic fury which is not natural, though occasionally fatal. But no sensible being doubts what is meant by it. "Different than" is merely meaningless. Besides comparatives, there is only a limited list of words which take the construction with "than." Two of them are "other" and "otherwise." Both are very good English words. "Different" is a good word, too, though Latin. But it is no synonym for either of the others.

✧ ✧ ✧

Vanishing Newgate, besides its chronicles of crime, has other interest for newspaper readers, and above all for newspaper proprietors and writers. Among "the early martyrs to freedom," to quote the language of one who has written its chronicles, was Daniel Defoe, who, however, learnt by the easy way in which the irony of his "Short Way with Dissenters"—hanging for preachers and banishment for congregations—deceived both High Church and Dissenters, the way to write "Robinson Crusoe." But he had to pay dearly for the lesson, three times in the pillory, 200 marks' fine and imprisonment. Then the Rev. Lawrence, having called George I. a usurper, was fined £500, imprisoned three years, whipped twice, and stripped of his gown. To say nothing of Thomas Paine and other "martyrs," the record brings us to John Wilkes. Nor can the "Times" forget that its founder, Mr. Walter, was imprisoned for alleged libels against three Royal Dukes. And the soldier has reason to remember with gratitude William Cobbett, who was fined £1,000 and sentenced to two years' imprisonment for protesting against corporal punishment in the Army.

✧ ✧ ✧

The enormous spread of Free Libraries in America is thought by some observers to be a serious menace to the book-selling and publishing trades. The pith of the argument is, of course, simply this, that if readers can borrow new books at a merely nominal expense, they will not buy them. We are by no means convinced, however, that this must follow. The more the appetite for reading is increased by wholesale lending, the more will the desire to buy and possess books be increased. The whole subject bristles with difficulties, and depends on figures and ratios which are not, and cannot be, produced. We can (remarks the "Academy") only say that if the effect of Free Libraries is to be the killing of the book habit, then these institutions are a doubtful blessing. Already, we think, they foster a most regrettable tendency to borrow many books instead of to purchase a few. The true book lover detests borrowing from Free Libraries, except it may be for purposes of temporary research, and it is hardly too much to say that the ultimate mission of the Free Library is to render itself unnecessary.

✧ ✧ ✧

They never lose sight of popular novelists in America. When printers cease from troubling and publishers are as much at rest as they ever are in this vale of hustle, American readers are punctiliously informed of the movements and next literary intentions of the writers they love or are requested to love. In the New York "American and Journal" we collect some breathless news of these good people. Thomas Bailey Aldrich, it seems, is spending the summer at his cottage at Tenants' Harbour, Me. His new book, "A Sea Turn and Other Matters," will be out in the fall. Arthur Butler Hulbert, author of "The Queen of Quelparte," which will be published in September, is bicycling abroad with his wife. Mary Johnston, "whose 'Audrey' is having such a phenomenal sale," is spending the summer at her home in Virginia at work on another book. Margaret Deland, author of "Old Chester Tales," is at her summer home in Kennebecport, Me., busily engaged on a series called "Twentieth Century Talks to Women." Onoto Watana, author of "A Japanese Nightingale," "soon to be dramatised on a more magnificent scale than 'Ben Hur,'" is in Oil City, Pa., where she is preparing further material for a Japanese story.

✧ ✧ ✧

The "Academy" remarks:—So we have at last a British Academy for the Promotion of Historical, Philosophical, and Philological studies. Three of the signatories to the petition to the King published last January—Lord Acton, Mr. S. R. Gardiner, and the Rev. A. B. Davidson—have since died. The others, with the addition of Lord Rosebery, whose name has been added to the list, have now the privilege (the King having been pleased, acting upon the advice of the Privy Council, to accede to the petition) of passing into history as the first forty-nine Fellows of the British Academy. Their names are:—The Earl of Rosebery, Viscount Dillon, Lord Reay, Mr. Arthur Balfour, Mr. John Morley, Mr. James Bryce, Mr. Lecky, Sir William Anson, Sir Frederick Pollock, Sir Edward Maunde Thompson, Sir Henry Churchill Maxwell-Lyte, Sir Courtney Ilbert, Sir Richard Jebb, Dr. Monro, Dr. A. W. Ward, Dr. Edward Caird, Dr. H. F. Pelham, Dr. John Rhys, Rev. George Salmon, Prof. J. B. Bury, Prof. S. H. Butcher, Prof. Ingram Bywater, Prof. E. B. Cowell, Rev. William Cunningham, Prof. Rhys Davids, Prof. Albert Dicey, Rev. Canon S. R. Driver, Prof. Robonson Ellis, Mr. Arthur John Evans, Rev. A. M. Fairbairn, Rev. Robert Flint, Mr. J. G. Frazer, Mr. Israel Gollancz, Mr. Thomas Hodgkin, Mr. S. H. Hodgson, Prof. T. E. Holland, Prof. F. W. Maitland, Prof. Alfred Marshall, Rev. J. E. B. Mayor, Dr. J. A. H. Murray, Prof. W. M. Ramsey, Rev. Canon William Sanday, Rev. W. W. Skeat, Mr. Leslie Stephen, Mr. Whitley Stokes, Rev. H. B. Swete, Rev. H. F. Tozer, Prof. Robert Yelverton Tyrrell, Prof. James Ward.

✧ ✧ ✧

The granting of this charter by the King signifies, we suppose, that certain appeals for an Academy of pure literature, which should include poetry, fiction, and belles lettres have not been considered. The demand for such an Academy is certainly not general, and we doubt if poets, novelists, and essayists could present to the King the organised front shown by their brothers in history, philosophy, and philology. The new British Academy is just what it is. Its connection with literature, in the persons of such members as Mr. Leslie Stephen and Mr. John Morley, is accidental.

✧ ✧ ✧

In the "Westminster Review" Mr. James Arthur Gibson has a pleasantly naive and buoyant article called "On becoming Possessed of a Library." Through long and strenuous years in which England and books were far from him, Mr. Gibson looked forward to the time when he should live in the country and browse on books. When a few months ago he returned home to fulfil this ambition and was already planning the formation of a library, an indulgent father presented him with the bulk of the family books, some 1,800 in number, and forming "three naked cartloads," to use Mr. Gibson's curious phrase. It is on this basis that he writes his paean of book love. We record so much merely because, under ordinary circumstances, we know nothing more calculated to fill the mind of a book lover with terror than the gift of the family collection of books, even if no more than one "naked cartload" represented their bulk. We know one literary man who, like Mr. Gibson, has set up his tabernacle in the country, and surrounded himself with books, of which, indeed, many portly folios invade the hall. It falls, however, to his guests, immediately on their arrival, to be taken aside and admonished that they are on no account to base their notions of his literary taste on the books they see around them. The reason given is Mr. Gibson's, and the guest is left to understand that the "naked cartloads" will one day reverse the process which has brought that gentleman so much satisfaction.

✧ ✧ ✧

The "Independent" prints some interesting letters, hitherto unpublished, of James Anthony Froude. They were addressed to the late General Gustave Cluseret, and are in the manuscript collection of Mr. Theodore Stanton, of Paris. From four of these letters we take some pithy passages, merely premising that the context must be guessed by the reader:—

Ramsgate, Sept. 18, 1872—The most stable Republics have been those in which the executive is vigorous while it lasts, but is liable to be called frequently to a strict and severe account for the use of its powers. In modern England our leading statesmen have little power, and therefore little or no responsibility. In old England they had great powers, but were liable to have their heads cut off if they abused it.

London, Sept. 11, 1872—I have little connection with so-called Radical politicians in England. They represent at bottom the interests merely of money-makers. They do not, and they never have, cared heartily for the people. Their symbol of faith is "Political Economy," and Political Economy means that the "weakest may go to the wall." Political adventurers make themselves a name as patriots and declaim on the people's wrongs.

London, July 3, 1872—I think you do not understand English. Authority is childishly weak among us because Ministers are afraid of Parliament, and members of Parliament are afraid of the votes of their constituents. The people can get all they ought to have, and a great deal more, by agitating for it. The peaceful revolution is in full progress, but if there was an appeal to force, such as you contemplate as having been possible at the time of the Trafalgar square meeting, it would be crushed with a violence of which you have no idea. I am happy to think that there is no occasion for a violent revolution in England. The storm is already on the side of the hill, and is moving so fast that nothing can stop it. There can be no revolution because there is no political resistance.

London, October 25, 1873—For myself, as I told you, I despair of any good coming from the "people" in this country. The wider we make the suffrage, the more entirely Parliament becomes filled with merely rich men. I prefer the aristocracy to the plutocrats. There will probably be a change of administration in the spring, and though I cannot, of course, do more than express my opinion, I should think (so far, at least, as your coming to England is concerned) that Mr. Disraeli would be more likely to consent to it than Mr. Gladstone.

SCIENTIFIC TOPICS.

In order to determine the condition of New York City's air, Street Cleaning Commissioner Woodbury is exposing gelatine plates to collect germs.

✧ ✧ ✧

Among the recent deaths of note is that of William S. Post, who was well known among the manufacturers of mechanical appliances in Boston, Mass., where he lived and worked. Among the more important of his inventions was a refrigerator car, a down-draft furnace, and the Post combustion boiler.

✧ ✧ ✧

A means of automatically inserting a fuse in an electric circuit has been recently patented by James T. Watson, of Scranton, Pa. It is a magazine fuse holder, and the number of fuses available is only limited by the size of the box which incases the apparatus. When the fuse blows the holder drops by its own weight, allowing the next holder to fall into place, thereby closing the circuit again.

✧ ✧ ✧

A graphophone in which several records are employed is the invention of E, P. Felt, of Elida, Minn. The stylus and reproducer are disengaged from operative connection with the records at the terminal of the latter in an automatic manner, and returned to a starting position. A motor device for controlling these operations is equipped with certain co-operating devices, which are proportioned and arranged to carry out the several steps.

✧ ✧ ✧

A patent has recently been granted for a combined phonograph and illustrating device, by means of which a series of pictures representing the subject matter of a phonograph record can be exhibited as the sound is reproduced. A series of pictures is mounted on a carrier, arranged to travel in succession, and displayed in a path focussed with reference to stereoscopic eye-glasses. The carrier is automatically actuated from a moving part of the phonograph.

✧ ✧ ✧

Benjamin Arnold, of East Greenwich, R.I., died recently after a short illness. He was an inventor of wide repute. He was born in 1822 and was educated at the Friends' High School in Philadelphia, and also at the Franklin Institute in the same city. The most useful and prominent of his inventions was a netting machine for making seines from either linen or cotton, the patent for which he disposed of to the firm of William E. Hooper and Sons, of Baltimore Md., which firm purchased a number of his other patents for doing the same character of work.

✧ ✧ ✧

Dr. Jacot-Guillarmod intends to climb some of the highest peaks in the Himalayas. His party consists of two Austrians and three Englishmen. The expedition left Trieste on March 3, and reached Bombay on March 30. When last heard from the party was in Cashmere. The first summits to be attempted will be the Godwin Austen, 28,250 feet high, and the Dapsang, 28,265 feet high. The Himalayan mountaineering record is held by W. Conway, who climbed the Pioneer Peak, 21,000 feet in height, in 1892.

✧ ✧ ✧

A large foghorn is to be placed in the cliff of St. Lawrence, 4 feet in diameter and 12 feet long, the sound being produced by sirens. Compressed air is supplied by valves actuated by clockwork. Every two minutes the foghorn will emit a deep roar, followed ten seconds later by a sharp shriek. There are three air tanks, each 6 feet in diameter and 12 feet long, and three gasoline engines run compressors to fill these tanks. The plant runs automatically, and a constant pressure is maintained in it. Even the clock is wound by a compressed air motor. The horn is mounted on a revolving track, so that the sound can be directed towards any point.

✧ ✧ ✧

The report issued by Messrs. Barry and Leslie, civil engineers, on the condition of St. Paul's Cathedral, London, made after a special examination into the stability of the cathedral, revealed a serious state of affairs. When Sir Christopher Wren erected the edifice he made elaborate precautions to insure thorough stability; but so extensive has been the undermining in the neighbourhood of the building that its foundations have been impaired, and unless it is speedily renovated the cathedral will within a few years be absolutely unsafe. The whole of the south side of the cathedral has subsided. The evil has been growing for the better part of a century. Sewers have been driven through the gravel soil and have drained the moisture out of the ground. Consequently there is an alteration in conditions, and a subsidence, resultant on the vast weight of the cathedral, follows. The most serious menace to the stability of the structure is a huge sewer in Carter lane near by, which is nearly 11 feet in diameter. The whole wall of the south transept has tilted from the perpendicular to an extent varying from four to five inches. This defect has, however, been attended to. Complete renovation will cost, at the very least, £50,000. The amount of money annually expended for urgent repairs—the building is never free from scaffolding—and cleaning is about £18,000.

✧ ✧ ✧

By the will of the late Mr. Thomas J. F. Deacon, of Newcastle-on-Tyne, the Royal Institution was made the richer by the possession of a number of valuable relics of Michael Faraday. These included the following:—Medals of silver and bronze (numbering 20 in all), and including the Fuller medal of 1828. two Copley medals of 1832 and 1838, two Newton medals of the Royal Society, 1833 and 1838, and the Rumford medal of 1846; two foreign orders contained in a small mahogany box; a book of portraits and autographs, including original letters from the Prince of Wales and Prince Alfred (written in 1856), Louis Napoleon, Emperor of France; Humphry Davy, Thomas Young, Humboldt, John Dalton, Whewell, Mary Somerville, and many others; a daguerreotype of a consultation of Faraday with Prof. Daniell; a drawing in colours of the laboratory of the Royal Institution by a niece of Sir John Moore; and a manuscript book entitled "A Class Book for the Reception of Mental Exercises instituted July, 1818," containing contributions by Faraday. The late Mr. Deacon requested that the medals and orders should be preserved, with an inscription showing that Margery Ann Reid and Caroline Deacon (nee Reid), nieces of Faraday's wife, often lived with Faraday and his wife during the most brilliant period of his life, and are—mentioned in Dr. Bence Jones' "Life of Faraday."

✧ ✧ ✧

The United States Coast and Geodetic Survey has made some experiments for the purpose of ascertaining the adaptability of wireless telegraphy for telegraphing longitude determinations in localities like Alaska, where there are no telegraph lines. The tests were made between the Marconi station at Sagaponack, on the eastern end of Long Island, and the United States Coast and Geodetic Survey schooner. As the vessel proceeded westward messages were sent at half hourly intervals, until the schooner was sixty-three miles from the station. At that point the last intelligible message was received. On board the schooner a circuit-breaking chronometer was included in the circuit of the battery and the spark coil. Each second-break of the chronometer was automatically transmitted as a time signal and recorded on a tape at the shore station. The results are said to show that regularly-spaced signals transmitted in this manner can be utilised for longitude determinations at a greater distance than is possible by verbal messages transmitted through the medium of the Morse code.

In the Comptes Rendus of the Paris Academy of Sciences, M. Jean Binot prints an account of his researches in the observatory on the summit of Mont Blanc, where he has been conducting bacteriological investigations at the highest altitude yet explored. As was to be expected, the air on the summit, away from the observatory, contains scarcely any bacteria whatever, only from four to eleven being detected in as much as a thousand litres, while in somewhat similar volumes none whatever was found. As a rule, at lower altitudes, the number of bacteria increased, as for instance, at the Plan de l'Aiguille fourteen, and at the Montenvert forty-nine were found in a thousand litres. Inside the observatory, in which M. Binot spent five days, from 260 to 540 microbes were found in the same volume of air, these being probably introduced by M. Binot and his companions during their temporary invasion of the building

✧ ✧ ✧

The investigations were not, however, confined to the air on the top of the mountain, but included also bacterial examinations of freshly-fallen snow, old snow, ice on the surface and below, glacier water and mountain streams. Freshly fallen snow, even when sampled in large quantities, frequently contained no bacteria whatever, while in snow which had lain for some time usually only from one to two individuals were discoverable per cubic centimetre; at the foot of the glaciers the surface snow contained rather more, the number varying from six to sixty-five per cubic centimetre at the Mer de Glace. Glacier water is usually very pure, and, like the glacier ice from which it is derived, was found to contain a number of yeasts and some streptothrix; but while high up such water contained but from three to eight bacteria per cubic centimetre, a stream at the foot of the glacier des Bossons contained ninety-five, while the water of the River Arve, at Chamonix, was found to have as many as 7,560 per cubic centimetre. Altogether, M. Binot examined 121 samples of air, ice, snow, and water, and isolated no less than 300 different varieties of microbes, one-third of which number he was able to identify as having been already studied and described, and the residue are being carefully investigated by him at the present time. Even the alluring and beautifully clear and crystalline spring water on the Montanvert road was condemned by being found to contain a dozen virulent colon bacilli in a cubic centimetre. Doubtless, this pollution was due to the cattle on the mountain.

✧ ✧ ✧

The experiment of freezing water by its own evaporation is more often described than performed, as it succeeds only with an unusually good air pump. A similar experiment with melted camphor is less impressive in one way, for the temperature required to freeze the camphor is not, very low, but the experiment is far more showy, can be exhibited to a greater number at once, and is very easy to perform. A very slight diminution of pressure brings the boiling point below the freezing point, so that if a flask or test tube of melted camphor be connected to an air pump, and but one or two strokes taken, the liquid will boil under the reduced pressure, and almost immediately flash into a bulky porous, solid mass, puffed up by the vapour that was coming off during the act of solidification. By heating the camphor under diminished and varying pressure it is easy to change at will from sublimation to distillation. If a cold rod is thrust down a test tube in which camphor is boiling, the cooler vapour in the upper part of the tube condenses on the rod in sparkling crystals, like frost, while lower down the hotter vapour is condensing to liquid. In fact, camphor may be made to illustrate, not only the appearance, but the true cause of formation of frost, snow, etc., while, in its pleasant odour, it has an advantage over many substances used in experiments of this kind.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, TUESDAY, MAY 8, 1787.

Large orders are every day expected from France by the different manufacturers for our broad and narrow stuffs, shalloons, garters, etc., and in consequence, not a single loom is idle at present. This is one of the good effects already resulting from the commercial treaty; and when the treaties with Spain and Portugal are also concluded, we shall find that the blessings of industry will be most sensibly and essentially felt in every part of the kingdom in general.

Notwithstanding the present distracted state of affairs in the United States of America, particularly in the northern part of that continent, the rage for emigration among the lower people still continues. In the course of the last year upwards of five thousand people went from the North of Ireland to North America, and by a late statement in the Maryland papers, it appears that upwards of twenty-four thousand Irish servants have gone to seek for and labour for their bread in the three middle States of America—Pennsylvania, Maryland, and Virginia.

The spring shuttles have been of late much adopted by many persons in the manufacturing of coarse and refine cloths in many parts of the Liberty, as also the spinning Jennies, by means of which from forty to sixty threads can be spun at one time, after being previously robed or flubbed, by way of preparation. Those who had been most averse to these highly necessary modes of improvements, and had endeavoured by every possible means to prevent their adoption or introduction, are now foremost for their furtherance and extension. When these are once universally made use of in that branch of the woollen business, and that prejudices against such very necessary and ingenious inventions are effectually removed, we may naturally expect that the woollen fabrics will rise to a very great degree of perfection and extensiveness amongst us.

It is asserted that at the very next sessions of the Irish Parliament, an effectual law will be passed to prevent the exportation of machinery, as large quantities of those machine imitations we have of late years attempted with a very great share of success, after the models obtained from England, are frequently sent to Spain, France, and Portugal, which must ultimately tend to injure the trade and manufactures of these kingdoms.

As a war is, in all probability, on the very point of breaking out between the two great empires of Turkey and Russia, victory and conquest will, in that case, no doubt, declare in favour of the latter. The Russians are very severe in their military discipline, and their superior officers possessing an unlimited power over their troops, every idea of personal equality is lost; and amidst the calm of dejection and servility, it is supposed that the attachment of a willing subordination is entirely produced. The dread of punishment supplies the want of a noble resolution, and the composure with which a Russian soldier faces death, may be said to arise more from a weariness of existence, than a courage to defend it; yet under all these disadvantages they certainly form, at present, some of the best troops in Europe.

The Turks, on the other hand, have been averse to any new modes of modern discipline, preferring that by which their former Emperors made such extended conquests in Europe and Asia, not considering, however, that discipline had not been in those periods reduced to a science as at present. Their janisaries and spahis will not suffer themselves to be brought under subordination, and their commanders and superiors are under the greatest apprehensions of offending them. The Turkish crescent must, therefore, in all probability, sink beneath the towering Eagle of the Northern empire.

Counsellor Hutchinson, son of the Provost of the University of Dublin, called on Lord Mountmorres on Saturday and Sunday se'nnight for an explanation of his speech in the House of Lords, on Monday, April the 23rd, as expressed in the papers. Lord Mountmorres said he meant no personal offence to the Provost, and if the Provost should ask him the same question, he would return him the same answer. Mr. Hutchinson, on his second visit, not seeming pleased with this answer, and leaving the room with some warmth, Lord Mountmorres sent a gentleman immediately to Mr. Hutchinson, who was present at the whole of this transaction, to know if he was satisfied at the answer and explanation; Mr. Hutchinson said that he was dissatisfied. Lord Mountmorres having refused any other explanation or conversation on the subject, Mr. Hutchinson sent him a message on Saturday evening last, at seven o'clock, purporting, "That in consequence of a libel appearing in the papers, as a representation of his speech, which his Lordship thought proper not to apologise for, he called upon his Lordship for personal satisfaction, and desired to meet him in half an hour." The parties met at Donnybrook according to the appointment of Mr. Hutchinson. The seconds having measured out the ground, they both fired at the same time; Lord Mountmorres fell in consequence of a wound under the arm. The seconds then interfered to prevent further bad consequence. Mr. Hutchinson was attended on the ground by George Ogle, Esq., and a surgeon; and Lord Mountmorres, by Lord Lottus. The wound which his Lordship received was nearly in the same place as that of the late Sir John Colthurst, but happily the ball took a different direction, and produced a violent concussion. Mr. Hume, the surgeon who attends Lord Mountmorres, hopes, however, it will not be accompanied by any fatal consequence.

Saturday, in the House of Lords, the Attorney-General was heard in reply, in the appeal of Magrath against Lord Muskerry, from the Court of Chancery; the Lord Chancellor spoke a considerable time in defence of the decree; he was answered with the greatest ability by Lord Pery; Lord Mountgarret supported the decree, and Lords Carhampton and Mountmorres said a few words in support of Lord Pery's opinion for the reversal. The House divided on the question put by the Chancellor for the reversing the decree (according to the standing order):

Contents below the bar	4
Non-contents in the House	5

The question for affirming the decree was then put, and carried by a majority of one.

We have the pleasure to hear that her Grace the Duchess of Rutland arrived safe at Holyhead about ten o'clock on Thursday night last, having made the passage in eight hours. Her Grace appeared to be in tolerable health and spirits upon landing.

The standing orders of the House of Lords relative to the postponing of causes, which are appointed for a certain day, upon the petition of either party, have been wisely and judiciously framed to prevent the delay and expense to the suitors in that assembly—the 82nd order prescribes that no petition is admissible to put off a cause unless an affidavit has been previously made at the bar that the adverse party has had two days notice of such intention; and the 83rd standing order, that a cause being put off after a day is appointed—in such case the party petitioning shall pay ten pounds costs to the adverse party; upon the due observance of these rules much depends; and the truly noble Lord, who brought them under consideration, has rendered essential service to his country.

By a private letter of respectable authority we learn, that on the night of Thursday, the 25th ult., a party of Whiteboys, to the number of 300 and upwards, all mounted on horseback, and some of them armed, assembled at a place called Carrigadrohid, near Macromp, in the county of Cork, and after having having abused several persons who refused to join in their unlawful proceedings, they swore numbers to abide by Captain Right's regulations of the last year.

On Friday last Lord Earlsfort, in a most feeling manner, warned the grand jury of the city of Dublin, of the necessity there was of their paying a proper attention to the state of the gaols. The horrors of some of them he declared to be shocking to humanity; he himself had personally visited some of them. The City Marshalsea was an hovel dreadful to imagination, a number of persons huddled together without even a little straw to lie on, surrounded by noisome stenches, and accessible only at the hazard of a person's life—yet this was nothing when compared to the state of their Bridewell. His Lordship severely reprobated the electioneering jobs which were practised by the citizens, and declared that there was as much solicitation used for the purpose of obtaining any city employment as would be sufficient to carry the election of a representative for a great county.

In addressing the grand jury on the above occasion, the Lord Chief Justice displayed all the firmness of a judge, and all the tender sensibility of a feeling mind. When such men as he quit the gorgeous palace and the fragrant gardens to visit the dreary mansions of distress, and breathe the impure vapours of a filthy dungeon, it manifests the innate goodness of the human heart, and shows a regard for their fellow-creatures which must ever excite the admiration and gratitude of the public.

The Attorney-General also recommended to the grand jury to be careful of the rights which yet remained to them; the charter obliged them to keep a proper gaol, and if they continued to neglect their duty, a Scire Facias might go against it.

We are extremely happy to find, that whatever private frauds or robberies may be committed in this city, scarcely any whatever are heard of in the public streets, so very exact are the proper officers, in visiting the different rounds, lest any of the Police guards should at any time be absent from their respective stations. The idea which has gone abroad relative to their being absent from their stands, is owing to their not being not so readily seen as the Watchmen formerly had been, which was occasioned by the lanterns they constantly carried along with them. This piece of etiquette, however, could not possibly be observed by a set of men who are obliged to carry a firelock and bayonet instead of a pole and clappers, and, therefore, it is not easy to discover them on dark nights; but when occasion requires, they are always near at hand, and ready to protect the lives and properties of the inhabitants.

CLEW BAY.

(From Mr. and Mrs. S. C. Hall's "Travels in Ireland.")

We take the following description of Clew Bay from the "Parliamentary Gazetteer of Ireland, 1843-44":—

CLEW BAY, a capacious, unique, and highly picturesque bay, on the west coast of Co. Mayo, Connaught. It enters between Achilbeg on the north, and Buinaha Point on the south, and extends 14½ miles eastward, with a breadth somewhat uniform, and averaging about 5½ miles. Its north shore and the northern part of the coast around its head belong to the barony of Burrishoole; and its south shore and the southern part of the coast around its head belong to the barony of Murrisk. The outline of all its head, and of about 6 miles and 3½ respectively down its north and south sides, is so singularly intricate as to present a continued and richly diversified series of little bays and peninsulæ; and the belt from 6 to 3½ miles across the head is a thoroughly crowded archipelago, a labyrinthine expanse of green and blooming isles and islets, which vie with one another in beauty, and are variously estimated at nearly 100, at 170, at upwards of 300, and at nearly 400. The shores west of the archipelago are bold, rocky, occasionally mountainous, and prevailingly unindented; they consist, on the north, of the grand sandstone heights of Coraan Achill, fringed in some spots with low limestone reefs; and, on the south, of shivery quartz rock, serpentine, and granite, towering aloft in cliff and eminence, and immediately presided over by the grand-monarch mountain of the west, the magnificent Croagh-Patrick. The island of Clare occupies one-third of the entrance of the bay, and largely contributes to both the beauty of its scenery and the safety of its harbourage and navigation. The profusion of isles in the archipelago are composed of a deep loamy soil upon a basis of limestone; and, excepting unimportant islets, are all fertile and well cultivated. The principal are Moynishmore, Moynishbeg, Inniskeel, Rosmurrevagh, Inishcooa, Roeillaun, Inisher-

kin, Inishturbid, Inishnacross, Inishquirk, Inishcorky, Inishcannon, Rossturk, Inishdasky, Inishdoonyer, Inishkea, Freaghillaneast, Inishfesh, Inishgowla, Inishoo, Inishdaweel, Muckinish, Inishdaff, Inishturk, Rabbit-Island, Inishturlin, Inishcottle, Illanmaw, Inishbee, Cloghcormick, Inishnakill, Clynish, Derrinish, Collanmore, Collanbeg, Inishgort, Inishlyre, Illanataggart, Crovinish, Inishgowla, Dorinishmore, Dorinishbeg, Inishleague, Inishdaugh, Inisheeny, Annagh, Cahirnarran, and Meeneenyaw. The island of Minish, in the reign of Charles I., had an area of 12 acres; in 1814 it was reduced in extent to 420 feet by 30; and and 1816, it totally disappeared. Superb views of the bay, its islands, and its gorgeous mountain-scenes, are obtained from very many points of observation in its neighbourhood; but those from Melcomb-Hill near Newport, and from the summit of Croagh-Patrick, are particularly imposing. Nearly the whole bay is clear of danger to navigation; its labyrinth of creeks and sounds, at the upper end, presents a multitude of safe harbours and roadsteads; its creeks of Oldhead Mynish, Doobeg, and some others are in use as fishery stations; and its chief expansions at the north and south corners of its head form the bays or harbours of Newport and Westport. Upwards of 20,000 persons on its shores and islands are supposed to be wholly or partly employed and maintained by its fisheries.

Mr. and Mrs. S. C. Hall thus voice the feelings of admiration which the beauty of Clew Bay enkindled in them:—

From Newport-Mayo we procceded to the Island of Achill, distant about fourteen miles. It is the largest island off the Irish coast, being sixteen miles in length by seven in breadth, and contains between 5,000 and 6,000 inhabitants. The scenery that leads to it is remarkably wild and barren; on one side are the bleak and bare mountains, and on the other is the beautiful bay—Clew Bay—for nearly half the distance, until the view opens upon the broad Atlantic. In natural grandeur and rude magnificence, the district is certainly unsurpassed—if indeed it be approached—by any other in Ireland; on no occasion have we so completely felt our utter inability to render justice to the wonderful works of Nature. Nor is the neighbourhood without its interest, arising from associations with the olden time; the remains of the ancient monastery of Burrishoole and the castle of Carrig-a-Hooly, one of the castles of Grace O'Malley, are among the most striking and remarkable of the ruins of Ireland. Those of the former stand upon the east bank of the river, and adjacent to the lake of Burrishoole; both afford famous sport to the angler, and unrestricted permission to fish in either is, as we have intimated, readily accorded to the tourist. The venerable ruin is highly picturesque; it retains many tokens of early splendour, and some of the mullions and capitals are curious specimens of art. As usual, the relics of mortality are scattered profusely within and around it; it is literally "a place of skulls;" every nook, crevice, and cranny is "crammed" with "dry bones."* The old castle was evidently built for strength; it is situated at an extremity of an arm of the sea, and immediately adjoining it, we were informed there was depth enough, at low water, for a vessel of considerable burthen to ride in concealment and in perfect shelter from the fiercer winds. In this vicinity, too, there are some singular caves, believed to be Druidic.

The beauty and magnificence of the scenery increase as we proceed; about midway to Achill Sound is the small village of Bunown, where the tourist will certainly give his horse a rest; for probably the whole line of the Irish coast does not supply a view at once so grand and inconceivably lovely. Yet it is all taken in at a glance. In the extreme distance, across the bay, rises a line of mountains, of which the venerable and legend-haunted Croagh-Patrick is the highest—seen with its peaked top in the clouds. Midway is the broad bay, dotted with islands. We stand above a terrific precipice the rocky strand beneath us, although at a considerable distance off, seems so immediately under our feet, that a stone thrown from a summit by a child's hand may reach the ocean—and so indeed it will, but not at a single bound; it goes rushing and plunging down the steep, leaping over every opposing barrier, now and then springing upwards many feet into the air, and at length when nearly out of sight, surmounting its last obstruction, and plunging in among the breakers, the white foam of which dashes against the sides of the huge precipice below.

* "Here tradition states that the skull of Grace O'Malley was formerly preserved, and valued as a precious relic. One night, however—so the legend goes—the bones of the famous sea-queen were stolen from their resting-place, and conveyed, with those of thousands of her descendants, into Scotland, to be ground into manure. The theft was of course perpetrated in secret and in the night-time; if the crew had been seized by the peasantry with their singular cargo, not a man of them would have lived to tell the tale; for the Irish regard with peculiar horror any desecration of the graveyard. It is said, however, and believed by many, that by some miraculous interposition, the skull of the brave lady was conveyed back to its nook in the Abbey-wall. The honour of having contained it is claimed also by Clare Island—where the stoutest of her castles stood and where its ruins still exist. In neither place is any such relic to be now met with. At Burrishoole, there was pointed out to us a recess, in which the collected bones are believed to be those of the monks. The skulls contained here are regarded with especial veneration; and, even now, it is by no means uncommon for the peasantry to borrow one of them, when a member of the family is sick and to boil milk in it, which is given to the sufferer as an infallible cure; the skull, when the object has been answered, is carefully restored to the heap. We examined several that had external marks of fire; and all our doubts upon the subject were removed, for a woman actually came while we were speculating concerning the matter, took a fragment of one in her apron, and in reply to our questions, did not hesitate to assure us of her conviction that the draught so prepared would 'cure her poor babby.'"

A portable garbage crematory, the invention of Morgan J. Cragin, of Chicago, was recently tested at a New York apartment house. One of the features of the apparatus is the employment of a grate constructed of hollow piping, by means of which it is possible to combine the disposal of the garbage with the heating of water. In this manner it is possible to use garbage as a fuel.

OUR WEEKLY STORY

READY BRAITHWAITE.

There were troubled faces in the office of the English mercantile house of Cartwright, in Tabriz, and with good reason. It was a busy office, as such establishments go in Persia. The Oriental langour was tempered with a good deal of Anglo-Saxon snap and energy. Like most of the European and Armenian offices, it was in a caravansary, a honeycomb of a building on four sides of a square. In the middle of the square was a great tank of fetid water, with which, five times a day, the Mohammedans laved their faces and hands while they prayed. Great bales of goods were piled here and there, awaiting the departure of the caravans.

Over this scene the windows of the Cartwright office looked out. You mounted to the office by winding stairs, whose steps were few in number, but so high as to make climbing them difficult to any but a long-legged man.

At the top there was an outer room or vestibule where, during business hours, there stood from ten to twenty pairs of sandals, belonging to the native attaches of the house, and to other Persians who came to do business there. The main office looked little enough like an American place of business. The whole place was covered with rugs. Mattresses were spread along the sides of the room, against the walls, and on them sat the Persian employes—mirzas or secretaries, money-changers, accountants—their legs curled up under them, big lambskin caps on their heads, and with little short-legged desks, scarcely a foot high, in front of them.

In one corner, on high stools, was the contingent of Anglo-Saxon clerks, and beyond a low, narrow passageway through the heavy wall was the inner office, where sat the manager of the branch, a handsome old Englishman, into whose hair and beard thirty years of commercial skirmishing with the tricky Orientals had brought plentious streaks of grey.

Before him, in an attitude of deference, stood a native, a thin, sun-burned fellow, whose eyes were heavy for want of sleep, and whose rough clothing was still white with the dust of the road. Within the hour he had arrived, after a headlong ride from the mountain districts in the south-western part of the province, bringing word that the turbulent Kurds along the border were at last in motion for the long-threatened raid into Persia.

The country was in a ferment. Sheik Obeidullah, who was at once a civil and religious chief, had been raising his legions of fierce warriors among the mountains. His provocation was grave. The Persian governors on the border, disappointed in their efforts at extortion, had beheaded some threescore of his followers, had looted some villages and imprisoned the women and children. Throughout all the wild ranges of Kurdistan rang the cry for revenge.

And now within a week the whole western country would be ablaze with war, and caravans bound for Tabriz would be prey to the raiders. That was the reason why the shadows were so deep on the brow of the British manager.

The Cartwright concern, of whose welfare in Persia he was chief custodian, had interests in every quarter of the kingdom. It was one of those enormous commercial houses of which the English have been founders in almost every part of the world. It exported silk and gums and curios, arms and armour, and shawls and velvets, and spices and opium, dried fruits, turquoise, hand-carved silverware, wool, and carpets without number.

In this case it was carpets. In Sujbulak, known as the Kurdish capital (although there is no actually constituted state of Kurdistan), a Kurdish merchant had been gathering for the firm for a year the finest carpets to be found anywhere in that part of the country.

He had contracted to deliver the consignment in Tabriz, where cash payment was to be made. The long camel train, with its valuable bales, was due to start eastward, and now, within a week, the chaos of Asiatic war would be raging along all the highways.

The caravan could never reach Tabriz, and on the other hand, if the goods were not secured at once, they would be bought up by the collector of a rival house, who was making a hurried journey through the district, to get out what he could in advance of the disorder. It meant a loss of many thousand pounds sterling in profits.

"Somebody," said the manager, anxiously, turning to his chief clerk, who sat near by, "must get out there to Sujubulak with that money in a hurry, and close the matter before this storm breaks. It's a risky business, but there's no other way."

"I think, sir," was the thoughtful answer, "you'd better send the American. Of course, to trust a native with that amount of money is out of the question, and Braithwaite's more up to a hard job like that than any of the rest of our people. Besides, he won't need a week to get ready in."

"Yes, I think you're right," replied the elder man, and he called out "Braithwaite!" in a loud voice.

In a moment the American stood in the doorway, his hands full of papers, just as he had sprung from his desk.

"Step in, Mr. Braithwaite." The manager could not help remarking to himself that it was a fine figure of a man that stood awaiting his orders. Tall and lithe, brown of skin from exposure to the Persian sun, straight and broad-shouldered, he was the sort of man that would have gladdened the heart of a cavalry recruiting officer.

"Mr. Braithwaite, we have just received word that the Kurdish forces will break over the border in a few days, and someone must go post-haste to Sujbulak with considerable money, to complete the purchase of a large lot of carpets there, and start them on by caravan to Trebizond. It is impossible to deliver the caravan here, and whatever is done must be done at once, because the Renwick agent, who was in Urumiah last week and working south toward Bushire, will secure the whole lot at his own price, and they're the cream of a year's picking. Now, could you start on such a journey at once."

Braithwaite's clear eyes were fairly snapping. "Oh, yes, sir," he answered, quietly. "I'm all ready to go at any time."

"Good!" said the manager. "Then you may see me at the house this evening, and I'll give you the necessary money and instructions, so that you can take the road at sunrise."

When Braithwaite was a small boy, at home in western New York, his father had said to him one day, "Jim, there's one thing I want to say to you while you're little, that the secret of success in this life, if a man has grit and honesty to start with, is in being ready—ready to take advantage of his opportunities. Some men have a good many opportunities; others never have but one, and as you go along you'll often hear men saying, 'I missed the chance of my life.' Those are generally the failures, and you'll find that they missed the chance of their lives just because they weren't ready to take it. Ready's the word. Remember that."

Jim remembered. He went on mastering one thing after another. People asked him what he was doing it for. "Oh, I'm just getting ready," he said. "Ready for what?" "Well, for whatever happens to me."

They laughed at him, but that did not matter. One day a neighbour's boy hailed him: "Hello, Ready!" And the name stuck. From that time on he was "Ready" Braithwaite. He carried the name into college. When he tried for full-back on the team, and was turned down hard, he stayed in training and played on the "scrub" whenever the chance came.

"What's the use of going on, Jim?" his room mate asked.

"Oh, I might as well be ready," said Jim. The regular full-back and the two substitutes were all laid up before Thanksgiving, and when Jim ran half the length of the gridiron and touched down in the last three minutes of a losing game against Yale, turning a defeat into a victory, he heard his class mates over on the "bleachers" singing: —

> Oh, when you want the business done
> By play that's strong and steady,
> Just take a look at old Princeton,
> She has a man that's "Ready!"

It was the same Ready Braithwaite that left the manager's house in Tabriz that night before the historic Kurdish raid, and walked slowly back to his lodgings through the silent and unlighted streets with five thousand pounds in gold and Bank of England notes in a bag.

"Now," said Mellish, his English roommate, with a pardonable tinge of jealousy in his tone, "I suppose all the pistol practice and the education of that Lucy mare which you have been putting in your spare time at will be very valuable to you."

"I think they'll come in handy, Frank," answered Braithwaite. "Who knows? Asad," he called to the native servant, "have the mare ready and call me at five! I'll saddle her."

"Yes, sahib."

In the pink dawn of the Persian day the Lucy mare, which had in her the triple birthright of Hungarian, Arabian, and Karabagh blood, was climbing the foot-hills to the south of Tabriz, on her way into the teeth of war, with Ready Braithwaite and five thousand English pounds on her shining back. A single blanket was strapped behind Braithwaite; in one pocket of his hunting-coat were some hard biscuits, and in the other some cakes of chocolate. At his waist, swinging from a full cartridge-belt underneath his coat, were the two big Colt revolvers he had brought out from home.

It was slow going up the hot sides of Sahend, but the powerful creature under him seemed to understand the urgency of the mission and to share her master's haste. Leaving her to make her own pace in the steep places, and crowding her a bit where the nature of the way would warrant, he found himself at last travelling over fairly smooth country, with the mountains towering, more or less remote, on every hand, and Lake Urumiah shining like a boundless plain of silver on his right.

At noon he halted some distance outside the town of Ducargan. With his head on the saddle-bags containing his treasure, he slept till four o'clock, and at five, after a splash in the little watercourse near by, he started on again. With night came a glorious moon, and with its radiance to light the way, he pushed along, meeting now and then a train of camels laden with giant bales, and with their bells tinkling softly through the night.

A couple of hours' rest on a grassy slope bordering the road sufficed for horse and man, and as morning dawned they entered the old Mongol capital of Maragha, with the sweet scent of the gardens and orchards heavy on the air all about them.

The firm had an agent there, a shipper of dried fruits, and at his house they rested till evening.

Early next morning they were in Miandoab, which was taken a fortnight later by the swarming Kurds. Already the warning of the raid had come, and the inhabitants were hiding whatever of value they could. Thousands of them were preparing to take the road. Others, with more hardihood, were polishing weapons and preparing for resistance. Watching them as he spurred out of town on the last stage of his journey, Braithwaite said to himself, "They are not ready; that's what's the matter with them."

After crossing the Tatavu River, the road led into higher country. When mid-day came Braithwaite turned off by a gully, some hundred yards from the road, where the stream flowed cool. There he took the saddle off the mare, picketed her within reach of a measure of barley which he threw on the ground, and then seated himself near by, to make a meal off crackers, chocolate and brook water, with some cheese he had bought at Miandoab.

"Well, Lucy, old girl," he said, between his voracious bites, "We've had a clear field so far. If our luck and your legs last till to-night, we're likely to save the firm of Cartwright and Co a good sum of money."

As if in response to this encouraging remark, Luck stopped munching her grain and whinnied, looking intently up the gully with ears pricked in alarm. From behind a small ridge of rock above the bank of the stream a black, conical sheepskin hat was rising into view, and underneath it a villainous, bearded face.

Its owner surveyed Braithwaite with a contemptuous leer, and as if convinced that he had found an easy victim, came out a little farther from his place of concealment, and gave vent to a long, shrill sort of bird-call. In a few minutes another forbidding visage appeared above the rock, and soon the two highwaymen were perched side by side, looking scornfully down at him.

"A fine brace of buzzards!" said Braithwaite. "Let's wait and see if there are any more," and he went on eating as if the two marauders who sat there arranging his murder were his two best friends.

These two swarthy scoundrels were of the most desperate type of "road agents" to be encountered in all Persia; of uncertain race, with no fixed habitation, ready to do murder for the smallest booty—the "criminal tramps" of the East.

Braithwaite saw that they were talking about him, laughing disagreeably at jokes of which he was the theme; but more particularly as he made out from scraps of sentences which reached him, they were discussing the mare, for the Persian of whatever caste has a keen eye for fine horseflesh.

"Oh, you've decided already where you'll bury me, have you," muttered Braithwaite, "and now you're settling what you'll do with Lucy and the saddle-bags afterwards! All right! I know a trick worth two of that old putty-blower you've got there."

Without paying any apparent attention to the robbers, Braithwaite finished his meal and rose in leisurely fashion. Picking up three smooth, white pebbles, he walked down the bank and laid them with much care and deliberation on top of a boulder at the side of the stream. Two pairs of black eyes were watching him with savage interest. Walking backwards, he returned to his place near the mare and sat down, still with no sign that he recognised the presence of others. His audience of two looked at each other in wonderment.

Braithwaite unbuttoned his coat and drew both revolvers. The right-hand weapon dropped to the mark, cowboy fashion, and one of the white pebbles disappeared. An instant later the second weapon spoke, and another stone went spinning off among the boulders. One tiny mark remained.

Just then, from a neighbouring crag high in the yellow sunlight, a hawk, disturbed by the firing, took wing, and circled in mid-air preparatory to laying a course for the distant hills. There was a glint of the blue barrel upward, a report, and the great bird came tumbling down and lodged on the stones at the waterside, a few rods away.

That was too much for the second bandit, who had come armed only with a wicked-looking knife. He made a sudden spring, gained the other side of the ridge, tumbled among the rocks, and then took to his heels, crying, "He's no ferenghi! (Foreigner!) He is a jin! (Evil spirit!)"

In a moment he was lost to sight among the underbrush. With one eye on he remaining ruffian, whose ancient smoothbore still lay on the ground beside him, Braithwaite drew up the mare's loosened girth and mounted. When he had gone a few rods down the gully he stopped, and drawing a bead on the last stone, knocked it out of sight.

"Vagabond!" he cried to the bandit, who

sat motionless and agape on his rock, "shall I cut off your ears, or can't you get into Paradise maimed? Gedap, Lucy!"

In another moment he had passed out of the gully." I thought that revolver practice would be useful some day," he said, as he got down at the high road and gave another hitch to the mare's girth. "It was worth something that time!"

Then, mounting again, he put spurs to the mare, and never drew rein till he had set a good dozen miles between him and the scene of the adventure.

It did not need the whole five thousand pounds to secure the carpets in Sujbulak, but in return for a considerable part of what remained, the sheik gave him safe conduct and a competent Kurdish escort for a caravan through the Ravanduz Pass and as far as Mosul. From there the way was easy to Trebizond.

The tide of border war and slaughter and rapine rolled on over Azerbaijan to the gates of Tabriz. Trade and communication were at a standstill. In the office of Cartwright and Co. they had changed both Braithwaite and the five thousand pounds to profit and loss, when one day, soon after the wires were re-opened, there came a despatch from the agent in Constantinople:—

"Braithwaite just arrived with whole consignment Kurdish goods, excellent order. Market empty. Can name our price."

To-day Ready Braithwaite sits in a big office in London, with electric buttons on the desk in front of him to summon the various employes of the great mercantile establishment he controls; and every one of them knows that he must be ready to give an account of himself, or of whatever is committed to his charge, on a minute's notice. Ready's the word.

EPITAPH ON FATHER PROUT

FRANCIS S. MAHONY.

Sweet upland! where, like hermit old, in peace sojourned
This priest devout,
Mark where beneath thy verdant sod lie deep inurned
The bones of Prout!
Nor deck with monumental shrine, or tapering column,
His place of rest
Whose soul, above earth's homage, meek, yet solemn,
Sits 'mid the blest.
Much was he prized, much loved; his stern rebuke
O'erawed sheep-stealers;
And rogues feared more the good man's single look
Than forty peelers.
He's gone, and discord soon, I ween, will visit
The land with quarrels;
And the foul demon vex with stills illicit
The village morals.
No fatal chance could happen more to cross
The public wishes;
And all the neighbourhood deplore his loss
Except the fishes;
For he kept Lent most strict, and pickled herring
Preferred to gammon,
Grim death has broke his angling rod; his "berring"
Delights the salmon.
No more can he hook up carp, eel or trout,
For fasting pittance,—
Arts which St. Peter loved, whose gates to Prout
Gave prompt admittance.
Mourn not, but verdantly let shamrocks keep
His sainted dust;
The bad man's death it well becomes to weep,—
Not so the just.

The United States Congress has appropriated 15.000 dollars for the purchase of additional buffalo for the Yellowstone Park. There are now in the Park about twenty buffalo. Originally there were twenty-two, but two escaped.

ORIGIN AND MEANINGS
OF
IRISH FAMILY NAMES.

By JOHN O'DONOVAN.

VII.

At the present day very few of the original Irish names remain without being translated into or assimilated with those borne by the English. Of this I shall next furnish instances, the truth and correctness of which cannot be controverted. Among the O'Conors of Connaught, the name Cathal, which is synonymous with the Welsh Cadell, and signifies "warlike," was changed to Charles after the accession of Charles I. to the throne; for the Irish, who were attached to this monarch, went great lengths to assimilate several of their Christian names to Charles. Thus, while among the O'Conors of Connaught, Cathal was manufactured into Charles (with which, it will be readily granted, it has nothing in common, either in meaning or sound), among the O'Conors of Faly in Leinster, Cahir, which signifies "warrior," was metamorphosed into the same; and at the same time the Mac Carthys of Desmond substituted it for their Cormac, and the O'Hagans and other northern families for their Turlogh. This was paying their court to the king with a vengeance!

In the families of Mac Carthy, O'Sullivan, and Driscol, Finghin [Fineen], a name very general among them, and which signifies "the fair offspring," has been Anglicised to Florence. Among the same southern families the name Saerbrethach, which prevails among the Mac Carthy's in particular, and which signifies the "noble judge," is translated Justin. In the family of O'Donovan, as the writer has had every opportunity of knowing, the name Murrogh has been metamorphosed to Morgan; Dermod, to Jeremiah; Teige, to Timothy; Conor or Concovar, to Cornelius; Donogh, to Denis; and Donnell, to Daniel. In the family of O'Brien, the hereditary name of Turlogh has been changed to Terence; Mahon, to Matthew; Murtogh or Moriertagh, to Mortimer (but this very lately); and Lachtna and Laoiseach, to Lucius. Among the O'Gradys the name Anesli is rendered Stanislaus and Standish. In the families of O'Donnell, O'Kane, and others, in the province of Ulster, Manus, a name borrowed by those families from the Danes, is now often rendered Manasses. In the families of Mac Mahon and Mac Kenna, in Ulster, the name Ardgal or Ardal, signifying "of high prowess or valour," is always Anglicised Arnold. In the family of O'Madden, of Shilanamchy, in the south-east of the county of Galway, the hereditary name of Anmcha, which is translated Animosus by Colgan, is now always rendered Ambrose, to which, it will be readily granted, it does not bear the slightest analogy. Among the families of Doyle, Cavanagh, and others, in the province of Leinster, the name Maidoc, or Mogue, which they adopted from St. Maidoc, or Aidan, the patron saint of the diocese of Ferns, is now always rendered Moses among the Roman Catholics, and Aidan among the Protestants! (any thing to make a difference.) Among the O'Neills in the province of Ulster, the name Felim, or Felimy, explained as meaning "the ever good," is now made Felix; Con, signifying "strength," is made Constantine; and Ferdoragh, meaning "dark-visaged man," is rendered Ferdinand. Among the O'Conors of Connaught, the name Ruaidhri, or Rory, is Anglicised Roderic, but among most other families it is rendered Roger. In the same family, Tomaltach is rendered Thomas; Aodh, Hugh; and Eoghan, Owen. In the families of Mac Donnell and other in Scotland, and in the north of Ireland, the name Aengus, or Angus, is always rendered Æneas. Among the O'Hanlys, of Slieve Bawn, in the east of the county of Roscommon, the name Berach, which they have adopted from their patron saint, and which is translated by Colgan, "directe ad scopum collimans," is now always and correctly enough rendered Barry. Throughout Ireland the old name of Brian is now rendered Bernard, and vulgarised to Barney, which is more properly an abbreviation of Barnaby than of Bernard. Among the O'Haras and O'Garas, in the county of Sligo, the name Kian, the son of Olioll Olum, King of Munster, is now rendered Kean; and I observe that the chief O'Hara has suffered himself to be called Charles King O'Hara in a book lately dedicated to him! In the family of Maguire, Cuconnaught is rendered Constantine, while in other families Cosnavy undergoes precisely the same change. In the family of O'Kane, the name Cooey, written Cu-maighe in the original language, and signifying "dog of the plain," is now rendered Quintin. In the family of O'Dowd, the ancient name of Dathi, which they have adopted from their ancestor of that name, who was the last Pagan King of Ireland, is now rendered David, a name with which it is supposed to be synonymous. In the north and west of Ireland the names Duvaltach, Duv-da-lethe, and Duvdara, are all Anglicised Dudley. In the family of Mac Sweeny, the very ancient name of Heremon is Anglicised Irwin, but it is now almost obsolete as a Christian name. In the families of O'Hanlon, O'Haran, and O'Heany, in the province of Ulster, the name Eochy, signifying "horseman," and which was Latinised Eochodius, Achaius, Euthichius, and Equitius, is Anglicised Auhy and Atty; but this name is also almost obsolete, the writer having never met more than one person who bore the name, in his travels through Ireland. Among the O'Mulconrys, now Conrys, the names Flann, Fithil, and Flaithri, have been Anglicised Florence. In the family of O'Daly, the name Baothghalach, which was formerly Latinised Boethius, is now always rendered Bowes; and in that of O'Clery, the name Lughaidh is Anglicised Lewy and Lewis. Among the O'Reillys of Cavan, the hereditary name of Maelmora, which signifies "majestic chief," is now invariably rendered Myles, and among the O'Kellys of Hy-Many, the name Fachtna is rendered Festus. In every part of Ireland, Maelseachlainn, or Melaghlin, which signifies "servant of St. Secundinus," has been changed to Malachy, to which it bears no analogy whatever, except some fancy resemblance in sound. In every part of Ireland the name of Gilla-patrick has been changed to Patrick; and, by the way, it is curious to observe, that common as the name Patrick has now become in Ireland, especially among the lower classes, it was never in use among the ancient Irish, for they never called their children by the name itself of the Irish apostle, deeming it more humble and more auspicious to call them his "servants"; and hence we find the ancient Irish calling their children, not

Patrick, but Maelpatrick, or Gillapatrick; and these names they Latinised Patricianus, not Patricius. The name of Patrick is now looked upon as the most vulgar in use among the Irish, which is a very strange and almost unaccountable prejudice, for Patricius was one of the most honourable names in all antiquity, as the reader will see if he will take the trouble to read the work on the antiquity of British Churches, by Ussher, pp. 841-1046, in which that learned primate gives the history and derivation of the name.

The names of women have been also very much metamorphosed, and many of the most curious of them entirely rejected. I have now before me a list of the names of women drawn up from the authentic annals, and from the "History of Remarkable Women"— a curious tract in the "Book of Lecan," fol. 193; but as the limits allotted me in this Journal will not allow me to furnish a list, I must rest satisfied with giving such names as are still retained, with a selection from the most curious of those which have been rejected, adding their meanings as far as they are certain. The following are the ancient Irish names of women still retained, as the writer has determined by examining the provinces of Ulster, Connaught, Leinster, and the greater part of Munster:—

1. "Aine, now Hannah.

2. "Brighid," now Anglicised Bridget, from its resemblance to the name of the celebrated Swedish virgin of that name. Brighid is a woman's name of Pagan origin in Ireland; it has been explained "fiery dart" by the Irish glossographers, especially by Cormac, Archbishop of Cashel, who distinctly states in his glossary that it was the name of the Muse who was believed to preside over poetry in Pagan times in Ireland. "Brighid" is now very common in Ireland as the name of a woman, in consequence of its being that of the most celebrated of the female saints in Ireland —the patroness of Kildare—who is well known all over Europe as the greatest patroness of Ireland.

3. "Finola," though a beautiful name, has nearly become obsolete since the beginning of the eighteenth century, but some few still retain it in the abbreviated form of Nuala.

4. "Graine,' 'now Grace.

5. "Lassarina, also, though in use not long since, has latterly become obsolete.

6. "Meadhbh," pronounced Meave. This is still preserved and Anglicised Maud, Mab, and Mabby; and the writer is acquainted with several old women of the Milesian race who still retain it. This was the name of a celebrated Queen of Connaught, who flourished in the first century, and who is now known in the legends in the mountainous districts of Ireland as the queen of the fairies. From this country her spirit found its way in to Scotland, and thence into the north of England, where Shakespeare met with her, but in rather too diminutive a form for the shade of the Irish heroine.

7. "Mor," pronounced More. The writer believes that there are a few women of this name still living in Ireland; but he is confident that there are but very few, though it was the name of many honourable ladies in the reign of Queen Elizabeth, and for a century later. In our own times, however, it has been almost invariably Anglicised Mary, with which it is neither synonymous nor cognate.

8. "Sadhbh," pronounced Soyv, is the name of several women of the old Irish race, and who are known to the writer. It is now almost invariably Anglicised Sally, to which it bears no analogy.

9. "Sorcha" is still the name of several women in Ireland, especially in the province of Ulster; but the rising generation are beginning to object to it as being too Irish, and are determined on having it changed to Sarah or Sally. The writer is acquainted with families in whom this name is hereditary, and among whom the mother is always called Sorcha, and the daughter Sally; and though the latter knows that her own and her mother's name are the same, still would she blush to hear her own name pronounced "Sorcha." The name Sorcha signifies clear, bright, and might be well rendered Lucy or "Lucinda"; but we should like to see it preserved in its primitive form, which is not to be despised either from its sound or signification.

10. "Una" This name is still in constant use among the women of Ireland, but when speaking English, they invariably Anglicise it to Winifred or Winny.

The writer is not aware that any other name which was in use in the ancient Irish times is now retained, except the foregoing.

The names Catherine, Evlin, Eleanor, Isabella, Mary, Honora, Sheela (Celia), and many others now in use, and supposed to be of Irish origin, do not occur in the account of "Remarkable Women" above referred to, and there is no reason to believe that they were ever in use in ancient Ireland.

The following is a list of curious names of women which occur in the authentic annals and in the "History of Remarkable Women." It is highly probable that a few of them are of Danish origin:—

1. Aevin, i.e., Amoena; 2, Africa; 3, Alb and Albin; 4, Allin; 5, Alma, all good: 6. Alphin; 7, Athracta. This name has been restored by the Mac Dermott of Coolavin. 8. Barduv, blackhaired; 9, Bebail, woman of prosperity; 10, Bebin, melodious woman; 11, Blanaid, Florinda, from blath a blossom; 12, Brigh, vigour; 13, Cacht, bondmaid; 14. Cailleach-De, i.e., female servant of God; 15. Cailleach-Kevin, the female servant of St. Kevin; 16, Cailleach-Aengus, the female servant of St. Aengus; 17, Caintigern, fair lady; 18, Keara, the ruddy; 19, Cochrand; 20, Covfla, i.e., Victoria; 21, Coca; 22, Corcar, the ruddy; 23, Crea; 24, Devnet; 25, Derval, the true request; 26, Derforgal, the true pledge, Latinised Dervorgilla; 27, Dianiv and Diniv; 28, Dechter; 29, Derdre, alarm; 30, Dorenn, the sullen; 31, Duv-Covfla, victoria nigra; 32, Duvessa, nigra nutrix; 33, Dunsa, the brown-haired; 34, Dunlah, lady of the fort; 35, Edwina; 36, Eithne; 37, Elbrigh; 38, Emeria; 39, Eri; 40, Essa, nutrix; 41, Euginia, female of Eoghan; 42, Fedilmi, the ever-good; 43, Finbil, the white blossom; 44, Findely, fair countenance; 45, Finnavor, of the fair eye-lids; 46, Finni, the comely; 47, Finscoh, the fair flower; 48, Findah, the fair colour; 49, Flanna, the ruddy; 50. Gelgs, swan white; 51, Gemlorg, gem-like; 52, Gnahat; 53, Gobnet, female of Gobban; 54, Gormlah, the blue lady; 55, Ida, the just; 56, Lann; 57, Lasser, a flame; 58, Lasserina, flame or blush of the wine; 59, Lerthan; 60, Lithan; 61, Luanmasi, beautiful as the moon; 62, Ligach, pearly, or like a precious stone; 63, Maelmaiden, servant of the morning; 64, Mongfin, of the fair hair; 65, Moncha, the same as Monica; 66, Murgel, the fair one of the sea; 67, Murrin, crinita, or of the long hair; 68, Neave, effulgence; 69, Orlah, or Orflah, the golden lady; 70, Ranalt, female of Randal; 71, Ronat, female of Ronan; 72. Sraaid, the excellent; quere, the same as Sarah? 73. Selvlah, lady of possessions; 74. Shinah, the good tranquillity; 75, Sodelva, of the goodly aspect; 76, So Domina, the good lady; 77. Temar, the conspicuous; 78, Tafilah, quere Dalilah? 79. Tindi, the tender; 80. Trosi, strength; 81, Tualah, the noble lady; 82, Uaisi, the proud; 83, Uaisl, the gentle; 84, Uallach, the proud; 85, Uchdelva, of the fair breast; 86, Unchi, the contentious.

We have now seen the process by which the Irish people have assimilated their names and surnames to those of the English, and the reasons which have led them to do so, I would not so much regret their having done so, if I were not aware that some of the families who have thus Anglicised their names wish to conceal their Irish origin, as if they were ashamed of their ancestors and country, and that another result of these changes must soon be, that statistical will be apt to infer from the small number of ancient Irish surnames retained in Ireland, that all the old Irish race were supplanted by the English.

I shall close these notices of the surnames of the Irish people by a remark which I should wish to be universally believed, namely—That no ancient Irish surname is perfect unless it has either O or Mac prefixed, excepting in those instances where the sobriquet or cognomen of the ancestor is used as the surname, as Cavanagh, etc., and, accordingly, that nine-tenths of the surnames at present borne by the Irish people are incorrect, as being mere mutilations of their original forms.

"Per mac atque O, tu vergos cognoscis Hibernos
His duobus demptis, nullus Hibernus adest:
By Mac and O
You'll surely know
True Irishmen alway;
But if they lack
Both O and Mac,
No Irishmen are they."

The truth of this well-known distich may now be questioned, though it was correct a few centuries since.

It is but natural to suppose that a conquered people should look upon themselves as inferior to their conquerors; and this rage for adopting English surnames which prevails at present, is, in the opinion of the writer, a clear proof of the prevalence of this feeling, that the Irish consider themselves inferior to the English. Spenser, while he advises that the Irish be compelled to reject their O's and Mac's, and to adopt English surnames, dissuades his own countrymen from adopting Irish ones, as some of them had done, in the following words, which the writer, being as Irish as Spenser was English, now adopts as his own:—"Is it possible that any should so farre growe out of frame, that they should in so short space, quite forget their countrey and their own names! that is a most dangerous lethargie, much worse than that of Messala Corvinus, who being a most learned man, thorough sickness forgat his own name."
"State of Ireland," Dub. Ed., p. 137.

And again:—

"Could they ever conceive any such dislike of their own natural countreys as that they would be ashamed of their name, and byte off the dugge from which they sucked life?"—"Ibid," p. 108.

(Concluded.)

In speaking on the interference of sound recently, before the Royal Institution, Lord Rayleigh described some of his experiments with foghorns made for Trinity House. Fog-horns with elliptic cones instead of circular cones were tried, the major axis being about four times longer than the minor. The experiments showed that the sound was best spread in a horizontal direction when the long axis was exactly vertical. It appears to be doubtful whether the phenomenon of the silent zones is really due to interference between waves of sound reaching the spot directly and those reflected from the sea. If the effect is due mainly to interference in this way it ought to be possible to recover the sound by the listener's changing his altitude above the sea surface, but Lord Rayleigh has on several occasions tried this on board the "Irene" and has not recovered the sound.

Ancient Boroughs of Ireland

(From Lewis's "Topographical Dictionary of Ireland," 1837.)

CARLINGFORD.

Carlingford, a seaport, market and post-town, and a parish (formerly a parliamentary borough), in the barony of Lower Dundalk, county of Louth, and province of Leinster, 11½ miles (E. by N.) from Dundalk, and 59¾ (N.) from Dublin; containing 12,185 inhabitants, of which number 1319 are in the town. This town appears to have originated in the erection of a castle, either by De Lacy or De Courcy, by order of King John, in 1210, but is mentioned by some authorities as the place where St. Patrick, in 432, effected his second landing; and the ferry of Carlingford was granted by Sir John de Courcy, in the year 1184, to the abbey of Downpatrick. The town, which gradually rose in the neighbourhood of the castle, appears to have consisted chiefly of castellated buildings, arising from its situation on the frontier of the pale. In 1301, Matilda de Lacy, widow of David, Baron of Naas, granted the advowson of the church to the priory of Kilmainham; and in 1305, Richard de Burgo, Earl of Ulster, founded a monastery for Dominicans here, dedicated to St. Malachy. Edw. II., in 1358, granted to his son, Lionel, Earl of Ulster, licence to hold a weekly market on Thursday, and a yearly fair here for six days. In 1404 the manor of Carlingford and town of Irish-Grange, which had previously belonged to the abbey and convent of Newry, vested by forfeiture in the king, who granted them in fee to Richard Sedgrave. A mint was established here in 1467, by act of parliament; and in 1495 it was enacted that Englishmen only should be constables of the castle. In 1596, Henry Oge, son-in-law of the Earl of Tyrone, notwithstanding the submission made and pledges given by that nobleman to Queen Elizabeth, made an attempt to surprise the castle, but was defeated. Sir Henry Tichbourne took possession of the town in 1642, not, however, before it had suffered much injury by fire, from the adherents of Sir Phelim O'Neal. In 1649, Lord Inchiquin, after taking Dundalk, marched to this place, and compelled the castle, with other neighbouring fortresses, to surrender; but in the following year it was delivered up to Sir Charles Coote and Col. Venables. A party of the forces of Jas. II., in 1689, set fire to the town, in their retreat before the army of Duke Schomberg, who, in consequence, issued a proclamation threatening that, if such conduct were repeated, he should give no quarter. During the Duke's encampment at Dundalk, and while disease was spreading through his forces, the sick were removed into Carlingford, until they became too numerous to be accommodated.

The town is beautifully situated on the south-west side of the spacious lough or bay to which it gives name, and immediately at the base of an extensive range of mountains which terminate at this point. The scenery of the bay is remarkably fine: the Mourne Mountains, on the opposite side, are beautifully varied with rocks, woods, heath, and verdure; and in the foreground the shores are enlivened with neat cottages and numerous bathing-lodges. Carlingford mountain, which overhangs the castle, attains, according to the Ordnance survey, an elevation of 1,935 feet above the level of the sea: from its height and position it intercepts, during a great part of the summer, the direct rays of the sun, for several hours before sunset. The oysters found in the bay are highly esteemed.

Carlingford is a borough of very great antiquity, probably by prescription. A corporation is recognised so early as 1326, when the king granted to the bailiffs of "Karlyngford" a charter for levying murage for six years, to enclose the town with a stone wall. By patent dated the 13th of March, 1409, Hen. IV., on the petition of the corporation, representing that the town had been often burned and wasted by the Irish and Scotch, acquitted them of all subsidies, tollages, &c., for several years; and for the same reasons, customs were granted to them, for 24 years, from 1501, towards fortifying the town with a stone wall. Queen Elizabeth granted by charter, in 1571, extensive privileges and immunities. The governing charter, dated the 9th of August, 17th of Jas. I (1619), creates a sovereign, 12 burgesses, and a community of six, giving them authority over the whole of Carlingford and its liberties, with the exception of the castle of Arthur Bagenal, lord of the manor and its appurtenances. This charter declared that the corporation should be styled the "Sovereign, Burgesses, and Commonalty of the Town and Borough of Carlingford," and should consist of a sovereign, twelve burgesses, and an unlimited number of freemen; two serjeants-at-mace and a coroner, a clerk of the market, and clerk of the entries were also appointed. The sovereign and burgesses returned two members to the Irish parliament prior to the Union, when the £15,000 paid as compensation for the loss of the franchise was divided equally between the Marquess of Downshire and the guardians of Mr. Ross Balfour Moore.

The remains of the Dominican monastery consist principally of the walls of the conventual church, with a square tower supported on lofty pointed arches, and separating the nave from the chancel; at the west end of the nave are two turrets, connected by a battlement, and on the south is a small detached ruin, probably a chapel. These ruins, which are situated at the extremity of the town farthest from the castle, bein govergrown with ivy, have a very interesting and romantic appearance. On the summit of a neighbouring hill, at Ruskey, are small remains of a church, or chapel, with traces of a burial ground, but no monuments or even graves: it is thought to have been a rural residence of the abbot. About half way between the abbey and the castle are the ruins of a square building, with windows of an ecclesiastical character, curiously ornamented with sculptures of animals, human heads, and foliage. The remains of the castle, called King John's castle, show it to have been an irregular pile of building, nearly in the form of a horse-shoe: the walls in some parts are eleven feet thick, and some of the salient points are defended by loophole abutments; it is washed by the sea on the eastern side, and on the land side is a narrow pass overhung by wild and lofty mountains. The castle seems to have been erected to command this pass, and it enclosed various baronial halls and apartments, and a courtyard surrounded with galleries: the chief entrance is on the side next the sea, from a platform on which was apparently a battery for the defence of the harbour. The pass is only wide enough to allow a very small number of men to walk abreast: on one side of it the mountain rises abruptly, and on the other are dangerous precipices with the sea below. At Templetown are the ruins of an ancient church, with a burial-ground attached, near which are the remains of the castle of Ballug, a square pile of building with very thick walls, defended at the opposite angles by square turrets; the lower part has been converted into stables, and the upper into corn-lofts. Carlingford formerly gave the title of Earl to the family of Taaffe, which becoming extinct on the death of Theobald, the 4th Earl, in 1738, Geo. III., in 1761, conferred the title of Viscount Carlingford on the family of Carpenter, together with that of Earl of Tyrconnel.

(To be Continued.)

THE HARVESTERS' PRAYER.

BY JOHN HAMPDEN GURNEY.

Lord of the Harvest! Thee we hail;
Thine ancient promise doth not fail;
The varying seasons haste their round—
With goodness all our years are crowned;
Our thanks we pay
This harvest day;
Oh, let our hearts in tune be found!

If spring doth wake the song of mirth,
If summer warms the fruitful earth;
When winter sweeps the naked plain,
Or autumn yields its ripen'd grain;
Still do we sing
To Thee, our King;
Through all their changes Thou dost reign.

But chiefly when Thy liberal hand
Scatters new plenty o'er the land,
When sounds of music fill the air,
As homeward all their treasures bear;
We too will raise
Our hymn of praise,
For we Thy common bounties share.

Lord of the Harvest! All is Thine!
The rains that fall, the suns that shine,
The seed once hidden in the ground,
The skull that makes our fruits abound!
New, every year,
Thy gifts appear:
New praises from our lips shall sound.

A shipping curiosity has been broken up at Teneriffe, Canary Islands, in the Italian ship "Anita," of Genoa, which was the oldest vessel in the world. The "Anita" resembled Christopher Columbus' ship, the "Santa Maria," and was built in Genoa in 1548. She completed her last voyage at the end of March last, when she ran from Naples to Teneriffe. The "Anita" was of tremendously stout build, and had weathered countless storms and tornadoes in all parts of the world. She was also the slowest ship afloat, taking 205 days on one voyage from Baltimore, Md., to Rio de Janeiro.

ANCIENT IRISH SOCIETY.

Its Elements.

By M. J. Byrne.

However one state of society may, on paper, appear to differ from another, yet it is obvious that as men of various nations and ages have almost infinitely more points of similarity than dissimilarity, so their real sociology—that which springs from and reflectively moulds their every-day thoughts—will on investigation be found not so singular as at first sight may appear.

How small of all that human hearts endure,
That part which laws or kings can cause or cure!

Slavery existed in ancient Irish society, and this might on first impression give us an idea of a sociology very different from our own at this date. In his lectures on the History of Civilisation in France, M. Guizot estimates the influence of slavery on manners and customs as enormous, and he illustrates his thesis by a reference to North and South America—"Between the manners of the States of the South, of Carolina, of Georgia, for example, and the manners of the States of the North, as Massachusetts or Connecticut, there is a profound difference, which arises from the States of the South holding slaves, while those of the North have not" (Sect. 18). On the other hand, we have the Israelites murmuring against Moses for leading them from the flesh-pots of Egyptian slavery into the liberty of want; and John Mitchel thought how many an Irish peasant might envy the lot of the lazy and laughing, careless negro slaves who crowded round his convict ship to sell oranges and such like.

In truth, slavery, like other things mundane, has its modes. In the East the slaves were a part of the family. "As long as the heir is a child, he differeth nothing from a servant" (Gal. iv., 1). Cicero's letters to Tiro are as affectionate as if written to his own son; "I thought that I should have been able to bear the want of you more easily," he writes to Tiro, whom he had left ill at home. "but in truth I cannot bear it. . . I seem to have committed a sin when I left you. But since you were utterly against proceeding on the voyage till your health was confirmed I approved your resolution. . . Observe this one thing, my Tiro, if you love me, let neither Mario's coming nor this letter hurry you." However, this is a digression intended merely to remind the reader that slavery is not always a case of manacles and whipping-post, and, indeed, if we examine more closely into the subject, there is always slavery in every state of society—call it serfdom, villeinage, the sweating system, what you will, the essence is always there; the subordination of one man's will to another, whether it be obtained by the force of the bow and spear; by the accident of birth; by the influence of wealth; or oppression of power; there are always one set of men dependent in greater or less degree on the will of others—which, as Grattan truly said, is the true definition of slavery.

Now, I am unable to say what was the precise position of the slave in ancient Ireland, but somewhat is clear from that portion of the ancient laws which have been published with translations, and this I propose to set forth!

Men became slaves in punishment of their own crimes (iv., 249) or for the crimes of others, for whom, under our ancient law, they were responsible (i. 65-71)), and perhaps for debt when they had no other means of paying (ii. 41., iii. 4 and 5), or by being born of slaves or foreigners imported (i. 163). The strangest of all is the provision as to the children of an abducted woman. It is provided, apparently in the case of the mother's death in child-birth, that such child belongs to the mother's family, who might sell it, but in such case the father was bound to buy the child in case the mother had been taken away by force; but if she had consented, the father was not bound to redeem the child, though he had the right of pre-emption if he chose to exercise it. It is provided that when sold the child is to be considered as lawfully begotten, whatever that may mean. Perhaps it means simply that the child is transferred from the mother's tribe to the father's or purchaser's tribe, and enters the latter as free-born (iii., 541). From other sources we know that slaves were also imported. Sometimes, as in the case of St. Patrick, they were captives taken in ravages on foreign lands, and sometimes they were purchased. When Strongbow and his free lances began to make head in Ireland, it was decided at a Synod held at Armagh that this was a scourge from God on account of the practice of purchasing natives of England from traders and pirates, and reducing them to slavery, and it was decreed that all English slaves should be restored to freedom (Gerald. Camb., i., 18).

What (if any) effect this canon, or its consequences, had on Irish society I have been unable to discover. Whether the slave trade terminated at or before this time, or when, is a matter on which I would welcome further information. What tasks were assigned to slaves does not clearly appear, but it is incidentally observed (i., 125) that the hopper of the mill was called "Cup comla," because originally the bondmaid was bound to mind it.

The bondmaid is expressly exempted from liability for accidents caused by her in the regular course of her work at the kneading trough (iii., 275), and so in the case of other working utensils, such as the sieve (iii., 277). But these were not exclusivly servile works, for we find in the laws as to fosterage of children of minor chiefs, that boys were to be taught herding of lambs, calves, kids, and young pigs, kiln-drying, combing, and wood-cutting; while girls were to be taught the use of the quern, and kneading trough, and sieve (ii., 155). A distinction seems to be taken (i., 105-7) between labourers, slaves, shepherds, cow-herds, and cart-boys, which would suggest that there was no species of labour exclusively or especially assigned to slaves. Even in the comment on the derivation of "Cupcomla," the annotator says "for she (i.e., the bondmaid) was bound to mind everything of these which a person wished" (i., 141), as if it were not a special function, but only one that might be assigned by the master. Manual labour was required of the clansmen for building the chief's fort, and reaping his havest, unless he accepted military services (ii., 195). Several kinds of servants are alluded to in the laws. There is the fuidhir servant (ii., 25), which would appear to be a slave (i., 107), and who is otherwise described as the "daer-servant" of the common people (ii., 25). The butler, valet, groom, and general retainers seem to have had different ranks (ii., 25); the "urerghi-servant," which would seem in course of time to have become the same as the "fuidhir"; and the "dichenn-servant," who would seem to rank with the butler; "anneslethe-servant," of which class was his horse-boy (ii., 27). Where the law deals with injuries caused by servants there is no distinction as to what kind of servants (iii., 175-81, 273-5), save as to whether he be the servant of a native freeman, or of a stranger, of a foreigner, or of a "daer-person," which would seem to be some sort of an unfree man (iii., 179).

We have seen that herding swine was not considered "infra dig" for the sons of minor chiefs, and we know that this was St. Patrick's function when in slavery. From some of the stories told of St. Patrick's early life, it would appear that Irish writers saw nothing menial in herding sheep or milking cows, as we find St. Patrick, his sister, and foster-mother represented as in their own country engaged therein. ("Tripartite Life of St. Patrick," etc. Edited by Dr. Whitley Stokes. Rolls Publication, (i., 13). In this "Tripartite Life of St. Patrick (i., 219), slaves are represented as felling trees, which we have seen was also taught to native freemen. Hence I infer that there were no especial works looked on as being suitable only for slaves. This paper has already run to such a length that I must defer the further consideration of the Irish slave system to another occasion.

HOW FICTION AIDED SCIENCE.

From about 1870 to about 1885 few works of fiction were more widely popular than the scientific romances of Jules Verne. Those whose business it was to gather and transmit the past's learning laughing at them, but eager-minded boys by millions read and dreamed over the possibilities that they suggested. About 1885 invention began to realise the dreams of science that Verne had but stated in popular form. During the last decade this process has gone on with increasing speed.

"Twenty Thousand Leagues Under the Sea," for example, was one of Verne's most popular works. The "Nautilus" was dubbed an impossibility. Yet the French, American, and English Governments are to-day making contracts for submarine vessels which will perform many of the feats ascribed to Captain Nemo's.

"Five Weeks in a Balloon" was one of Verne's earlier books. The literary pundits lifted scornful eyebrows over it. Yet balloon journeys nearly as far have been made, and the airship that will keep afloat for weeks seems almost at hand.

As for Captain Hatteras, the hero of Verne's polar romances, the voyages of Nansen and the Belgica read like chapters from his adventures. And to-day no fewer than five parties are actually prosecuting, or will soon enter upon, the search to which the imaginary Hatteras gave his fortune and life.

Phineas Fogg's feat of girdling the globe in 80 days which cost him 100,000 dols, may be beaten easily now for one-fiftieth of that sum. Rousseau, Moissin, and others have duplicated in kind, if not in extent, the precious stone making of the old chemist in Verne's "Southern Star." And the gas with which "Dr. Ox's Experiment" was performed may now be purchased, in quantities to suit at almost any corner drug store.

Recalling these and other fulfillments of Verne's dreams, Emile Gautier, in the Paris "Figaro," is moved to assert: "Positively, Jules Verne, with his suggestive fictions, has more than once inspired science and industry. He has engendered miracles by imagining them in advance. It would be difficult to estimate the results his works have achieved in the illumination of minds and the stimulation of energies."

When we remember that the revolutionary inventor's greatest difficulty, such as Morse had with his telegraph, has been to get people to believe the possibility of his ideas, Gautier's estimate of Verne's influence will seem by no means exaggerated. By imagining scientific miracles he has helped to make them possible. He stimulated that creative imagination whose activity is the fundamental condition of success in any line of human endeavour.

FORTS AND FAIRIES.

A COMPILATION.

BY E. J. RYAN.

7. CLASSES OF FAIRIES.

The fairies are said to be of different denominations and to adopt various forms. There is nothing inconsistent in this idea, especially in view of the known arts of the devil. Neither is it impossible for fallen angels and departed human souls to manifest themselves to corporal eyes. According to St. Thomas, disembodied souls are sometimes sent to this earth to do penance where their sin was committed. It is possible that souls may be sent to the forts as the scene of former sin, or as the resting place of their bodies, and that these souls, or the souls of others baptised or unbaptised, may have been mistaken for lost spirits created without a body. Scriptural authority, ecclesiastical history, and cases stated on other reliable testimony, make it manifest that actual apparitions have occurred.

The impression of beholding objects of supernatural horror is not confined to the human race. Dogs are said to be influenced in this way, even when human beings can perceive nothing(67).

Some terms denote spirits indefinitely: Dhoul, Dwarfs, of a supernatural origin, Eldritch, Genius, Ghost, Ghoul, Gnome, Goblin, Hobgoblin, Imp, Mann, Nymph, Phantom, Spectre, Spirit, Spook, Sprite, Troll, Wraith, the dwarfs and gnomes were considered to be dark and swarthy in contradistinction to the fairies. The Mann were visible or invisible beings.

Other spirits are of a more specific description:

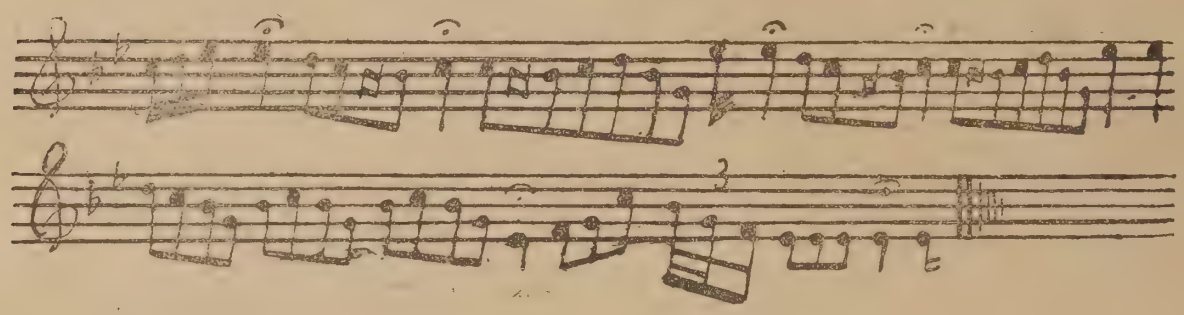
Banshee(68).—The Banshee, or woman spirit, is a woman of the supernatural life, a fairy woman, a woman of peace, a woman of the fairy hills. The banshee was the spirit of death, the foreteller of doom.

There are various explanations of her nature and quality. She is said to be a beautiful young girl of the Celtic race who cannot enter heaven until some other member of the family, who must be likewise young and beautiful, takes her place through death; again, it is said that the banshee sometimes assumes the form of some sweet singing maiden of the family, one who died young, and has been given the mission by the invisible powers to become the messenger of impending doom to her mortal kindred. Some imagine tre banshee to be a guardian spirit; others consider her as a spirit from purgatorial realms. Another view is that she is the spirit of a mortal woman deceased, whose destinies become linked by some dispensation or accident with some particular family. It is stated thar the banshee is one who assumes the shape and dress of an old Milesian female, and makes it her business to intimate to her friends their approaching death.

At one time she is represented as a fair young girl with long flowing hair; and is said never to grow old, and to be accordingly in a sense immortal. At another time she is described as a withered old woman. She manifests herself at the death of the members of old Celtic families of the Milesian race, even across the sea. She is sometimes seen at night as a shrouded woman, or flying past in the moonlight. Her cry is mournful beyond all the sounds on earth. Sometimes it is low and soft, lamenting as if close to the window of the sick; at other times, loud, shrill and melancholy, accompanied by the slapping together of her long, skinny, withered hands. Sometimes she is heard and seen by several people; at others, only by one, at night, or by day, and even at the grave of a newly-buried deceased.

The gleam of her dark eyes, the hiss of her breath,
But herald the coming of sorrow and death.

It may possibly be the soul of a deceased

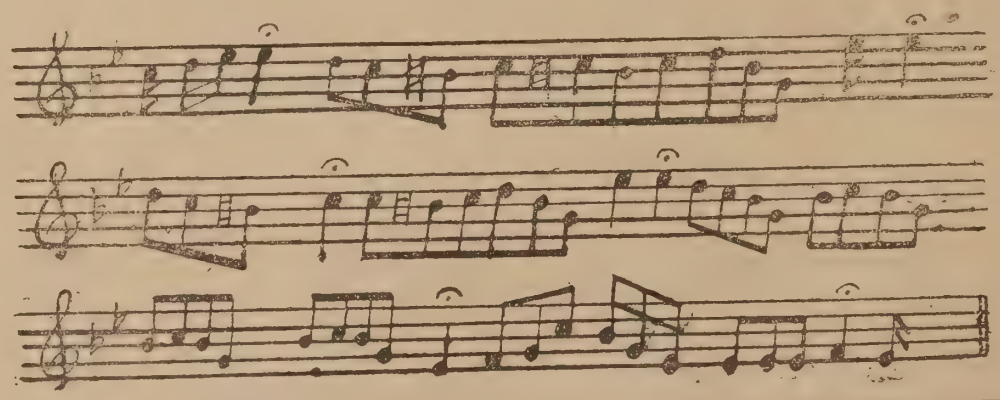


(67) The cruel stepmother in the Danish ballad or its Provencal counterpart, is kind to the children when the dog howls, for she dreads the appearance of the dead mother.

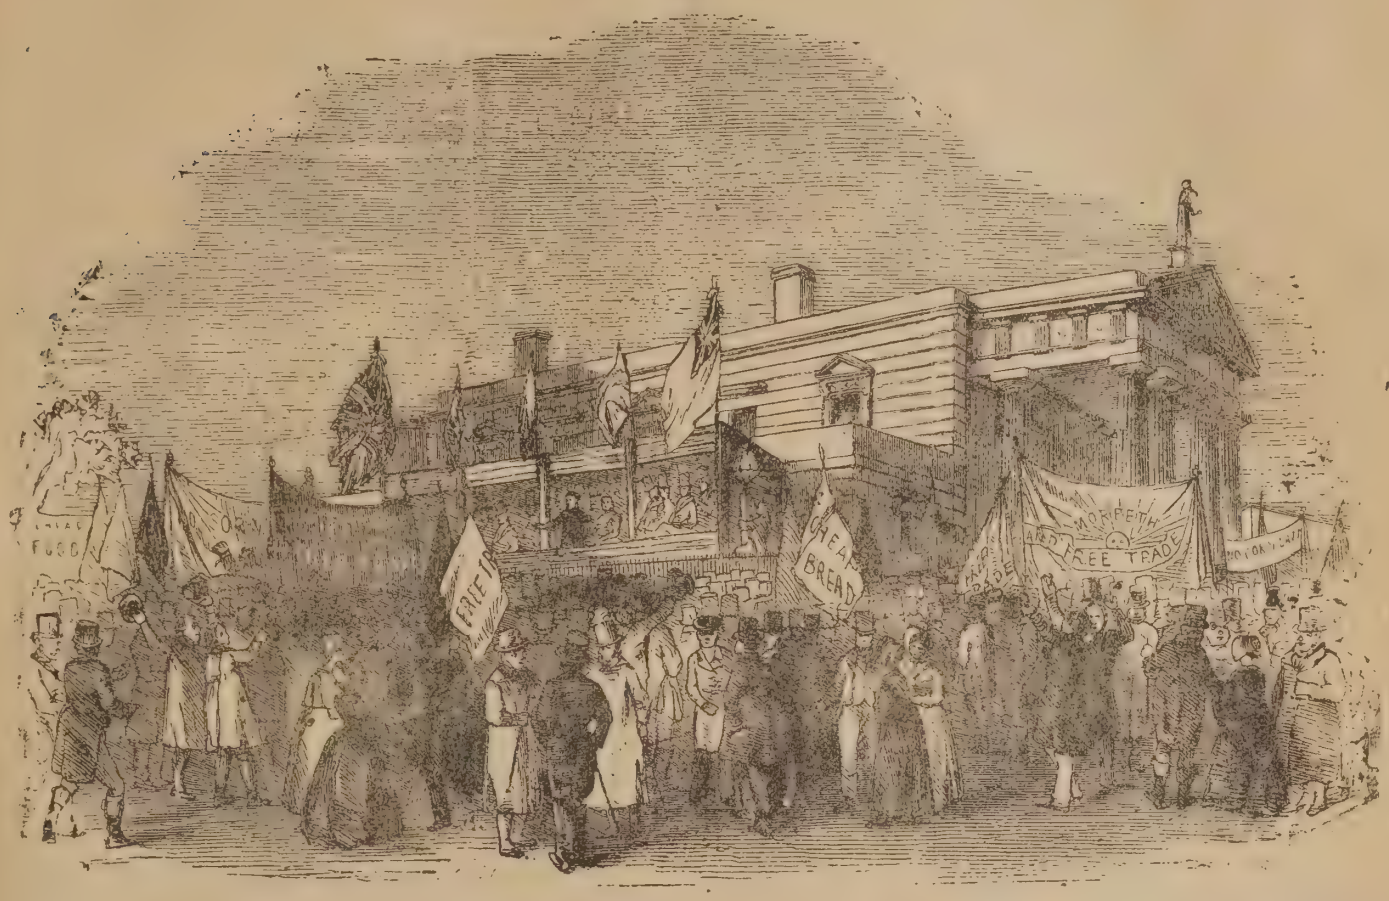
(68) Banshee, from van. "the woman, the beautiful," and shee, spirit. The word is spelled also banshi and benshee. The spirit is likewise called the ban caointhe, and ban caointhechaune, a woman or wailing, baob and boheentha. The ideal meaning of banshee is a nymph of the air. The cry is the archetype of the kine—properly cine or caoine. Sudden and unaccountable raps on doors, tables, or windows, the melancholy howling of the house dog, the crowing of cocks before midnight, are believed to be death warnings. The crowing of the cock is believed to keep away spirits. A dead carriage, distinctly heard but seldom seen, comes for the doomed one of some families. The carriage, which is sometimes seen passing along roads, is called the headless coach.

NOTATION OF THE BANSHEE'S WAIL.

BY



MR. AND MRS. S. C. HALL.



ANOTHER NOTATION OF THE BANSHEE'S CRY IN A DIFFERENT KEY,

ATTRIBUTED TO

MR. AND MRS. S. C. HALL.

ELECTIONEERING HALF A CENTURY AGO.

ELECTION OF LORD MORPETH FOR WEST RIDING OF YORKSHIRE. FROM THE LONDON "PICTORIAL TIMES" OF SATURDAY, FEBRUARY 7TH, 1846.

relative of a person whose death it may by God's dispensation be allowed to announce. Or it may be the evil spirit or genius, which, according to the common opinion, accompanies each individual, and weeping for the salvation of the soul, and the lost chance of ruin. Like the Daemones of the Greeks, some of them were believed to have been always disembodied(69). The same appearances are associated with the ancient families of Italy, and some of the princely houses of Germany.

Cluricaune.—The Cluricaune is a small weeny fellow, of a humoursome disposition, and supposed to be fond of good wine and race-horses. This is the name by which it is known especially in county Cork; it is called Luricaune in county Kerry, and Luricane, also Looricaun, and Cluricane.
and Cluricane.

Dullaghan(70).—The Dullaghan takes off and puts on his head at pleasure. He sometimes puts it in his pocket, or under his arm; sometimes it is thrown at one another by members of this class ,and sometimes it is kicked as a football by them, or is absent altogether. Glendalligan, in the parish of Kilrossanty, county Waterford, is supposed to derive its name from this fairy.

Elf.—The elves were a supernatural race of invisible dwarfs.

Fay.—The fays of the old romances were enchantresses of human size and appearance.

(69. Daimones, a kind of spirit or genius that presided over the actions of men.

(70) Also Dulachan, Dullahan, Dullachan, and Dulhallane.

By degrees elves and fays were confused and eventually identified.

Fearshi.—The fearshi or shifra, the masculine of banshi, is the fairy man of peace, but is not considered to indulge so generally in wailings as the banshee, although it is alleged it has sometimes been heard. (The fearshi is called also the fear caointhe.)

Fetch.—A fetch is an apparition of one's own self while living, and is supposed to portend one's death. It may be seen by oneself or by another person.

Genius.—A genius is a good or an evil spirit or demon, supposed to preside over a man's destiny or life. The plural, genii, is a sort of imaginary intermediate beings, some good and some bad, between men and angels.

Leprechaun(71).—The Leprechaun is a fat, plump, merry fellow, industrious and tricksy, with a pipe, but can be malicious if offended. He is called Lurigadaun in county Tipperary (72); and Logheryman or loughryman in Ulster,—all probably provincialisms of the Irish name for a pigmy. He is the shoemaker or cobbler, and artisan of the fairy kingdom. He is acquainted with all the hidden treasures of the earth, and has the knowledge of unlimited quantities of gold. As long as you keep your eyes on him he is in your power, but the moment you look away—and he is ingenious in furnishing some inducement—he vanishes. In order to prevent money so obtained from becoming mere dross, it should have real money mixed with it, or some of it should be spent immediately. A very different account, however, has been given of that goblin.

(71) Also leprechan or leprochaune in Leinster, and luprachaun. The name is from leath brog, or leith brogan, odd shoe, or an artisan of the brogue.

(72) Also lurigadaun and lurrigadane, or lurikeen. Other names are lupperdane and luchorpan. The cluricaune and its equivalents, also the leprechaun and its equivalents, are sometimes considered as being identical.

Lianhan-shee(73).—The Lianhan-shee is the spirit of life, and gives inspiration to song and music. It sometimes took the form of a woman, who gave men valour and strength in battle by her songs, and sometimes affords invisible aid against adversaries.

Nymph.—A nymph is a goddess of the mountains, forests, meadows, or waters.

Phooka(74).—The Phooka is a spirit which appears in the form of an animal, horse, bull, buffalo, dragon, or eagle, or sometimes as a pack of wool rolling along the ground. He is a capricious sprite, sometimes merry, and sometimes wicked. He even sometimes helps at work. If anyone uses him for locomotion the method is rough and startling, but results in no injury. His caprice may be illustrative of the alleged alternate hope and fear of the fallen angels.

Sylph.—The Sylph is an imaginary being of the air, of the male sex, without a soul. But the term is now usually applied to a graceful girl or young woman.

Thivish or Thousha.

(73) Also lenan-sidhe, and lenauntshee, fairy follower or lover.

(74) Also phouka, and pooka.

Will-o'-the-Wisp.—Will-o'-the-Wisp also called Jack-o'-the-Lantern, and Friar's Lantern, supposed by some to be a spirit, is a marsh gas consisting of carburetted hydrogen, which takes fire on contact with the air, and on account of its lightness is easily moved about in the atmosphere(75).

There are also spirits of the water, one being called the water-wraith, and another the water-elf, or kelpie, a malignant evil spirit of the water. Yet another is the merrow, or marrow.

Possibly the various spirits may be only figures of speech, representing various qualities.

8. RANK AND DEFINITE LOCATIONS.

Donn, named Marc, a son of Milesius, is traditionally believed to be the chief of the West Munster fairies, and to hold his court at Cnoc-Firinn, in the county of Limerick(76.

Finvar(77) is said to a fairy king or chief of the fairies of the West. He has his palace in the hill of Knockma, at Tuam, deep under ground, where the walls are of crystal, and the floor paved with gold.

Macaneantan is also supposed to be a fairy king or chief.

Mananan Mac Lir is the fair sea-king. (The name is found also as Manannan Mac Lir.)

Midar is also mentioned as a fairy chief.

Aeibhell(78) is understood to be a powerful banshee, the fairy queen of Thomond, presiding over North Munster, the guardian spirit of the Dalcassians, and to have her palace in Crageevil(79), a rocky hill rising over the Shannon, two miles north of Killaloe.

Arma, Clina(80), Maobh(81), Morgana and Oona are also said to be fairy queens. Clina is reputed to be queen of the South Munster fairies, and Corig Cleena, a few miles above Mallow, is believed to be her principal habitation. Maobh is represented as queen of the fairies of Connaught, or of all the Irish fairies. Oone is queen of the fairies of the West.

Many places in Ireland are considered eerie(82) on account of the presence of the fairies. If a house is built on one of their favourite paths through the country its occupants gets no peace from them. It is remarkable besides that houses built in some places are unlucky, as neither the inhabitants nor the irrational animals there thrive from the same cause. Indeed, they are supposed in some cases to die unduly, and the effects are attributed to the fairies in whose way the house happens to be. In old times there were people who could point out the exact spot that would be a lucky site for a house. It is considered unlucky to make an addition to the North to a house already built.

(75) If people guide their course by it at night they are apt to be led astray on account of its shifting nature. By turning any article of one's garments inside out this result is prevented. All though the Will-o'-the-Wisp is of such a quality light in general seen at night is considered good. But a person who comes directly into the light after seeing a ghost at night is said to be apt to faint.

(76) Donn is also called Doun, and Dhoun Fierna or Fiarna, Cnoc-Firinn is found also as Cnoc Firinne, as Knockfirinn, Knockfeerina, and Knockfierna.

(77) Also Finvarra and Kinvarra.

(78) Aeibhell, Aoibhill, Aebhinn, Ailill, Eevil, Eevin, and Eiblin, are names applied to the same imaginary spirit. They mean beautiful.

(79) Or, Craglea.

(80) Also Cleena, Cliona, Clidhna, and Cliodhna.

(81) Also Mab, Maev, Maeve, Mave, Maive, and Meave. Some represent Ailill as a fairy king and Maob as his wife.

(82) Or airy.

For exorcised spirits the Red Sea is, according to popular estimation, a specific location. Petticoat Loose, whose lost soul after her decease used to haunt Bay Lough, near Clogheen, and inflict injury and death on passers-by, was banished by exorcism to the Red Sea.

It is said that the half day from noon to midnight is the time when spirits generally are more actively at large, and that night itself, up to 12 o'clock, is the time when their influence is most exerted. Shakespeare refers to this when he says:

'Tis how the very witching hour of night
When churchyards yawn, and hell itself breathes out
Contagion to this world.

The night is figurative of death, and, moreover, is the time when people, being deprived of light, feel most apprehensive. By darkness the devils are sometimes understood; the devil is the prince of darkness, and "every one that doth evil hateth the light, and cometh not to the light, that his works may not be reproved."

There is a saying that a person born from midday to midnight is liable to see apparitions, and that a person born between midnight and midday is exempt.

9. BELIEF IN OTHER COUNTRIES.

Every nation believes in the existence of these mysterious spirits with influence over the human race, but each nation represents them differently according to national circumstances.

The belief in divinities and good and evil genii dwelling in the elements, and ghosts was very widespread in Europe; and in evil spirits, among the Indians of America, and in Persia.

A brownie in Scotland is a kind of supposed good-natured spirit.

The pixies in Devonshire are a race of beings invisibly small, and harmless or friendly to man.

The Cornish country has its bogeys, fays, and sloes.

Traces of belief in fairies are found in Germany, Denmark, and among the Scandinavians, as well as in Russia, Turkey, and amongst the Cossacks of the Don.

Typhon is an Egyptian evil spirit.

The Afghans believe each of the numerous solitudes and deserts of their country to be inhabited by a lonely demon, whom they call the Ghoolee Beeabau, or Spirit of the Waste.

In Arabia it is supposed that there is a demon which haunts localities in human shape.

Among Mahometans a houri is a nymph of paradise.

A peri, one of those beautiful creatures of the air who have lost Paradise is, in Persian fables, a genius(83) or fairy who is doing penance on earth preparatory to being admitted into heaven. The Persians call the Peris the midway mystic race. The Egyptians and the Greeks named them demons, not as evil, but as mysterious allies of man, invisible though ever present, capable of kind acts, but implacable if offended.

The deeves were wicked and formidable genii, enemies of the peris(84).

The kings of Persia had adventures in fairyland.

In non-Catholic countries, however, the belief in fairies and spirits is not entertained altogether as in Ireland. But St. Cyprian says the devil troubles not himself with those he has already made sure of, . . . whom he hath already alienated from the Church, and employs his . . . stratagems upon those in whom he observes Christ to dwell.

There is not as much reason to suppose that places are now as likely to be haunted as in former times, or that the operations of the devil are as manifest, for "before Satan was bound," says Butler in his "Lives of the Saints," "or his power curbed by the triumph of Christ over him, and the spreading of the happy light and influence of the Gospel throughout the world, the empire which the devils exercised on earth was much greater than since that time. But it is most certain that the devils are sometimes permitted by God to continue in some degree the mischievous influence of their malice against men." The devil is said to be bound because the Lord has restrained the power which Satan shall have at the time of Antichrist, and the empire of the devil being constrained is implied by his being said to be bound.

People sometimes say that in the case of places which have ceased to be haunted, the time of the spirits haunting them is up.

(To be Continued.)

(83) A jinn or devil. Ginnistan, which the marvellous traditions of the Assyrians and Arabs place at the foot of Mount Caucasus, on the borders of the Caspian Sea, was the abode of the peris.

(84) The Koran states that all the deeves and evil spirits were subject to Solomon. The word is spelled also dives.

THE KING OF THE SEVEN HILLS.

(From the German of Joseph Matzerath.)

In ancient times beside the Rhine, a king sat on his throne,
And all his people called him "good"—no other name is known.

Seven hills and seven old castles marked the land beneath his sway,
His children all were beautiful and cheerful as the day.

Oft, clad in simple garments, he travelled through the land,
And to the poorest subject then he gave a friendly hand.

Now when this good old king believed his latest hour was nigh,
He bade his servants bear him to a neighbouring mountain high:

Below he saw the pleasant fields in cloudless sunlight shine,
While through the valleys, brightly green, flowed peacefully the Rhine;

And pastures, gaily decked with flowers, extended far away;
While round them stood the mighty hills in darkly-blue array;

And on the hills along the Rhine seven noble castle frown,
Stern guardians! on their charge below for ever looking down.

Long gazed the king upon that land; his eyes with tears o'erflow—
He cries, "My own loved country! I must bless thee ere I go!—

"Oh fairest of all rivers! my own beloved Rhine!
How beauteous are the pastures all that on thy margin shine.

"To leave thee, oh my land! wakes my bosom's latest sigh,
Let me spend my breath in blessing thee, and so, contented, die.

"My good and loving people all! my land! farewell for ever!
May sorrow and oppression come within your borders, never!

"May people, land, and river, all, in sure protection lie,
For ever 'neath the guardianship of the Almighty's eye."

Soon as the blessing was pronounced, the good old king was dead,
And the halo of the setting sun shone all around his head.

That king was always called "the good"—no other name is known;
But his blessing still is resting on the land he called his own.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

CHAPTER XI.—Continued.

A.D. 1676. Humphry Jervis (who had been sheriff of Dublin two years before, and afterwards lord mayor, and knighted in 1681) set about building a bridge over the river Liffey, which was called Essex-bridge, in honour of Arthur, Earl of Essex, then lord lieutenant of Ireland.

A.D. 1678, Sept 1. Upon the news of the Popish plot in England, Peter Talbot, titular archbishop of Dublin, was imprisoned in Dublin castle.

Oct. 16. By proclamation, all titular archbishops, bishops, and all who exercise ecclesiastical jurisdiction under the Pope, and all Jesuits and other regular priests, are required to depart the kingdom by the 20th of November.

Nov. 20. By another proclamation, the Papists are forbidden to come into the castle of Dublin and markets of Drogheda, Cork, Waterford, Limerick, Wexford, Youghal, and Galway.

In December the same year a letter was dropped in the streets of Dublin, discovering a conspiracy against the life of James, Duke of Ormond, then lord lieutenant; upon which a proclamation was issued promising a reward of £200 to the discoverer, and one Jephson and two priests were imprisoned for it.

A.D. 1769, March 26. A proclamation was issued for seizing the near relations of tories, and imprisoning them until such tories be killed or taken, also for apprehending the parish priest where a robbery is committed, in order that the criminals be taken or discovered.

A.D. 1681, July 1. Oliver Plunket, titular primate of Ireland, was executed at Tyburn.

A.D. 1682. Ormond-market in Dublin was opened, and the year following the Tholsel built at the city charge.

A.D. 1683. There issued a commission of grace to the chief governor, the chancellor, the chief judges, &c., to grant his majesty's title to those who were in possession, and to grant manors and other privileges for a reasonable fine, &c. This court of grace sat at the king's inns, and was dissolved by the king's death.

A.D. 1684, Feb. 11. Upon the death of Charles II., on the 6th instant, King James was proclaimed at Dublin.

March 20. The Duke of Ormond delivered up the sword to the primate and Lord Granard as lords justices; but the Earl of Tyrconnel was lieutenant-general of the army.

April 7. A great part of the castle of Dublin was consumed by a dangerous fire that begun about two in the morning: his Excellency the Earl of Arran narrowly escaping. The great magazine of powder (as also the tower in which the ancient records of the kingdom were kept) was happily preserved from the approaching flames, which else had laid the city in ruins.

This year (a) the Royal-hospital was built at Kilmainham, near Dublin, at the charge of the army, being a stately, spacious, and commodious building, wherein 400 invalids are decently maintained. Two stone bridges were erected over the river Liffey this year by the city, the one called Ormond-bridge, after the Duke of Ormond, then lord lieutenant, and the other Arran-bridge, from the Earl of Arran, son and deputy to the Duke for two years before.

A.D. 1685, Jan. 9. The Earl of Clarendon is made lord lieutenant, and Sir Charles Porter lord chancellor.

A.D. 1686, Feb. 12. The Earl of Tyrconnel was sworn lord deputy, and endeavoured to prevail on the city of Dublin to admit Papists to freedoms and offices in it, contrary to the established laws, that by their means he might obtain a surrender of their charter, and so settle the corporation in the hands of Papists to his mind; but the resolution of Sir John Knox, then lord mayor of Dublin, and of the board of aldermen spoiled this design, and obliged the earl to bring a quo warranto against the city charter, which was done. The Lord Chief Baron Rice, a Papist, would not allow the city so much time to put in their plea as was sufficient to transcribe it with care. This hurry occasioned the clerk to mistake the date of one of their charters, which upon discovering the error they prayed leave to amend. But this was denied, and judgment given against the charter by the chief baron upon this defect of pleading, the merits of the cause never coming in question. The same way were most other corporations of the kingdom dealt with.

A.D. 1687. A great inundation happened in the river Liffey from excessive rains and a violent storm, which laid the low parts of the city under water up to the first floors, insomuch that boats plied in the streets. A part of Essex-bridge, which had been built but eleven years before, was broken down, and a coach and horses passing over it fell into the river.

A.D. 1688. The brutish and barbarous behaviour of Sir Thomas Hacket, lord mayor of Dublin, to the Protestants, laid many under the necessity of getting out of his power by leaving behind them their estates and concerns, and transporting themselves and what effects they could carry with them into England. Colonel Luttrell, governor of Dublin, did not fall short of his lordship in barbarity, and the lord chief justice Nugent made a third in the ruinous scheme against the Protestants.

February following the Protestants of Dublin were obliged by military force to deliver up their arms and horses; and the same practice was soon carried into execution through the greater part of the kingdom.

The Earl of Tyrconnel filled the churches with soldiers, and made them store-houses for the arms of Protestants. They were again seized in September, the monuments and graves opened, and dead bodies tumbled out of coffins, under pretence of searching for arms.

March 12. King James landed at Kinsale, marched to Dublin the 24th, and next day called a parliament; this parliament sat till the 20th of July, and passed an act of repeal of the act of settlement, and by an act of attainder attaints near 3,000 Protestants.

A.D. 1689. A mint was set up in Dublin for coining money of the worst kind of brass, old guns, and the refuse of metals melted down together, valued at about 3d. or 4d. a pound weight, which by proclamation dated June the 18th were made current. So that 20s. of this money were not intrinsically worth 2d. The half crown piece (being the largest at this time struck) represented on one side the king's head in bust, inscribed JACOBUS. II. DEI. GRATIA., and on the reverse a crown laid on two sceptres in saltier with I.R. inscribed MAG. BR. FRA. ET. HIB. Rex. 1689. Above the crown were XXX., denoting its value to be 30 pence, and on the exergue the month wherein the several pieces were coined, as Aug., Sept., Oct. The shillings and sixpences were the same. By another proclamation dated in December following, the half crowns were called in, and, being stamped anew, made to pass for crowns. These pieces bore the king on horseback ,inscribed JAC. II. DEI GRA. MAG. BRI. FRA. ET. HIB. REX. On the reverse a crown imperial guarded with the four royal scutcheons (crosswise and crowned) of England, Scotland, France, and Ireland, interwoven with ANNO DOM. 1690, and inscribed CHRISTO VICTORE TRIUMPHO. By Archbishop King's estimate there was coined of this sort of money, from the first setting up of the mint to the battle of the Boyne, being something above a year, £965,375, but by a closer calculation much more, according to the following scheme, which

(a) It was begun in 1680, and although it was at this time fit for the reception of invalids, it was not finished until 1686.

seems to have been taken from the mint-master's accounts:

Weight of Metal.		Current Value.		
lbs.	dwt.	£	s.	d.
62,422	3¼ coined into	245,879	17	0 in large shillings.
110,308	15	443,498	10	0 in large half crowns.
172,731	1½	689,375	7	0 in large shillings and half crowns together.
14,080	3	49,042	6	6 in six-pences.
8,914	11¾	41,80)	0	0 in small shillings.
21,267	0¾	127,200	0	0 in small half crowns.
389,724	3¼	£1,596,799	0	6

In this wretched sort of money the Popish soldiers were paid their subsistance, and the Protestant tradesmen and creditors were obliged to receive it for their goods and debts, and it was reasonably computed that they lost about £60,000 a month by this cruel stratagem. The governor of Dublin, the provost-marshal, and his deputies threatened to hang all that refused it, and several were made prisoners on the occasion.

(To be Continued.)

SEA AND SKY.

Long ago, when the world was new,
The sapphire sky and the ocean blue
Wedded one summer day:
And the sky still bends as the years go by,
And the ocean leaps to the bending sky,
For constant lovers are they.

But when a mist arises between,
The ocean grown with jealousy green,
His doubts to the listener tells.
He storms and frets, he rages and roars;
In furious wrath he beats his shores,
While his turbulent bosom swells.

The sky, though dark with a moment's frown,
Will tenderly from its height look down
With a radiant smile divine.
The green to blue with its magic skill
'Twill change, and the stormy ocean still,
And the sun of love will smile.

Pause thou, my heart, and the lesson read:
When the darkness falls and with jealous speed,
The mists of doubt arise—
Fret not! 'twill pass, and thou wilt know
That the sun still shines with a fervent glow
In love's unchanging skies.

ORB OF NIGHT.

Queen of the stars! proud empress of the night!
Great governess o'er earth's unbridled deep!
Whose waters at thy mandate, banish sleep,
And skyward mount to meet thee with delight!
The poet sings of thee, as smiling o'er
City and meadow, forest, rock, and wold,
Enamelling seas with silver and with gold.
Seen from afar, how fair! But when thy shore,
Through astronomic glass, we gazing, see,
In fearful grandeur, molten rivers flow,
Red craters, too, in unremitting glow;
Wreck, waste, and ruin wrought continually—
With borrowed brightness dost thou nightly shine,
But yet, for ever parched, no envied lot is thine.

IRISH ECCLESIOLOGY.

OUR COUNTRY'S REMARKABLE MONUMENTS.

I.

The following paper appeared in the "Irish Metropolitan Magazine," published by Edward J. Milliken, College Green, Dublin, in 1857:—

The days of Ecclesiological ignorance are gone by in England. We wish we could say as much for Ireland. While most English schoolboys know something about church architecture, and are familiar with, at least, the alphabet of the language—while ordinary hand-books, guide-books, illustrated journals, and newspapers, are filled with engravings of old cathedrals and new churches, described with technical precision; while in English society it is almost as discreditable to be ignorant of Gothic architecture, as of geography—not one Irishman in a hundred can tell the names of the styles, or knows the difference between Norman and Perpendicular. However well acquainted he may be with other branches of knowledge, of this he is utterly ignorant. And he is not ashamed of his ignorance. One man has studied geology, and would blush not to know the difference between primary and tertiary strata; while he is wholly indifferent to the charge of not knowing any distinction between first-pointed and third-pointed mouldings. Another has a taste for painting. He would, of course, despise the person who should attribute a "Venus" of Correggio to Hogarth; while, all the time, he himself would confound a work of William of Wykeham with one of Sir Christopher Wren. A third has a fancy for sculpture, and can tell at a glance if a particular statue be a copy, but is unable to make a guess at the date of a church, or detect the clumsiest modern-antique in stone and mortar. In short, there is scarcely one educated Irishman in a hundred who knows anything whatever about ecclesiastical architecture; and the few who do know anything are regarded by the many as idle dreamers, crazy antiquaries, or worse.

The amateur painter or sculptor is in no danger of similar reproaches. He, on the contrary, is looked on as a man of refined tastes and accomplishments. He may even fall into ecstasies before a pre-Raphaelite abortion, and yet not sink in the estimation of his acquaintances. And yet surely architecture, especially Christian architecture, is superior to painting or sculpture. As one of the Fine Arts, it is indisputably more original than either. The architect is like the man who, after storing his mind with knowledge, derived from an extensive course of reading, writes a book which is strictly original—a book in which we can detect no plagiarism from the authors whose works he has studied, but which he could not have written were it not for his study of those authors. The painter or sculptor, on the other hand, is the translator who reproduces, in his own language, the thoughts of another writer. Painting and sculpture are simply imitation. The more perfect the imitation the more perfect the picture and statue. And as no translator ever equalled the elegance or force of the original, so there is no picture or statue which has not fallen short of nature. The Homer of Pope, splendid though it be, is inferior to the Homer of Homer. "The statue which enchants the world" is, after all, less enchanting than the "human form divine" of a beautiful woman.

That architecture is more practical and useful than painting and sculpture, is a proposition which requires little argument. Indeed, to be a perfect architect requires a combination of practical and useful accomplishments rarely united in one individual. And though we cannot altogether subscribe to the dogma of Vitruvius, that a perfect architect must of necessity be intimately acquainted with literature, design, geometry, optics, philosophy, music, medicine, jurisprudence, and astronomy, still some of them are indispensable, and most of them desirable for an architect. We do not well see, we admit, how a knowledge of law could much avail him, unless we suppose it part of his business to investigate the title to his building-ground. Neither is there such an evident connection between astronomy and architecture as Vitruvius would seem to suppose; except the undeniable fact, that astronomy and architecture commence with the same letter of the alphabet. But, to say nothing of design, geometry, optics, and arithmetic, it is plain that the man who understands the principles of music is better qualified to build a church, a concert-hall, or an opera-house, than the man who knows nothing of music; and that the more he excels in philosophy, poetry, and acquaintance with history—in short, the more extensive his information, and the more enlarged his understanding—the greater will be the probability of his achieving success in his profession. Would Michael Angelo have been such an architect had he not also been a sculptor, a painter, a poet, and an—anatomist?

An anatomist! What possible connection, it may be asked, can subsist between architecture and anatomy, except that, as in the case of astronomy, they both begin with the same letter. Is Sir Benjamin Brodie less disqualified to build a church than Sir Benjamin Hall? Will a knowledge of the articulations of the vertebral column assist us in building the column of a portico?

Two instances mentioned by Mr. Cockerell will answer the question. It was a knowledge of anatomy which suggested to Brunelleschi the idea of the dome of Sta. Maria—an idea which Buonarotti followed in constructing the dome of St. Peter's—an idea on which almost every subsequent dome has been built. Brunelleschi wished to combine strength with lightness in the dome of his cathedral, and he attained his object through his knowledge of anatomy. He reflected that the bones of animals, especially of birds, possessed solidity without weight, by the double crust and hollow within; and he remarked that the human skull is constructed with a double plate, connected by the walls of the hollow cancelli. This idea he adopted in the two plates which form the inner and outer domes of the cathedral at Florence.

It was a knowledge of anatomy which suggested to Sir Christopher Wren the idea of the spire of St. Bride's. He wished to impart to that spire the utmost solidity and duration, and he adopted his idea from no more dignified original than a shell. He found that the long, thin shell, called turretella, though otherwise extremely liable to fracture, was yet rendered impregnable by the central column round which the spiral turned; and accordingly, when building the spire of St. Bride's, by forming a spiral staircase to the top, he left us the most remarkable and enduring spire hitherto erected. Wren thus proved the utility to an architect of a knowledge of anatomy, if we may speak of the anatomy of a shell; if, however, we prefer to call it conchology, it only shows that Vitruvius did not exaggerate so much after all, and that there is no branch of human knowledge, however at first sight inappropriate, which may not be useful to the architect.

The study of history is, no doubt, useful

to the architect. But the study of architecture is, perhaps, even more so to the historian, producing an effect on the imagination which the study of nature alone cannot excite. Rivers, and mountains, and valleys, belong to ourselves as much as they did to our ancestors. They are the same now as then. They have seen great deeds done of old, but they do not bring those deeds before our eyes. The Nile is the same mighty river which it was three thousand years ago, when Moses turned its waters into blood; but it cannot place the ancient glory of Egypt before us like the Pyramid of Cheops, or the ruined temples of Thebes. Had we nothing but the seven hills to remind us of heathen Rome we should not be so impressed with the reality of her former existence as we are by the Coliseum, the Pantheon, and the palace of the Cæsars. The edifices which nations raise are historical illustrations of the countries to which they belong. Architecture has been well called the historical costume of different nations in different ages.

But the historical value of architecture is not confined to producing an effect on the imagination. New facts, sometimes of the greatest importance, are revealed through the agency of old ruins. The knowledge of the existence of races, of which we had never before dreamed, we sometimes owe to architectural remains. We should never have known that a people, all traces of whom had perished, once flourished in Central America, had it not been for the ruins explored some years since by Mr. Stephens. We should never have known of the discovery of America by ancient sea-kings, probably centuries before the time of Columbus, were it not for the remains of an old Scandinavian church in Rhode Island. And, more important still, we see how the truth of sacred history is confirmed by Mr. Layard's discoveries among the sandy mounds of Nimroud; a testimony which cannot be impugned even by Francis William Newman himself. Indeed, there is no art to which history, both sacred and profane, is more indebted than the art of architecture. And there are few countries in which this truth holds more good than it does in our own.

The history of Ireland has often been called the history of the English in Ireland. Mr. Lascelles entitles the admirable work which forms the preface to his "Liber Munerum Publicorum," "Res Gestæ Anglorum in Hibernia." The description is true enough, if we limit the history of Ireland to the period which commences with the Conquest; for, from the English invasion to the final subjugation of the country, it is as well worth being recorded as that of Timbuctoo or of Tasmania. Yet there was a time when this was otherwise. There was a time when, while the once civilised world was overrun with ignorance, superstition, and barbarism, Ireland was a refuge for religion and a school for learning and art. There was a time when the whole Christian world sent pupils to her for instruction, and received missionaries from her in return. It was to Ireland that the Continent was indebted for the revival of learning and art. Almost all the European monasteries were founded by Irishmen; and even in the remote region of Iceland, Irish bells, croziers, and shrines show how widely the influence of our country extended.

Few know these facts. Few think of Ireland in former times except as the country of a barbarous, violent, and superstitious people. Few, accordingly, take much interest in the remarkable monuments with which the whole island is studded. Even in the capital city, where there is the greatest amount of education and intelligence, the greatest ignorance on the subject still exists. People look with stolid indifference on the many singular ruins to be found in the immediate neighbourhood of Dublin, or they pass them by in total blindness as to the fact that such ruins exist. For instance, of the numerous crowds who visit the Hill of Killiney, how few are aware that within a stone's throw of the spot where they are eating their sandwiches and chicken there stands, concealed in a clump of trees, a church upwards of a thousand years old? There it stands, within forty minutes' drive of the room in which we are writing this moment; yet how few of our readers have ever seen that remarkable building? How few have ever heard that such a building even exists?

The churches of Glendalough are more known than the Church of Killiney. But it were almost better they were known as little, than known in the manner they are. In the words of Mr. Wakeman, we would ask—

"How few of the gay tourists by whom the Glen is yearly visited view these ruins with any other feeling than that of idle and ignorant curiosity? Their ears have been poisoned with the burlesque and lying tales (inventions of the last half century) which the wretched men and women, miscalled guides of the place, have compiled for the entertainment of the thoughtless. They wander unmoved among glories which, nearly thirteen centuries ago, were raised in honour of their God by men joyous and thankful in the feeling of certain immortality—men whose fathers, in their youth, had reverenced the Druid as a more than human counsellor."

Thoughts like these seldom enter the minds of the visitors of that desolate district, where, to quote another writer—

"The long, continuous shadow of the lofty and slender Round Tower moves slowly, from morn till eve, over wasted churches, crumbling oratories, shattered crosses, scattered yew-trees, and tombs, now undistinguishable, of Bishops, abbots, and anchorites."

We have mentioned in particular these two places, Killiney and Glendalough, because they afford fair specimens of the classes into which our architectural remains may be divided—those which are not known at all, except to one or two Jonathan Oldbucks, and those which are known to everybody, and yet known so to speak, without knowledge. But it would be easy to enlarge the list.

Indeed, the number of objects of antiquarian and architectural interest in the immediate vicinity of Dublin, many of them in a remarkable state of preservation, is astonishing—sepulchral tumuli, stone circles, pillar-stones, cromlechs, round towers, churches, crosses, castles, all within a short railway drive, many within a morning's walk. At a short distance from Dublin stand no less than four of those tall, ghostlike, and once mysterious Round Towers, so long the stumbling-block of antiquarians, whose origin had, for centuries, been veiled in the deepest obscurity. No less than four of these relics of the early Irish Church stand in the immediate neighbourhood of Dublin. One of them, that of Clondalkin, a village in the suburbs, is perhaps the most perfectly preserved in the kingdom. Yet we venture to affirm that many, very many, of the readers of this periodical never saw a Round Tower in their lives.

Now, could one of these extraordinary and deeply-interesting buildings be transplanted to the neighbourhood of London, would it meet with this neglect and indifference? Would not the Cockneys swarm in hundreds and in thousands to gaze on the mighty monument of past ages? Would there not be a railway, or at all events a line of omnibuses, to and from the Round Tower to Clapham, or Camdentown, or whatever might be the site selected for the illustrious stranger? The Irish Tower would be looked on with the same amount of interest as the British Stonehenge.

The Irish Stonehenge, by the way, if ancient chronicles speak true, would be the more correct designation. Stonehenge, according to them, was actually transplanted from Ireland, as we have just imagined our Round Tower to be. This feat, which throws into the shade the transportation of Assyrian bulls and Egyptian obelisks, is thus described in a history compiled in the reign of Queen Elizabeth:—

"Aurelius Ambrosius, after his valiant exploits and noble victories, went to a monasterie neere Caircaredock, now called Salisburie, where, through the treason of Hengist, the nobles and princes of Britaine were slayne and buryed, called his Councell, and demanded what monument were meete to be made there in remembrance of so many nobles there resting in the dust of the earthe. Carpenters, masons, carvers, ingravers, and tombe-makers being out of all places sent for, came thither, delivered their opinions, but concluded nothing. Then stepped forth a bishop, which said, O King, if it may stand with your pleasure, there is one Merlin of Worcester, a prophet, a searcher of antiquities, a man of rare gifts, I wish his opinion in this matter."

We may here pause to observe that this Bishop of the fifth century sets us of the nineteenth a good example. Instead of consulting carpenters or carvers, churchwardens or church-commissioners, he simply desired the opinion of "one Merlin, a searcher of antiquities." The result of the episcopal counsel is thus described by the historian:—

"Merlin came, and said, Most noble king, upon occasion offered, I went lately into Ireland, and having ended my businesse, I was inquisitive of antiquities and sights of monuments, where, among other things, being brought to a mountain of Kyldare, I saw so rare a sight, in so rude a countrie, as might be seene; there was a round row of huge stones, the which none of this age had so fraymed, neither could bee, unless art had mastered the common skill of man; send for them, and set them up as they are there couched, and they will be a monument while the world standeth. Hereat the king smiled, and said, How shall we convey so great stones into Britaine from so farr a country, and to what ende, as though Britaine yeelded not so good stones to all purposes? Merlin replied, Be not displeased, O King, there is a hid mysterie in these stones, they are medicinable, and, as I was given to understand in Ireland, the gyaunts of old dwelling in that land procured them from the farthest part of Affricke, and pitched them there; in them they bathed themselves, and were rid of their infirmities. The Britons, hearing this, were persuaded to send for them. The King appointed his brother, Uter-Pendragon, with Merlin, and fifteen thousand men, to effect the businesse. In a short time they arrived in Ireland. Gillomer, King of Leinster, raised an armie to resist them, and reviled the Britaines, saying, What fooles and asses you are? Are the Irish better than the British stones? and, turning himself to his armie, said, Come on, quit yourselves like men, keep your monuments, and defend your countrie."

(To be Continued.)

HOPE ON.

"Hope on—bear up for ever."

Hope on, O heart! even 'mid thy fears—
The gift may yet be thine,
Though "hope deferred," through weary years,
Hath made thee 'plain and pine.
Though clouds are dark above thy head,
And shadows dim thy way,
Though pain and penury—toil and care—
Bear up thy heart against despair!

Hope on! though friends and kin forsake—
Though slander hurl her dart—
Do thou a firmer purpose take
To keep thee pure, O heart!
Dark Malice and mean Envy dare
Assail with Upas-tongue,
But innocence is strong to bear
The weight against it flung:
And in this Fath—through every ill—
Learn thou to "suffer and be still!"

Hope on! it is not always night—
The morn must break at last;
When thou shalt hail as clear a light
As o'er thy youth was cast.
Thou hast the promise still—O, then,
Poor wronged heart, hope on!
And, for the sake of what hath been,
Thy rest shall yet be won.
With truth undimmed within thy breast,
Bear on—and leave to God the rest!

LITERARY NOTES.

On the 10th September Mr. Heinemann will publish Mr. T. Douglas Murray's translation of the records of the evidence given at the solemn revision of Jeanne d'Arc's trial in 1455. Some sixty years ago the Latin text was done into French for one of the French societies, but it has never been done into English.

✧ ✧ ✧

During the past two or three weeks Mr. Andrew Carnegie has given to over forty libraries a sum amounting in the aggregate to £207,600. This makes a total for about four weeks of £320,000. The individual donations range from £1,200 (Fermoy) to £15,000 (Paddington), the only conditions being that the Libraries Acts are adopted, and free sites given for the buildings. These lavish donations establish a record for public libraries, and there should be great rejoicing amongst prospective librarians.

✧ ✧ ✧

Mr. James Doel, the doyen of the theatrical profession, who has just died at his home near Plymouth at the age of 98, could boast of having played gravedigger to Macready's "Hamlet," which in itself takes one back to the forties of the last century. Those who were present at Mrs. Keeley's benefit at the Lyceum a couple of years ago will remember the veteran actor's appearance that afternoon side by side with the veteran actress in whose honour the entertainment was being given.

✧ ✧ ✧

The death is announced of Mr. George Douglas Brown, the author of "The House with the Green Shutters." This book he wrote under the nom-de-plume of "George Douglas," and when it appeared its power as a picture of one side of Scottish village life and character was speedily recognised by the critics. The book was almost as successful in America as in these countries, and another volume which Mr. Brown had in hand, and is believed to have finished, had been looked forward to with much interest. His death at the early age of thirty-three removes a young Scottish novelist who was also an Oxford man of scholarly accomplishments.

✧ ✧ ✧

We are continually being reminded of the fact that the market for verse, as verse, is practically non-existent. Even those writers who have a distinct following do not show well in circulation, except in cases where the subjects treated have in themselves, as in the work of Mr. Newbolt and Mr. Kipling, a popular appeal. A Manchester contemporary illustrates this by naming four volumes of verse, all published by good firms, which are now being offered as remainders at prices varying from twopence to sixpence. But the poet, even the bad poet, believes in himself, and always keeps a cheerful eye upon posterity.

✧ ✧ ✧

Eel Pie Island Hotel, with its extensive frontages to the Thames at Twickenham, all freehold, was brought under the hammer the other day. There was a good attendance of intending buyers, to whom the auctioneer descanted eloquently upon "this quiet spot where Turner painted and Pope wrote," now practically invaded by electric tramcars and sixpenny fares from the Bank. The first offer for the property was one of £3,500, advancing by five hundreds to £9,000, at which the offers came to a sudden and complete stop. The auctioneer said £9,000 did not touch the reserve, and he withdrew the property, for which, it is understood, a private offer has been made.

✧ ✧ ✧

Under the general title of "The King's Library," the De La More Press are about to issue a select library of English Classics. Some of the books are being handsomely printed in folio and quarto, and the first of the volumes is to be the "Mirrour of vertue in Worldly Greatness, or the Life of Sir Thomas More, Knight," by his son-in-law, William Roper. This is to be followed by the "Eikon Basilike." Shakespeare's "Ovid," being Arthur Golding's translation of the Metamorphoses, and "The Percy Folio of Old English Ballads and Romances." Other sections of "The King's Library" will include "Old English Plays," "English Character Books," a special "Shakespeare Library," dealing in the first instance with the original of the plays, and a popular series to be called "The Kings Classics." "The King's Library" will be under the general editorship of Mr. Israel Gallancz.

✧ ✧ ✧

The season of the big gooseberry has of late years been transformed into the season of the grotesque epitaph and the season of the humours of translation. Just now the humours of translation (remarks the "Academy") are particularly rife, and we must add to the collection our own poor trifle, which happens to be both an epitaph and a translation. It is culled from the church of Ewelme, near Wallingford, that magnificent specimen of English Perpendicular, where lie buried Thomas Chaucer, son of Geoffrey, and Thomas's daughter Alice, who contrived to marry first a knight, then an earl, and finally a duke. On the tomb of one Charles Eyre, in this churchyard, is chiselled a long epitaph said to be translated from the Latin and the French. Charles was a boy, and the inscription remarks:—

> A too early fate snatched him out of this life
> When not born quite ten years.

It continues, later (we cannot quote it in full):—

> Charlie was born 24th January,
> 1859. Died of typhus fever:
> And he learned to speak French
> In 7 months, fluently;
> He possessed a noble mind
> And loved truthfulness:
> Indeed his father, ever
> Abominating GUILT
> Taught him SINCERITY.
> He intended, God willing, when
> He had finished his education
> In France, that he should con-
> Secutively enter universities
> In Germany and Italy; and then, if
> He pleased, should take a de-
> Gree in an English University:
> But alas his father's hopes
> Have been suddenly blasted,
> The affliction is as appalling
> As any ever recorded.
> By universal law death
> Is decreed, but the time may
> Be stayed by the Intercess-
> Ionary prayer of parents;
> But here that was wanting.

✧ ✧ ✧

This month Messrs. Duckworth and Co. will publish an important Art book, consisting of a set of "Reproductions of Drawings by Old Masters." These are taken frm the Duke of Devonshire's collection at Chatsworth. Copies from these drawings are already known, in part, from the reproductions of Brann and the critical notices of Crowe, Morelli, and others. But the present series is new. It consists of seventy plates, accompanied by a critical and explanatory text from the pen of Mr. S. Arthur Strong, who is Librarian at the House of Lords. The list of plates includes the names of the following painters:—Holbein, Ghirlandaio, Mantegna, Carpaccio, Correggio, Giorgione, Raphael, Durer, Filippino Lippi, Signorelli, Leonardo da Vinci, Titian, Giulio Romano, Lorenzo di Credi, Il Sodoma, Hans Baldung Grien, Jam (the old) Brueghel Pontormo, Pordenone, Bronzino, Parmegianino, and others of the Dutch, and Florentine Schools. The book will be published at the subscription price of twenty guineas net.

✧ ✧ ✧

M. Zola's next novel, "Truth," will begin as a serial in the autumn, and will come out as a volume early next spring. M. Zola states that the plot is far more exciting than that of his last story, "Labour." It is based on the Dreyfus tragedy, though there is no direct reference thereto. M. Zola is very enthusiastic about this tale, which is now approaching completion. He has allowed Mr. Theodore Stanton, of the New York "Critic," to see the first rough printer's proofs of about a quarter of the whole. These proofs well illustrate Zola's manner of working. They are an exact reproduction in type of the first draft of his manuscript. It is on this proof that are made all corrections in style, punctuation, etc., all additions or deletions, until the sheets are black with pen marks. A fresh proof, containing these modifications, is pulled, and is soon returned to the printer almost in the state in which it was received. The larger part of this new novel has already passed through this first stage, and the final touches to it are being given in Medan, the author's pretty country home near Paris.

✧ ✧ ✧

Mr. Justin Huntly M'Carthy's play, "If I were King," which was staged at the St. James's Theatre, London, last Monday night, was first produced in New York as long ago as October of last year. With Mr. G. H. Sothern as the vagabond poet Villon, and Miss Cecilia Loftus as Katherine de Vancelles, it scored a decided success. It ran until May, and is to be revived again in a month's time. The part of Francois Villon is being played at the St. James's by Mr. Alexander. The important character of Hugnette de Hamel was created in America by Miss Suzanne Sheldon, who also plays it at the St. James's. Villon, the hero of Mr. M'Carthy's entirely fanciful story, is himself, of course, a historical character. He was born in 1431, probably of poor parents. He was a man of some education, however, for he took his degrees of Bachelor in the University of Paris in 1450, and that of Master in 1452. In spite of a life which began by being one of excess and debauchery, and ended by being one of vagabondage and theft, he left behind him a small but remarkable collection of poems, through all of which runs the strong personal note of regret for a wrecked and wasted life. He appears to have killed a priest in a scuffle in 1455, to have been consequently banished, but in some way to have obtained a pardon. From this time he was alternately under the patronage of such important persons as Charles d'Orleans and Jean of Bourbon—his very name of Villon was, perhaps, assumed from a patron—and in a succession of prisons for vagabondage and theft. He was certainly in prison in 1461, because he came out at the general jail delivery upon the accession of Louis XI. in 1461, and he probably died soon after.

✧ ✧ ✧

That he ever came into personal contact with Louis XI. is pure supposition, although the supposition forms the basis not only of Mr. M'Carthy's play, but of De Bauville's play of "Gringoire" and its English adaptation, "The Ballad Monger," which are obviously founded upon what is known of his character. But, indeed, there is so little of actual fact about his history that practically all we know about the events of his life and his own personality is gathered from the internal evidences of his poems. The most important of these is the Grand Testament (so called by the application to it of a regular class name of mediaeval poetry), a more or less continuous work, of which, however, the most beautiful features are the interpolated ballads and rondeaux. From these Mr. M'Carthy supplies himself with a personality of Villon, and even with the names of the characters in his play. Thus the "Ballade pour sa Mere" tells him that Villon had something of simple piety in his wild nature. "Regrets de la Belle Heaulmiere," the beautiful poem in which an old woman mourns her past loveliness, gives him the name of a character. Doubtless the gruesome "Ballade des Pendus"—supposed to have been written when the poet thought he was awaiting execution—and "Mais ou sont les neiges d'antan?"—perhaps the best known of Villon's poems—supply Mr. M'Carthy with similar suggestions.

SCIENTIFIC TOPICS.

After having oiled their roadbed for three years for the purpose of preventing dust, the Boston and Albany road has decided to abandon the practice. The oil-soaked sand and fine cinders have been removed and in their place broken stone is now used. The reason for the change is to be found in the bitter complaints which have been received by the railway company. A particle of the oil-laden sand sticks to whatever it strikes. Women have protested against the spattering of oil dirt.

✧ ✧ ✧

A communication by M. Berthelot in "Comptes Rendus," shows that the Chaldeans and Babylonians were possessed of considerable metallurgical skill. A Babylonian statuette was found to consist of a copper alloy containing 79.5 per cent of copper, 1.25 per cent. of tin, and 0.8 per cent. of iron. A statuette from Chaldea, estimated to be 2,200 years old, was composed of nearly pure copper containing only a slight proportion of iron, whereas another Chaldean statuette, some 400 years older, consisted mainly of an alloy of four parts of copper with one part of lead and a trace of sulphur.

✧ ✧ ✧

The greater part of the world's supply of rubber comes from the jungles of the Amazon. The growing demand for the product has led the natives to explore regions which have hitherto never been trodden by man. These explorations have resulted in the discovery of new areas of rubber lands. Consequently the world's supply of rubber annually exported is increasing. The shipments from Iquitos during 1900 amounted to 920 tons; in 1901 the quantity sent abroad increased to 1391 tons, and this year a still larger gain is expected.

✧ ✧ ✧

For inventiveness the town of New Britain, Conn., apparently takes the palm. Since the United States patent laws have been in existence, 1,447 inventions have been patented by 344 New Britain citizens. For ten years one patent was granted annually to every 367 inhabitants of the town. The man who heads the list for the number of patents taken out is Justus A. Trout. From his prolific brain 121 patented inventions have sprung. Another man, George E. Adams, has patented 66 inventions. A third inventor, Thomas E. Corscaden, has patented 51 devices. The fourth place in the list is occupied by Henry G. Voight, who has taken out 44 patents on inventions.

✧✧✧

From Chicago comes the news that woman has conquered still another field, over which man formerly reigned supreme. She is now employed in the stockyards in Chicago, the last place in the world that one would expect to find her. To be sure, she does not actually slaughter the animals, but even that may come in time. In the packing and canning factories some thousands of women have taken the places of men; if the business grows, as it has done in the last three years, thousands more will find positions. The work is light, is technically called "kitchen work," and consists in the cutting of dried beef, packing of cans, stuffing of sausages, etc.

✧ ✧ ✧

According to "Engineering News," a special trolley car for conveying fire engines is in use at Springfield, Mass. The engine is carried on a platform only nine and one-half inches above the top of the rail, mounted on a truck at each end. The front truck is detached and the front end of the platform lowered to the ground when the engine is to be loaded on the car. Platforms over each truck afford space for firemen and equipment. The length of the car over all is 30 feet 10½ inches, and its net weight is 14,000 pounds. The Springfield Fire Department has loaded an engine on one of these cars in two and one-quarter minutes from the time the car was in position to its being ready to start, and has unloaded an engine and attached the horses to it in one and one-quarter minutes.

✧ ✧ ✧

Some interesting experiments for the purpose of obtaining data regarding the earth's rotation have been carried out by the two eminent French scientists, MM. Berbot and Camille Flammarion, with the Foucault pendulem on exhibition in the Pantheon, Paris. This ball of lead weighing 56 pounds, attached to the end of a specially-made fine piano-string approximately 210 feet in length—the longest piano-wire ever drawn. The oscillation lasts eight seconds in either direction—sixteen seconds in all—and the pendulum apparently displaces itself in the opposite direction to the movement of the earth's rotation. The pendulum affords one of the most comprehensive lessons in astronomy that has ever been given to the public.

✧ ✧ ✧

The huge locomotive recently built for the Santa Fe Railway to haul freight over the Step Raton Mountain Road, was wrecked on July 29. In company with two other engines the giant locomotive was taking a very long train over the mountains. Three times the train broke in two. When the last break came the long train started to back down the steep grade and the giant locomotive was unable to hold it. The brakemen, after having tightened every available brake, were finally compelled to jump for their lives After a mad downward plunge of three miles the train jumped the rails on a bridge fifty feet high near Seymour. The engine and all the cars plunged down the canyon. The engine is the largest freight engine in the world.

✧ ✧ ✧

A new detonator has been devised by a Berlin inventor for firing explosives, consisting of pulverised aluminium mixed wth detonating and oxygen-yielding substances. The aluminium is used in the shape of powder as an ingredient in detonating compositions, and especially of those mixtures for filling detonating or percussion caps for starting the detonation of explosives. The detonation composition varies according to the explosives employed, but in each instance it is essential to utilise the thermic properties of aluminium, which produces a very high temperature when burnt with oxygen-yielding substances, in consequence of which the mechanical energy developed is much higher than that obtainable with the compositions containing no aluminium. Owing to this peculiar property, a small quantity of aluminium composition is sufficient for detonating explosives, on which the compositions hitherto used free from aluminium have little or no effect.

✧ ✧ ✧

A new electric car has been undergoing severe tests in England, the results of which have been highly satisfactory, as the vehicle has succeeded in covering 100 miles without recharging. The car itself is made by Krieger, of Paris, but the electrical fittings are supplied by a London firm. The electrical installation consists of two compound motors, which drive the front wheels independently. The battery comprises 44 Leitner cells, of 300 ampere hours capacity, and is capable of running the car 100 miles without recharging at a speed of 40 miles per hour on a level road. When travelling down hill the motors are reversed, and become generators and recharge the battery. Another interesting feature of this arrangement is that by converting the motors into generators an excellent braking effect is produced, and in the majority of instances is sufficient to hold the vehicle in check, without necessitating the application of the mechanical brakes.

✧ ✧ ✧

The year 1882 was particularly prolific in the finds of treasure trove. In January of that year while repairs were being carried out in a house in Broughton, the workmen unearthed a large leathern bag containing thirty crowns and several shillings of the reign of Charles II., James II., and Queen Anne. In the following month a discovery of great antiquarian interest was made at Vufarfre, Sweden, when a number of antique silver bowls were brought to light. They proved to be excellent samples of the twelfth and thirteenth century work, and were covered with quaint inscriptions. Some months later a clay vessel full of Roman coins was found near Yeovil, Somersetshire, and, at about the same time, two hundred and fifty coins of Queen Anne's reign were found at Watford. The greatest discovery of the nineteenth century took place in December of the same year in an old house in the Rue Vieille de Temple, Paris. Upon its demolition a copper jar was found in one of the walls. It contained seven thousand eight hundred and eighty-two gold coins, worth nearly £6,000 as bullion, but to the collector their value was untold, for they belonged numismatically to the rarest reigns of France. In other parts of the house were found one thousand and ten coins of Jean le Bon; six thousand one hundred and ninety-nine of Charles V., and over five hundred pieces of other mints, the latter being alone valued at £30,000.

✧ ✧ ✧

Two French explorers, M. Pierre de Jecquer and M. Watlin, have been carrying out some interesting excavations for archæological purposes in Persia, and have made several valuable discoveries. At Susa they unearthed a large black marble column, covered from head to foot with cuneiform inscriptions, which should throw much light on the history of that ancient capital. According to the terms the explorers have made with the Persian Government, they are not compelled to examine their treasures at Susa, but are permitted to transport them to France. Originally the concession permitted them only to share equally with the Persian Government, but they were molested and attacked by the natives at Susa, and by way of compensation they obtained the right to take everything they require from Susa. In other parts of Persia the Shah claims his share. Generally the explorers work four or five months at Susa, and then before the winter in Susiana becomes intolerable they migrate to the northern parts of the country, where there are ample fields for exploration. In this way they are gradually unfolding the history of past ages, and at the same time adding considerably to the present incomplete knowledge of Persian geography.

✧ ✧ ✧

The piece of platinum foil which forms part of the outfit of every beginner in chemistry, and of most working chemists, has become so expensive of late that acceptable substitutes are worth considering. Very pure silver is actually superior to platinum for most of the uses to which such pieces of foil are usually put. It must be very pure; the thick sheets used as anodes by electroplaters are pure enough, and of a convenient thickness. Or, any chemist can easily purify his silver and then get a jeweller to melt it and roll it. When used for evaporating solutions to dryness the silver is liable to be attacked by oxidizing acids, but this action can be prevented by the addition of ammonia, which is generally unobjectionable. For fusions, however, the silver is altogether preferable. Being unaffected by alkalies, it can be used with caustic soda, instead of the carbonate, and thus a lower temperature suffices; manganese and chromium fusions are readily performed. The silver is so cheap (a piece an inch square and a sixteenth thick should cost about twenty cents) that thicker, and hence stronger and more durable pieces can be used; with such heavy pieces a strip an eighth of an inch wide may be cut so as to project as a handle, and the assay is thus freed from liability of contamination by material from the tweezers which hold the foil in the flame—generally a great nuisance with platinum. The platinum wires, also, which are used to hold salts in a flame for spectroscope work, and may be replaced by iron—with advantage, for the iron may readily be thrown away if they get mixed or incrusted.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

Extract of a letter from Cavan, May 8.

"Yesterday, at the close of the poll, the numbers were:

For Mr. Maxwell	444
Mr. Saunderson	444

A number of armed villains entered into the house of the Rev. Mr. M'Cabe, at Mohill, in the County of Longford on Monday se-night, and, having secured the family, robbed it of many valuable articles and near £555 in cash.

On Friday last died, in the 81st year of his age, the excellent and truly reverend Philip Skelton, Rector of Fintona, in the diocese of Clogher. His conversation, as well as his various and voluminous writings, breathed a nervous and manly strain of native eloquence unadorned by art; glowing with all the rich, though sometimes exuberant colouring, of a well-stored and ardent imagination, and fraught with such sentiments of exalted piety and benevolence, with such abhorrence of everything mean or vicious, as zeal only, founded upon a rational and thorough conviction of the grand truths of religion, can inspire; to which indeed it was impossible for his hearers, if not lost to all sense of feeling, to listen without emotion. His life, consonant to his conversation and writings, shone forth a constellation of the brightest virtues; amongst which his liberal and all-embracing charity was conspicuous. Upon one occasion, in particular, when the poor inhabitants of his parish were much distressed by famine, after having expended all the money he could otherwise procure in the purchase of provisions for their relief, he had recourse to an expedient which, in a man of literature, and passionately fond of reading, we must acknowledge to be a sacrifice of no ordinary kind. He sold his whole library, and laid the price of it at his suffering parishioners feet. Thus relinquishing almost his only gratification, in the dreary solitude of a sequestered situation and a celibate life, until he should be enabled by the gradual savings of a scanty ecclesiastical benefice (his only fund) to replace the volumes he had collected in a long series of years. Nor was this humanity inferior to his other virtues. When the University of Dublin, some years since, as a mark of the estimation in which they held his abilities and his worth, freely offered to confer on him the degree of Doctor of Divinity, no solicitations could prevail upon him to accept a title of which he alone did not deem himself worthy. Behold an Israelite indeed in whom there was no guile!

We are happy to hear that Mr. Wood's benefit on Wednesday next is likely to answer his most sanguine expectations, and though a very useful comedian, has yet a higher claim to public patronage—his present afflicted and distressed state—to which he has been reduced by having accidentally broken his leg some months ago. It is but justice to the manager to acknowledge his great humanity to him on the above melancholy event. Public report intimates that the Freemasons, of whose Society he has many years been a most unexceptionable member, intend, on the present occasion, to shew their utmost attention to a Brother in distress.

DUBLIN, THURSDAY, MAY 10.

The late election for an Alderman of this city was the closest in point of numbers, in the Sheriffs and Commons, of any that has been known for many years past; and it was also equally the same among the Board of Aldermen, for they were twelve, two tens, and eight for the four Sheriffs Peers that had been returned, in order to choose one out of the same.

When the Charter of Freedom and Incorporation was first granted to this city, the citizens in general, by election, chose their own magistrates, and they, without any Common Council, made bye-laws, and transacted every other business of the government of this Metropolis; from the disorder and loss of time however, occasioned by frequent elections, it was thought necessary to curtail this privilege, and then the Lord Mayor and Aldermen alone made choice of fresh ones to fill the places that were vacant, and in that manner it continued for a considerable period of time—at length it was altered to the present mode, by which no person whatever can be elected into any office of magistracy or employment without the joint concurrence of both the Aldermen and the Commons.

The choice of a proper person to inspect the jails, especially as the sultry season of the year is at hand (when for want of proper care in the removal or remedying of nuisances, infectious disorders of the most dangerous and alarming nature might originate) must be a circumstance highly pleasing to every lover of humanity. The first example of such an appointment in these kingdoms was in the year 1751, when the debtors of the King's Bench prison, London, petitioned the British Parliament for a redress of the many inconveniences they laboured under in their confinement, from the extreme wretchedness of their accommodations. Many of the prisoners were then examined at the bar of the House, and among the rest the famous Baron Stein, once crowned King of Corsica by the name of Theodore, and who died soon afterwards in the same prison.

The charge given to the Grand Jury of the city of Dublin by the Lord Chief Justice of the King's Bench, respecting the jails and prisons, does the highest honour to that nobleman's feelings, and points out, among an infinite variety of other instances, that principle of soft humanity and innate goodness and benevolence of disposition which at all times have most peculiarly characterised him. In addition, however, to what has been mentioned respecting the state of the City Marshalsea, the damages done to that prison at the time of the riot a few months since render it very unsafe for persons to be kept in, as it has a most ruinous appearance within side, and menaces destruction every day to the unfortunate and indeed truly wicked inhabitants of the same.

On the 1st inst. a most desperate quarrel took place near Ennis between some persons who were partners in a lot of ground near Ayle, in the parish of Feacle. The combatants were, on each side, a father and four sons, and the action first took place between the father and four sons, against two brothers, one of whom was killed on the spot, and the other so desperately mangled that he is since dead: the father of the two unfortunate men coming up, with his remaining two sons, were attacked with the most savage brutality by the murderers of his two children, who, not content with having one of them a corpse before them, and the other drawing his last breath, attacked the poor father and his surviving children, whom they also left weltering in their blood, and so desperately wounded as to leave their recovery doubtful. The murderers immediately absconded, and have not since been heard of.

The horrid practice of taking fat out of sheep, when alive, has now become alarmingly frequent in the counties of Meath, Wicklow, and Dublin. On Friday night last some sheep, the property of the Attorney-General, were treated in the above wicked and barbarous manner by some villains, two of whom, we are informed, are apprehended, and, it is hoped, will undergo the punishment due to so diabolical a practice.

COUNTRY NEWS.

KILKENNY, MAY 9, 1787.

On Thursday, at a Quarter Sessions in this city, a woman was convicted of stealing sundry articles of wearing apparel out of a house in High street, and ordered to be publicly whipped; which sentence was carried into execution on Saturday.

TULLAMORE, MAY 12, 1787.

James Clark, of Attyconnor, Esq., Magistrate of King's County and county of Westmeath, with the assistance of a party of the Green Horse, safely lodged in Philipstown Jail, James, Daniel, and John Gorman, brothers, who stand charged with having, on the night of the 22nd of October, 1785, murdered Michael Cunningham, of this town. The two first were taken in the King's County, and made very great resistance; the other brother was taken in the county of Westmeath. Much praise is due to Mr. Clark for his judicious and spirited conduct on the above occasion.

Extract of a letter from Cavan, May 13.

"At the close of the poll on Saturday evening the numbers were:—

For Mr. Maxwell	53
For Mr. Saunderson	39
Total on Saturday	94
Gross poll	1040

Mr. Wolfe was called to his place at the bar of the Court of Chancery as Solicitor-General on Saturday last—the other appointments have not yet come over.

Mr. Serjeant Fitzgerald is certainly to be appointed Prime Serjeant in the room of Mr. Browne, who retires with a pension. Mr. Hewet, the Chancellor's son, it is said will get the Serjeant's gown.

DUBLIN, TUESDAY, MAY 15, 1787.

We are informed from a most respectable authority, that when the rumour of an intended enquiry into the particulars of a late duel in the House of Lords on Monday last, reached the noble Lord who was concerned in it, he was much affected at the censure passed there, while there was any uncertainty about his life, because it might have an influence upon a subsequent trial; the only part of the transaction which he thought could fairly and with regard to him, come under their consideration, was, the parties wanting to speak to him, at the entrance to the House of Lords, while the House was sitting upon a cause, and waiting for him in the room of the Usher of the Black Rod (as he was informed), while the House was sitting as a Court of Justice.

One of the most atrocious insults and attacks that could be made on magistracy, was that on Sunday last, on Mr. Alderman Exshaw and several of the Police Guards. The fields before Merrion square have been made, for some Sundays past, a place of rendezvous for an immense number of vagabonds, who assembled for every vile purpose of profaning the Sabbath. The active efforts of Mr. Alderman Exshaw, for dispersing this great band of miscreants, was most laudable, and he merited a very different result than he experienced.

Monday morning the house, the corner of Sycamore alley, in Essex street, in which Mr. Crosby, woolen draper, lately lived, fell to the ground, but providentially no person received the least injury, though several were passing at the time; the house was uninhabited, as Mr. Crosby removed out of it a few days ago. It fell with such violence as to drive in several of the windows in the house opposite, and a young lady lying in bed narrowly escaped with her life with the number of bricks which was drove into the room.

Dublin Penny Journal

A Magazine of Art, Archæology, Literature, and Science

Vol. I., No. 25.] DUBLIN: SATURDAY, SEPTEMBER 20, 1902. [Price One Penny.

IN THE OLD IRISH HOUSE OF LORDS.

VISIT OF THE LATE QUEEN VICTORIA TO THE BANK OF IRELAND, 1849.

The above picture is taken from the "Illustrated London News," August, 1349, when her late Majesty visited Ireland with Prince Albert. The accompanying letter-press said of the old Irish Parliament House:—"This is the finest building in Dublin, and one of the very finest in the kingdom. Since its conversion into a bank, the interior has undergone an entire change, except the House of Lords, which yet retains very much of its original appearance. This is now the Court of Proprietors' Room, shown in our illustration. In the semi-circular recess, once occupied by the Throne, is a statue of George III. The walls are hung with Dutch tapestry, which is very fine."

FORTS AND FAIRIES.

A COMPILATION.

By Rev. E. J. RYAN.

10. THE UNSEEN.

An Irish child "imagines he sees a fairy in every bush," and "if he sees a butterfly upon a stalk in the field, he thinks it is a Leprechawn. . . . This Irish superstition is at least a proof of the faculty of realising the unseen. . . . Wherever superstition—especially of a spiritual character—exists, there is proof that there is a character formed to realise the unseen." The proof is the greater from the fact that the Irish "fought for 600 years(85) for something they had never seen . . .

11. "GOOD PEOPLE."

The appellation of good people bestowed on the fairies could hardly be even a distorted idea of the good angels, some of whom are guardians of persons, and others, of places. Neither does it apply to the souls in purgatory, for the idea it conveys is not consonant with the dignity of office of those holy souls who suffer there "for a time before they go to heaven." In the popular mind the term is probably not ironical. As applied to fallen angels, it is a misapplication in regard to beings of such an evil character, for although the devil seems, in the ordinary understanding, to be of a more directly active disposition in trying to accomplish the ruin of man, the fact remains that all fallen angels are devils.

12. TREATMENT OF FORTS.

Some people dislike to interfere in any injurious way with the forts or with their preints, or with objects belonging intimately to either. The same reluctance extends to all the old relics of antiquity, and to the ancient isolated whitethorns or trees, all on account of the dreaded vengeance of the fairies; but the grass which forts produce is usually treated in the ordinary way. Forts are said to have been in old times the scenes of many a fierce fight between Dane and Celt, and for this additional reason it would not be right to disturb the dust of the combatants which rests beneath. The veneration for old solitary thorns proceeds from an idea that they are the haunts of fairies, who are provoked at their being destroyed, and will either maim the person who cuts the thorns, or will kill his cattle, or in some other way injure himself or his substance.

A case heard before the Tipperary Sub-Land Commission sitting in Cahir, on Monday, 28th March, 1898, affords an example in the evidence of a man under examination of the idea of harm resulting from levelling a fort(86);

ESTATE OF LOUIS H. GRUBB.

Patrick Kenealy, tenant; lands of Oldgraigue—Area, 47a 2r 9p; old rent, £34 11s 1d; judicial rent, £27 13s 1d; valuation, £22 10s. Mr. W. Nolan for landlord, and Mr. Crean for tenant. The tenant said he levelled 13 old ditches, some cliffs, and an old fort, and he lost a horse.

Mr. Walpole—Better have left the fort alone (laughter).

Witness—Begor I lost my hand, too (laughter). I buried eight out of my house in seven years.

Mr. Walpole—Was that after levelling the fort? Yes.

Chairman—Do you attribute the death of your people to the levelling of the fort? I suppose it was the fault of it, sir. It was about 18 feet high. The gentlemen will see it when they go there.

Mr. Nolan—They had better take care of themselves (laughter).

Mr. Walpole—They won't get me in there (laughter).

Fear of the fairies on account of altering a fort or anything belonging thereto, or solitary whitethorns, or any antiquarian remains, or any object associated with the fairies, is misplaced as regards its origin. If there is need of dealing with any of these objects no such fear should be entertained, or allowed to influence their treatment. But in any case, a sentimental reason should prevent any injury being done to any of the archæological remains, or the topical antiquities of Ireland—Pagan or Christian.

13. A LEGEND OF KNOCKGRAFFON MOAT.

A poor hunchback man, who lived in the Glen of Aherlow, was nicknamed Lusmore, by reason of his always wearing a sprig of the fairy cap, or lusmore (the fox glove or fairy finger), in his little straw hat. One moonlight night he was walking from Cahir towads Cappagh, and passing through Knockgraffon he sat down to rest under the steep side of the old moat which stood on the left-hand side of his road. Presently he heard a strain of melody from the inside of the moat—a number of tiny fairy voices singing: Dia-luan, Dia-mart, Dia-luan, Dia-mart, Dia-luan, Dia-mart (Monday, Tuesday), repeated continually after a pause. He joined in the singing, and to vary the monotony, he added after the pauses: Agus Dia-Ceudaion (and Wednesday) (87). The music will be found on page 387.

The fairies were so delighted that, rushing out, they brought Lusmore into their palace and treated him like a prince. They also removed the hump from him, and one of them came up to him and said:

Lusmore! Lusmore!
Doubt not, nor deplore,
For the hump which you bore
On your back is no more;
Look down on the floor,
And view it, Lusmore!

Afterwads he fell asleep, and awaking, he found himself, in broad daylight, at the foot of the moat, and departed as straight as a rush.

A man named Jack Madden, peevish and cunning from his birth, from Decies' country, in the county Waterford, also a hunchback, having heard of the occurrence, was brought to the moat at nightfall, by his friends, in the hope of having his hump taken off. He heard the tune sweeter than before as amended by Lusmore. He was in a hurry to get quit of his hump, and in his anxiety, without waiting for a fit opportunity, he added: agus da Hena (and Friday). The fairies were displeased, and crowding around him, they brought him into the fort, and demanded in anger: Who spoiled our tune? One of them approached to him, above all the rest, and addressing him, said:

Jack Madden, Jack Madden!
Your words come so bad in
The tune we felt glad in;—
This castle you're had in,
That your life we may sadden;
Here's two humps for Jack Madden!

The put Lusmore's hump upon Jack, over his own, and kicked him out of the moat.

In the morning his friends found him half dead, lying at the foot of the moat, and with the weight of his other hump, and with the long journey, he died soon after they had brought him home.

14. FUTURE DESTINY.

It is said that the future destiny of the fairies will be determined at the Day of Judgment, and that they all live in fear of utter condemnation then, but sometimes experience a slight hope that their place may not be with Satan and his angels. The Peri in Lalla Rookh gets from a good angel at the gates of heaven, a hope of forgiveness by bringing to the "Eternal Gate the Gift that is most dear to Heaven!"(89) And in the end, by bringing, after various futile tasks, a repentant sinner's tear drop, the Peri's

task is done—
The gates are passed, and Heaven is won.

Origen, one of the early Christian Fathers, for some time denied the eternity of the torments of the damned, and held the theory that all the damned would in course of ages be saved and admitted to heaven. Both his writings and his name were condemned in the fifth general Council of the Catholic Church, but he seems to have speedily arisen from his errors.

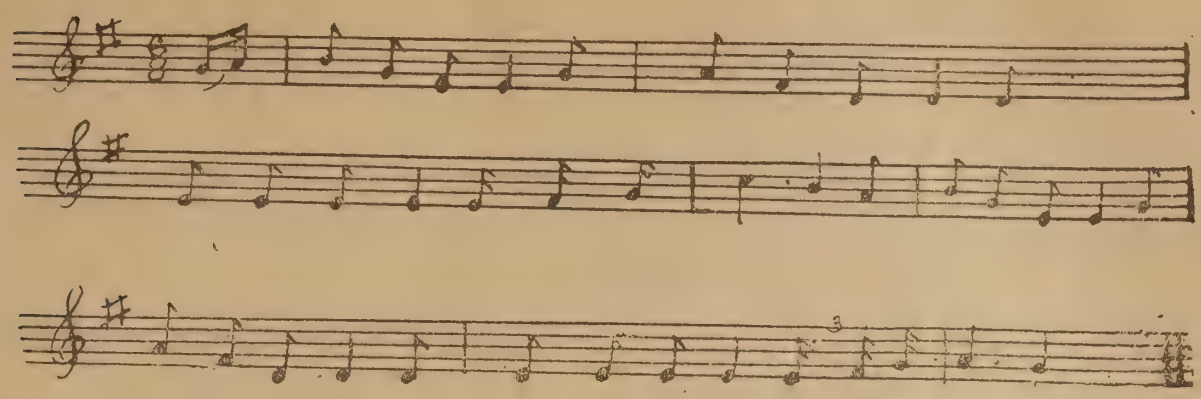
It is also said that they are fated to pass at the judgment day into annihilation for ever, doomed to perish utterly and be seen no more.

The fallen angels, being mere spirits, differ essentially from man. Each of these angels became guilty of actual mortal sin by his own free will ,and they obtained no further mercy. According to St. Peter, hell is the permanent dwelling even of these evil spirits who are in the air for the trial of men. For the bad angels, and for a lost human soul, there can be no possibility of salvation, for "out of hell there is no redemption."

For a mere spirit there is no annihilation, all spirits being immortal. Hence the fanciful statement that the fairies must die without hope of regaining heaven, and that the beautiful fairy race is doomed to annihilation, is utterly erroneous.

All the splendour and beauty of the fairies are merely illusive. When seen by the eye of a seer the delights vanish; and the fairies themselves appear as wrinkled old men and hideous hags, typical, perhaps, of the repugnant deformity of the angels in their fallen state.

---



(85) 300 years with the Dane, from about 700 to 1014; and 300 years with England, from Henry VIII., 1509—1547 to about the last quarter of the nineteenth century.

(86) The report of the case is from "The Nationalist and Tipperary Advertiser." Clonmel. Wednesday, March 30, 1898. The paper, in reference to the proceedings, states that: "On Monday, 28th March, the Sub-Commissioners, Messrs. M. T. Crean, B.L., and W. Walpole, with their Registrar, Mr. W. St. L., resumed their sitting in Cahir Courthouse, when a number of cases from Clogheen Union were heard."

(87) In Irish the word dia, die, or de, is prefixed to the proper names of the week days. The names of the days in Irish are: Dia Domnaig, Sunday; Dia Luain, Monday; Dia Mairt, Tuesday; Dia Céadaoine, Wednesday; Dia Daordaoin, Thursday; Dia h-Aoine, Friday; Dia Satuirn, Saturday.

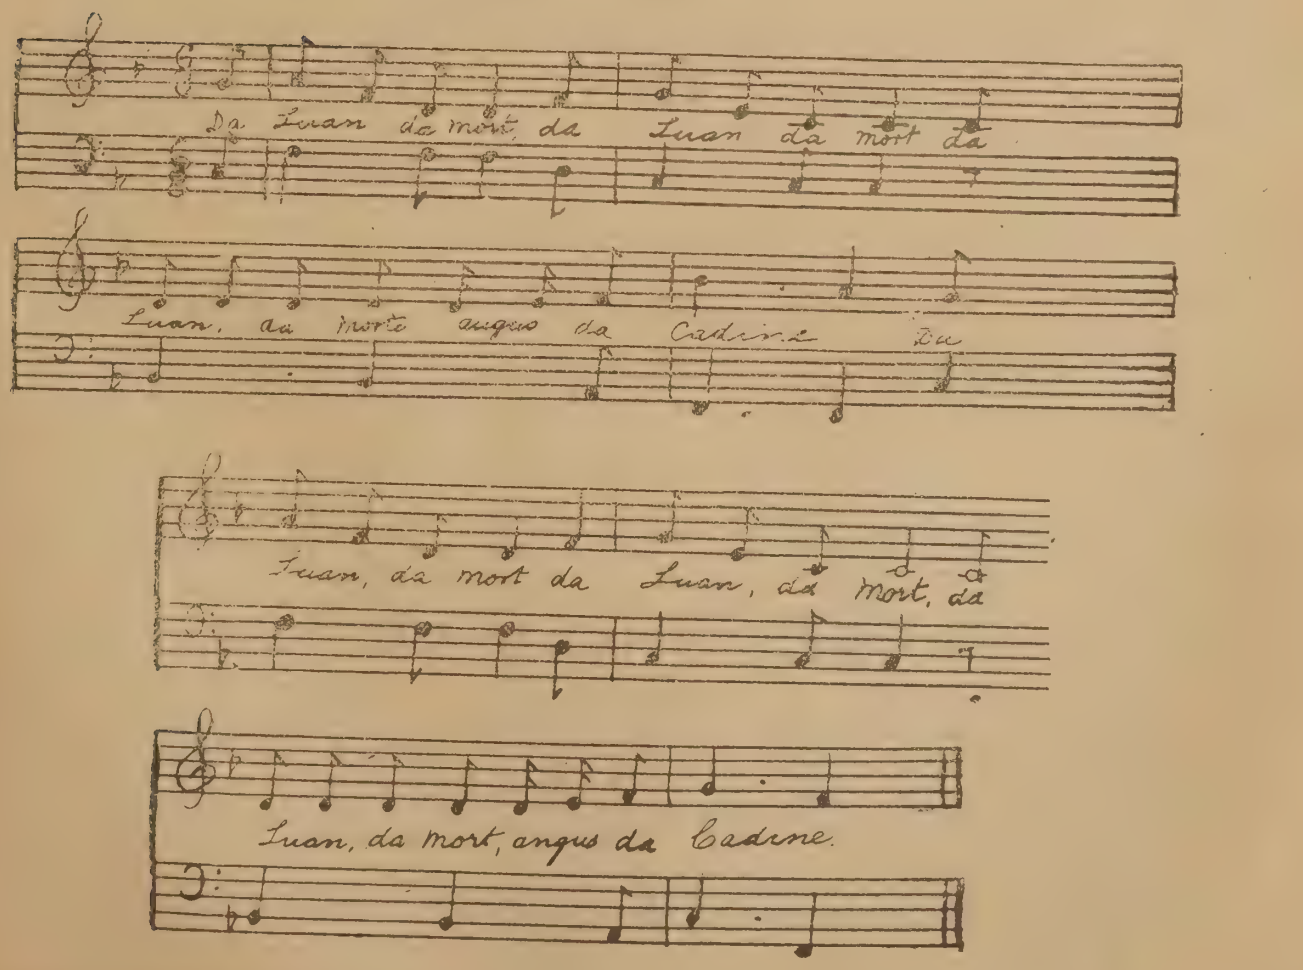
(89) In Lalla Rookh is embodied, under the disguise of "The Fire Wirshippers," the fierce resolve of Catholic Ireland to break the bondage of the penal yoke.

THE FAIRIES' SONG.

Dia-luain, Dia-mairt, agus
Dia-ceadaoin.

Monday, Tuesday, and
Wednesday.

Moderate time.



Pronunciation. :—

Dia luan, Dia mairt, Dia luan, Dia mairt, Dia
Thee loo-an, Thee mort, Thee loo -an, Thee mort, Thee

luan - an Dia mairt, ag- us Dia ceud-daoin, Dia luan, Dia mairt, Dia
loo - an Thee mort, og- us Thee kai-deen, Thee loo-an, Thee mort, Thee

luan - an, Dia mairt, Dia luan - an, Dia mort, ag - us Dia ceud-daoin.
loo - an, Thee mort, Thee loo - an, Thee mort, ag - us Thee kai-deen.

ANOTHER VERSION.(88)

(88) Thomas Parnell's poetical version is found in M'Carthy's "Book of Irish Ballads."

It is the opinion of several authorities that man was created to supply the place of the fallen angels, and it is said that their hatred of the human race arises from envy of man's destiny, which they regard as the filling of the heavenly seats lost by themselves(90).

Milton represents Satan as saying:

O Hell! who do mine eyes with grief behold!
Into our room of bliss thus high advanced
Creatures of other mould, earth-born, perhaps,
Not spirits, yet to heav'nly spirits bright
Little inferior.

It is an appalling consideration that enough of mankind is not yet saved to occupy the places lost by the angels, but to God alone is known the number of the elect to be placed in celestial happiness. Those, O God! whom Thou foreknowest shall be Thine by faith and good works.

(90) It is thought that the fairies are very anxious to ascertain whether or not the golden gates of paradise will revolve for them on the day of Judgment. Many a priest, it is said, even St. Patrick himself, has been interrogated on this point on behalf of the fairies, but—in vain! The spade and shovel are placed in form of a cross over newly-made graves to prevent the interference of malign spirits, this being the plan said to have been adopted under St. Patrick's directions by a man to be saved in a grave made for the purpose, from the fairy vengeance, on bringing back word from the saint that they were not to be saved.

NOTANDA.—In note (8) grainin should be grainan.

Note (13). Tealach sometimes telach means a family.

In Section 1, Caisoil in seventh line from end should be Caisioi, which should be so spelled throughout.

In note (16) Tuath de Danaan, and Tuath-de-Danaan are repeated, once each. The repetition should be omitted. Tuath da is also repeated once. It should be omitted when first occurring, and to the second case, Danaan should be added. Next, Twath-de-Danaan, and Tuatha-De-Danaan, should be inserted. In Tuatha De Danaan, Dé should be accepted with an acute accent. Tuatha De Denions should be Tuatha De Denion. In Tooaha De Danann, an acute accent should be over D[illegible], and over the second a in Danann. Thus corrected the name is found in twenty different modifications. Yet another, possibly a misprint, is Tuath-de-Danaan.

The Tuatha De Danaans are sometimes represented as the dark haired race. The Scotic or dominant race in ancient Ireland are spoken of as light haired. In the case of the Firbolgs and the Tuatha De Danaans the physical qualities ascribed to one race are sometimes attributed to the other.

Section 11. To the articles mentioned as food, nuts may be added.

Section 15. Similarity of the words Danaan and Dan[illegible]. Red-haired people are said to be of Danish ex[illegible]. Perhaps the reference is to the D[illegible]s.

Section 14. Bodheen should be Badheen, Dallan [illegible] marking Christian graves. Here may be added: or other notable places and memorable events.

Moats.—Tubids should be tulids; and tumili should be Tumuli, which should be so spelled throughout.

In note (33) after: the farmers, add: fians, Irish [illegible].

Fenni should be fenii.

Note (35). Prefix: Cromlech or cromleac.

In note (36), Baudrai should be Bantrai, (druidesses).

Note (38). To the different spellings of Diarmid may be added: Dhiarmada, and Diarmuad.

Grana is stated to have been the daughter of Cormac Ulfhada, monarch of Ireland.

Fiann M'Cumhaile should be Finn M'Cumhaill. The name is found also as: Finn mac Cumail; Finn Mac Cumhaill; Fionn McComhaill; Fionn Mac Cumhail; and Fin Mac Cool.

It would seem to be more satisfactory if there were a uniform method of rendering words which are spelled in many diverse ways.

Note (39). Cacht should be lacht, and Cath should be leath.

Micholithic should be microlithic.

In the Journal of August 30, the heading of Part —Continued: Other Antiquarian Remarks should be: Other Antiquarian Remains.

With these may be associated "Stone Chairs," found in various places in Ireland, and such objects as the grave of Bran, Finn Mac Coole's famous dog.

To the note (a) may be added: Ui or Hy is found also as Hi.

In Part II, section I, La Fort de Scee should have an acute accent over the first e in Scée.

Misprints occurring in the course of this contribution are either easily recognisable or do not affect the substance of this article on "Forts and Fairies."—E.J.R.

[The End.]

LOVELY LENKA.

(From the Hungarian of Kolosey.)

He lingers on the ocean shore,
The seaman in his boat;
The water spirit's music o'er
The ruffled wave doth float.
"Maiden of beauty!" counselled be,
The tempest wakes from out the sea."

"I may not stay," the maiden cried,
"Tho loud the tempest blow,
That meadow on the water side—
That cottage—bids me go.
That shady grove, that murmurs near,
Invites me—he I love is there."

"The wave is high—the storm is loud,
And dangers rise anon."—
"But hope sits smiling on the cloud,
Storms drive the vessel on.
And joy and sorrow both convey
Man's mortal barque along its way."

Into the seaman's boat she stept,
The helm the seaman took;
The storming billows fiercely swept,
And all the horizon shook.
The maiden spoke—"Ye fears be gone!
The storm-wind drives the vessel on."

"O maiden! darker is the sky,
And fiercer is the wind,
Alas! there is no harbour nigh,
No refuge can we find.
A whirlpool is the angry sea,
It will engulph both thee and me."

"No, seaman! fortune always shone
And still shine on me;
Soon will the stormy clouds be gone,
And sunbeams calm the sea,
And evening bring the promised dove,
And evening guide me to my love."

She turned her to the distant strand,
(He stood upon the spot)—
In sweet delirum stretched her hand,
And wind and waves forgot.
So is love's spirit overfraught
With love's intensity of thought.

He stood—a statue on the shore,
A pale—ice-hardened form;
The billows battling more and more,
And louder waxed the storm.
Clouds—waves, all mingled—and the boat?
Its scattered planks asunder float.

Where is she? Ask the storm! for he
No single tear has shed;
And he? Go ask the silent sea—
Its echoes answer "Dead!"
I held communion with its waves,
But could not find the lovers' graves.

The play itself displays all the excellencies of style for which the writings of Mr. Standish O'Grady are noted. As readers of Irish history are aware, the episode in which Hugh Roe O'Donnell figures is one of the most stirring that marked the Elizabethan times, and Mr. O'Grady's treatment of it is vigorous and incisive. Many of the scenes are of a high order of dramatic interest, and inspire the wish that Mr. O'Grady may see his way in the future to devote more attention to this class of work. The printers are Messrs. Nelson and Knox, Limited, Belfast.

SHAPIRA, THE PHILOLOGICAL FORGER

The recently published biography of Sir Walter Besant contains an interesting anecdote of Shapira, who may well be regarded as the prince of philological impostors. Shapira was a Polish Jew, who had been converted to Christianity, but not to Christian honesty. Many years ago he visited Sir Walter Besant and submitted to him a document which he said refuted every theory held by modern theological students. Shapira was a good actor. At first he would tell nothing of the discovery. Then, after much hard pressing, he confided to Sir Walter with apparent reluctance that the document was nothing less than a contemporary copy of the book of Deuteronomy written on parchment. Hesitatingly Shapira exhibited a piece of his precious manuscript. It was written in the Phœnician characters of the Moabite Stone in fine, black ink, and was still bright and legible after three thousand years. Shapira fabled interestingly of his wonderful find. He told how the manuscript had been preserved because it had been deposited in a perfectly dry cave in Moab. Besant urged him to proclaim his discovery to the world. Shapira hesitated; but finally he consented to reveal his discovery to two persons, Dr. Ginsburg, the great Hebrew scholar, and Captain Conder, the Surveyor of Western Palestine. Mr. Besant invited both these gentlemen to visit him on the following day. Dr. Ginsburg thought that the invitation included his friends, and brought with him practically the whole British Museum and all the Hebrew scholars in London. Conder also came. Amid much ill-suppressed excitement, Shapira unfolded his manuscript. One of the company remarked that the parchment was strangely modern in appearance, and spoke well for the art of the time of Moses. When the company separated, a professor of Hebrew remarked, "This is one of the few things that could not be a forgery and a fraud." William Simpson, of the "Illustrated London News," had no great respect for the wily Shapira. Conder quietly observed that "all the points objected to by German critics have vanished in this new and epoch-making trouvaille. The geography is not confused, and Moses does not record his own death." Simpson, who knew all the caves of Moab, and also knew that they were damp and earthy, said, "There is not a dry cave in the country." "Then you think?" questioned Besant. "Precisely," said Simpson. While the learned professors were hanging over the manuscript for days, and were preparing commentaries, Clement Ganneau came over from Paris to see the document. "I know," he said, how this manuscript was obtained. The parchment is cut from the margins of Hebrew manuscripts, some of them of considerable antiquity. The writing is that of yesterday." Ganneau's statement was only too true. Shapira received the manuscript without a single offer to buy it. His mind became unbalanced. His failure and the work of preparing his admirable forgery proved too much for him. He hanged himself.

Paris is said to lead the world in the culture of city trees. The success of the French capital is due not so much to an admirable soil climate as to a well-organised system of caring for the trees. In large nurseries young trees are grown and prepared for the Parisian streets. The culture of the soil is elaborate. From the very beginning the trees are pruned and staked to compel a straight growth. By frequent transplanting the roots become so hardened that they are enabled to withstand injury due to transportation. When a tree is sufficiently large, it is set out in the streets with the same care that was lavished upon it in the nursery. Often the cost of planting a single tree is 50 dollars. Whenever a storm destroys the city trees the nursery can be immediately drawn upon for another supply.

OUR WEEKLY STORY

A TARDY VINDICATION.

As years go by people grow to look like their dogs and their houses, or their houses and their dogs to look like them. Never did I see a better proof of this commonplace than the morning I stopped to inquire which of two crossroads would lead me to the town of Memphis (not the pride of Tennessee, but a junior village in Missouri).

The dooryard where I had dismounted, and the house it led to, and the man and the dogs on its porch, all bore a family resemblance. For the man looked haunted and weather-beaten, the house was forbidding of aspect and wrinkled with age, and the dogs were decrepit and rickety.

The cottager stared at me incredulously when I addressed him. When I repeated my question, a look of hospitable interest flashed into his expression, but quickly turned to a scowl of misanthropy.

The third time I questioned him a bit sharply, no doubt; and now he gave only a surly gesture that bade me take the road to the left.

Thanking him with ironic cordiality for his effusive courtesy, I jumped on my wheel and rode on. At the top of the hill I could look down at the snug hamlet where my business was; and, putting my feet on the bar of my bicycle, I forgot the sullenness of the hermit in the beaming cordiality of the sun and breeze, as I coasted merrily down the hill till it brought me to the outskirts of the town.

Another inquiry led me to the square where sat the county court-house, around which the chief buildings of the town were gathered. I looked with interest upon the square, for it was historical ground to me, since one of the longest and most famous litigations in the West had culminated in various mob meetings there. It was the Scotland County Bond Case, which is well known to all students of American legal history, and in which my father had played a leading part—a case that began with him as a young lawyer and carried him well on through life. Here he had done what many a professional brave man had flinched from: had stood alone and faced a mob that filled the square, a mob determined to resist the law and its rulings at any cost.

It was in connection with some of the final details of this suit that I had come to Memphis. My destination was discovered at a rather seedy single-storey frame building, over whose door projected a rusty iron sign containing the legend:

J. P. FENTON.
Atty. and Counsellor at Law.

Fenton had been concerned for many years with the Scotland County bond controversy as a zealous and tireless, and sometimes successful, opponent of my father. But there was no bad blood between them, as they had been friends since they first met on opposite sides of another famous Western case, the trial of Bill Young. The two lawyers were wont to joke about this rather sad laughing matter, for each claimed to have won the case: Fenton, because the jury had failed to find Bill Young guilty of the charge—the butchery of a whole family—and my father, because the indignant populace had hanged Mr. Young to his own gate-post the same day.

The signing of the proper papers was quickly arranged with Fenton, and I mentioned casually my encounter with the surly hermit.

"Oho!" cried Fenton, "so you met him, did you? That's old Bob Higbee. He was my first client, and he was acquitted for lack of evidence. The neighbours came near lynchin' him, too; but law and order prevailed for once, and he escaped a clothes-line by a neck. But he might a'most 's well 'a' everybody believed he was guilty of one of the cold-bloodedest murders ever knowed hereabouts."

"Was he guilty?" I asked languidly.

"Well, you couldn't expect me, his lawyer, to answer that question, could you?" said Fenton, quizzically.

"Why, yes, if you thought he was innocent."

"Oh, yes, if I thought he was innocent I'd certainly say so. But under the circumstances I haven't got no opinion to express." And he winked violently and laughed uproariously. Like many another shrewd and successful Western lawyer, he was more conversant with the statutes than with grammar.

"How did you get him off?" I inquired.

"Well, I always thought I was pretty cute in that case," said Fenton, puffing mightily at a villainous cigar which seemed to serve the double purpose of smoking and chewing tobacco. "You see, it was this-a-way. They never was a more beautiful chain of circumstantial evidence brought ag'in' a man than ag'in' that same Bob Higbee. He was a young farmer livin' alone, and dead set on gittin' married. But he was a shif'less sort of a feller, and drank a little, and never saved no money, and several of the men in town was after him for debt. The girl's paw and maw, old Jim McCrae and his wife, said he couldn't never have the girl till he braced up and paid his debts and settled down. And the girl said the same thing. She was fond of him then, the girl was, but she believed in reformin' a man before, and not after, marriage. Finally it come to her refusin' to see him at all. He felt purty bad, Bob did, and went moonin' around, sayin' that if he could only raise a couple of hundred dollars to settle his debts and fix up his place a little, he'd brace up. But nobody in town had any money in the first place, and nobody was a-goin' to resk it on Bob Higbee in the second.

"'Long about that time a peddler named Jim Hicks disappeared. He'd been a-travellin' these parts 'n' years with his pack, and everybody knowed him for miles around. They said he carried all his money with him in an old wallet. Up to Judge Hawkins's house one day—Judge Hawkins is dead now—Mrs. Hawkins wanted to buy some tinware and hadn't no money in the house but a five-dollar bill. It was an old one that had got tore in three pieces, the childern havin' found it by accident, and Mrs. Hawkins had pasted it together with stickin' plaster, and the family 'd had a good laugh over it. When she said she hadn't nothin' but this bill the old peddler said he could change it all right, and, diggin' his hand 'way down into his clothes, he brought up an old leather wallet and took out a powerful big roll of bills and peeled off four ones and give 'em to Mrs. Hawkins, and took that patched-up five-dollar green-back.

"He went next door then, and found Mrs. Bates—she buried her third husband only the other day—just lockin' up her house to go callin'. She said she wanted to buy some of his things, but couldn't he come around the next mornin'? So he said he would. He said he'd come sure, 'specially as he expected to be in town for a couple o' more days.

"That night the peddler was at the saloon. Bob Higbee was there, and they got mighty friendly over their liquor, and finally nothin' would do but the old peddler must put up for the night at Bob's house. So, after a while, they traipsed along home, friendly-like.

"That was the last anybody ever saw of that there peddler. The next day Judge Hawkins met Bob on the street, and asked him when in tarnation he was goin' to pay back that money he'd loaned him. Bob r'ared back an' reached down in his jeans and pulled out a roll o' bills as big as a stovepipe almost, and counted out the amount to the Judge, as magnificent as a dook. One of the bills was that patched greenback, and the Judge spotted it the moment he laid eyes on it. When he quizzed Bob, Bob looked embarrassed, and admitted that he got it from the peddler; said the feller had lent it to him.

"The Judge was glad enough to git his money, and pocketed it and went on. That afternoon Mrs. Bates come over to his house, raisin' a great row because the peddler hadn't come as he promised. Nobody had saw him in town all day, either, and, havin' nothin' better to talk about, the people talked about the strange disappearance of Jim Hicks.

"That evenin' some boys comin' through a lonely piece of woods back of Bob Higbee's house found the peddler's old hat, and, hid under some brush, his pack of tinware.

"Everybody thought this was cur'ous, and the Judge, who was s'picious by perfession, egged the Sheriff on to investigate in the matter. Word was telegraphed around to all the neighbourin' towns, and in all of them the old peddler was a familiar—landmark, you might say; but nobody had saw him. And they couldn't find hide or hair of him. So they arrested Bob Higbee.

"Just a few months back another peddler had been found beaten to death in the woods not fur away. Bill Young was suspected of killin' him, but they could never fasten nothin' on him. Now, peddlers was a mighty useful institution in them days, and the people was powerful excited. There was so much s'picion concernin' Bob Higbee that many of 'em was in favour of lynchin' him and havin' it over with in short order. But the rest of us was afraid it would hurt trade and the reputation of the county to have a lynchin', and we argied against it, and finally carried the day, me bein' one of the most eloquent speakers.

"Well, what do you suppose? Blamed if Bob Higbee didn't come to me and ask me to be his lawyer! I hadn't had my first case yet, and he flourished the money in my face—the peddler's money, too, I suppose—so I couldn't do nothin' but accept.

"The other side worked up as pretty a chain of circumstantial evidence as you ever see. I couldn't help admirin' it myself; but I'd a little card up my sleeve that was better than a right or left bower or the ace of trumps, and that was a little joker of a technicality. The other side said they had proved a motive for the murder—the desire to git money, which Bob stood notoriously in need of; the peddler was last seen in the defendant's company; defendant was knowed to be a man of shif'less habits, his own 'ryansee' bein' unable to put up with his ways; furthermore, said defendant was seen with an unusual amount of money the day after the disappearance of the peddler, and one of the bills had been positively identified as bein' given to the peddler by Mrs. Judge Hawkins; an the prisoner could not satisfactorily account for how he come by it.

"All this was summed up in fine shape by the prosecutin' attorney, and made a powerful effect on the jury. He'd worked up his case with witnesses and everythin,—but I hadn't nary a witness. I hadn't more 'n two words to say in cross-examination; but when the time come to speak my piece, I simply riz up on my hind-legs, and said:

"'Your Honor, I won't waste no time pickin' little flaws in the argument of the learned counsel on the other side. Your Honor, I don't need to waste time pickin' little flaws, for there is just one big flaw that knocks the whole case out of court. He has worked up a fine cock-and-bull story about motives and the character of the prisoner at the bar, and he has went an' perduced the peddler's hat and the peddler's pack of tinware; but he has not perduced one hair off the head—or one inch of the hide—or one livin' soul that saw the dead body—of the peddler himself. In technical terms, your Honor, he has not perduced the 'corpus delicti,' and there is not one ioty of hard-and-fast evidence that Jim Hicks ever was murdered at all. Nobody seen him killed, and nobody has laid eyes on his corpse. Your Honor, I rest.'

"Well, when I finished my speech you could 'a' knocked the whole kit and boodle of 'em over with a feather. It was more 'n five minutes before you heard a sound. The upshot of it was that the Judge come around to my side of the case, and instructed the jury to bring in a verdict of not guilty. There wasn't no applause for the prisoner, I can tell you, and there was a lot of talk about givin' him a surprise party with a rope.

"Some of 'em even wanted to lynch me; and I can't say that winnin' that case ever did me much good, for Bob cussed me up and down for not gittin' him a honourable discharge, and my neighbours wouldn't speak to me for some months. They never would speak to Bob Higbee.

"His own sweetheart turned agin him, too. It broke her all up, and she was sick in bed for weeks; but she had a will of her own, and she never would see him, though she et her heart out for him and never married nobuddy else. She's livin' yet, doin' a lot of church work and settin' up with the sick and all those kind o' doin's; but her sorrer didn't sour her like Bob's did.

"Bob, he tore around town for days and days, trying to persuade his old friends that he was innocent. They wouldn't have nothin' to do with him, and finally he begun to shun 'em and drink himself to death. But he didn't have much luck at that, an' so he tried to kill himself workin' on his farm. He improved the property right smart, but finally got tired o' that, too. He let the farm go to the dogs. And now that the town has growed almost out to it, it gits valuabler and valuabler every year; but Bob, he don't care a dum—he's goin' to the dogs, too. They're his only friends. The old inhabitants of this part of the country won't speak to him, and he's never took up with the new-comers. He just sets out there smokin' his pipe and broodin' all day long like a hermit. He'd 'a' be'n happier, he used to say, if he'd be'n strung up; and he certainly has been servin' a sort of a life sentence in the penitentiary."

"And you believe that he was guilty?" I said, when Fenton had apparently talked himself out.

"Wa-al," Fenton drawled. "as I said before, it wouldn't be becomin' in me to express an opinion about an old client of mine. Of course Bob denied it at first—but every murderer does that until he half believes it himself. Now I guess Bob has give up all hope of ever persuadin' anybody that he was innocent; and I reckon he's about made up his mind that he was guilty and might as well let it go at that."

Then I left Fenton and went to the hotel to dinner—a fearful and wonderful conglomeration of meats and vegetables and desserts, all spread out before me at once, after I had vainly tried to understand the verbal menu recited at breakneck pace by a waitress who did not wait to hear my selection.

After giving this enormous hash a brief opportunity to digest, I mounted my wheel again and started back over the road I had come. I was soon looking ruefully at the steep hill I had coasted down so blithely. After pumping dolefully up the incline, and wondering why some genius had not invented a reversible hillside, I was at length impelled to dismount and trundle my machine.

Not far from the top I came upon an old man seated by the road, and mopping the inside of his hat and the outside of his head with a flaming bandanna handkerchief. On his back was a curiosity shop of tinware. At my approach he rose and asked me if I knew the way to Bob Higbee's place.

When I told him that I did, and that it was the next house over the brow of the hill, he heaved a sigh of delight and began to stumble along at my side. After vainly trying to learn much about my identity or destination, he began in desperation to enlighten me as to his. He informed me that he was a peddler, a fact which, with Scotland Yard perspicacity, I had already gleaned from the sight of his enormous pack, which, I guessed, could hardly have been carried for pleasure.

When the old man confirmed my suspicion of his trade, I tendered the remark that Bob's place had a rather unpleasant reputation as a resting-place for peddlers. He asked me to explain; and, feeling under no obligations to Bob Higbee, I told the story of his crime as well as I remembered it, making up and improving such points as were hazy in my mind. I was just finishing my account when we arrived before the inhospitable dooryard. Bob Higbee himself was leaning upon the gate, smoking his eternal pipe.

As Bob saw us he turned to move back into his yard; but the old peddler, who had received my story with an expression of dumb horror, now found voice to call Higbee's name aloud, and found strength to hurry toward him. Higbee turned back, and, holding the gate tight, as the old man fumbled at it to open it, demanded roughly:

"What do you want?"

The peddler answered with some indignation at the coolness of his reception:

"Don't you know me? I'm Jim Hicks. I've come for the money I loaned you years and years ago."

A look of rage flashed across Higbee's face.

"Go on!" he cried. "I don't want none of your jokes. Go on, or I'll 'sic' my dog on you." And he drew back his hand to strike.

But the peddler persisted:

"I'm Jim Hicks, I tell you! and I perpose to have you pay your honest debts."

"Why, I killed Jim Hicks twenty years ago, everybody says; and I've come to believe it myself. You can't fool me. I may have took your money, but I've paid for it by my sufferin' all these years."

And he would have torn loose the old man's claws from the gate, but the peddler caught new hold, and persisted in a shrill voice:

"But I need that money, Bob Higbee. What are you talkin' about killin' me for? That's no way to git out o' payin' your honest debts. What if everybody did say you killed me? That don't make it so. Don't you 'member that night I come to your house—we'd been drinkin' a little—and you was tellin' me your troubles and how you needed money; and I was feelin' very generous—whiskey-generous—and I pulled out my wallet and counted out a hundred dollars and give it to you, and you promised to pay me inside of a year, with interest; and I counted over what was left of my money, and I began to think, What's the use of peddlin' your life away for a lot of money you never spend? And that night I dreamed I was in the city of St. Loous, livin' like a prince; and I waked up jest as the birds was singin' for daybreak, and I took my pack and started out, cuttin' across a neck of woods, takin' a short cut to the railroad station, fer I was plumb determined to go to the city.

"Well, I got so blamed sick of that old pack that I hid it under a pile of bresh, and took out a new hat what I had took in exchange a few weeks back for some tinware; and I throwed my old hat away and went on, feelin' like a prisoner out o' jail. And I seen a freight train stalled on a up-grade, and I thought, Here's a way to save some money! And I sneaked around and got into a empty car when none of the trainmen was lookin', and gol-ding it ef I didn't get locked in and nearly starved to death 'fore I was let out, right in St. Loous. Well, I hadn't spent ten dollars of all my earnings when I met a feller what said he was goin' up to the Black Hills, prospectin' for gold; and we became pardners and went up there, and spent part of our money and had part of it stole. And sometimes I'd think I was goin' to be rich as a king, and sometimes I'd a'most have to eat my boots. And year after year went by, and everybody seemed to be havin' luck but me; and at last I give up a few weeks ago, an old broken-down man, and decided I'd take up peddlin' again.

"And I thought of the old district I used to travel, and come down here and bought a outfit. And then I begun to think of that hundred dollars I loaned you 'way back in the old days. I used to forgit it for years at a time; 'peared like I never could think of it when I needed it; and when I didn't need it, I couldn't write any more'n I kin read. But I need it powerful bad now, and I hope you won't go and try to do me out of my rights, Bob Higbee. I helped you in your hour of need, and now you ought to do the square thing by me."

The old man's garrulous treble had seemed to fall on deaf ears. An expression of utter stupor had come upon Higbee's face. When the peddler had ceased to run on and clung to the gate, staring anxiously into the other man's face, Higbee at length found words, but his voice had a far-away sound, and he said, half to himself, inaudibly:

"Then if you are Jim Hicks and you are here and alive, why it must be I never killed you; and it must be that I'm innocent; and that means that I'd oughtn't to have had all these years of loneliness and hell without no friends but dogs, and without a kind look for twenty years from a single human bein', not even from Sairey; it's poorty hard, hain't it?"

Again he sank into a stupor, and his dogs, wondering, rubbed against him and whined sympathetically.

Suddenly a fierce change swept over his features; he gave a wild shriek like a maniac. He wrenched the gate open, fastened like a catamount on the peddler, and started toward Memphis, hauling the old man after him.

I followed, amazed, and trying to assist the old man, who half ran and was half dragged at the side of Bob Higbee. Down the steep hill Bob rushed, stumbling as one running in the dark, but still hastening on until he had reached the square.

His dash into the town had attracted the attention of the sleepy villagers, and they followed him with a buzz if wonderment. When he had reached the square a crowd was quickly gathered, but he threaded his way through, answering none of the questions; and he mounted a platform where Fourth of July

orators were wont to harangue the rustics with fiery platitudes.

But never was so thrilling an oration delivered from that platform, and never so ardent a declaration of independence. The hermit and outcast of twenty years was throwing off the shackles of disgrace and standing forth a free man. He poured out vials of wrath, too. Some of the older citizens were still able to recognise the peddler, and they understood Bog Higbee's defiant rage, and forgave him all his bitterness, and, reaching up, seized his hand and wrung it. And three of the town's most honoured citizens walked up on the platform and put their arms about him before all the people, and tried at the same time to atone for their blind and ancient injustice, and to welcome him back and soothe away his rancour.

But he flung them aside, and stormed out the indignation of his bitter exile. He shook his fists at heaven for its part in the crime, and thundered his denunciations at the people who had disgraced him even until he had grown to believe himself guilty.

The crowd was beginning to wonder if the man whose mind had stood firm through a score of years of tragedy would be wrenched loose from its anchorage by this sudden hurricane of joy.

Abruptly, in the midst of Bob's tirade, he stopped short. He stared across, above the heads of the people beneath him, and then ran down the steps of the platform, and elbowed through the crowd, dragging the stupefied peddler after him.

Then everyone, turning, saw his destination; but I, a stranger among them, only noted that a plaintive little figure, a white-haired little spinster, had appeared outside the grocery store, with her arms full of packages. To her Bob Higbee ran. He stopped short before her, and whirling the old peddler out in front of him at arm's length, cried:

"Sairey! Sairey! here's Jim Hicks! the man they said I murdered!"

The little old maid's hands dropped and her parcels fell, spilling crimson apples and bouncing scarlet cranberries all over the walk. And Sairey McCrae collapsed, and would have dropped in a heap had not Bob Higbee darted forward and caught her.

He picked her up in his long arms as if she were a child, and stood there, exultant in his possession, a moment.

Then Fenton appeared, stepping out of the crowd, important with the knowledge that it was he that had saved the life of this man, and quite ready to prove that he had believed him innocent all the while.

"Better bring her in here, Bob," he said, laying his hand affectionately on the shoulder of the giant and ushering him into his office.

There was an anxious silence for a little time, and then a wild scream, the mingled voices of a man and woman re-united after years of separation, a strange, uncanny cry, in which long and bitter suffering was remembered and effaced and drowned in overwhelming joy.

A moment later Fenton tip-toed out of the office and closed the door softly behind him, and said, almost in a whisper:

"She's come to now, all right; but you can't tell whether she's laughin' or cryin',"

As the crowd was dispersing, old Mrs. Bates rushed up, and, seizing the bewildered peddler by the elbow, demanded:

"Where's then tin things you promised to bring me the next day? You're a nice one, you air!"

CHILDREN'S GAMES.

An appreciative notice in the "Daily Chronicle" (London) of a performance of children's games recently given in the grounds of the Hospital and Home for Incurable Children, Maida Vale, by some sixty children, wearing caps of white and print frocks of red, blue, and lilac, suggests the inquiry if there has been recorded anything concerning children's games in Ireland. We subjoin some extracts from the article referred to—

"Looby Loo, with which the performance began, and in which the players simultaneously go through a variety of actions in harmony with the words they sing, is supposed to have come down from antic dancing in honour of some deity. Our old friend, "London Bridge is Broken Down," is generally admitted to be very ancient. The first line appears in "Heimskringla," where a battle of London Bridge is described. How many little Londoners of the present day have played "Old Roger"?

Old Roger is dead and laid in his grave,
Oh! ah! laid in his grave.
There grew a good apple tree over his head,
Oh! ah! over his head.
When apples were ripe, and ready to drop,
Oh! ah! ready to drop.
There came an old woman a-picking them up,
Oh! ah! picking them up.
Old Roger jumped up and hit her a knock,
Oh! ah! hit her a knock.
For old woman went flipperty flop,
Oh! ah! flipperty flop.

One of the girls personated old Roger, a second the tree, and a third the old woman, while the rest by their singing described the action. Thus we had a repetition of the way in which primitive plays were sometimes staged. Then we were treated to a view of the three discourteous dukes who came a-riding, "with my fancy, fancy, tiddy ti tay," and who, having announced that "our will it is to marry," were invited to "marry one of us, sirs," whereupon they replied, "You are all too black and too blousy." Very naturally, the indignant maidens replied, We are good enough for you, sirs," and the dukes make amends by choosing three. It is said that this is the oldest game that children know, dating from a time when young men of one village went together to another place seek wives in a business-like way. "Oats and Beans and Barley" is believed to have originated at a time when wheat was not generally grown, for none of the old variants of the rhyme allude to that grain. The next game is less known to youngsters than most of the others. The words are supposed to have come from a ballad—

Isabella, Isabella, Isabella, farewell,
Last night when we parted,
I left you broken-hearted,
And in the green meadow
You were standing alone.
Choose a sweetheart. Farewell.
Take a walk, love. Farewell.
In the ring, love—farewell—
Put the ring on. Farewell.
Go to church, love. Farewell.
Kneel down, love. Farewell.
Take a kiss, love. Farewell.

Some people trace in these lines a suggestion from the extremely simple marriage ceremonies that used to prevail in parts of Scotland and are valid yet beyond the Tweed. Isabella and her fortunes having been dismissed, "When I was a Young Girl" was played. As old people know, if young ones do not, it is an expression of the tendency of children to imitate their elders, as appears from such lines as "When I had a husband." "When I had a baby," "When I did the washing." Then came "Round and Round the Village," as to which the learned have no doubt that it is an imitation of the dance-like procession that formed part of certain sacred festivals in the earliest times. "Poor Mary Sits a-Weeping" is familiar, and so is "Draw a Pail o' Water," though the words given below are fuller than the version familar to most children—

Draw a pail 'o water for a lady's daughter;
Her father's a king, her mother's a queen,
Her two little sisters are dressed in green.
Stamping grass and parsley, marigold leaves and daisies;
Sift my lady's oatmeal; sift it into flour;
Put it in a chestnut tree; let it lie an hour.
Give a silver pin and a gold ring.
One and a bush; two and a bush.
Please, young lady, come under my bush.
My bush is too high; my bush is too low,
Please, young lady, come under my bough.

Who but a student would imagine that in this delightfully-inconsequential rhyme there was a suggestion of ancient well worship? Yet wise men tell us that such is the case. It is written in Gomme's Ethnology and Folk Lore that dressing the well with flowers, endowing it with a cake, and with gifts of gold and silver, were all accompaniments of the adoration of wells, and that, moreover, a sacred bush often stood near. "Under the Greenwood Tree" having been played, the performance ended with "My Lady Greensleeves," the words of which were written before 1580. They are pretty enough to be quoted fully—

Alas! my love, you do me wrong
To cast me off discourteously;
And I have loved you so long,
Delighting in your company.

I bought thee petticoats of the best,
The cloth so fine as might be;
I gave thee jewels for thy chest,
And all this cost I spent on thee.
Thy smock of silk, both fair and white,
With gold embroidered gorgeously,
Thy petticoat of sendal right;
And these I bought thee gladly.

Greensleeves, now farewell, adieu!
God I pray to prosper thee,
For I am still thy lover true,
Come once again and love me.

To each verse there is the following refrain—

For oh! Greensleeves was all my joy,
And oh! Greensleeves was my delight,
And oh! Greensleeves was my heart of gold,
And who but my lady Greensleaves?

The only water power wheel in America driven by an artesian well, is at St. Augustine, Florida, and supplies power to a wood-working shop. The wheel is 16 feet in diameter, the well 6½ inches and 240 feet deep. Since the well does not supply power enough, however, a second well has been driven near by to reinforce the present one. The new well is 8 inches in diameter. The contractor first drove an 8-inch iron tube about 150 feet through the sand, when he struck bedrock. On drilling into this some 50 feet, water overflowed in considerable quantity, but it was not until he penetrated quite through the rock strata (about 100 feet thick) that the well gave a normal volume of water.

Genuine meteorites are curiosities highly prized by museums and scientific collectors. Prof. St. Meunier, of the Natural History Museum of Berlin, paid as much as £1 per gramme for a meteorite. It is, therefore, conceivable that sharp practices should be resorted to by dealers in scientific curiosities. A band of meteorite counterfeiters was recently captured and considerable evidence obtained of very curious and ingenious methods for seducing the gullible collector. The members of this band were Corsicans. It was their practice to obtain natural rock resembling meteorites as closely as possible and then to burn them in order to produce the black crust which is one of the earmarks of every genuine meteorite. The pieces of rock were coated with lampblack, dissolved in molten sulphur. It seems, however, that this method was so crude that the deception was easily discovered, and the men were forthwith arrested.

NOTES AND QUERIES.

THE ORIGIN OF IRISH NAMES—THE NOLANS.

(To the Editor of the "Dublin Penny Journal."

Ballinderry,
Tuam,
11th September.

Sir—I don't know whether you encourage correspondence relative to your statements as to the origin of families, but if you admit letters on the interesting subject, I would like to point out that the Western Nolans are certainly not O'Hoolahans removed from Munster to Connaught by Cromwell.

Donnell O'Hologhan, it is true, did occupy a castle close to Galway Town, in 1574 (vide Carew Manuscripts, Lambeth Place), but it is highly improbable that he was connected with the Nolans.

The Western Nolans came from the Barony of Forth—either that of Carlow or Wexford—long before the era of Cromwell.

Deaghnan Nolan, of the town of Galway, complains (1586) to the Privy Council that his ship was seized by pirates off the coast of Scotland (Dasent).

Thomas Nolan, whose Mayo Castle was attacked by the Bourkes (1589), is also styled Thomas O Nolan, Esq, in a Royal Commission of 1627 (State Papers). His eldest son, Gregory Nolan, Esq, of Ballinrobe Castle, was elected Agent for Mayo to the Catholic Kilkenny Convention about 1643 (Clanricarde Memoirs).

Gregory's property was confiscated by Cromwell. The two other descendants of Thomas and the son of Richard were amongst the 49 officers who fought for Charles II. John, a younger son of Thomas, is returned in the Strafford Survey as in hereditary possession of Enescrorn Castle (1632). This castle and the adjacent property had been the property of Thomas, who died 1628 (vide Sligo Inquisitions, 1629-33). Enescrorn Castle had originally been built by another native Irish tribe, the O'Dowds.

John was transplanted by Cromwell from Tirtnagh-Tyrawley and Kilmaine Baronies to Clare—Claremorris and Kilmaine Baronies—from him I descend.

The arms of the Nolans of the West, were before 1650, precisely or nearly the same as those of the O'Nolan chiefs of Fotharta, Richard Nolan, apparently the principal Burgess of Athlone in 1600 (State Papers), was a close connection (probably the brother), of Thomas. While our connection with the Barony of Forth rests only on the Arms, tradition, and some similarity of Christian names, it is absolutely clear that the Nolans were established in Connaught before the confiscations of Connaught.

The O'Hoolahan or O'Hollachain theory is a modern myth, unsupported by any evidence from the Books of Survey. It is probably founded on the fact that the initial Nox Nolan is very occasionally written V for the Eastern Nolans.

As the O'Nolans of Fotharta were stout fighters, particularly between 1320 and 1335, I, as one Western Nolan, do not desire to be segregated from their history. The O'Nolans lived in a flat country, and Desmond, Kildare, Ormond, Sir John D'Arcy, Lord Gray, and, I must add, Brine O'Brian, proved too much for them; some of the scattered fragments of the O'Nolans sought their fortunes westward, but have always asser ed their ancient connection with the Barony of Forth.—Faithfully yours,

JOHN P. NOLAN.

The tallest steel chimney in the city of New York was recently torn down. The stack, which was 18 feet in circumference, consisted of thirty sections, each weighing a ton. In taking down the chimney, the workmen rigged up a scaffold about 10 feet from the top. Perched upon this support, they punched out the rivets that held the adjacent sections together, and lowered the two sections, weighing two tons, by ropes connected with windlasses. The scaffold was then lowered to the next two sections, where the disjointing work was continued. The removal of the chimney was effected at a cost of about £400.

EUGENE O'CURRY.

BY EBLANA.

I.

"This mortal, call'd to join your choir,
Through every care and every grief,
Sought, with an antique soul of fire,
O'er all, God's glory, first and chief.
And next, he sought, oh! sacred band,
Ye disinherited of heaven,
To give you back your native land,
To give it as it first was given!"
—Darcy McGee's Requiem for Eugene O'Curry.

The county of Clare, part of the ancient Tuath Mumhain or Thomond, has been from the earliest times rich in the production of poets, bards, historians, and other literateurs, whose mission in life, from century to century was to preserve the records of their Church, the genealogies of their kings, and the heroic deeds of their brave Dalcassians.

A worthy successor to this long line of eminent men was one of the ablest and most industrious of them all—the subject of the present sketch.

Eugene O'Curry, or, more properly, Eoghan O'Comhraidhe, was born near Carrigaholt, in the south-west of the county Clare, in the year 1794.

The old Castle of Carrigaholt stands on the very brink of the River Shannon, which washes the southern boundary of the territory of Moyarta, or Magh Fearta—the Plain of the Graves—in which it stands. No doubt this name is due to the frequent wars which took place in this division of the ancient Corca Baiscinn.

O'Curry tells us that his father knew more about the place than any other person he had ever met.

He was the son of a farmer of the same name, and his youth was spent amongst the wild grandeur of the stupendous cliffs, extensive caverns, and natural architecture dominated by the great Atlantic, and which extends for many miles around his native place.

This, together with the fact that he worked on the farm notwithstanding a slight lameness, and despite the latter circumstance, ensured him the great blessing of a sound mind in a sound body, a condition much needed for the work that lay before him.

His studies he kept up so far as circumstances permitted, and to the utmost extent that the evil laws of the time allowed.

He cultivated especially the study of Irish history and Irish music, in both of which he became proficient.

Owing, however, to the agricultural depression of 1815, his family were ruined and scattered, he himself obtaining employment in Limerick as keeper of the Lunatic Asylum.

In 1825 he lost his father, who died at the age of 81.

But despite all these trials and struggles, he never omitted his favourite pursuits; and, ere he was aware of it, the clouds had begun to break.

About the year 1830 the Ordnance Survey of Ireland, which was being silently organised, commenced operations. The several departments included those of geology, meteorology, hagiology, history, topography, and antiquities. It was under the direction of Lieutenant Drummond, Sir Thomas Larcom, and George Petrie, with the assistance of a most able staff, which by 1834 included Messrs. O'Conor, O'Keefe, and Wakeman, James Clarence Mangan, that erudite scholar; Dr. John O'Donovan, and his wife's brother, Eugene O'Curry.

The work was accomplished partly in the office in Great Charles street, partly in the Libraries of Trinity College and of the Royal Irish Academy, and partly by journeying through the country.

O'Curry's share of the work was, first of all, the translation of Irish MSS.

An opening so unhoped for, yet so congenial as this, was a source of the most intense joy and delight to O'Curry.

He was the one man in all Ireland best qualified for the task, and, with all his well known modesty, he proceeded to commence the work with the utmost confidence in his perfect knowledge and ability.

Yet, as the writer of this sketch has it from a high authority, he was met at the very outset by a most unlooked-for and appalling check!

True, it was no dream. There before him and within easy access to him lay untold numbers of Irish MSS. of all ages and descriptions, but so interspersed were they with contradictions and signs of words not written, which had grown up through the necessity for expedition by over-worked authors ere printing was known or available, that poor O'Curry, utterly unprepared for, and even ignorant of such enigmatical writing, was so astounded, so suddenly grief-stricken, that tears blinded his eyes and coursed each other down his cheeks.

To anyone this would have been a disappointment; to O'Curry it was heart-breaking.

According to one of our legends, there have lain for centuries, and still lie in a Northern tumulus, enchanted warriors, ready equipped and armed, waiting for the magic hour to awaken from their long sleep, and spring into action for the delivery of Ireland.

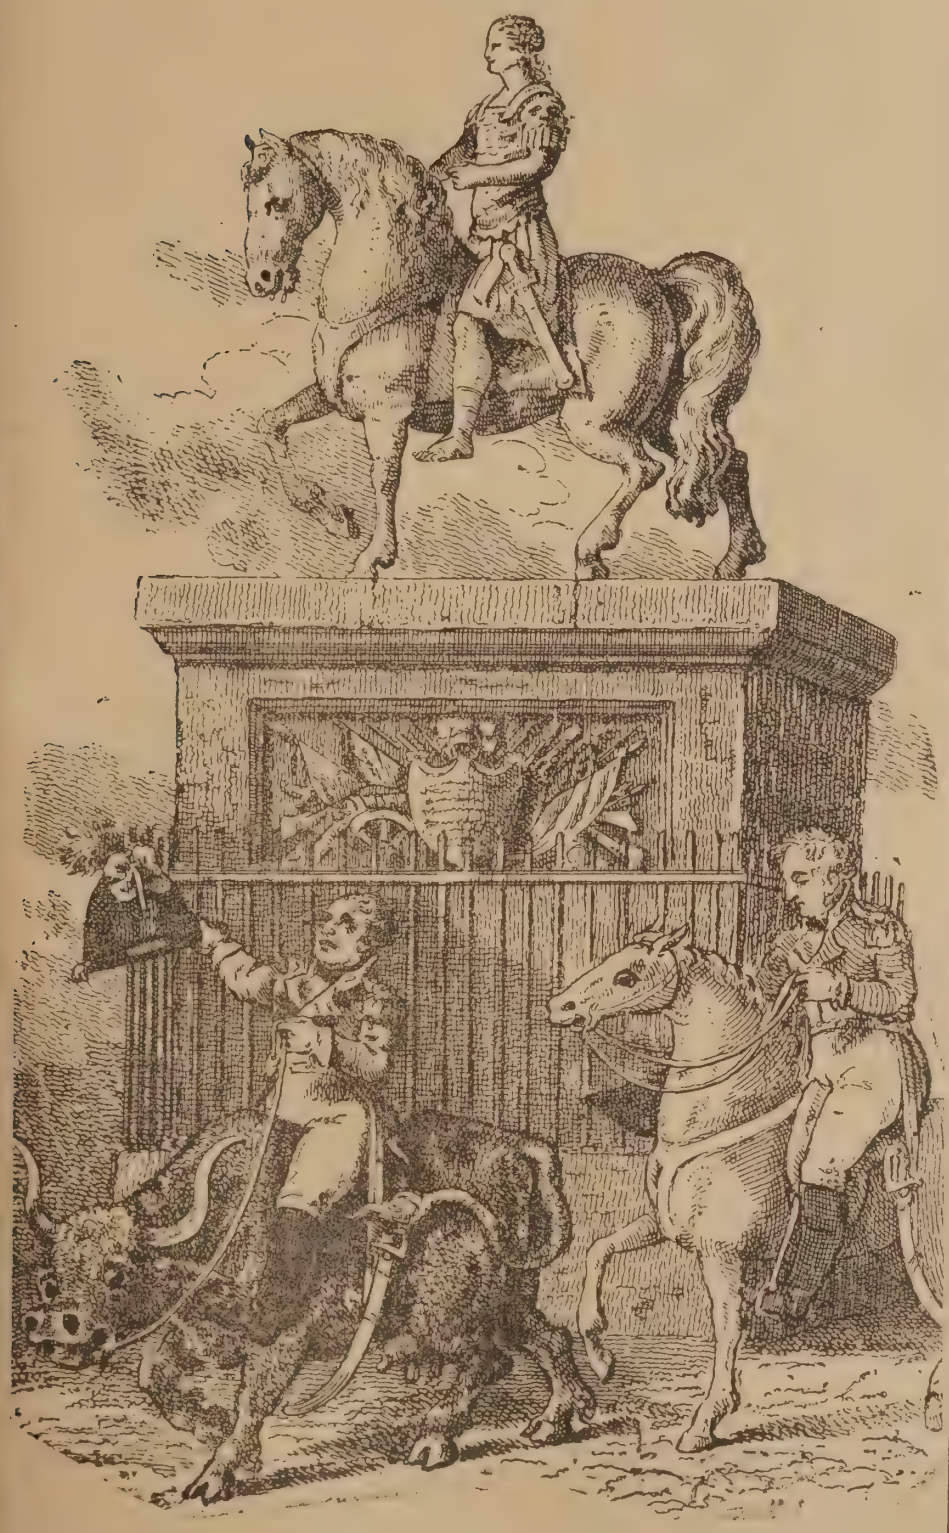
That prophecy has not yet been verified.

But something very like it seemed about to happen at this eventful period of O'Curry's career.

Here sealed up in the sleep of ages in countless Gaelic manuscripts, were the buried records, not alone of warriors and champions, knights and kings, but of saints, sages, bards, poets, ollamhs, scientists, artificers, artists, astronomers, musicians—all awaiting the touch of the magic hand to unloose them from their enchantment, and enable them to proclaim the glories of the past and the hopes of the future of their country.

The moment had come—and the man!—the first man for many centuries possessing the power, and the last man, perhaps, for as many centuries to come!

He had even entered upon his mission—had raised his magic wand; but, to his surprise and horror, it would not work! It seemed as if the enchanted would sleep on for ever. What fate was it that had always pursued his country at critical moments of her existence? Were the forces for her deliverance for ever doomed to torpor and oblivion?



His anguish was intense and painful to a degree. Only one thing was clear. It was now or never for the work. The now was the mystery—the never the appalling penalty of unravelment.

But O'Curry, amongst his many other endowments, had a special genius for overcoming difficulties.

He set to work with a will over the puzzle, determined to succeed. He was the only man

ANOTHER "WATTY COX" CARICATURE.

(From the Irish Magazine and Monthly Asylum of Neglected Biography, February, 1811.)

"The Two Majors, on Browney's Cow and Hevey's Mare, on a visit to King William."

(The two majors are Majors Sandys and Major Sirr.)

living that could even hope to accomplish it, but he did. His patience and research was rewarded, and he discovered the clue! That once found, all the rest was easy.

Then his work of the translation commenced. He was in his element. He regretted the want of a university education, but the galaxy of scholars into whose company he was now thrown, and the opportunity he acquired with the immense mass of Irish MSS. in Dublin, London, Oxford, and elsewhere, almost supplied the deficiency. In T.C.D. alone there were more than 140 volumes, some of them being vellum, and embracing a period of 600 years, besides the large collection in the R.I.A. They treated of history, laws, science, and commerce. Many were translated from Latin, Greek, and other tongues, and included the classics. O'Curry himself said of them:—

"Anyone well read in the comparatively few existing fragments of our Gaedhlic literature, and whose education had been confined solely to this source, would find that there are but very few, indeed, of the great events in the history of the world with which he was not acquainted."

O'Curry, accordingly, set to work at transcribing and translating, in the office and in the public libraries, while O'Donovan and some of his other confreres explored the several Irish counties in search of antiquities, in confirmation of the written accounts of the old records.

Owing to his lameness, this was not a branch of the work well suited to him, however congenial in other respects it might be. There were, however, two exceptions to this arrangement. The county Dublin was not too far from the city, and this district O'Curry took upon himself to explore.

Accordingly in May, 1837, he and O'Donovan proceeded together to the Dublin Mountains, and visited Glencullen. Thence they went to Ballybetagh, the Scalp, Kilternan, Carrickmines, Shanganagh, and Kingstown. These trips were made, every few days, sometimes with O'Donovan, sometimes with Williams or others, sometimes alone, and they lasted about two months.

Then another series of trips occupied him during August and September. They included Ballinascorney, Tallaght, Tibradden, Saggard, Ballybrack, and Glenasmol.

He was accustomed to write an account of the results of his rambles to Larcom, describing the antiquities he had met with, and what explanations could be gleaned in the neighbourhood, as well as any other interesting matter which came in his way.

In Glenasmol he met with an old man of 84, who spoke Irish, as did his sister Una, and who told him that 40 years before, very few there spoke English, and that he had known many who both read and wrote Irish. At one place there called Aill Mairin, or Maureen's Cliff, were very large ivy leaves, and O'Curry in his letter relates the Ossianic story connected with them:—

"Ossian complaining of St. Patrick's scanty fare, says that he would find a quarter of a blackbird in Glenasmol larger than his quarter of mutton, a quicken berry larger than his measgan of butter, and an ivy leaf larger than his griddle of bread."

O'Curry enclosed two of the celebrated ivy leaves, which, he said, though not arrived at maturity of growth, would yet afford a good specimen of the produce of the famous glen.

These two immense leaves are still preserved in the R.I.A.

The second series of peregrinations made by him were to his native county, as he knew it much better than did anyone else.

This was in November, 1839, and among

other interesting details, he corrects the erroneous impression concerning Cuchullen's leap. It was generally thought that the leap was made from Clare to Kerry, across the Shannon. But he points out the impossibility of such a feat, and in relating the story explains that Cuchullen leaped from Leap (or Loop) Head to Ballan na Leime, a little island about 50 feet out from it, and the very name of which confirms his assertion,

In 1839, this same year, the first volume of the Ordnance Survey was published. It treated of Londonderry, and was hailed with surprise and delight by the learned at home and abroad.

But the English Government took alarm, and refused to allow any further light concerning the past grandeur of a country which it had been their aim for centuries to suppress and brutalise. The work was admitted to be admirable; but the staff was discharged.

The late Very Rev. Canon Ulick Bourke says:—

"The vast amount of materials even then collected—it is said 400 quarto volumes of letters and documents relating to the topography, language, history, antiquities productions ,and social state of Ireland in the past and in the present—were stowed away into the Library of the Phœnix Park, and were subsequently, at least some, handed over to the guardian care of the Royal Irish Academy."

Yes, a few of the sleeping warriors, sages, and saints had burst their bonds, had broken the silence of ages, and proclaimed that the milennium of Erin of her deliverance was at hand.

But her jailors, who held the golden key which alone could unlock the cemetery gates, took alarm, dismissed the diviner and his rod, and decreed that no further resuscitation would be permitted.

However, it was not as before. Henceforth the spirits of the past seemed to permeate the very air of Ireland, and notwithstanding many discouragements as well from the silent apathy of its own people, as from the open hostility of its foes—the work of literary regeneration went gravely on, and the succeeding years almost vied with those agone in the number of eloquent voices and brilliant pens that have given us, as it were, limelight views of the lives and deeds of Ireland's long dead and almost forgotten children.

Some took up one branch of the work, some another. Some worked individually and independently, others in colleagueship with fellow-workers in the same cause. Catholic and Protestant clergy and the laity of both creeds, with every shade of political opinion, united in the congenial and delightful work, and their common country to-day enjoys the result, and needs but the liberty of profiting by it.

Notwithstanding this, however, the largest part of the work still remains to be done, even of the immense quantity of accessible MSS.

While the Ordnance Survey Commissioners were still at work, the Very Rev. Canon O'Hanlon, M.R.I.A., author of the "Lives of the Irish Saints" and many other works, contributed to them valuable information and assistance.

He likewise compiled a complete catalogue of the Ordnance Survey materials for county and parish histories, which were published in the Kilkenny Archæological Society's Journal.

In the introduction to his "Lives of the Irish Saints," he gives a very lucid and interesting account of their mode of work, and of O'Curry's zeal and industry, and supplies an exhaustive and amazingly copious list of the immense number of Irish MSS. stowed away in the British Museum, London; the Bodleian Library, Oxford; and also in innumerable places on the Continent—in Austria, Prussia, Bavaria, Switzerland, Italy, France, Belgium, Denmark, Holland, Saxony, Portugal, Spain, and Sweden.

O'Curry laboured apart from his work on the Survey. In 1836 he made a fac-simile copy for the R.I.A. of a genealogical MS. of Duald Mac Firbis. belonging to Lord Roden. If printed, it would cover over 1,300 quarto pages; and in '39 he made a beautiful copy of the Book of Lismore, a 15th century MS. of 262 pages. He made similar copies of the Book of Lecan and of the Leabhar Breac for Trinity College; and he also transcribed eight large volumes of 2,906 pages of ancient Irish Law Tracts.

In 1842 he commenced a large folio volume, which he described as "A Catalogue of the Number and Contents of Messrs. Hodges and Smith's Collection of Irish MSS."

Besides three large folio volumes of catalogues, he compiled two more volumes describing the Betham collection of Irish manuscripts. In all this learned Irish scholar and scribe compiled six large folios of catalogues of descriptions of all the MSS. in the R.I.A.

The Rev. Maxwell Close, at his own expense, presented two MS. folio volumes, compiled by O'Curry and magnificently bound, to the Royal Irish Academy, where they may be seen.

Besides these, O'Curry's Glossaries number over 25,000 separate articles.

In 1851 he made a translation with text of Irish poems, one of which was that composed by St. Cumin of Connor in the year 656.

He became a member of the Celtic Society, founded in 1853, and two years later it published a text and translation by him of two Irish tales, "The Battle of Moy Leana" and "The Courtship of Momera, the Spanish Princess," who became ancestress of the chief families in Munster and Connaught.

He likewise wrote 13 volumes of a rough preliminary translation in preparation for other works, so untiring was his industry.

He also transcribed, collated, and prepared for press the original Irish texts of the "Annals of the Four Masters," and of almost every Gaelic volume issued by the Archæological and Celtic Societies.

In conjunction with O'Donovan he prepared the ancient "Brehon Laws," and he had even collected a great deal of material for an Irish Dictionary.

At the instance of Dr. Todd, T.C.D., and President of the R.I.A., he investigated the habit of ancient bards of satirising rats, and even gave an instance of the kind in his father's time in his native place.

He visited the Bodleian Library, Oxford, with Dr. Todd, in 1849, and together they examined its rich collection of Irish MSS.

In that year also, and again in 1855, they paid visits to the British Museum, and examined the MSS. there.

O'Curry it was who compiled the useful MS. catalogue now in that Library.

There also may be seen two poems in Irish by his brother, Malachy O'Curry, who was a good Irish poet and scholar.

The writer has it on the same authority as before-mentioned, that the two friends utilised the occasion to pay a visit to Dr. Todd's brother, a Catholic priest in charge of a London parish containing many Irish inhabitants, who understood their native language.

The pastor announced their advent to his flock, as also to a much wider circle of Celts.

The result was that on a given Sunday an immense concourse of Irishmen, women, and children assembled to hear the great Irish scholar, who was to deliver a speech in their own tongue.

O'Curry realised their warmest anticipations, congratulating them on the possession of such a pastor, and the pastor in like manner on that of the flock, relating news of their beloved country, and the work that was being done there in furtherance of their interests, and filling them with hope for the future of their native land.

(To be continued.)

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

BANAGHER.

BANAGHER, a market and post-town (formerly a parliamentary borough), in the parish of Rynagh, barony of Garrycastle, King's county, and province of Leinster, 6 miles (N.W. by N.) from Parsonstown, and 64 miles (W.S.W.) from Dublin; containing 2,636 inhabitants. This town is situated on the side of a hill, on the south bank of the Shannon, just above the influx of the little Brosna river, and at the junction of the roads from Parsonstown to Cloghan and Eyrecourt. The bridge, connecting it with the Galway shore, is one of the oldest across the Shannon: it consists of several small arches with projecting piers, and is very narrow and inconvenient, but of great strength and solidity. Latterly, however, this bridge, which is supposed to have stood between 400 and 500 years, has shown numerous symptoms of decay: it completely obstructs the navigation of the river, to remedy which a canal with a swing bridge over it has been formed on the Galway side. Its military defences are very strong: on the King's county or Bangher side is a "tete-du pont" mounting three pieces of heavy ordnance, and about a ¼ of a mile lower down the river is a circular field work with six pieces of ordnance; on the Galway side to the right is a martello tower, and on the left a small battery. The inhabitants were incorporated in 1628 by charter of Chas. I., which empowered the corporation at large to send two members to the Irish parliament. The corporation was styled "The Sovereign, Burgesses, and Free Commons of the Borough and Town of Bannacher alias Bannagher;" and consisted of a sovereign and twelve burgesses, with power to admit freemen and appoint a recorder and other officers, but the corporate offices have not been filled up since the year 1800, when the borough was deprived of its right of parliamentary representation, and the £15,000 awarded as compensation was paid to the Right Hon. Wm. Brabazon Ponsonby. In the vicinity is Cloghan Castle, the seat of Garrett O'Moore, Esq., and one of the oldest inhabited castles in Ireland; and a short distance to the south of the town, near the banks of the Little Brosna river, are the ruins of Garry Castle, which gave name to the barony.

IRISH ECCLESIOLOGY.

OUR COUNTRY'S REMARKABLE MONUMENTS.

II.

Another piece of good advice is here given. "Keepe your monuments." Had this been always acted on, the noble circle of stones which formerly stood on Dalkey Common would not have been blasted and quarried for the purpose of converting them into an ugly and absurd Martello Tower. But to continue our chronicler's story:—

"Uter-Pendragon, seeing this, animated his company; they met, and manfully encountered; in the end Gillomer fled, and the Irish were discomfited. Uter-Pendragon marched on; they came by Merlin's direction to the place, and, beholding the hugeness of the stones, they wondered, yet they joyed that they found them. To worke they went, some with ropes, some with wythes, some with ladders, and carried them away, brought them to Britaine, and pitched them in the Plaine of Salisburie, which place is now caled Stonehenge."

The ridiculous story is gravely told by several historians of the sixteenth century. But that a stone, supposed to be endued with miraculous powers, was actually transported from Ireland to Scotland, and from Scotland to story of this travelled stone is as follows:—

On the celebrated Hill of Tara stood a pillar-stone, called the Lia Fail, or Stone of Destiny. On this stone the ancient Kings of Ireland were crowned, and it bore witness to the legitimacy of their majesties' title by roaring beneath them during the ceremony. This miraculous article the Scotch begged as a loan for the coronation of one of their own monarchs, who belonged to the Royal Family of Ireland. The request was granted at once in the most polite and friendly manner. A package, neatly made up, and possibly labelled, "With care—this side to be kept uppermost," was forthwith despatched to Scotland, and the Scotch King was crowned in the most orthodox and satisfactory manner. The Scotch people were charmed with the Lia Fail. It relieved them from the fear of a Caledonian War of Roses. No Northern York and Lancaster would ever come to blows with such an infallible referee within reach. Instead of plunging his native land into all the horrors of a civil war, and wading through slaughter to the throne, the candidate for the crown had but quietly to sit down on the Stone of Destiny. One roar, we presume, settled the succession. The Scotch naturally valued such a useful article of furniture as this was likely to prove in that age; in fact, they valued it so much that they, somehow or other, quite forgot to return it to the right owners. The Irish never saw their property again.

When Edward I. conquered Scotland, he carried the Lia Fail away with him to his own country, and deposited it in Westminster Abbey. Its travels terminated there; and it may be seen, to this day, in the seat of the chair in Edward the Confessor's chapel. Whether its miraculous power has remained, we are not in a position to say. We have, indeed, ourselves sat on it, in common with all other visitors to the Abbey; but, as we are not a legitimate sovereign, its silence on the occasion proved nothing. For aught we know, it may have roared on the 28th of June, 1838.

Now, it may seem strange that the Scotch should have been at the trouble of transporting a piece of Irish rock to the Abbey of Scone. It may seem no less strange that the English should have been at the trouble of transferring it from the Abbey of Scone to the Abbey of Westminster. But the best part of the tale remains to be told.

This wonderful stone—the stone on which the sovereigns of Scotland from Feargus Mac-Eark to Alexander III., and the sovereigns of England from Edward II. to Victoria, have actually sat at their coronations—this stone turns out, after all, to be as very a sham as any ever denounced by Mr. Thomas Carlyle. So far from the Stone of Destiny having made the tour of the Three Kingdoms, it never stirred from home all the while, and it is standing at this instant within an enclosure on the Hill of Tara, almost in the position which it originally occupied. It was Dr. Petrie who made the discovery that the precious stone in the Abbey is but paste. In short, it was a counterfeit Lia Fail which the Irish imposed on the Scotch as the original, and the result proved that the precaution was not needless.

We may here again take a lesson from the early Irish. We may learn by their example to take more care of our national monuments; and, as has been already remarked, we have such monuments scattered in profusion around us. "Ireland," as Mr. Wakeman observes, "is more remarkable, perhaps, than any other country of the West of Europe for the number, the variety, and, it may be said, the nationality of its ancient remains." Amongst these some of the most remarkable are the Cromlechs, popularly called Druids' Altars, or Giants' Graves—sepulchres, probably dating from a period anterior to the introduction of Christianity into this country, and in which have been discovered the skeletons of men who, in all likelihood, were among the first inhabitants of Ireland. Cromlechs are found in every direction around Dublin. There is one at Howth, one at Golden Ball, and others at Rathfarnham, at Killiney, at Cabinteely, all within a short drive or walk, and all well worthy of a visit. But if even these are too distant, there is one in the Phoenix Park, standing, it may be said, in our very streets. This cromlech was accidentally discovered nineteen years ago. Here was archaeology brought home to our doors—the mountain actually coming to Mohammed; yet how many of our citizens have ever seen that ancient sepulchre? It is in their own Park, close to their own houses, within the circuit of their daily walks, and drives, and rides; yet it might as well be in the remotest of the Orkneys for all the inhabitants of Dublin know of it. Nearer still are the Cathedrals of St. Patrick and Christ Church—the one affording an example of the purest first-pointed Gothic, in some respects almost unique; the other, with many defects, presenting excellent specimens of both Norman and first-pointed architecture. Yet how many among the congregations which fill them every Sunday bestow a single thought on their architecture? They might just as well be the ugliest barns which have ever been consecrated as parish churches.

With the exception of St. Audoen's, there are few other objects of much ecclesiological interest in Dublin. But at a short distance from it we have St. Doulough's, the most singular example of first-pointed architecture existing—one, too, which still continues to baffle the curiosity of antiquaries. Then there are the churches of Kilbarrack, Kinsaly, Kilternan, Dalkey, and Killiney—the round towers of Clondalkin, Lusk, Swords, and Rathmichael—and many other monuments which we have not space to recount. A short railway journey brings within reach all the wonders of New Grange, and the churches, round tower, and crosses of Monasterboice. Extend the drive a little farther and you see the famous Hill of Tara, with its singular raths and enclosures, where, after thirteen hundred years of ruin, the ancient city of Irish kings may still be traced—the remains of Bective Abbey, which combined, in a remarkable degree, ecclesiastical with military and domestic architecture—and the exquisitely beautiful ruins of the once magnificent Abbey of Newtown. Another line brings you to the churches of Killeshin and Rahan, the Abbeys of Jerpoint and Kilmallock, and the celebrated ruins on the Rock of Cashel. Castles, too, there are, as well as churches, though by no means so remarkable, nor in an equal state of preservation. For the last we have to thank Cromwell's cannon. Still there are some worth examining even in the neighbourhood of Dublin, as the Castle of Malahide, the Castles of Bullock and Dalkey, and the Castle of Drimnagh, near Templeogue. Drimnagh Castle is one of the most perfectly preserved of all the fortresses remaining in Ireland. But none of these can for a moment bear comparison with the majestic ruins of the once formidable Castle of Trim, which, owing to the facility afforded by railways, may fairly be numbered with those in the vicinity of the metropolis. The Castle of Trim would of itself repay a visit to a district rich in architectural remains, coming more strictly within the sphere of ecclesiology than heathen sepulchres or secular fortresses.

Our catalogue of objects of ecclesiological interest in Ireland might very readily be enlarged. Enough, however, has been said to show that it is not owing to the absence of such objects that so little attention has been hitherto given to the subject; and that the inhabitants of Dublin at least may, at little expenditure of time and money, see examples of almost every class of ecclesiological or archæological curiosities to be met with in any part of the Kingdom. If, however, we should be fortunate enough to induce any of our subscribers to set out on an exploring expedition, it is more than probable that at first they might be disappointed with the result of their travels. If they start with the expectation of finding a Fountains Abbey in every county, there is no doubt that they will be so beyond measure. There are, it must be acknowledged, few architectural remains in Ireland which, like so many in England, must command the admiration of even the most ignorant spectator. As a general rule, to appreciate the former, one must know something beforehand of the subject. It will not do to start with Mr. Wakeman's Handbook in our pocket, but without any knowledge of architecture in our head; to attempt, in short, to read before we take the trouble of learning to spell. We might as well hope to attain proficiency in the science of astronomy by going out and gazing at the stars, as imagine we can become acquainted with the science of ecclesiology by the mere act of looking at a church. And as the astronomer, who is able to investigate the motions, the magnitudes, and the distances of the heavenly bodies—who knows the laws by which their movements are directed, and the ends for which they were intended by God—derives more true pleasure from contemplating the stars than the man who only admires them as a spectacle, so the ecclesiologist feels a peculiar and distinctive enjoyment in surveying a beautiful specimen of architecture. Dr. Johnson might have said to an ecclesiologist, had such existed in his time, as he said to a friend with a strong taste for music, in which Johnson himself was deficient—"Sir, I envy you the possession of a sixth sense." Now, every man is not capable of acquiring a taste for music, but every man can acquire a taste for ecclesiology, and the more that taste is cultivated, both in and out of doors, the more gratification will it afford its possessor. But, like every other taste, except in some remarkable instances, it requires more or less cultivation.

To the true ecclesiologist a church is something more than a beautiful and picturesque building. With him it is closely connected with an earnest and deep sense of religion. He looks on ecclesiastical architecture as something more than a subject of amusement; it teaches him a higher lesson, and imparts a graver and more ennobling instruction. Like Shakespeare's exile, the ecclesiologist "finds sermons in stones," and regards with Coleridge, "a Gothic cathedral as the petrefaction of the

Christian religion." Without such feelings the study of ecclesiology loses a considerable portion of its importance. "To understand church architecture aright," says Paley, "and to desire the real pleasure and profit it can confer, we must comprehend its spirit as well as its privileges." And we cannot conclude these observations in a better manner than by quoting the following remarks by the same writer:—

"Mediæval architecture was not a mere result of piling together stone and timber by mechanical cunning and ingenious device. It was the visible embodying of the highest feelings of adoration and worship; the expression of a sense which must have a language of its own, and which could have utterance in no worthier or more significant way. And even as the soul quickens the body, which without it is but lifeless and helpless matter, so it is the hallowed association and the intellectual interpretation which alone imparts to the student of church architecture its full meaning and its true beauty."

[THE END.]

THE CHARGE OF THE FORD.

BY THOMAS DUNN ENGLISH.

Eighty and nine with their captain,
Rode on the enemy's track,
Rode in the gray of the morning—
Nine of the ninety came back.

Slow rose the mist from the river,
Lighter each moment the way;
Careless and tearless and fearless,
Galloped they on to the fray.

Singing in tune, how the scabbard
Loud on the stirrup-irons rang,
Clinked as the men rose in saddle,
Fell as they sank with a clang.

What is it moves by the river,
Faded and weary and weak?
Gray-backs—a cross on their banner—
Yonder the foe whom they seek.

Silence! They see not, they hear not,
Tarrying there by the marge;
Forward! Draw sabre! Trot! Gallop!
Charge like a hurricane! Charge!

Ah! 'twas a man-trap infernal;
Fire like the deep pit of hell!
Volley on volley to meet them,
Mixed with the gray rebels' yell.

Ninety had ridden to battle,
Tracing the enemy's track;
Ninety had ridden to battle,
Nine of the ninety came back.

Honour the nine of the ninety,
Honour the heroes who came
Scathless from nine hundred muskets,
Safe from the lead-bearing flame.

Eighty and one of the troopers
Lie on the field of the slain—
Lie on the red field of honour;
Honour the nine who remain.

Cold are the dead there, and gory,
There where their life-blood was spilt;
Back come the living, each sabre
Red from the point to the hilt.

Give them three cheers and a tiger!
Let the flags wave as they come!
Give them the blare of the trumpet!
Give them the roll of the drum!

The South Kensington Museum, London, has been presented with the famous Walsingham collection of micro-lepidoptera, consisting of 200,000 specimens, and upon the collection of which Lord Walsingham has been engaged for thirty years. The Walsingham collection is the largest and the most important in existence. It includes among others the famous Zeller collection, and also those formed by Hofmann and Christoph. The specimens embrace many of the originals selected as standard types by various authorities who have written on the subject.

COMMERCIAL ALASKA.

A million dollars a month is the estimate made by the American Bureau of Statistics of the present value of the market which "frozen Alaska" offers to the producers and manufacturers of the United States. By reason of the application of modern systems of travel and transportation, Alaska is now as accessible as Arizona. Three days of travel by modern ocean steamers for Seattle, among the islands and along the coast which form the south-eastern extension of Alaska, lands the traveller at Skagway; twelve hours by rail over the mountains carries him to the headquarters of the Yukon, where comfortable and well-equipped river steamers carry him to the goldfields of central Alaska or down the Yukon river, which is navigable for more than two thousand miles at this season of the year. From the mouth of the Yukon another comparatively short trip by steamer carries him to Cape Nome—the latest and greatest of the geld fields of Alaska. Gold, fish, and furs are the principal industries of Alaska at the present time; and their value to the United States is 15,000,000 dollars annually. The cost of Alaska was 7,200,000 dollars. The revenue which the Government has derived from it since its purchase amounts to over 9,000,000 dollars, and the value of the products is now twice as much every year as it cost. The total value of the products of Alaska brought to the United States since its purchase is (according to the best estimates that the Bureau of Statistics is able to make) about 150,000,000 dollars, of which 50,000,000 dollars is precious metals, 50,000,000 dollars products of the fisheries, chiefly salmon, and 50,000,000 dollars more furs, chiefly seal fur. Probably 50,000,000 dollars of American capital is invested in Alaskan industries and business enterprises, including transportation systems. In the salmon fisheries alone the companies engaged have a capitalisation of 22,000,000 dollars, and the value of their plants, including vessels, is given at twelve million dollars. In the mining industries there are large investments, the quartz mill at Juneau being the largest quartz stamp in the world, while several other quartz mills represent large investments. With the inflow of capital, the development of transportation systems, and the gold discoveries, have come the building of towns and the development of cities with modern conveniences of life. Nome City, which is located but a comparatively short distance south of the Arctic circle, has now a population of over twelve thousand; postal facilities have been so extended that the number of post offices is now about sixty, and mails are being regularly delivered north of the Arctic circle.

Agricultural opportunities in Alaska have until within a recent period been considered of but slight importance. As the country was explored, however, and its conditions of climate and soil studied, its natural products observed, and experiments made with various classes of agricultural productions, it became apparent that the agricultural possibilities of the country, and especially of the south and south-east, where the climate is modified by the Japan current, were of considerable importance, in view of the practicability of furnishing at least a part of the food supply of the population which the varied resources of Alaska seem likely to sustain and make permanent. Grasses for the support of cattle are abundant, and the experiments with live stock thus far justify the belief that this feature of the food requirements of Alaska may be furnished by the development of stock farms in the southern sections. In the north vast areas are covered with a moss similar to that upon which the reindeer thrives in other parts of the Artic regions; and in view of this fact, the introduction of reindeer from Siberia was begun a few years since, and has proved extremely successful, about three thousand now being distributed through north-west Alaska. The experiment has advanced sufficiently to justify the confident belief that the reindeer will within a few years prove an important feature in furnishing both the transportation and food supply of northern and north-western Alaska. The gross area of Alaska is, according to the 1900 census, 590,804 square miles. The Governor of Alaska in a recent report states that this is equal to the combined area of the twenty States of Main, New Hampshire, Verticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, and Tennesse.

AN EMPIRE OF NATURE.

VAST EXTENT OF CANADA WHERE THE WILD BEAST IS KING.

The vast extent of Canada, with its boundless possibilities, is, perhaps, not fully realised by the Canadian himself, says a writer in "Ainslee's Magazine." A man must needs travel the land, from north to south and from east to west, to obtain a correct idea of its capacity or its immensity. It contains within its boundaries 3,456,383 square miles, one and a quarter million of which are covered with forest growths.

From a point on the Atlantic seaboard some 200 miles north of the boundary line, reaching upward to the Arctic circle, and stretching across the continent to the waters of the Pacific, a vast forest, which contains a large variety of the most valuable trees of commerce, covers the land. The elm, ash, hickory, oak, beech, butternut, and hard maple of New Brunswick, Quebec, and Ontario, give place as the forest swings west and north, to the immense pine woods of the Ottawa and its tributaries. Then from Nipissing to the Lake of the Woods, the hummocky soil is covered with 1,000 miles of rugged spruce and fir, which gradually merges into the white poplar and silver birch of northern Manitoba. Farther west, where the warm chinook winds temper the winter's cold, a mightier growth clothes the Pacific shores—the snow-capped peaks of the Rockies uprear from amidst the grand trees of British Columbia.

This king of forests abounds with big game, and in its depths the old, old, struggle for existence goes on with unabated fury. Wild beasts and savage men contend for the empire of savagery. Through the glades of this hunter's paradise dashes the little jumping deer with the ferocious timber wolf in hot pursuit. From the timbered slough comes the snorting whistle of the charging moose. The great mallard, the little teal, the ubiquitous diver, and a score of other wild fowl blacken the waters of the inland lakes; the giant crane spreads his seven feet of snow pinions; the weird wailing of the solitary loon answers the solemn questioning of the night owl, while the rich honk of the wild goose rings from aloft as he speeds northward. In the silence of the night the long-drawn howl of the gray wolf thrills through the air hastening the steps of the belated lumberman; the wildcat shrieks in the woods; the coyote sits lonely on the glittering snow and mourns with the moon; and the pioneer awakes in the morning to find the mountain lion has made his kill.

There to the north of 53, the last of the voyagers live the free life of the forest. In the woods, or on the wide prairie, stands the Hudson's Bay Fort, with its stockade, its numerous storehouses, and its groups of silent Indians. The factor, the breed, the trapper, live, and love, and fight, and die, cheered in their passing by the mission father.

THE HISTORY AND ANTIQUITIES OF THE CITY OF DUBLIN.

FROM THE EARLIEST ACCOUNTS:

Compiled from Authentick Memoirs, Offices of Record, Manufcript Collections, and other Unexceptionable Vouchers,

By THE LATE WALTER HARRIS, ESQ.

IX.—(Continued).

A.D. 1690. Brass failing to answer the exigencies King James had brought himself into, a new contrivance was, just before the battle of the Boyne, set on foot, of impressing the last-mentioned stamps and inscriptions upon pieces of pewter, which were intended to be passed at the currency of a crown, and a proclamation was prepared for the purpose. But the success of King William's arms put a stop to that project, and, though really stamped, they were never issued.

The difference between these and the pieces before-mentioned were not only in metal, but those had on the breast and flank of the horse two small specks of copper, and the imperial crown between the scutcheons was also struck on a bit of copper. They were besides ornamented about the edges with this inscription: MELIORIS TESSERA FATI. ANNO REGNI SEXTI. These pewter pieces are a great rarity, and probably but few of them were minted, the action of the Boyne putting a stop to any further coinage of this sort.

April 18. Sir Cloudesly Shovel took a frigate out of the harbour of Dublin in sight of King James's army, in which was contained a great proportion of the plate and other valuable movables of the Papist nobility and gentry.

May 3. This year the governor of Dublin issued an order commanding all ministers and curates of the several parishes, and cures of the city and liberties to return to him a fair list of the names of all male Protestants and Dissenters, from the age of 15 to 80, in the several parishes and cures by the Thursday following, under the penalty of treating the disobedient as spies or enemies, and on the 18th of June he issued another order, requiring all Protestants without the said districts, who were not housekeepers, or who had not followed some lawful vocation therein for three months before, to depart thereout within twenty-four hours, under pain of death or imprisonment; and that all Protestants, not of the privy council, nor in the king's army, or actual service, shall deliver up within the said time their arms and ammunition into the stores, on pain of death. Further, that no Protestant presume to walk the streets from ten o'clock at night till five in the morning, nor at any time during an alarm; and, that no greater number of them than five shall meet and converse at any time, either in house, streets, or fields, under pain of death, or such punishment as a court marshal shall think fit. He also made many of the verbal orders death. But the battle of the Boyne, which happened on the 1st of July, put an end to these schemes, and King James was obliged to fly from Dublin, and soon after left the kingdom.

Oct. 7. An earthquake was felt in the city of Dublin, but no harm ensued.

A.D. 1691. In April, Mark Baggot was taken at Dublin in woman's clothes, and in May following was condemned as a spy and hanged.

July 12. Was fought the sharp and decisive battle of Aughrim, in which St. Ruth, the general, was slain, with near 7,000 Irish, and about 700 on the other side.

Aug. 17. One hundred and forty commissioned officers taken at Athlone, Aughrim, &c., were sent from Dublin to Chester as prisoners.

Jan. 19 following began a great frost, which held till the middle of February.

March 23. By proclamation the war in Ireland was declared at an end.

A.D. 1695, May 29. The coin was raised by proclamation, a louis d'or 21s., a ducat 6s. 8d., &c.

This year the four courts for the administration of justice were new built in Christ-church-lane, Dublin, at the charge of the crown, and the courts in the meantime were held under the Tholsel, where the merchants kept their exchange.

Oct. 2. Pursuant to an act of parliament, the rolls, records, papers, &c., relating to the acts of attainder and other acts in the late King James's time, were cancelled and publicly burnt.

Oct. 8. Was kept a day of thanksgiving in Dublin, for the preservation of his majesty's person, and the taking of Namur in sight of the French army, though 100,000 strong.

A.D. 1696, Aug. 4. A proclamation was published in Dublin for apprehending Henry Every, the pirate, and his crew, several of whom were taken.

Nov. 10. The William packet-boat, with two mails and about eighty passengers (among whom was brigadier Fitzpatrick, Mr. O'Neal, and many other persons of distinction), was cast away in a violent storm in Dublin bay, near Sutton, only the master and a boy saved.

A.D. 1697. The old parish of St. Michan's, Dublin, including all that part of the city on the north side of the Liffey, was, by act of parliament, divided into three parishes, viz., the New St. Michan's St. Paul's, and St Mary's, and churches were erected in each of the two latter by a tax on the parish.

This year Bartholomew Van-Homrigh, Esq., one of the commissioners of the revenue, and then lord mayor of the city of Dublin, obtained a royal donative of a collar of S. S. to the value of near £1,000, to be worn by the chief magistrate of the city, the former collar having been lost in King James's time.

This year, upon the commons address, his Majesty King William gave £3,000 to Trinity College towards enlarging it by some additional buildings.

Nov. 4. The peace which was concluded with France at Ryswick, Sept. 10th, was now proclaimed at Dublin.

A.D. 1701. The city of Dublin, in grateful commemoration of their late deliverance from Popery and slavery by the conduct of King William III., erected his statue on horseback in brass upon a marble pedestal in College-green, with the following inscription on the marble work:

GULIELMO Tertio;
Magnæ Britanniæ, Franciæ et Hiberniæ,
Regi,
Ob Religionem Conservatam,
Restitutas Leges,
Libertatem Assertam,
Cives Dubliniensis hano statuam posuere.

It was begun A.D. 1700, Sir Anthony Percy, lord mayor, and Charles Forrest and James Barlow, Esqrs., sheriffs.

Finished A.D. 1701.

Sir Mark Ransford, lord mayor.

John Eccles and Ralph Gore, Esqrs., sheriffs,

and was opened with great solemnity on the 1st of July, 1701, being the anniversary of the victory at the Boyne.

A.D. 1703, Aug. 12.—The city of Dublin gave a splendid entertainment to the Duke and Duchess of Ormond at the Tholsel, when the corporations marched through the city with their several pageants.

A.D. 1704. The Castle-market in Dame street was built on the old site of St. Andrew's-church and church-yard, by Alderman William Fownes and Thomas Pooley, Esqrs., and was on the 26th of July this year opened by the lord mayor, with proclamation and beat of drum.

The city marshalsea begun to be kept in a separate place from the marshalsea of the four courts in Bridge-street, Dublin.

Oct. 12. This year the foundation-stone of the city work-house, at the west end of St. James's street, was laid by Mary, Duchess of Ormond, attended by the lord mayor, recorder, aldermen, and sheriffs; the lord mayor, Sir Francis Stoyte, invited her Grace to a splendid entertainment prepared by him upon that occasion. Thomas Wilkinson and Robert Cheatham were then sheriffs.

[END.]

Four years ago the Belgian Government offered a reward of £2,000 for the discovery of a paste for matches, not containing white phosphorus, in order to mitigate the evil influences which the present manufacture of matches exercise upon the employees. The arbitrators, however, although they have tested several so-called harmless mixtures, have not yet discovered one that fulfils the required conditions, since all the mixtures so far submitted have been defective in inflammability, igniting on all surfaces, or, in igniting, ejecting inflammable matter containing poisonous substances. The matter is of supreme importance to Belgium, because match-making is one of the stable industries of the country, but the mortality in the manufactories is very high, the prevalent complaint being phosphorus poisoning.

LITERARY NOTES.

It is not often that the author of a play publishes a book of the same name on the day of that play's production. But this was done recently by Mr. Justin Huntly McCarthy in the case of "If I Were King."

✧ ✧ ✧

In an article in the September "Macmillan's," apropos of Sir Leslie Stephen's "George Eliot," Mr. W. A. Sibbald says: "Twenty years ago a literary plebiscite would undoubtedly have resulted in awarding the premier place among George Eliot's novels to 'Silas Marner.'" That is a suggestion, remarks the "Academy," which we have heard before, but we doubt its accuracy. It is true that the late Sir Walter Besant called "Silas Marner" the most perfect novel in the language, but that was an individual opinion which could not go unchallenged. We believe that at no time would serious literary criticism have given "Silas Marner" the first place, and certainly in popularity it has not equalled several of George Eliot's other works.

✧ ✧ ✧

We gather from a County Kilkenny contemporary that close on two thousand persons were present at the production of Mr. Standish O'Grady's Irish historical play "Hugh Roe O'Donnell," at Sheestown, in the demesne attached to the residence of Captain the Hon. Otway Cuffe, Vice-president of the Kilkenny Branch of the Gaelic League, one evening towards the end of last month. The play was produced by "The Neophytes," Cave Hill, Belfast, who, for a number of days previously, were encamped on the banks of the Nore, in the Sheestown demesne. The dramatis personæ were as follows:—Hugh Roe O'Donnell, Samuel Turner; Sir John Perrott, Gordon Parrott; Art O'Neill and Henry O'Neill (sons of Shane an Diomas), John Robinson and Fred Hughes; Dudall (owner of the ship "Popinjay"), Fred Hughes; Captain Bermingham, Art Kavanagh, and Sir Hugh O'Donnell (Lord of Tir-Connall), Philip Reynolds; Garland (Secretary to Perrott), Franciscan Abbot, and MacSwine's Seneschal, Herbert Hughes; Turlough O'Hagan (Lord of Tullahoge), and The MacSwine of Fanat, William Foster; The Lady O'Donnell (Eileen dhu), and The Lady Rose O'Byrne, Herbert Grant; Maplesdeane (the jailer), Harold MacDonald; Hostages in the castle, all the Neophytes; soldiers, drummers, etc., Kilkenny boys; horse boy, Davin; harper, Owen Lloyd; piper, R. L. O'Mealy; reciter of pedigree, Standish O'Grady.

✧ ✧ ✧

The late Mr. Philip James Bailey may be said to have been a man of one book. Since "Festus" first appeared he has written several poems, but most of these were ultimately incorporated in his great work. Mr. Bailey first conceived the idea of "Festus" in the early thirties, and most of the poem was written at his father's house at Old Basford, then a village just outside Nottingham. Here he spent three years on the work, and the book was published anonymously by Pickering in 1839. "Festus" at once leaped into popularity, and several of the leading literary men of the time cordially joined in the chorus of approval with which it was greeted. Bulwer called it "a magnificent production"; Thackeray described its writer as "an author of much genius"; while Tennyson said, "I can scarcely trust myself to say how much I admire it for fear of falling into extravagance." In America the poem ran[illegible] "caught on," and some thirty editions were issued there, against about half that number in England. For the American editions we believe the poet never received one penny. In its present form "Festus" is much longer than when it first appeared, its author having between 1864 and 1889 added some sixteen thousand lines to it. Mr. Bailey had been a pensioner of the Royal Literary Fund since 1856.

✧ ✧ ✧

C. K. S., of the "Sphere," prints the following interesting notes supplied to him by Dr. W. H. Drummond, who is now on his first visit to England. Dr. Drummond's work is perhaps hardly as well known over here as it deserves, though both "The Habitant" and Johnnie Courteau" have been issued in London:—"I was born in the West of Ireland, and came to the province of Quebec at ten years of age, in the year 1869, when the lumbering interest was at its height. I lived in a typical mixed-up village—Bord a Plouffe—composed of French and English-speaking raftsmen, or 'voyageurs' as we call them—the class of men who went with Wolseley to the Red River and later accompanied the same general up the Nile—men with rings in their ears, dare-devils, Indians, half-breeds, French Canadians, Scotch and Irish Canadians—a motley crew, but great 'river men,' who ran the rapids, sang their quaint old songs—'En Roulant,' 'Par Derriere Chez ma Tante,' and 'Dans le Prison de Nantes'—songs forgotten in France but preserved in French-Canada. Running the rapids with these men I learned to love them and their rough ways. As a boy I was always very fond of outdoor sports, fishing, shooting, etc., and have never 'lost touch' with the class of men referred to. I wrote a lot of stuff in the way of verse, but never seriously; and much of it became lost. Only a few years ago, on the advice of friends, I published 'The Habitant,' of which I believe some 35,000 copies have been sold. 'Johnnie Courteau' followed six months ago, and is also very popular."

✧ ✧ ✧

At a meeting of the Institute of Journalists held recently in the Memorial Theatre, Stratford-on-Avon, Mr. A. F. Robbins read a paper on "Shakespeare as a Journalist." Shakespeare, at one time and another, has been proved to have been most things, and it is not difficult to demonstrate that he had something of what we now call the journalistic habit, which simply means that he kept his eyes open to passing events, and made use of them as subjects or illustrations. Beyond that, he was as little of a journalist as Darwin. When Mr. Robbins comes to applying certain of Shakespeare's lines to journalism he is more interesting. We take the following from his address:—"Shakespeare has provided words of wisdom or description for all branches of journalism. The sub-editor, who is 'gone, in pity of his misery, to despatch his nighted life,' may appropriate those lines to himself, while from the paper for which he works may fairly come the remark, ''Tis fresh morning with me, when you are by at night.' The weeklies can tell their purchasers, 'You take your pennyworths now,—sleep for a week'; while the purchasers may reply to those who offer the greatest prizes and the largest insurances, 'Your pennyworth is good, and your goose is fat.' The ladies' journals, of course, will not admit the truth of the description—

'For we are soft as our complexions are,
And credulous to false prints;'

though the Society journal's editor must often have to exclaim, 'If, sir, you come with news from the Court, I take it there's but two ways—either to utter them, or to conceal them'; while the prescience of Shakespeare may be held to be further shown in some obvious advice, when races are proceeding, to the watcher of the stop-press and the artist of the 'fudge.'

'Let's teach ourselves that honourable stop
Not to out-sport discretion.'"

✧ ✧ ✧

In the current issue of the "Academy" there is an interesting article on "The Old and New in Ireland," the writer of which traces the beginnings of the Irish literary movement from its beginnings in 1892 down to the present time. Ten years ago (we read) all, or nearly all, the writers who have since done well—W. B. Yeats, George Russell, Standish O'Grady, Edward Martyn, Lady Gregory, and Douglas Hyde, were at work, but so obscurely that they were quite away from the eye of the general public. It is not easy to realise the change these years have made. In those days, if an odd undergraduate of Trinity felt a vague longing to know more of Ireland and her past than he could learn from his teachers or companions, he had to wander on Aston's quay and Bachelor's Walk, picking up ugly pamphlets with Grattan's speeches in them, or Davis's poems, or the true History of Ireland from before the Flood. If he wished to learn a little of the Irish language, and went to the professor appointed to teach it in Trinity College, he found an amiable old clergyman who made him read a crabbed version of the New Testament, and seemed to know nothing, or at least to care nothing, about the old literature of Ireland, or the fine folk-tales and folk-poetry of Munster and Connaught. In the libraries he could find a few books on the antiquities of Ireland that had interest and scholarship, and with a few other volumes, such as W. Stokes' "Life of Petrie," the antiquarian, he could make the beginning of an intellectual atmosphere for himself that gave life to Dublin. Most of the figures he called up were respectable students and scribes; but there were one or two men, like Clarence Mangan, who had the peculiar restlessness that goes everywhere with artistic life. Those days had the incitement of the early spring in Ireland when there are wild evenings that are filled with uneasiness and hope, because they promise everything and give nothing but their promise. Now everything is changed. We have fine editions of books by W. B. Yeats and other Irish writers in all our bookshop windows. One evening we can read the "Shadowy Waters," and catch a tenuous sadness, such as we find in "Aglavaine et Selysette," and the next evening we can go on to some new writer in the Irish language, and read some little work like "Faith and Famine," by Father Dineen, where we have vigour and talent, using a form and pyschology that recall the predecessors of Titus Andronicus or Tamburlaine.

✧ ✧ ✧

The "Academy" then asks what will be the influence of the Gaelic movement on the culture of Ireland? Will the Gaelic stifle the English once more, or will the English stifle the new hope of the Gaels? Our contemporary hazards the opinion that the latter contingency will occur, and goes on to remark:—"If, however, the Gaelic League can keep the cruder powers of the Irish mind occupied in a healthy and national way till the influence of Irish literature, written in English, is more definite in Irish life, the half-cultured classes may come over to the side of the others and give an intellectual unity to the country of the highest value. For the future of the Anglo-Irish writers everything is hopeful. The Irish reading public is still too limited to keep up an independent school of Irish men of letters, yet Irish writers are recognised, to some extent, as the best judges of Irish literary work, and it may be hoped that we have seen the last of careless writing addressed to an English public that was eager to be amused, and did not always take the trouble to distinguish in Irish books between what was futile and what had real originality and merit. Religious questions, also are beginning to put less restriction on Irish culture. Everywhere the Catholic population are becoming more alive to intellectual matters, and the harder forms of Protestantism are losing ground. There have been many fine scholars of this latter persuasion in Ireland, due to the influence of Trinity College, but as a class they have too often shown their kinship with the early reformers of whom Erasmus wrote: 'Evangelicos istos, cum multis aliis, tum hoc nomine praecipue odi, quod per eos ubique languent, fugent, jacent, intereunt bonae literae sine quibus quid est hominum vita?'"

SCIENTIFIC TOPICS.

It is said that by June, 1903, the Tehuantepec Railroad, across the isthmus of that name in Mexico, will compete with the Panama route and the American overland lines for a share of the shipments between the Atlantic seaboard and the Pacific coast.

✧✧✧

It is announced that a company has been formed, with a nominal capital of £175,000, for the purpose of operating the Armstrong-Orling system of wireless telegraphy. Factories are to be erected in Buckinghamshire and in France. The step is the outcome of experiments made in Hughenden in the autumn of 1901, when electrical impulses were sent through the ground without wires and without poles.

✧✧✧

Considerable prominence has lately been given in the press of the world to the fact that not a passenger on the English railroads was killed during the year 1901. It may prove of interest to know that on the Mexican National Narrow Gauge Road, from Corpus Christi through Laredo to the city of Mexico, with its branches amounting to more than 1,200 miles of operated road, for more than twenty years no passenger has been killed. This, in the face of the fact that this road climbs more mountains, and turns more curves than any road in the United States.

✧✧✧

Experiments by the American Government have shown that no matter what the process of cooking, meat loses a great deal of its bulk, owing to the evaporation of the water, which constitutes a large part of all flesh. This loss is greater in small pieces than in larger ones. In a lean piece of beef weighing from one to one and three-quarters of a pound, the loss of weight was 45.6 per cent., while in a piece weighing from five to five and three-quarters pounds, the loss was only 39.8 per cent. The loss of nutrition is not nearly so great, however, as that of the weight would seem to indicate.

✧ ✧ ✧

Most of the railroads reaching the recently developed oil fields in the south-western States of the Union are actively engaged in making the necessary changes, or have preliminary arrangements under the way, whereby oil will be used as locomotive fuel on the equipment operating locally in this territory. There is economy in the use of oil in comparison with coal in this district, where the cost of coal is above and the quality below the average, but just how much is as yet undetermined from reliable information. Conservative estimates, says the "Railway Age," place the saving at from 15 to 20 per cent. This reduction is not based on the relative cost of actually producing one horse power by use of coal or oil as fuel, but involves the comparative cost of the handling of both, and it is from this source that the greater proportion of the economy must be looked for, as in some instances the actual cost of the amount of oil used for fuel has exceeded the cost of coal in performing similar service. This may possibly have been due to improper combustion, but it illustrates the fact that care must be taken in the selection of the proper appliances for using oil to effect an economical consumption.

✧ ✧ ✧

The production of pig iron in the first half of 1902 was 8,808.574 gross tons., against 7,674.613 tons in the same period of 1901 and 8,203,741 tons in the second half of 1901. The production of pig iron in the United States for the first half of 1902 was more than a million tons greater than the production of either Great Britain or Germany during the whole year of 1901, the total production of these countries being 7,761.830 and 7,736.663 gross tons during that period. The production of Bessemer pig iron during the first half of 1902 was 5,105,932 gross tons, against 4,582,187 tons during the same period of 1901. The production of basic pig iron during the first half of 1902 was 1,053,274 gross tons, against 645,105 tons in the same period of 1901. Charcoal pig iron production for the first six months of 1902 was 186-098 gross tons, against 194,231 tons in the same period of 1901. The stocks of pig iron unsold in the hands of manufacturers on June 30, 1902, amounted to 29,861 tons, against 70,647 tons on December 31, 1901, and 372,560 tons on June 30, 1901. The total number of furnaces in blast June 30, 1902, was 286, against 259 at the same period of 1901.

✧ ✧ ✧

Prof. Bohuslav Brauner contributes to a recent number of the Journal of the Russian Physical and Chemical Society a paper on the position of the rare earths in Mendeleeff's periodic system of elements. After mentioning his experimental and theoretical work concerning the elements lanthanum, cerium, praseodymium, neodymium, thorium, etc., the author discusses the position of these elements in the periodic system, and the four different ways in which it may be attempted to place them in it. With Mr. Steele, of Melbourne, he comes to the conclusion that this group of elements represent a sort of node in the periodic system, between cerium and an unknown element which has the atomic weight of 180. This interperiodic group is a continuation of the eight series, which ends with the platinum elements; gold appears in such case as the first member of the ninth series, and not of the eleventh. In the twelfth series the first members are, probably, radium, thorium and uranium. This addition seems, in Mendeleeff's opinion, to deserve serious attention.

✧ ✧ ✧

Messrs. Thornycroft, the well-known ship builders, of Chiswick, London, have been carrying out elaborate experiments with a new oil engine, the invention of a Swiss engineer named Berthan, the patents of which they have purchased outright. The motor is specially adapted for small craft. In the ordinary oil engine the machinery has to be set in motion by outside means, generally by the application of manual power. In the Berthan engine reservoirs are placed beneath the seats of the launch, and while the engine is at work a proportion of the gas or vapour generated passes into them, where it is stored ready to start the engine the next time the boat is required. Another notable feature is the reversing gear. At present the system of reversing, where oil motors are used, is not to reverse the engine, but to shift the power from a cogwheel on the crankshaft to one bevelled another way, and by this means to alter the direction of the screw. In the Berthan engine a simple movement of a handle is all that is necessary, as this operation causes the propelling vapour to enter another set of valves, and in ten seconds the engine is working full speed in the opposite direction. The new oil motor occupies half the space of the steam engine. Power can be developed in ten minutes, as compared with half-an-hour which is required in the case of steam.

✧ ✧ ✧

Osmium has the highest melting point of any metal, viz., about 2,600 deg. C., and it can, therefore, be used at a higher temperature than carbon in an incandescent lamp, making the efficiency correspondingly higher. The lamp is the invention of Dr. Auer von Welsbach, and the Auer Company, who are making it, will shortly be letting out lamps on hire. Owing to the rarity of osmium, it is found worth while to employ the metal remaining in the filaments after they have burned out. The chief difficulty appears to be the low resistivity of osmium. Owing to this, up to the present lamps of 25, 35 and 50 volts only have been produced, and the smallest candlepower of a 35-volt lamp has so far been 40. Experiments have been made with a 20-volt lamp at different pressures. At 20.5 volts the lamp gave 22 candle power, and required 1.48 watts per candle. At 25 volts the efficiency rose to 0.99 watts per candle and the candle power to 46. At 30 volts the figures were 0.654 watts per candle and 99 candle power; at 35 volts 0.487 watts per candle and 171 candle power; at 40 volts 0.38 watts per candle and 275 candle power; and at 50 volts 0.32 watts per candle and 460 candle power. At this pressure the lamp burned out. A life test was made on another lamp at its normal pressure. This lamp required 1.5 watts per candle at the commencement, dropped gradually to 1.36 and 1.32 watts per candle, and finished at 1.4 watts per candle after 1,100 hours. During this time the candle power, which started at 14.8 rose gradually to 16.8 after 250, and then dropped to 15 candle power after 1,000 hours' use.

✧ ✧ ✧

One of the most important substitutions of electric for steam traction in Italy has been carried out by the Mediterranean Railroad Company upon a system of lines starting from Milan. The main branch goes from Milan to Gallarate, 25 miles, and thence start three separate branches which supply the Lago Maggiore region and have their termini at Arona, Laveno and Porte Ceresio, with lengths of 16, 19 and 20 miles. The Milan-Gallarate line passes through a densely populated region, and the traffic is constant throughout the year, while the three branches supply the tourist traffic, which is considerable in the summer and autumn. In order to meet the competition of the local tramway lines the company was obliged to change its system. Since the new system was inaugurated last October the passenger traffic has increased 50 per cent. The direct current system is used for the motors, and the trains have a speed of 50 miles an hour. The energy is supplied by a hydraulic and a steam plant on the Tessin, which generate 3-phase current at 12,000 volts, and this is fed to the line by substations of 650 volts. The third-rail contact system is used. The hydraulic plant, at Tornavento, is under construction. Meanwhile the road is fed from the steam plant. A fall of 25 feet is obtained here by a branch canal, which delivers 140 cubic yards per second, representing 11,000 horse power. The dam upon the Tessin is constructed upon the Poiree movable system, with 179 sections. The canal, which is over 40 feet wide and 12 feet deep, is navigable. The station has eight large turbines, which drive the alternators, and two smaller ones for the exciters. The main turbines generate 1,200 horse power and the dynamos 742 kilowatts. The steam plant will be used as a reserve when the hydraulic station is finished; it has eight boilers and three horizontal Corliss engines of 1,400 horse power, which drive triphase alternators. The latter give 13,000 volts at 25 reversals.

✧ ✧ ✧

From the station the current is transmitted by two main lines at high tension, and these supply the five sub-stations for the road, where the current is transformed to 420 volts direct current by sets of rotary converters. The third rail, carrying the current, is supported along the road every 12 feet upon earthenware insulators protected by a cast-iron cap, which receives the rail flange. The rolling stock consists of 20 motor cars and 20 trailers, of 55 feet length, having two first-class compartments containing 24 passengers, and two third-class containing 39. The cars have a vestibule at each end, in which is also the motorman's cab. The motor cars will hold in all 75 passengers, and the trailers 90; the former have four Thomson-Houston motors per car, which take current from the side rails by four sliding contacts. The express trains make a speed of 55 miles an hour, and the ordinary trains 20. The road started last November with 38 trains per day, but since January 42 trains have been running.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

WEDNESDAY, MAY 16.

The heinous practice, now too prevalent in this city, of kidnapping children in order to have them sent to the American plantations, is of the most alarming tendency, and calls loudly for prevention. No later than Sunday evening a woman was detected in Dorset street with a beautiful boy, gagged, and leading him off, but was prevented by two men who were eye-witnesses to the transaction; the woman was, however, suffered to depart without any punishmnet whatever. Surely no species of torture is adequate to the crime of those wretches, who, in a free country, and in the face of day, thus rob fond parents of, perhaps, their only child, and hurry it off to a land of savages, to the great affliction of its parents, and perhaps loss of the child's life, as those wretches care not how it is used when in their possession. If the magistrates will not put a stop to this worse than savage practice, it behoves every citizen to unite in order to stop the further progress of this alarming grievance, as he knows not how soon the case may be his own.

Never was any remark more truly or more humanely made than that of Lord Earlsfort, with respect to the City Marshalsea. And as the noble Judge so emphatically feels for the distress of the poor debtors in that prison, and as the public are so fond of relieving their miseries, we confide that we shall soon see its miserable inhabitants liberated—at least, those who cannot pay.

A strict adherence to the duties of office must insure regularity and success in every station of life, and the well-being of our fellow-citizens, so peculiarly depending on the due observance of the police, we cannot but express our abhorrence of the violence lately offered an active magistrate employed on a very laudable occasion, and most particularly on the Sabbath. Such an exertion was in the highest degree to be wished for, as riot, dissipation, and the most scandalous species of gambling, fraud, and profanation have too long existed in the city outlets with impunity; to give them a check was truly commendable.

THURSDAY, MAY 17.

Last Tuesday evening the election at Cavan ended, when on casting up the poll, a majority of 27 appeared in favour of John Maxwell, Esq., who was accordingly chaired in the usual form.

A Privy Council was held at the Castle on Monday after the rising of the House of Parliament, in consequence of a despatch from London; we have the pleasure of finding that the said Privy Council was on the subject of declaring our ports open to the full operation of the French treaty, a proclamation for the purpose having been since issued.

Sunday evening two gentlemen belonging to the garrison, having had some difference of opinion, met with pistols in the Horse-barrack; both were wounded, and one, it is feared, mortally.

We are informed, on the best mercantile authority, that by a very late alteration in the Spanish rates, Irish linens will henceforth be received into Spain on the same terms with those of the most favoured nations.

The certainty of matters being speedily settled with Portugal, has induced several of our merchants to speculate largely upon its consequences, and are, therefore, proceeding in several branches of manufacture, to prepare cargoes for that market. This pleasing prospect has occasioned the employment of many hands more than usual in the Liberty, particularly on the lower priced woollens, in which this kingdom can, and ever will, be able to undersell any competitors.

Some gentlemen we hear, in the neighbourhood of Belfast, where are extensive strata of the finest clay for the pottery business, and large quantities of which are yearly bought by English potters, and exported, have united for the very laudable purpose of engaging from England some knowing hands in the business, and establishing for it an Irish factery. One thing is manifest, that if the English potters can turn out a profitable trade, after being at the great expense of importing so heavy an article as clay from the North of Ireland, the pottery business must necessarily prove far more advantageous to us, who are in immediate possession of the raw material.

Garret Farrel was greatly bruised by a cart being overset upon him at Rathfarnham. Thomas Russel, riding a horse at Glassmanogue, the horse fell and dislocated his leg, and otherwise greatly bruised him. Robert Cooke, late of Clonmel, watch-maker, one of the debtors who made their escape from the Four-Courts-Marshalsea early on Tuesday morning last (by a rope suspended from the top of the wall), it broke when he got hold of it, when he fell from the top, by which his leg was broke, and his right knee shattered in a shocking manner, and was otherwise severely hurt; they were carried to Doctor Stevens' Hospital.

Last night the Turnpike Gates on Malahide road were cut down by some villains, who also fired two shots into the area of the house of Major Archbold, one of the Trustees of that road.

COUNTRY NEWS.

TRALEE, MAY 14.

With pleasure we inform our readers that on Friday morning last, between the hours of one and two o'clock, the noted offender, John O'Donnell, alias Sergeant O'Donnell, was apprehended near Abbeyfeale, in the county of Limerick, by our very active and spirited magistrate, George Gun, jun., Esq., who, on the evening of the same day, safely conducted him to his old lodging in Tralee jail, where he now lies loaded with irons. It is to be remembered that this unhappy man was a prisoner under sentence of transportation in August last, when he, together with seventeen or eighteen others, having made a breach in the arch on which the jail is built, and, with the most unexampled brutality putting the jailer, Patrick Hands, to death, effected their escape, and then dispersed into different parts of the country.

CORK, MAY 17.

Yesterday Catherine Hodnett, convicted of petit larceny, was publicly exhibited in several parts of the town, on our new moving pillory. This pillory has been constructed according to the orders of our Chief Magistrate, who in every instance has proved himself spiritedly determined strictly to have the laws executed. It has two wheels, and is drawn by a horse, the culprit placed quite erect, and the machinery goes on swivels so as to have the face viewed in every direction. This mode of punishment is not a mockery of justice as heretofore, but is serious and intimidating to all thieves, pickpockets, shoplifters, and perjurers; and another great good will accrue, that shopkeepers will become acquainted with such shoplifters as are thus exhibited, and be on their guard against them.

DUBLIN, TUESDAY, MAY 22.

Yesterday a petition was handed about the House of Commons, but not presented, from James Preston, Esq., commonly called Count Preston, eldest surviving brother of the late Lord Gormanstown, setting forth his innocence with respect to any knowledge of the suppertitiously taking away the minor out of this kingdom, and praying to be excluded from the penalties contained in the Bill now pending in Parliament.

So little has the late gold coin act taken place in the country, that the traveller who shall be so unlucky as to take money with him any ways deficient in weight, will find himself a considerable loser, at least to the amount of two shillings for a guinea, and a shilling for half a guinea. If the Commissioners of his Majesty's revenue would humanely order the collectors of each district to change gold at its real loss of weight, and then cut it as the Act prescribes, trade would be much benefited, the King's revenue experience increase, and the subject be freed from the most iniquitous impositions.

A few days since was taken by four of the petty constables of Stephen's green division two notorious offenders of the name of Goff; they made a stout resistance for a considerable time, having two bags of fat, which they had the night before taken out of a number of sheep. The persons of the police guard who stopped these villians deserve a liberal and permanent reward from Government. The Right Hon. the Attorney-General has held out the noble example by rewarding the men with no less a sum than 50 guineas; the names of the men who apprehended these villains are Thomas Morgan, William Edmonds, Peter Walsh, and Thomas Walker, belonging to the police horse. The exertions of Mr. Morgan ought to be recollected by the citizens of Dublin, for when a dangerous gang of highwaymen infested the vicinity of the metropolis (having hired his horses) he pursued in the course of a night, and apprehended four desperate robbers, who were brought to condign punishment.

On Sunday last a set of villains found means to break into the wardrobe of Crow street theatre, and from thence, by cutting a panel out of a door, made their way into a room belonging to the Shakespeare Tavern in Temple lane, out of which they took the table-linen used at Tholsel dinners, some large lacquered candlesticks, a number of books, and a quantity of valuable china. Mr. Loughlin, the owner of the tavern, was in the country on particular business the whole day; and, as the villains got clear off with their booty, it is not exactly known at what hour the robbery was committed; but by some theatrical dresses which they dropped, probably in the hurry of their departure, it appears that they had pillaged the wardrobe also. Mr. Loughlin yesterday gave notice to the Commissioners of Police; and as strict search is making after these daring freebooters, it is hoped they will be shortly apprehended and brought to justice.

As the continuation of the South Wall to the lighthouse is now going forward with the utmost despatch, we have every reason to hope that this work, which will be of such very great importance in both clearing and deepening the channel, and, of course, making it much safer for ships of burden, will be effected in a shorter period than what is generally imagined. In process of time this wall will be brought entirely across from the lighthouse to the land, a little above Irishtown, by which some thousand acres of ground will be gained from the sea, and the harbour will be very much improved in every respect.

DUHALLOW CASTLE, CO. CORK.

THE ANCIENT STRONGHOLD OF THE MacDONOGHS.
(FROM SMITH'S HISTORY OF CORK, 1774).

THE LORDS OF ELLA: THE MACDONOGHS OF DUHALLOW.

By WILLIAM F. DENNEHY.

Father Hogan, S.J., in one of the many copious and admirable notes with which he has given illustration and consecutiveness to the ancient "Description of Ireland in 1598" (1), which is still preserved in Clongowes Wood College, and which he edited and published in 1878, says:—

"Two of the McCarthies claimed to be McDonogh: Dermot McOwen and Donagh McCormac. . . . I regret that I could not find any pedigree of the McDonough Carthies." (Ibid, note, page 175).

Perhaps we may be permitted to endeavour to cast some light upon the origin and history of a family who in their day held no mean place among Irish chieftains, whose swords were never laggard in battle, who fought and lost and suffered in common with their fellows for the sake of faith and fatherland, and whose escutcheon, though supplanted in their olden halls by the banner of the stranger knight, was never dimmed by shadow of dishonour.

In order to clearly understand the matter now before us, it is necessary to recall the fact that the founder of the great clan Carthy was Carthach, Prince of Desmond, in the early part of the eleventh century. Cartach was son of Justin, king of Munster, and a direct descendant of the celebrated Oilioll Oluim. His son, Murcadhach, was king of Desmond, and his grandson, Cormac Muimhnach, was monarch of the Two Munsters. The son of this Cormac, Dermod Mor na Cille Bain, born in A.D. 1098, was in his turn king of Cork and Desmond. This latter prince passed through some various vicissitudes, and in spite of much warring lived to be treacherously murdered at the age of eighty-seven by the English settlers of Cork. Dermod was succeeded by his son,

(1) "The Description of Ireland and The State thereof, as it is at this present." In Anno 1598. Now for the first time published. From a MS. preserved in Clongowes Wood College. With copious Notes and Illustrations by Edmund Hogan, Priest of the Society of Jesus. Dublin: M. H. Gill and Son. London: B. Quaritch. 1878.

Donal Mor-na-Curradh, who won an important victory over the English of Limerick and Munster in A.D. 1196. Donal was followed by Cormac Fionn MacCarthy Mor, who, born in A.D. 1170, died in A.D. 1215, aged forty-five years. Cormac Fionn's third son, Dermod MacCarthy, was the first lord of Duhallow (2), and was succeeded by Donagh MacCarthy McDonogh, Cormac Oge, who died in 1380 (3). Donogh, and Donogh Oge MacCarthy MacDonogh, who signalised himself in 1486 by the incidents recorded in the following words by the "Four Masters":—

"The Barry More (of Cork)—i.e., John—the most worthy young man of the English of Ireland, was killed on Christmas Day by Donogh Oge MacCarthy(lord of Ella, he having gone to plunder him." (Ibid, page 308.)

In 1501 this redoubtable wielder of the sword and maintainer of the freedom of his clan was gathered to his fathers, and was succeeded by Cormac MacDonogh, who was alive in 1516 (4), and who was followed by Cormac Oge, who, in 1524, defeated in battle O'Conor Kerry, who, in his turn, had been tempted by the richness of the possessions of the MacDonoghs to invade them, and who, it is pleasant to know, suffered due punishment for his action, for his forces were routed, while he himself, sorely wounded, was made captive (5). The MacDonoghs were men to strike hard when urged by wrong to action, but none can scan their history without seeing that they were far oftener engaged in war for self-defence than for aggrandizement. Their record in this particular is far more pure than that of most of the Irish chiefs.

We read in the "Annals of the Four Masters," under date 1585, that—

"A proclamation for a Parliament was issued to the men of Ireland, commanding their chiefs to attend in Dublin precisely in May, for most of the men in Ireland were obedient to their sovereign. Thither came the chiefs of Tirconnell and Tyrone, O'Doherty, Lord of Innishowen; Macmahon, Prince of Oirgiall. Thither also went the two who were in contention with each other about the Lordship of Duitche Ella—namely, Dermod, the son of Owen, son of Donogh-an-Bhothair (the road), son of Owen MacDonogh, and Donogh, son of Cormac Oge, son of Cormac MacDonogh."

There can be no doubt but that by descent Donogh was the rightful MacDonogh, and that this Dermot who contended with him claimed what he had no right to. We have, however, sought in vain for any record as to how or when their conflict was decided; but that Donogh kept the lordship is undoubted, beecause we find that in 1589 MacCarthy Mor mentioned as one of those true friends who were ready to give bail for him, "Charles MacCarthy, son "and heir of Donogh MacCarthy, alias "MacDonogh, Chief Lord of the Countrie "of Duhallow, in Cork." (6)

Perhaps this is as good a place as any to mention that the MacDonoghs of Cork were in no way a branch of, or connected with, the MacDonoghs of Sligo—those of the latter country deriving their descent from the MacDermotts, and those of the former, as we have shown, from the MacCarthys. This name "MacDonogh," to the English spelling of which we have for the sake of clearness thought it as well to adhere, is, however, merely to Anglicise a name which to English ears and tongues must have been somewhat puzzling. The correct spelling of the name of the Lords of Ella was "MacDonnocha or MacDonnochaidh, pronounced Donnoghy" (7)—a pronunciation which has led in latter days to a still further alteration of the old Irish surname, when it became "Denahy" and "Dennehy."

MacCarthy Mor in a letter to Lord Burghley on the 16th March, 1594, speaks of a Dermod MacOwen MacCarthy, whom he calls "the young MacDonough," and as none knew better than Florence MacCarthy who was rightful Lord of Ella then, we may take it for granted that in the six years which had elapsed since 1589 Both Donogh and his son Charles had died, the heirship to the title and estates descending to Dermod MacOwen. This Dermod MacOwen was to be the cause of much anxiety to poor Florence MacCarthy during his imprisonment, and did not scruple during 1600 to lay claim to the title and estates of Mor (8), but in his belief it may well be urged that he raised no contention on this account until his good cousin, Donal MacCarthy, had first claimed the rank and land, and that both contended while Florence was buried in an English dungeon, and while they knew not whether he would ever return to his rightful territory. Dermod was son-in-law to Fitzgibbon, the White Knight. On the 13th August, 1601, that stern old warrior, Lord President Carew, wrote Cecil that Dermod MacOwen MacDonogh was "a gentleman of great land, of Florence's surname, his cousin-germane in blood, and married to his cousin-germane." Such a man was hardly likely to be regarded as a safe neighbour by the governors of the Queen's dominions in Ireland, and whatever chances he may have had in this respect had been utterly destroyed by the erection of "a strong and regular fortress" at Kanturk. This castle still exists, and has been thus described by a modern writer:—(9)

"Its plan is an oblong of one hundred and twenty feet by eighty, flanked at each angle with a square and embattled tower; the main building four storeys high, the windows small but numerous, and the window cases, the coignes, and the battlements all of hewn stone. This structure is believed to be the finest ever erected by an Irish chieftain; it stands a monument of the increasing taste for architectural improvement which begun to be experienced by a race who formerly has been signalised by turbulence and warlike asperity." (Parliamentary Gazeteer of Ireland, vol. ii., page 337).

Tidings of the work the MacDonogh was engaged in were quickly wafted to England, and the Lords of her Majesty's Council were soon sitting in anxious debate over "the regular fortress" of the Irish chieftain. The outcome of their consideration was the issuance of a mandate that the work of erection should be stayed. This order, all accounts agree in stating, MacDonogh obeyed. It may have been that he knew that the moment was drawing near when the olden warfare between the two nations would be renewed upon more equal terms than was then possible; that he saw no use in desultory or local insurrection; or that—and this we think the most likely supposition—the funds which paid the expenses of this great building were borrowed from a certain prudent English lender of whom we shall have more to say hereafter. Such a one dare not, unless he wished to risk the losing of his money, continue to aid in the erection of a building condemned by the English authorities. Whatever the reason may have been, MacDonogh did not proceed with the building of his castle.

In that bigoted and anti-Irish, although in some respects useful, work, generally known by the abbreviated title of "Pacata Hibernia," we find the following passage:

"You have already perceived that this cunning hypocritical Traytor (i.e., Florence MacCarthy) hath written Letters to the Arch-Traytors, James fits-Thomas, Tyrone, and Odonnell, and, besides, 'hath sent, or at least procured, Letters to be sent to the King of Spaine, moving and intreating him to invade Her Majesties kingdome: And now for a per a perclose of all you shall behold (Ne quid desit ad summan impudentiam) that hee might equall, if not exceed, the most impudent and barbarous Traytor; his letters sent to his holy Father, the Pope, the contents are as followeth." (Pacata Hibernia, vol. ii., page 308; Dublin edition of 1810.)

The letter quoted by the writer of the "Pacata Hibernia" was an humble supplication signed by O'Neill, Desmond, MacCarthy Mor, and MacDonogh, to the Pontiff, requesting him to exercise his deposing power in the case of Elizabeth, and assuring the Holy Father that her government was as bad as Pharaoh's, and worse to the Christians than that of the Turks. The historian of the conquests of the fierce old Lord President, after quoting this letter, every word of which was sad and sober truth, becomes quite excited, and exclaims:—

"I only will demand one question, whether that man which shall suggest that Her Majestie's subjects are in worse case than the Christians under the Turks, that Her Majestie's government is more tyrannicall than that of the Egyptian Pharaoh, that shall prefer suppliction into the Court of Rome to have his annoynted Prince excommunicated as an Heretike and deposed as an Usurper; whether this may bee adjudged to carie a loyall heart to that prince, or deemed worthy to live in that commonwealth?"

MacDonogh, no more than Desmond or MacCarthy, made any pretence of having "a loyal heart" for Elizabeth. They rightfully regarded her as the unrelenting foe of Ireland, of her faith, and of her people, and they only waited for foreign aid, and that high sanction which would help to bring this aid, in order to meet, blade against blade, and breast to breast, the soldiers of the false and brutal woman who sat upon the throne of England. The times, however, were those of a kind wherein men should act warily and prudently, no matter how keenly they might resent the seeming humbleness the part given them imposed upon them. Irish chieftains, as well as ordinary Irishmen,

(9) In Smith's History of Cork, published in 1750, there is a large engraving of this building.

owed something to those near and dear to them, and could not afford to disdain those arts of diplomacy which are even now as well as they were them, the ordinary accompaniments of politics. Time changes many things, and what we would now regard as unfair would not have presented itself in quite the same light to an Irish noble contending with Lord President Carew. But, in truth, MacDonogh's conduct in his transactions with Elizabeth's viceroy needs no apology. He was, beyond doubt, looking to the Spaniard for aid and asking from the Sovereign Pontiff that benediction upon his efforts against the imposition of heresy at the sword's point which the usage—to employ no stronger word—of Christendom justified him in seeking; but, nevertheless, he was educated sufficiently in the art of war to know full well that the few remaining independent chiefs could not, either separately or unitedly, contend with the stranger. They should have help, both men and gold, from beyond the seas ere they could meet in the open field the trained and tried soldiers who sustained the banner of England. There was another point—MacDonogh was in debt, and this to an Englishman. Until he could take his place in battle line with his countrymen he had to deal as best he fairly could with things as they were. Hence it is that we find the following record from the pen of Lord President Carew:—

"Dermod MacOwen, Lord of the Countrie called Dowalla—a man for wit and courage nothing inferior to any of the Munster Rebels—by his letters directed to Captain Roger, bearing the date the 26th aforesaid (26th August, 1600), made humble suite unto the President (Carew), that himself, MacAwley and O'Keeffe (Tributaries and subordinates to MacDonogh, who sought no grace for himself in which his friends could not participate), with all their followers, might be received into her Majestie's gracious protection, promising both for himself and them from thence forward to remain loyall and obedient subjects, and for the performance of same they would put in sufficient security, which humble suit the President not long after granted."

So we are told in "Pacata Hibernia," which, however, testifies to the manful bearing of the chieftain of Duhallow, even while he bowed to the fulfilling of the legal formularies which were necessary if he were to keep the rank his fathers left him or the lands they had ruled through so many years. The English set down a law or rule of their own making, and MacDonogh, because he should; obeyed it; but he scorned to lie, and made no secret of his hopes. Hear Carew's eulogist:—

"I may not here omit to relate unto you a passage which passed between Donogh MacOwen Mac Donogh aforesaid and the Lord President, when he was first taken in upon protection. He did not swear and protest he would remain a good subject; 'but,' said the Lord President, 'if the Spaniards invade Ireland what would you doe then?' 'Your lordship puts mee,' said hee, 'a hard question, for, if that should happen, let not your lordship trust mee or the Lords Barry or Roche, or any other whatsoever that you have best conceit of, for if you doe you will be deceived." (Pacata Hibernia, vol. ii., page 315).

Two months later the Spaniards (10) landed at Kinsale, and were speedily joined by Florence MacCarthy and MacDonogh, who marched with O'Donnell to join them. MacDonogh brought more than five hundred fighting men. There followed his standard three hundred and sixty kerne, eighty gallowglasses, and one hundred and sixteen cavalry soldiers.

There is no necessity to travel in these pages, at present at all events, over the sad story of the Spanish invasion and its disatrous results; suffice it to record that Dermod MacOwen MacDonogh, after doing all that a brave man might in order to avert defeat, shared the fate of his fellows, bared his wrists to English shackles, and bore the weight of English gyves. For full four years he rusted in captivity, until at last, in 1604, he made his peace with the Government of King James, who, by a letter dated at Westminster, 23rd July, 1604, restored him his freedom and his lands. This act of restitution was still further confirmed by letters-patent in 1615, and which are thus summarised in "Smith's History of Cork" (Vol. I., page 20):—

"Anno 13th of James I., letters-patent were passed to Dermot MacOwen MacCarty, of the town and lands of Keantwirk, Lohort, and divers other lands, etc, containing the greatest part of the territory of Duhallow with a chiefrie and other duties and customs out of the territories of Poble O'Callaghan, Poble O'Kief, and the lands of Donough-Oge, with the royalties of all waifes, strays, goods of felons, court-leet, and court-baron, view of frank pledge, etc., a weekly market and annual fair, with power to impark 550 acres, to have free chase and free warren throughout the said territory, and divers other ample privileges, to be held in free and common soccage of his Majesty's castle of Dublin. Dated at Dublin, June 6, 1615."

One would have thought that MacDonogh might now have rested content. After many risks of total loss, he was in full enjoyment of power and place again; he had only to remain a loyal subject of England, and before many years an English-given coronet would deck his brows, and English honours bless his forgetfulness of Ireland. It was not so, however. 1641 found him battling againt his olden foemen, and his kernes and gallowglasses ranged with those of O'Neill. His two brave sons were with him. The MacDonogh had taken sides again, and again it was the losing cause he championed. What followed may be told by the following extract:—

"Upon the first of February, 1666, it was certified by the Court of Claims that Sir Philip Perceval, knight, deceased, had lent more money to Dermont MacOwen Carty, alias MacDonough, upon the territories of Duhallow and manor of Kanturk, than they were worth; and that the said Sir Philip was in actual possession of them upon the 23rd of October, 1641. That the equity of redemption, which was of no value, was forfeited by the said Dermot's engaging with the rebels; and that Sir Philip Percival, bart., then a minor, grandson and heir of the said Sir Philip the elder, was legally entitled to the said lordship and manor." (Smith's History of Cork, vol. i., page 20.)

It may be observed that it was as creditors of MacDonogh that the Percevals claimed his possessions, and that it seems absurd to suppose that their seizure of these psosessions in satisfaction of a money debt could give them any right to the personal titles of the former owner; yet, in spite of this objection, they did assume all the honours of the ancient Lords of Ella, and even up to comparatively recent times did not scruple to hold them forth to the world as their own (11).

The new owners of the lands of Duhallow evidently felt uneasy as to the stability of their possession. MacDonogh had never had fair opportunity of having their money claim investigated. Judgment had gone in default, but default in such a case was no admission of debt. Therefore, we find the Percevals year after year making renewed efforts to secure their hold upon the fair territories they had seized. In 1667 they passed a patent for the lands to themselves and their heirs "for ever;" in 1675 they passed another patent for another eternity; and yet again in 1683 they sought legal sanction for a third perpetuity. "Uneasy lies the head that wears a crown," we all have heard, but how many declarations of right "for ever" give sanction to ill-gained ownership it were hard to tell. The Percevals, at all events, seem to have been in doubt, but people in their position might well be excused a sense of insecurity. They obtained grants of land forfeited by Irish Papists to the extent of one hundred and one thousand acres.

Although the actual ownership of the lands and castle of the MacDonoghs passed into strangers' keeping, the old family still retained hold on the hearts of the people, and the Percevals were only masters of the mere soil they claimed to have paid for. While all went fair with the English Crown, there was little chance of fair play for such as the lords of Ella, but when the shadows of misfortune came upon the last of the Stuart kings of England, things were somewhat altered, even though only for a time. James the Second, driven to Ireland by the plots of traitors and his own blunders, was compelled to seek to enlist the aid of the leaders of the Irish people. Ireland could no longer be held to the Crown of England by the English colony, for the English colony were rebels—rebels, at all events, to the legitimate king. On the 10th April, 1690, James issued a commission for applotting £20,000 per month on personal estates and the benefit of trade and traffic "according to the ancient custom of this kingdom used in time of danger." Of this tax one of the assessors for the county of Cork was "Charles MacCarthy, alias MacDonogh" (12). In the same year this Colonel Charles MacDonogh was appointed Governor of Cork; he was also a deputy-lieutenant of the county.

If proof were wanted that amongst the native inhabitants the MacDonoghs were still counted the rightful owners of Duhallow, the following letter, written on October 29th, 1690, by Lord Barrymore to

(10) Calendar State Papers, Ireland, 1603-1606. p. 187.

(11) In Lodge's Peerage of Ireland (1754), the titles of Perceval, Earl of Egmont, are given as "Sir John Perceval, Earl of Egmont; Viscount Perceval of Kanturk; Baron Perceval of Briton; Baronet and Lord Paramount of Duhallow, and of the Territories of Poble O'Callaghan and Poble O'Keeffe." Sir Bernard Burke, however, does not credit the Earl of Egmont with the titles of the defeated MacDonogh.

(12) Dalton's King James's Irish Army List, page 33.

the Duke of Wirtemberg, might well be quoted:—

"I have within these two days received a very humble petition from Colonel MacDonogh, Chief of the country called Duhallow, between Mallow and the County of Kerry, and of another Chieftain of a country called O'Callaghan, in order to obtain the protection of their Majesties. It is of great consequence to draw over people of their quality and interest who will bring with them over one thousand men and at least seven or eight thousand cows." (Clarke's Corresp. MS. T. C, Dublin, quoted in Dalton's Army List, page 868).

Thirty years had elapsed since the MacDonoghs' lands passed to the Percevals, and nearly one hundred since the Lords of Duhallow had leagued with the Spaniard, and yet, such was the potency of Celtic clanship, they could in their poverty have raised against King William double the number of men they armed againt Elizabeth. The submission of MacDonogh was reciprocated as might have been expected. The attainders of 1691 included his name. His kinsman, O'Callaghan, attainted too, carried his sword to Spain, and won high honour in the war of 1710. MacDonogh remained in Ireland, preferring honourable poverty in the land he loved to the choicest gifts of the stranger, hopeful for the coming of a time when peace and justice would reign anew in Ireland, and bequeathing to his posterity the recollection of the wrongs and losses of the Lords of Duhallow—a recollection, perhaps, only profitable now in so far as it throws some light upon some of the problems of the present.

TO ELODIE.

Nay, weep not! mid those orbs of light,
There surely is some world more bright—
A world of bliss,
To which our souls shall wing their flight,
When done with this.

And there, beneath its azure sky—
The pain, the grief of days gone by,
Will only seem,
To memory's retrospective eye—
Like a sad dream.

And thoughts and words to memory dear,
Which chilled by woe and sorrow here—
Have perished,
Shall surely be revived there,
And cherished.

And hope which cheered us on our way,
A transient flash—a meteor ray,
Yet fondly prized,
Will in those glorious realms of day,
Be realised.

Oh! when our spirits burst the chain,
Which binds us to this world of pain—
And from it sever,
How sweet in bliss to meet again,
And live—for ever!

A recent issue of the United States "Patent Office Gazette" contains thirteen patents on wireless telegraphy apparatus which have been granted to R. H. Fessenden, who is an expert of the Weather Bureau at Washington. Among the patents are included a device for signalling by magnetic waves, a current-actuated wave-responsive device, and also a conductor for wireless telegraphy apparatus. This is the apparatus employed by Mr. Fessenden in competitive tests of the wireless system which were made on the Carolina coast some little time ago. It was stated at the time that the results secured by Mr. Fessenden's device were superior to those of any other systems included in the tests.

THE O'NEILLS, OF SHANE'S CASTLE.

The interesting article republished in the "Dublin Penny Journal" of 26th July from a number of the year 1832, concerning this famous habitation, contains some inaccuracies, to which I am sure you will be good enough to accept these corrections.

In the first place, the author presupposed that the Earl O'Neill, at that time proprietor of Shane's Castle, was the only remaining descendant of the "once powerful family." At that time, indeed, the Earl O'Neill, second Viscount O'Neill, who died unmarried in 1841, had only one brother, John Bruce Richard O'Neill, who became third Viscount O'Neill and succeeded him in the possession of Shane's Castle, and died subsequently without issue.

Other branches of the house of O'Neill of Clannaboy, however, were, and are still, in existence, and one of them established in Portugal for nearly two centuries represents today, as it represented in 1834, the senior branch of the O'Neills of Clannaboy.

The pedigree of this family, and its connection with the Earl O'Neill of 1834, can be found in Burke's Peerage, as well as in O'Hart's "Irish Pedigrees," and we are aware that in the archives of the Portuguese family several precious documents of Irish origin have been confirmed and acknowledged by the College of Arms. Therefore it is clearly proved that in 1834, and in more recent times, the O'Neill family of Clannaboy is well represented.

But, in addition to this mistake, the author of the said article makes another, still more significant, when he sketches the origin of the O'Neill family, as follows:—

"The family of O'Neill are of Gothic descent, having sprung from Belus, a Gothic King of the Orkneys. They came into Ireland in the latter part of the 9th century, and were called Nial, O'Nial, or Hy Niall, which signifies a chief or prince,"

It is almost needless, now-a-days, to affirm how completely groundless and erroneous are such assertions, as the Royal pedigree of the house of O'Neill is known to-day in Ireland as well as the pedigree of King Edward himself, and anyone who takes an interest in these things can find the complete pedigrees of the O'Neill family from remote Pagan times down to its modern representatives.

Indeed, the pedigrees of the four great Irish monarchial families, namely—the O'Neills, the O'Connors, the Macartys, and the O'Briens, constitute, in the opinion of the best genealogists, such as Sir William Betham and Sir Bernard Burke, one of the noblest documents in genealogical history, and would alone suffice to place the Celtic nobility at the head of European aristocracy for antiquity of blood.

In the most concise form, the pedigree of the O'Neills, of Shane's Castle, as it is to be found in all Irish histories having authority, and as it is confirmed by the College of Arms, runs thus:—

1. Niall, of the nine hostages; 379-405, King of Ireland.
2. Owen; converted to Christianity; 465, P. †

33. Aodh; 1493, P. and P. C.
34. Constantine; 1492, P. and P. C.
35. Niall Mor; 1512, P. C.

† Note.—K. means King of Ireland.
P. Prince of Tyrowen.
P.C. Prince of Clannaboy.

This Niall Mor was the proprietor of Eden-Dubh-Carrig, now called Shane's Castle, and was the father of five sons, whose names appear in history in the following succession, and whose descents run thus:—

1st.—Hugh, who died P. C. in 1524, leaving two sons—Owen and Niall—whose descent is extinct.

2nd.—Brian Ballagh, who died P. C. in 1524, killed by Cormac MacQuillin, and is the ancestor of the O'Neill family, who settled in Portugal and have occupied high dignities at Court. (See Burke's Peerage, the Four Masters, and State Papers vol. II. apnd., A.C. 1580).

3rd—Niall Oge, whose posterity is extinct.

4th.—Felim Baccagh, who died in 1533, and does not appear to have ever been sovereign of Clannaboy. His son, Brian MacFelim, however, became a renowned chieftain, and settled in Shane's Castle under the same auspices. This castle was, till then, called Eden Dubh-Carrig; i.e., the brow of the black rock.

Brian MacFelim was succeeded by his son Shane, who was chosen by the English to be chieftain of Clannaboy, to the detriment of the elder branches, because "he was a modest man that spoke English." Shane rebuilt or restored the castle, and gave it its name.

This is, therefore, the origin of Shane's Castle. Shane's posterity is now represented in the female line by the present Lord O'Neill. The posterity of the 5th son of Niall Mor Murtagh is limited in history to his sons Hugh and Niall.

Your readers can judge by this short genealogical sketch—the elements of which are to be met with in any Irish History, such as the "Annals of the Four Masters," Mac Geoghegan's History of Ireland, Keating, O'Hart, etc., and in the State Papers—now erroneously the origin of the O'Neill family is attributed to "Gothic Kings of the Orkney Islands," an assertion that could only be made by one not acquainted with the history of this country.

A FRIEND OF OLD IRELAND.

The time-honoured rule that moss grows on the north side of a tree, a rule which forms part of every woodsman's catechism, and which he would no more dispute than one of the Ten Commandments, has received a few sharp blows from Henry Kraemer, of Philadelphia. An investigation which he has conducted shows that on 10 per cent. of the trees which he examined moss grew on the west side; 10 per cent. on the north-west side; 20 per cent. on the north-east side; 35 per cent. on the east side; and 25 per cent. on the south-east side. What becomes of the old rule after such iconoclastic investigation

OUR WEEKLY STORY

THE HINCKLEY CHINA.

The old Hinckley house was set well back from the road in the village of Dunham Center. From the small-paned windows of the house you could look across Skilling's Cove to the railway terminus where passengers for Bar Harbour left the train for the ferry-boats. The few passengers for Dunham trusted to chance to get "set across" to their destination. Generally these passengers were old residents, who were expected by their families, and were met by a small row-boat.

Dunham had had seasons of undesired activity. One year an enterprising young man had mortgaged his ancestral home, built a large wooden structure on Pratt's Hill, and advertised for summer boarders. A dozen or more hopeful persons had arrived, and the young man appeared to flourish, but only for a season.

The next year only three wanderers responded to his glowing advertisements, and it was said by the well-informed that the "table" was not all that summer boarders had a right to expect. At the end of three years old Mr. Hinckley foreclosed the mortgage he held, and the wooden box remained a blot on the landscape.

Then there came another year of possibilities. Gold was discovered at North Dunham. Big crushing mills were built. A small steamer made daily trips between Dunham and the railway terminus; a newspaper was printed; the wondering farmers sold their rocky acres cheerfully, and put the money into United States bonds; and in two years the gold had given out, and trusting stockholders were penniless.

Through these brief seasons of change old Mr. Hinckley kept on the even tenor of his way. He discouraged Enoch Pratt when the young man borrowed money to build the hotel; but he sold him groceries, and foreclosed promptly when the mortgage fell due. When gold was discovered he sniffed doubtfully, but brought his own rocky pastures to market, and added the money they brought to his already comfortable property.

But the hope that "folks would let Dunham be" was frequently expressed to his neighbours and customers, and he stubbornly refused to lease the hotel or to sign a petition of his townspeople for a steam ferry-boat.

"Dunham don't need no hotel nor no steamboat, and I don't want to live to see 'em," he would aver.

Mr. Hinckley's two daughters had married Dunham men, and were comfortably settled in homes of their own within sight of the Hinckley place. When Martha married Captain Silas Hall her father had given her a desk and bureau of solid mahogany, brought to Dunham from the Hinckley home in Connecticut. To Eunice, who married Abner Field, he had given money.

"Eunice don't value things as Martha does," he said, when the mother suggested that the old pink-and-gold china be given to Eunice, "and she can't have that china; money is good enough for her. I don't propose for any Hall or Field to have that china. I intend George to have that."

George was the only son—a mild, inefficient youth who helped in the grocery store or on the farm, and occasionally taught a district school in the winter. When his father referred to George as the prospective owner of the china and other valued possessions of the family, Mrs. Hinckley would smile cheerfully.

"There won't be any danger of his wanting them," she would say. "The girl who gets George will have to do the proposing;" and both the old people had a comfortable reliance upon their son, and an unspoken hope that he would be in no haste to wed.

But when George was twenty-five years old he married Olive Ward, a dark-eyed, buxom woman nearly eight years older than himself, and brought her home. His parents told the neighbours how pleased they were, but George sometimes wondered why his father looked at him in such a strange manner; and old Mrs. Hinckley locked the china-closet, which was, fortunately, in her room, and said nothing to Olive about the pink china.

It was toward the end of the first winter that Mr. Hinckley carried a silver pitcher, marked "Joel Francis Hinckley, 1784," to Abner Field's house, and secretly gave it into Eunice's keeping.

Old Mrs. Hinckley passed more and more time with her daughters. Olive was an active woman—"a born manager," her proud sister was apt to assert—and the older woman found little to do at home. Under Olive's influence George became more interested in the farm and in the store, and began to suggest to his father that "he take things easy."

At first Mr. Hinckley received these remarks as an evidence of his son's affection; but the repetition became irksome, and on one occasion he turned upon his son with a decision that remained unquestioned, and which reduced George to his accustomed place of "helper."

Olive did not make any claim to authority in the Hinckley home, but gradually old Mrs. Hinckley found that there was not work enough to keep two women busy, and she began to sit in her own chamber instead of in the family sitting-room. It was a large, comfortable room, with two western windows, near one of which stood Mrs. Hinckley's rocking-chair and a small round table.

The broad mahogany bedstead and the polished bureau were valued reminders of the family's early importance. The old lady frequently enumerated the valuables of the family as she sat there alone:

"Desk and bureau safe at Martha's; silver pitcher at Eunice's; Grandma Hinckley's pink china and silver spoons safe in my own china-closet."

Many of the neighbours congratulated Mrs. Captain Hall and Mrs. Field on their brother's marriage. "She takes all the care right off your mother's shoulders," they would say, and the two daughters assented cordially to their sister-in-law's virtues, although they sometimes confided to each other that they did wish "Olive would let mother run her own house!"

They noticed the lines coming about their mother's mouth, and the little appealing look that had come into the faded brown eyes; and Martha finally decided that she would watch Olive carefully, and, if need be, "father should be spoken to," for none of the Hinckley family questioned the power of Joel Hinckley in his own house.

A week after Martha's decision old Mrs. Hinckley hurried into her daughter Eunice's house full of trouble. Her very gown and bonnet indicated dismay. Her daughter helped her mother's trembling effort to untie her bonnet-strings, and tenderly smoothed the thin hair.

"Why, mother, you're all of a tremble! What is the matter?"

The old lady clasped her wrinkled hands over her daughter's plump arm. "It's Olive," she said, brokenly. "Olive, she's got the key to my china-closet, and she's using Grandma's pink china! She had her folks there to tea last night, and had the china all out."

"Well, I never!" Eunice's voice expressed surprised indignation. "Did she ask for them?"

"No, Eunice, she didn't. I was over to Martha's in the afternoon, and I didn't get home until they were sitting down, and when I saw that china I 'most dropped in my tracks. I didn't suppose Olive knew I had any dishes except those in the dining-room closet. I never spoke to her about the pink china, and I have kept the closet locked ever since she came into the house.

"She got the key out of the pocket of my blue gingham," continued Mrs. Hinckley. "O Eunice, she goes searching about whenever I'm out of the house; I know she does for I find my things meddled with; and there ain't a place in my own house where I feel welcome to sit except in my own bedroom. I haven't said a word, for I didn't want trouble with George's wife; but Grandma's pink china taken right away from me!" and Mrs. Hinckley began to cry.

Eunice wiped her own eyes sympathetically. "What I want to know is what my father says to such actions?" she questioned.

"Your father don't know, Eunice. If I should tell him how Olive has pushed me out of her way I don't know what he would do. You know George ain't to blame, and father would be severe on both of 'em."

"George!" sniffed his sister, scornfully. "I wasn't thinking of George. I suppose father saw the pink china?"

"Yes; and at first he acted about as I did, but before tea was over he spoke about it to Olive's sister Jane, told her how Grandma Hinckley's father brought it from France and gave it to her for a wedding present; then he praised Olive's cooking."

"Well, I never!" Eunice's exclamation was more forcible than before.

"And your father told Olive," Mrs. Hinckley went on, "that he wanted her to ask her sister's folks there for next Thursday to tea, and said he would be pleased if she would ask you and Abner and Martha and Silas, and he hoped she'd use the pink china and silver spoons; and Olive seemed real pleased, and said she would."

"Think of father asking if he could invite his own children to his own house!" exclaimed Eunice. "He's crazy!"

"No, dear, but father wants to live in peace," said the old lady, in a pathetic voice. "Old folks have to be patient with what they can't help," she added, meekly.

The two sisters passed an unhappy week. They saw no way to rescue their mother from their brother's wife except by an open rupture, which they both dreaded.

"I never thought father would submit to such an imposition," said Martha. "Look at all the fuss he stirred up when they tried to have a steamboat come here; and now to let George spend his property and treat mother as if she was a beggar! I shall speak to father and tell him what I think."

And Martha did speak to him. The old man listened with approving eyes. "You are a good girl, Martha," he responded, "but don't you worry about mother and me. We'll come out all right. You and Silas be on hand Thursday, sure, now!" he concluded, with as happy a smile as if he were bidding his daughter to a wedding feast.

"Father is losing his faculties," Martha announced to her husband that evening, as she told him of their conversation, and Silas nodded hopelessly. That Joel Hinckley, who had managed the town affairs of Dunham so nearly to his own liking, should be vanquished

by his son's wife seemed a sufficient proof of Martha's words.

The eventful Thursday found the expected guests assembled at the Hinckley house. Olive met Eunice and her husband at the door, and welcomed them warmly. For the first time during her reign there were visible signs of triumphant authority.

"Sister Jane will take your things," she said; and Jane, a robust, good-natured woman, delighted at the evident importance of her sister, came cheerfully forward.

Martha and Silas were late in coming. They had stopped at the store for Mr. Hinckley, and the three had walked silently down the lane together. "You treat Olive well, Martha," her father said, as they went up the steps; and, for the first and last time in her like, Martha looked at her father with contempt.

"It's like a funeral," Eunice whispered to her sister, as they greeted each other.

Old Mrs. Hinckley did not appear until Olive called her from her own chamber; but she came into the dining-room in state, leaning on her husband's arm. Both the old people were carefully dressed in their best, and Mr. Hinckley greeted Jane and her sons cordially, and shook hands with Olive's brother, a smart young sailing-master whose schooner had arrived in the harbour that day.

Mr. Hinckley glanced over the table appreciatively. "I tell you, Olive, you can set a table about right," and Olive beamed, well pleased that the entire family should hear her praised.

"I believe she could run a hotel and make money," he continued, turning questioningly to her brother, and the young sailor responded heartily:

"Indeed she could, sir; I never knew Olive to fail yet." And he nodded to his sister, who sent him a little glance of reproof.

Mr. Hinckley again told the story of the china, and then, turning to Olive, he said: "I don't know, Olive, as George has had a chance to tell you his plans yet, so I may have a surprise for you."

"He's going to give her the pink china," said Martha, audibly, and Olive smiled hopefully.

"Of course we know," continued Mr. Hinckley, "that you and George don't plan to stay here with us all your lives, that you want to be earning a home for yourselves, and mother and I won't stand in your way. George," and the old man's voice grew sharp as he turned toward his son, "you can tell the folks what your plans are."

George did not look at Olive, and he spoke somewhat indistinctly, but his father's eyes were upon him, and he did not hesitate. "I am going to open the old hotel for summer boarders. Father has got the railway company to promise to run a boat across to connect with all the trains, and he thinks I can do well."

There was a moment's silence, and Martha reached for her mother's hand under the table, and squeezed it affectionately. Eunice was the first to speak.

"Well, I'm real glad for you, Olive," she said, "and if there's anything I can do in the way of helping you to get ready, you just call on me."

Sister Jane's congratulations were even more cordial, and Olive's brother declared that it was "fine"; that Dunham would be another place with a hotel and a steamboat, at which Mr. Hinckley winced visibly.

"How soon are you going to move?" questioned Captain Silas, anxiously; and George responded, "Father thinks I had better get settled right away."

"You see, I thought it would be pleasant for Olive to have a sort of a farewell party," remarked Mr. Hinckley, "and I expect that is why mother wanted her to use the pink china. You see we never use this china except on important occasions," and the old man looked at Olive smilingly.

"Now, Olive, I'll help you with the dishes," urged Eunice, as they rose from the table; but Olive refused sullenly. For once her plans had come to naught. From the very pinnacle of her ambition as mistress of the Hinckley house she had fallen to the level of a pensioner on the Hinckleys' bounty; and she moved about the big kitchen with revengeful thoughts.

In the sitting-room evident peace and goodwill reigned. Olive's relatives were pleased and flattered to have been invited to a family gathering, and they looked upon George with more approval than he was accustomed to receive. Martha confronted her father with a whispered "Well done!" at which the old man chuckled responsively; but she could not refrain from adding "Steamboat!" apprehensively, at which his smile vanished.

When the guests left the house that evening it was old Mrs. Hinckley whom they thanked for her hospitality, and it was she who urged the young sailing-master to come again. Martha and Jane walked down the lane together, while Eunice followed with Olive's brother. Captain Silas and Abner Field walked more slowly behind them.

"We've had a real good time," said Jane, heartily, "but poor Olive felt so bad to think she broke your mother's pink china teapot!"

"What!" exclaimed Martha.

"It slipped right out of her hands into the sink," concluded Jane, impressively.

MEMORY.—A FRAGMENT.

While others sweetly sing
Of lights from memory cast,
Which heavenly radiance fling
O'er the pleasures they have past,
Be mine to tell the sadness she brings,
When her weary flight she steers,
O'er the waste of cheerless years,
And deep in bitter tears—dips her wings.

Age, in her peaceful vale,
Where tranquil joy still dwells,
May smile to hear the tale
That memory sweetly tells,
Of pleasures, which, in youth we have known:
But joyless is the lore
That memory hath in store,
Of pleasures, which no more—are our own.

For, memory grief renews,
When I think of joys gone o'er,
As the shipwreck'd sailor views,
From the tempest-beaten shore
The barque that bounded, once, o'er the wave:
Or the mother, whose chill tear
Trickles down, if she hear
The name of baby dear—in the grave.

—L.

We learn from the American "Bookman" that the following books have been in the greatest demand in the States during the past month:—

The Virginian. Wister.
Mrs. Wiggs of the Cabbage Patch. Hegan.
The Mississippi Bubble. Hough.
Dorothy Vernon. Major.
Ranson's Folly. Davis.
The Hound of the Baskervilles. Doyle.

It will be noticed that only one of these, and that the last in popularity, hails from England. Not long ago things were just the other way about. America seems determined to supply her own literary needs, at any rate in the way of fiction.

SOME OLD SHIPS.

Investigations recently made show beyond a doubt that the oldest warship extant is the "Victory," Admiral Nelson's flagship at the battle of Trafalgar. The "Victory" was launched in 1765, and is now 137 years old. She has passed many a year tied up to her dock at Portsmouth, and the tooth of time has left its destructive mark upon her. Not so long ago the British Admiralty spent a considerable sum of money in saving the old ship from ruin. As a general rule, the lifetime of a ship built of the very best materials scarcely exceeds 120 years. To be sure, there are exceptions. Perhaps the most remarkable of these is the case of the whaler "True Love," of Hull. The "True Love" was a barque of 248 tons, and was built in Philadelphia in 1847. After she had sailed for a few years under the American flag, she was purchased by an Englishman and converted into a whaler. When she was 97 years old, old enough to be retired, she still voyaged to the Arctic Ocean. After changing hands once again she was still in active commission for forty-four years as a carrier of wood in the Baltic Sea. Finally, after an active life of 139 years, she succumbed to the inevitable axe. Still another hoary ship was the sailing vessel "Betsy Cains." The exact date of her launching is not known. But it is definitely recorded that in 1688 she bore the name "Princess Marie," and had the honour of carrying Prince William of Orange to England. She was then used for a time as a pleasure yacht by Queen Anne. After her period of royal usefulness had passed, she was sold and rechristened "Betsy Cains." Her end was pathetic. She was shipwrecked at Tynemouth in 1827, after she had carried the English flag uninterruptedly for 139 years. A long life was also granted to the three-masted schooner "Three Sisters," a contemporary of the "Betsy Cains." She had taken part in 1689 in the siege of Londonderry. At the beginning of the last century, after she had attained the respectable age of 130, she was still voyaging in the Irish sea. In an account —of old ships the brig "; Brotherly Love," which carried Capt. Cook on many a notable voyage should not be omitted. After a service of 140 years she sank in a collision in the harbour of Hamburg. In November, 1892, the Danish ship "De Tree Sostrene" cast anchor in the harbour of Dundee. Some curious person hit upon the idea of looking up the history of the vessel. The investigation proved that the Danish ship was built in 1772 in Rudkjobing, and was at that time 120 years of age. The "Success," which voyaged from one English port to another, was launched in 1789. As late as 1895 she made a voyage to Australia, and later crossed the Atlantic Ocean. An investigation carried out some time ago by the shipping register officials of Great Britain showed that on their books were recorded twenty-four English ships over a hundred years old, and thirteen over ninety-five years old. A ship twenty-six years old was reckoned "middle age." It is, of course, difficult to ascertain what is the maximum term of service of a steamship under the most favourable conditions. It is remarkable, however, that of the steamers built from 1815 to 1830, not a single one seems to be in existence. This is, perhaps, due not so much to a lack of endurance in the steamship as to the fact that the cost of running a modern vessel is less than that of an old-timer. The oldest vessel of the English merchant fleet is the sidewheeler "Sir Charles Ogles," of Halifax, built in Dartmouth in 1830. The oldest English iron steamer is the Cardiff ship "Swift," which is now 71 years old, and is still in active service.

EUGENE O'CURRY.

BY EBLANA.

II.

When the Catholic University was founded, O'Curry was appointed, unsolicited on his own part, to the Chair of Irish History and Archæology. He even felt timid about accepting it, as he says that his studies had always been of a silent kind—he was engaged in underground work.

However, he was induced to yield by the Rector, Dr. (afterwards Cardinal) Newman, and other distinguished persons.

The time and opportunity had now arrived for utilising the rich store of knowledge he had been for years acquiring, and which his connection with the Ordnance Survey in particular had placed in his way. He prepared a course of lectures on "The MS. Materials of Irish History."

Having paid a tribute to previous labourers in the field, who had done much in particular directions, O'Curry said:

"Still the great sources of general historical and antiquarian knowledge lay buried in those vast, but yet almost entirely unexplored compilations which to my predecessors were inaccessibly sealed up in the keeping of the ancient Gaedhlic, the venerable language of our country. It is the first effort made to bring within the view of the student of Irish History and Archæology an honest, if not a complete, analysis of all the materials of that yet unwritten story which lies accessible indeed in our native language, but the great body of which—the flesh and blood of all true history of Ireland—remains to this day unexamined and unknown to the world."

In his first lecture O'Curry described the disastrous effects on Irish MSS. through the drowning and burning of them by the Danes and after their expulsion by the conflicts of the natives with their Anglo-Norman invaders, who likewise burned immense numbers of these valuable records, added to which, the old practice of copying and of adding to them was suspended.

It had been even found necessary by the invaders to enact penal laws against the Irish language and literature, especially during the reigns of Edward III. and Henry VIII. Nevertheless, as O'Curry said: "Not only the old Irish nobility, gentry, and people in general were lovers of their native language and literature, and patrons of literary men, but even the great Anglo-Norman nobles themselves, who effected a permanent settlement amongst us, appear from the first to have adopted what doubtless must have seemed to them the better manners, customs, language, and literature of the natives; and not only did they munificently patronise their professors, but became themselves proficients in these studies, so that the Geraldines, the Butlers, the Bourkes, the Keatings, and others, thought, spoke, and wrote in the Gaelic, and stored their libraries with choice and expensive volumes in that language."

Still the statutes in force had gradually had their effect; but it was not till open force was superseded by the more subtle arts of intrigue, bribery, and derision that the sinister ends of the enemy succeeded.

Even so late as the close of the 18th century the possession of an Irish MS. was sufficient to make the owner a suspected person, and often occasioned his ruin.

This has come down almost to our own day, according to Professor Sullivan and Canon Bourke, who say that "an Irish MS., in the reigns of Queen Anne or of George I. and George II., was, if found, much more dangerous for an Irishman than the possession at the present day of a revolver or a rifle without licence in a proclaimed district," and that "the yeomanry became willing instruments in the hands of a destroying power."

O'Curry said:—

"With such various causes, active and long-continued, in operation to effect its destruction, there is reason for wonder that we should still be in possession of any fragments of the ancient literature of our country, however extensive it may once have been. And that it was extensive, and comprehended a wide range of subjects—justifying the expression of the old writers who spoke of 'the hosts of the books of Erinn'—may be judged from those that have survived the destructive ravages of invasion, the accidents of time, and other causes;" and adds that "if we judge the value and proportions of the original literature of our Gaelic ancestors—as we may fairly do—by what remains of it, we may justly be excused the indulgence of no small feeling of national pride."

In all, he delivered twenty-one lectures on this subject alone, and an inexhaustible one it seemed.

He gave a full account of the chief Irish MSS. and their contents, derived from personal investigation, and very often from his transcription. The chronicles, historical romances, imaginative tales and poems, civil and ecclesiastical records, genealogies, medicine, astronomy, mathematics, and law.

This latter subject he dealt with in the ninth lecture. He had translated 8,000 quarto pages of matter on this subject alone, which was only part of the Brehon Laws.

These lectures were delivered during the years 1855 and 1856.

He paid a tribute to the Rector, the Rev. Dr. Newman, who was a constant attendant, and who encouraged him in every way, having the deepest sympathy with the wrongs and the hopes of Ireland. He also acknowledged his indebtedness to Drs. Todd, Graves, and Lyons, and Messrs. J. E. Pigott and Whitley Stokes.

The conclusion he arrived at was that "the history of ancient Erinn is yet entirely unwritten, and her antiquities all but unexplored."

It is well known that Thomas Moore wrote a History of Ireland. But when he paid a visit to O'Curry and found him surrounded with such books as the Annals of the Four Masters, the Speckled Book, the Books of Leinster, of Lecan, and of Ballymote, etc., he turned to Dr. Petrie, who was present, and said:

"These large tomes could not have been written by fools, or for any foolish purpose. I never knew anything about them before, and I had no right to have undertaken the History of Ireland."

The Catholic University was the first public institution in Ireland to erect a Chair of Irish History and Archæology.

To it also belongs the credit, not only of giving to O'Curry the opportunity of enriching his country with the results of his genius and labour, but also of liberally providing for the expense of printing and producing the work in a permanent and accessible form.

The volume of twenty-one lectures, when printed, contained more than 700 pages. On the suggestion of Dr. W. K. O'Sullivan, he added a complete set of examples of handwriting of Gaelic scribes, including that of St. Columkille, from the earliest period to the beginning of the 18th century.

The Appendix contains more than 150 extracts from MSS., with translations from the Gaelic, all made by himself.

The work was published in 1860.

He remarks that he little thought that the efforts of his pen would ever pass beyond the walls within which the lectures were delivered.

His successor (Professor O'Looney, of the Catholic University), and Professor O'Mahoney, of Trinity College, compute that there are still extant 1,000 volumes of Irish MSS.

In his preface to the work, O'Curry pathetically alludes to "the crushing succession of domestic afflictions and of bodily infirmities with which it has pleased Providence to visit me during the last three years."

Thomas D'Arcy M'Gee, in a poem entitled "Sursum Corda," endeavoured to comfort him:

"Health and comfort! may thy sorrow
Pass as lifts the mournful night,
Bringing in the calm to-morrow,
Thoughtful, dutiful, yet bright.

Though the new-made graves should thicken,
Though the empty chairs increase;
Still the wakeful soul must quicken,
Still, through labour, seek for peace.

Turn for solace to those pages
Where your hived-up lore we read,
To that company of sages
Who for you have lived indeed.

Think of him who strove to smother
In his books a noble's grief;
Think of the poor footsore brother,
Of the Masters Four the chief!

Think what life the scald of Lecan
Led through evil penal days;
Let his gentle spirit beacon
Yours to render greater praise.

Sad must be your fireside, only
Sadder still the wayside inn
Where he perished, old and lonely,
By the Letcher of Dunflin."

O'Curry, among his valuable and extensive collection, had the manuscript of a poem composed in 1603 by the Bard, Owen MacWard, who accompanied the Princes O'Neill and O'Donnell in their flight to Rome after the fall of Ulster. It refers to the past glories of their families and territories, and to the many defeats their ancestors and themselves had inflicted upon the English.

This MS. O'Curry gave, with a literal translation, to James Clarence Mangan, who, in his own superior style, rendered it into English verse. It was published in the 'Irish Penny Journal."

Meanwhile O'Curry delivered his second series of lectures, in the Hall of the Catholic University, the subject now being "The Manners and Customs of the Ancient Irish."

In the first lecture of this series he described the civilisation of the country.

In the second, its legislation.

In the six following, its education and literature.

In the 9th and 10th, its Religion and Druidism.

In the next seven, its war weapons.

In the 18th, its military education.

In the four following, its buildings and furniture.

In the subsequent seven, its dress and ornaments.

And, in the final nine, its music and musical instruments.

These lectures, which were delivered between 1857 and 1862, were published (after O'Curry's death) in 1873, having been edited by Dr. O'Sullivan.

They contained a vast collection of information on public and social life in Ireland in past times. There were also many extracts, with their translations, and many texts.

For the Rev. Dr. Reeves' "Ancient Churches of Armagh" he gave texts and translations, including part of the Dinneseanchus, or History of famous places in Ireland.

He varied his labours, however, by excursions into the country; but these, so far from being a hindrance, were a help.

As we have seen, one of his lectures was devoted exclusively to music. He had also, from his earliest youth, cultivated a talent for it.

Dr. Stokes, in his Life of Petrie, says:—

"In 1857, after the visit of the British Association to those next neighbours of America (the Aran Isles), Dr. Petrie remained for some time with the author (Dr. Stokes), Mr. Ferguson, and the late Professor O'Curry, to examine in detail some of the relics of the past, and particularly some monumental inscriptions, the readings of which had been debated. The village of Kilronan was their head-quarters, near which an appointment could be made to meet parties known to possess and sing some of the old airs. To this cottage, when evening fell, Petrie, with his manuscript music-book and violin (on which he was an accomplished performer), and always accompanied by his friend O'Curry, used to proceed. Nothing could exceed the strange picturesqueness of the scenes which night after night were thus presented. On approaching the house—always lighted up by a blazing turf fire—it was seen surrounded by the islanders, while its interior was crowded with figures, the rich colours of whose dresses, heightened by the fire-light, showed with a strange vividness and variety, while their fine countenances were all animated with curiosity and pleasure. It would have required a Rembrandt to paint the scene. The minstrel—sometimes an old woman, sometimes a beautiful girl or a young man—was seated on a low stool in the chimney-corner, while chairs for Petrie and O'Curry were placed opposite; the rest of the crowded audience remained standing. The song having been given, O'Curry wrote the Irish words, when Petrie's work began. The singer recommenced, stopping at a signal at every two or three bars of the melody to permit the writing of the notes, often repeating the passage until correctly taken down, and then going on with the melody exactly from the point where the singing was interrupted. The entire air being obtained, the singer gave the song continuously, and then Petrie played the air on the violin, as he alone could play it, the people listening with rapt pleasure, and, when the music ceased, murmuring their delight in their own native language."

But, as a rule, O'Curry spent most—indeed all—of his time at his laborious, though beloved, literary occupations, the extent of which this slight sketch is so inadequate to convey.

It is much to be regretted that Sir John Gilbert—who contemplated writing a life of O'Curry and his works—should have been called to join in his reward ere he could put his project into execution.

Nevertheless, besides the multiplicity of his literary avocations, O'Curry found time to lend the aid of his knowledge and experience to fellow-labourers in the field.

Among others, the Rev. Dr. Cogan, in his "Diocese of Meath," pays him a tribute. He says that together they went over his (Dr. Cogan's) MSS., and afterwards, on the 18th July, 1862, O'Curry wrote him a letter of praise and encouragement.

A few days later, Dr. Cogan, as he tells us in his introduction, sat with the Professor for an hour, and he renewed a promise of joining the excursion of the Young Men's Society, on the first Sunday of August, to Gormanstown.

On the evening of the 29th July Dr. Cogan's Appendix was received by O'Curry for supervision, and the author believes that it was the last MS. that he ever held in his hands.

O'Curry had certainly been in ill-health for some time. There is little doubt that he overworked himself.

At all events, Dr. Cogan, to his amazement and distress, received a letter from one of his children announcing his death, on the Wednesday, the 30th July.

The 2nd August was the day fixed for sending him the MS. of Dr. Cogan's introductory lecture. "But, alas!" writes the latter, "on that day all that was mortal of Eugene O'Curry was consigned to the tomb." He adds:

"Who that beheld the venerable Ollamh in the pride of his intellect, seated beside the Archbishop of Armagh on the memorable day of the Catholic University demonstration, could ever apprehend that in a few days the good and great O'Curry would pass away—would leave us just when Ireland began to know and to value him?"

They had had a mutual salute on the Demonstration Day. He winds up:

"Our great Irish scholar is gone, and there is no one to fill his place. The key of antiquity is lost, and much of the learning of ancient Ireland is now a sealed book."

Heart disease was the immediate cause of his death.

According to the "Freeman" of Monday, the 4th of August, his funeral took place on the previous Saturday, leaving his late residence, 2 Portland street North, at an early hour, for Marlborough street Cathedral, where Office and High Mass was celebrated.

Amongst those present who afterwards followed the remains to Glasnevin were, besides his son and brother, Messrs. J. J. and A. O'Curry and Mr. Russell, the Professors and students of the Catholic University, a large number of the members of the Royal Irish Academy, with the Vice-President (Dr. Petrie), and preceded by the mace-bearer, the mace covered with crepe—and a great body of clergy and people.

Amongst those who specially deplored his loss were—Dr. Reeves, Bishop of Down, Connor, and Dromore; and Sir Samuel Ferguson.

"His death," said the "Freeman," "leaves a blank in the Gaelic language equalled only by that caused a few months ago by the decease of his great fellow-labourer, Dr. John O'Donovan," and added that an exact picture of O'Curry was in possession of its painter, B. Mulrennin, in the Royal Hibernian Academy.

He was interred in the new O'Connell Circle, where a beautiful Celtic cross was afterwards, by public subscription, erected to his memory. Inscribed upon it in Irish characters in the following:—

"Ir beannaighe na maith.
Noc do ghein bar ir in Tigearna."

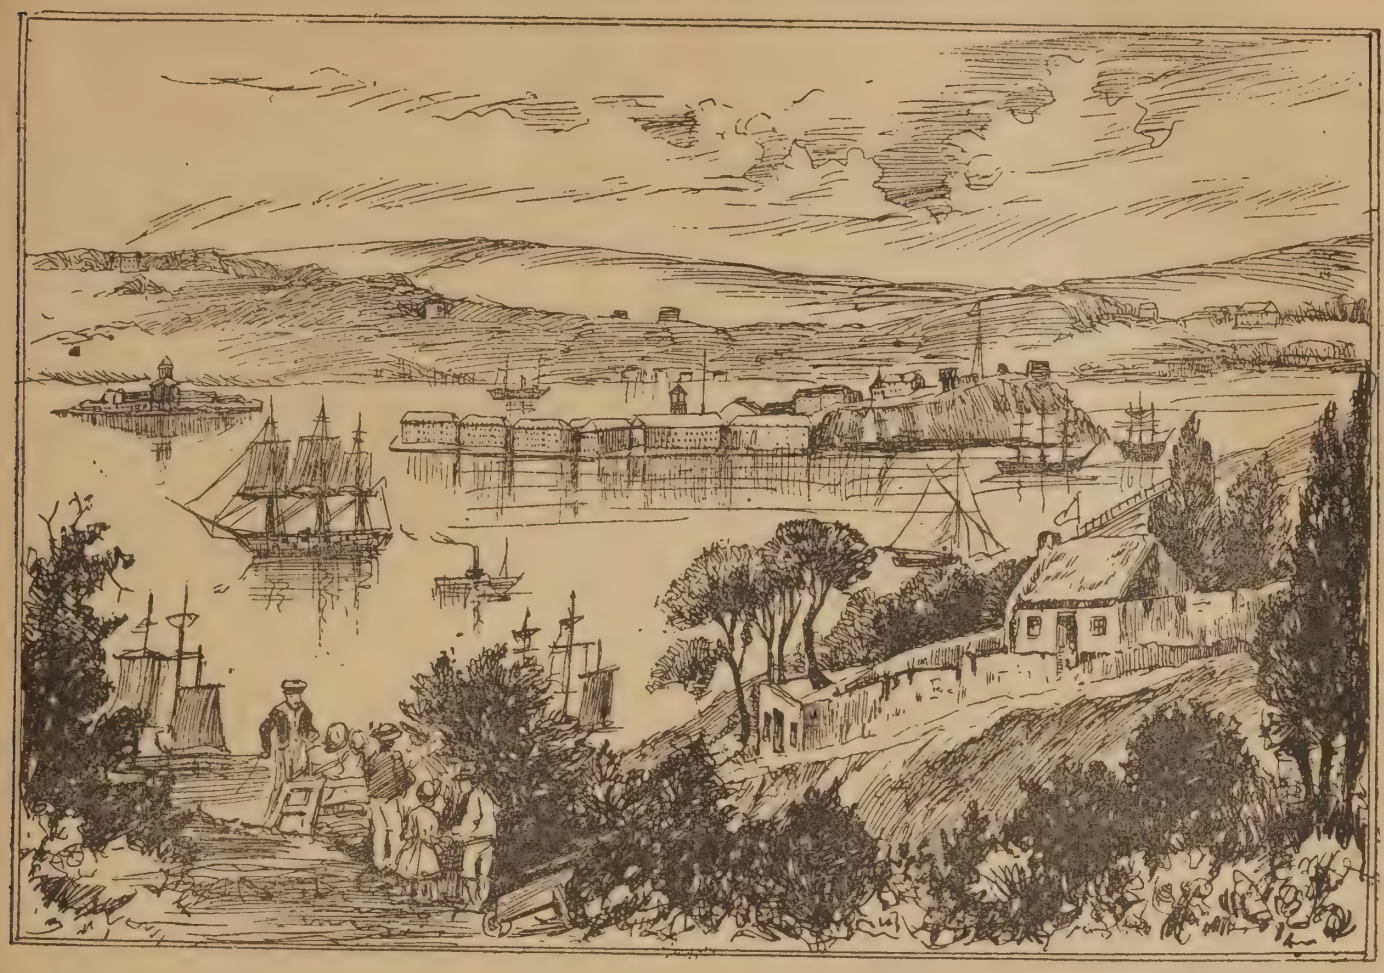
Then underneath, in English:—

"Pray for the Soul of
EUGENE O'CURRY,
Professor of Irish History and Archæology
In the Catholic University of Ireland,
1854—1862.
Born 11th November, 1794.
Died 30th July, 1862.
May he Rest in Peace."

Thomas D'Arcy M'Gee composed a long and beautiful Requiem on the dead Ollamh, a verse from which heads this sketch. Let us cite two more ere we conclude:

"No more the widow'd glen repines,
No more the ruined cloister groans;
Back on the tides have come the shrines,
Lo! we have heard the speech of stones,
In the mid-watch, when darkness reigned,
And sleepers slept, unseen his toil;
But Heaven kept count of all he gained
For ye! lords of the Holy Isle!

. . . . . .



May Angus of the festal lays,
And Marian of the Apostle's hill,
And Tiernan of the Danish days,
And Adamnan and Columb-kille
Befriend his soul in every strait,
Recite some good 'gainst every sin;
Unfold at last the happy gate,
And lead their scribe and Ollamh in."

(The End.)

HORROR OF THE GUILLOTINE.

A Paris correspondent writes—All Paris seems to share the horror of the 14th Arrondissement for the guillotine. There was, not long ago, a movement among the Town Councillors of that district and of other quarters of the town where it was proposed to cut off heads, to confine the operations of Deibler to the courtyard of the Sante Prison. The capital sentence against Bidaure has thrown the subject, as I have already reported, into sharp relief anew. As Bidaure is at La Sante, he may be taken to the Place Saint Jacques, immortalised by Victor Hugo in "Le Dernier jour d'un Condamne," the most powerful work ever writen against capital punishment. All executions by the guillotine during the First Empire and the reigns of Louis XVIII., Charles X., and Louis Philippe took place at the Place Saint Jacques. There is still, at the corner of that place and of the Rue de la Tombe Issoire, a mean-looking wineshop and eatinghouse, painted red, in which Sanson had the use of a room on the mornings of public executions. It is on the first floor front, and approached by dark, rickety stairs. Sanson used to stand at an open window to direct the mechanics and other persons employed to set up the guillotine. When all was ready he and his aides went to the Bicetre for "the toilette" of the convict, and to fetch him to the Place Saint Jacques. I heard Victor Hugo give a description of the rearing of a guillotine that he witnessed under the direction of Sanson in the mean looking red house. He spoke of it as a sight horribly ignoble. The manacled prisoner, more dead than alive, mounted thirteen steps to the scaffold, or was, rather, hauled up by Sanson's assistants. Sanson's father—an executioner not from choice, but from hereditary compulsory duty—beheaded Louis XVI. The executioner, whom Victor Hugo saw, "a timorous, unhappy creature," who reminded the poet of "an unhealthy jackal," assisted him. What came home most strongly to Victor Hugo's mind was the following reflection:—"What right has society to delegate to any human creature a task in fulfilling which he becomes baser than the criminal he executes? When one considers the complex motives of many a murderer, and the effects on his moral nature of violent passion, one cannot hold him so vile as the wretch who coolly cuts off his head for wages, and, when he has done the job, goes to eat a meal. I saw Sanson descend thirteen steps from the scaffold on the Place St. Jacques, return to the red house to order a beef steak and fried potatoes for his breakfast, and then signal from a window to his aides to take the decapitated body to the turnip field for burial. He lived, yet was dead, for moral sense had long died out in him. The publican noticed that he ate with better appetite after than before an execution. He generally dined with police agents, at the red house, on the eve of executions.

THE COVE OF CORK

AS IT WAS HALF A CENTURY AGO.

(REPRODUCED FROM HALL'S IRELAND.)

THE COVE OF CORK.

ITS HISTORY AND TRADITIONS.

From Hall's "Ireland."

The town of Cove faces the entrance to Cork Harbour, from which, however, it is distant about five miles. It is built on the side of a steep hill, and rises from the water's edge, terrace above terrace, the more elevated parts commanding a magnificent bird's-eye view of the extensive anchorage. The town has, therefore, natural advantages of a rare order, so manifest are they, indeed, as almost to justify the prophecy of an English traveller, that in time it would supplant the prosperous city; "for here," he adds, "the merchant may discharge his cargo in the sight of his own store-houses." Cove has a southern aspect, and the climate is consequently mild during all seasons; from the nature of the site on which it stands. Cove is almost always clean—a fall of rain carrying its impurities into the Atlantic. On all sides the shore is covered with villas—the trees, usually stunted on the coast, grow gracefully and majestically: the islands, and fortified headlands, are so many imposing objects within view; and the gay yachts, which a tourist described a century ago as 'little vessels, that for painting and gilding exceed those of the king at Greenwich," give animation and variety to the exciting scene.

"The Yacht Club" of Cork is said to be the oldest association of the kind in the United Kingdom, and it probably is so. With its "rules and orders," printed in 1765, under the name of those of the "Cork Water Club," is given a list of the OLD members of 1720; and reference is made to its "ancient rules and constitution;" one of the early regulations provided that no long-tailed wigs, large sleeves, or ruffles should be worn by any member. In 1830 it received the prefix of "Royal," and in 1831 the French Government conceded to it the privilege of free access to all the ports of France. The Club has of late years successfully laboured to improve the construction, appointments, and management of vessels of all descriptions, and the commonest craft of the harbour may now vie with those belonging to any English port; the skill and hardihood of the Cove boatmen and mariners are proverbial; and if the kingdom shall again require sailors to maintain the supremacy of the British flag, and give emphasis to the almost forgotten line "Britannia rules the waves," the Cove of Cork will supply, at least its quota.

Previous to the war between England and her American colonies, Cove consisted of little more than the mud cabins of a few fishermen. Dr. Smith, whose county history was published in 1750, describes it as "a village built under a steep hill, inhabited by seamen and revenue officers." And in 1752 John Wesley records that "there was nothing to be bought there—neither flesh, nor fish, nor butter, nor cheese," and adds that he was obliged to be "well contented" with some eggs and bread." The present population of Cove exceeds 7,000, and its character is that of a thriving and improving town.

During the early part of the last cen-

tury, numerous are the anecdotes related of the daring exploits of hostile privateers and pirates, performed actually within Cork Harbour, and in full view of the town of Cove—if town it could then be called—and its population. In one instance the Custom-house officers were made prisoners and carried off "to larn them to spake French," as was jocularly remarked. In another, after the enemy had taken on board supplies of water and fresh provisions, they cut out such merchant-vessels as they considered to be worth the trouble of carrying off. Soon after this occurrence, insulting notices were posted in the city of Cork boasting of the achievement, and inviting the citizens generally, some of them by name, to an entertainment on a particular day, which was appointed, as an acknowledgment of the ready sale their goods had met with; and, strange as it may seem, the entertainment took place. These and similar outrages, conceived in the most wanton spirit, and executed in the most reckless manner, were, almost without exception, the acts of Irishmen intimately acquainted with the localities, who had entered into foreign services. Some of such enterprises were executed under letters of marque (of which we have seen one) from the Pretender; and many very romantic stories are told of the semi-warlike, semi-friendly intercourse carried on between the residents upon the southern coast of Ireland and "the wild geese," as the Irish metaphorically termed their expatriated relatives and friends.

So late as 1780, Cove had scarcely advanced beyond the dignity of a fishing hamlet. Soon afterwards, however, the value of Cork Having been appreciated, its Cove gradually rose into importance; houses were built, fortifications for defence constructed, government stores established, and it became the naval station of an Admiral's flag. Bustle, activity, and a thriving trade followed. It was no unusual sight to behold from "Spy-hill," as the highest point of Cove was called, three hundred sail of merchant vessels assembled, waiting for convoy; nor was it a rare occurrence to hear the booming of distant cannon from some daring privateer that like a shark had watched the harbour's mouth, until it was brought an honourable prize into port. Cove was then all gaiety: the steady officers, the light-hearted and thoughtless "middies," and the "jolly Jack tars," paraded up and down at all hours. The pennant floated in the breeze, redolent with dust, pitch, whiskey, and music; the fiddle and bagpipes resounded in a district named, for what reason we know not, "the holy ground," unless that it was sacred to every species of marine frolic and dissipation—a spot, by the way, from just above which Mr. Creswick's view is taken. Many are the odd stories told in illustration of the proverbial recklessness of the sailor; and if the traditions of "the holy ground" could be collected, rich, indeed, would be the exhibition of mingled nautical humour and Irish wit. With "dove-like Peace," the glory of Cove departed. Notwithstanding the arguments and remonstrances of its inhabitants, Cove was reduced from an Admiral's command to a mere naval station for the supply of water and provisions. Nowadays, the appearance of a ship of war is an event of rare occurrence, and the arrival of a cruising squadron an era of so much importance as to be celebrated in song.* But the natural beauty of the situation of Cove, the salubrity of its sea-breezes, its vicinity to Cork (the distance being about ten miles), and the facility of the communication by means of steam-boats, have averted the anticipated ruin of the place; and now instead of the gallant seaman or giddy seaboy full of health and animal spirits, we too often encounter the poor maiden upon whose cheek a hectic flush speaks of an early tomb; or some youth, whose feeble step and emaciated person are evidences too strong to be doubted that consumption will triumph, and that his removal to a genial climate had been too long deferred. The mild air and warm southern aspect of Cove, added to the advantages of sea-bathing, strongly recommend it to invalids, by whom, from all parts of Ireland, it is now visited.*

*"Your welcome—you're welcome,
Vice-Admiral Malcolm,
To anchor your squadron at Cove;
And, moreover, the stronger
Your force, and the longer
Your stay—the more welcome, by Jove," etc.

THE HOSPITAL CHILD.

When gentle sunset floods the sky,
And just before the gloam,
They take me to the window high,
To see the hills of home.

I look beyond the city street,
Above the grimy roofs,
Far from the pavement's noise and heat,
Far from the clanging hoofs.

And eagerly my eyes discern
The hills remote and green,
And then I stretch my arms, and yearn
O'er vales that intervene.

One hill more green and high than all,
I love to look upon.
There stands a house, and voices call
A weary little one.

There by the lamp my mother sits,
My father reads his book,
My little sister plays or knits,
My dog is in his nook.

Amid the oaks, with pleaant eaves
The house stands, white, secure.
Its form is hidden by the leaves,
Yet it is there, I'm sure!

Some day this door shall open wide,
And forth my feet shall go
To find the house the branches hide,
That all my heart shall know;

To find the dwelling marvellous
My dreams have made so fair—
For though I cannot see the house,
I know the house is there!

*Mr J Windele, the author of an interesting and valuable work, "Notices of Cork and its Vicinity," supplies the following table, kept for ten months of the year 1833-4, with a view to exhibit the slight range of variation of temperature that had taken place at Cove; and argues, upon safe grounds and upon good authority, that those who seek to renovate health in continental climes may perceive how attainable it is nearer home, where extremes of heat and cold are alike unknown:—

Mean highest—April, 53; May, 63; June, 63; July, 70; November, 57; December, 52; January, 49; February, 50 degrees.

Mean lowest—April, 47; May, 50; June, 50; July 56; November, 47; December, 46; January, 43; February, 43 degrees

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

BANDON, or BANDONBRIDGE, a borough, market, and post-town, partly in the parish of Kilbrogan, barony of Kinalmeaky, but chiefly in that of Ballymodan, partly in the barony of Kinalmeaky, and partly in the east division of the barony of East Carbery, county of Cork, and province of Munster, 15½ miles (S.W.) from Cork, and 141½ (S.W. by S.) from Dublin; containing 9,917 inhabitants. This place derives its name from the erection of a bridge over the river Bandon, and owes its origin to the English planters on the great Desmond forfeitures in the reign of Elizabeth. It is first noticed in 1609, when Jas. I. granted to Henry Becher, Esq., the privilege of a Saturday's market and two fairs at the town lately built on the south side of the river Bandon, near the bridge; and in the grant made to Becher, in 1612, of a moiety of the territory of Kinalmeaky, which was erected into the manor of "Castle Mahowne," power was given to him and his heirs to appoint a clerk of the market in the newly-erected town called Bandon-Bridge, or in any other town within the said territory, with the privilege of licensing all tradesmen and artisans settling therein. These grants were shortly afterwards purchased by the first Earl of Cork, whose exertions in promoting its growth and prosperity entitle him to be regarded as the founder of the town, which he peopled with a colony of Protestants from Bristol, and which in a few years, from a mere waste of bog and wood, became a spacious, handsome, and well fortified place, continuing to flourish and to increase in extent and importance. At the commencement of the civil war in 1641, the town was placed under the government of Lord Kinalmeaky, son of the Earl of Cork, who took possession of it January, 1642, and mustering all the inhabitants put it into an excellent state of defence. As it was the only walled town in this part of the country, it became an asylum for the English of the surrounding district, and by its own resources maintained four companies of foot, raised a corps of volunteers, and made every preparation both for offensive and defensive warfare. On the 18th of February a party of Irish under McCarty Reagh approached, when Lord Kinalmeaky sallying out with 200 foot and 60 horse, a severe conflict ensued, in which, without the loss of a single townsman, more than 100 of the assailants were killed. The inhabitants soon afterwards, in conjunction with a troop from Kinsale, defeated another party that had lain in ambush to surprise them, and in a short time took several forts in the adjacent territory which had been held by the Irish; they also killed fifty who had made an attempt to carry off their cattle; but on Cromwell's approach in 1649, they declared for parliament. In 1688, hearing that the Earl of Clancarty was advancing

with six companies of foot of the army of Jas. II., to reinforce the two companies of foot and the troop of horse already stationed here, the inhabitants disarmed the garrison, killed several of he soldiers, took possession of their arms and horses, and shut the gates against the Earl. At length, however, they were obliged to yield for want of provisions, but refused to give up any of their leaders, and consented to pay £1,000 as the price of their pardon; on their submission, the walls were razed to the ground, and have never been rebuilt. The manufacture of camlets, stuffs and other woollen goods prevailed here to a great extent at the close of the last and beginning of the present centuries, and was succeeded by the spinning and weaving of cotton, which continued to flourish till 1825; spinning mills were erected on a large scale, and more than 1,000 persons were employed in weaving, but both branches have fallen off, insomuch that the mills are in ruins, and not more than 100 weavers are employed. The inhabitants were incorporated by charter of the 11th of Jas. I. (1614), and by letters patent of the 19th of Chas. II. (1667) received a grant of lands in the baronies of Ibane and Barryroe. Jas. II., in the 4th of his reign, granted a new charter founded on the seizure of the franchises, which soon became inoperative. The corporation is styled "The Provost, Free Burgesses, and Commonalty of the Borough of Bandon-Bridge." The borough sent two members to the Irish parliament prior to the Union. The corporation formerly possessed lands under the patent of Chas II., amounting to about 1,340 statute acres, which having mortgaged at different periods, they finally disposed of with a view to pay certain debts in 1809, since which period they have had no income or property of any kind.

The parish churches of Ballymodan and Kilbrogan are both in the town: the former is not distinguished by any architectural details of importance; it contains a handsome monument to Francis Bernard, Esq., one of the justices of the court of common pleas, and an ancestor of the Earl of Bandon. The church of Kilbrogan, commonly called Christchurch, was begun in 1610 by Henry Becher, Esq., and finished by the first Earl of Cork in 1625, as appears by a date on a stone in the south wall: it is a cruciform structure, and occupies the site of a Danish encampment; in the churchyard are the graves of three of Clancarty's soldiers, who were slain in the attempt to take the town for Jas. II. Sir Richard Cox, an eminent statesman and historian, born in 1650; Dr. Nicholas Brady, who assisted Tate in composing a new version of the Psalms, born in 1659; and Sir William Jumper, a distinguished naval officer, were natives of this place. The town gives the titles of Earl, Viscount, and Baron to the family of Bernard, Earls of Bandon; and the inferior title of Baron of Bandon-Bridge to the family of Boyle, Earls of Cork and Orrery.

(To be Continued.)

SIR WALTER SCOTT IN IRELAND.

THE "WIZARD OF THE NORTH'S" VISIT IN 1825.

From the DUBLIN PENNY JOURNAL, 1832.

The general life of Sir Walter Scott does not properly come within the objects of our Journal, and besides must be already familiar to most of our readers; but there is one portion of it which belongs peculiarly to our country, and which has been but little noticed hitherto—his first and only visit to Ireland, in the summer of 1825.

That he had long viewed Ireland with feelings of considerable interest, there can be little doubt; deeply engaged in antiquarian research, his attention could hardly have failed to be arrested by her well known claim to the highest antiquity, and still further, by the connection of her ancient history with that of Scotland. He had, besides, many old and valued friends here, who had long and urgently solicited him to visit them; and at length his son (the present Sir Walter Scott), to whom he was much attached, being quartered in Dublin with his regiment, the 15th Hussars, affording an additional inducement, on the 14th July, 1825, Scott arrived accompanied by Mr. Lockhart, his son-in-law, and his daughter, Miss Scott.

Our national poet, Moore, was expected in Dublin about this time, but he did not arrive during Scott's stay. Mr. Hallam, the talented historian of the "Middle Ages," was in Ireland, but was just at that time engaged in a tour through some of the Northern counties. Sir Humphrey Davy, and the learned Dr. Adam Clarke, were indeed here, but the former appears to have been engaged with the promotion of his brother's election to the office of Professor of Chemistry to the Dublin Society, about which he had come from England, and the latter, with the performance of his clerical functions among the Society of Methodists, to which he belonged, and accordingly neither of them appear to have met Scott in society during the short period of his sojourn in this country.

For nearly a fortnight after his arrival, Scott was occupied in viewing the public buildings and institutions of Dublin. Among the rest, St. Patrick's Cathedral, so closely connected with his editorial labours and recollections of Swift, attracted his earliest attention; he lingered long before the monumental tablet to Swift's memory, and with much feeling translated to the ladies who accompanied him the nervous Latin epitaph inscribed on it, which records Swift's own words, his hatred of oppression, and exertions in the cause of liberty. The humble memorial of Mrs. Hester Johnson (the unfortunate Stella), did not escape his notice; nor a small slab which Swift placed near the southern entrance, anciently called St. Paul's gate., in memory of the "discretion, fidelity, and diligence" of his faithful servant, Alexander M'Gee. At the Deanery House he was shown the fine full length original portrait of Swift, which is preserved there, having been painted by Bindon, in the year 1738, at the expense of the Chapter, whose property it is.

In passing from the Deanery to the adjacent library, founded by Dr. Marsh, Scott was shown the ancient residence of the Archbishops of Dublin, which, however, was not deemed worth a visit, as the exterior of the building alone retains any interest, it having been some time previously converted into a barrack for the horse police of the city. In Marsh's library he was much interested and amused by some marginal autograph notes, written chiefly in pencil, in Clarendon's History of the Rebellion, by Swift, in his most caustic and abusive style, containing the fiercest invectives against the Scottish nation. His notice was also called by the librarian to a desk of rather rude workmanship, which had been long used there by his deceased friend, Maturin, who, being in the habit of reading in this library for several hours every day, had, with his own hands, constructed this little desk for his convenience. On this, it is said, the greater part of his novel, "The Albigenses," as well as some others of his works had been written. Of Maturin's genius, Scott had long entertained the very highest opinion; they had corresponded for a long time, and he had invited Maturin to Abbotsford, but it does not appear that they had ever met. To his widow, Scott hastened to pay an early visit of condolence, and endeavoured to mitigate her sorrows by an act of munificent generosity. He had previously offered, in the most friendly manner, to edit Maturin's novels, or selections from them, with an introduction by himself, on his return home from Ireland; but before he could carry his intentions into effect, the disastrous consequences of his connection with the house of Constable and Co., which met him almost on his arrival in Scotland, compelled him to relinquish his design, and he wrote back to Mrs. Maturin in the kindest terms, assuring her that nothing but the imperative necessity of devoting his exclusive attention and energies to his own pressing affairs, should have made him give up the task he had undertaken.

While Scott was in Dublin, he hoped to have been able to make some valuable additions to his library, of rare books and tracts relating to Irish history, which he supposed he would more probably have met with here than elsewhere; and he was accordingly indefatigable in his search at shops and standings where second-hand books are sold. More than once he sallied out by himself, at an early hour after breakfast, on his quest. Upon one occasion he was observed to remain at a bookstanding upon the quay, leading to the Custom House, for a considerable while, nearly a quarter of an hour, and during that time he never took down a single book from its place, or even removed his hands from behind his back, contenting himself with patiently and carefully going over the titles of the books inscribed on their backs. He expressed much disappointment at being unsuccessful in his search; and in despair at his ill-fortune, he went the day before he quitted Ireland to the shop of Mr. Milliken, the bookseller, in Grafton street, and there expended upwards of £60 in the purchase of books relating solely to the history and antiquities of this country.

For some time before his visit to Ireland, a very general notion prevailed that he was the author of the celebrated Waverley Novels, and this idea certainly was far from diminishing the popularity he had acquired by his previously acknowledged works. This was most strikingly manifested in Dublin, not only at the theatre, where he was compelled by the reiterated calls of a crowded audience, to come forward and return thanks for his flattering welcome, but also through the streets, where his carriage was followed by crowds in every direction, who pursued it, anxious to catch a glimpse of him from whose writings they had derived so much gratification. It is said he was much pleased, as indeed was most natural, by these unequivocal demonstrations of public estimation and favour.

Various tokens of respect and esteem now poured in from every quarter on the distinguished stranger; of many invitations he accepted, but they were invariably from private individuals; those from public bodies were politely but firmly declined. The freedom of the Guild of Merchants was conferred upon him soon after his arrival, a deputation from the Guild having waited upon him at his house in Stephen's green for the purpose; and soon

after he was presented by the University with the degree of Doctor of Laws. He had also, some time before, been elected an honorary member of the Royal Irish Academy, and on the occasion of his visiting Cork, on his return from his tour in the South of Ireland, he was granted the freedom of that city at the same time with Major-General Sir George Bingham, Admiral Plampin, and Mr. Serjeant Lefroy. He paid a visit of some days at Old Connaught, the hospitable residence of the Lord Chancellor, then Mr. Plunket; shortly afterwards he dined with the Lord Lieutenant (Lord Wellesley), at Malahide Castle, where he resided for his health during the summer.

The first excursion Scott made to the country was to the county of Wicklow, several of the most picturesque spots of which he rapidly visited. No beauty of sylvan scenery, however, seems to have arrested his attention, or excited his interest in the same degree as the ecclesiastical ruins at Glendalough, Holycross, and the Rock of Cashel. At "that inestimably singular scene of Irish antiquities," as he afterwards termed it in an article in the Quarterly, the "Seven Churches at Glendalough," he remained an entire day, with great apparent pleasure, and examined these moulder-ing monuments of the ancient monastic splendour of Ireland, with an excited enthusiasm, which appeared extraordinary to the companions of his tour, to whom he frequently observed that he had never before seen ecclesiastical remains of equal antiquity or interest. He also, with all the ardour of a youthful mind, despite his lameness, boldly ascended the cliff and entered that extraordinary hermit's cell, called St. Kevin's Bed; and after the fashion of its visitors, inscribed his name upon the rock as a memorial of his daring.

Stopping at the inn, at Roundwood, he sent for the well-known Judy, and entered into some conversation with her; the circumstances of which interview she since details with great delight to many an attentive auditory; and before dismissing her, he gave her a more substantial cause to remember his visit than mere words.

The wild and rocky scenery of some parts of the Wicklow mountains proximate to Dublin, reminded him of some of the scenes of his native Scotland. From the Phœnix Park, where he was present at a review of part of the garrison, he had already noted these mountains, forming, as he said, "a beautiful screen" along the southern boundary of the county.

There is a spot about four miles distant from Dublin, on the mountain road to Glencree, from which a singularly interesting view of our city is obtained, to this Scott's attention was directed by a friend who was with him. The place we allude to is one of almost desert wildness; nothing but heath and rock surround the spectator; while before him is extended, in all the pride of cultivation, and dotted all over with villas and beautifully wooded demesnes, the fertile plain in which Dublin is situated. Spread along the entire horizon lies the city, its spires and lofty buildings rising from among its less distinguished structures, till on the right, Howth, and the magnificent Bay of Dublin, terminate the prospect. Struck with the sudden transition from the lonely and desert heath to the cultivated and busy plain, he expressed, energetically, his surprise at the contrast, one so remarkable as which, he said, he had never before taken in at a glance.

It happened that rather a singular circumstance took place before he had well quitted the spot. He was at the time on his way with one of the most intimate and valued of his friends, about to make a short visit to a beautiful little rustic villa he had built in the very wildest part of these rugged and desert hills, on the verge of the singularly picturesque mountain lake of Lough Bray; and the carriage was stopped while they alighted to admire the remarkable features of the landscape to which we have just alluded. As they were about to resume their journey, they perceived a vast number of the peasantry appearing suddenly on the surrounding hills, nearer to them, women and children rushing out of the houses, and an unusual commotion evidently taking place. A small detachment of police were on the road, evidently remonstrating with some of the people, and presently a troop of Dragoons galloped up. As they approached the place where the police stood, they perceived them endeavouring to persuade the people to separate and return to their houses peaceably. One fellow, however, resisted more strenuously than the rest, perhaps under the influence of valour-inspiring whiskey, and opposed himself to the police with all the characteristic hardihood of his countrymen; he threw open his coat, exposed his bared breast to their bayonets, which, however, they were far from attempting to use, and, with the most frantic gesticulations, he called out—"Kill me now, do!—arrah, why don't ye kill me?—just do, now; kill me if you dare!" One of the police calmly thrust him back with his hands, and his wife and some other females clinging about him, gradually took him away. The whole terminated quite peaceably in a short time. The people, overawed, retreated to their homes, and the military and police soon drew off. A short explanation sufficed to clear up the matter. There had been a turn-out of the workmen of an extensive paper factory in the neighbourhood, established there by a Mr. Pickering, which gave employment to numbers of the peasantry of the surrounding country, and, in consequence of some difference with their employer, they had threatened the demolition of his factory, which they possibly would have effected but for the timely interference of a protecting force. While this explanation was being obtained, Scott gravely turned round to his host, and with infinite humour thanked him most warmly for all his hospitality and solicitude for his entertainment since his arrival in Ireland, and added, that above all he felt indebted to him for his kindness in having so obligingly got up a little rebellion for his especial amusement.

The situation of Lough Bray is very remarkable; embosomed in the mountains, which almost on every side overhang it precipitously, its vicinity is quite imperceptible to the stranger, till a sudden turn in the road abruptly presents it in all its wildness and solitary beauty. "Ah!" said Scott, the moment he caught the first view of it, "this is surely the lake of the Arabian tale, where the enchanted fish were, of the situation of which it appeared so incredible to the Sultan and his Vizier that they should be ignorant, it being but a short distance from their capital."

The amazing retentiveness and fidelity of Scott's memory has been often noticed; one instance in which it was very remarkably exhibited about this time has come within our knowledge. It was occasioned by his happening to ask the friend of whom we have been speaking, had he ever heard of a namesake of his, a young Irish officer of great wit and talent, who had been much spoken of in Scotland, where he had been many years quartered with his regiment, and had left behind him some poetical fragments, evincing taste and spirit. Scott's friend quickly recognised him as a younger brother of his father's, and in a passing way repeated the following little effusion of his, which he just then happened to recollect.

ON MISS WHITING.

Since Whiting is no fasting dish,
Let priests say what they dare,
I'd rather have my pretty fish
Than all their Christmas fare!

So gay, so innocent, so free
From all that tends to strife,
Thrice happy man, whose lot shall be
To glide with her through life.

But Venus, goddess of the flood,
Does all my prayers deny,
And surly Mars cries "D——your blood,
You've other fish to fry!"

Nothing further was said at the time, but several days afterwards, meeting at the house of a mutual acquaintance, Scott being, after dinner, in the drawing-room, he took his friend's arm, and walking up and down the room, recurred to these verses, and said he nearly remembered all, but wished to be quite certain that he had them correctly. He then rapidly ran them over, but at the line

"So gay, so innocent, so free,"

he paused, uncertain as to the word "gay," for which he substituted "bright," and this slight difference being corrected, he repeated the whole without the slightest mistake of even a syllable.

The museum of Dr. Tuke, a physician of some eminence in Dublin, which Scott visited about this time, afforded him more gratification than even that of the Royal Dublin Society. At the latter he had vainly looked for a national collection illustrative of Irish antiquities and history, and expressed much disappointment at finding the Museum rather poor in such remains; instead of which he was shown a fine arrangement of minerals, which, as he observed, he was already familiar with in other places; and it is not a little remarkable that the Russian Archduke Michael on visiting this museum expressed a similar disappointment, and stated that he was himself possessed of a much finer and more extensive collection of the antiquities of Ireland. At Dr. Tuke's house, on the contrary, Scott's anxiety to see some specimens of the weapons, ornaments, etc., of the ancient Irish, was abundantly gratified. He remained there some hours, evidently much pleased, and on his return to Scotland he sent Dr. Tuke a present of two antique brazen vessels which had been found there, but yet bore considerable resemblance to some of this country, which he had seen in Dr. Tuke's collection.

The following morning (Friday, the 29th) he left Dublin at an early hour for Edgeworthstown, to pay a long promised visit to our celebrated and talented countrywoman, Miss Edgeworth, who, after he had remained a few days, set out with him on his tour to the Lakes of Killarney. The first object of his attention on his arrival there, was the venerable ruin of Muckross Abbey, which he visited in the afternoon of the day he reached Killarney. The following morning he was early on the water with his party, though the weather was by no means favourable, there being a stiff north-westerly breeze during the greater part of the day, which came in strong gusts down through the mountains surrounding the upper lake, for which they had embarked. They amused themselves for some time waking the slumbering echoes of the rocky cliffs of the Eagle's Nest by the music of the bugle, or the less harmonious, though grander sounds produced by the discharge of small pieces of ordnance, the reiterated reverberations of which exactly resemble a long succession of thunder claps. There were several parties on the Lakes, all anxious to catch a glimpse of "the great unknown." After threading the narrow and highly picturesque channel that divides the Upper from Tore Lake, the party landed at Dinis, one of the most beautifully wooded among the innumerable islets of these Lakes, and here they dined. They cannot, however, be presumed to have been guided in their selection of a place for that repast by the similarity of its name to that of the little island, inasmuch as it is very generally fixed on by parties visiting the Lakes for the same purpose. The following day was occupied by the Lower Lake, O'Sullivan's Cascade, etc., and thus in less than three days Scott despatched his survey of Killarney, which, indeed, seemed to fall short of the expectations he had formed, and at all events failed to draw forth those expressions of enthusiastic pleasure excited by the antiquities of Glendalough and Cashel.

From Killarney he returned to Dublin, visiting in his route Cork, where, as we have mentioned, the freedom of that city was con-

ferred on him; from thence, proceeding by way of Holycross, Cashel, and Johnstown, to Kilkenny. At Cashel, it is said, his purpose had been simply to have changed horses, and during the time occupied by this, to have paid a hurried visit to the celebrated monastic ruins there. But no sooner had he caught a glimpse of this majestic and venerable pile standing in so striking a position on the summit of a lofty and precipitous rock, than he proceed that day, and a messenger was at once despatched to countermand the horses, and to order dinner; and when asked at what hour he wished it to be on the table, Scott instantly replied, not till after dusk should have rendered it useless to linger longer among the ruins. At Kilkenny Scott made a somewhat longer stay, for the purpose of seeing at leisure the fine old castle, so long the residence of the Ormond family. The following day he was taken to the Convent, the Black Abbey and Cathedral, and afterwards to the celebrated Cave of Dunmore, three miles from the town.

On Sunday, the 14th of August, being the anniversary of his birth, Scott entertained a large party of his friends at dinner at his son's house in Stephen's Green. This was in some degree saddened by the recollection that it was a take-leave party. On the Wednesday following he sailed from Howth, in the Harlequin packet, with the late Captain Skinner, whose melancholy fate his friends, in common with every one by whom he was known, and consequently valued and esteemed, have so lately had to deplore.

It seems that it was a weakness of Scott (a pardonable one, no doubt) to be a little vain of the coincidence of his birthday with that of Napoleon; they were born on the same day, the 14th of August, 1771. A similar feeling was excited by the fact of the initials of Shakespeare's name being those of his own. A friend who was staying at Abbotsford happened accidentally to be struck by this coincidence on seeing a bust of Shakespeare in the library, the pedestal of which simply bore the letters W.S.; and on mentioning to Miss Scott what had occurred to him, she replied that the coincidence had been some time before noticed to her father, and that he appeared not a little pleased at the circumstance. Byron, it is said, in like manner, took pleasure in remarking that the initials of his name, Noel Byron, were the same as those of Napoleon Bonaparte.

There is certainly a great deal about the writings of Scott, and especially his inimitable novels, which cannot fail to remind every one of his great predecessor, and probably, in no slight degree, master in fiction, the mighty and still unrivalled Shakespeare. Whether on the one hand we look at his vast and intimate knowledge of human nature, and of all the various springs of human action, or on the other, his astonishing facility of composition, together with the brilliancy and forcible truth of his delineations of personal character, of the scenery of nature, and the surprising individuality of the actors of his histories, which place so livingly before our mental vision the very bodily shapes of the men he portrays, all combine powerfully to bring to our recollection triumphs similar to those of the great dramatist. In this respect, the eulogium of an Italian poet, Anton Franceso Doni, who died in 1574, on the "Novelle Stupende" of Ariosto, are strictly applicable to the great novelist.

We must, however, admit, with a writer who long since noticed the striking points of resemblance between those two great masters of the imagination, that Scott is not for a moment to be put in competition with Shakespeare, as respects the richness and sweetness of his fancy, or that living vein of pure and lofty poetry which flows with such abundance through every part of his composition. On that level no other writer has ever stood, or perhaps ever will stand. Notwithstanding, in Scott's works there is, beyond all question, fancy as well as poetry enough, if not fully to justify the comparison between a writer of our own day with the immortal Shakespeare, at least to save such comparison, for the first time for two centuries from being altogether ridiculous.

On leaving Ireland, Scott proceeded to Cumberland, to join a large and distinguished party of visitors at Storrs, the elegant and picturesque residence of Mr. Bolton on the banks of Lake Windermere, among whom not the least eminent was Canning, and after remaining there for but a few days, he returned to Abbotsford.

O'DONOVAN'S IRISH FAMILY NAMES.

WHAT IS THE CORRECT INTERPRETATION OF "DIARMAID"?

By Rev. J. F. Lynch.

The explanation of Diarmaid as "freedman" in O'Donovan's article on Irish Family Names (D. P. J., p. 355) has been rejected by Celtic scholars of our day. Professor Rhys ("Hibbert Lectures," p. 529, note 2) says "that hitherto no successful attempt has been made to explain his (Diarmait's) name as Celtic." The explanation of the name Conchobar also given by O'Donovan, has been rejected, and O'Donovan's explanation of Cormac is not correct. Cormac, or Corbmac, is the Oghamic Corpimaquas, and the corb, or corp, of this name occurs in such names as Cu Corb, Mogh, Corb, Fer Corb, and O'Curry (Lectures, p. 482), explains corb as body, and says that "Corbmac Mac Cuilennain gives a different meaning to Corb, that of 'corrupt,' or 'chariot,' but neither of these could be well compounded with Cu." It appears to me that O'Curry's explanation must also be rejected (compare "Calendar of Oengus," p. Lxxxv), but it is with the name Diarmaid I wish to deal in this note. It is now well known that Diarmaid is the Irish Adonis, and Professor Rhys ("Hibbert Lectures," p. 511) says—"So the noble Diarmait, beloved of all, and the grisly boar were the offspring of one mother they represent light and darkness." In Trans. Os. Soc., vol. v., p. 64, William Hackett says—"Thamuz was another name for Adonis, whose history is the same as that of Diarmaid." Thamuz is the Chaldœan Dumu-zi, and Maspero ("Dawn of Civilisation") says that Dumu was the earth of spring and that zi means life. Diarmaid was, however, in Ireland an early personification of light, and it appears to me that the name is an extension of Diar, or Der, just as Cermaid, son of the Dagda, comes from Cer, or Ciar, for, as I have noted in a previous article, we must, in order to explain the old Irish sacred names, compare name with name, and the old names of Ireland must be compared with the old names of other lands. Professor Rhys ("Hibbert Lectures," p.p. 40, 41), says:—"It may be hazardous, perhaps, to construe in the same sense the words from the Rig-Veda about Dyu or Dyaushpitar as a god of mighty works. I refer to a hymn to his son Indra, who mostly superseded him, and the passage is thus rendered by Prof. Max Muller: 'Dyu, thy parent, was reputed strong, the maker of Indra was mighty in his works; he (who) begat the heavenly Indra, armed with the thunderbolt, who is immovable, as the earth, from his seat.' But there can be no such doubt with regard to the Teutonic Tiu, whose name, Anglo-Saxon Tiu, gen. Tiues; old H. German Ziu, gen. Ziuves; old Norse Tyr, gen. Tys, is etymologically identical with Zeus and Dyu, while all the little that is known of him makes him the war-god of the Teutons, before he was surpassed and superseded by Woden: witness the name of the day which Frenchmen and Welshmen call the day of Mars—English Tuesday, Ger. Dienstag, formerly Ziestag; old Norse Tysdagr and Tyrsdagr." We thus see that Tuesday means day of the Anglo-Saxon Tiw, the old H. German Zio, Old Norse Tyr, Sanskrit Dyu, Div, or Dyaus, Greek Zeus, and Latin Jupiter (Gen. Jovis). The Irish Diar, or Dir, to which I have reduced Diarmaid, is identical with the Old Norse Tyr, but in Tyr the letter r is a suffix for Old Norse Tyr is identical with the Sanskrit Dyu, Diu, or Div, and the well-known Irish name Duach is the genitive of Diu, Dui, Dai, Du, or Di, which is the oldest form, and so it appears that Da, Du, or Di, is a very old word for light, and the base of the two names Duach and Diarmaid. Professor Rhys ("Hibbert Lectures," p. 505) mentions that Diarmaid was son of Corc, and grandson of Duben, the mother of Corc, and wife of Cairbre Musc, and he says that in the story of "The Pursuit" Diarmaid's father is called Donn, but that in the Munster poem, quoted by the editor of "The Pursuit," the father of Diarmaid is called Corc, and the grandfather is Cairbre, and, accordingly, Professor Rhys thinks that Corc was named Corc Donn, but this is a mistake, for it is Diarmaid that is named Diarmaid Donn in the Fenian poems, and in the poem to which Professor Rhys refers we read—

> "Diarmaid was son to Corc,
> He suffered gloom and woe.
> Donn was son's son to Cairbre."

Corc being son of Cairbre, the son of Corc, that is, Diarmaid—that is, Donn—was son's son to Cairbre.

Duben, of which the genitive case is Duibhne, was a goddess of the race who named themselves Corca Dhuibhne, which became Corcaguinny, the name of a barony in Kerry. Corc was reared in Inis Boi, or Island of Boi, the nurse of Corc. This island was also called Tech Duinn, or "house of Donn," and it is now called Dursey Island (doirse, "doors"), from being, as it were, the entrance to Ireland. In the story of the "Pursuit," Diarmaid is constantly termed grandson of Duben, and he is also called son of Donn, grandson of Donnchadh. (See also "Hibbert Lectures," p. 505). In "Silva Gadelica" Diarmaid is termed grandson of Duben, son of Donnchadh. In "Silva Gadelica" Diarmaid is also called Diarmaid na mban, or "of the women." In Smith's "Smaller Classical Mythology," p. 121, we read—"How Hephaestus revenged himself for her (Aphrodite's) fondness for Ares has been already related, as also how her attachment for the beautiful Adonis procured the restoration of the youth to earth. In honour of the latter, a festival called Adonia was held in many parts of Greece, which lasted two days, and was celebrated by women only. On the first day statues of Adonis were laid out like corpses in the streets, and the women bewailed and lamented his death. This was done to typify his sojourn with Persephone in Hades; the second day was spent in merriment and feasting, to celebrate his return upon earth to Aphrodite. These customs were analogous to and, perhaps, derived from, the worship of Thammuz on the banks of the Adonis, in Syria, which is thus described by Milton:—

> "Thammuz came next behind,
> Whose annual wound in Lebanon allured
> The Syrian damsels to lament his fate
> In amorous ditties all a summer's day;
> While smooth Adonis, from his native rock,
> Ran purple to the sea, supposed with blood
> Of Thammuz yearly wounded."

Announcement is made that the United States War Department has arranged with Ehrhardt, of Dusseldorf, to re-arm the United States field artillery with Ehrhardt's new piece. The gun which the United States has acquired the right to use is said to be an improvement on the models supplied to Great Britain, of lighter weight, and of longer range.

LITERARY NOTES.

Mr. Robert Barr is to return to the editorship of the "Idler," of which he and Mr. J. K. Jerome were the founders and joint editors. The "Idler" has seen so many changes that it has been difficult to follow them, and its price has varied as well.

✧ ✧ ✧

M. Jules Verne was recently reported as thinking that the novel will disappear in fifty or a hundred years. The "North American Review" has been sounding some American novelists on the subject, and prints their opinions in the number for the present month. Mr. James Lane Allen traverses the reasons M. Jules Verne gave for arriving at his conclusion. One of these was that novels were declining in merit. While admitting that this is true of some countries, Mr. Lane Allen thinks it by no means follows that it will keep on declining everywhere till it is finally extinct. "The history of no art is a long dead level or a long dead gain. It consists of movements, of periods of renascence and decadence. If the novel were now declining in merit throughout the world, in such a fact would be the simple presumption that in the future it will be revived."

✧ ✧ ✧

Mr. W. D. Howells also takes up a position antagonistic to the distinguished Frenchman. "The year 1870, say, no more marked a decline in fiction or in the passion for it than any other year of our era, or any of these years of the world that run back to the beginning:—" The cave-dweller, sitting at his cavern door in the cool of the evening, and absently picking out the simple chords of stone-age music on the sinews stretched upon the thighbone of the brother he had eaten, listened with the same rapture to the tarradiddles of some gifted neighbour as the twentieth-century maiden feels in hanging over the page of the largest-selling book of the actual summer; and when time is getting ready to be no more, the Last Man shall say to the Next to the Last, 'Now that we are not likely to be interrupted, here is a little thing of mine in three volumes that I would like to read you before we die'; and the Next to the Last Man will gather himself into an attitude of comfortable attention, and cling to each fleeting breath, in the hope that the universal asphyxiation will spare him till he knows whether They get married."

✧ ✧ ✧

Hamlin Garland believes that the only really dangerous rival of the novel is the drama. The novel may change, but it will never disappear. Hamilton W. Mabie says: "So long as life is dramatic, and men have imagination, they will delight to tell and to hear stories, and the dreadful possibility of a world in which the 'Arabian Nights' and 'Vanity Fair' have been expelled by the newspapers may be dismissed." "It may be that the novel is about to expire in a blaze of popularity, but it is more probable that M. Jules Verne has been making another journey to the moon. It is a course of travel which literary prophets have taken before his day and will continue to take to the end of time."

✧ ✧ ✧

Mr. John Kendrick Bangs, on the other hand, believes that the novel is passing, and that in a hundred years from now there will be no such form of literature, or at least not as we know it. The literature of the future will be "induced by pills taken before retiring, and acting immediately thereafter." "The man who wants a poem of a certain kind will swallow what, for the lack of a better term, we may call 'The Alfred Austin Pellet,' and live the resulting poem in his dreams. Then there will be 'Caine's Capsules for Creepy Creatures,' each guaranteed to contain ten grains of gloom, and absolutely free from humour, lightness, sunshine, or other deleterious substances, and which, taken three times a day, will enable every man to be his own "Manxman." "Some clever druggist, Mr. Bangs goes on to say, "will meet the literary necessities of the hour, and put up 'all literature that anybody can want in small doses, in every variety, and at a price which will bring it within the reach of all.' This will be a great boon, and will enable thousands of men who might otherwise have been novelists or poets to 'turn their back on letters and take up some really useful occupation.'"

✧ ✧ ✧

As fiction had a knowable beginning, it will never, Mr. Howells asserts, have a knowable end.

✧ ✧ ✧

The American "Book-Buyer" has a way of running authors by means of the camera. This month it gives us a photograph of "Richard Harding Davis (in London)," which shows the author of "Soldiers of Fortune" with every appearance of a commonplace citizen. This is followed by an article and a series of photographs illustrating Mr. Davis's work. These include the Beef Steak Club and "The Lion and the Unicorn," which latter is described as a "loan-shop in Cranbourne street." Then comes "The Devon of Mr. Eden Phillpots," with photographs of general scenery not in the least illuminating. But the "Book-Buyer" surpasses itself in "Literary Life in India." "His Highness, the Nizam of Hyderabad—song-writer," appears in the somewhat unlyrical costume of a hunter sitting on a dead tiger, and there gazes out upon us the benign countenance of "Syed Ali Bilgrami," who "recently resigned high public office to devote his life to literary work at Oxford."

✧ ✧ ✧

Apropos of the new "library" biographical edition of Dickens, which Messrs. Chapman and Hall have in preparation, the publishers have, says the "Daily Chronicle," been looking into the sale of his books. They find that the annual sales for many years past have averaged a quarter of a million copies. The first in point of popularity is "Pickwick"; then, with but slight difference in numbers, comes "David Copperfield." The increase in the sale of the "Tale of Two Cities" Messrs. Chapman and Hall attribute to the production of "The Only Way." The publishers state the interesting fact that when that play is being performed in the provinces they can trace the course of the tour by the orders received. When it is remembered that many of the novels are out of copyright, and have been issued in various forms by other publishers, it will be seen how enormous the sale of Dickens continues to be.

✧ ✧ ✧

The production by Dr. Elgar, at the Worcester Festival, of Newman's "Dream of Gerontius" may serve as an occasion to recall two letters relating to the poem. Cardinal Newman acknowledging the gift from the sister of Frank Power of the copy of the little book which General Gordon had given to her brother, wrote: "I was deeply moved to find that a book of mine had been in General Gordon's hands, and that, the description of a soul preparing for death. I send it back to you with my heartfelt thanks." A facsimile of General Gordon's scored copy sent in 1888 to Mr. Gladstone by Mr. L. Dillon, of the Manchester Reference Library, brought the following reply: "I must thank you for the 'Dream of Gerontius.' I rejoice to see on it, twenty-fourth edition. It originally came into the world in graveclothes, swaddled, that is to say, in the folds of the anonymous; but it has now fairly burst them, and will, I hope, take and hold its place in the literature of the world."

✧ ✧ ✧

There is every indication that the autumn publishing season will be a full one. In the lists already received we note the following volumes:—"The Life of Dr. Martineau," by the Rev. James Drummond; "Poems," by A. C. Swinburne; "Just So Stories," by Rudyard Kipling; "Biographical Sketches," by James Bryce; "Side-walk Studies," by Austin Dobson; "Historical Essays and Reviews," by the late Bishop of London; "Historical Essays," by the late Bishop of Oxford; "The Story and Criticism of Italian Art," by Bernhard Berenson; "Rochester and other Literary Rakes," by the author of "The Life of Kenelm Digby"; "Some Eighteenth Century Men of Letters," by the Rev. Whitwell Elwin, some time editor of the "Quarterly Review"; "The Complete Works of Charles Lamb," edited by E. V. Lucas; "The Eldorado of the Ancients," by Karl Peters; "Contemporary France, 1870-1900," by J. Hanotaux; "Laughter and Humour," by James Sully; "London in the Eighteenth Century," by Sir Walter Besant; "James VI. and the Gowrie Mystery," by Andrew Lang; "The Romance Book," edited by Andrew Lang; "A Literary History of Persia," by E. G. Browne and Sir Thomas Adams; "Rural England," by H. Rider Haggard; "Tolstoi and Dostojevski," by the author of "The Forerunner"; "Of Aucassin and Nicolete," by Laurence Housman.

✧ ✧ ✧

Some striking examples of the effects sometimes achieved by untrained writers are to be found, says the "Academy," in the recent Blue Book concerning the late volcanic eruptions in St. Vincent and Martinique. The matter is so terrific that any attempt at literary embellishment would ring false; the statement of bare fact is all that is needed, and nothing in its way could be more suggestive than the narrative of Mr. Freeman, of the British steamer "Roddam," which escaped:—

"The captain approached, and saw the steamship 'Roraima' and the 'Grappler' in the bay, riding quietly at anchor, so he dropped his anchor close to the shore. At about 8.15 he was in the chart room; a good many of the sailors were leaning over the side of the vessel watching the distant mountain, which was emitting dense clouds of smoke and occasional flashes of light. Mr. Campbell was talking to Mr. Plissoneau on the deck. On a sudden, he (the captain) heard a tremendous noise, as though the entire land had parted asunder. Simultaneous with the noise there was a great rush of wind, which immediately agitated the sea, and tossed the ship to and fro; he rushed out of the chart-room, and, looking over the town and across the hills, he saw a sight he cannot describe. He remembers calling out to Mr. Campbell and saying 'look,' and then an avalanche of lava was upon them. It immediately caught the town afire as it passed over it, likewise the shipping. It struck his ship with the terrible force of a mighty hammer, and the lava rained upon the deck. Everyone, as far as he could see, sought shelter at once, but the heat was so great and the air so suffocating that Mr. Campbell and many of the crew—among whom was the chief mate—threw themselves, in despair, overboard. Some crawled from where they had hidden themselves on the deck to obtain a breath of air, and were roasted upon the fiery hot ashes. He did not lose his head; his first thought was to try and save his ship and such of his crew as were still alive. He rang the bell for full speed astern, and the heroes below turned on the steam. He had time to slip his anchor, and he was off. As his steering gear was rather difficult to manage, he once or twice nearly ran foul of the steamship 'Roraima,' which was on fire. He saw two still figures standing on the bridge with arms folded, heroically awaiting their end. One of them waved a good-bye to him."

There is no touch of artifice there, but every word tells. A similar instance of simplicity of effect occurs in Lieutenant Gibbon's letter describing his part in the Belgian ride. Speaking of his horse, he says: "He was given a little beer, after which he went on again, I walking, the horse being apparently much refreshed. About six hundred yards from the end he suddenly stopped, shook his head, and fell down dead." The last sentence is worth half-a-column of picturesque reporting.

SCIENTIFIC TOPICS.

The radiations of radium have proved to be of rare value in medicine. It is found that a metallic screen interposed between the eye and a vial containing radium in no way prevents the healthy eye from seeing it. If the retina of a blind person be healthy, it will be affected by radium rays, even though the cornea be opaque to light rays. Consequently the radiations from radium can be used to discover whether or not the retina of a blind person is healthy.

✧ ✧ ✧

The New York Central Railroad has tested the experimental instalment of the Miller visible engine signal and direct-circuit on all its trains running through the Park Avenue tunnel. The test is said to have been very successful, the engine signals working perfectly and duplicating the block signals. There are two sets of signals in the cab of the engine, one in the front and the other in the rear, to be used when the engine moves back. When the track is clear a white light is displayed, but as soon as danger threatens the red light in the lower bulb glows red, no matter what the indications of a block-signal may be.

✧ ✧ ✧

The British Government has been requested to sanction the construction of an important railroad from Berbera, on the North Somali coast, to a spot adjoining Harrar, just inside the Abyssinian frontier, to provide rapid communication between the latter country and the sea. The distance is about 220 miles. The railroad is to be a lightly built one, and will cost £750,000 to construct, unless the promoters follow a route over the formidable Harrar escarpment. On this outlay the Government is asked to guarantee a return of 3 per cent.—a relatively small sum. The Emperor Menelik favours the construction of the line, which would tap the trade of a most wealthy district and afford an easy and direct route for the conveyance of British manufactures into Abyssinia, in which country there is a heavy demand for such goods.

✧ ✧ ✧

The President has consented to authorise the Pacific Commercial Cable Company to lay a cable across the Pacific to the Philippines, thus ending the fight which has been waged for fifteen years by rival firms. The Mackay-Bennett Company will probably soon begin work. The route to be followed extends from San Francisco to Guam and thence to Manila. The estimated time of laying the cable is fourteen months from the beginning of the work. Heretofore all messages have been sent to the Philippines over an English line from Hong Kong. The owners of this line have a franchise monopoly granted by the Chinese Government. Under the favoured nation clause of the treaty between the United States and China the American Government has the right to claim a similar franchise for an American cable company. It is expected that advantage will be taken of this treaty relation, for by getting a terminal in China the cable company will obtain 700 miles of new cable lines. The Pacific cable will then connect with the Atlantic cable lines in China so that messages can be sent to all parts of the world by American cables.

✧ ✧ ✧

How does a spider spin a thread from one bush to another at a height from the ground and then draw it so tight? Everyone who has ever walked through a country lane early in the morning has felt the strained threads upon the face, and often these threads are many yards long, but the way in which it is done remains a mystery. He does not fly across, drawing the thread after him, for he has no wings. Neither does he descend to the ground and then climb the opposite bush, for this would lead to immediate and hopeless entanglement of the gossamer filament. How then does he do it? M. Favier, a French scientist, has discovered that a thread, one yard long, will support by its own buoyancy in the air the weight of a young spider. It would thus be in the power of a juvenile to spin a thread of that length and trust to air currents to carry it across and attach it to an opposite bush so that he himself could then pass over and draw it tight. But many of these threads, to judge from their strength and consistency, are not the work of young spiders, and, as every observer knows, they are often many yards long and drawn so tightly that the face is instantly aware of their presence when breaking them. The work is nearly always done in the night time, so that observation is difficult.

The commission for the Galileo Ferraris award, which was instituted in 1898, composed of representatives of the Executive Committee of the Association of the General Italian Exposition, in Turin, 1898, of the Chamber of Commerce and Arts, of the Royal Academy of Sciences and of the Royal Italian Industrial Museum of Turin, has decided to reopen an international competition for the conferring of this premium on the occasion of the inauguration of the monument to be erected in Turin to this illustrious scientist. The premium consists of 15,000 lire and interest from 1899 up to the date of the assignment, and will be conferred upon the author of any invention from which results a notable progress in the industrial applications of electricity. Competitors can present papers, projects and drawings, as well as machines, apparatus or constructions relating to their inventions. The jury nominated by the association above named will have the most ample powers to execute practical experiments with the inventions presented.

✧ ✧ ✧

A Swedish invention which ought to have a good future is a system of oiling piston rods, cylinders, slide rods, and slide guides on locomotives, which had been invented by T. F. Malmros, of Gothenburg, locomotive engineer on the State railroads. Formerly cylinders and slide guides have, at best, received necessary lubrication from the central steam-lubricating apparatus, but piston rods and slide rods with packings have been lubricated by means of old-fashioned oil cups, with wick feed, which method, for many reasons, has proved unsatisfactory—especially when metal packings are used. Mr. Malmros, by introducing intermixed oil and steam, coming from the central steam-lubricating apparatus, through gland bushings expressly constructed for this purpose, has effected a good and economical lubrication of packings and rods, as well as of the cylinders and slide guides. The system has for five years been tested on one of the express engines of the State railroads—used for the fastest train in Sweden, with a speed considerably exceeding 37 miles per hour—and with good results. The State railroads have applied the new lubricating system to a number of the old and new locomotives.

✧ ✧ ✧

The expedition despatched last summer to Gambia, on the West Coast of Africa, by the Liverpool School of Tropical Medicine has discovered another malaria-spreading animal, the parasite trypanosoma. This parasite resembles a minute worm, and is very similar to the blood parasite which is the cause of the devastating disease prevalent among cattle, horses, etc., and in Africa, India, and other tropical countries known as the tsetse fly disease, nagana and surra. In the case of animals it has been proved that these diseases are communicated through the agency of certain biting insects, such as the tsetse fly. The expedition discovered the typanosoma parasite in the blood of a native child. Since the return of the expedition a special study of the question has been made at the laboratories of the Liverpool school, and a new expedition to the West Coast will investigate the conditions in which the disease occurs in both Europeans and natives and its distribution, and also to ascertain how it is conveyed from man to man; whether by biting insects or by other means.

✧ ✧ ✧

Owing to the severe competition with which the English railways are threatened in their suburban traffic around the big cities by electric street railroads and deep level electric tubes, one or two of the big railways are preparing plans for the electrification of their suburban tracks to meet the competition. The Lancashire and Yorkshire Railway, which serves several busy cities, such as Liverpool and Manchester, have prepared elaborate plans for the conversion to electricity of many of their short tracks. The first experiment with this system is to be made upon a branch line running from Manchester to Liverpool through residential districts. The population is more dense in this area than in any other part of England except London. Between Liverpool and Southport there is already a fifteen minute service, and around Manchester some branches have trains nearly as often. With electric traction a four or five minute service or less would be inaugurated; and by having motors fitted to each car, the train could be made long or short according to the exigencies of the traffic at different hours of the day. When the Mono Railroad between Liverpool and Manchester is completed, by which the journey of 36½ miles is to be accomplished in 20 minutes, the electrification of this section of the main track of the Lancashire and Yorkshire Railroad will probably be completed in order to meet the mono-rail competition. The journey with steam traction occupies at present forty to forty-five minutes. The North-Eastern Railway Company, another large concern serving the busy portions of North-east England, are going to convert to electricity at once a number of their branch tracks, commencing with the Newcastle to Tynemouth, the Gosforth to Ponteland, and the Quayside branches. The North-Eastern will be the first great English railway to adopt electric haulage, though the other trunk railroads are contemplating a similar conversion upon an elaborate scale.

✧ ✧ ✧

The Zoological Gardens in London has lately received a young animal known as the Panda. This animal, a small mammifer of the Procyonidae family, constitutes a unique species in the genus Aelurus (A. fulgus), and comes from the Himalayas, where it is found at altitudes varying from 6,000 to 11,000 feet. It is also found in the mountains to the north of the Assam as far as the Yuman region. Its ordinary name is "red cat-bear," the name being due to its appearance and its plantigrade walk, also to the reddish colour of the fur. The Aelurus genus exists in the fossil state, and one species, that of the A. Anglicus, is found in England in the pliocene layers. The Panda is not often seen in Europe. The first specimen which arrived in London was sent in 1869, but its two companions died en route. The survivor did not live longer than seven months. It was made the subject of careful observations by zoologists, especially by Sir William Flower and Mr. A. E. Bartlett. It is interesting to note that the Panda now in London often uses his forepaws like arms and hands. Mr. Hodgson, who observed the species in the East Indies, never saw the Panda act in this way and use his anterior members to seize objects. A second Panda was sent to London in 1876. The habits of the animal are nocturnal, and during the day he sleeps almost constantly. He seeks his nourishment in the evening or very early morning, living upon herbs, buds, roots, and will also eat eggs and insects. The character of the animal is rather mild; the large claws with which his fingers are provided are used not for attack or defence, but mainly to climb trees, in which he passes a good part of his time, except in the periods when he seeks his food, this being generally obtained on the ground.

GLIMPSES OF THE PAST.

(From the Dublin Newspapers of 1787.)

DUBLIN, THURSDAY, MAY 24.

His Majesty's birthday will be celebrated at the Castle of Dublin on Monday, the 4th of June, when there will be an ode and levee; and it is to be hoped that the nobility and gentry who shall appear there on that day will be dressed in the manufactures of Ireland.

The incomparable powers of Mrs. Crawford are to be called into action but once more this season. Our fashionable amateurs are accommodating themselves with seats, and we have no doubt that the last performance of this great actress will be before as resplendent an assemblage as have for many years graced our theatre.

The only precedent for re-hearing a decree in the Journals of the Lords of Ireland was the case of Mr. Vernon, of Clontarf, the 14th of June, 1705, as cited by Lord Mountmorres, with his usual accuracy and information—it is entitled the case of Vernon against Vernon, and is as follows:—A decree of the Court of Chancery was reversed June 14, 1705; next day a petition to rehear the case was offered; the reception was met by a previous question which passed in the negative; the prayer to be reheard was negatived by the equality of voices according to the rule of the House of Lords, but proxies were called for, and the rehearing of the cause was carried by them—however, much to the honour of the Lords, by a standing order in 1783, proxies are forbid on all judicial matters and private Bills.

Lord Pery's conduct in the case of Lord Muskerry and Magrath reflects the highest honour on his head and heart; it was difficult to determine whether the great lawyer or the sympathising feeling of humanity was more conspicuous in his statement of his case. In final decisions in cases of property it is much wished that as many peers would attend as possible, as "in a multitude of counsellors there is wisdom," and the more numerous the judges, the less room there must be for exception to their determination.

The Law Courts now building on the site of the old Cloisters, which had been once the residence of James the Second when in this kingdom, is going forward with the most remarkable despatch and will be the most complete erection of the kind in any part of his Majesty's dominions. All the necessary departments and offices relative to the business of the law will be comprehended in that very large and stately pile of buildings, which must prove a circumstance of the utmost utility both for the despatch and regularity of all legal proceedings.

A gentleman who has of late made a tour through a great part of the country, both on business and amusement, declares that it afforded him infinite pleasure and satisfaction to view such a number of plantations of young trees, both ornamental and useful, as in a variety of places presented themselves to his view. The spirit of planting is everywhere diffusing itself through the kingdom, which will be necessarily attended with the most pleasing and salutary consequences.

The unfeigned joy and exultation demonstrated by all the inhabitants of those places that Prince William-Henry graciously vouchsafes to visit must be a circumstance highly flattering to the Royal youth. His whole demeanour and deportment evince, in the most striking and emphatical manner, that he is possessed of every manly virtue, and likewise adorned with all the graces of true politeness.

From the circumstance of there being no address to the Lord Lieutenant voted by either of the Houses of Parliament now at the conclusion of the Session, it is generally imagined that his Grace means to meet another Parliament in order to accomplish his full time. Indeed the Duke of Rutland seems to have conceived an affection for the people of Ireland, their hilarity and truly convivial disposition being congenial to his own.

The manufactures of this metropolis have felt a severe loss in the absence of her Grace the Duchess of Rutland; but it is hoped the nobility and gentry, by appearing on the next birth-day, dressed in the manufactures of Ireland, will give life to the shuttle, and employment to the industrious poor.

It was with great justice observed, in the Session before last, by Sir Lucius O'Brien, in the House of Commons, that while we lamented after the inferior trade of Portugal, the object of a Spanish trade was forgotten, though it was, in fact, the only one in Europe which commanded the respectability of our attention in commerce. In respect to manufacture, the Spaniards are the most backward of our neighbours in Europe; the immense empire they hold in America, their great possessions in the Philippine islands, their islands on the African coast, and the other diversified extent of dominion Spain holds on the scale of the world, demand a wonderful consumption of manufacture, particularly linens. How much, therefore, should a trade with Spain be the object of Irish attention?

Sackville street is entirely cleared of the parapet wall and stone columns which sustained the lamps, and the flags and paving of the whole raised upwards of a foot above the old level. The middle will consist of crown pavement, and when the magnificent colossal statue of Neptune, presented by his Grace the Lord Lieutenant, and its compartments, are added to the intended fountain, it will form one of the finest streets in Europe.

DUBLIN, FRIDAY, MAY 25.

Wednesday, about one o'clock, a daring footpad stopped Lord Charlemont in his own domain, and robbed him of two guineas and a half, and made off, though closely pursued. He had a case of brass-mounted pistols.

The report of the day is, that a young gentleman, well known in the fashionable world, and not a little remarkable for the singularity of his bets, lately tossed up with another gentleman, his house in Stephen's green against ten thousand pounds. It is said that he was so fortunate as to win, and that he instantly received four thousand pounds of the sum in cash, and the remainder in bills.

Every day convinces us of the utility of that national undertaking, the Grand Canal, by which not only the necessaries of life are become easy, but travelling is rendered both cheap and commodious, as to pleasure and charge. To pass for thirty miles along a country delightfully beautiful, as any perhaps that Europe can boast, where villas, groves, meadows, flocks, fields of corn, all that can please or gratify the eye, are sure to meet the sight, at the same time that the public are so amply supplied through its medium, is a consideration truly pleasing to the real friends of every description of Irishmen, and well merits the ample protection of those who have means to encourage the patriotic work.

The navigation of the Grand Canal increases daily, at a rate that will render it, in a great measure, as useful to the public as the most celebrated in Holland and Flanders. A gentleman just returned from a tour through the counties of Kildare, Carlow, and Kilkenny informs us that the bounty for provisions brought to Dublin by this conveyance has operated so speedily, that cars loaded with corn, flour, etc., arrive daily from very distant places as Monasterevan, where they are stored, till an opportunity offers of embarking them on the canal for the consumption of the Metropolis.

As no general good can take place without some partial evil, our inland navigation has begun to affect the inn-keepers in town and country in a sensible manner. Several persons in the public line, once esteemed rich, or safe in their circumstances, finding great part of their usual trade transferred to the canal boats, have been obliged to shut up, or engage in some other business. Nor is this decay of trade confined to the roads, for one of the most eminent hotel-keepers in Dublin has resolved to let his house and concerns for a brewery, and retire to the country, rather than continue in a state of comparative inaction.

We hear that an opulent company are now forming for the patriotic purpose of supplying the city of Dublin with Irish coal. Six vessels, of two hundred tons each, will be employed as a beginning, and, as subscriptions increase, the number will be augmented. Every subscriber of one hundred pounds or upwards to be of the acting committee, who are to be changed every three months. The present objects of this trade are Ballycastle and Ballintoy, in the county of Antrim, which, if properly encouraged, may, with the intended junction of the canal and Shannon, bring such a supply to the Metropolis as to reduce the price of English coals to twelve shillings a ton the year round.

Though individuals may suffer from the reduced demand for barrelled beef, yet in those enlightened days, almost everyone is sensible that the provision is far from being a general benefit to this kingdom; for it not only keeps up the price of fresh meat at home, but induces farmers to lay down great tracts of country in uninhabited and desolate pastures, giving a bare and wretched existence to a few miserable herdsmen, instead of maintaining thousands of industrious, well-fed, and comfortable labourers, by turning the land to the more salutary uses of tillage and agriculture.

AUGUSTINIAN ABBEY, ADARE,

WITH THE CASTLE OF THE FITZGERALDS AND THE FRANCISCAN ABBEY.
(FROM HALL'S IRELAND.)

Adare, about eight miles from Limerick, is a neat and apparently flourishing town; immediately adjoining which are the remains of several monastic edifices, the greater number of them being within the walls of the Earl of Dunraven's beautiful park. One of the old abbeys has been converted into a church, and another into a chapel; and both retain traces of their original grandeur, although modern "improvements" have essentially changed their character. The erections of these abbeys, churches, and a castle of the Desmonds, which "much incommoded the English" during the Elizabethan wars are not of very remote dates. A house was founded here for friars of the order of the Holy Trinity, for the redemption of Christian captives, in the reign of King Edward the First, by John Earl of Kildare. The Augustinian Friary, called also the Black Abbey, was founded in 1315, and King Edward the Second confirmed the grants made to it, A.D. 1317. The house of Grey Friars was founded in 1465, by Thomas Earl of Kildare, and Joan, his wife—and they were both buried in the choir.

Of the Augustinian Abbey, the Rev. T. Walsh says, in his "Ecclesiastical History of Ireland" (New York, 1855):—

A great part of this friary still remains in good preservation. The steeple is

supported on an arch; the choir is large, with stalls, and the nave answerable thereto, with a lateral aisle on the south side. To the north of the steeple are some beautiful cloisters, with pointed windows, within which, on three sides of the square, are corridors, and on most of the windows are escutcheons, with English crosses, ranged alternately with saltire ones. The workmanship is simply elegant, the principal parts being of hewn stone, which appear so fresh as to give it a modern yet venerable appearance. Adjoining the cloisters were several apartments, which seem to be more ancient than the other parts of the building.

TO SUPPLANT AGRICULTURE.

Senator Berthelot, the well-known French chemist, has published an interesting paper anent the chemical synthesis of aliments, in which he foresees in the difficulties it still presents the economical emancipation of the human race, and the transformation of this planet into a vast pleasure ground. The more the conquest of electrical energy advances the nearer it appears to M. Berthelot that mankind approaches toward the substitution of chemistry for agriculture. Just as agriculture was evolved from the hunting, fishing, and pastoral stages of primitive mankind, so chemistry now sets up to displace with its products agricultural industries based on the production of living organisms, animal and vegetable, by the creation of nutritive matters. The farm is already being edged out by the factory, and engineers and mechanics will soon take the place of peasants and field labourers. It is not long since the possibility of creating by synthesis all the organic matters was held to be chimerical; now the possibility has been demonstrated so often as to render it undeniable. Alimentary stuffs may be broadly divided into three fundamental classes—fats, sugars, and albuminoids. As early as 1854 M. Berthelot by chemical synthesis created bodies exactly similar to natural fats by means of substances related to them—namely, glycerine and acid. He also generated these two substances with hydrocarbons. Sugar can now be produced in the chemist's laboratory by similar combinations. Chemical synthesis has not yet created the albuminoids, which are more complex and more liable to spoil. There is no doubt, however, but this feat will shortly be accomplished. Chemical discoveries have already given rise to changes in agriculture. Madder has gone out of cultivation in the south of France, indigo in the West Indies, and vanilla in other tropical places, owing to the chemical substitutes, and chemical foodstuffs are no more an impossibility than chemical dyestuffs. M. Berthelot, however, utters a note of warning against the illusion of thinking that food can be condensed into lozenges and pills, and that one's meals can be carried in a small chocolate box in one's waistcoat pocket. The human organism has its habits which are tantamount to necessities, and among its habits is that of burning from 250 to 300 grammes of carbon daily, and of eliminating from 15 to 20 grammes of nitrogen. Allowance must also be made for the waste in the body of about one-seventh of the food it consumes. A certain bulk or weight of food will, therefore, continue to be indispensable, and though this may be chemical food, it is not likely ever to become so condensed that a man can carry a week's rations on the march without inconvenience, as is sometimes suggested.

NATIONAL MONUMENTS.

WHAT THEY ARE WORTH.

When Dr. Johnson visited Iona, and the sacred associations of the island cast their spell upon him, he wrote: "Whatever withdraws us from the power of our senses, whatever makes the past, the distant, or the future predominate over the present, advances us in the dignity of thinking beings. Far from me and my friends be such frigid philosophy as may conduct us indifferent and unmoved over any ground that has been dignified by wisdom, bravery, or virtue. The man is little to be envied whose patriotism would not gain force on the plains of Marathon, or whose piety would not grow warm among the ruins of Iona."

Since Dr. Johnson's day the world has grown smaller, and the distant in space has become familiar through the general popularity of travel:

We glance, and nod, and hurry by,

spending a great deal of time and force upon mere movement, but gaining opportunities for wider observation and sympathy if we have wit and thought enough to use them. Meanwhile, amid the hurry and variety of actual circumstance, it is difficult for the past to lay hold upon the minds of men. Long vistas of distant millenniums open out before the explorer and the archæologist; fresh facts and fresh revelations of character reward the student of ages less remote, but most of us lack time to make this wealth of knowledge our own. Still more we lack the sense of leisure and mental freedom which is all but essential if the imagination is to brood over the past, and if the mind is to be saturated by its influence. The reality of a far-off time comes home to us slowly and laboriously. It is difficult to think much about anything except the present—peculiarly difficult to the hard-worked and imperfectly educated masses; and so the past, with all its weight of moral meaning, is to society a less effective educator than the distant, which easily excites the curiosity of travellers. Yet the long story of a noble nation appeals powerfully to the heart and the imagination; and, if the story be of our own race, the appeal finds deep and passionate repose, for, whether we would have it so or not, we must admit that patriotism remains more potent than any wider, cosmopolitan philanthropy, and the fire of patriotism may be both purified and energised by memories of the past.

Whether monuments are natural objects or the result of human toil and skill, their value is inestimable, because they embody national memories, and make the past real, stirring, generous emotion, and arousing vivid interest without artifice or effort. Only men and women of coldest philosophy or dullest imagination can gaze unmoved upon "ground that has been dignified by wisdom, bravery, and virtue." After the scene of some memorable national conflict, whether it were an heroic failure or an instance of triumphant self-devotion and achievement, even a stolid and matter-of-fact Englishman may go away with a new sense that it is worth while to live and suffer for other than narrow personal aims.

Architectural or artistic monuments are more sure of their effect than natural scenes. We may forget that famous persons and events are associated with certain features in a landscape, if those persons or events have left no trace, but where the hand of man is visible the idea of struggle, development, change, is forced upon us, and the effort of the imagination to give the past a place beside the present is more natural and spontaneous. Many British soldiers, for instance, will see the river Nile without a thought of the world-famous men who have gazed upon it before them—Moses and Herodotus, Alexander and Mark Antony, St. Louis and Napoleon Bonaparte; but even the ignorant and apathetic must be startled into curiosity by the sight of the Sphinx, with its comeliness not of this world, or not of this time; even to the unawakened intelligence such relics of an ancient civilisation may bring some dim sense of vast changes that may be in the future.

Our own island story is written upon the stones of churches, halls, and fortifications. Every neighbourhood has some ancient buildings within reach and each will reward study; each gives food for the historic imagination, and helps to withdraw us from the dominion of the present. Every old tower, or bridge, or gateway, if it has not been too much tampered with, retains something of this subtle educating power for those who pass by it or over it, though, perhaps, we know nothing about it except that it has existed for ages and seen generations come and go. Generally some special associations will be found in each case if we take the trouble to search for them.

And most readers will agree that it is good for us to be removed from the dominion of the present; that anything which makes real to us the past, the distant, and the future, enlarges our minds, broadens our sympathies, and "advances us in the dignity of thinking beings"; that, in the endeavour to educate ourselves in this way, we are assisted by visiting historic sites associated with great events, and, still more, by monuments which are the workmanship of past generations; and that, if we are wise, we shall prize every opportunity of bringing ourselves under such influences. There may be men with imagination so vivid and patriotism so warm, that they can dispense with such aid for themselves; but, if they think of the Jew's devotion to the Temple of the Moslem's pilgrimages to Mecca, and if they remember the world-shaking movement of the Crusades, they will admit that in multitudes of people this sentiment of association is among the toughest and the strongest that we have to reckon with, and one that ought to be made useful in the service of humanity.—"National Home-Reading Union Magazine."

A SUMMER NOON.

The dog-star reigns! no wandering cloud
Festoons the clear, unpillared sky;
Gold-bosomed fields, hills grassy-browed,
The lazy river, stream-beds dry,
Are flushed with Sol's fierce effluent tide,
Poured from his flood-gates far and wide.

They leave their prandial boards who toil,
To drowse in sun-excluded bowers;
Bees, anther-bronzed, slow sleek their spoil,
Sounding their needs to th' fainting flowers:
The garish jay, the fussy wren,
Find refuge in the mossy glen.

Flocks, herds, to wood- aisles have strayed,
Soft and subdued the insects' hum;
By th' feverish air no leaf is swayed,
Silent the grouse's fluttering drum:
Lone midnight's hush enthralls wan noon,
And nature rests as in a swoon.

Hezekiah Conant, who died a few weeks ago at his home in Central Falls, R. I., was an extremely useful and benevolent man. He had accumulated a great deal of money, and during his lifetime was noted for the generosity with which he made use of his wealth in order to help his fellows. In his early manhood he devised a number of minor implements which enabled him to cultivate his taste for invention, and in 1857 he designed and patented several mechanical improvements for the manufacture of thread of all grades, and ten years after he was head of a large business concern which bore his name at Pawtucket, R. I. This has been since consolidated with the Scotch firm of J. and P. Coats. The establishment at Pawtucket now covers about forty acres of land, and is valued at £800,000.

DUBLIN'S OLD THEATRE ROYAL.

(HAWKINS STREET).

HOW IT CAME TO BE BUILT.

SOME HISTORIC PERFORMANCES.

By H. CALCRAFT.

[The following are some of the "Leaves of Manager's Portfolio" written by one whose ame has not yet left the memories of old Dublin laygoers, the actor-manager, Calcraft.]

1.

The history of national amusements, and re-eminently that of a national drama, has een pronounced, by many deep-thinking philo-ophers and statists, to comprise, in a great easure, the history of national manners, aste, and civilisation. Individual objections ave been raised from time to time, which, so obscure riders to private Parliamentary ills have passed into currency, as being con-dered too unimportant for debate or oppo-on. The question, in all its details, has been orn so threadbare, that any argument on the bject now would be, as Sir W. Napier, the eat historian, has elsewhere expressed him-lf on self-evident deductions, "a sinful waste words." The small section of our readers no may think differently and take no interest the matter, can pass those pages over, re-mbering that their perusal is, according to ston in Lubin Log (on donations to stage-ach drivers), "quite optional," and an affair free-will election.

When Mr. Henry Harris came over to Dub-in 1820, with a patent in his pocket, which had obtained through personal interest with e then Duke of York, he was very anxious take a lease of the old theatre in Crow reet. It proved fortunate for him in the uel that he was foiled by the impracticable nper of the parties concerned, with whom found it impossible to treat. Crow street eatre was then in a state of tottering dela-lation, which should have required nearly much outlay as building a new one, and was ally pulled to pieces by instalments, in 24-5. I stood on the stage, soon after my ival in Ireland, in October, 1824. The nery was gone, and there were sundry ts and chasms in the roof. The audience t of the house was still tolerably perfect, many detachments of unlicensed plunderers e busily employed in all directions (appa-tly with no one to interfere), knocking out panels of the boxes, tearing up the benches firewood, and carrying off all bodily, for h other purposes as pleased their fancy. was a painful, a humiliating scene, with a found moral lesson attached to it; a strik-illustration of "sic transit gloria mundi," ch called up before the mirror of the mind, odied thoughts of all beauty, rank, and ion so often congregated in that mouldering ple of the Muses, with the departed talent came to admire. This theatre was ori-ally built by Barry and Woodward, on the of an old music-hall, which, with other cent edifices, was pulled down for the pur-. It was opened on the 22nd of October, 3, and the final performance occurred on 13th of May, 1820. On the 11th Decem-in the preceding year, Miss O'Neill made last appearance there on any stage, in the acters of Juliet, and Maria in "The zen." The building existed altogether r-six years. The only tangible record that remains is the great bell (transplanted to kins' street), which Barry imported from London, to toll for the death of the conspira-tors in the last act of "Venice Preserved"; a theatrical relic of considerable interest, well worthy of inspection, and with a much better authenticated pedigree than the tomb of Juliet at Verona, so carefully preserved for the especial benefit of curious and credulous English travellers.

The interior of Crow street Theatre pre-sented, in its days of splendour, a very hand-some and imposing area, capable of holding, at the good old prices, nearly £600. The out-side was an unshapely mass, and the avenues of approach so incommodious that, during the spring tides, the audience had to flounder through (not pellucid) water, reaching con-siderably above their ankles, before they could get from the pay-office to their seats. But in those days people frequented the theatre from pure love of the art; nobody minded trifling inconveniences, and the incumbent generation, patient of little defects in the social system, were content to take the world as they found it, without seeking to hand it over to posterity in an improved state.

When Mr. Harris arrived in the Irish metro-polis, and issued his prospectus, he had nothing to do but, as Lord Byron says of himself in his latest verses, "to look around and choose his ground," which he did at last in Hawkins' street, a more ineligible locality, if possible, than that of the old theatre; more abounding in objections, more out of the gangway of fashion, and cooped up in a corner, which it requires some study of the map of Dublin to find out. There stood a pile of buildings, then the Mendicity, formerly the Dublin Society House, on ground belonging to Trinity College, and subject to the trifling rent of £600 per annum, Irish currency—a perpetual, irremov-able incubus, weighing down the property, and producing strangulation and paralysis more effectually than the old man of the sea slung round the neck of Sinbad. This rent has since been reduced to £400 British, during pleasure, being about double the value according to most competent estimate, and the half of which it is very unlikely to bring, if engulphed in the Encumbered Estates Court, or in the muta-tions of worldy affairs, appropriated to other than theatrical purposes. The landlords, as a matter of course, will not believe this until ex-perience proves its truth, The writer has some grounds for venturing an opinion on the subject, having for twenty-one years suffered almost to death, under this fundamental error of the original patentee. There were situa-tions in Dublin a thousand times preferable, the rent of which exceeded not one quarter of the sum above named. But Mr. Harris was a stranger in a hurry, imbued with very ex-panded notions of expenditure derived from a long apprenticeship at Covent Garden; and he had, moreover, the misfortune to fall into the hands of interested and incompetent advisers. He was taught to consider Dublin an inex-haustible dramatic El Dorado, but he lived to discover his mistake.

The theatre in Hawkins' street was run up at railroad speed, in ninety-five days. The pre-siding architect was the late Mr. Samuel Beazley, well known also as a successful dra-matic writer. His English version of the "Sonnambula" keeps the stage in every theatre throughout the kingdom. He erected several Thespian edifices in London, full of strange errors and inconveniences. This is only one of his construction in which the entire auditory can see and hear in every compartment. When looked at, in the interior, it may almost be considered a model as to shape and size, al-though much too large for the resources of the Irish capital. Of its outward pretensions, the less that is said the better. It has a very commodious arcade, and if finished according to the proposed plans, would have been an or-nament to the city, were it easy of discovery. The theatres in Dublin have ever been an ex-ception to the other public buildings, which are as remarkable for their external beauty as for the commanding prominence of their situa-tions. The London architects might study these with advantage, and take profitable lessons, where they are often more disposed to the Revels, on the 19th of June, 1820, with a very efficient company, who continued to per-form with good success until the 21st of De-cember in the same year. During these six months, eighteen new pieces were produced—a reasonable amount of novelty, although it would be found insufficient to satisfy the cravings of the public in the present day. The most successful were—"Henri Quatre," "Vir-ginius," "A Roland for an Oliver," "Don Gio-vanni in London," and the pantomime of "Harlequin Gulliver." The stars were Miss M. Tree, Mr. R. Macready, Mr. J. Wallack, and the inimitable Grimaldi. In the meantime the new theatre rose almost as rapidly as Alad-din's palace. The enchanter's wand appeared to multiply human labour. Mr. Harris, being unprovided with superfluous capital, was ad-vised to raise £12,500 on one hundred trans-ferable debentures, thus adding another formi-dable incumbrance to his patent and property, already subject to the enormous ground-rent we have mentioned before. After a few years, more than half of these admissions began to be sold nightly by public advertisement, at re-duced prices—a proceeding not contemplated in the original contract, but teeming with ruin, although unfortunately there was no legal remedy or restriction, as such an attempt had never been foreseen. It was not until the year 1839 that this suicidal practice, having reached its full measure of mischief, was finally abolished by a new deed, setting aside certain provisions in the former one, and establishing fresh conditions. Transferable free tickets, given judiciously, are not so injurious as may appear at first sight. They often induce others to join a party and pay, and help to make a respectable show in the boxes on what are called slack nights, when Diogenes and his lantern would find it difficult to stumble against anything but empty benches. But when sold, and, above all, at reduced prices, each becomes a mortal aphis vastator, drink-ing up the sap, and eating into the vitals of the very body from which its own existence is derived. As a commercial mistake this was soon tested by the fact that a debenture, ori-ginally costing £120, could, with difficulty, obtain the market price of fifty, and for one of these it has, more than once, been considered by prudent capitalists a rash investment to involve twenty!

On Thursday, the 18th of January, 1821, the new theatre opened, being scarcely more than half-finished, and many workmen still busy both before and behind the curtain, when the audience were admitted. Mr. Harris made an involuntary first appearance, being dis-covered on the stage, by an accident, and told the public, in a brief impromptu, that he was very happy to see them, and hoped they would often repeat their attendance. The theatre is

now in its thirty-first year, "a ripe age," as Toushston says to William of the Forest. During these six lustra, it has been twice in the jaws of Chancery; once put up to public auction (without bidders), by the renowned Robins, as a "mine of wealth;" and has been governed by five successive sovereign—Mr. H. Harris, who ruled five years, with an interregnum; Mr. W. Abbot, two years; Mr. Bunn, three years; Mr. Calcraft, twenty-one years; and Mr. J. Harris, the present lessee, who has only just commenced his bold experiment.

On the first night, the occasional address we have subjoined, was spoken by the stage-manager, Mr. Percy Farren (since dead), and written by no less a personage than the celebrated dramatic author, George Colman:—

Hail, generous natives of green Erin's isle!
Welcome, kind patrons, to our new-rais'd pile!
Three fleeting months have scarcely slipp'd away,
Since a mere waste this scene of action lay.
Not long the block was laid, which all must own
Damps eagerness—the slow foundation stone
Ere, expectation kept no more aloof,
The architect was Hope-crown'd with the roof.
Brisk went the work, exertion still increasing;
Hods, trowels, hammers, chisels, never ceasing;
Labour was wing'd on expectation's plan,
And every labourer—an Irishman!
After a brick-and-mortar chase, so hot,
Take our historic outline of the spot.
Here once a market rear'd its busy head,
Where sheep, instead of Tragic heroes, bled.
Bright cleavers form'd a band to charm the ears,
Joints dangled in the place of chandeliers;
Stout butchers, stern as critics, had their day,
And cut up oxen, like a modern play!
Soon science came—his steel the butcher drops,
Removes, with awe, the shambles and the shops,
And learning triumph'd over mutton-chops.
Then, in the school of patriotism rear'd,
Arts, agriculture, chemistry appear'd,
Botanic lore, and studies all too great
For our inferior powers to emulate!
No merit we in agriculture claim—
To cultivate your favour is our aim;
Which gain'd, by learned chemists we are told,
It turns, by play-house alchymy, to gold;
While all the botany we dare to boast,
Lies in those plants your breath may cherish most.
Again the scene was chang'd by wisdom's rule—
Want's refuge then succeeded learning's school.
No more in streets the shivering beggar stood;
Vice found correction here, and famine food;
Morality rejoic'd at sloth's defeat,
And pity smil'd to see the hungry eat.
At length, and following these wretched elves,
Behold another race—we mean ourselves;
Who, leaning to our predecessors' laws,
Now beg, most heartily, for your applause;
Beg you, brave Erin's sons, and Erin's fair
To make your nation's Theatre your care.
Two wonder-working virtues, 'tis confest,
Lurk'd in the lamp Aladdin once possest;
Beyond all common method or device
It rais'd both house and money in a trice.
Our building, the first wonder keeps in view,
The second miracle, remains with you!
Crowd hither nightly, then, from every quarter,
'Till coin, in speed, has rivall'd brick and mortar.

It must be admitted, this address is rather flimsy and commonplace, below the reputation of the writer. The occasion should have inspired him with a little poetic fervour. Many native bards might have been readily invoked, who would have sung with superior grace and melody. The opening performance consisted of Shakespeare's "Comedy of Errors" (to which the two Dromois of Williams and Johnson gave an attraction), beginning and ending with themselves; with the farce of the "Sleep-Walker." As an historical document scarcely attainable, a copy of the bill may not be without interest:—

The New THEATRE ROYAL Will Open
On Thursday, January 18th, 1821, when His Majesty's Servants will perform Shakespeare's
COMEDY OF ERRORS,
With incidental Songs, Duets, and Chorouses, taken from his works, and adapted to the Stage,
BY BISHOP.

Solinus, Duke of Ephesus.	Mr. Armstrong.
Ægeon	Mr. Cunningham.
Angelo	Mr. Rowswell.
Cleon	Mr. Digges
Dromio, of Ephesus	Mr. Williams.
Dromio, of Syracuse	Mr. Johnson.
Ctesiphon	Mr. Bedford.
Abbes	Mrs. Vaughan.
Lesbia	Miss Cunningham.
Adriana	Miss Byrne.
Antipholis, of Ephesus	Mr. Humby.
Antipholis, of Syracuse	Mr Farren.
Balthazar	Mr. M'Keon.
Dr. Pinch	Mr. Chippendale.
Cerimon	Mr. A. Lee.
Chares	Mr. Horrebow.
Officer	Mr. Leonard.
Hermia	Miss Curtis.
Luciana	Miss Humby.
Kitchen Maid	Mrs. Gray.

The following new Scenery will be exhibited in the course of the evening:—The Drop Curtain will represent the Acropolis at Athens—Dixon. A Corinthian Palace—Whitmore. A chamber in the house of Antipholis—T. Grieve. The mart at Ephesus—W. Grieve. A chamber—Phillips. A garden—T. Grieve. Street in Ephesus—Whitmore.

Previous to the play, an address will be spoken by Mr. Farren (written for the occasion by George Colman, Esq).

To conclude with the popular farce of the

SLEEP-WALKER.

Sir Patrick Maguire	Mr. Homerton.
Alibi	Mr. Chippendale.
Somno	Mr. J. Russell.
Jorum	Mr. Leonard.
Squire Rattlepate	Mr. Humby.
Spy	Mr. Roswell.
Mrs. Decorum	Mrs. McCullagh.
Sophia	Mrs. Simon.
Susan	Mrs. Johnson.

Boxes, 5s. 5d.; Pit, 3s. 3d.; Middle Gallery, 2s. 2d.; Upper Gallery, 1s. 1d.

Tickets and places (for the present) to be had of Mr. Lowther, at Mr. Willis's Music Warehouse, 7 Westmoreland street.

Of thirty-four persons, including the painters, named in this bill, not more than five are now in existence. The box-office was not available for use until the 23rd of April, and the saloon, which might have been dispensed with altogether, or at least much curtailed in its unnecessary dimensions, was first opened to the public on the 18th of July. Wednesday, August the 22nd, 1821, is a memorable epoch in the annals of the Dublin stage. On that evening, his Majesty King George the Fourth visited the theatre in state, and was received with a perfect tempest of enthusiastic loyalty, such as an Irish public only can be worked up to when they are in the mood. Throughout the performance, Earl Talbot, then Lord Lieutenant, stood beside the monarch's chair (such being the court etiquette), which somewhat lessened his viceregal importance. The receipts amounted to £520 Irish currency, being the largest sum ever returned from the Hawkins' street Theatre. The house would not fairly contain this sum, allowing for the debenture-holders' tickets, and a numerous press free list, with the loss of two public boxes for the state accommodation. But hundreds were content to perambulate the lobbies, or thrust themselves into corners behind the scenes, catching an occasional glimpse at the unique exhibition of royalty; and many, when the doors first opened, paid box-price, ran up stairs, and jumped over into the pit, where they obtained comfortable places without trouble. The rush and crush at the ordinary entrance impeded the legitimate customers, who, as usual, were exercising their accustomed privilege of trying as hard as they could do to prevent each other from getting in. They arrange these little details much better in Paris. There, no crowds are permitted, no bonnets are squeezed to death, and no skirts of coats are immolated. A sturdy gens-d'arme shouts "a la queue, mesdames et messieurs, a la queue!" as each successive reinforcement arrives; which being interpreted, means, "ladies and gentlemen, fall into the rear!" And thus a long line is formed in Indian file, resembling an uncoiled serpent, which glides in imperceptibly in very little time, and without apparent effort, as if by the operation of vis inertiæ. A little dapper Dublin attorney, now defunct, once described this in a company where I was present, with graphic distinctness, and in all the exuberance of his native vernacular, the only language with which he held communion. "Bedad," said he, "if you attempt to push or jostle at the door of a French theatre, you'll get the worst of it, for a big lump of a John darme comes up, and cries out 'Ally kew, mounseer,' and you must ally kew; for if you don't ally kew at once, he'll make you ally kew in a moment."

Subjoined is a bill of the performance on the command night of King George the Fourth. The selection certainly did not show the strength of the company to much advantage, and, with one or two exceptions, was singularly weak; but the audience cared little for the actors or acting, his Majesty being the cynosure and attraction of the evening. Of the individuals included in the dramatis personæ, we know but of three spared by the relentless scythe of time at this present writing. Miss Curtis, many years since, married and retired from the stage; Paul Bedford, still flourishing in full bloom at the Adelphi Theatre in London; and Miss Stephens, now the Countess Dowager of Essex:—

NEW THEATRE ROYAL, DUBLIN.
By Command of His Majesty.
This Evening, Wednesday, August 22nd, 1821, His Majesty's servants will perform Sheridan's Comic Opera, called
THE DUENNA.

Don Carlos—Mr. Duruset (of the Theatre Royal, Covent Garden). Don Jerome—Mr. Fullam. Don Ferdinand—Mr. Bedford. Don Antonio—Mr. A. Lee. Isaac Mendoza—Mr. Johnson. Father Paul—Mr. Chippendale. Lopez—Mr. Rowswell. Louisa—Mrs. Austin. The Duenna—Mrs. McCullagh. Isabella—Mrs. Chippendale. Agnes—Miss Cunningham. Clara—Miss Stephens (of the Theatre Royal, Covent Garden).

To conclude with Sheridan's Farce of
SAINT PATRICK'S DAY.

Lieutenant O'Connor—Mr. Hamerton. Justice Credulous—Mr. Fullam. Dr. Rosy—Mr. Chippendale. Sergeant Trounce—Mr. Rowswell. Countrymen—Messrs. Good and Hart. Drummer Crackskull—Mr. Sutcliffe. Soldier—Mr. Turner Robin—Mr. Swan. Mrs. Bridget—Mrs. McCullagh. Lauretta—Miss Curtis.

This first season concluded on the 11th of September, on the one hundred and eighty-second part of Shakespeare's "King Henry the Fourth, to which was appended a facsimile of the coronation of George the Fourth, most gorgeously produced, with the grand banquet in Westminster Hall, and the entry of the champion, in complete armour, on horseback. This pageant had been repeated eleven nights with corresponding attraction. On the 14th of December, in the year 1822, the celebrated "bottle row" took place on the first state visit of the Marquis Wellesley, who had succeeded Earl Talbot as Lord Lieutenant. Mr. Harris, at the end of four seasons, grew tired of management. He had reaped all the harvest, of which he discovered symptoms, and apprehended the coming stubble. He was an absentee sovereign, governing by a somewhat indolent viceroy, to whom very limited powers were entrusted. His visits were like those of angels, "few and far between," and he cared little to busy himself with studying the peculiarities of Irish character—a book of many pages and diversified composition. He admitted but a small circle of intimates into his cabinet councils, and they were not particularly well adapted to enlighten him. I became acquainted with the majority of them at a later period, and soon discovered that

their knowledge was obscured by prejudices, and although living in Dublin, they were unsafe authorities as to the social, political, or theatrical tendencies of their native city. Mr. Harris had great experience and remarkable tact in collecting together effective performers. But his notions of management were exclusively London notions. These he endeavoured to engraft on Dublin, by the same parity of reasoning, and with much the same chance of success, through which some legislators have sought to persuade themselves and the community, that a measure which works well in one country, must of necessity be equally suited to another.

(To be Continued.)

CHANGE.

A dusty hollow where the pond once lay,
A withered bank once green with moss and shade;
But yonder in wide meadow-lands the hay
Stands straight and tall to wait the mower's blade.
A silence, morn and noon among the trees
Where all day long the robins used to sing;
But life has sweeter uses now for these.
Why should we mourn the spring?

A dry sharp stubble where the grain-fields gold
Spread out of late their wealth in waving pride;
But press and garner keep the manifold
Rich treasure of the autumn countryside.
The sunlight waning with the waning year,
The sting of frost at twilight and at dawn;
But hearth and woodland glow with scarlet cheer.
Why mourn for summer gone?

A veil of mist across the purple hills,
A hush of snow along the forest aisles;
A brooding peace that through the silence thrills
Above the whiteness of unbroken miles.
A sealed hope beneath the clasping snow,
Hope sure to quicken soon at springtime's breath.
The world shall wake again when south winds blow;
Life shall be born of death.

DEATH VALLEY.

California can certainly claim the greatest natural wonders of the world. Its Yosemite Valley, its big trees, petrified forests, and other attractions substantiate the claim.

One of the wonders rarely spoken of is Death Valley. This is the unpleasant name of an unpleasant place in Inyo County, but a remarkable natural curiosity.

Imagine a trackless waste of sand and rock, shimmering under the rays of a more than tropical sun, hemmed in on all sides by titanic rocks and mountains, whose very impress is that of eternal desolation, and you have a fair idea of Death Valley. Geographically it is the sink of the Amargosa river, which is quite a marvel in itself. It rises in the Western Sierras, about two miles from the California line, and flows southward for ninety miles, when it disappears from sight in the bed of an ancient lake at the foot of the Resting Spring Mountains. A little further south it reappears and continues another sixty miles, when it again returns to its subterranean channel. Still again it reappears, and flows nearly one hundred miles, when it finally disappears in the sink of Death Valley. Quite a remarkable river.

Death Valley is eight miles broad by thirty-five miles long, and comprises about three hundred square miles of the most desolate country in the world.

It looks as if suffering from some terrible curse, such as we read about in the Scriptures. It lies far below the sea level, in some places one hundred and sixty feet. No friendly clouds appear to intercept the scorching heat. The thermometer registers 125 degrees week after week. No moisture ever falls to cool the burning sand. Bright steel may be left out night after night, and never be tarnished. Nothing will decay; a dead animal will simply dry up like parchment, and remain so seemingly forever. No sound is ever heard; the silence of eternal desolation reigns supreme.

OUR WEEKLY STORY

THE HERO OF THE REGIMENT.

BY CLARENCE MAIKO.

There was only one Private Jens Jensen in the United States army, and the officers and men of the —th Regiment of Infantry used to say it was a very good thing for the service that there was but one. Mind you, they do not say so now, which shows that the opinion of an entire regiment concerning a man may all be wrong. There are plenty of men wearing medals of honour in the army to-day who were never suspected by their most intimate friends of being heroes, and many a gawky recruit lives to give orders to those who laughed at him doing the "balance-step" in the recruit school. The ways of the army do not change, for they are the ways of human nature, and remain the same for generation unto generation.

When Private Jens Jensen swore to bear "true faith and allegiance" to his adopted country, his earthly endowments consisted of a magnificent physique, a Scandinavian brogue, and a determination to carry out all the lawful orders of his superior officers at any cost. In the course of time he lost his Scandinavian brogue, but he kept his superior physique; and the manner in which he held to his determination to obey all orders to the very letter was truly remarkable. Strange to relate, he frequently found himself in trouble because he obeyed orders too well. He often made himself the laughing-stock of the regiment, and he became the despair of his officers.

The first thing a soldier must learn is to obey orders, and the second is to exercise a certain discretion in doing so. Private Jensen was never able to learn the second.

He distinguished himself on the day he first joined the company by a remarkable performance. While crossing the parade-ground he encountered the adjutant and saluted as prescribed, raising his hand to the vizor of his cap. The adjutant suddenly remembered that he had forgotten something at headquarters, turned abruptly on his heel and walked off, neglecting in his haste to return Private Jensen's salute.

Now the orders for saluting are that a private must keep his hand at the vizor of his cap until the officer returns the salute or until the officer passes. Private Jensen obeyed orders, and with his hand still raised in salute to the vizor of his cap, he marched across the parade-ground to Company F's quarters.

From the porch of the company quarters the members of Company F witnessed the incident, and when Private Jensen reached the quarters he was received by a jeering crowd of soldiers, but he was not disconcerted. He marched through the quarters with his hand raised in salute, unmindful of the laughter of the soldiers. He hunted up the first sergeant, and asked him if he could take his hand down from the vizor of his cap. All the explanations of the first sergeant did not make it plain to him that he had any right to let his hand fall from his cap. He took the matter very seriously, and lost much of his respect for the authors of the army regulations in consequence.

A recruit gets his character from what he does when he first joins his company, and after this incident Private Jensen was considered a joke. But he was never molested or persecuted by his comrades, for his magnificent physique and his willingness to "go outside" and give personal satisfaction to any one who demanded it commanded respect.

There was a certain officer at Fort McBride who was in the habit of ignoring the challenge of a sentry. He liked to sneak up to a sentry in the dead of night and surprise the man, whom he often accused of being asleep on post. Men dreaded to "do a guard" when this officer was the officer of the day, because they were likely to get into trouble.

Every soldier knows that there is an order in the Manual of Guard Duty for sentries to fire on persons who ignore a challenge, and every soldier knows that in times of peace the order is not carried out. Nevertheless Private Jensen carried out the order and put a bullet through the hat of the officer, who ignored his challenge one night on guard.

Jensen was promptly arrested, and locked up in a cell at the guard-house. For a few days things looked very grave for him, but the commanding officer made a careful investigation of the case, and decided that Jensen was in the right, and had only obeyed orders. Guard duty under the officer in question was a pleasanter task after this incident, and for this the enlisted men of the regiment were thankful to Private Jensen.

During Jensen's three years' term of service as a private of infantry his performances were an unfailing source of amusement to the enlisted men of the regiment, but his superior officer regarded him as a nuisance. It frequently happened that he was chosen as orderly for the commanding officer, because he was the cleanest soldier on guard, but the colonel always shuddered when Jensen reported as orderly, for he knew, by sad experience, that it was dangerous to trust Jensen with any order which called for discretion in execution.

When his term of service was drawing to a close every officer in the regiment called him a fool. At regimental headquarters he was spoken of as a crazy Norwegian. Still, all might have gone well with him, if he had not committed an act which incurred for him the stern displeasure of his own captain.

The captain owned a bull-terrier which had won prizes in bench shows all over the country, and which he valued very highly. One day the captain gave the bull-terrier to Jensen to hold, with orders not to let the dog loose under any circumstances. A stray cur tried to make friends with the bull-terrier during the absence of the captain, and trouble ensued.

Jensen managed to hold the terrier, but in doing so he was severely bitten, and in order to protect himself he was obliged to choke the animal. He did not wish to strangle the brute, but when the captain returned to relieve him of his charge, he found his dog had been choked to death, and he was not pleased. This unfortunate affair was Jensen's undoing.

"I will not have this man in my company any longer," said the captain to the first sergeant, a few days after the incident.

"He has some good qualities I admit," continued the captain. "He is sober, clean, honest, and willing, but he lacks common sense. You can tell him, sergeant, that he need not apply for re-enlistment. He is only fit to work on a farm."

Thus it happened that the deed was done, and the word was spoken which blasted all Private Jensen's hopes of winning military glory. The news broke his heart. He first heard it in the railroad train which was carrying the regiment to a little city in a Rocky Mountain territory. It was a rough place in which a strike of miners had been made the excuse for all sorts of violence by its turbulent population.

It seemed that the captain had been as good as his word, and had given Jensen a character on his discharge papers which would effectually

prevent his re-enlistment. Of this fact the soldier was duly informed by the first sergeant, as the army regulations require. In a few days his term of service would expire. His discharge papers were already made out, and were locked up in the company field-desk. On his dischage was written in cruel black letters: "This man is so stupid that he is useless as a soldier."

The first sergeant felt sorry for Private Jensen, and told him that he had the right to ask for a board of officers to investigate his record, and pass upon his character; but Jensen thought of the captain's bull-terrier, and the officer at whom he had fired when on guard, and was silent. He had done his best to be a good soldier, he had been faithful in the performance of every duty, and he could not understand why he was being turned out of the army branded as a fool. As he gazed out of the car window at the flying brown landscape, for the first time in his life tears came to his honest blue eyes.

After the soldiers had been at Jones City for three days, so peaceful was the aspect of the situation that their presence seemed to be unnecessary. There were those, however, who predicted that if the troops were withdrawn riot and bloodshed would follow.

On the last day of his term of service as a soldier in the United States army Jensen was detailed for guard. Since the regiment had arrived at Jones City he had hardly spoken a word to his comrades, but they all knew what troubled him. Every man in Company F knew what the captain had written on his discharge papers, and every man felt sorry for him. The men tried to show their sympathy in many ways, but as they did not succeed in cheering him, they considerately left him alone to brood over his misfortune.

Private Jensen had postponed making any plans for his future until the last minute. He was a member of the third relief, and went on post at three o'clock in the morning. The post to which he was assigned was situated far out of the line of sentries, in a little hollow in the rolling plain, and there was nothing to distract one's thoughts on this post but a little square brick building, which looked like a tiny fort. The special orders for the sentry on this isolated post were not to allow any person to go in or out of this little building.

As there was no one in the vicinity of his post and no one inside of the building, he did not have to exercise great vigilance when he began his lonely guard at three o'clock in the morning.

When the sergeant of the guard had left him, he began to pace up and down in front of the little brick building, and formulate plans for his future career. At twelve o'clock the following day he would discard the uniform he loved so well, forever, and it was necessary for him to choose another vocation.

The first sergeant had advised him to go to work on a farm, but the farming was not congenial to this man of arms. Some of the men in the company had spoken in glowing terms to him of the life of a cowboy, but from what he had seen the cowboys he did not think he should like to be one. The truth was, Jensen was a born soldier, and he did not care to be anything but a soldier. The hours dragged on uneventfully, and he was unable to decide what he would do when he was discharged from the army. He was so sad and so depressed that he did not care what happened to him.

The dawn was breaking, and it was time to expect the sergeant of the guard, whose duty it was to relieve the sentries, and still he was undecided as to his future career. Then the sun came up over the eastern horizon, and he patiently awaited the coming of the sergeant of the guard. Higher rose the sun, but the sergeant did not appear, and Jensen wondered what was the matter. Growing anxious, he shouted lustily for the sergeant of the guard, and when he perceived that the shouts were not answered, he was seriously alarmed.

After he had exhausted himself shouting for relief, it dawned on him that he was forgotten on post, but there was nothing that he could do, except wait until some soldier passed, by whom he could send word to the sergeant of the guard or the officer of the day. So he waited while the sun rose higher in the sky and the minutes flew by, but no person appeared at the lonely post. The minutes became hours, and no help or relief came to Private Jensen, who was tied down to his post by inexorable orders. Any other soldier in the regiment would have abandoned his post in the circumstances, but Private Jensen always obeyed orders, and it proved to be a good thing for Jones City that he did.

Shortly before the noon hour a party of a dozen men came down into the little hollow where he was posted, and expressed their astonishment at finding a soldier there on guard.

"What are you doing here?" inquired the foremost of the party.

"I am on guard," replied the soldier.

When they heard this, the men laughed loud and long.

"You don't mean to say that the army has gone away and left you here to preserve law and order, do you?" sneered one of them.

"I guess it has," answered Jensen, with a smile.

"Well, surely you won't stay here?" said another, and to the astonishment of the miners Private Jensen replied: "Yes, I will stay until relieved."

"But they can't relieve you, man! The soldiers went away on a train early this morning!" cried another of the fellows.

But the only thing Private Jensen said was: "That does not make any difference."

"Look here!" cried one of the men in an angry voice. "You fellows quit this fooling! This soldier is crazy. We came here to get the stuff, now let us go in and get it."

Private Jensen had placed himself in front of the door of the little brick structure which he was instructed to guard. The men advanced to enter the building, but they halted abruptly when the soldier levelled his rifle at them and said: "I will shoot the first man who tries to enter this building!" The others knew, by the look in Jensen's eye, that he would keep his word, and they drew back and held a consultation.

Although Jensen did not know it, the little brick building he guarded was the dynamite magazine of the mining company. The instant that the troops left trouble had occurred, and now the evil element which often misrepresents strikers planned to blow up the mines. It was to get dynamite for the purpose that the malicious party had come to the dynamite magazine, but their calculations had been upset by Private Jens Jensen.

After consulting among themselves for a few minutes the crowd went away. One of the party called back to the soldier, derisively: "When you get hungry come to town and we will feed you." Then the men disappeared, and for a while Jensen was left alone with his thoughts, which were not pleasant.

He did not know that the sergenat of the guard had suddenly been taken ill, and had forgotten to tell the new sergeant to relieve him. He did not know that he was not missed until the regiment was one hundred miles away, and that when he was reported absent the captain believed that he had deserted, without waiting to receive his discharge papers, which were useless to him. But even if Private Jensen had known all this, it would not have made any difference, he would have been just as faithful to his trust.

Even if he had not expected that his absence would be discovered, and a detail sent back to relieve him, he would have stayed on guard just as he did. Then men who expected that he would desert his post because he had been abandoned by his regiment, and because he was tired and hungry, did not know him. All day this soldier remained at his post without a morsel of food to sustain him, and with only the fetid water in his canteen to drink. At noon his term of service in the United States army expired, but he did not choose to consider it so, as he had not received his discharge.

During the afternoon a rough crowd collected about the dynamite magazine, with the evident intention of forcing an entrance. There were some open advocates of violence. Cries of "Shoot the soldier!" "String him up!" and similar expressions were frequently heard by Private Jensen; but wiser counsels prevailed, and he was not molested. They were not afraid of the man, but they were afraid of his uniform. Behind that uniform was the federal government of the United States.

Efforts were made by the besiegers to accomplish by diplomacy what they did not dare to do by force. Plausible arguments were made to Private Jensen to allow the miners to enter the magazine, and every effort was made to induce him to abandon his post. They refused to give him food or drink when he begged for them, in the hope that hunger and thirst would conquer him if nothing else could; and thus the day wore on and night fell, but Private Jensen remained on guard, in front of the door of the little brick house.

During the night the roughs posted a cordon of pickets about the dynamite magazine, and no person was allowed to communicate with the lone soldier on guard there. Many of the strikers would have been glad to feed him that he might be enabled to save from destruction the mines to which Jones City must look for future employment.

Private Jensen passed the night sitting on the door-step of the magazine, rifle in hand, watching his watchers. The men on guard were relieved every few hours, but there was no relief for him. When morning came he began to lose hope. He came to the conclusion that he had been reported as a deserter, but even then, after he had abandoned all hope of being relieved, he stayed at his post. Through another long, hot day, although famishing with hunger and tortured with thirst, he remained on guard, and prevented the malicious element from blowing up the mines.

What would have happened to him if there had not been a riot at Jones City that afternoon, it is impossible to tell. Orders were sent by telegraph which brought the soldiers back to the scene in a hurry. When the troops arrived, one of the first orders issued was to put a strong guard at the dynamite magazine, and a detail of Company F was assigned to this duty. The captain of the company, who had written on Private Jensen's discharge papers: "This man is so stupid that he is useless as a soldier," marched the detail, in person, to the dynamite magazine.

Private Jensen saw the soldiers coming, but he was too weak to rise and greet them. The soldiers also saw Private Jensen, and they marvelled greatly. Some of them shouted to him, in defiance of discipline, and laughed, but the laughter died on the lips of the soldiers when they reached the door-step and saw the haggard face of the man sitting there. Weak as he was, Private Jense tried to stand up and salute the captain. He also tried to

speak, but no sound came from his swollen lips.

In a voice that was reverential one of the soldiers said: "Captain, Jensen went on guard here three days ago."

The captain thought of what he had written on Jensen's discharge papers, and he blushed. Then there appeared on the scene a miner who told the captain that Jensen had stood guard over the dynamite magazine for three days and nights; how the rioters planned to blow up the mines, and how they were foiled by Private Jensen's heroism.

The captain is an impulsive, warm-hearted man, and it is said of him that when he heard the story of the miner he cried like a child.

Tenderly the awed soldiers carried Private Jensen to the field hospital. For several days he was sick and delirious. When he recovered and was himself again there were several surprises in store for him. He was informed that during his sickness he had been re-enlisted. Then an order was shown to him, appointing him colour sergeant of the regiment.

But it was what was written on his discharge papers that most surprised Private Jensen. He found that the captain had written in a bold hand on the face of his discharge: "This man is a hero!"

THE OKAPI IN ANCIENT EGYPT.

It was a bold stroke of imagination on the part of Sir Edwin Arnold in his recent poem, "The Voyage of Ithobal," to appropriate the remarkable discovery of Sir Harry Johnston in the forests of Central Africa, and to make his Phœnician mariner describe to the King of Egypt the strange quadruped now known as the okapi, from the name given to it by the natives of Uganda. But truth is often stranger than fiction, and fiction not unfrequently is an "intelligent anticipation of scientific discovery. Was the okapi really known to the ancient Egyptians, and, if so, can it be found upon their monuments? Professor Wiedemann, of Bonn, the most eminent living Egyptologist, believes that he has solved this question in the affirmative, and in the current number of the "Orientalistische Litteratur-Zeitung," of Berlin, details his reasons for this solution.

There is an ancient divine ideogram in the Egyptian monuments, which has been explained in a great variety of ways. This is the so-called animal of Set." All that is certain about it is that it represents a quadruped living in the desert. Some Egyptologists have taken this creature for the desert fox, fenek; others for the jerboa, the musk-rat, for some other kind of mouse, for a kind of dog, or even for a fabulous creature made up of the gazelle and the ass. Wiedemann himself held it for a conventionalised camel, or for a figure influenced by the shape of the giraffe. In the hunting scenes at Beni-Lassan, a creature very like Set's animal occurs, and is there called "she." It is not altogether clear whether it is meant to pourtray a real animal of the chase or a fabulous being, inasmuch as both a griffin and a panther with a long neck like a snake occur with it. But the Beni-Lassan reliefs belong to the Twelfth Dynasty, and it is known that the artists of that epoch often went back for their motifs to the earliest times, and so very likely may have depicted extinct animals which were known to the artists of earlier centuries, and had since disappeared. A case in point is that of the rhinoceros, which at that time was no longer known in Egypt itself, and whose form was, therefore, very incorrectly reproduced, with much too long a horn. Much the same may be said of the ostrich. Possibly, therefore, the figure of the Set animal, or the "she," may have had a similar history.

Now a comparison of the various representations of this creature on the monuments shows very characteristic peculiarities, especially in head and neck. The body itself seems somewhat conventionalised, and influenced by the form of the jackal, sacred to Aphat, as this animal was to Set. The tail, however,, always ends in a kind of tuft. The neck goes off at rather too sharp an angle from the trunk, the face is long and narrow; the lips are protruding, the upper lip projecting beyond the lower, so as almost to give the appearance of an incipient trunk. The nostrils are forward and close beside the upper lip. Over the eyes is a bony, horn-like protuberance, recalling somewhat that of the giraffe. The ears are long, the epiphysis of the aural muscle narrow, the upper termination of the ear almost a straight line. The colour, when indicated, seems yellow or reddish. The general impression is that of a rather large animal.

Professor Wiedemann believes that the prototype of this hitherto unidentified creature was no other than the ocapia Johnstoni. The size of the latter is about that of an ox, the neck longer than that of the horse the head recalls that of the tapir, the ears are as long as those of the ass, the eyes like those of the hart. Moreover, the legs are long, and the tail ends in a tuft. "If we compare the head and neck of the okapi, especially in its characteristic profile view, with those of Set's animal, they will be found to correspond perfectly. Only the form of the ear differs in this respect—that in the okapi the ear-tip is not flat, but ends in a blunt point. But no animal known to us has a rectangular flat top to its ear, so that is clearly a case of conventionalisation in the Egyptian drawing." Again, the okapi has short hair and a reddish skin. It is true that the nose is marked by a black stripe, legs and feet are cream-coloured and striped like a zebra's, but the predominating tone of colour agrees with that of Set's animal.

As for the disappearance of this animal from Egypt, Wiedemann remarks that the okapi is easily caught, and if it ever lived in the Nile valley must very soon have fallen a prey to the Egyptian hunters, or have sought refuge in the deserts of the interior. This very circumstance would have led to its being taken for the incarnation of the god Set, who dwelt in the desert. Later on in the Twelfth Dynasty the artist, who no longer knew the animal from nature, misrepresented it by giving it the flat feet of a beast of prey instead of hoofs. Later still it was more or less identified with the wild ass. "In conclusion," declares the eminent German Egyptologist, "I believe that the discovery of a new large mammal in Africa, which has been such a surprise for zoologists, is also a fruitful one for Egyptology, and that we must definitely recognise the prototype, especially in the remarkable head, of Set's animal in the head of the okapi."

HALF-WAY TOWN.

BY FRANK WALCOTT HUTT.

An easy road runs smoothly down
To Half-Way Town;
For everything that's but begun,
And everything that's never done,
Just rolls aside and, one by one,
Goes into Half-Way Town.

Half-finished walls are tumbling down
In Half-Way Town.
Half-finished streets are always lined
With half-done work of every kind;
And all the world just lags behind
In dreary Half-Way Town.

Keep straight along, and don't look down
Toward Half-Way Town.
They say, if every one should try
To keep on moving, brisk and spry,
We should discover, by and by,
There'd be no Half-Way Town.

Ancient Boroughs of Ireland

From Lewis's "Topographical Dictionary of Ireland," 1837.

CASTLEBAR.

CASTLEBAR, a market and post town, and a parish (formerly a parliamentary borough), in the barony of Carra, County of Mayo, and province of Connaught, 44 miles (S.W.) from Sligo, and 125¼ (W. by N.) from Dublin; containing 11,805 inhabitants, of which number 6,373 are in the town. The place owes its rise and importance to the ancestor of its present proprietor, Sir John Bingham, who, in 1609, obtained for it the grant of a market and fair. In 1613 Jas. I. granted the inhabitants a charter of incorporation, under which the government of the town was vested in a portreeve, fifteen free burgesses, and a commonalty, with power to hold a court of record every Monday for the recovery of debts not exceeding five marks. The charter also conferred upon the portreeve and free burgesses the right of returning two members to the Irish Parliament; and in 1620 the inhabitants received a grant of a second annual fair. After the quelling of the disturbances of 1798, in the autumn of that year the French, under the command of Gen. Humbert, having landed in the bay of Kilcummin on the 22nd of August, made themselves masters of that town, and proceeded to Ballina, of which they took possession on the 24th. On the following day, Gen. Hutchinson arrived at this place from Galway, and being joined on the evening of the 26th by Lieut.-Gen. Lake, every disposition was made for the reception of the invaders, who, after an obstinate contest, made themselves masters of the town, of which they kept possession for some days; but learning that the Marquess Cornwallis was approaching with his army, Gen. Humbert abandoned this place, and retreated with his force towards Sligo.

The town is situated on the river of Castlebar, which has its source in Lough Lanark, and on the mail coach road from Ballinasloe to Westport: it consists of one principal street nearly a mile in length, from which diverge several smaller streets and lanes; and in 1831 contained 909 houses, some of the best of which are built round the green, which forms a pleasant promenade; the streets are paved and kept in repair at the expense of the county. Under the charter of Jas. I., the corporation continued to return two members to the Irish Parliament till the Union, when the borough was disfranchised, and the sum of £15,000 awarded as compensation was paid to Richard Earl of Lucan. At the head of Lough Lanark, near the town, is an ancient burial-place, commanding a fine view of the distant mountains; and on the other side of the lake are the ruins of a fortified residence.

(To be Continued.)

THE NEW BRITISH ACADEMY.

By ELLA MacMAHON.

A British Academy of Letters has long been talked about, yet possibly the announcement that the King has granted a charter of inauguration to such an organisation at last has come more or less as a surprise to the public in general. The wording of the Royal charter declares the new Academy to be "for the promotion of philosophical, historical, and philological studies," which appears to mean what is briefly comprehended by the term "Letters." The analogy which is instantly presented is that of the French Academy. Exactly how far the new British Academy will conform to the French model remains to be seen, and whether its foundation will have any marked influence upon English literature and letters also remains to be seen. As a matter of fact, in France the influence exerted by an esoteric organisation of this sort has not been very tremendous; indeed, if the French Academy never existed, letters and art in France would probably have been, and still be, precisely where they are, speaking generally. Where Academies possibly do accomplish something is in the spirit of emulation which they foster among their members. Every man of science, for example, in Britain's domains—and outside too—longs and hopes to write F.R.S. after his name. It is the blue ribbon of his career—the hall-mark of his acquirements. All the same, Academies are, if one may say so, more or less counsels of perfection; and counsels of perfection, as a rule, look best on paper; reduced to practice they fail surprisingly, and even ignominiously. The Academy of France is, no doubt, the most illustrious organisation of its kind on earth, yet this tribunal which so complacently arrogated to itself supreme power of judgment has earned undying fame by its rejection of Corncille's "Cid," and its refusal to admit Moliere and La Bruyere within its august limits! Such mistakes, however, are perhaps inevitable in any organisation that has its roots in human direction, and the new British Academy will be lucky indeed if, during its existence, it escapes or avoids similar blunders. Already, indeed, so far as the list of those goes which have gained admission, there is more than one notable omission observable.

Historically the Academy has a long record. Every schoolboy knows the derivation of the word, and has heard of the Garden of Academus, where Plato treated his pupils to those philosophic monologues which the philosopher chose to call conversations. From those discourses of Plato sprang the succeeding schools of philosophy, which were, of course, not schools in our ordinary acceptation of the term, but societies of scholars for treating some especial branch of study, or even a particular method or set of opinions held by scholars on a given subject. Later came the idea of forming specific organisations for promoting any particular branch of learning. The earliest organisation of this kind was, indeed, the celebrated "Museum" founded at Alexandria in the third century. The Alexandrian Academy was the model of others founded by the Jews and the Arabians, and even of those in the Middle Ages that were of Moorish origin. Alcuin, that wonder of learning, suggested to his famous pupil, Charlemagne, the foundation of the society which was associated with the Emperor's name and formed in his palace. In the 15th century, however, after the conquest of Constantinople drove numberless refugees to Italy, the Greek conception of an Academy of Letters or Art first took root in Europe. Fostered by princely patrons, the Medici, the Academies of Florence, lit the torch-light of the Renaissance, and though in themselves they afterwards declined, they gave an impulse to study and scholarship that remained. Almost every country in Europe followed the classical model, and founded Academies for the promotion of learning. Among the best known may be mentioned those which, converted by Richelieu into a great national institution, form now the French Academy; the Berlin Academy of Arts and Sciences, formed by Frederick I., with Leitnitz as its first President; the Imperial Academy of Sciences of St. Petersburg, planned by Peter the Great, under the advice of Leibnitz and Wolf, and actually founded by Catharine I. and liberally supported by her; the Academy of Sciences at Stockholm, founded in 1739, among the six members of which it originally consisted being Linnaeus; the Royal Academy at Copenhagen, founded in 1742; the American Academy of Arts and Sciences, dating from 1780; and the Academies of Munich, Mannheim, Lisbon, and Vienna, all dating from the 18th century. To these may be added the Royal Society and the Royal Irish Academy, which, founded in 1782, has since held a distinguished place among European Councils of learning. As regards the more restricted term, Academies for the promotion of specific branches of learning are innumerable, but they partake of a professional character, and are open only to members of particular professions. Whether the British Academy will gradually include within its borders departments other than those already specified is not yet indicated. Following, apparently, the precedent of the French Academy, it seems to restrict itself to the line of letters. But it is possible that, following the French prototype, a wider range may follow. Richelieu's original object was the cultivation of the French language, and the first work of the Academy was the preparation of a dictionary of the French language. Then Louis XIV. founded the Academie des Inscriptions, for the immediate object of examining his collection of medals and other antiquities; but the taste for antiquities—which was very marked in France in the 17th century—ere long led to its extension. The third French Academy—that of Sciences—the most distinguished in the world even to the present day, was founded by Colbert, in 1666, and Le Brun founded the Academy of Painting in 1648. The Directory suppressed these Academies by the barbarous edict of 1793, but they were practically re-incarnated two years later, and formed into what has since become the Institute of France. That organisation consists really of five divisions, namely—the Academie Francaise, Belles-lettres, Sciences, Beaux Arts and Sciences, Morales et Politiques. It is, as will be seen, more comprehensive than the British institution. Moreover, the French Academy has at its disposal many valuable prizes, not the least of these being the fund for distribution to meritorious authors whose means are straightened. The French Academy, besides French members, includes foreigners also, a practice that no doubt the British Academy will follow in due course.

CORK IN 1760.

A PANORAMIC VIEW.

[OUR GRATIS SUPPLEMENT.]

We present gratis to our readers this week a picture which we are sure they will regard as of no ordinary interest. It shows the City of Cork as it was in 1760, and is a faithful reproduction, as to size and in every detail, of the beautiful steel engraving with which "The History of the County and City of Cork," by Charles Smith, M.D., was embellished. It is taken from the second edition of that work, which was printed and published in Dublin in 1774.

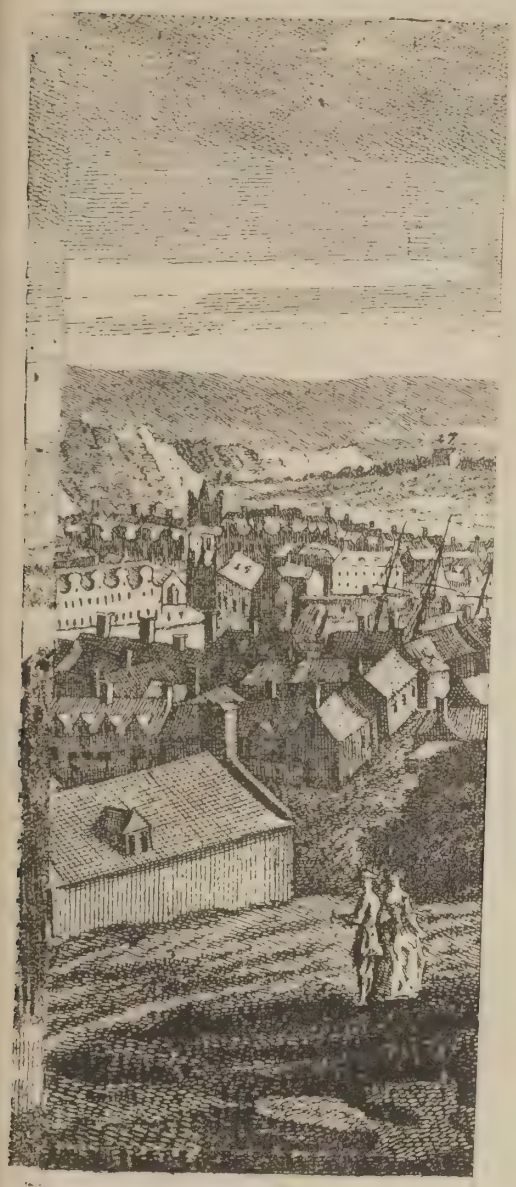
THE MAID OF CLOGHROE.*

ANONYMOUS.

As I roved out at Faha one morning,
Where Adrum's tall groves were in view,
When Sol's lucid beams were adorning,
And the meadows were spangled with dew;
Reflecting, in deep contemplation,
On the state of my country kept low,
I perceived a fair juvenile female
On the side of the hill of Cloghroe.

Her form resembled fair Venus,
That amorous Cyprian queen;
She's the charming young sapling of Erin,
As she gracefully trips on the green;
She's tall, and her form is graceful,
Her features are killing also;
She's a charming, accomplished young maiden,
This beautiful dame of Cloghroe.

Fair Juno, Minerva, or Helen,
Could not vie with this beautiful dame;
Hibernian swains are bewailing,
And anxious to know her dear name.
She's tender, she's tall, and she's stately,
Her complexion much whiter than snow;
She outrivals all maidens completely,
This lovely young maid of Cloghroe.



At Coachfort, at Dripsey, and Blarney,
This lovely young maid is admired;
The bucks, at the lakes of Killarney,
With the fame of her beauty are fired.
Her image, I think, is before me,
And present wherever I go;
Sweet, charming young maid, I adore thee,
Thou beautiful nymph of Cloghroe.

Now, aid me, ye country grammarians!
Your learned assistance I claim
To know the bright name of this fair one—
This charming young damsel of fame.
Two mutes and a liquid united,
Ingeniously placed in a row,
Spell part of the name of this phœnix
The beautiful maid of Cloghroe.

A dipthong and three semivowels
Will give us this cynosure's name—
This charming Hibernian beauty,
This lovely, this virtuous young dame.
Had Jupiter heard of this fair one,
He'd descend from Olympus, I know,
To pay court to this juvenile phœnix—
This beautiful maid of Cloghroe.

* An imitation of the more pretentious kind of street ballads once much in vogue in Dublin.

of the County and City of Cor

CORK IN 1760—Panorama Reproduced from Smith's "History of the County and City of Cork."

THE ANCIENT AND PRESENT STATE OF THE COUNTY AND CITY OF CORK.

BOOK I.

Containing a Natural, Civil, Ecclesiastical, Historical, and Topographical Description thereof.

By CHARLES SMITH, M.D.

Æquum est enim meminisse & me, qui discerem hominem esse, et vos, qui Judicetis ut si probabilia dicentur nihil ultra requiratis.
Cicero Univers.

In Two Volumes.

VOL I.

The Second Edition, with Additions.

CHAP. I.

Of the ancient Names of the Territories and Inhabitants of this County, together with those of the middle and present Age.

PTOLEMY (1) places several people in this country, since known by the names of the counties of Cork and Desmond, and calls them Coriondi, Udiæ or Vodii, Velabori, and Uterini, which seem to be a corruption of the name Iberni, and are, according to Baxter (2), only synonymous names for one and the same people.

The Coriondi, whose name still bears some affinity to the Irish name of this tract, were the inhabitants of the middle part of the county, particularly near the present city of Cork. They seem to be derived from the ancient Coritani, a British tribe, whom Cambden places in Northamptonshire, Leicestershire, Rutland, Lincolnshire, &c., or, according to that other celebrated antiquarian, Llhuyd, who makes them only to be a small colony, inhabiting Lincolnshire. But whether our Coriondi be a colony of the British Coritani (3) or not is, at this distance of time, no very easy matter to determine. It is certain that many of the ancient British people retired into Ireland, upon the invasion of the Romans, in the reign of the Emperor Vespasian, about the year of Christ 76, during the government of Petilius Cerealis in Britain. And Cambden adds that they fled hither, some for the sake of ease and quietness, others to keep their eyes untainted with the Roman insolence, and others again to preserve their liberty.

The Irish to this day call all marshy places bordering on rivers, corcass grounds. The boats made of wattles, covered over with raw hides, in which the old Irish, as well as the ancient Britons used to sail, were called, in the Irish tongue, curraghs, in the old British, corcog, which comes very near the Irish name for Cork, viz., Corcach, signifying in the Irish language, a marshy place, or, rather, a naval place, or a place of curraghs, i.e., boats (4). Hence the Latin name of those people, Coriondi, i.e., navigators, from corion, leather. The Welsh to this day call skins Crugh, from the Greek Χρῆς, and also in the Latin, Corium. If we may give any credit to the old Irish chronicles, the first who made use of leathern boats in Ireland was Eochaid Vairceas, king of Ireland, A.M. 3394, the surname, Vairceas, signifying an open skiff or boat. They add that this prince was banished two years before he came to the throne, but, with a number of his followers, kept the sea (5), in several vessels, from which he often landed his men, to spoil the inhabitants, in these kind of boats. They are mentioned as a sort of miracle, by Festus Avienus (6), describing the Oestrymindes, or isles of Scilly.

Non usque navibus turbidum late fretum
Et belluosum gurgitem oceani secant,
Non hi carinas quippe pinu texere,
Facere morem non abiete, ut usus est,
Curvant phasello: sed rei ad miraculum,
Navigia junctis semper aptant pellibus,
Corioque vastum sæpe percurrunt salem.

Yet not in ships they try the watery plain,
And rouse the shapeless monsters of the main.
For neither gallies fram'd of lofty pine
They know to make, nor weaker fir to join
In barques; but wondrous! skins to skins they sew;
Secure in these to distant regions go,
And pathless seas with keels of leather plough.

The method of making those boats is also described by Lucan (7), thus:

Utque habuit ripas Sicoris, camposq; reliquit,
Primum cana falix, madefacto vimine, parvam
Texitur in puppim, cæsõque induta juvenco
Vectoris patiens tumidum superenatat amnen.
Sic Venetus, stagnante Pado, fusoque Britannus
Navigat oceano: Sic cum tenet omnia Nilus,
Conferitur bibula Memphitis cymba papyro.

Cæsar the champaign leaves, and spreading ground,
When Sicorean waves his troops surround;
The twisting willows to the keel he joins,
And reeking hides cements, and close the lines.
Proud of their crew, they waft them to the shore,
Such Venice knows, such Britons had before,
And such as river Nile to Memphis bore.

From Cæsar's own description of this passage in his Commentaries, it appears that he had learned the method of making these boats from the Britons. For, says he "cum in his angustiis res esset, atq; omne, vice ab Afranianis militibus, equitibusq; obsidirentur, imperat militibus Cæsar, ut naves faciant, cujus generis eum superioribus annis usus Britanniæ docuerat. Carinæ primum, ac statumina ex levi materia fibant, reliquum corpus navium viminibus contextum Coriis integebatur, &c." When things were brought to such extremities, and all the ways guarded and shut up by the soldiers and horsemen of Afranius, Cæsar ordered the soldiers to make such boats as he had seen used in Britain formerly: the keels whereof were made of light stuff and small timber, and the upper part formed of osiers, covered with hides. And Pliny (8) says, "ad eam Britanni vitulibus corio circumfutis navigare." We have an example, also, of another place taking its name from a boat or vessel, viz., the country of Liburnia, being a part of Croatia, from Liburna, a kind of ship used by these people.

The Vodii or Udiæ, were a people which Baxter (9) will have to inhabit the inland parts of Munster. They took their name from their situation in a woody country, the British words Vydheiu, Guydieu, denoting wood. Ptolemy, if the maps handed down to us be his, places those people on the coast, between the mouths of the Lee and Avenmore (which last I take to be the Daurona of that ancient geographer) S. of the Coriondi. So that the great Cambden's conjecture for placing them in the county of Kilkenny, founded only in the likeness of the sound of the words Vodii, or Udiæ, to Idou or Idouth, a territory in that county, comprehending the modern barony of Fassaghdining, cannot be admitted; as the position of that barony is very remote from the S. coast of Munster. Nor need we seek elsewhere for those Vodii than in the very spot assigned them by Ptolemy, viz., the barony of Imokilly, which in the Irish tongue, signifies the woody territory, the same as the word Vodii, a Latin termination of the British Vydheiu, also means. The chief place in which tract is Youghal, in old writings called Ochella, derived from the words O-chill, or Y-chill, the place of a wood. In all ages, whole countries, cities and towns, have been denominated from trees, as Cyparissa in Greece, Cerasus in Pontus, Laurentum in Italy, Myrhinus in Attica: as also ports, mountains, and eminent places, as the Viminalis, Æsculetum, &c., probably from the spontaneous growth and abounding of such trees in the respective soils.

Ptolmey places, near the Notium of

(1) Geograp. lib. 4.

(2) p. 134.

(3) The name Coritani might easily be changed for the word Coridani, which last our people have been called, by a mere transmutation of the letter t into d, a change frequent in language, as Alexanter to Alexander, etc, and many examples might be given of this also in the Irish, was it proper to enlarge on so needless a criticism.

(4) Cork harbour was, in ancient manuscripts, called Bealach Conglac.

(5) The ancients called our ocean by the name of the Vergivian sea; which sea was called, by the Britons, Morveridh, i.e., the Irish sea; for Mor in the British tongue, signifies the sea, and Everdhon Ireland; and hence Llhuyd thinks the ancient name Vergivium is derived. But Cambden will either have it from Morveridh, or Farigi or Fairrge, (the letter F being pronounced like a V consonant), which signifies, in the old Irish, the seas. Marcianus Heracleta, who wrote a geographical treatise in Greek prose, called περιπλεῖς, says, that Ireland has 16 nations, 11 famous cities, 5 remarkable promontories, and 15 principal rivers.

(6) De oris Maritimis.

(7) Lib. 4.

(8) Lib. 4. cap 16.

(9) Gloff. page 283.

Munster (which is now called the Missen-head, and, in Irish, Mullavogy-head) a people named Vellabori, in some copies of this geographer they are called Ουελλέβοροι and also Ουελίβοροι. We can neither seek for the original of those people, nor of the former, as they both take their names from the nature of the country; for Bel, or Bel Abor, in the old British, signifies the head of a bay probably Biar or Bearhead.

The same geographer calls those people which inhabited the more western parts of this county, viz., about Bear-haven and Bantry, Uterini; and, in some editions, Iberni. That these Iberni had their origin from the Iberi, or Spaniards, who, by the Irish writers, have been said to send early colonies into Ireland, is very probable, not only from the affinity of the name, but also from those parts of Ireland lying nearer, and more opposite to the Spanish coast than any other. The distance between Cape Ortugal in Spain, and Cape Clear in Ireland, being but 150 leagues, almost opposite to each other N. and S., and as far as to Ushant in France, which is two-thirds of the way, may be, in a manner, coasted, the usual method of sailing in those ages, they not daring to venture far to sea, not having the use of the compass to steer by, but observing the sun by day and the stars by night to direct them. Yet, notwithstanding these difficulties, many of the ancients undertook long voyages, as the Phenicians and Carthaginians, which last nation had many colonies in Spain, who often sailed to Britain, and other northern climes. Certain it is that in Aristotle's time (10) the Greeks had some notion of this island, which limited their knowledge of the western world. I make no doubt but the northern and eastern parts of Ireland were peopled from Britain, those parts lying opposite and contiguous to each other, the navigation being short and safe, even in open boats. Yet, if all the kingdom was originally inhabited this way, it would be hard to conceive how there should remain such a diversity of manners, customs, and dialects between the northern and southern parts, which diversity being common to all the other nations of Europe, can be owing to nothing else but to the different colonies they were first peopled with.

I should not dwell so much on this subject, but that many modern English writers treat this colony of the Iberi, under Milesius, as a fable. But the contrary appears from the testimony of all the old Irish MSS., which, like other early histories, are blended with truth and fable; besides, the remains of the Irish tongue is still spoken among the Vascones and Cantabrians, as is shown by Llhuyd in his Archeologia, where we may also meet with many singular customs of theirs, which agree with the Irish, as wearing bonnets, short skeins or durks. In Cantabria, the peasants still wear Irish courrans, or rough shoes, without heels; use their pipes, tunes, and ways of dancing; and in their shape and features resemble the tall, thin make, and black, slender hair of our Momonian Irish, a very different kind of bodied men from the squat, short, thick-limbed people of the eastern coasts, resembling the Welsh, from whose country they undoubtedly came (11).

(10) De Mundo, cap. 3.

Having given some account of those people mentioned by Ptolemy in this country, I shall next collect together what I find, by any good authority, related of the ancient Irish septs, dispersed in this large county, with the names their different territories went by, before the arrival of the English.

Cork, before the arrival of the Strongbonian conquerors, was a kingdom of, itself the kings of which were the Mac-Cartys, that family being found in possession of it by the English. Diarmuid, who was Mac-Carty-More, king of Cork or Desmond, swore fealty, gave hostages, and subjected his kingdom to a yearly tribute to King Henry II., in the year 1172 (12). This kingdom comprehended all that tract of country from Lismore to Brandon hills, in the county of Kerry, where they face the eastern part of that county. Besides the county of Cork and the western parts of Waterford, it also comprehended another county, formerly called Desmond, which county, being now part of those of Cork and Kerry, it may not be amiss to mention its extent. It was divided into three tracts: 1st, Clancare, which lay next the sea, between the bay of Dingle and Kilmaire river; 2nd, Bear, lying between that river and Bantry; and, 3rd, Iveragh or Evaugh, situated between Bantry and Baltimore. There was also another part of it, which lay near the Shannon, being the small barony of Iragticonner. Desmond, in the Irish language, signifies South Munster.

The Irish antiquarians allow but eight families of royal extraction in Munster, of which they place four in Carbery (13),

(11) It may not be amiss to quote a very ancient writer in this place, * who says that Eberus, Erimon. Ir, Don, Amergius and Calptha, were the six sons of Milesius, who landed in Ireland. From Eberus sprang the Momonii, or people of Munster. From Erimon, were derived the people of Lethlenii, and the Lagenii, or people of Leinster. The Ulides or people of Ulster, sprang from Ir. From Don, the territory of Teach Duin, in the western parts of Ireland; and from Calptha, the river Inber Calptha was called, where the Bodanus empties itself. These ancient accounts differ much from each other; some only making three sons of Milesius to land in Ireland, whom Keating † follows, but the landing of these, as well as of Partholanus, they all place in the bay of Bantry, which they call Inber Sceine.

*Prima vita sanct. Patric. scholia veteris scholiast.

† Page83.

(12) Ware's Ann. p. 7.

(13) The territory of Carbery took its name from an ancient Irish chief, so called. There were three brothers, according to the Irish antiquarians, 1. Carbry Riada, 2 Carbry Muse, and 3. Carbry Bascoin, who are said to be sons of Fiachad, who was brother to Eana Aighnach, monarch of Munster. They, and their posterity, were called Earniade Mumhan; from the first of these, this barony is said to take its name; and some add, that from him, or his race, Dailriada, in Scotland, was called. The second brother is said to give his name to Muskerry, as did the youngest to Corca Bascoin, a territory where the city of Cork now stands. In reign of Oilioll Olum, king of Munster, Carbry Muse presented a poem to the king, wherein he celebrated the valour, generosity, and magnificence of that prince, who so greatly liked the performance, that he rewarded him with the two Urmhumhains i.e., upper and lower Ormond, called afterwards, from this Carbry, Muskery, and contained all the country from Ossory to Carrignashure. Keating.

which comprehended all the S.W. part of this county; and these were, besides the Mac-Cartys above-mentioned, O Mahon, or Hahown, O Donovan and O Driscoll (14). Those Mahowns derive their pedigree from Kean Mac-Moyle More, who married Sarah, daughter of Brien Boruma, king of Munster, by whom he had Mahown the ancestor of all that sept. For in that king's reign, surnames were given to the Irish, and were commonly deduced from the name of their principal ancestor, with O or Mac annexed. It is from this Kean that the village of Inniskean, in Carbery, has its name, and from this sept that Bandon is called sometimes Droghid Mahon, and the castle near it Castlemahon. The head branch of the family resided in west Carbery, and were called O Mahownfune, alias Owinyerer, or of the west, where they had many castles, the chief of which were at Ardintenant and Three Castle-head (15). This family had also anciently possessions in part of the modern barony of Muskery, viz., the parishes of Kilmurry, Moviddy, Caneboy, Aglish, &c., which bore the name of Ive-flan-lee, from Flan, one of the Mahonys nursed there, who conquered almost all this tract, as appears from those ancient Irish lines:

O Glaise crithe fuair flan
Na ciocha thuaig adteorinn
Mar ar shaig cuan achros
Gan chios uatha ach deaglais.

West from the stream of Glaisecrithe brook,
To Muskery's paps, where holy Patrick struck
His crosier; thence unto the southern main
The conquering Flan o'er all this tract did reign,
No rent, or tribute, for this land he paid,
But to the church alone, his offering made.

From this Flan descended Beake, from whom, according to the Munster Annals, the territory of Kinalmeaky (16) took its name, which was anciently part of Carbery (17).

The family of O Donovan (18) was the next mentioned as allowed to be of royal extraction; their territory in this county went formerly by the name of Clancahill, a part of west Carbery, comprehending the large and mountainous parish of Druma-

(14) According to the genealogical tables added to Keating, all the tribes and septs of the O'Mahonys, in the counties of Cork and Kerry, are descended from Cas, brother to Nadfraoch, and son of Corc, kings of Munster.

In an ancient life of Saint Kieran, quoted by Archbishop Ussher, Carbery is called Corcaluidhe.

(15) Vide a note of the names of all the plowlands belonging to O Mahown-sune in Duaghe, a part of west Carbery, in the Lambeth library, L. fol. 105.

The division of the territory of Ivagh (a part also of Carbery) among the O Mahonys, may also be seen, in the manuscripts of the same library, X. X. fol. 10.

(16) Kinalmeaky signifies the head of the noble root. From Kean a head, Neal noble and Mecan a root, in old Irish, probably alluding to this sept of the Mahonys.

(17) The last of this sept, who was called Coroner O'Mahony, was slain in Desmond's rebellion, and died seized of the seigniory of Kinalmeaky. Cox, vol. 1. p. 383.

(18) The O Conailles and O Cullinanes also derive their pedigree from the same origin as O'Donovan. What is remarkable of this last family of the O Cullinanes, is that it was never known without one or more physicians in it, which is remarked by Cambden; insomuch that when a person is given away, they have a saying in Irish, even O Cullinane cannot cure him. Which profession still continues in the family.

legue, and other tracts, in which parish they had their chief residence, at Castle-Donovan. This family came hither from a barony in the county of Limerick, called Coshma, where they built the famous castle of Crom, which afterwards fell to the Kildare family, and from which the motto Crom-a-Boo, still used by that noble house, was taken. The representative of this ancient family has his seat at Banlaghan, in west Carbery. Another ancient sept, also said to be of royal extraction, are the O-Driscolls (19), who took this surname, as they pretend, from Heidersgoil, son of Fin, who sprang from Ith, son of Bregoan, which Ith, they will have to be uncle to King Milesius. Other antiquarians, with more probability, say they had their name from Conary More Mac-Eidriscoll, King of Ireland. But be that as it may, this sept had possession of a large tract both in this county and in Kerry, called Iveragh, and also Cothilia, in old Irish records, being a very considerable country on the S.W coast. They had in it several strong castles, viz., Dunashad, now Baltimore; and opposite to it, in the island of Inisherkin, Dunelong castle, in which island Sir Florence O-Driscoll founded a Franciscan abbey, anno 1460. The island of Cape Clear also belonged to them, the castle of which place, together with all their other castles, were, by Sir Fineene O-Driscoll, delivered up to the Spaniards, anno 1601, but were re-taken by the English two years after. In order to ingratiate himself with Queen Elizabeth, a fleet of English ships of war were supplied for a considerable time with fresh provisions by this Sir Fineene O Driscoll, who also nobly entertained all the captains and other officers in his castles. The Queen, being informed of it, pardoned his joining the Spaniards, and sent for him to court. But before he arrived there, the Queen died; and during his absence, great part of his possessions were intruded into by Sir Walter Coppinger, which caused this ancient family to fall to decay.

I have already taken notice that the Mac-Cartys were kings of Cork, but the chief of this name in Carbery was Mac-Carty Reagh, who was also the chief person in the whole territory of Carbery. He is not only in the Irish chronicles, but also in several patents and records, styled Prince of Carbery; and it is certain that he enjoyed a chief rent, more or less, out of the greatest part of this barony, computed to be £300 per annum, which, for the most part, was paid in hogs, beeves, sheep, and the like, and was counted a greater and more noble chiefry than was received in those times out of any other seigniory in Ireland.

It is also manifest, from the honourable marriages (20) and noble alliances of this family of Mac-Carty Reagh, that it was always esteemed amongst the most considerablo in Ireland; nor was there any of this house in rebellion against the crown of England, until the unhappy year of 1641, which makes it strange that so great a man as the head of this house was, had then but £1,200 per annum. But the Irish gave two reasons for this: the first is that tho younger sons of the family had drawn off many tracts from the patrimonial estate; and, another, that in the infancy of Daniel, who was called Nipipy (21) (who was Mac-Carty Reagh by tanistry), his uncle, Sir Donogh Mac-Carty, gave his own son, Florence, a better estate in Carbery than he left to the heir, or than his son got by Mac-Carty More's daughter. For he gave him Tough Carriganassig, containing 12 plowlands; Tough mountain, being 7 plowlands; and Tough Iniskean, 12 plowlands. So that he left Mac-Carty Reagh only the 10 plowlands of Kilbritton (22), 3 of Coolmain, 2 of Downdaniel, 4 of Ballynadee, 1 of Burrin, 2½ of Gorticlogh, now Skibbereen, one plowland of Knockandee, and some other parcels, besides his chief rent.

(To be Continued.)

(19) Keating's Tables.

(20) Donald Mac-Fineen Mac-Carty Reagh was married to Elinor, daughter to Gerald, the eighth earl of Kildare, who was lord lieutenant of Ireland, anno 1496, by whom he had four sons, 1. Florence, commonly called the deaf, who died without issue male. 2. Cormac Mac-Carty Reagh, ancestor to the family of Banduff in Carbery. 3. Sir Donogh, alias MacCarty Reagh, ancestor of Charles Mac-Carty More, who lived in the reign of King William, and of Donogh Mac-Carty, of Carigypheeaghane, in Kerry, Esq; 4. Sir Owen Mac-Carty Reagh, ancestor to the family of Trale in Carbery, and of Owen MacCarty, lieutenant-colonel in 1689, to MacCarty More. Sir Donogh and Sir Owen were Mac-Carty Reagh during their lives. Thomas, their elder brother, had issue Donald.

(21) This Donald Ni-pipy, was so-called because in his time some pipes of wine were cast on shore at Burrin, and consequently, were his right, being a wreck, and accordingly he had them, which, in those superstitious times, was reckoned very fortunate; the wreck being esteemed (as the Cornish mens' phrase) is God's goods. His grandson, Donald MacCormac, was high sheriff of this county, and a Protestant, anno 1635. The additional name of Reagh was annexed to this family, from the time of Donald Reagh, one of its ancestors, to distinguish it from the other family of Mac Carty More.

(22) Kilbritton belonged to the lords Kingsale, long before Mac Carty Reagh possessed it. For, by a composition of Walter de la Haye, the king's escheator of Ireland, anno 23 Edw. I. 1295, the manor of Kilbritton and Ringrone, with the mills, fisheries, etc, thereto belonging; the lands of Corrotsheran, Holderness, Lisfynin, Tathax, Lysedie, and Kingsale, in the county of Cork; and other places in the extent roll taken on the occasion, being seized into the king's hands, upon the death of John de Courcey, who was slain by Mac Carty in the same year, in the island of Inchydonny (as appears by a certificate of Samuel Mollineux, Ulster king at arms, concerning the said battle. This Walter restores the said lands, etc, on a composition of £12 12s. to James Keating, per brevi domini regis, etc. And the said Walter de la Haye restores the country of Glynardall, and other lands in the county of Kerry, to the said Keating, for the use of the heir of the said John, lord Courcy. SCIENTIFIC DEVICES.

The Societe Francaise de Physique, recently held its annual exhibition in Paris, when a large variety of the inventions of the numerous ramifications of science, devised during the past year, were displayed. Notwithstanding the apparently exclusive name which it bears, this institution is international in its operations.

Some novel and interesting devices were exhibited. One contrivance was a wall of rippling and constantly changing colours of light, the effect being produced by a different series of electric lights, alternately switched on and off by a revolving wheel. This was intended as a startling attraction for fetes or advertisement purposes.

One room was devoted to a practical exhibition of the varied utilisations of acetylene gas, among which the acetylene blow-pipe stood prominent. A practical example of how well acetylene gas is adapted for welding steel was given by an engineer. His eyes were protected with goggles similar to those utilised by automobilists. The blow-pipe was then brought to bear upon the requisite pieces of metals to be welded, and so terrific was the heat produced that the operation was accomplished in a few moments.

The two most valuable contributions to the show, however, were the devices of Professor Curie and Professor Pellat respectively. The former, who has long been engaged in the investigation of radium, exhibited the peculiar luminous properties of the substance. He had a small piece of radium measuring about one cubic inch, and which had cost 2.000 dollars to produce. A German firm, when they received news of Prof. Curie's discovery some months ago, offered to extract a sufficient quantity of the substance from the salts of barium, at their own expense for the purpose of this exhibition. Several tons of the salt were required to produce even a cubic inch. This substance shines like a lamp, and also imparts a phosphorescent effect upon certain materials with which it is brought into contact, such as zinc sulphide. This is not a chemical, but purely a physical, influence. Prof. Curie displayed a retort containing a quantity of zinc sulphide, and connected the upper tube of the vessel with another retort containing a solution of radium. Immediately the zinc sulphide emitted a bright light. A small particle of radium renders phosphorescent a volume of zinc sulphide a thousand times its bulk. Another curious feature of the substance is that the zinc sulphide retains its phosphorescence for some time after the radium has been removed.

Prof. Pellat suspended a Crookes tube between two magnets. The effect produced was exactly the same as that which he obtained by transmitting a current through the tube. The colours in the tube varied, as the latter was turned one way or the other, thus showing the direction of the magnetic field.

Among the various X-ray contrivances exhibited was M. Benoit's "radiochromometer," an ingenious device for registering the degree of the penetration of the Roentgen rays. This invention consists of a series of discs of aluminium of various thicknesses, each layer being numbered consecutively from one to twelve. The depth of the penetration of the rays is determined by the number of layers through which the rays penetrate. Thus if the rays penetrate through five layers the photo is a 5 X-ray picture.

IN VAIN.

Sang the maid to the hour,
To the bee called the flower,
To the brook called the lea,
"Return thou to me";
But the brook wandered on to the sea,
No flower-sweets brought back the bee,
While the hour passed to eternity.

THE ANCIENT IRISH JUDGE.

By REV. F. R. MONTGOMERY HITCHCOCK, B.D.

From the earliest ages on record Irishmen have always had a taste and genius for law. In that domain they find scope for their natural eloquence, their love of argument, and their keen ingenuity. Their oratory is more of the forensic style than the judicial, possessing rather the quality of sweet or cogent persuasiveness than the merit of clear and calm statement. In olden days the Irish were just as fond of laying down the law. They had a hereditary caste of lawyers called Brehons, who were people of very great importance. Every prince had his own Brehon, who acted as his assessor, his adviser, and his herald. The Brehon was always called in when there was a dispute, and the occasion was not passed over without notice. For then, as now, numbers thronged to hear the debates and the decisions. The poet, Spenser, in his "Discoverie of the State of Ireland," describes how he saw their meetings on the ancient hills, which they attended in crowds armed to the teeth. The blackthorn stick of the present day can hardly be called a weapon of war, but it is questionable whether, when wielded by the muscular sinewy arm of an Irishman, it has not proved as effective as the sword or pike of the happy days of the olden time. The custom of going armed to the seat of judgment was, however, no reflection on the authority of the court, for popular opinion was on the side of the Brehon, and any one who refused to abide by his decision was visited with punishment in the shape of "erics" or fines of so many cows, which were distrained by the predecessors of the modern bailiffs. But if the offender was unable to pay, the whole family to which he belonged was compelled to settle with the plaintiff. In this case the defendant was deprived of his civil status and all his privileges as a member of the tribe, especially his allotment of ground, which was handed over as part of payment to the creditors. The Brehons were taught to be scrupulously impartial and just. Moran, the King of Ireland, the chief Brehon of the land in the first century, is described as wearing a collar of gold (Iodhan Morain or Moran's Collar), which was said to possess the property of choking an unjust judge. Mageoghan thus describes the law the Brehons administered: "This Fenechus or Brehon lawe is nothing but the civil law which the Brehons had to themselves in an obscure and unknown language which none could understand except those that studied in the open schools. Some were judges, and others were admitted to plead as barristers, and for their fees, costs and all, received the eleventh part of the things in demand of the party from whom it was ordered; the loser paid no costes."

The Brehon generally gave his decision seated on a stone within an ancient rath, around which were gathered an eager, excited crowd of listeners, who followed every turn of the case with interest, enjoying keenly, as Irishmen only can, the wordy strife and the battle of arguments. Near Canterbury, in England, I believe there is an old fort called Daingean, where the ancient Brehons gave judgment. Before the Brehon families brought their quarrels, and townships their feuds, and the judgment given, the contending parties, after submitting to the decision, withdrew. The judge had his fees, which were very high; it being not unusual for him to receive fifteen cows and ten days' entertainment for his services. But if an appeal was lodged against his sentence, and he was convicted of giving a partial decision, he was branded on the cheek.

An Englishman named Campion, who travelled through Ireland in Queen Elizabeth's day, has left us this interesting account of the Brehons and their schools: "They speak Latin, like a vulgar language, learned in their schools of leechcraft and law, whereat they begin children, and hold on sixteen or twenty years conning by rote the aphorisms of Hippocrates and the Civil Institutes, and a few other parings of those two faculties. I have seen them where they kept school, ten in some one chamber, grovelling upon couches of straw, their books at their noses, themselves lying prostrate, and so to chaunt out their lessons by piecemeal, being the most part lusty fellows of twenty-five years and upwards."

We can almost imagine we can see those stalwart lads of the days of good Queen Bess, working away at their law quite oblivious of their sordid surroundings, and when school was over rushing out to air their brains and brace their muscles in a vigorous game of hurling, which has always been popular with Irish "boys."

The Brehon code which they studied was spoken of by some of the earlier English authorities in terms of the greatest contempt, while it was declared by Irish writers to be a mine of wisdom and equity. But now that we are able to read it in a translation, we find that the arguments on both sides were exaggerated; for it was neither a divine code nor a diabolical custom. The system and principles of the Brehon law were adapted to the tribal organisation of the people, and bears much resemblance to the laws of other Aryan nations in the same stage of development. Originally it was handed down by word of mouth, but in the course of time, the various customs, usages, and decisions were collected and codified, and after the introduction of Christianity were revised. It may interest our readers to be initiated more fully into the principles of the law which prevailed in Ireland for thousands of years down to the reign of James I. In the "Senchus Mor," which claims to have been compiled under the auspices of St. Patrick, we have the following description of its origin:—"How the judgment of true nature which the Holy Ghost had spoken through the mouths of the Brehons and just poets of the men of Erin, from the first occupation of the island down to the reception of the Faith, were exhibited by Dubhtach to Patrick, what did not clash with the word of God in the written law and in the New Testament, and with the consciences of the believers, was confirmed in the law of the Brehons by Patrick and by the ecclesiastics and the chieftains of Erin. For the law of nature had been quite right except the faith and its obligations, and the harmony of the Church and the people."

The fundamental ideas of the code were two—arbitration and compensation. The source of all judicial authority in the tribe life lay in the interference of the public in the interests of peace. A crime was looked upon as a personal wrong, not as a public offence. There was, in fact, no state to be offended, no state authority to be upheld. The community merely intervened in the matter as arbitrators. Consequently, the legal system pointed not to sentence but settlement. The object of the arbitrators was to bring about a compromise. And consequently corporal and capital punishment were out of the question. The compensation was made according to a scale of damages. Murder and outrage were atoned for by payment to the family of the injured. It was the function of the Brehon to assess the amount of damages in the action. This was a work of great difficulty, as every circumstance in each particular case had to be taken into account—the rank and motives of the defendant, the rank and conduct of the plaintiff, the nature of the injury and the place where it was inflicted required consideration. In the course of time, as the cases and judgments multiplied, the study of the law and its precedents became a very absorbing and complicated matter. But, as we have seen, the post of Brehon was a lucrative one, there was a great encouragement to men of ability to enter the profession, which eventually became hereditary or confined to certain families.

We shall now say something about one particular family of Brehons who were greatly distinguished in the annals of Ireland—the MacEgans. This family had a good and pious record. The chief Brehons of Ireland, especially thos of Munster and Connaught, sprang from its branches. It was especially renowned for learning and hospitality. Galway was the headquarters of this clan Diarmada, which was widespread. It had possessions in the neighbourhood of Lorrha. At Coillte Ruadha, now Redwood, the MacEgans, Dionysius, and Darius had a castle. And at Killaleigh, the modern Sopwell, the residence of Captain the Hon. Cosby Trench, the MacEgans had a large castle, which is maintained in splendid preservation. Cromwell, who dispossessed MacEgan, gave his ancestral halls to the famous Colonel Sadleir, and accomodated the evicted family with a residence on the lake. One of the national bards has eulogised the MacEgans in the following verses:—

> Precedence for his valour and fame
> Be given to MacEgan the noble;
> Record him for the activity of his warriors,
> Of his prosperity and great renown,
> The Clan Diarmada, north and south,
> To place them in my poem is a duty.

The Four Masters give several interesting notices of this remarkable family. In 1309 a MacEgan, who rejoiced in the name of Giolla-na-need, or servant of the saints, and held the post of Chief Brehon of Ireland, and was considered to be the most learned judge of his time, was killed. Ninety years afterwards died Boetius MacEgan of Ormond, learned in the laws and in music, and eminent for hospitality. Thirty-one years passed away, and another MacEgan died. This was Fergal, Chief Brehon of North Connaught, "a man learned in the laws and sciences, and who kept a house of hospitality for all persons who came to his place, and died after a well-spent life." And after thirteen years died Hugh MacEgan, a man who added eloquence to all the hereditary gifts of knowledge, of law, hospitality, and goodness. We can with confidence point those who speak of the wildness and barbarity of the ancient Irish to this record of a family which would be a credit to any nation, and which was an honour to those by whom it was honoured.

The Castle of Annameadle, near Toomavara, was the chief seat of the family of Ormond; Ballymacegan was called after it, and Ballyoughter was its burial-place. Lislea, (Greyfort), and Lisleabeg (little Greyfort), around Borrisokane, now in the possession of the Saunders family, also belonged to the Mac-Egans. Such was a race of Brehons who administered the law, and who carried their decisions without any executive save that of moral force. To their justice and equity foreigners, like Spenser, bore ungrudging testimony. Of their love for their law, Sir John Davies (1610) in his letter to Robert, Earl of Salisbury, gives evidence, wherein he describes the first assizes that was held in Fermanagh among the ruins of the Abbey in the island of Lough Erne, when the venerable Brehon of the McGuires, who had possessed the land from time immemorial, drew from his breast, with trembling hands, the ancient roll, with which he refused to part, until the Deputy, Sir Arthur Chichester, gave his word to return it. It was at this date that the Brehon law was suspended in Ireland, and the

English judges, who had been hitherto confined to the Pale, were now sent through all the country.

There was one peculiar custom which deserves mention in connection with the Brehon. It was the system of levying kincogues, or "kindred moneys." In the days of the Tories, or the dispossessed landlords, who turned brigands and cattle-lifters, and supported themselves in their mountain retreats on the cows and sheep of the English occupiers of their lands, this cusom of kincogish was made law. And it worked in this way. When a band of outlaws swooped down from the hills upon a man's herd and carried them off, compensation was made to him by fines levied on the members of the guilty family who were living under English protection. But as it was often impossible to raise a great sum of money from a few poor people, all the Irish of the barony in which the outrage was committed were held liable for the damages, which were extended over other baronies through which the outlaw had been allowed to escape. Although Spenser objected strongly to this law, there was a great deal of common sense in its principle, for it acted as a preventive of sympathy with crime, and, therefore, of crime. The same principle to a certain extent operates now-a-days. For the county has to pay for any malicious outrage that is committed by unknown persons. But as the majority of the ratepayers are respectable, law-abiding folk, and the criminal class is generally exempt from taxes of all kinds, the innocent have often to suffer for the guilty. Still the interests of justice are, on the whole, furthered by this procedure. The arrangement, however, of costs under the Brehon system, by which the loser in a case paid no costs, is one we would not gladly see introduced again; for it would tend to prevent poor people who had a just claim or a righteous cause from seeking the assistance of the law.

In their schools the Brehons calculated the amount of damages to be levied for a cat stealing milk, or bees stinging a stranger, with mathematical precision. They recorded the provisions that regulated the boundaries of land, the preservation of roads, woods, watercourses, bees, dress, and hospitality. But in those palmy days there was no game law. The sportsmen had it all their own way. At a time when in England a man dared not hawk or hunt on his own estate, a right which was only wrested from the absurdly wicked King John by Magna Charta, the Irish never knew the meaing of the Forest Law or Game Law, and would not allow it to be imposed upon them. On this truly sportsmanlike characteristic of the Irish chieftain and his men, Sir John Davies made this grim comment. When lamenting that the English had not succeeded in making the Irish give up their sport, he says: "If they had, it might have been the means of conquest; for they might have turned the Irish out of the wild places where they dwelt in freedom, and might have given them up to the beasts of the chase, less hurtful and less wild than they." It would, however, have taken the Norman Kings all their time to preserve the game in Ireland, and to reduce the Irish to such a degree of servility that the very birds would appear to know that they were under the royal protection, as they did in England. There is an interesting account given by one of John's mercenaries of the way in which the birds in England would not fly from the traveller, but merely move on and continue to feed. One might safely wager that a few Irish boys would soon have taught them to keep at a respectable distance.

But though the Brehons had not to adjudicate in cases of infringement of the game laws, they had sometimes very curious quarrels to settle. We shall conclude with an account of one historic and important judgment given by a Brehon. It appears that a well-known Irish saint, in the seclusion of a monastery, ventured to make a copy of a Psalter belonging to his host, who was so enraged by an action that was truly laudable in itself, but which was considered in that unenlightened age as a breach of privilege, that he brought the matter before one of the principal Brehons of the land, who gave the extraordinary decision that the copy should be returned to the owner of the book; "For," he argued, "as to every cow belongs her own calf, so to every book belongs its own copy." But Columba would not return the book, and the consequence was a battle, in which many men were slain.

WIRELESS TELEGRAPHY.

COMPREHENSIBLE DEFINITION AS TO WHAT IT IS.

There is nothing very mysterious about it, and there is no reason why it should not be within the mental grasp of those most uninstructed in matters of science, so long as they have sufficient imagination to comprehend the fundamental hypothesis on which all later theories of electricity are based. As is now well known to every intelligent, well-informed person, between star and star, filling up a seemingly boundless void, and there is also between molecules of all substances, whether solid, liquid or aeriform, something which is vaguely known as ether. Of course, this something, this ether, cannot be handled— it is not tangible; we can best infer it only from the fact that light, according to the latest scientific discoveries, is produced by extremely rapid vibrations in an elastic medium.

It is by means of this ether, however, that we are now able to telegraph without wires. It was shown by Hertz that if sparks are allowed to pass between two conductors of a certain shape, electric oscillations are set up which extend to a considerable distance in all directions. The effect is, in fact, very like that produced in a pond when one throws a stone into it. It may seem, at first sight, as if the medium in which those oscillations are produced might be the air. But if any object impermeable to air, such as the wall of a room or a house, is interposed in the path of such oscillations, they pass through it as if it were not there.

There can, therefore, be no doubt that the medium of transmission is the ether, and that we can not only transmit signals through it in all directions, irrespective of intervening objects, but to almost any distance, provided we can only make the oscillations sufficiently violent.

The usual means of producing these oscillation-creating sparks is the Ruhmkorff, or induction coil, whereby a rather feeble current of a voltaic cell or battery is transformed into one of enormous intensity. It is possible to make coils that are capable of producing oscillations that will extend for thousands of miles, but they are somewhat impracticable, owing to technical difficulties. This, therefore, imposes some limits upon the use of wireless telegraphy.

This setting up of electric oscillations, or Hertzian waves, may be likened to the waving of a flag by a signaller anxious to attract the attention of a comrade on a distant height. In the latter case, however, the observer has his eyes to help him, while the Hertzian waves are not perceptible by our unaided senses. As they are given off every time that an induction coil, or the Wimshurst electric machine, or even one of the electric gas-lighters in common use, is worked, it is evident that they are passing through and around us every day, without our being aware of the fact. Something like an artificial eye is necessary, therefore, to fulfil the same office as the telescope which the observer of flag signals calls to his aid when the distance is too great for his unassisted vision.

This first assumed practical shape in the "coherer" invented almost simultaneously by Professor Branly of Paris and Principal Oliver Lodge. It consists of a glass tube filled with metal filings which, though they offer a strong resistance to the passage of an electric current at ordinary times, have the singular property of becoming an excellent conductor when the Hertzian waves fall upon them, and of relapsing into their normal condition on receiving a light tap.

Signor Marconi conducted his earlier experiments with his "coherer," but he now prefers to use a soft iron core surrounded by a coil of copper wire, near which a magnet is kept in constant revolution by clockwork. The core is alternately magnetised and demagnetised, and a corresponding electric current is set up in the surrounding wire, of which one end is connected with the recording instrument and the other end in the earth. By the impinging of a Hertzian wave upon the apparatus a slight extra impulse is occasioned, sufficient to set the recording instruments in operation.

There remains to be said how it is possible to confine the ether waves sent out by the transmitting station to those instruments by which it is intended that they should be received. It is reported that an enterprising Frenchman, who set up his own wireless apparatus, had become the unwitting recipient of messages passing between warships of the British northern squadron.

There are many ways in which the problem may be overcome, and Principal Oliver Lodge has shown that with apparatus so simple as two parallel wires and a sliding ring connecting them it is possible to "tune" an electric circuit so accurately that it will omit sparks in sympathy with another one of exactly the same adjustment with which it is not in contact. The Italian Navy claims to have overcome the same difficulty by the substitution of a globule of mercury between two carbon plugs for the recording instrument. Signor Marconi is employing somewhat different means for achieving the same result. There is ground to believe that, before a great while, the wireless system will transmit human speech over moderate distances, and replace our present clumsy telephoning methods completely. Scientists are now discussing the question whether ether may be utilised for the transmission of mechanical power, or of light. Wireless telegraphy has brought us face to face with many new, almost romantic, problems by its use of ether as transmitting power.

THE LARGEST WATCH IN THE WORLD.

At the American Waltham Watch Factory, the largest watch ever designed was recently completed. To build this gigantic timepiece cost several thousand dollars and several weeks' time. Special machinery and tools were required for its construction. The watch is a model of the new model 16-size Maximus, three-quarter plate watch, enlarged ten times, perfect in every detail, and as highly finished as the finest watch. The diameter of the pillar plate is 17 inches, and the movement is 2½ inches thick. The balance wheel is 6½ inches in diameter, and the Breguet spring which controls its action is 8 feet long, 0.08 centimetre thick, and 0.25 centimetre wide. When running the balance makes a vibration in 0.7 second. The pallet stones are of sapphire, and exquisitely polished. The actuating or mainspring is 23 feet long, 0.17 centimetres thick, and 2.9 centimetres wide. The mammoth model is as completely jewelled as a watch of the finest grade. The plate jewels, which are as large as the smallest movement made, are fine rubies, about ten lines in diameter, but bushed with sapphires. The polish of the wheels, pinions, and other steel work is perfect, and the damascening on the plates is most beautiful. The pendant and winding crown are of fine bronze, brilliantly polished. Every portion is made on the exact scale of the watch it represents. No dial has been made for this movement, as it is designed to show not only the action of the train, but the stem-winding and stem-setting mechanism as well. The movement stands on a bronze pedestal, and from its base to the tip of the winding crown is twenty-six inches.

LITERARY NOTES.

Mr. Herbert C. Fyfe's "Submarine Warfare: Past, Present, and Future," is to be added to the officers' and seamen's libraries on board his Majesty's ships. We are glad to hear that Mr. Fyfe's excellent summary of the submarine's history and possibilities is being appreciated in the right quarter.

✧ ✧ ✧

During the twelvemonth ending with August 31, Arch House, the humble dwelling in Ecclefechan, in which Thomas Carlyle was born, was visited by 1,238 persons. Of this number, forty-six represented the United States, ten Canada, thirteen South Africa, nine New Zealand, six Australia, three Germany, five the West Indies, and one Switzerland.

✧ ✧ ✧

The portrait of Charles Lamb, by Meyer, which the India Office has lately bought from Miss Talfourd, the daughter of his friend and biographer, Judge Talfourd, was painted in 1826, the year following Lamb's retirement on a pension from the East India Company's service. For thirty-three years he was a clerk in the India House. "My printed works," he used to say with his old stutter, "were my recreations; my real works may be found on the shelves of Leadenhall street, filling some hundred folios." These have long been destroyed.

✧ ✧ ✧

There is still in the Accountant-General's Department in which he worked a pin-bowl with his name scratched upon it; also in daily use an old book of interest tables, on the fly-leaf of which may be seen in Lamb's handwriting the following imaginary extracts from reviews of the day criticising its contents:—

This is a book of great interest, but does not much engage our sympathy.—The "Edinburgh Review" for October, November, and December, 1818.

This is a very interesting publication.—"Gentleman's Magazine" for July, 1819.

The interest of this book, unlike the generality which we are doomed to peruse, rises to the end.—"British Critic" for August, 1820.

✧ ✧ ✧

The picture will be placed in one of the committee rooms of the India Office, which already possesses a very interesting collection of letters, prints and statues of persons and events connected with the Government of India. A view in the background of the old East India House in Leadenhall street, where Lamb's official life was spent, gives an increased interest to the present addition to the collection. A small badly executed copy of the picture hangs in the National Portrait Gallery.

✧ ✧ ✧

, Twenty separate works—thirteen in prose and seven in verse—have came from the pen of Mr. Edmund Gosse, LL.D., who entered upon his fifty-fourth year yesterday. It is almost thirty years since his first volume of poems, "On Viol and Flute," was published, and his earliest prose work, "Northern Studies," appeared in 1879. For eight years—1867-75— Mr. Gosse was assistant librarian at the British Museum.

✧ ✧ ✧

Dr. Andrew Balfour, who has been appointed bacteriologist and expert adviser to the Governor-General of the Soudan provinces at Khartoum, like Mr. John Buchan, spent some time in South Africa. He has written a few short stories with the local colour of the veldt since his return. He is author of a book on public health, and his best known novel is "By Stroke of Sword." He has another novel in manuscript.

✧ ✧ ✧

What we mainly admire in our new Academy is the perfect success with which "literature" (in the popular sense) has been excluded (says Mr. Andrew Lang in "Longman's"). Mr. Lecky, I think, is the only poet on the list; it is remarkable that, among so many eminent men, he alone, to my knowledge, has publicly struck the lyre. All have miraculously abstained from adding to the fiction of the age—at least, under their own names. Mr. Morley and Sir Leslie Stephen, indeed, have dallied with the Muse of Essay, but always with extreme dignity; they never remind us of Charles Lamb or Hazlitt.

✧ ✧ ✧

Thus the new Academy avoids all occasion of public excitement, continues Mr. Lang. None of the members appeal to the general in sixpenny editions. The young lions cannot roar over the exclusion of their favourite poets and romancers. In fact, there is room for another and a popular Academy, containing novelists, dramatists, poets, and popular divines of all denominations. What are they to do? Cannot half-a-dozen of them meet in one of their palaces, and elect themselves and their friends? Then, indeed, there would be "wigs on the green," and lively matter to write upon.

✧ ✧ ✧

The wanderer in the holidays mainly battens upon sixpenny literature, Mr. Lang remarks. A sixpenny Academy would be a lively Academy. For President I would, if consulted, select Mr. Nathaniel Gould, who shines by a candid simplicity of style, and a direct and unaffected appeal to the primitive emotions and our love for that noble animal the horse. After a profound study of Mr. Gould's romances a man feels incapable of reading anything else. Mr. Guy Boothby appears relatively, "un raffine." We begin to think that "ex-officio" means "unofficially," and that "urbs in rus" is correct Latin. These gems of fiction I find in my favourite sixpenny novelists; but one of them, in "Tit-Bits," quotes Richard of Cirencester. This erudition is out of place; the sixpenny standard is sensibly lowered. Mr. Nathaniel Gould never quotes Richard of Cirencester, nor writes the word "begin," always preferring to say "commence, which is more worthy of an Academician and of the dignity of literature.

✧ ✧ ✧

The first studio of Mr. John Hassall, the famous poster artist, was away in the backwoods of Canada. Some years before Mr. Hassall had made an attempt to get into the Army, but Fate had another career for him. He was not successful at Sandhurst, and in his despair he emigrated to a Canadian farm. In the dark monotonous evenings he found a method of amusing himself—and his partner—with pen and paper. "Send them to London," was the advice of his friends when they saw his strong, clear pen and ink drawings. He did so, and one of them even got into "Punch." Then his friends urged him seriously to consider whether the artist's studio was not to be his workshop. He considered, and came back to England.

✧ ✧ ✧

The works of Goethe and Schiller—the former in thirteen volumes and the latter in eleven volumes—edited by Nathan Haskell Dole, well known for his previous work in connection with translations of both authors, will shortly be published by Mr. John C. Nimmo. The best translations, such as Thomas Carlyle's "Meister" and Sir Theodore Martin's "Faust," have been selected, and the volumes will contain over 120 photogravure illustrations, reproduced from the works of contemporary German painters, printed on Japan paper, the text being printed on antique deckle-edged laid paper. Eugene Sue's works, in twelve volumes, with fifty-nine etchings by Mercier, Poiteau, Bicknell, and Adrian Marcel, and otherwise uniform with Goethe's and Schiller's works, will also be shortly ready.

✧ ✧ ✧

The current "Harper's" prints an interesting article on "Macaulay's English," in which the writer points out the enormous care which Macaulay took to perfect the form of his own work. Taine, one of the historian's most out-and-out admirers, suggested that he owed much of his accuracy and precision to the study of French models. We imagine that he went further back than that, to Latin models. Certainly there is nothing essentially Gallic in the flow and even construction of his rolling sentences. "I spent," said Macaulay, referring to the "History of England," "nineteen days working over thirty octavo pages"; and again, "In two years from the time I began writing I shall have more than finished the second part (vols. III. and IV.), then I reckon a year for polishing, retouching, and printing." The writer in "Harper's" continues:—
